No State in the Union would willingly and without reward surrender the control of its public-school system to a Federal bureaucracy at Washington or expose its public-school system to alien meddling from Geneva. The only consideration which would tempt a State to make this surrender would be the offer of a bribe in the form of a liberal Federal subsidy of precisely the sort that the Towner-Sterling bill provides for. Caught between the upper millstone of such a temptation and the lower millstone of the rising cost of government everywhere, the poorer and less populous States of the Union might and probably would surrender their birthright in return for such a bribe. The State of Nevada, for example, having yielded to such a temptation and having accepted such a bribe, would then be in a condition where, if the Congress of the United States so decreed, a secretary of education from New England or the South could make of the public-school system of Nevada an educational experimental station for the remainder of the States of the Union, regardless of the effect of the experiment upon the youth of Nevada.

The people of Massachusetts in the past have, as we have said, gladly contributed from their earnings toward the development of the less wealthy States of the Union, and that will always be the generous spirit of the Commonwealth while it remains true to its traditions. But the people of Massachusetts never have contributed knowingly and willingly, and willingly and knowingly never will contribute one cent to be expended by the Federal Government anywhere in the United States in the form of a bribe to a State to surrender that part of its birthright which gives to each State absolute control of its public-school system. This feature of the Towner-Sterling bill has only to be understood by our electorate, as we believe, for the bill to receive the same repudiation at the hands of Massachusetts that the covenant for a League of Nations received in 1920 in the "great and solemn referendum" of that year. And then the elaborate scheme with a hyphenated name will go the way of "the evil thing with a holy name," so far as the American people are concerned. But American independence will remain and freedom in education and religion will thereby be safeguarded.

—

[From the Boston Transcript, July 7, 1922.]

BILL TO EUROPEANIZE OUR PUBLIC SCHOOLS.

"If the day should ever arrive (which God forbid) when the people of the different parts of our country should allow their local affairs to be administered from Washington—on that day the progressive political career of the American people will have come to an end, and the hopes that have been built upon it for the future happiness and prosperity of mankind will be wrecked forever.—(John Fiske, in 'A Critical Period of American History.')"

Without debate, but not without a preliminary propaganda that might well make any alien agent envious of its efficacy, the National Education Association in national convention assembled has again indorsed the Towner-Sterling bill. A big fund is being raised by the proponents of this measure to pay the cost of the lobby that is trying to jam it through the Congress during a campaign year, while the jamming process is comparatively simple, and down the throats of the American people who will be taxed to pay the cost of this elaborate scheme with a hyphenated name.

What is the Towner-Sterling bill? It is a bill to Europeanize the educational system of the United States, to scrap the free school system of the several States and substitute in its place a Federal system of education, subsidized from Washington, regulated from Washington, and all in imitation of the imperialistic methods of the Old World. The main provisions of the bill are two: The first provides for the creation by Congress of a Federal department of education to be headed by a secretary who shall be nominated by the President, with the advice and consent of the Senate, and shall be a member of the President's Cabinet. The second provides Federal aid in education in the form of a Federal subsidy to be taken out of the Federal Treasury and doled out among the States to be used in education as Congress may from time to time decree. These two main provisions are enough to condemn the measure in the eyes of true Americans who take the trouble to think the thing through, and in their hearts cherish the hope of making a contribution in their day and generation toward the conservation and enhancement of that "American character" at home and abroad which it was the dream of Washington to develop and the destiny of Lincoln to save and the glory of Roosevelt to incarnate in his life and work.

Any bill providing for the creation of an additional executive department at Washington and an additional member of the Cabinet is to that extent a bad bill and ought to be opposed by every taxpayer in the land. Experience has demonstrated that the number of executive departments and the size of the Cabinet should be reduced, not increased, and in the light of that experience a plan for the reorganization of the executive branch of the Government has been prepared and is now before the President, who will presently submit it to Congress as a basis for remedial legislation. Any bill that provides for further trespassing by the Federal Government upon the premises placed by the Constitution in the control of the several States is also bad and ought to be opposed by every taxpayer in the land. It is true that Federal control will hasten standardization of education, but what true American, believing in education and religious freedom, wishes to see a system of standardized education or standardized religion established in this country and controlled in Washington?

Our own Congressman JOHN JACOB ROGERS voices, we believe, the true sentiments of the plain people of Massachusetts when he declares his belief that "Massachusetts or California is a better judge of what her people should learn and use and in what schools they should learn it than any bureau or department chief can be." The late Franklin K. Lane, the able Secretary of the Interior of the last administration, put the argument against the Towner-Sterling bill in a single sentence when he said: "Federal control of schools would be a curse, because the inevitable effect of Federal control is to standardize." President Goodnow, of Johns Hopkins University, sees in this elaborate scheme with a hyphenated name "a most dangerous usurpation of power in Washington that will undermine the rights of the people." President Butler, of Columbia University, puts the case in language so plain that parents and pupils alike can understand the menace of this measure to our happiness as a people at home and our prestige as a nation abroad, when he warns the country that "once more to tap the Federal Treasury under the guise of aiding the State, and once more to establish an army of bureaucrats in Washington, and another army of inspectors roaming at large through the land, will not only fail to accomplish any permanent improvement in the education of our people but will assist in effecting so great a revolution in our form of government as to endanger one day its perpetuity." President Hadley, of Yale University, was in Berlin in the winter of 1907–8 and saw a great deal of the inside working of what was then the Imperial German Government; he noted that the degradation of German thought was largely due to the fact that through the establishment, first, of Berlin University and, second, of other centralized Prussian authorities, "the politicians had become able to throttle free thought." He regards the Towner-Sterling bill as "a long step in the Prussianizing of American education," and so will every other American when he examines the provisions of the bill in the light of "the plainest and most weighty lessons of the war."

But the lobby back of the Towner-Sterling bill would have the public believe that it does not provide for Federal control of public education but that the Federal Government will be willing to scatter millions of dollars from its Treasury broadcast through the several States and ask no questions as to the expenditure. If this were true, it would be taxation without representation—a tyranny more intolerable than the yoke that would be put upon the youth of America for the rest of the time by the Europeanizing of our public schools. Of course, it is not true; it is grotesquely untrue, for the reason that the Federal Government never has been and never will be willing to subsidize an enterprise without retaining the right to regulate the expenditure of the subsidy, and Federal regulation is only another name for Federal control.

It would be bad enough to scrap our American system of free schools in the several States and set up in its place a Federal department of education, whose control would immediately become a football of partisan politics, but the vision of the National Education Association and the lobby that is backing the Towner-Sterling bill is "a world vision." Already steps have been taken looking to the "internationalizing" of the association. If that is accomplished and this organization gains control of a Federal department of education, we shall soon see Federal control of our public-school system give way to international meddling, with a superdepartment of education set up at Geneva as an adjunct of the supergovernment provided for in the covenant of the League of Nations. Every teacher in the land drawing a subsidy under this elaborate scheme with a hyphenated name could then be mobilized in support of a drive to force the United States into full membership in "the evil thing with a holy name," as the late Senator Knox rightly called the League of Nations.

Massachusetts had the grit and the gumption to repudiate by the most overwhelming majority on record the covenant of the League of Nations, in spite of the favor which that war-breeding scheme of supergovernment found among many members of the National Education Association and in spite of the lobby that endeavored to jam that scheme through the United States Senate and down the throats of the American people. Massachusetts with equal grit and equal gumption, when her people are given the opportunity to pass upon it at the polls, will repudiate by an equally overwhelming majority the elaborate scheme with a hyphenated name provided for in the Towner-Sterling bill. Our electorate in this Commonwealth is sprung from many races, but the belief in our public-school system is as strong as the belief in the freedom of religion. Freedom in education and freedom in religion are twin liberties that are dear to the heart of every loyal citizen of the Commonwealth. Any attempt in any quarter to Europeanize our public schools and yoke them under a federated bureaucracy at Washington or an international bureaucracy in some European capital will be regarded, and rightly, by the people of Massachusetts as a challenge to our dual form of government, an assault upon American independence, and a direct attack not only upon the Constitution of the United States, which is the political corner stone of our national life, but also upon that "American char-

acter" which is the spiritual corner stone of our national life. And should not the people of Massachusetts have the opportunity to pass upon the Towner-Sterling bill? It can be done in the coming State campaign by requiring every candidate for public office to say whether he is for or against the attempt of the National Education Association to Europeanize our public schools.

—

[From the Springfield Union, July 6, 1922.]

THE SMITH-TOWNER BILL.

The proceedings of the convention of the National Education Association in Boston developed a difference of opinion as to the desirability of the Smith-Towner bill, now on the calendars of both Houses in Congress, which would establish a department of education on the same basis as other major departments of the Government and start it off with an appropriation of $100,000,000, a portion of which would be used in the too popular 50–50 process of Federal aid. Mr. TOWNER, of Iowa, specializes in measures of this sort designed to bring under Federal supervision and control various State and local prerogatives, the temptation being a small Federal allowance to States appropriating a like amount.

When such a temptation is placed before educators of the land some of them inevitably succumb to it under the too easy assumption that it will tend to promote education, and in any case it suggests more money. Too little thought is given to the possible effect of Federal interference upon local education or State supervision of it, provided it had any effect at all.

A certain useful service to the cause of education may appear in the general surveys and statistics that the Federal Commissioner of Education now publishes for the benefit of educators in the various States, but we doubt if there is any agency of public welfare that should be so scrupulously left to the supervision and control of State and local authorities as public-school education. Fundamentally and in its most intimate details it must be left to local committees while general supervision and incidental support should be in the hands of the State government of which the local communities are the units. The process can not be stretched further with profit. It is claimed by TOWNER and other proponents of the bill that the rights of the States and communities will not be interfered with. Were this to be the case, what would be the use of creating an expensive Federal department of equal authority and position with other departments, with a secretary entitled to a place in the Cabinet equal to that of the Secretaries of departments actually in control of Federal service as delegated in the Constitution? Were it a proposition to inaugurate a system of purely Federal education for certain purposes or certain classes not within the jurisdiction of the several States such a proceeding might be proper enough.

But it is not that kind of proposition. As a matter of fact, it is a proposition to erect a Federal department for alleged educational purposes within the States and for people within the jurisdiction of the States. Such a proposition has no natural relation to departmental agencies that actually control the foreign affairs, finances, post offices, military and naval forces, public lands, and other functions of the Federal Government.

If, on the other hand, it is the purpose to interfere with the rights of States and local communities, the case is worse than it would be if the Federal Government inaugurated this large expenditure for no effective purpose whatever. It would probably be found that the $100,000,000 would be multiplied as the Secretary of Education functioned and increased his requests or demands. In the nature of the case such a Federal officer would seek more and more authority and interfere more and more with the State and local management of schools, in so far as State authorities permitted it by accepting the allowance from the Federal appropriations.

As in other schemes of this kind, one of the ideas is to transfer money from certain States to others. The cost of education in Massachusetts as given by the last reports is $36,614,623, or more than a third of the $100,000,000 proposed as a start for the expenses of the Department of Education and the State allowances. At the best Massachusetts would receive but a relatively small amount out of the Federal appropriations as the price of its surrender of full control, while it would pay a considerable proportion of the money allowed other States.

From any point of view the principle of the measure is vicious and the best thing the members of the National Education Association can do for the cause of education is to declare against it and to continue to seek their general information and helps from such conferences as has been assembled in Boston.

Mr. KING. Mr. President, I have here a short letter from a distinguished lawyer of Tennessee, Mr. George N. Tillman, which I ask may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NASHVILLE, TENN., *April 5, 1921.*

Mrs. GEORGE A. WASHINGTON,
Washington Hall, Tennessee.

DEAR MRS. WASHINGTON: In response to your inquiry as to my position upon the Smith-Towner bill, I wish to say that I am decidedly opposed to it. It might be amended so as to make it acceptable, but I doubt it. It proposes an appropriation of $100,000,000 annually for the purpose of maintaining a new department at Washington to encourage and assist the States in the promotion of education. It contains a provision that the management of public schools shall remain exclusively under the State control; but this provision is misleading, and if the bill should become a law I believe it would ultimately result in the department virtually controlling education in the States through compulsion that could be brought about by the command of large Federal appropriations. The bill itself clearly indicates that that would be the final outcome, for the receipt of allotments from the large Federal appropriations is made dependent not only upon equal appropriations by the State, but of conformity by the State with certain requirements embodied in the bill—for instance, the number of months to be taught, compulsory school attendance, and certain requirements looking toward the standardization of education. Another reason why I am opposed to the bill is that it is in the line of encouraging the people to look to Federal appropriations to relieve, as imagined, themselves of legitimate burdens. The further removed government is from the people the less responsible they feel therefor, and people have the idea that what they get out of the Federal Government is that much picked up without any corresponding burden upon themselves. In my opinion, we need no such plan as that proposed in the bill. All we need at Washington is a bureau or department of investigation and research, whose main functions shall be to furnish information and stimulate the States to the highest exertion in educating all the children in accordance with the best standards, leaving it to each State to provide its own funds and manage exclusively its own system. I think it will prove a great misfortune to the country to continue augmenting bureaucracy at Washington, with all of its red tape and multiplication of offices.

Yours very truly,

GEORGE N. TILLMAN.

Mr. KING. Mr. President, I will conclude by asking that there likewise be printed in the RECORD a brief review of the Smith-Towner bill by one of the ablest and most distinguished members of the New York bar, Mr. William D. Guthrie.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE FEDERAL GOVERNMENT AND EDUCATION.

A REVIEW OF THE SMITH-TOWNER BILL.

[By William D. Guthrie, of the New York bar.]

In compliance with the request of many interested in the subject of education I have studied the provisions of the so-called Smith-Towner bill (S. 1017 and H. R. 7) entitled:

"A bill to create a department of education, to authorize appropriations for the conduct of said department, to authorize the appropriation of money to encourage the States in the promotion and support of education, and for other purposes."

I have also studied the report of the joint hearings before the Committee on Education and Labor of the Sixty-sixth Congress as well as a number of publications discussing the above-mentioned bill and the governmental policy that it seeks to introduce. The aspects of the subject which I have considered may be briefly summarized as follows:

1. Under the Constitution of the United States no power has been delegated to Congress to regulate or control education in the several States. That subject was left within the exclusive domain and governmental duty and responsibility of the several States, and Congress can not constitutionally seek directly or indirectly to regulate or control education in the States without violating the reserved rights of the States and the fundamental principle of local self-government.

2. The provisions of the Smith-Towner bill would, in my judgment, inevitably involve an attempt at interference in the local affairs of the States, and the policy of so-called federalization of education once established would lead to an agitation and demand for a constitutional amendment in order to vest in Congress adequate and effective power of centralized supervision and control.

3. Any such increase of Federal power and diminution of State authority, responsibility, and duty would be prejudicial to the best interests of the Nation and of the States.

4. The creation of a new executive department to be known as the department of education, with a secretary of education as the head thereof and as such a member of the President's Cabinet, would bring the subject of education into politics, with the danger of constantly varying educational policies and constantly pursued efforts to control the patronage of the department in the interest of the political party then in power.

5. The tendency of Federal interference and direct or indirect control would be toward the centralization and standardization of education, and such centralization and standardization would in all probability prove to be prejudicial not only to the public-school system but to the independent and satisfactory operation of existing private schools, including those maintained by various religious denominations for the purpose especially of securing to the younger children of the country the benefit of adequate religious training as well as secular education.

It is generally conceded that under the Constitution of the United States the subject and control of education are at present indisputably within the exclusive domain of the States, and, indeed, many of the advocates of Federal subsidies to the States insistently repudiate any intention of interfering with the control of the States. These advocates may sincerely believe, as I have no doubt they do, that the movement for Federal subsidies and interference can be permanently limited to financial and advisory aid, and can always be checked so as to prevent any infringement upon the constitutional rights of the States. But to accept this view would be to disregard all the lessons of practical experience.

If the States begin by accepting moderate grants of Federal funds as, for example, one enabling them to increase the salaries of their public-school teachers, and if, in order to secure Federal funds they conform to Federal standards, they will in time come to rely upon the Federal Government for larger and larger appropriations. This reliance will inevitably undermine their independence and sense of responsibility and destroy the incentive of local pride and interest in the subject of education, as well as engender a feeling that the burdens of local taxation and responsibility in connection with education could and should be shifted to the Federal Government at Washington.

Federal aid without any direct or practical control and Federal advice without any power of enforcement would undoubtedly prove unsatisfactory, and would inevitably create an agitation to render federalization actually effective and Federal advice or direction practically enforcible. If the country should be now persuaded to approve the appropriation by Congress of large sums of money merely "to encourage the States in the promotion and support of education," it would not be many years before it would be urged that Federal aid without control had been found to be unsatisfactory because of the lack of adequate power of enforcement, and, therefore, that full and effective authority should be secured by constitutional amendment.

As to the danger of standardization, what seems to me to be a fair and accurate forecast is contained in a pamphlet issued by the American Council on Education at Washington in connection with the proposed Smith-Towner bill, as follows:

"The power to establish standards would unquestionably be the most influential prerogative of a department of education. Under the Smith-Towner bill the department is implicitly given this power. Through its ability to withhold appropriations unless State plans meet with its approval, the department can establish minimum standards in some of the principal fields of educational effort. It is this implied power to coerce through shutting off supplies that constitutes in the minds of critics of the bill one of its principal dangers. Standards formulated in the serene seclusion of Washington may be imposed without debate

or appeal upon institutions in all parts of the United States. Nothing is more likely to foster bureaucratic tendencies."

And to this should be added the statement of the retiring Secretary of the Interior, Franklin K. Lane, in his final report to the President dated February 28, 1920, that "Federal control of schools would be a curse, because the inevitable effect of Federal control is to standardize," etc.

Interference by Congress in the matter of education would, as it seems to me, gravely imperil the future integrity, independence, and autonomy of the States. Nothing is more essential to the perpetuity of our present system of government than the Federal principle of Nation and State each supreme and independent within its allotted sphere and the preservation to the States of their right to local self-government and the actual practice of that right. Our Federal Constitution contemplates and assumes the continuance of the States as autonomous, independent, self-governing communities, and this is an inseparable incident to the republican form of dual government intended to be established by the founders of the Republic. Such a vital principle ought not to be in any way sacrificed by the States because of a temporary crisis or because of a desire for subsidies of Federal funds to meet the increased cost of education. The States should be jealous of their right to control a matter affecting them so vitally and should not experiment with Federal control, which under federalization would be centered in Washington and might readily develop into the tyranny and irresponsibility of bureaucratic government.

In the recent case in which the Supreme Court of the United States held unconstitutional and void the so-called child labor law of Congress, the opinion of the court by Mr. Justice Day, among other things, stated (247 U. S. 251, 275):

"The maintenance of the authority of the States over matters purely local is as essential to the preservation of our institutions as is the conservation of the supremacy of the Federal power in all matters entrusted to the Nation by the Federal Constitution.

"In interpreting the Constitution it must never be forgotten that the Naion is made up of States to which are entrusted the powers of local government. And to them and to the people the powers not expressly delegated to the National Government are reserved. (Lane County *v.* Oregon, 7 Wall. 71, 76.) The power of the States to regulate their purely internal affairs by such laws as seem wise to the local authority is inherent and has never been surrendered to the General Government."

And more than 50 years ago Mr. Chief Justice Chase, in the famous case of Texas *v.* White (7 Wall. 700, 725), used the following language:

"The perpetuity and indissolubility of the Union by no means implies the loss of distinct and individual existence or of the right of self-government by the States. * * * Not only, therefore, can there be no loss of separate and independent autonomy to the States through their union under the Constitution, but it may be not unreasonably said that the preservation of the States and the maintenance of their governments are so much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States."

I have cited these two decisions of the Supreme Court in order to emphasize the fundamental and essential feature of the Federal and dual aspect of our national political system. In doing so I have not, of course, overlooked the recent decision of the Supreme Court in the Prohibition cases (253 U. S. 350), upholding the constitutionality of the eighteenth amendment. Whilst it is true that the eighteenth amendment, as interpreted by Congress and enforced by the Supreme Court, infringes upon the theretofore reserved powers of the States as to their local affairs, the court did not necessarily hold—it decided the cases without opinion—that the amendment was not violative of the spirit of the Constitution and the theretofore reserved powers of the States.

The undisclosed theory upon which the court upheld the amendment may have been, and probably was, that the question of the exercise in any particular case of the power of amendment under Article V of the Constitution was of a political nature and as such was not the subject of judicial cognizance, just as the court had previously held that the question of whether or not a State constitution provided a republican form of government, as guaranteed by another article of the Federal Constitution, was not a justiciable but a political question and was to be determined conclusively by the political branches of the Government. But it does not follow from this conclusion that an amendment substantially interfering with the right of local self-government is not, as such, in conflict with the fundamental spirit of the Constitution itself and with the theory and form of Federal government that it originally established.

This aspect of the subject is mentioned because the existence of practically unlimited power of amendment should warn all patriotic Americans, who believe in a Federal system constituted of "an indestructible Union composed of indestructible States," that the Supreme Court can not be looked to for redress and that the defense and preservation of the right to local self-government now lie wholly in the hands of the people, who, if they are not active and vigilant, may improvidently surrender or lose by default the most valuable of their political rights. In criticizing the eighteenth amendment and its inevitable tendency to beget other like amendments, Senator Thomas, of Colorado, in a learned and eloquent address delivered before the New York State Bar Association at its annual meeting last February, well said that "history warns us that the first step toward fundamental change leads inexorably to another, and yet another, until the great transformation is finally realized or violently prevented."

If the American people now permit the appropriation by Congress of $100,000,000 of Federal funds annually in aid of education in the States, it will soon be realized that this sum is inadequate to produce any substantial results, and the next step will be to increase the appropriation. In a few years it will be appreciated that Federal interference, which they have been permitting and seeking indirectly to bring about, can after all only be accomplished effectively by a constitutional amendment. Accustomed by that time to the idea of Federal regulation, anxious as some of the poorer States will be to be relieved of the burden and responsibility of education, misled by the clamor of ardent or fanatical propagandists, and blind or indifferent to the great principle and duty of preserving to the States their right to local self-government, the proposed amendment might be brought about as easily and as speedily as the eighteenth amendment.

The most serious aspect of the situation is that the doctrine of the rule of the majority no longer necessarily controls upon the question of the amendment of the Federal Constitution. States representing a minority of the citizenship of the Nation can amend the Constitution in any respect they see fit, and no matter how oppressive or how prejudicial may be any such amendment in its practical operation or enforcement, a very small minority can prevent its repeal although the best interests of the country at large may then demand such repeal. We have created so many new States that now, under the figures disclosed by the recent census, a group of 36 States could be combined which would represent only 45 per cent of the population, whilst 13 States would together have a total population of only 5 per cent of the whole. Stated in other words, the Constitution of the United States can now be amended by the votes of State legislatures representing a minority of the people of the United States, and State legislatures representing only 5 per cent of the people can prevent any repeal or change.

It is of paramount importance that the American people should clearly realize the fact that under the decision of the Supreme Court upholding the eighteenth amendment, there is, perhaps, no State function that can not be taken over by the Federal Government under the power to amend the Federal Constitution, and that the only protection lies in patriotic and vigilant public opinion. If these questions involving the perpetuity of local self-government and the right of each State to regulate education within its own borders be submitted to the people with adequate explanation and full discussion of the merits, the verdict will probably be a wise and just one. All parties and all religions are alike interested and concerned in preserving our institutions. The American spirit ought to lead to a sound, provident, and just conclusion. True Americans, who understand the real issue, will never barter away the heritage of local self-government simply to secure a few millions of Federal funds in aid of education. Nor will they abdicate their duties and responsibilities to their children and the children of their neighbors. They will not vote, as I confidently believe, to transfer the education of their children, a matter of as vital concern to them as their religion, to a bureaucracy functioning in Washington and controlled, it may possibly be, by obscure and irresponsible politicians. I have no apprehension as to the result, if those who believe in our present form of republican government will unite and defend their right to local self-government and not allow this great and vital issue to go by default.

In studying the recent publications upon the subject of education, I have been profoundly impressed by the general and emphatic recognition on the part of Catholic, Protestant, and Jewish organizations that systematic religious training should be regarded as indispensable in the education of our children, and that many of those who are now attending the public schools are not receiving proper religious instruction. The most complete vindication of the Catholic doctrine as to the necessity of religious training for school children has recently come from the thirty-odd Protestant denominations which were united in what was called the "Interchurch World Movement of North America," and in support of which an exhaustive survey was published.

This publication apparently favored the enactment of the Smith-Towner bill, but, among other pertinent observations on education, it declared that "the survey shows how utterly inadequate are the religious agencies and forces at work," that "America's greatest peril lies in the spiritual neglect of childhood," that there are "27,000,000 Protestant children and youth under 25 years of age who are not enrolled in any Sunday school or other institution for religious training," and who are "without any definite or systematic training in religion," that this defect "constitutes the greatest peril in our national life," that "this is the seed plot of immorality, crime, social unrest, and anarchy," that "one-half hour a week of religious instruction is utterly inadequate," that "unless this fundamental need of religious education be met, the solution of the present situation is hopeless," that "a religious education should be the heritage of every child," that "spiritual illiteracy is the greatest peril of organized society," and "is the forerunner of moral bankruptcy and national decay," that "the church must find a way to reach the children and to account for them systematically from infancy to maturity," that "the national public-school system must be supplemented by a unified program of religious education which will guarantee the spiritual homogeneity of our democracy," and that "unless such a program of religious education can be created, there is great danger that a system of public schools will become nationalistic and materialistic in theory and practice, and the direction of social development will be determined by the secular state rather than by the spiritual forces represented by the church."

Similarly, the Jews are fully realizing that many of the existing schools have failed in the essential need of religious education. At the commencement exercises of the Jewish Theological Seminary of America and Teachers' Institute, held last spring, the distinguished chairman of the board of directors is reported to have stated that of the 300,000 Jewish children in the city of New York "not 15 per cent of them received the proper religious education," and to have characterized as shameful the manner in which religion was being neglected by the Jews in the training of their children.

In conclusion I venture to point out that the matter of the Smith-Towner bill now pending before Congress is urgent, and that its consideration can not be delayed. Many active and zealous propagandists are agitating for the nationalization of education under the provisions of this bill, and hundreds of organizations throughout the country are said to have indorsed it and to have urged its passage. Such a measure, if once passed, will, as it seems to me, become the opening wedge; it will probably be found to be inadequate; there will be constant reaching out for more and more power in the matter of education, and there will then be started a movement for a constitutional amendment so as to render Federal interference and control adequate and enable the proposed new Department of Education effectively to regulate and control education throughout the whole country. Beginning with the present proposed yearly appropriation of $100,000,000, the tendency will, in my judgment, be irresistible to increase the appropriation, and then to insist that large Federal appropriations should be coupled with adequate Federal control. This in final analysis must spell the complete nationalization of education.

I am profoundly convinced that the tendency of the Smith-Towner bill, if enacted, would be distinctly prejudicial to the permanent and best interests of the Nation, as well as of the States, that the subject of education should be left within the exclusive control, responsibility, and duty of the several States under long-established and sound principles of local self-government, and that unless the present Federal centralizing tendencies be checked, our dual form of government can not long endure.

In this most critical period of our history every American is called upon, so far as lies in his power and to the utmost of his ability, to strive for a revival of reverence for American institutions as estab-

lished by the founders, and to inculcate, as the clear duty of National and State patriotism, a steadfast determination to resist the impairment or destruction of our Federal system.

WILLIAM D. GUTHRIE.

NEW YORK, *December 27, 1920.*

THE COTTON INDUSTRY.

Mr. SMITH. Mr. President, as we are discussing the two great commodities out of which the clothing of the world is made, I think it is an appropriate time to put into the RECORD an editorial which appears in one of my State papers, the News and Courier, of Charleston, S. C.

I do not believe the people of this country have even an approximation of the impending disaster, not only to America but to the world, in its supply of cotton. When it is taken into consideration that in the year 1921 there was practically the same acreage planted that there had been for perhaps the last 8 or 10 years and that our production dropped from the maximum, in 1914, of sixteen-odd million bales of cotton to 7,900,000 in 1921, it will be realized that that was not an accident of the seasons of cultivation; it was a result of the ravages of the pest to which I had reference yesterday when I called attention to white arsenic, out of which calcium arsenate is made.

I have never predicted the size of a cotton crop, but it is my opinion that the present crop will not very greatly exceed the crop of last year.

At the peak of the stress, in 1919, the American mills consumed of American cotton approximately 7,000,000 bales. Up until 1914 the exports of American cotton ranged from seven to ten million bales. The United Kingdom consumed around 4,000,000 bales of American cotton, Germany about 2,000,000, France about 1,000,000, the other European States taking up whatever balance there was, if any. The textile industry of England, which is her largest single investment, is dependent entirely, practically speaking, upon the supply of American cotton.

There has been no Government aid in any shape or form to the struggling people who have raised this wonderful fiber for the clothing of the nations. On the contrary, they have been the victims of every exploiting form of greed. They have been the victims of the fertilizer people, and when I say victims I mean they were helpless, and had to purchase fertilizer at the prices charged. They were the victims of the grocer, the dry-goods man, the speculator, and the buyer. Everything moving along the line of least resistance, the cotton raiser being the producer of one of the prime necessities of the human family, of course was an easy mark. We are busily engaged here to-day with the best brain of the country protecting those who convert the raw material into the finished article and are taking no concern or care of the source of the raw material which makes the manufacture of the finished article possible.

I predict that unless there be some relief found in the course of three or four years the South Atlantic States, as distinguished from the Gulf States, will cease entirely producing cotton. With the additional cost of from $15 to $20 an acre to fight this pest, with the ordinary cost for the artificial fertilization necessary and the enhanced price for labor, with the yield problematical as to whether it will be one-fourth of a crop or none at all, merchants can not afford to take a chance, the banker will not take a chance, and the laborer can not afford to take a chance.

These are the conditions that confront us. The rates of rediscount in our banks and the rates of primary discount are the same as though the crop was running along under normal conditions. In the States of North Carolina, South Carolina, and Georgia cotton is the medium of exchange.

I do not know what word I might say; I do not know if it is worth while to try to arouse the attention of the American people. If the sufferings of 15,000,000 to 20,000,000 people during the past two years can not reach them, my voice can not.

The editorial to which I desire to call attention corroborates what I have said and gives a very good picture of the conditions on the part of England, which is the leading nation of the earth outside of the United States in the conversion of cotton into the finished article, and her attempts to duplicate the supply from her own domain. Before reading the article, I ask permission to have such parts as I shall read printed in 8-point type.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SMITH. I now read the editorial from the Charleston (S. C.) News and Courier of July 21, 1922:

FUTURE OF THE COTTON SUPPLY.

"The shareholders of the British Cotton Growing Association held their seventeenth annual meeting in Manchester on July 4, and Lord Derby, who presided, reviewed the work of the association during the past year. Started with the purpose of developing, if possible, supplies of raw cotton within the British Empire, a new impulse has been given to the work of the association by reason of the lively fears now entertained by British spinners that the ravages of the boll weevil in America will soon result in a cotton famine which will leave a good percentage of Lancashire spindles idle.

"Satisfaction was expressed by Lord Derby with the accomplishments of the British Cotton Growing Association, the efforts of which, since the association began operations in 1903, had produced, he said, approximately 1,070,000 bales of cotton. Last year a crop of 165,100 bales was produced as compared with 105,800 bales in 1920. Much of this cotton appears to be of a most inferior quality. A good deal of it was produced last year at a loss to the association. In Nigeria the association had guaranteed the native grower a fixed price for his cotton. In the past 20,000 bales had been the largest crop produced in Nigeria, but in 1921 the association found itself with a crop of 31,000 bales dumped on its hands, involving an actual loss under the guaranty of about 113,000 pounds.

"In Uganda last year the crop amounted to over 81,300 bales and the growers experienced considerable difficulty in disposing of the cotton. Nyasaland produced a crop in 1921 of 4,637 bales, showing a disturbing variation in qualities, and the quality of the 2,000 bales produced in South Africa was also far from satisfactory. Political conditions have retarded progress in cotton growing in Mesopotamia, it was stated, and in Tanganyika, the late German colony of East Africa, 350 bales were ginned.

"The association is looking somewhat hopefully now to Australia. There, in Queensland, the association has guaranteed a selling price of 1 shilling 6 pence per pound for all first-class quality lint grown from approved types of long-staple seed, the guaranty to extend over a period of five years, with a maximum loss to the association of 10,000 pounds. Queensland produced last year 1,256 bales under this guaranty, and this season about 20,000 acres is understood to have been planted, from which a crop of approximately 8,000 bales is expected. Considerable difficulties will have to be overcome, however, to make cotton growing in Australia a success."

I have read this much to show that with all the resources of the United Kingdom, with the vast amount of her capital invested in cotton spinning, she has been unable to produce any cotton within her domain anywhere that will fulfill the qualities of the American cotton. Therefore, were the American cotton to fail, the British spindles would stop and the British Empire be bankrupt.

The editorial continues:

"In spite of large subsidies and other encouragements not very much headway would seem to have been made in discovering a region which is likely ever to rival the cotton-growing States of America as a cotton-producing country. Figures recently tabulated by the National City Bank of New York show that from 1881 to 1885 the United States produced 63.6 per cent of all the cotton grown throughout the world. Only in 1919 has the United States failed to produce 50 per cent or over of the total cotton grown, and in that year it produced 49.6 per cent. The world's cotton production has remained about stationary since 1906. The average between 1906 and 1910 was 20,956,000 bales. The largest crop produced since 1910 was in 1914, a world total of 26,022,000 bales, and the United States produced in that year 16,135,000 bales, or 62 per cent of the total.

"The fact is that with the ravages of the boll weevil unchecked the world is heading steadily toward a cotton famine, which would have arrived before now if it had not been for the war, which upset consumption. The Manufacturers' Record is absolutely right when it says that upon the South's ability to supply cotton 'rests the future of the textile industry and allied trades and the millions dependent on them.' The only way a cotton famine can be averted, if the boll weevil keeps up its destructive work, is to stabilize the price of cotton at a figure which will make it possible for the southern grower to maintain production in spite of the weevil."

I was anxious to reproduce this article from one of my home papers in corroboration of what I had said heretofore.

In conclusion I desire to say that the fluctuations of the market—right now at the present market level—are a fine illustration of the fact that the producers of cotton in the South are absolutely at the mercy of the prices dictated from abroad and at home.

Every man familiar with cotton growing in the South knows that at 40 or 50 cents a pound to-day there would scarcely be a profit in view of the amount produced. Yet the market is fluctuating around 21 or 22 cents a pound to-day, which will not

cover the actual cost of producing the cotton, to say nothing of showing a profit and meeting the necessary expense incurred in ordinary farming.

We are busy here piling up artificial legislation to take care of those who, by their resources and their organizations, can take care of themselves, and yet not one word spoken nor an hour spent in devising means to aid the great mass of the American people who are producing the raw material out of which these vast industries must find their possibility of existence. We have organized perhaps the finest commercial banking system in the world, and yet absolutely agricultural America is without a successful banking organization that will meet the particular needs of the poor devils in the field. Every man recognizes that we can not combine successfully the quick convertible assets necessary for commercial banking with the long-time turnover of agriculture, and yet we have left agriculture to be the victim of a system which can not extend him adequate financial assistance.

I am glad to say that there are organizing throughout the cotton-growing States cooperative selling agencies whereby the poor beleaguered producers of the raw material will combine their aggregate of 7,000,000 or 8,000,000 bales of cotton, finance it as best they may, and mutually combine in order to protect themselves; and yet that should not be necessary in a government such as ours. We ought long before this to have provided an ample banking arrangement to meet the necessities of the agricultural interests of the country, and amongst them the cotton grower. I believe that we are face to face as to the supply of raw material with the worst condition that the world ever saw. According to statistics furnished us by the department, we shall arrive at the 1st of August, according to their figures, with about 1,000,000 bales of carry-over from all the crops which preceded. If the crop this year should not exceed 9,000,000 bales, we will have a supply of American cotton of 10,000,000 bales, with the normal world consumption of from 14,000,000 to 15,000,000 bales.

Mr. DIAL. Of American cotton.

Mr. SMITH. Yes; of American cotton. The consequence will be that the spindles of this country and the spindles of Europe, or part of both, will have to lie idle until another crop is made; and yet in the face of that fact cotton is selling today at the rate for which it should sell were the conditions normal and the supply normal.

These are the facts which I desire to bring before the Senate at this time in order to show that the raw material out of which the manufacturers are to produce their goods is absolutely without help and selling at a price that is a disgrace to America, and yet we are busying ourselves, using all the force within our power, to accumulate and pile up the expenses upon the shoulders of those who are so defenseless and helpless.

Mr. DIAL. Mr. President, we read in history that during the days of the colonies they raised cotton as far north as New Jersey. In fact, history tells us the colonies in Pennsylvania raised enough to supply their local demands. The cultivation of cotton extended on down the coast. I have wondered often why it was that those people quit raising cotton in New Jersey, Pennsylvania, Maryland, and practically in Virginia. I presume it was because it was not profitable. If the present signs indicate anything, the practice of raising cotton will be discontinued more and more in the South.

While we are on the subject and for the information of the Senate, I wish to have printed in the RECORD as a part of my remarks a report of the National Agricultural Conference, held January 23–27 of this year, beginning on page 150 and running down to page 153 thereof.

The PRESIDING OFFICER. Without objection it is so ordered.

Mr. DIAL. I wish to take just a moment of the time of the Senate to call attention to a statement on page 152, where, after going into details of the cost of production of cotton, it is stated:

> The balance of $182.50 represents labor for the entire year for man, wife, and two children, which is 61 cents per day of 300 days. On a 365-day basis—

That includes Sundays also—

> this gives a total revenue of 10 cents per day for each member of the tenant's family of four.

During the debates we have heard a great deal of the pauper labor of other countries. If that is not pauper pay it would be hard for me to understand what is. There is some very illuminating discussion in the report to which I have referred.

We are making efforts to improve the condition of the cotton grower. It is absolutely necessary to the existence of the production of this commodity that we arrive at some radical change. I am very much in hopes that during this session the Members of the Senate will see the importance of some action and that we will pass some legislation along this line. I have a matter pending which I think goes to the vitals of the proposition. I shall ask of the Senate serious consideration of that proposition, which I think will do as much or more than any other one thing that could possibly be done to relieve the deplorable condition of this great industry.

APPENDIX.

REPORT OF SUBCOMMITTEE 5A ON COSTS, PRICES, AND READJUSTMENTS IN THE COTTON BELT.

Owing to varying conditions in different parts of the Cotton Belt, and especially to factors of boll-weevil infestation, land fertility, and the use of fertilizers, the cost of production of cotton varies so tremendously that it is impossible to discuss it adequately in a brief committee report. Your committee, however, believes that it would be helpful to discuss some of the conditions found in cotton production at present in order that the Nation and world may understand the extent in which this industry is threatened by present conditions.

The crop of 1920 was made at a higher production cost than any previous crop and the prices received for it were admittedly far below the cost of production. The crop of 1921 was made at a somewhat lower production cost, but turned out only about two-thirds of a recent average production, and prices have again been much below the cost of production. Two years of such conditions have destroyed a large part of the capital invested in cotton production, have faced a large proportion of the landowners, merchants, and fertilizer companies with bankruptcy, and have left a large proportion of the banks in a position where, but for the support of the Federal reserve system, the War Finance Corporation, and other outside capital, they would be unable to function. The boll weevil is now present in every producing State of the Cotton Belt except Missouri and Virginia, and has covered fully seven-eighths of the acreage devoted to cotton. During the past year its ravages (while not exclusively responsible for the small crop) greatly reduced the production in every large producing State except North Carolina.

The outlook for production the coming year is not good. The South has thus far experienced a winter almost as warm as last, a condition most favorable to the hibernating weevil. A large proportion of the farmers not only lack the funds or credit with which to procure fertilizers and labor but are discouraged at the outlook for production and prices.

It may be helpful at this point to give a typical illustration of the outlook for landowner and tenant. Let us take a 30-acre farm unit, valued at $1,500 and including 25 acres of cleared land. This is occupied by a tenant farmer who furnishes all the implements and labor, including mule power, and receives half the cotton and all the grain crop for his services. The landlord's account will appear about as follows:

Landlord's account:	
Debit—	
Taxes	$25.00
Interest and depreciation	150.00
Fertilizer for cotton	90.00
Cotton seed	10.00
Half of cost of ginning and baling	12.50
Supervision	100.00
Total	387.50
Credit—	
One-half of 5 bales of cotton, at 16 cents a pound	200.00
2½ tons cotton seed, at $30	75.00
Total	275.00
Landlord's loss	112.50
Tenant's account:	
Debit—	
Feed of mule	75.00
Depreciation and interest on mule	25.00
Taxes	5.00
Fertilizer for 10 acres corn and grain, at $3	30.00
Depreciation and repairs, implements	10.00
Half of cost of ginning and baling	12.50
Total	157.50
Credit—	
One-half of 5 bales of cotton, at 16 cents a pound	200.00
75 bushels of corn	50.00
100 bushels of oats	50.00
2 tons of hay	40.00
Total	340.00
Return received by tenant	182.50

The balance of $182.50 represents labor for the entire year for man, wife, and two children, which is 61 cents per day for 300 days. On a 365-day basis this gives a total revenue of 10 cents per day for each member of the tenant's family of four. That these figures are not overdrawn can be readily proven by reference to the production statistics of the Department of Agriculture which are readily available. The Census Bureau reports 1,890,000 farms producing cotton in 1919. This for the crop of 1921 would give 4¼ bales per farm. Assuming only one family per farm (a totally unwarranted conclusion) this would give each share-cropping farmer 2½ bales, or a revenue of $170 from cotton.

What would the cost of production of farm products be if farm labor were allowed a wage commensurate to that received by the coal miner, the railroad worker, the brick mason, or the factory operative? Your committee has not the data upon which to base this calculation, but states without fear of contradiction that no price received, even at the peak prices, will give the actual producer of farm products a wage comparable in any way with that normally received by all classes of union labor and even by most classes of farm labor elsewhere in the United States.

The boll weevil having practically covered the Cotton Belt, and the pink bollworm having been discovered at various points in the western part of the belt, the future hazards in cotton production are greater than ever before. A high production can be kept up only by a much higher range of prices than those prevailing in the past. Those in close touch with the cotton situation have no fear that the recent overproduction—or rather underconsumption due to world poverty caused by war—will continue, but rather are they concerned as to how to keep the cotton industry producing in sufficient volume to maintain a prosperous and well-balanced southern agriculture. It is true that present conditions, caused by a temporary underconsumption, have caused a most serious situation, and this situation must be met by a decreased acreage for 1922 and by financial measures to prevent dumping of the temporary surplus upon the market until demand overtakes supply.

Diversification of crops and the production of ample—but not excessive—supplies of foodstuffs and live stock should be encouraged in the Cotton Belt by every agency interested in the industry. Such a policy, while vital in the present emergency, is desirable at all times, for a normal acreage of cotton can not be planted, cultivated, and promptly gathered under boll-weevil conditions. The cost of cotton production can, to a certain extent, be reduced and the yields increased by educating the farmers of the belt in the proper use of fertilizers, the value of seed breeding, and the use of well-bred varieties of uniform staple and good character, and also by giving the farmers access to full information as to the best methods of farm management and diversification. This can best be accomplished by greatly increasing the scope of the extension service of the cotton States and according it ample support.

Attention is called to the growth of cooperative marketing in the cotton industry and the economic saving therefrom. We indorse the continuance and expansion of this movement and the action of the War Finance Corporation in supporting these organizations. We recommend that this corporation be continued until other measures to furnish adequate financial support be devised and put into operation.

Especial attention is called to the problem of the pink bollworm, and your committee recommends that the Department of Agriculture continue its investigations of the situation created by the invasion of this new pest, determine whether it is possible to eliminate or control it, and immediately go to Congress for the necessary appropriation, however large, for complete elimination or effective control. We make the same recommendation with reference to the boll weevil. The history of the pink bollworm in Egypt and in Mexico indicates that should it become firmly established in this country with its ravages added to those of the boll weevil, it is unlikely that cotton production can be profitably continued at any prices which the world may be willing or able to pay for the product.

High transportation charges add to the cost of production of cotton just as they do to the cost of production of every other commodity, and the cotton grower feels that the earliest possible steps should be taken to reduce this burden, and we protest any increase in rates through any proposed readjustment of rates.

Your committee would like to call your attention to the fact that a very high return for labor in the railroad, coal mining, building trades, and other industries has a very definite effect in the cost of production for cotton and is a factor in keeping wages and returns in the cotton industry at the present scandalously low level.

It would also call attention to the fact that the great cotton-producing industry, except in minor sections, can not be helped by a tariff. The tariff on cottonseed oil has, according to the best opinion of many students of that industry, been harmful rather than helpful to the producer. A tariff, when laid upon a product which must be purchased by the cotton producer, adds to his cost of production and reduces the return upon his labor and investment. A particular case in point will be the tariff on potash salts, a commodity which is indispensable to the production of cotton over large areas.

Mr. HEFLIN. Mr. President, I desire to say a few words in line with what the senior Senator from South Carolina [Mr. SMITH] has said, and also what has been said by the junior Senator from South Carolina [Mr. DIAL]. A very serious situation confronts the cotton producers of the United States. The cotton crop being produced this year will be the third crop in succession which will be sold below the cost of production. No man will or should continue in business if that business is a failure. Thousands of farmers have been compelled to quit trying to produce cotton; thousands of them this year were unable to make the financial arrangements to produce a cotton crop. Cotton, as the senior Senator from South Carolina has said, is now selling below the cost of production. That ought not to be, Mr. President, and there is a way to prevent such a condition.

Our farmers and merchants have tried to borrow money to hold their cotton until it would bring the cost of production plus a profit, but word has gone down the line from the Federal Reserve Board not to lend money in order to hold that cotton. What is the farmer to do and what is the merchant to do and what is the local banker to do? What can the local banker do when he can not get aid from the great Federal reserve banking system to help the producer carry his cotton until the business of producing cotton is made profitable? Yet, Mr. President, in the face of the fact that we are confronted with a cotton famine, in the face of the fact that the farmer is now selling his cotton below the cost of production and can not obtain money with which to hold his cotton for a price that will yield a profit, the banking interests of the East, and of Wall Street particularly, are moving heaven and earth to keep this condition hanging over the cotton producers of the South. They are asking the President to reappoint the present governor of the Federal Reserve Board, who has conducted this desperate, drastic, and murderous deflation policy. Some people are saying every now and then that the President will reappoint the present governor of the Federal Reserve Board; we hear, on the other hand, that he will not do so. I have good assurances from a certain source that he will not, and I am hoping and praying that he will not.

Mr. President, the present condition ought not to be permitted to continue any longer. If I were President and the governor of the Federal Reserve Board continued to serve the stock gamblers of the East with the money supply of the country and to withhold it from the farmers and merchants and bankers of the South and West, I would remove him instanter. He ought not to be permitted to serve another day in his present capacity. No one has a right to hold at the head of that great banking system such a governing power as we have at its head to-day. No one has the right to administer that banking system so that it will deny to the producers of cotton in the United States a profit upon their labor and investment. It is wrong; it ought not to be permitted.

The country is in a state of dire distress, not only amongst the farming class, but there is also industrial distress. There is more unrest and discontent in the country to-day than there has been in many years, but there is not anything in the financial world which the President could do that would so quickly restore confidence generally amongst the masses as to take from the head of the great Federal reserve banking system the deadly and dangerous power that now presides over it in the person of Governor Harding.

I shall not consume any more time of the Senate, Mr. President. I do not wish to interfere with the discussion of the pending tariff bill, but the senior Senator from South Carolina has put his finger upon a very important and serious matter, a matter that involves the welfare of millions of people in the cotton-producing section and of millions of people in the United States who are dependent upon cotton goods and also of people in other sections of the world.

If a cotton famine should develop millions of people will suffer for the wearing apparel which is made of cotton; millions of people who are employed in the spinning industry will be thrown out of employment. While Senators are here planning and pulling to heap up profits for a few men by the use of the taxing power, employing legislative enactment to take away millions of dollars from unwilling people by processes of law and to put them into the pockets of a few manufacturing magnates, I appeal for simple justice to the great army of cotton producers in the United States who are to-day selling their produce below the cost of production and are consequently eking out a miserable existence.

PETITION.

Mr. WILLIS presented a petition of sundry citizens of Sandusky, Ohio, praying for the passage of a protective tariff act based upon American valuations, which was referred to the Committee on Finance, and the body of the petition was ordered to be printed in the RECORD, as follows:

To our honorable representatives in the United States Congress, Senators and Representatives:

We, the undersigned residents of the city of Sandusky, Ohio, dependent upon the industrial prosperity of our community and interested in its development, respectfully urge that a permanent tariff bill be enacted that will protect American products and American workmen, and that the administrative basis of the bill for the assessing of ad valorem duties be American valuation, substantially in accord with the Fordney bill, as reported by the Ways and Means Committee of the United States Congress.

RETIREMENT OF NAVAL RESERVE FORCE OFFICERS.

Mr. SHORTRIDGE introduced a bill (S. 3861) to provide for the retirement of certain officers of the Naval Reserve Force on account of physical disability, and for other purposes, which was read twice by its title and referred to the Committee on Naval Affairs.

THE L. C. PARKER PLAN RELATIVE TO JUVENILE CRIME.

Mr. JONES of Washington submitted the following resolution (S. Res. 323), which was referred to the Committee on Education and Labor:

Resolved, That the Committee on Education and Labor of the Senate be, and it is hereby, authorized, by subcommittee or otherwise, to investigate the plan of L. C. Parker, of Seattle, State of Washington, for the reduction and elimination of juvenile crimes in the United States, and to recommend to Congress what, if anything, the Government of the United States should do concerning such plan and what, if any, arrangement should be made with L. C. Parker in connection therewith.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. WALSH of Massachusetts. Mr. President, I have some reluctance in attempting to discuss the wool schedule. I have not had the experience or the deep, keen, personal interest that some of the Senators on this floor possess who in the course of debate to-day have referred with a good deal of pride to the fact that they were manufacturers of wool or were woolgrowers. Therefore I can not speak with the knowledge or the self-interest of the wool manufacturer, and neither can I speak with the knowledge or the self-interest of the woolgrower. Fortunately, however, there has been prepared by disinterested organizations which have been created by the Government information of an unprejudiced character which gives the story of this industry and provides all the available facts necessary to discuss the wool tariff question from the standpoint of one who is not personally interested but is striving to determine the public interest and welfare.

Hardly a word has been said during this day's debate about the great army of consumers in this country upon whom the rates in this schedule will bear more heavily than will the rates in any other schedule in this tariff bill. Hardly a word has been said for the people of America who must wear woolen clothing in order to protect themselves against the cold and severe climate of our country. Hardly a word has been said for the people of America who must have wool, just as the people of my State are clamoring now for coal, realizing the approach of a great coal famine because of the strike in progress in the coal mines of this country. Has the consumer no rights? Has the consumer no right to stand here and to ask the only question which is in issue in the first two paragraphs of this schedule, namely, Is this rate of 33 cents on wool fair? Is it a just rate? Is it an honest burden to place upon the backs of the American people? Is it a tax that can be justified in the light of all available information?

The manufacturer is silent; he has been made voiceless; but if he could speak we know he would denounce the rate upon raw wool as an injury to him, as an injury to his business, as an injury to the growth and development of the wool-manufacturing industry of the United States. He has been silenced by the compensatory and protective duties levied in this bill upon wool manufactures, which are also excessively high.

Mr. President, I am going to confine what I have to say at this time strictly to the first two paragraphs. The wool schedule contains many paragraphs, each of which will provoke much discussion. The duties, compensatory and protective, levied upon tops, yarns, dress goods, woolen cloths, blankets, and knit fabrics all involve serious questions and somewhat different principles than are involved in the first two paragraphs—the one fixing a duty upon carpet wool, and the other paragraph fixing a duty upon raw wool used in clothing. What I have to say at this time is to relate to the first two paragraphs, and more particularly to the duty attempted to be levied upon wool clothing than that upon wool for carpeting, because I do not think there is very serious difference between this side of the Chamber and the other as to that paragraph. It permits the importation of carpet wool free of duty unless that wool is used for the making of clothes; but it is a singular thing, it is a significant thing, it is an indictment of the policy pursued by the drafters of this bill that in the very same paragraph where they admit free of duty the raw material out of which is made the carpet upon which people walk they impose a duty upon the very same raw material when converted into clothing which poor people must wear upon their backs, for only the poorest of the poor wear carpet wool in their clothes.

I shall not at this time, either, discuss, except incidentally, the cost to the manufacturer and then to the consumer because of the high duty levied upon raw wool. At a later time, in the discussion of this schedule, I shall address the Senate at some length about the cost to the American people of this excessively high duty upon raw wool, and I shall prove that it constitutes a burden upon the American people greater than they have ever before been obliged to assume.

Mr. President, the duty of 33 cents levied on wool for clothing in paragraph 1102 is the highest duty ever levied on raw wool under any tariff law. The duty in the Senate bill is a specific duty upon the grease basis, graduated upward at each decline of 3 per cent in the shrinkage. It is equivalent in each instance to approximately 33 cents per clean pound.

The House text provides for a specific duty of 25 cents per pound on the clean content, with a maximum ad valorem limitation of 35 per cent, which is the first time that the clean content of wool has been made the basis for levying a duty on wool. It is to be observed, therefore, at the very outset that the Senate duty is an increase over the House rate of at least 33 per cent, or even more whenever the maximum ad valorem provision in the House bill is operative, for it is clear that this proviso would, under certain conditions, have made the duty actually levied less than 25 cents per pound. This proviso was to the Senate committee one of the objectionable features of the House text, and was eliminated through the insistence of the agricultural tariff bloc.

Mr. SMOOT. Mr. President——

Mr. WALSH of Massachusetts. I know what the Senator is going to say, but he will please notice my words. I am not talking about the wool that has been produced in this country. The duty levied in this law is a duty on importations and not necessarily a subsidy or a bonus or a gift to the woolgrowers of this country.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Utah?

Mr. WALSH of Massachusetts. I do.

Mr. SMOOT. It was not to the wool producer in the past, but the manufacturer got his all right; and he took good care that he did get it, too.

Mr. WALSH of Massachusetts. I was astonished to hear the Senator confess to-day in this Chamber that he voted in the Payne-Aldrich bill for duties in behalf of the manufacturers of this country that he denounced here to-day in stronger terms than I could possibly denounce them, and yet he stood here and said, "I voted for that bill as a manufacturer and as a Senator of the United States."

Mr. SMOOT. Mr. President, I qualified that statement by saying that there were no goods that came in such as I described, with the exception of the sample blankets that were brought in here—I think a dozen pair—in that year; but I pointed to the fact that it was true under the Payne-Aldrich bill that if those goods did come in and were used in that way there would be 485 per cent duty upon them, and that provision is out of this bill.

Mr. WALSH of Massachusetts. My remark was provoked by the remark of the Senator that the manufacturers "got theirs," and they did get it. They got more than they ought to. One of the scandals of our national legislation is what the manufacturers got in the Payne-Aldrich bill, of which we will hear a good deal during this debate; but what I comment upon is the Senator's denunciation of that law, and his statement that he voted for it.

Mr. SMOOT. Or, in other words, there will be a profit between the wool itself and the time it gets into the cloth and is sold of 300 per cent on that 33 cents. That is what this statement says.

Mr. WALSH of Massachusetts. A profit of about 300 per cent. I am not going to defend the manufacturing interests. I am going to join with the Senator, and I am going to give him an opportunity, by his votes and by arguments produced here, to drive down some of the protective duties levied in this bill in favor of the manufacturers.

Mr. SMOOT. Mr. President, all that I wanted to call attention to particularly was the statement just made by the Senator as to this 33 per cent duty costing the wool-manufacturing industry $72,000,000. I say it will not be $72,000,000; but even on that statement of $72,000,000, the Senator says it will amount to $200,000,000 when it gets into the cloth. There is nearly 300 per cent, and somebody is going to account for it.

Mr. WALSH of Massachusetts. Why do we not find some way to check that 300 per cent instead of levying a duty which will help this industry and the woolgrowers to get more profits?

Mr. SMOOT. Mr. President, I do not say that that will be the fact. I claim that it will not be a fact, although the very men who make the statement are the very men who hope to have in the end that 300 per cent; but they will never get it under this bill.

Mr. WALSH of Massachusetts. Mr. President, what is the situation in this country that justifies now, to-day, the imposition of the highest rate ever imposed upon raw wool? Certainly the condition of the working people does not justify it. Certainly the condition of the business people does not justify it. Certainly the deplorable condition of the cotton growers, that the Senator from South Carolina just described, does not justify it. Where are the groups of people in this country who are in such a favorable situation financially to-day, this year, now, that they can have levied upon them a higher protective duty than ever before on raw wool?

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from New Mexico?

Mr. WALSH of Massachusetts. I yield.

Mr. BURSUM. In answer to the Senator's question I will say that the cost of production justifies this rate, and it is simply a question of policy as to whether or not it is desirable to maintain the industry in this country. If there ever was a rate based upon the actual cost of production as compared with the cost of the imported article, it is the rate which has been fixed upon this wool schedule.

Mr. WALSH of Massachusetts. Mr. President, I have no doubt whatever but that the woolgrowers have suffered greatly in the past two years; but the able Senator from South Carolina has just told you the troubles of the cotton growers, and they have just as much right to come here and demand that protective duties be given them as have the woolgrowers of this country.

The story which he has told of the depression in that business, of the losses, of the threatened destruction of that important industry, is paralleled by the story that we know and will hear from the woolgrowers; and let me say to you, sir, that there are walking the streets of this country now from two to four million people who have no way whatever of providing themselves with a livelihood, and must draw upon their reserve funds, as the woolgrowers, the cotton growers, the manufacturers, and the business interests of this country are sometimes obliged to do. Why not come here and ask that a protective tariff or bonus be levied in favor of those who have no employment whatever?

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts further yield to the Senator from New Mexico?

Mr. WALSH of Massachusetts. Just a moment. There is just as much reason for it if we are to take care of every industry that is impaired and injured. Why, Mr. President, if this thing goes on I look to see attempts to enact laws here which will demand that the American people buy this product and buy that product, and buy it at this price and buy it at that price, in order that certain industries may be kept prosperous. If this were the only industry, important and necessary as it is, that was struggling, that was suffering, that was financially embarrassed, it would be a different story. Only within the last week, and during the whole discussion, manufacturer after manufacturer has approached me and has said: "To show you how our business has been injured I will bring you statistics to show that we have had in the past two years more failures in our line of industry than in any other industry in the country and a higher percentage of failures than ever before." Is that the basis upon which we are to proceed to levy duties upon our people? When an industry meets with depression, must we come here and by law compel all our people to contribute something to the income of the people engaged in that depressed industry?

I now yield to the Senator from New Mexico.

Mr. BURSUM. Mr. President, we do not ask for a duty on the basis of failures or any hard luck; but we do contend that we are entitled to such a duty as will give the industry a relative purchasing power as compared with the purchasing power of other industries and other commodities and other things which enter into the expenses of the industry.

Mr. WALSH of Massachusetts. The Senator's industry is entitled to just as much fair consideration in the way of protection as any other industry. I do not dispute that at all.

Mr. BURSUM. Wool enters largely into clothing, and I say that the wool producer is entitled to a fair relative proportion of the proceeds of the article in which his product is used. For instance, take a suit of fine clothes made by a tailor. It will cost $95. The producer, the raiser of the wool, will not get to exceed $5 out of that suit, less the expense of commissions, and freights, and all other expenses, so that ultimately he gets less than 2½ per cent of the price of the suit.

Mr. WALSH of Massachusetts. I agree with the Senator; but the Senator must find some law to restrict profits if he is going to get for the producer of the raw material a better share of the proceeds.

Mr. BURSUM. Let me say to the Senator from Massachusetts, further, that even under the duty proposed the wool business will not yield to exceed 10 per cent on the investment for a term of 5 years to the woolgrowers in the West. It is simply a question of whether the Senator will agree that it is policy to keep alive this industry, and permit it to continue to produce in this country.

Mr. WALSH of Massachusetts. Let me ask the Senator one question, frankly: Has the woolgrowing industry ever been a paying industry in this country?

Mr. BURSUM. Well, yes.

Mr. WALSH of Massachusetts. It has been? When?

Mr. BURSUM. It has gotten along. It never has made large profits.

Mr. WALSH of Massachusetts. Then the woolgrowing industry of this country under former protective tariff duties on wool was prosperous, or was a paying business? Then I say we ought not to increase these duties to the extent which is proposed here simply because last year and the year before we went through a financial panic in this country.

Mr. BURSUM. Let me say to the Senator that the cost of production has greatly increased, the cost of labor has increased, the cost of grazing lands has increased, and taxation has increased, both county, State, and Federal; so that you can not produce wool under present conditions at the same cost at which you could produce it before the war, or 10 years ago, or 20 years ago.

Mr. OVERMAN. Does the Senator contend that this rate is put in the bill for the purpose of allowing the woolgrowers 10 per cent on their investment? Do I so understand him?

Mr. BURSUM. I say they can not make to exceed 10 per cent under this rate. It does not give them 10 per cent. They can not possibly make over 10 per cent, over an average of five years. There is no industry as hazardous as the live-stock industry. There is no class of people who encounter the hazards in industry that they encounter.

Mr. OVERMAN. That is the basis upon which this rate is to be levied, to give them 10 per cent on their investment?

Mr. BURSUM. Yes; we figure that. We think we ought to have it.

Mr. OVERMAN. Has that been the rule as to every industry in this country?

Mr. BURSUM. I do not think so. It is contended that some of them make a great deal more than that.

Mr. OVERMAN. But that is the idea upon which this rate is based?

Mr. BURSUM. I say that is about what the rate would produce under favorable conditions. A rancher might be able to make 10 per cent.

Mr. WALSH of Massachusetts. So I understand we are asked to pass a law fixing a protective duty upon wool which will, in the opinion of those who know best the woolgrowing industry in this country, reflect a profit of 10 per cent to that industry. That is the first time I have ever heard it proposed to this body that we should fix a protective duty which would give any class a fixed profit.

Mr. BURSUM. Does not the Senator think that the people who are in this business should be enabled to make a living?

Mr. WALSH of Massachusetts. I will not argue with the Senator, I will not go into any controversy about the depressed character of this business, about its great financial losses; but while the Senator is thinking of the woolgrowers I am thinking of the men and women of New England, and the men and women all over this country, who are walking the streets without any work whatsoever. They have a right to be considered when it comes to the question of tariff duties and of imposing taxes upon the people of this country, for the clothes they wear and the blankets that shelter them.

Mr. SMOOT. Mr. President, the Senator from New Mexico did not say that the committee reported this rate with a view of giving every woolgrower 10 per cent. That never entered the minds of the committee.

Mr. WALSH of Massachusetts. It is, then, a mere coincidence that the committee and the Senator from New Mexico agreed upon the rate that would result in that profit.

Mr. SMOOT. But the remark of the Senator from New Mexico was, that even with this rate there would be no woolgrower in the United States who could make more than 10 per cent, and he expressed the opinion, in answer to the Senator, that he thought they would make 10 per cent under this rate. Then he qualified that by saying it is the most hazardous business in the United States.

I want to ask the Senator another question: Was the statement that there would be a 300 per cent increase on this 33-cent wool by the time it got into cloth, or $72,000,000 in one case and $200,000,000 in another, made by the same party who said that a suit of clothes would cost $4.75 more if this increase in the rate of 33 cents over existing law took place?

Mr. WALSH of Massachusetts. The Senator is attempting to put on my tongue words I never used. I never referred to a 300 per cent profit. He did himself, and I did not dispute it. The Senator himself raised that question. I said nothing about the amount of profit to the manufacturer. The Senator is asking me if the authority which gave him the information which he had was the same authority which gave me information about another proposition. Who is the Senator's authority? Let him tell me that, and then I will tell him who mine is.

Mr. SMOOT. I had no authority except what I saw in the press, and that statement came from Mr. Goldman, and Mr. Goldman also made the statement that if the rate of 33 cents a pound on scoured wool took effect, a suit of men's clothing would cost from $4 to $4.75 more. I know how reasonable the Senator from Massachusetts is. I know he does not want to be misled, and he would not for the world try to mislead anybody else.

Mr. WALSH of Massachusetts. I think if the Senator will give me time I can make my position clear. I will state objections to this rate which I am going to try to prove. I do not know whether I will be able to or not, but I am going to try. One of them is the statement the Senator is now contradicting. He has not heard my side. He has not heard my mathematics. My authority is my own mathematics, plus what I hope is the disinterested information which the Tariff Commission furnishes in the pamphlets and documents they publish. I have no manufacturers' statistics. I have only the Tariff Commission's statistics.

Mr. SMOOT. I know that, and that is what I want the Senator to take. There is no question but that the tariff survey says that on May 19 of this year 50 to 60 of good medium fleece cost 40 pence per pound, which is 80 cents a pound. Add the 33 cents to that and you have $1.13 a pound, if every cent of the tariff were added. That is a scoured pound of wool that goes into a man's suit. There are 4 pounds of that scoured wool, taking the lightweights. Some do not like to say 4 pounds, but I say 4 pounds.

Mr. WALSH of Massachusetts. I do not want to interrupt the Senator, but I said a few minutes ago that on Monday I intend to discuss, separately and entirely apart from this rate, the question of costs. I am going to try to show that this rate, in the light of previous laws, in the light of all the information I have received, in the light of the depressed condition of the country as a whole, is an unfair, unjust, and wrong burden to place upon the backs of the American people.

Mr. SMOOT. At $1.13, 4 pounds makes $4.52 on the wool that goes into a suit of clothes. We could give him all the wool for nothing, not make him pay any duty, and if he was honest he would say it did not cost $4.75 more for his suit of clothes.

Mr. WALSH of Massachusetts. I want to ask one question. What does the Senator say will be the increased cost on the wool in a suit of clothes, the average suit of clothes worn by the average American citizen, by reason of this duty?

Mr. SMOOT. Over existing law?

Mr. WALSH of Massachusetts. Yes.

Mr. SMOOT. On the ordinary clothing in the United States, under existing law to-day, there will not be any increase, and I can prove it to the Senator. But there are the coarse English wools which we discussed this morning, on which there will be a great increase in the wool itself—that is, where the shrinkage is low.

Mr. WALSH of Massachusetts. The Senator says to me and to this body that we are proceeding to increase the protective duty upon raw wool, and consequently the compensatory duties upon the manufactured articles, but that there will not be any increase in the cost of clothing. That is absurd, and even a child would not believe such a proposition as that.

Mr. SMOOT. The Senator misunderstood me. I did not say there was not any increase——

Mr. WALSH of Massachusetts. I asked the Senator what, in his opinion, would be the increased cost of a suit of clothes. He said not anything. Then I say to him that we are proceeding to increase the duty upon raw wool, and consequently the compensatory duties to the manufacturers, and he has the hardihood to say it will have no effect at all upon the consuming public.

Mr. SMOOT. The Senator certainly did not understand what I said.

Mr. WALSH of Massachusetts. Perhaps I did not. I will give the Senator another chance.

Mr. SMOOT. I said that on the general run of clothing worn by men throughout the United States, under the existing rates, there is no increase.

Mr. WALSH of Massachusetts. If the wool growers get 10 per cent profit, somebody will have to pay it. Perhaps it is the manufacturer and not the consumer who will pay it, but that is incredible.

Mr. SMOOT. The Senator is not complaining of the 10 per cent rate in the emergency tariff law? The emergency tariff law saved every wool grower in the United States. If it had not been for that, there would not have been a single wool grower in the United States who would not have failed, I do not care who he is.

I wanted simply to say that the statement, which is going from one end of this country to the other, that this duty of 33 cents would mean an increase in the cost of a suit of clothes of $4.75 is not true, and I do not believe the Senator believes it is true.

Mr. WALSH of Massachusetts. I think I will have to make that assertion, or very near that assertion, and I will demonstrate it. I know I have not the ability at figures; I know I have not the wonderful analytical mind of the Senator from Utah. I know I can not penetrate into these questions to the depth he can, but I do know that when you levy a protective duty that becomes effective—and everybody knows that the rate on wool will, because we must import wool—it means that the consumers of wool must pay more for the cloth that they buy and the suits they wear. That, it seems to me, does not require any further demonstration than the statement itself.

Mr. SMOOT. I read from the Tariff Commission's report this morning that 4.5 per cent of the total wools consumed in the United States were these low-shrinking wools, and that we produce about 20 per cent of them in the United States, which would be less than 1 per cent of all the wools in the United States. The other 80 per cent is imported. The low shrinkage on wool comes in carpet wools, and we make those free, as the Senator knows.

Mr. WALSH of Massachusetts. Into what kind of fabric do the wools go which are imported, and on which the rate is being increased?

Mr. SMOOT. The great bulk of them go into clothing.

Mr. WALSH of Massachusetts. Yet the Senator says he is going to increase the duty, but that it will not increase the price of clothing.

Mr. SMOOT. That is exactly where the Senator did not understand me. None of that wool comes in skirting at all unless it pays 30 per cent, and if it comes in scoured it pays 45 per cent, and in the pending bill it pays 33 per cent.

Mr. BURSUM. Mr. President, I simply desire to call the attention of the Senate to the fact that this rate is practically one-third less than the present rate on wool. The present rate is 45 cents on scoured wool, 30 cents on skirted, and 15 cents on cleaned.

Mr. WALSH of Massachusetts. I am going to have something to say about that directly.

Mr. BURSUM. So that this rate is a lower rate than the one under which we are now operating.

Mr. WALSH of Massachusetts. I think, with the joker in the emergency law, this is a lower rate, but without the joker, so called, to the casual reader of the emergency law it appears to be lower. The joker did succeed in doing away with any rate upon wool at all, practically speaking, but put an embargo on wool. It stopped all wool from coming into this country, and I say to the Senator that if the emergency law should continue in operation another year you would see the prices of wool and wool clothing increase in this country to heights they never reached before. The Senator knows he will not dispute my statement that the recent increases by the American Woolen Co. in the price of woolen cloth have been due to the fact that the emergency embargo law is just now becoming effective. The oversupply of wool in the world did not permit that law to become operative until now. But just now it is becoming effective. We are going to feel the results of the embargo, the results of an embargo on one-half of the wool which people must have in the clothes they wear.

Mr. SMOOT. Mr. President, I want to say right in this connection——

Mr. WALSH of Massachusetts. The Senator may go on; I do not care about what time he consumes, but if Senators would permit me to demonstrate my propositions one at a time and to discuss them, I would be able to answer some of the questions which Senators are now presenting to me. I have a very long discussion and considerable to say about the effect of the emergency tariff law, which will answer the question that has just been propounded.

Mr. SMOOT. I want to say to the Senator now that with the emergency tariff law in effect I have sent to five of the best mills in the United States and asked them to send me samples of their goods with the prices of April, 1920; July, 1921; and February, 1922. I want to say to the Senator now that the July prices of 1921 were less than one-half of what they were in April, 1920. I want to say further that the prices in February, 1922, under the emergency tariff law, were less than they were in January, 1921.

Mr. WALSH of Massachusetts. What does that prove? Does not every American know that the peak of prices in

everything was reached in 1920, and that there has been a decline since in wool as well as everything else?

Mr. SMOOT. I am speaking now of July, 1921, after the emergency tariff law was enacted, and I am speaking of the prices of 1922. The February, 1922, prices were lower than the July, 1921, prices.

Mr. WALSH of Massachusetts. Will the Senator give us the prices since February, 1922?

Mr. SMOOT. Yes.

Mr. WALSH of Massachusetts. Why did not the Senator give us the last prices available? The Senator knows that the prices to-day are substantially above those of February, 1922. He knows there has been a substantial increase in prices between February, 1922, and the present time. Why take the lowest figure under date of February? Does the Senator dispute the fact that there has been a substantial increase since February?

Mr. SMOOT. I dispute the fact that that was the lowest opening. There were only two openings in woolen goods in the United States, and the opening of those goods was in February, 1922, and that is the price I quoted. I have the price lists here, and any Senator can find out by asking any purchaser of wool.

Mr. WALSH of Massachusetts. Will the Senator dispute that the American Woolen Co. announced increases in prices of 20 per cent and more within the last two months? Will he dispute that?

Mr. SMOOT. I deny the fact that all goods——

Mr. WALSH of Massachusetts. Will the Senator dispute that? Yes or no.

Mr. SMOOT. I say that in one line of goods there was an increase of 20 per cent, but because of that fact it does not necessarily follow that there was an increase in all the lines of all the mills of the United States. I could tell the Senator the reason why.

Mr. WALSH of Massachusetts. I want to know the Senator's position. The Senator states now that there has been no increase except in one line of woolen goods since February, 1922.

Mr. SMOOT. No; I did not say that.

Mr. WALSH of Massachusetts. What was the Senator's statement about the present prices compared with those of February, 1922?

Mr. SMOOT. The Senator said 20 per cent——

Mr. WALSH of Massachusetts. I said it is more than 20 per cent. There have been two, if not three, increases in the prices in the last three months, due to the fact that the emergency tariff law is now becoming effective in the prices of woolen cloths.

Mr. SMOOT. Of course, the emergency law was enacted in May, 1921. That is when it was enacted.

Mr. WALSH of Massachusetts. Is it not a fact that all the world was flooded with wool and that this country had an oversupply of wool, and that it is now becoming exhausted and we are beginning to draw upon the world's supply, and when we began to do that we found an embargo against wool coming in here?

Mr. SMOOT. We took one hour of time this morning in talking about the rates on wool because of overproduction in the world in 1921. The Senator knows that where there is an overproduction—and particularly is that the case with the coarse wools—we had the Government of the United States carrying over about 60,000,000 pounds and no demand for wool. The price of wool went down. There are abnormal prices now and there were abnormal prices in 1921. There are, so far as coarse woolens are concerned, abnormal prices to-day. We can buy the coarse woolens to-day in London for 22 cents a pound. They are abnormal, and why? It is because there is no special demand for them in the world to-day.

Mr. WALSH of Montana. Mr. President, with the permission of the Senator from Massachusetts——

Mr. WALSH of Massachusetts. I yield to the Senator from Montana.

Mr. WALSH of Montana. The Senator from Utah has twice to-day asserted that but for the emergency tariff law every producer of wool in the country to-day would be in bankruptcy and the industry totally destroyed. I do not care to allow that statement to go unchallenged. There is no justification whatever for it, in my judgment. I voted against the emergency tariff law for reasons more or less unrelated to the duty upon wool. Nevertheless, the facts in the case disclose that the contention made by the Senator from Utah has no support whatever.

I have here a schedule furnished me by the Bureau of Markets giving the average prices of wool for each month from January, 1921, down to and inclusive of the month of April, 1922. It discloses that at no time during that period was the price of wool in London less than 21 cents.

Mr, SMOOT. Oh, well, Mr. President——

Mr. WALSH of Montana. I object to the Senator interrupting until I get through, and then I shall be very glad to yield to the Senator.

The fact about the matter further is that the emergency tariff law, although it was approved in the month of May, 1921, did not become effective so far as the market prices were concerned until after all of the wool produced in this country during the year 1921 was on the market, from the fact that large importations were made in anticipation of the enactment of that law. So that the wool prices for 1921 have no relation whatever to the emergency tariff law.

So far as destruction is concerned, I was in the wool business myself for 10 years as a side issue, and I know something about it, though, of course, not so much as the Senator from Utah. I was fortunate enough to dispose of all my interests in the wool business several years ago, so I speak as an onlooker in Venice. But when I was in the business we got 17 cents a pound for wool, and we considered that we were doing fairly well. Now, the cost of producing wool has, of course, very largely increased during the last five, six, or seven years. The range has been taken up, the cost of labor has increased, the cost of supplies has increased, and so on. But I think it is utterly indefensible in any man to say that when wool is selling at 21 cents a pound on the market in London the wool business would be utterly destroyed.

The fact about the matter is that the figures show during all of this year prices for wool in London which ought to be regarded as pretty fairly remunerative for the production of wool in this country.

In January, 1922, the price was 26 cents a pound; in February, 26 cents; in March, 28 cents; and in April, 28 cents. I submit this table, and with it a table of importations during the same period, showing that up to and including the month of April, 1921, our importations of wool amounted to 227,567,377 pounds, while the total for the year amounted to 326,365,751 pounds; in other words, about three-fourths of all the importations occurred during the first four months of the year, so that the emergency tariff law was of no benefit whatever to the woolgrowers in the United States, so far as 1921 was concerned.

Of course, for 1922 there was some substantial advantage, because in the month of January, 1922, the price in the United States was 37 cents, while in London it was 26 cents; in February, 1922, the Boston price was 41 cents as against the London price of 28 cents; in March, 1922, the Boston price was 41 cents as against the London price of 28 cents; and in April the Boston price was 39 cents as against the London price of 28 cents. But when wool was selling for anywhere between 21 and 28 cents a pound I think it rather an unjustifiable statement to say that the industry would have been ruined.

Mr. President, I ask that the tables to which I have referred may be printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Monthly average prices of wool.

[Wool Record and Textile World (London prices). Boston Commercial Bulletin (Boston prices).]

Month.	Boston.[1]	London.[2]
1921.	*Pound.*	*Pound.*
January	$0.29	$0.53
February	.30	.45
March	.30	.37
April	.30	.30
May	.29	.26
June	.28	.21
July	.27	.21
August	.26	.22
September	.26	.23
October	.27	.25
November	.28	.25
December	.32	.26
1922.		
January	.37	.26
February	.41	.28
March	.41	.28
April	.39	.28

[1] Ohio, Pennsylvania, and West Virginia, ⅜ blood, unwashed.
[2] British fleece wool—pick shrop hoggets.

Imports of wool, unmanufactured, into the United States by months, 1921.

[Statement prepared by Research and Foreign Statistics Section, Bureau of Markets and Crop Estimates. Source, Bureau of Foreign and Domestic Commerce.]

	Pounds.
January	21,169,480
February	42,885,968
March	98,103,098
April	65,402,631
Total (four months)	227,561,377
May	14,744,598
June	5,951,755
July	9,396,864
August	15,866,744
September	14,592,459
October	9,085,706
November	10,946,395
December	12,519,853
Total (eight months)	93,104,374
Total for year 1921	320,665,751

Mr. SMOOT. Mr. President, I wish to show that the figures quoted by the Senator are wrong. I do not know who prepared them, but to show that they are wrong, I want to quote from the Tariff Commission as to the London market. For instance, 36/40's crossbred fleeces on March 5, 1921, were unsalable; they could not sell them. In April they could not sell them. On May 12 they were 9 pence, or 18 cents.

Mr. WALSH of Montana. May I inquire from what the Senator is reading?

Mr. SMOOT. I am reading from "Recent Tendencies in the Wool Trade," page 12. On June 18 the price was 9 pence, or 18 cents; on July 28, 7 pence, or 14 cents. That is not 20 cents a pound. On September 15 the price was 8 pence, or 16 cents. Then, coming down to October 15, 1921, the price was 8 pence, or 16 cents; October 30, 8 pence, or 16 cents; December 8, 8½ pence, or 17 cents; January 12, 10 pence, or 20 cents; February, 9 pence, or 18 cents; March 10, 9 pence, or 18 cents.

Now, let us see whether there was not any increase in the price during the first four months of 1921.

Mr. WALSH of Montana. Mr. President, will the Senator pardon an interruption?

Mr. SMOOT. Yes.

Mr. WALSH of Montana. The Senator has given us the figures for the very lowest grade of wool scheduled.

Mr. SMOOT. And the Senator said there was no wool sold for 20 cents in London.

Mr. WALSH of Montana. Oh, the Senator is quite in error.

Mr. SMOOT. I will let the RECORD speak for what the Senator said.

Mr. WALSH of Montana. The table shows the average price of wool, and it gives the quality as three-eighths crossbred.

Mr. SMOOT. Of course there never was any three-eighths crossbred that sold for 20 cents.

Mr. WALSH of Montana. The Senator does not intend to say that the grades he spoke of are ordinary western country wools?

Mr. SMOOT. No; and I say to the Senate of the United States that there was not any question but what the price was never less than 20 cents a pound on western wools in London. There is no doubt about it at all. That, however, is on the scoured pound. That is not in the grease. On the scoured pound the Senator will note that I quoted as to the three-eighths crossbred and not in the grease. The prices I quoted were on scoured wool, not wool in the grease.

Then, taking the prices showing the advances on wool, the increases began in January. On the fine staple in October, 1920, the price was $1.37. Then the peak began to fall. In January the slump came and prices went to 83 cents, in April to 90 cents, and then fell in July to 83 cents, in October to 83 cents, and in January, 1922, went to 91 cents. That is on the scoured pound.

Mr. GOODING. Mr. President, will the Senator from Massachusetts yield to me?

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WALSH of Massachusetts. I yield to the Senator from Idaho.

Mr. GOODING. The junior Senator from Massachusetts is discussing the question of the tariff from the laboring man's standpoint; and he is fighting for a reduction of every duty which is contained in the bill. I myself am advocating a high protective duty and voting for every rate, regardless of how high it may be, in the interest of the laboring man. This country is the only country in the world, Mr. President, which, since the World War, has not increased the protection afforded to manufacturers. There is no exception to that rule. Germany, as measured by the mark, has increased her protective tariff rates sixty-five times; Austria, measured by the kronen, has increased her protective tariff rates two hundred times; but we permit importers in this country to go to all foreign countries, with their depreciated currencies, and to bring in foreign goods and sell them here regardless of what they cost. On the other hand, the people are not getting any benefit from such importations, as has been clearly shown by the exhibits which have been presented here on different occasions, which demonstrated that as high as 3,000 per cent profit was being charged by the department stores on foreign-made goods.

Our tariff law to-day affords the lowest protection accorded by any country on the earth, not even excepting free-trade England. England has 26 per cent protection, as against all German imports, while the average rates in the pending bill are not 35 per cent. Besides that, England provides a protective rate of 33 per cent additional on all her "key" industries. Unless we do what Germany is doing, what Austria is doing, and what every other country is doing—shut our doors against imports of goods of foreign manufacture which may be manufactured in our country we shall not put to work the 3,000,000 or 4,000,000 men now out of employment, for those men can only be put to work by starting the wheels of industry.

The Senator from Massachusetts may say that we are not getting any great amount of imports from Germany, but we are getting a very much larger amount of imports, not in dollars and cents, perhaps, but very much larger in amount, to displace labor than we got before the war; two or three times as much. Unless we do what every other country has done, practically impose an embargo, we shall never increase our manufactures. I can understand why the Senator might oppose the rates proposed if they were based on the American valuation, or might feel that the rates were too high, but on the foreign valuation, measured by the mark and by the kronen, and the depreciated currencies of other countries, we have not any protection at all.

I do not care how high may be the rates which are adopted in this bill, it is not going to help some of our manufacturing industries. I am discussing the tariff bill, I wish to say to the Senator from Massachusetts, in the interest of the laboring man. It is his question, and nobody else's. I want such protection as will give him a job in America; and the only way he can get it will be by protecting our industries and shutting out imports, because when we import $1,000,000 worth of foreign products we import $1,000,000 worth of foreign labor. That is all there is to the question of protection—the opportunity for the American laboring man to have a job.

Mr. WALSH of Massachusetts. Mr. President, one distinction between the position of the Senator from Idaho and of myself is this: He wants the laboring man to have a job, while I want the laboring man to have a wage which bears some relationship to the cost of living. To obtain that for him it is very essential that reasonably low protective tariff duties shall be levied.

However, the discussion just indulged by the Senator from Idaho is of a general nature and does not relate to the subject under consideration. At some other time I shall again discuss, if necessary, at length my general views upon protective tariff duties, but at this time I am trying to confine the discussion and have up to now confined it to the schedule and paragraphs which are immediately under consideration. Mr. President, I must proceed with my argument.

RATE UNDER EMERGENCY TARIFF LAW.

Mr. President, in order to appreciate the magnitude of the proposed duty let us make a comparison of the duties levied in previous laws. To do this we should transpose the duty levied on wool in the grease to its equivalent in clean content.

First, let us consider the emergency tariff law. This law imposed a duty of 15 cents per pound on unwashed wool, 30 cents per pound on washed wool, and 45 cents per pound on scoured wool. But the rates actually in effect were double those here noted because of a joker relating to skirted wool, which reads as follows:

> On wool and hair provided for in this paragraph, which is sorted or increased in value by the rejection of any part of the original fleece, the duty shall be twice the duty to which it would otherwise be subject, but not more than 45 cents per pound.

Incidentally it is to be noted that this limitation of 45 cents per pound refers to wool in the condition in which imported. It does not apply to the unwashed wool which, if skirted, would be dutiable at 30 cents; but makes the duty on washed

wool, if skirted, 45 cents instead of 60 cents, and it prevents any increase in the duty of 45 cents on scoured wool—that is, wool imported in the scoured condition. It is therefore plain that the equivalent clean-content duty can be very high despite this 45-cent limitation. On unwashed wool which has been skirted and which shrinks 50 per cent the duty would be equivalent to 60 cents per pound, clean content.

The importance of this joker can best be appreciated when we understand that practically all the wool for clothing imported into this country up to the passage of the emergency law was skirted wool. All previous laws levied a duty upon wool on the grease basis. The emergency law apparently followed that principle of levying a duty on wool on the grease basis, but by the injection of this clause practically doubles the rates. Thus the rate of 15 cents per pound on unwashed wool, because it is imported in the skirted condition, actually amounts to 30 cents per grease pound or, assuming a 50 per cent shrinkage, 60 cents per pound clean content.

Wool in the grease includes wool which is increased in value by the rejection of part of the original fleece.

"Skirting" is merely the removing of those parts of the fleece which contain extraneous matter, other than grease, for the purpose of decreasing the shrinkage of wool.

Because in the past the duty on wool has always been levied upon the grease basis the domestic importer has always brought in skirted wool in order to save payment of duty on extraneous matter, other than grease. The effect of the joker, therefore, is that for practical purposes the duties named in the emergency law are actually doubled and amount to an embargo.

RATE UNDER THE UNDERWOOD LAW.

Under the Underwood law all wool was admitted free.

RATE UNDER THE PAYNE-ALDRICH LAW.

Under the Payne-Aldrich law wools of the type in paragraph 1102—wool for use in clothing—were divided into two classes—Class I and Class II. The duty on Class I wool was 11 cents per pound on the grease basis, and on Class II it was 12 cents per pound on the grease basis. The great bulk of our imports of wool fall into Class I. This 11-cent rate on wool in the grease is equivalent to approximately 22 cents on the clean-content basis. Or, assuming that under a clean-content duty imported wool would not be skirted and would shrink 55 or 56 per cent, the equivalent of an 11-cent grease duty would be about 25 cents per pound, clean content. As a matter of fact, the foreign wools, if unskirted, would probably shrink less than 55 per cent on the average. In fixing the clean-content rate in paragraph 1102 at 33 cents per pound it is to be noted that the Senate amendment increases the duty 50 per cent over the rate in the Payne-Aldrich law; or, on the second assumption above, 33 per cent; or, in case of low shrinkage, more than 50 per cent.

INEQUITIES OF PREVIOUS LAWS GROWING OUT OF DUTIES LEVIED ON A GREASE BASIS.

Under the Payne-Aldrich tariff law and under previous protective tariff laws the duty on wool was a specific duty levied upon the grease basis. The inequitable results of such a duty are notorious in the wool trade.

Under such a system of duties it is obvious that there is a premium placed upon the importation of wool with a minimum shrinkage, for the lower the shrinkage the less duty which must be paid upon grease. The reason for importing low-shrinking wool under this condition is precisely the same as the reason for importing skirted wool—that is, any reduction in the amount of matter extraneous to the native fiber will lead to a saving in the amount of duty.

The result of all this was that those sections of the domestic wool-manufacturing industry which were forced to utilize high-shrinking wool were discriminated against in comparison with those branches of the industry which were able to use medium or low-shrinking wool. Inasmuch as the woolen branch of the industry—carded woolen manufacture—is more largely dependent upon the finer and higher shrinking wools than is the worsted branch, it follows that the effect of a duty levied upon the grease basis has been to discriminate against the carded woolen manufacturers and in favor of the worsted manufacturers.

Of course, the Democratic Underwood tariff, placing wool on the free list, eliminated this discrimination. The public protest, particularly against Schedule K, which followed the enactment of the Payne-Aldrich law was so loud and was such a powerful factor in the repudiation of that bill by the electorate in the election of 1912 that it can be safely asserted that this country will never return to the levying of duties on wool on a grease basis.

RECENT IMPORTS AND EXPORTS.

Mr. President, statistics show that after the passage of the emergency tariff law importations of wool dropped from 52,000,000 pounds in April and 80,000,000 pounds in March to 868,000 pounds in June and 656,000 pounds in July. August showed a jump to 3,000,000 pounds, while in September the importations fell back to 293,000 pounds. It is to be noted that importation figures here quoted are "general importations"—that is, they include both wool entered in bond and wool entered for consumption, or upon which the duty has been paid. Table 4 in the Tariff Commission's report on the operation of the emergency tariff law shows very clearly that practically all of these importations of wool since the enactment of the emergency law have gone into bonded warehouses. The outstanding feature of Tables 3A and 3B is that the emergency tariff law almost shut off the imports of Class I and Class II wool. It must be borne in mind, however, that we must import wool at any price in order to take care of our consumption. The Tariff Commission, in the same report, points out the fact that there has been some importation of wool for possible speculative purposes. Wool has been imported and stored in bonded warehouses on the assumption that this bill might establish a rate lower than that in the emergency law. It can be readily seen why this should be done. Without the joker above referred to, the duty on wool at 15 cents per pound on the grease basis would be lower on the average than would be the duty of 33 cents per clean pound, which is imposed in the Senate bill. But inasmuch as the skirted clause in the emergency tariff law makes the actual duty 30 cents per pound on the grease basis—which would be equivalent to approximately 60 cents per clean pound—it is apparent that the duty in the emergency tariff law is, for practical purposes, higher even than the 33 cents per pound duty in the Senate bill, though to the casual observer apparently much less. Consequently there has been of late a considerable importation of wool accumulating in the bonded warehouses, upon which it is expected that a lower duty may be levied under the proposed low. Of course, if there were any assurance that the emergency law would continue to operate over a long period, it is quite likely that the domestic purchaser of foreign wools would instruct his foreign clients not to skirt the wool, in order that the doubling of the duty might be avoided. But in view of the tentative nature of the emergency law it has not been feasible to carry out such a scheme, and the result has been that the actual rates applied have been double those contained in the emergency law. If the emergency law were to operate over a sufficiently long period, the skirting of wool shipped to this country would probably cease, as has been stated, and in this case the rates actually operative under the emergency law would be not far different from the rate of 33 cents per clean pound contained in the Senate bill.

Assuming that the average shrinkage of unskirted imported wool would be, say, 55 per cent, the duty of 15 cents per grease pound in the emergency tariff would be equivalent to about 33 cents per pound, which is the duty in the Senate bill. Some of the unskirted foreign wools will, of course, shrink more than 55 per cent; others less than 55 per cent.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from New Mexico?

Mr. WALSH of Massachusetts. I yield to the Senator.

Mr. BURSUM. I desire to call the attention of the Senator from Massachusetts to the fact that there is a slight difference of opinion about this "joker" which he has been talking about. Of course, it is admitted that the rate of the emergency tariff was a higher rate than the rate which is now proposed. The emergency tariff provided for a rate of 45 cents. The rate on wool in the grease was 15 cents. The duty on skirted wools or washed wools or wools in any way improved through the process of manufacture or partial manufacture, altering the character of the fleece, was 30 cents; but the Senator is hardly fair about this "joker" proposition.

The truth of the matter is that it is the grower on whom the "joker" has been practiced from time immemorial. The producer has been led to believe, and those interested in cutting down the rate of duty on the wool have led Congress to believe, that 11 cents a pound duty, as provided under the Payne-Aldrich law, and as provided under nearly every other tariff that I can recall at this time, was intended to be 11 cents a pound on a whole fleece taken off the sheep, or wool in the grease. How did it work in practice?

Mr. WALSH of Massachusetts. I do not think there is any difference between us. What the Senator means to say is that

the American woolgrower all of these years has been selling unskirted wool, while the importer has been selling skirted wool. Is that true?

Mr. BURSUM. The importer has done this——

Mr. WALSH of Massachusetts. Is that a fact?

Mr. BURSUM. That is a fact, and here is where the American producer has been defrauded: He has not obtained the protection that the public believed he was obtaining. For instance, the duty would be 11 cents a pound. What would the importer do? He would eliminate the belly, eliminate the tags, eliminate the sides, and bring in the choice portion of that fleece, which would shrink all the way from 30 to 40 per cent. In place of bringing in 33⅓ pounds of wool, which was estimated when that duty was levied, for 11 cents, he would bring in 60 pounds of wool, and in some instances 70 pounds of wool; so that he was simply cutting down the rate of duty as intended by the makers of the bill at least 50 per cent, and thereby defrauding the producer of this country of the protection which was intended for him. I say that the joker has been in favor of the manufacturer, in favor of the importer, and it has been against the producer and the grower.

Mr. WALSH of Massachusetts. Mr. President, I do not think I differ very much with the Senator about the situation he has described. There is no doubt whatever but that the American-grown wool, because it was not skirted, shrank more than the imported wool, which was skirted, and therefore that the duty of 11 cents per pound on grease wool was not entirely and completely effective in giving to the woolgrower exactly 11 cents per pound more than he would have received if the wool that came in from Europe was not skirted.

Mr. LODGE rose.

Mr. WALSH of Massachusetts. I will yield to my colleague in just a moment. Anticipating a reduction from the emergency law in the present law, there have been imported large amounts of wool, which are held in bond and will be released when this new tariff law becomes operative, the wool importers figuring that it is better to hold it in bond and wait and see if they can get a less rate than they could get under the emergency law, because the emergency law was prohibitive.

I now yield to my colleague.

Mr. LODGE. I was only going to make the point that in my colleague's first statement I thought he made a little error, because there has come into the port of Boston since the 1st of January the largest amount of wool ever imported; but, of course, it is in bond, as my colleague says, awaiting the passage of this bill.

Mr. WALSH of Massachusetts. Yes. Mr. President, I have those figures before me, and while I am not going to take the time to read them, I do not think there is any disagreement between us that the emergency law has shut out the importations of wool which were immediately applied to commercial uses in this country, and that whatever importations have come in recently have been in bond and have been held in bond for the purpose of waiting for a change in rates.

Mr. LODGE. Over 100,000,000 pounds have come into Boston.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Utah?

Mr. WALSH of Massachusetts. In just a moment. Of course, that is to be expected. How could you expect the manufacturing interests in this country who, under the Underwood law, have been getting free wool, and who, under the Payne-Aldrich law, have been getting wool at 11 cents a pound in the grease, to meet now, in this time of great depression, a price of 30 cents on wool in the grease, or 60 cents on the cleaned content?

I yield to the Senator from Utah.

Mr. SMOOT. Mr. President, I want to say that the so-called "joker" in the emergency tariff bill was put in there with full knowledge of what it really meant; and let me tell the Senator one reason why it was worded just as it was.

On March 18, 1922, a certain Philadelphia importer of wool undertook to bring in wool here classed as carpet wool, so that it would come in free, or, if not free, in clothing under the lowest rate of duty, and inside of those bales was the finest wool from South America. It happened to be detected. If it had not been detected, simply through one bale of wool having been torn and the wool showing, there would have been $275,000 worth of wool imported into the United States, and the great bulk of that value would have been fine wool, and the Government of the United States would have been cheated out of every dollar of duty. I am quite sure that the Senator has heard of that case.

Mr. WALSH of Massachusetts. I have heard of that case.

Mr. SMOOT. That was on March 18 of the present year. That was after the emergency bill was in operation; and then they tried to rob the American Treasury of the amount of the duty by putting coarse carpet wools around fine wools from South America.

Mr. WALSH of Massachusetts. Mr. President, the Senator's suggestion leads me to the next proposition which I was about to discuss.

Mr. SMOOT. Mr. President, I do not want to be misunderstood in what I said. I do not want it thought that I have said that all importers would try to defraud the Government in this way. That is not so; but I do want to say that the importers have the brightest minds that there are in the United States, and they have taken the very best attorneys and the very best appraisers that the Government of the United States has educated for years and years. I am not blaming them if they can pick a hole in the wording of the tariff law; but they have these men at work, and that is what they are paid for, and if there is any flaw in the wording of any paragraph or any part of a schedule of any kind that can be turned to the disadvantage of the Government they are going to do it.

Mind you, if it is done lawfully, I have not a word of complaint about it. I think they are entitled to get the very best advice in the world, no matter whether the Government of the United States has educated their advisers or not. I am not objecting to that. But I do object to the importers using this method of fraud in order to cheat the United States out of dollars and cents.

Mr. WALSH of Massachusetts. I think we are all in accord with the Senator in that respect. Let me resume my argument.

FINANCIAL DIFFICULTIES OF THE WOOLGROWERS.

Mr. President, that the woolgrowers suffered severely in the great decline of 1920 and the depression of 1921 can not be doubted; but so did all branches of industry suffer, and so did the consuming public. During part of this period statistics indicate that from two to four million wage earners have been out of work.

That every effort should be made to improve the financial condition of the woolgrower all agree, but he should expect no more to be done for him by the Government through indirect taxation levied upon the consumer than those engaged in any other industry. He should not expect the great majority of our people to be burdened by taxation to a greater degree than at present solely for his benefit. He should bear in mind also that as a consumer he will have to pay an enhanced price for clothing for himself and family, and that the general increase in prices through the high protective tariff duties upon clothes and other necessities of life will increase accordingly the wages he will have to pay his help who will have to pay higher living costs.

There is a point where it is fundamentally uneconomic for a government to extend protection to an industry which yields as is claimed only meager returns to those engaged in it under extreme protection.

COST TO THE MANUFACTURER.

The production of wool in the United States during the past 40 years averaged very close to 300,000,000 pounds in the grease, which, with a shrinkage of 60 per cent, gives 120,000,000 pounds of clean wool. Imports of Class I and Class II wools—disregarding Class III, carpet wools—that will be required from abroad may be estimated as at least 100,000,000 pounds of clean wool per annum. This gives a total consumption of wool for clothing of about 220,000,000 pounds of clean wool per year.

Assuming that the duty fulfills its purpose of raising the value of domestic wools by the amount of the duty, the increased cost to the wool manufacturer—which will, of course, be passed on to the public, after further pyramiding—of the 33 cents a pound duty on clean wool will be $72,600,000 a year.

Mr. President, let me ask my friends on the other side if they are prepared, in the face of the greatest depression in the history of this country, to say to the American people, "Congress has increased the price of your wearing apparel, of your blankets, of your overcoat, of your clothing"? Will you dare to pass such legislation, in view of all previous laws upon this subject, in view of the action of the House one year ago this very time, when the depression was greater, determining that the fair, just rate to all interests concerned was 25 cents and not 33 cents? Can you justify it? Can you expect a verdict of approval from the American people? Do you not know that there is no issue more effective than that which touches the individual? Do you not know that the statement of any public man on any platform in this country calling attention to the fact that you, as a United States Senator, voted to increase

the price of a suit of clothes $2.50, the price of a dress $2.50, the price of an overcoat $5, is an argument which penetrates deep and has a decisive effect on election day?

It is amusing to hear men declare on this floor that increasing tariff duties does not affect prices and that putting articles upon the free list does not reduce prices. I ask, What are tariff duties for? Is there any difference between the free list and a protective duty, and if there is, is it not this, that products on the free list ought to permit prices to be forced down, and not up, while articles which bear a protective duty, in the natural course of events, would reflect increased prices? Yet Senator after Senator on this floor has had the hardihood to say at one time or another that high protective duties do not reflect increased prices, and then, in another breath, to say that the putting of articles on the free list does not lower prices.

No man has said that more effectively than the distinguished Senator from Utah. He always tells you that the retailer and the manufacturer are going to get theirs anyway, regardless of tariff duties. Yet we sit here making assertions of reckless and scandalous profiteering and declare we are powerless. The people will not take that answer from us any longer. The people are not going to permit us to cloak and hide our responsibility to keep their taxes and their cost of living at a low level by assertions of that kind.

Mr. President, I will discuss now the objections to the use of the brackets in paragraph 1102.

The House bill based the duty on raw wool, other than carpet wool, upon the clean content. The Senate bill substitutes for this an elaborate sliding scale of duties based on wool in the grease and graduated by steps according to the shrinkage.

Beginning with the highest shrinking wools—those shrinking more than 93 per cent upon which the duty is 1.6 cents per grease pound—the duty is graduated upward by 1 cent per grease pound for each decline of 3 per cent in the shrinkage.

The entire scale of duties is worked out in such a way as to approximate 33 cents per pound on the clean content of wool. The elaborate scale of brackets covering nearly three pages in the Senate bill, when translated into plain English, simply means that the duty on clean wool shall be approximately 33 cents per pound. By camouflaging the duty in this manner, however, it is made to appear much lower than 33 cents per pound.

If the only objections which could be urged against this scheme were that it is intended to deceive the public and that it consumes an unnecessary amount of space in the bill, it would not be so serious; but the sliding-scale system is peculiarly objectionable, because it can not be administered in such a way as to avoid constant litigation. Litigation will arise from the fact that whenever the test of the imported wool shows a shrinkage slightly less than the amount required for classification in the next higher bracket—where the duty would be 1 cent per grease pound lower—the importer will be strongly inclined to protest the classification.

To take an illustration: Suppose that the examiner figures the shrinkage of a given importation of wool at 59.4 per cent. The wool would then be dutiable at 13½ cents per pound, because it falls within the bracket which covers wool shrinking more than 57 per cent and not more than 60 per cent. Obviously, if the importer can prove that the shrinkage is 60.1 per cent instead of 59.4 per cent, he will be able to save 1 cent per grease pound on the shipment, because in such case it would be dutiable at 12½ cents under the bracket which covers wool shrinking more than 60 per cent and not more than 63 per cent.

Let us carry the illustration further. The difference between the estimates of shrinkage in the above illustration is seven-tenths of 1 per cent. Under a straight clean-content duty of 33 cents a mistake of 1 per cent in estimating the shrinkage would amount to one-third of 1 cent per grease pound; a mistake of seven-tenths of 1 per cent would, therefore, amount to seven-tenths of one-third cent, or seven-thirtieths of 1 cent. Under the Senate bill the same mistake in estimating the shrinkage would amount to 1 cent per grease pound. On a shipment of 500,000 pounds of wool in the grease the duty involved in a mistake of seven-tenths of 1 per cent in estimating the shrinkage would amount under the straight clean-content duty of 33 cents to 500,000 times seven-thirtieths of 1 cent, or $1,166.66; but under the bracket system in the Senate bill it would amount to 500,000 times 1 cent, or $5,000.

Nor is this all. Under the Senate bill the amount of duty involved in a mistake in estimating the shrinkage will be much greater for the importer of high-shrinking wool than for the importer of low-shrinking wool who brings in the same amount in clean equivalent. Both importers would have 1 cent per grease pound at stake; but 1 cent per grease pound is a more serious matter for the importer of high-shrinking wool than for the importer of low-shrinking wool—that is, if the examiner's estimate runs against rather than in favor of him. If it runs in his favor no litigation will ensue, but if it runs against him the incentive to protest will be particularly strong.

Mr. SMOOT. As far as I am concerned, I would just as lief not have the brackets, and perhaps I would a little rather have it that way.

Mr. WALSH of Massachusetts. I am very glad to hear that. I ask the Senator if there is any likelihood of there being an amendment changing that feature?

Mr. SMOOT. I can not say as to that. So far the committee has not agreed to any amendment along that line. I only expressed my personal view when I stated to the Senator what I did. Yet I want to say frankly that there is one reason why it would be better in brackets; but I think the other reasons overbalance that. When we discuss this later I will frankly state to the Senator what they are.

Mr. WALSH of Massachusetts. At another time we will discuss that feature of the sliding scale suggested in the committee amendment.

Mr. President, if I may proceed I will now discuss the subject of production.

Mr. President, the production of wool has not materially increased in the United States in the last 40 years. Our production averages very close to 300,000,000 pounds per year. Our consumption has averaged—I quote from the Tariff Commission's report on the emergency tariff—in recent years, owing to the unusual war-time demands, from 600,000,000 pounds to 800,000,000 pounds. Of this amount, about 300,000,000 pounds were produced in the United States and 400,000,000 pounds imported. For a series of years before the war, out of a total consumption of about 525,000,000 pounds per year, 300,000,000 were grown in the United States. (See Table 1 in the aforementioned report.) It is to be noted from this table that the percentage of foreign wool consumed in 1921 was about 53 per cent. During the war it was as high as 65 per cent. Prior to the war it was about 40 per cent.

Let me show you what the record of production in this country has been. I want to say to the Senator from Montana [Mr. WALSH] that I hope he was not misled by what the Senator from Utah said, for the Senator from Utah is a very able and very clever man and he has the rare ability to state one fact which proves the thing which he then wants to demonstrate, omitting another fact which would quite change the conclusion one would arrive at.

Mr. SMOOT. It is unintentional.

Mr. WALSH of Massachusetts. The Senator very cleverly stated that the number of sheep in this country had decreased. What would one take that mere statement to mean except that the production of wool had decreased? Would one not take it to mean that, when we were discussing and considering wool? He said that the number of sheep in this country had decreased 50 per cent. He told the Senator from Montana that.

Mr. SMOOT. Does the Senator doubt that?

Mr. WALSH of Massachusetts. I say to the Senator that I do not care how much smaller the number of sheep in this country is, the fact is that the production of wool has not decreased 50 per cent, or anywhere near that. Am I correct about that?

Mr. SMOOT. Of course, there is a finer grade of wool grown, which makes more pounds of wool per head to-day than when we had 67,000,000 head of sheep. I thought everybody knew it. There was no intention in my mind of misleading anyone.

Mr. WALSH of Massachusetts. The Senator was trying to show how this industry had suffered and how much it had slid back; that the number of sheep had decreased 50 per cent, and that therefore we must appreciate that the industry was gradually getting less and less able to take care of its former production. The cold facts are that there has been practically no decrease in the production of wool. I do not care whether wool comes off the backs of 10 sheep or 3 sheep, the number of pounds to-day is about the same as it has been in the last 40 years. Will the Senator agree with that?

Mr. SMOOT. I think it is a little less. It is easily understood, and I thought every Senator understood, that in the years we were speaking of every sheep man kept his lambs, and his lambs were counted the first year in the increase in the number of sheep in the United States. To-day that is all changed. The lambs go to the market, with the exception of enough lambs to keep the ewe herd alive. Years ago we used to have wethers, and kept the wethers until they were 2, 3, and 4 years old, and that is where we used to get our wool from.

It is entirely different now. We run ewe herds entirely, and the only lambs that are saved from the market are enough lambs to keep the ewe herds alive and up to the standard.

Mr. WALSH of Massachusetts. I called attention to that because I thought the Senator from Montana [Mr. WALSH], who was talking about the production of wool, would gather from the statement made by the Senator from Utah that our production had decreased 50 per cent.

Mr. SMOOT. The Senator from Montana knows the situation just as well as the Senator from Utah.

Mr. WALSH of Massachusetts. I think both the Senator from Utah and the Senator from Montana have the advantage over me in knowing more about the wool-growing industry than I do. But, as I said in the beginning, plenty of statistics are available for one who wants to be informed upon the subject. But let us now consider a comparison of domestic production and domestic consumption.

For 16 years under Republican control before 1913 there was a duty of 11 cents per pound on grease wool, which practically never amounted to less than 30 per cent ad valorem, and frequently exceeded 100 per cent. Scarcely had the Democratic Party placed wool on the free list when the war broke out and prices were raised to such a level that, for the growers of wool at least, the result was even better than under Republican protection.

Under such favorable circumstances one would suppose the wool industry of this country would have flourished and the domestic production increased. The plain truth is that domestic production has not increased, and, for one reason or another, it would appear that this country is not as well suited to wool growing as to other industries, and that even high protective tariff duties have not resulted in the development of this industry to the extent of taking care of only about one-half of our domestic consumption.

In 1891 this country raised 309,474,876 pounds of wool; in 1895, 294,296,296 pounds; in 1900, 288,656,621 pounds; in 1905, 295,488,438 pounds; in 1910, 321,362,750 pounds; in 1915, 288,777,000 pounds; in 1920, 260,270,000 pounds; and in 1921, according to the best available figures, the clip fell to 240,000,000 pounds. Our per capita domestic consumption decreased from 6.16 pounds in 1884 to 2.9 pounds in 1921.

We are forced to go into the markets of the world to buy from 40 to 50 per cent of our annual consumption. A fair average annual consumption of scoured wool would be in the neighborhood of 220,000,000 pounds, and our domestic clip is now about 120,000,000 pounds of scoured wool, leaving 100,000,000 pounds to be imported.

In view of our needs and the failure of the wool industry to keep pace with the increased demand for wool or show any material growth during the last 40 years, how can we justify an increase in the protective tariff duty on wool over 50 per cent above the highest duty heretofore levied?

Mr. WALSH of Montana. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Montana.

Mr. WALSH of Montana. The Senator is quite right that the production of wool in this country has remained practically stationary. I perhaps did not speak accurately. I was referring to the number of sheep. The number of sheep in the country diminished from about 64,000,000 in 1903 to about 45,000,000 in 1921, but the sheep bear more wool, so that the production has remained practically stationary.

Mr. WALSH of Massachusetts. I ought to say to the Senator that even the Department of Agriculture had some doubts about the accuracy of their figures with reference to the industry. Undoubtedly the fact is that there has been some decrease, but I think there is a good deal of confusion about the accuracy of the figures.

Mr. WALSH of Montana. There can be no doubt about it. I may say there has been a very substantial decrease. There has been a decrease of at least 50 per cent in my own State, and the conditions there obtaining likewise prevail to a greater or less extent throughout all the western country. That is by reason of the fact that the open range is being appropriated as a result of our industries being changed from pastoral to agricultural.

Mr. WALSH of Massachusetts. It is in this country somewhat of a pioneer industry. There is no question about that.

Mr. WALSH of Montana. There is no doubt that similar conditions are operative—I know them to be operative, in fact, all over the western portion of the country. I have no doubt that they are equally operative in South America, in the Argentine, in Australia, and to a greater or less extent in South Africa.

The last report we have from the Tariff Commission on this subject, just out, has the following to say on the subject:

> Owing to extensions in the area of cultivated land and to competition of cattle with sheep, the number of sheep had been declining fairly steadily for a long period prior to the war. Wool production, however, had remained about stationary, owing in part to breeding and selection for heavier fleeces within breeds, particularly in the case of merinos, and in part to the rapid adoption of crossbreeding for mutton production, which also gave heavier fleeces.

I rose to emphasize the point the Senator is making that, despite the long period in which this industry has been protected, the number of sheep in the country continues steadily to decline, but it continues to decline by reason of the conditions which surround the industry.

Mr. SMOOT. This tells the story, I will say to the Senator: In 1901 the average weight per fleece was 5.06 pounds. In 1902 it was 5.10 pounds. In 1903 it fell to 4.49 pounds per fleece in the United States. That can be accounted for by the fact that that was a very wet year, and when it is a very wet year the fleeces, particularly of the western wool, are very much lighter in weight. Then it began to increase. In 1904 it was 5.65 pounds per fleece; in 1907, 5.60 pounds; and in 1921 it had increased to 7.28 pounds. That is why the number of pounds of wool remains about the same.

Mr. WALSH of Massachusetts. I am glad to have that information from the Senator, because I thought the Senator was contending that there had been a decrease in the production of wool.

Mr. SMOOT. There is a decrease in the pounds of scoured wool, because the finer the wool and the heavier the fleece the greater the shrinkage in the wool. We could take the 272,564,000 pounds of wool in 1921, with an average fleece of 7.28 pounds, and would not get the same amount of scoured wool out of that many pounds that we would out of the 287,000,000 pounds in 1903, when the fleece weighed but 4.49 pounds. In other words, so far as pounds were concerned, the scoured wool in 1903 was very largely in excess of what the 272,000,000 pounds would have produced in 1921. I should think as to shrinkage there would be at least 20 per cent difference in the two cases.

Mr. WALSH of Massachusetts. Mr. President, the only purpose of my argument was to call attention to the fact that with what people considered high protection and with a long period of protection this infant industry has not expanded, is not able to take care of the demands of the American people, and we must to-day import 40 to 50 per cent of all the wool consumed by the manufacturers of the country. There has been a steady increase in the amount of wool which it is necessary to import. Yet in the face of that history it is seriously proposed to us here to increase by 50 per cent the rate of duty over that enjoyed under the Payne-Aldrich law and to burden the American people, who must go into the world's market for their wool, with a higher rate of duty than ever before. Where are we going to stop? Five years from now, when the figures show a further decline, the woolgrowers will be asking a duty of 40 cents. Ten years from now, when we must import 60 per cent instead of 40 per cent, or 70 per cent instead of 45 per cent, they will be here asking for a duty of 50 cents. It is now over 100 per cent ad valorem, measured in terms of value.

Mr. SMOOT. Of course the Senator does not want the statement to stand that the average rate in equivalent ad valorem is 100 per cent on 33-cent wool?

Mr. WALSH of Massachusetts. No; I did not mean to say that, but I do say that there are classes of wool where it amounts to that. Perhaps not all of the wool, but some of the wool that goes into clothing pays that rate of duty.

Mr. SMOOT. Very little of it, I will say to the Senator.

Mr. WALSH of Massachusetts. But it approaches very close to 100 per cent.

Mr. SMOOT. It is 1 per cent of the consumption in the United States.

Mr. WALSH of Massachusetts. Wool that comes into this country in clothing must bear a duty of 33 cents a pound, and that, measured in terms of the value of the wool and the duty, approaches figures amounting to almost 100 per cent, varying from 50 to 100 per cent.

Mr. President, it is proposed to give this industry a further opportunity to develop, though all the progress of the United States, by reason of its expansion and agricultural development in the West has not resulted in the expansion of this industry. It is proposed to require the American people to pay even more than ever before for the wool which is used for blankets, for sweaters, for dresses, for suits, for overcoats—to pay more to try to lead the woolgrowers in different parts of the country to increase the production of wool. There can be no

other explanation. There can be no justification for such high tariff duties unless it is based upon the belief that the industry can be made to grow, can be made to take care of our demands and to take care of them at a reasonable price. But there is a point where it is uneconomical for a government to tax its people with high protective duties, and we have reached that point in wool. This bill will make the burden so excessive that the American people can not and will not bear it.

Mr. President, there is another aspect of this question I will proceed to discuss.

TENDENCY OF HIGH PROTECTIVE DUTIES TO CREATE TRUSTS.

Mr. President, the high duties which have been levied upon raw wool and the iniquitous protective duties levied upon wool manufactures have, together with a tendency toward centralization, resulted in destroying individual initiative and have resulted in the consolidation of the wool industry in the hands of a few.

According to the census the capital invested in the wool manufacturing industry increased from $256,000,000 in 1899 to $450,000,000 in 1909. Yet the extent to which the number of manufacturing units decreased is astounding. In 1869, according to the census figures, there were 3,280 establishments engaged in manufacturing wool; in 1879, 2,330; in 1889, 1,693; in 1899, 1,414; in 1905, 1,213; in 1910, 1,124; and in 1915, 979. All this indicates that individual manufacturers were driven out of business, not by foreign competition, for there were no imports, but by excessive protective tariff duties, which tend to promote the creation of private monopolies. Unreasonably high protective tariff duties tend to promote profiteering; to encourage industrial gambling and speculation; to destroy private enterprise and ultimately lead to the creation of monopolies.

During these years of high protective duties the American Woolen Co. has merged over 50 large independent companies into its organization, and now controls over 25 per cent of the domestic production of woolen and worsted cloth. It also fixes the prices; that is, the trade waits for this company's semiannual announcement and follows the prices named by this organization.

Mr. President, what has destroyed these individual units? It was not foreign competition, for there was none. The individual manufacturing units of this industry were destroyed under protective tariff duties of the very highest kind; protective tariff duties that were so offensive to the American public that they led to the complete repudiation, defeat, and ejectment of the Republican administration in 1912.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WALSH of Massachusetts. I yield.

Mr. GOODING. I should like to ask the Senator if he thinks had Roosevelt been nominated in Chicago there would have been a defeat of the Republican Party, or that if there had been only one candidate nominated instead of two the Republican nominee would have been defeated?

Mr. WALSH of Massachusetts. There were two candidates nominated by the Republicans of this country because of the tariff, because there was a group of Republicans who were determined to protest the rates of duty which had been levied in the Payne-Aldrich law, who left their party because they wanted to register a protest against the extortions practiced upon the American people through that iniquitous tariff law and the control of the party by reactionary leaders.

Mr. GOODING. That is the first time I have ever heard that statement made. I remember the circumstances surrounding the Chicago convention; there was a division between two contending forces. It was not over the tariff, but it was between two men; that is about all; nothing more and nothing less.

Mr. WALSH of Massachusetts. I do not know of any Senator on this floor who has indirectly more severely denounced the Payne-Aldrich law than has the Senator from Idaho who has just spoken. He has denounced the manufacturers as getting everything out of that law, stating that they had the big end of it. The only time that the manufacturers had the big end was under the Payne-Aldrich law, because wool has been free since 1913. Yet the Senator now stands on the floor and asks me a question which would lead me to believe that he thinks the Payne-Aldrich law was all right.

Mr. GOODING. No. The Senator from Massachusetts has not any right to think that at all. I merely said that it was not the tariff question which divided the Republican Party in 1912 at all. We have always been a unit on that on all occasions. So far as the principle of protection is concerned, I do not think there was a difference to any great extent in the two platforms adopted in that year; both stood for protection. I agree, however, that the Payne-Aldrich law was not right.

Mr. WALSH of Massachusetts. I am glad to hear the Senator say that.

Mr. GOODING. That law was an outrage—there is not any question about that—so far as the wool duties were concerned and so far as the compensatory duties were concerned. That is not only true of the Payne-Aldrich law but is true also of the Dingley law, in which that clause was first inserted. I denounce that legislation now; I have always denounced it; and I expect to continue to denounce it. It is for that reason that it is now changed in the pending bill to a scoured basis; so that the importers can not now take off all the heavy parts of the fleece and merely bring in the light wool. However, I shall not take up the Senator's time to discuss how well they did the job; how, instead of bringing in wool shrinking 66⅔ per cent, they brought it in shrinking 40 per cent. It is too long a story with which to take up the Senator's time, and he is very kind to have yielded so long.

Mr. WALSH of Massachusetts. The Senator from Idaho has admitted that the Payne-Aldrich law was an outrage. I give him credit for having sufficient respect for the judgment of the American people to believe that they would repudiate its outrageous provisions in the first election that followed its enactment.

Mr. GOODING. The point I make is that in the campaign of 1912 the tariff was not the issue, but there was an issue between two men.

Mr. WALSH of Massachusetts. I am not going into the history of the campaign of 1912, but everyone ought to know that one of the great issues of that campaign was Schedule K; and perhaps no feature of any tariff bill has ever been so much discussed upon the public platform and in the press as was Schedule K in the campaign of 1912. Ex-President Taft will not agree with the Senator from Idaho that Schedule K was not an issue in 1912.

Mr. SMOOT. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Utah.

Mr. SMOOT. The Senator has stated the number of mills in the United States, the number showing a decrease. I presume he has the figures as to the number of spindles now in operation in the United States. Those figures will show an increase.

Mr. WALSH of Massachusetts. I have stated that there was a very substantial increase in the capital invested in the industry, and I gave the figures showing such increase; there is no doubt the industry has grown; but what I am saying is that protective tariff duties tend to lead to the creation of monopolies and of trusts and tend to drive the little fellow out of business; and the figures which I have given are some contribution to that conclusion.

Mr. SMOOT. I can not agree with the Senator as to that, because it is a question of principle that the little fellow, if he has protection, can live, and if he does not have it he can not live. However, I will not interrupt the Senator further.

Mr. WALSH of Massachusetts. Mr. President, to such an extent did these industries consolidate that under these high protective duties the American Woolen Co., as I have heretofore stated, which now produces 25 per cent of all the dress and woolen goods manufactured in this country, consolidated 50 separate independent factories into one of the largest and most prosperous organizations in this country.

Mr. SMOOT. And I will say to the Senator that the great growth of the American wool industry, as to the amount of capital invested, came during the time when we had free wool.

Mr. WALSH of Massachusetts. I think undoubtedly the American Woolen Co. made large sums of money during the war, at which time wool was being admitted free.

Mr. SMOOT. I had reference to the consolidations.

Mr. WALSH of Massachusetts. I beg the Senator's pardon. I will give the Senator the figures on Monday. Fifty great plants, many of them located in communities with which I am personally familiar, some in my own State and others in various portions of New England and other sections of the country, have been consolidated, and I venture to say that nearly all of them were consolidated before 1914, when free wool became operative.

Mr. SMOOT. I refer to the whole United States.

Mr. GOODING. Mr. President, I should like to call the Senator's attention to the fact—and it is very kind for him to yield so frequently—that this is the age of centralization everywhere and in every industry; there is no exception to that

rule, so far as I know. It is true of the steel industry and it is true of every other industry; there can be no question about that. It is an era of centralization and organization.

Mr. WALSH of Massachusetts. But it is a significant fact that the movement toward consolidation and high protective tariff duties have gone together.

Mr. President, I am not going to take up any more time. The many interruptions during the course of my remarks have lead to the prolongation of my argument. I simply wish to state that I may desire to resume the floor for a short time on Monday—for I assume there will not be a vote taken to-night—in order further to enlarge upon what I have said to-day.

Mr. President, I desire to make the following conclusions by way of—

RECAPITULATION.

Mr. President, the foregoing discussion clearly shows:

(1) That the rate of 33 cents per clean pound on wool is the highest ever levied in any tariff law, excluding from consideration the joker clause in the emergency law.

(2) That the rate of 33 cents per clean pound of wool is 50 per cent higher than the average rate in operation under the Payne-Aldrich law, and on certain grades of wool where the shrinkage is low it is considerably more than 50 per cent higher.

(3) That the rate of 33 cents per clean pound of wool is at least 33 per cent more—in some cases even higher—than that named in the House bill.

(4) That the bracket sliding scale of duties through which the rate of 33 cents per clean pound of wool is levied is objectionable because it is deceptive and can not be administered in such a way as to avoid litigation.

(5) That the domestic production of wool, notwithstanding high protective duties, has not increased and that it is now necessary to import from 40 to 50 per cent of the domestic consumption.

(6) That the cost to the wool-manufacturing industry of the 33 per cent duty on raw wool will be $72,600,000, which, when paid by the consumer, after pyramiding, will approximate $200,000,000—which figure excludes the increased cost to the public by reason of the manufacturers' protective duties.

(7) That high protective duties in the wool-manufacturing industry has tended to decrease the number of individual manufacturing units and promote trust control of the industry.

Mr. McCUMBER. Mr. President, the Senator from Massachusetts has reiterated time and again the declaration that Congress has increased the cost of the coat which is worn and has increased the cost of blankets. On what basis does the Senator from Massachusetts say that Congress has increased the cost of coats or blankets? Where is the beginning? Under the days of free wool or under the emergency tariff act? Did Congress increase the cost of the coat when the cloth of which a coat is made in April, 1920, brought $5.85 a yard? There was not one penny of duty on wool at that time. Did Congress make that price $5.85 a yard, or did it not? To-day, with a duty of 45 cents a pound upon the scoured content of wool, the same cloth is sold for $2.50 a yard. Did Congress make the price $5.85 in the first instance, and did it make the price $2.50 in the second instance, or did the trade, the business, make the prices? If it were a fact that free scoured content wool results in the production of a cloth costing $5.85 per yard and that a duty of 45 cents a pound insures a cloth costing only $2.50 a yard, it seems to me, then, that we ought better put on a duty and lower the price.

But, Mr. President, let us be honest in the discussion of this question. The man who manufactured and sold that article at $5.85 sold it for that price because he could get it. The manufacturer who is selling that same article for $2.50 a yard to-day is selling it for that price because he can not get any more. That is all there is to it, and it demonstrates two things: First, that the tariff has had no effect in fixing the price of that yard of cloth; and, secondly, that the price was fixed by the amount the trade would bear.

Mr. President, the tariff did not add to that. You talk about raising the price of woolen goods. The duty to-day is 45 cents a pound upon the scoured content of the wool. The duty under the pending bill is 33 cents a pound, or 12 cents a pound less. Then, in God's name, how can any man claim that reducing the tariff 12 cents a pound upon the scoured content is going to increase the cost of woolen goods?

It is not going to affect the price of the woolen goods. The price of those goods is coming down. It is bound to come down. It comes down in a single month. For instance, let us take July of 1921. The same product sold for $2.72 at that time. In February, 1922, it sold for $2.50. The emergency tariff law went into effect on the 27th day of May, 1921. It did not stop the downward course of the price of these goods. It follows the economic law of supply and demand, and supply and demand always means the measure of the pocketbook that is to make the purchase. That is the thing which determines the prices. When the manufacturer finds that he can not sell that article for $5.85 any longer, he begins to lower the price, and he keeps on lowering it until he can sell it, until somebody will take his product. The tariff duty had practically no effect; otherwise, it would have been cheaper with no tariff upon it than it would with a tariff of 45 per cent, when, as a matter of fact, it was twice as much when there was no tariff on the wool itself.

Mr. WALSH of Massachusetts. Mr. President, the Senator was talking about prices at a normal time and at the present time when there is a very great depression in the country.

Mr. McCUMBER. Yes; that is right.

Mr. WALSH of Massachusetts. Does the Senator argue that tariff duties will have no effect upon prices in the future?

Mr. McCUMBER. I am arguing that the condition of the country is the thing that will determine the prices.

Mr. WALSH of Massachusetts. And not tariff duties?

Mr. McCUMBER. Tariff duties ordinarily will have some effect; yes. It was an abnormal spending time in 1920 that made that excessively high price. The freedom of those goods from a tariff duty upon the wool did not seem to keep down the prices, and the placing of the duty will not drive the price beyond what the public will be willing to pay for those articles, and it will not stop close domestic competition.

It is true that the manufacturer took advantage of the 1909 tariff law, and when he was given a differential on the basis of 33 cents per pound on the scoured content he only paid the difference in the tariff to the extent of an average of 18 cents per pound. We will admit that, and, measured by that, you can say that this is a raise in the tariff, but if he had paid what he was supposed to pay and the farmer had gotten the benefit of the full 11 cents a pound upon the grease wool, and the manufacturer had paid 33 cents upon the scoured content, then he would have been paying the same duty that we are fixing here to-day.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. POMERENE. What the Senator has said has interested me very much, but my correspondents, merchant tailors in Ohio, have written me that within a few days after the pending bill was reported to the Senate the American Woolen Mills sent out notices advancing the price of all their woolens from 10 to 45 cents per yard, and within the last 30 days—possibly a little longer than that—I have been advised by some of these same people that there was another advance of 10 to 45 cents a yard. Is that correct or not?

Mr. McCUMBER. If that is true, it verifies exactly what I have been saying, namely, that the price will be fixed by the demand and the condition of the country rather than by the tariff. We have not changed the tariff, and if we do change it it will be changed downward and not upward. Therefore that is not an excuse.

Mr. POMERENE. Mr. President——

Mr. McCUMBER. Let me answer the Senator fully.

Mr. POMERENE. All right.

Mr. McCUMBER. What is the fact? Conditions are picking up a little. I will not say what the cause it. I will not say that it is in anticipation of a protective tariff, because that would bring up a question on which we might differ; but it is admitted that conditions are picking up and people are beginning to spend more, and the moment the manufacturers and others notice that they begin to raise the prices to see if they can not get a little more for their products. It is on the same principle that this importer and manufacturer of goods said that if this tariff bill went through he would have to raise the price of his coats $4.50 and the price of his overcoats $7.50. notwithstanding the fact that this tariff bill reduces the duty per pound of scoured content 12 cents per pound.

Mr. POMERENE. Mr. President, of course I would be less than candid if I did not say that supply and demand to some extent control these prices; but I do not think—and I say this with all due respect—that the Senator's answer is a complete answer. It may be that these prices were tremendously high, as we all know they were. It may be that they had some thought that these tariff duties on the manufactured product as well as upon the raw material might have been increased or might have been decreased, and it may be that they were not decreased as much as they thought. To say that that has had no influence, however, is something that I can not accept.

Mr. McCUMBER. I do not say that. On the contrary, I said that, of course, it has some influence.

Mr. POMERENE. I am glad to hear the Senator make that statement.

Mr. McCUMBER. I said that a moment ago; but it is not the real, governing thing that fixes the prices.

There is another matter that I want to ask the Senator from Massachusetts to consider for a little while. I do not ask him to answer it now. The sheep industry in this country, according to those who are best qualified to speak upon the subject, has decreased enormously in the last 12 or 15 years. The Senator from Wyoming [Mr. WARREN], who has been in that industry for years, tells me that the number of sheep in the United States in 1909—I think that was about the highest peak—was about 60,000,000, and that it is now about 35,000,000. The industry is about 45 per cent dead.

Mr. WALSH of Montana. Mr. President——

Mr. McCUMBER. In just a moment I will yield to the Senator. Do you want to save it? If it is 45 per cent sick and there is 55 per cent of a living chance, do you want to give it the living chance by whatever tariff is necessary to uphold it?

I yield to the Senator from Montana.

Mr. WALSH of Montana. Mr. President, I rose merely to give the accurate figures from the Department of Agriculture.

Mr. McCUMBER. I will correct the figures after the Senator gives them to me.

Mr. WALSH of Montana. The peak was reached in 1903, when the number was 63,965,000. For 1920, the number is given as 45,067,000.

Mr. McCUMBER. Mr. President, it is not the same relation, but I am informed that the difference lies in this fact: You send out your officials to get the number of sheep. Sometimes, in some seasons of the year, they count the lambs. They are pretty good-sized. In the next spring they will not count the lambs because they are so small, and they count only the grown sheep, and the records therefore do not agree. So I have tried to get from those who are in the business, taking a particular month in the year when the lambs are about the same size, the total number of sheep that year in the United States and then the number in the corresponding month of a year 10 or 15 years after that. In that way they ought to have it pretty accurately; and they tell me that it ranges not quite as high as the 63,000,000 that the Senator has given, but from about 60,000,000 at the highest down to about 35,000,000 at the present time.

Mr. WALSH of Montana. Mr. President, I interpose to say that I do not think there are any figures more accurate than those furnished by the Department of Agriculture, nor do I think there is any source of information on the subject that is more accurate. It is undoubtedly true, and the department doubtless will admit, that their figures are not accurate. Indeed, the schedule shows that at every census the figures are revised, sometimes revised upward and sometimes revised downward, reaching back to 1870; but these figures, I think, must be accepted as being as accurate as any that can be secured.

Mr. McCUMBER. Let us suppose that that is accurate, and that the industry is 60 per cent alive: Should we bring it back to 100 per cent of good, healthy condition? I believe it is for the interest of this country that we do so.

Mr. WALSH of Montana. Mr. President, if the Senator will pardon me, the Senator from Massachusetts [Mr. WALSH] has been arguing—but the Senator from North Dakota has not been present all the time—that our efforts in that direction in the past by high protective duties have not resulted in the increase that is to be hoped for; and he argues that we could not reasonably expect, accordingly, that the increase which is obviously to be desired would result from these high duties. Does the Senator take a different view of the matter?

Mr. McCUMBER. I think that a good rate of duty, which will allow the farmers living in parts of the country where the price of land is quite high to raise a few sheep in addition to their other farming business, will tend to increase the number.

Mr. WALSH of Montana. It has not in the past, though.

Mr. McCUMBER. We have had some pretty hard times for the sheep industry in the past.

Mr. WALSH of Montana. The last two or three years have been pretty severe.

Mr. McCUMBER. They certainly have. The industry in my State has been going down, because land is so high that we can not afford to pasture our sheep upon it. If the sheep industry should be more valuable in some sections of the State it could be continued, but if it is going down it can not be continued.

Mr. WALSH of Montana. But the argument of the Senator is that the production is going down because of conditions entirely unrelated to the tariff, and that the tariff does not seem to help.

Mr. McCUMBER. I do not think that is wholly true, Mr. President. I think in States like Ohio, Kentucky, the Virginias, and the Carolinas, where they raise a considerable number of sheep, they will raise a greater number if it will pay them to raise them. Those are good agricultural States.

The whole question, in a nutshell, is this: Should we give the farmers 33 cents per pound protection on the scoured content of their wool? If we should, that will be the basis of all the other duties. I think they are entitled to it. They should have had that in the act of 1909; it was intended that they should have it. They did not get it, but they will get it under this act.

If we increase that rate to 33 cents a pound we will have to give a compensatory duty, of course, upon the products of the woolen mills. We have tried to give that in a way that would exactly measure the 33 cents a pound upon the scoured content, after making due allowance for the waste.

In addition to that we have given a duty for protection, and that seems to me to be the whole question: Have we made the protective rates too high?

I think not. As I stated, the ad valorem on the manufactured product will be very much below that of the Payne-Aldrich law. It should not increase, but ought to decrease the cost of all woolen fabrics.

This is a beautiful piece of cloth [exhibiting]. I went without a new suit of clothes just as long as I could, but finally had to get one the other day, and I know the cloth is not as heavy or as good as this sample, which is quoted at $2.50 a yard. Yet I paid $90 for the suit I just bought. It takes 3¼ yards to make a suit, and the price of the suit I bought was $90. With some tailors they run as high as $100 or $125. The little duty upon the cloth is a bagatelle compared with the labor cost and the overhead costs in the cost of a suit of clothes.

Mr. SMOOT. I notice in the New York World of July 22, and also in the other New York papers, headlines like these:

Eighteen-million-dollar blow to farmers seen in tax on arsenic—Tariff bill enables Guggenheims to collect toll—Calls it menace to war on boll weevil in South.

Referring to a statement of the senior Senator from South Carolina [Mr. SMITH], I hardly think that is fair to the American people. I have before me the Tariff Commission's summary, and I want to show now just what the production of this product is in the United States, the amount imported, and the total value of the product. On page 17 of the Summary of Tariff Information the Tariff Commission make this statement:

Description and uses: Arsenious acid or white arsenic, the most important and the commonest form of arsenic in commerce, is an acid anhydride rather than a true acid. It is also known simply as "arsenic" or as arsenic trioxide. Arsenious acid is a white insoluble powder with a slightly metallic taste and vaporizes without melting when heated in the open. Arsenic acid is chemically different and is obtained by oxidation of white arsenic. It occurs in commerce as a true acid, a thick sirupy liquid packed in steel drums, and in the form of the acid anhydride—arsenic pentoxide, which by the addition of water forms arsenic acid. Both of these acids, as well as all soluble salts of arsenic, are extremely poisonous.

Arsenious acid is used in the manufacture of insecticides, chiefly lead and calcium arsenates, in plate-glass manufacture, as a preservative for green hides, and in the manufacture of arsenic acid and arsenic salts. Arsenic acid is used in the preparation of organic medicinal chemicals containing arsenic, and its salts have medicinal uses.

Mark all the uses of this item in the United States. It is used in the manufacture of plate glass, in the preservation of green hides, and in medicinal preparations. What is the production? What are the imports? And what is the value of the whole product? The commission further say:

The domestic production of white arsenic has increased from 1,497 short tons in 1910 to 6,323 short tons, valued at $1,213,000, in 1918. The 1919 output was 6,029 tons. White arsenic is obtained chiefly in the United States as a by-product of smelting copper and lead ores. Arsenic acid is manufactured by oxidizing white arsenic by means of either nitric acid or chlorine.

Imports of arsenic and arsenious acids from 1908 to 1918 have averaged 2,725,575 pounds, valued at $126,828, and have come chiefly from Germany, Canada, England, and Belgium. Later statistics follow.

I am not going to take the importations of the nine months of 1921, of 2,705,635 pounds; but I am going to take 7,479,485 pounds for the year 1920 and add it to the production in the United States. That amounts to only 20,000,000 pounds. The value of the whole 20,000,000 pounds, including the duty and everything else, was $1,339,826. Taking the amount in the year of greatest manufacture in the United States, and that brought in during the year of greatest importation, and adding them together, it gives 20,000,000 pounds, and at 2 cents a pound the tariff would

amount to $400,000. There is quite a difference between $18,000,000 and $400,000. Taking the imports alone the duty would amount to something over $100,000 at 2 cents a pound during the year of highest importations; but assuming it affected every pound produced in the United States and every pound imported it would amount to only $400,000, and it has been used in the manufacture of plate glass for the preservation of green hides, in chemical compounds, and for medicinal purposes in all parts of the United States. It is absurd to say that it costs the cotton growers of the South $18,000,000, when the whole cost, for all that was produced, and all that was imported, was $1,339,826.

Mr. OVERMAN. Whether it is $18,000,000 or $400,000 it is a tax of 2 cents in favor of the smelters, and the burden is on the farmer who buys the articles. That is the truth about it, whether it is $400,000 or $18,000,000.

Mr. SMOOT. There is quite a difference between the two.

Mr. OVERMAN. It is a burden of 2 cents a pound in favor of the smelters, giving them a tariff on the by-product and imposing a burden on the men who have to buy it.

Mr. SMOOT. Whatever they use, if you can count the 2 cents a pound it would be that much burden upon them; but great quantities of it are used in the manufacture of plate glass, great quantities are used for medicinal purposes, and these figures cover every purpose for which it is used in all the United States, not in one section.

Mr. McCUMBER. Mr. President, I do not think we can get a vote to-day on this schedule, and I am fearful that if we should attempt to call for a yea-and-nay vote we would have difficulty in obtaining a quorum at this hour in the afternoon on Saturday. Under the circumstances I shall not ask for the further consideration of the tariff bill this afternoon. I understand the Senator from Washington has a bill he would like to bring up for very short discussion.

Mr. WALSH of Montana. Mr. President, during the course of the debate a colloquy ensued between the Senator from Idaho [Mr. GOODING] and the Senator from Massachusetts [Mr. WALSH] concerning the importance of the Payne-Aldrich law in connection with the election of 1912, and the statement was made in that connection that the tariff was not an issue in that campaign as between the two wings of the Republican Party. I read from the platform of the Progressive Party adopted in Chicago on August 7, 1912, as follows:

> We demand tariff revision because the present tariff is unjust to the people of the United States. Fair dealing toward the people requires an immediate downward revision of those schedules wherein duties are shown to be unjust or excessive.
>
> * * * * * * *
>
> We condemn the Payne-Aldrich bill as unjust to the people. The Republican organization is in the hands of those who have broken, and can not again be trusted to keep, the promise of necessary downward revision.

So it is a fact that at least one-half of the Republican Party in 1912 was protesting against the Payne-Aldrich law.

Mr. WADSWORTH. Mr. President, may I inquire of Senators in charge of the tariff bill if it is their expectation to reach a vote on the woolen schedule or any important segment of it on Monday?

Mr. McCUMBER. I hope so. I hope to dispose of the first woolen proposition, both as to carpet wool and as to the duty upon scoured content.

Mr. WADSWORTH. I had hoped very much that we would not be expected to vote upon the main portion of the matter—that is, the duty on the scoured content—until Tuesday. There are some of us who have to be away on Monday to fill engagements which we can not very well break. We have been pretty patient in our attendance here for many weeks past, and I had hoped the matter might go over until Tuesday.

Mr. McCUMBER. The Senator can easily understand that we can not continue one step beyond in the schedule until we have first determined the duty upon the wool itself.

Mr. WARREN. As a matter of fact, all the matters relating to wool and wool cloth are related to the rate on the scoured content of the wool.

Mr. McCUMBER. That is necessarily so.

Mr. WADSWORTH. I understand that, of course. I thought there might have been some things passed over in the previous portion of the bill upon which the Senate would be ready to vote, which might be taken up on Monday. However, if the Senator insists——

Mr. SMOOT. I do not think the discussion will be concluded on Monday, I will say to the Senator.

Mr. WADSWORTH. To be frank, there are some of us who would like to have a little consultation about the wool schedule. We would like a little time in which to consult. So far as I am concerned, the consultation is to be carried on in a very friendly manner toward the Committee on Finance.

Mr. McCUMBER. No one can say on any morning whether we will get a vote that day before evenin . I hope we shall be able to get a vote upon it on Monday. It will depend upon the discussion.

Mr. WADSWORTH. For example, the Senator from Washington [Mr. JONES] has a bill of immense importance, the river and harbor legislative bill, which he gave notice the other day should be passed at this session of Congress.

Mr. McCUMBER. I hope we can pass it this evening.

Mr. WADSWORTH. I hope so. If not, it can be taken up on Monday.

Mr. McCUMBER. No; I could not consent to that.

Mr. SMOOT. I do not understand that the Senator from Washington is going to ask that the bill he has in charge shall be passed this evening?

Mr. JONES of Washington. No; I do not ask that it be passed to-day.

Mr. WADSWORTH. Very well.

NORTH CAROLINA STATE CLAIM.

Mr. OVERMAN. Mr. President, I submit the resolution which I send to the desk and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The Secretary will read the resolution.

The resolution (S. Res. 324) was read, as follows:

> *Resolved*, That the Comptroller General of the United States be, and he hereby is, requested and directed to reexamine and restate the account of advances and expenditures made by the State of North Carolina for military purposes in the War of 1812 to 1815 with Great Britain, computing interest on said advances and expenditures according to the rule which was applied in the settlement of a like account of the State of Maryland under provisions of the act of Congress approved the 3d day of March, 1857, and which was afterwards applied to like claims of the States of Massachusetts, Maine (July, 1870), New York, Pennsylvania, South Carolina, and Delaware, and report to the Senate the result of such statement.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. WADSWORTH. I have no objection to the resolution, but I hope the Senator from North Carolina will have better luck than New York had. New York's account was audited and checked up in every conceivable way.

Mr. OVERMAN. I do not know whether we will have any luck. We merely want a statement of the account.

Mr. WADSWORTH. Congress has consistently refused to appropriate the money which it owes to New York.

Mr. OVERMAN. We just want to be put on a par with New York, and get the information.

Mr. WADSWORTH. I wish the Senator better luck than New York has had.

The resolution was considered by unanimous consent and was agreed to.

REPORT OF EXECUTIVE NOMINATIONS.

Mr. LODGE. I ask unanimous consent, out of order, to make a report, as in executive session, from the Committee on Naval Affairs of two nominations of chaplains in the Navy, to go to the calendar.

The PRESIDING OFFICER. Without objection, the nominations will be received and placed on the Executive Calendar.

Mr. WADSWORTH. I ask unanimous consent, out of order, as in executive session, to make a report from the Committee on Military Affairs of nominations, to go to the Executive Calendar.

The PRESIDING OFFICER. Without objection, the nominations will be received and placed on the Executive Calendar.

RIVER AND HARBOR PROJECTS.

Mr. JONES of Washington. I ask unanimous consent that the Senate proceed to the consideration of the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, with the understanding that any objected item or amendment shall go over. I ask simply for the adoption of such amendments as may be agreed to without any objection.

Mr. SMOOT. The Senator will also have it understood that in case there is objection later, after investigation, he will consent to a reconsideration of the vote by which any amendment was agreed to?

Mr. JONES of Washington. I shall ask for a reconsideration of any item that may be adopted to-day in case a request is made for its reconsideration.

Mr. McCUMBER. For that purpose I have no objection to temporarily laying aside the tariff bill for the balance of the day. I ask unanimous consent for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered. Is there objection to the request of the Senator from Washington?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, which had been reported from the Committee on Commerce with amendments.

Mr. JONES of Washington. I ask that the formal reading of the bill be dispensed with and that the bill be read for action on the committee amendments.

The PRESIDING OFFICER. Without objection, it is so ordered. The Secretary will report the first amendment.

The first amendment of the Committee on Commerce was, on page 2, after line 22, to insert:

Inland waterway from Norfolk, Va., to Beaufort Inlet, N. C.: The Secretary of War is hereby authorized to purchase, as a part of said waterway, the existing Lake Drummond Canal, together with all property rights and franchises appertaining thereto, at a price of not to exceed $500,000, in accordance with the report submitted in House Committee Document No. 5, Sixty-seventh Congress, second session.

Mr. JONES of Washington. I ask that the amendment may go over. The Senators from North Carolina are interested in it, and there are some Senators who are opposed to it. So I ask that it may go over.

The PRESIDING OFFICER. The amendment will be passed over.

The next amendment of the Committee on Commerce was, on page 4, after line 18, to insert:

Corpus Christi, Tex., in accordance with the report submitted in House Document No. 321, Sixty-seventh Congress, second session, and subject to the conditions set forth in said document.

Mr. WARREN. Mr. President, I notice that the project is predicated upon the report, House Document No. 321. What is the approximate amount of money contemplated by the several projects recommended by the committee?

Mr. JONES of Washington. The obligations upon the Government with respect to those projects reported by the committee will be something over $2,000,000; that is, for all the projects recommended by the Senate Committee on Commerce.

Mr. WARREN. The total expenditure to be estimated under these amendments of the committee will be something like $2,000,000?

Mr. JONES of Washington. A little over $2,000,000.

The amendment was agreed to.

The next amendment of the Committee on Commerce was, on page 6, after line 4, to insert:

Noyo River, Calif., in accordance with the report submitted in House Document No. 679, Sixty-sixth Congress, second session.

The amendment was agreed to.

The next amendment was, on page 6, at the end of line 13, to insert the following additional proviso:

Provided further, That no work shall be done above the Webster Street and Harrison Street Bridges until those bridges have been removed or so altered, in accordance with plans approved by the Secretary of War and the Chief of Engineers, as to provide suitable facilities for navigation.

The amendment was agreed to.

The next amendment was, on page 7, after line 10, to insert:

Umpqua River, bar and entrance, Oreg., in accordance with report submitted in House Document No. 913, Sixty-fifth Congress, second session.

The amendment was agreed to.

The next amendment was, on page 7, after line 16, to insert:

Siuslaw River, Oreg., Acme to entrance, in accordance with report submitted in House Document No. 173, Sixty-fifth Congress, first session.

The amendment was agreed to.

The next amendment was, on page 7, after line 16, to insert:

Lake Washington Ship Canal, Wash., below the locks, in accordance with report submitted in House Document No. 324, Sixty-seventh Congress, second session.

The amendment was agreed to.

The next amendment was, on page 10, after line 2, to insert:

Wrangell Harbor, Alaska, in accordance with the report submitted in House Document No. 161, Sixty-seventh Congress, second session, and subject to the conditions set forth in said document.

The amendment was agreed to.

The next amendment was, on page 11, after line 9, to insert:

Galena River Lock, Illinois.

The amendment was agreed to.

The next amendment was, on page 12, line 2, after the word "authorized," to strike out "and directed," so as to read:

SEC. 5. That the Secretary of War be, and he is hereby, authorized to construct six seagoing hopper dredges for use in improvement and maintenance work on authorized projects on the Atlantic, Pacific, and Gulf coasts, the cost of said dredges to be paid from appropriations heretofore made, or to be hereafter made, for the preservation and maintenance of existing river and harbor works, and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation.

The amendment was agreed to.

The next amendment was, on page 13, after line 21, to insert the following new section:

SEC. 9. That hereafter no project shall be considered by any committee of Congress with a view to its adoption, except with a view to a survey, if five years have elapsed since a report upon a survey of such project has been submitted to Congress pursuant to law.

The amendment was agreed to.

The next amendment was, on page 14, after line 2, to insert the following new section:

SEC. 10. That any work of improvement herein adopted, and any public work on canals, rivers, and harbors heretofore adopted by Congress, may be prosecuted by direct appropriations, by continuing contracts, or by both direct appropriations and continuing contracts, as may be provided in any act making appropriations to carry on such works.

The amendment was agreed to.

The next amendment was, on page 14, after line 8, to insert the following new section:

SEC. 11. That owners, agents, masters, and clerks of vessels and other craft plying upon the navigable waters of the United States, and all individuals and corporations engaged in transporting their own goods upon the navigable waters of the United States, shall furnish such statements relative to vessels, passengers, freight, and tonnage as may be required by the Secretary of War: *Provided*, That this shall not apply to the rafting of logs except upon a direct request upon the owner to furnish specific information.

That every person or persons offending against the provisions of this act shall, for each and every offense, be liable to a fine of $100, or imprisonment not exceeding two months, to be enforced in any district court in the United States within whose territorial jurisdiction such offense may have been committed.

The amendment was agreed to.

The next amendment was, on page 14, after line 23, to insert the following new section:

SEC. 12. That the contract dated July 29, 1921, executed by the Boston, Cape Cod & New York Canal Co., and transmitted to Congress by the Secretary of War and printed in House Document No. 139, Sixty-seventh Congress, second session, is hereby ratified on condition that such company files with the Secretary of War its consent in writing that paragraph 8 of such contract be amended to read as follows:

"8. The payment of the amount herein agreed to be paid, or any part of same, to the said canal company is to be upon the express condition that the Boston, Cape Cod & New York Canal Co. waives, in writing, any and all claims of any nature whatsoever that it may have against the President, the Director General of Railroads, or the United States, and upon such release the Director General of Railroads shall release the company from any claim or demand against the company growing out of Federal control."

Mr. JONES of Washington. That amendment will have to go over. There is objection to it and the Senator from Massachusetts [Mr. LODGE] is not here.

The PRESIDING OFFICER. The amendment will be passed over.

The next amendment of the Committee on Commerce was, on page 15, line 17, to change the section number from "9" to "13."

The amendment was agreed to.

The next amendment was, on page 17, after line 7, to insert:

Gowanus Creek Channel from the foot of Percival Street to Hamilton Avenue, Brooklyn, N. Y., with a view to deepening the same to 26 feet at mean low water.

The amendment was agreed to.

Mr. JONES of Washington. At this point I desire to offer the following amendment.

The PRESIDING OFFICER. The Senator from Washington offers an amendment, which the Secretary will report.

The READING CLERK. On page 17, after line 11, following the amendment just agreed to, insert the following:

Buffalo, outer and inner harbor, and Buffalo Creek, N. Y.

The amendment was agreed to.

The next amendment of the Committee on Commerce was, on page 17, line 16, after the word "navigation," to insert "and extending in a straight line in front of the dock of Edgewater about three-quarters of a mile farther north," so as to make the paragraph read:

Hudson River Channel, along the water front of Weehawken and Edgewater, N. J., with a view to providing a depth of 40 feet at mean low water or such lesser depth as may be necessary to serve the interests of navigation and extending in a straight line in front of the dock of Edgewater about three-quarters of a mile farther north.

The amendment was agreed to.

The next amendment was, on page 17, after line 21, to insert:

Oyster Creek, Atlantic County, N. J.

The amendment was agreed to.

The next amendment was, on page 17, after line 22, to insert:

Shrewsbury River, N. J.

The amendment was agreed to.

The next amendment was, on page 18, after line 4, to insert:

Manasquan Inlet, N. J.

The amendment was agreed to.

The next amendment was, on page 18, after line 5, to insert:

Passaic River, N. J., above the Montclair and Greenwood Lake railway bridge.

The amendment was agreed to.

The next amendment was, on page 18, after line 11, to insert:

Herring Bay and Rockhole Creek, Md.

The amendment was agreed to.

The next amendment was, on page 18, line 22, after the word "with," to strike out "Black" and insert "Back," so as to read:

Channel connecting York River, Va., with Back Creek to Slaight's wharf.

The amendment was agreed to.

The next amendment was, on page 19, line 4, after the word basin," to strike out "between Craney Island and the city of Norfolk" and insert "in the vicinity of Craney Island," so as to make the paragraph read:

Norfolk Harbor, Va., with a view to providing an anchorage basin in the vicinity of Craney Island.

The amendment was agreed to.

The next amendment was, on page 19, after line 6, to strike out:

Tallahatchie and Coldwater Rivers, Miss., and the tributaries of these rivers, with a view to devising plans for flood prevention and determining the extent to which the United States should cooperate with the State and other communities and interests in carrying out such plans, its share being based on the value of protection to navigation.

The amendment was agreed to.

The next amendment was, on page 19, at the end of line 17, to strike out "Manassa" and insert "Nevassa," so as to read:

Cape Fear River, below Wilmington, N. C., and between Wilmington and Nevassa.

The amendment was agreed to.

The next amendment was, on page 19, line 20, after the word "Mill," to strike out "Gut" and insert "Cut," so as to read:

Mill Cut, North Harlowe, Craven County, N. C.

The amendment was agreed to.

The next amendment was, at the top of page 20, to strike out:

Savannah River, below Augusta, Ga.

The amendment was agreed to.

The next amendment was, on page 20, after line 1, to insert:

Waccamaw River from Red Bluff, S. C., to Pireway, N. C., with a view to providing a 4-foot channel.

The amendment was agreed to.

The next amendment was, on page 20, after line 7, to insert:

Savannah River, below Augusta, Ga.

The amendment was agreed to.

The next amendment was, on page 20, after line 8, to insert:

St. Johns River, Fla., Jacksonville to Palatka.

Mr. TRAMMELL. Mr. President, I desire to offer an amendment to the committee amendment. In line 9 I move to amend by striking out "Palatka" and inserting "Sanford." My colleague [Mr. FLETCHER], who is the author of the original amendment, wishes to have the change made that is now proposed by the amendment just offered by me, and I, too, desire its adoption.

Mr. JONES of Washington. I have no objection to the amendment proposed by the junior Senator from Florida to the amendment of the committee.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The next amendment of the Committee on Commerce was, on page 20, after line 9, to insert:

Bayou Chico, Fla.

The amendment was agreed to.

The next amendment was, on page 20, after line 10, to insert:

Blackwater Bay and River, Fla.

The amendment was agreed to.

The next amendment was, on page 20, after line 11, to insert:

Suwanee River, from Branford, Fla., to Channel No. 4, near Cedar Key.

The amendment was agreed to.

The next amendment was, on page 20, line 22, after the word "and," to strike out "Mississippi" and insert "Tennessee," so as to read:

Tombigbee River, Ala. and Miss., and canal connecting the Tombigbee and Tennessee Rivers.

The amendment was agreed to.

The next amendment was, on page 20, after line 22, to insert:

West side Mississippi River at St. Paul, Minn., with a view of establishing a harbor there.

The amendment was agreed to.

The next amendment was, at the top of page 21, to strike out:

Waterway from Bayou Teche, La., to the Mermentau River.

Mr. JONES of Washington. I ask that the amendment be disagreed to.

The amendment was rejected.

The next amendment was, on page 21, after line 2, to strike out:

Waterway from Lake Charles, La., to the Sabine River, Tex. and La., through the Calcasieu River and the Intracoastal Waterway from Calcasieu River, La., to Sabine River, Tex. and La.

Mr. JONES of Washington. I ask that this amendment also be disagreed to.

The amendment was rejected.

The next amendment was, on page 21, line 10, after the name "Bogue," to strike out "Falaya" and insert "Falia," so as to read:

Chefuncte River and Bogue Falia, La.

The amendment was agreed to.

The next amendment was, on page 21, after line 11, to insert:

Lake Fausse Pointe, La., with a view to securing a navigable channel by constructing and maintaining a canal from Grand Bayou to Sandy Point, or otherwise.

The amendment was agreed to.

Mr. RANSDELL. After line 14, page 21, I move to insert the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Louisiana will be stated.

The READING CLERK. On page 21, after line 14, it is proposed to insert:

Bayou Bonfouca, La.

The amendment was agreed to.

The next amendment of the Committee on Commerce was, on page 21, after line 17, to insert:

Tallahatchie and Coldwater Rivers, Miss., and the tributaries of these rivers, with a view to devising plans for flood protection and determining the extent to which the United States should cooperate with the State and other communities and interests in carrying out such plans, its share being based on the value of protection to navigation.

The amendment was agreed to.

The next amendment was, on page 21, after line 23, to insert:

Intracoastal canal from the Mississippi River at or near New Orleans, La., to Corpus Christi, Tex.

Mr. JONES of Washington. I ask that that amendment be disagreed to, as it is covered by an amendment which was adopted a moment ago.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was rejected.

The next amendment of the Committee on Commerce was, at the top of page 22, to insert:

Sabine-Neches Canal, with a view to revetment of north bank from what is known as Blands Bend Road, on the north, through the city to the southern limits of said city.

The amendment was agreed to.

The next amendment was, on page 22, line 5, after the word "and," to strike out "Sioux City, Iowa," and insert "Chamberlain, S. Dak.," so as to read:

Missouri River, between Kansas City, Kans., from the upper end of Quindaro Bend, and Chamberlain, S. Dak.

The amendment was agreed to.

The next amendment was, on page 22, after line 8, to insert:

Canoe Creek, Henderson County, Ky., at its junction with the Ohio River, with a view to dredging and establishing a harbor of refuge.

The amendment was agreed to.

The next amendment was, on page 22, after line 13, to insert:

Mississippi River, at Nauvoo, Ill.

The amendment was agreed to.

The next amendment was, on page 22, after line 14, to insert:

Mississippi River, at Dallas City, Ill.

The amendment was agreed to.

The next amendment was, on page 22, after line 17, to insert:

Petoskey Harbor, Mich.

The amendment was agreed to.

The next amendment was, on page 22, after line 18, to insert:

Cheboygan River, Mich., with a view to being dredged to the depth of 16 feet, from the State Street Bridge to Elm Street, in the city of Cheboygan.

The amendment was agreed to.

The next amendment was, at the top of page 23, to insert:

Illinois River, Ill., with a view to preparing plans, and estimates of cost, for the prevention and control of floods on said river and its tributaries, and to determining the extent to which the United States and local interests should cooperate in carrying out such plans.

The amendment was agreed to.

The next amendment was, on page 23, after line 12, to strike out:

Wilson Harbor, N. Y.

The amendment was agreed to.

The next amendment was, on page 23, after line 16, to insert:

Wilson Harbor, N. Y.

The amendment was agreed to.

The next amendment was, on page 24, line 1, after the name "Niagara River," to strike out:

And Tonawanda Creek.

The amendment was agreed to.

The next amendment was, on page 24, after line 1, to insert:

Tonawanda Creek, N. Y.

The amendment was agreed to.

The next amendment was, on page 24, after line 2, to insert:

Bloomfield Creek, Staten Island, N. Y.

The amendment was agreed to.

The next amendment was, on page 24, after line 10, to insert:

Oakland Harbor, Calif.

The amendment was agreed to.

Mr. JONES of Washington. After line 9, on page 25, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Washington will be stated.

The READING CLERK. On page 25, after line 9, it is proposed to insert:

The Columbia River between the mouth of the Willamette and the city of Vancouver, Wash., with a view to determine whether the United States should maintain the channel if it is deepened to 25 feet by the port commission of Vancouver, Wash.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Washington.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Commerce was, on page 25, after line 11, to insert:

English Bay, St. Paul Island, Alaska.

The amendment was agreed to.

The next amendment was, on page 25, after line 15, to insert:

Hilo Harbor, Hawaii.

The amendment was agreed to.

The next amendment was, on page 25, after line 16, to insert:

Kahului Harbor, Hawaii.

The amendment was agreed to.

The next amendment was, on page 25, after line 17, to insert the following new section:

SEC. 14. That the jurisdiction of the Mississippi River Commission is hereby extended from Cairo, Ill., to the Head of the Passes and to the tributaries and outlets of the Mississippi River, in so far as they are affected by the flood waters of the Mississippi River.

The amendment was agreed to.

Mr. JONES of Washington. Mr. President, that completes the bill with the exception of the amendments which have been passed over.

THE TARIFF.

Mr. CURTIS. I ask that the unfinished business may be laid before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

RECESS.

Mr. CURTIS. I move that the Senate take a recess, the recess being, under the unanimous-consent agreement, until Monday next at 11 o'clock a. m.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m.) the Senate, under the order previously entered, took a recess until Monday, July 24, 1922, at 11 o'clock a. m.

SENATE.

MONDAY, *July 24, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. UNDERWOOD obtained the floor.

Mr. HEFLIN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gooding	Nicholson	Stanley
Ball	Harreld	Norbeck	Sterling
Borah	Heflin	Oddie	Swanson
Brandegee	Jones, N. Mex.	Overman	Trammell
Bursum	Jones, Wash.	Phipps	Underwood
Cameron	Kellogg	Pomerene	Wadsworth
Capper	Kendrick	Ransdell	Walsh, Mass.
Caraway	Ladd	Rawson	Walsh, Mont.
Colt	Lodge	Robinson	Warren
Culberson	McCumber	Sheppard	Watson, Ind.
Cummins	McLean	Smith	Willis
Curtis	McNary	Smoot	
Dial	Nelson	Spencer	
Elkins	New	Stanfield	

Mr. CURTIS. I wish to announce that the Senator from New Hampshire [Mr. KEYES] is detained on official business.

Mr. UNDERWOOD. I wish to state that the Senator from Nevada [Mr. PITTMAN] is absent owing to illness in his family, and that the Senator from Georgia [Mr. WATSON] is absent by reason of illness.

The PRESIDING OFFICER (Mr. LADD in the chair). Fifty-three Senators having answered to their names, a quorum is present.

RAILROAD SITUATION IN COLORADO.

Mr. NICHOLSON. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Colorado for a moment.

Mr. NICHOLSON. I desire to have read a telegram which I have received from citizens of my State, which is self-explanatory.

The telegram was read and referred to the Committee on Interstate Commerce, as follows:

[Western Union telegram.]

DELTA, COLO., *July 23, 1922.*

SAMUEL D. NICHOLSON,
United States Senator, Washington, D. C.:

At a meeting held in Delta this morning, attended by representatives from Montrose, Coalcreek, Olathe, California, Mesa, Delta, Cedaredge, Hotchkiss, and Paonia, it was decided that the railroad situation must be relieved or financial ruin faced. Both Delta and Montrose Counties' perishable products are now ready to move. Ten thousand cars is the railroad estimate from the above sections. We ask that the National Government immediately take charge, both as to the labor and management of the railroads, and draft the necessary employees if other means fail. We further represent the National Government is interested financially. Five thousand cars or more come from the reclamation project located in the Uncompahgre Valley. The farmers are obligated to pay the Government, and they now demand protection in moving and selling their crop, so their indebtedness may be met. We also request immediate action be taken to give the Labor Board powers that their mandates may be enforced both against capital and labor.

WALTER J. HOLLANDS, *Chairman.*
J. W. SARJENT, *Secretary.*

PETITIONS.

Mr. McLEAN presented a resolution adopted by Bricklayers, Masons, and Plasterers' International Union, No. 22, of Danbury, Conn., which was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

BRICKLAYERS, MASONS, AND PLASTERERS' INTERNATIONAL UNION, NO. 22,
Danbury, Conn., July 20, 1922.

At a special meeting of Bricklayers, Masons, and Plasterers' Local No. 22, held July 20, 1922, the following resolution was adopted:

"Whereas many thousands of wage earners have been out of employment for the past year; and

"Whereas manufactured goods are coming into our country from Europe, due to the cheap labor conditions, in competition with American labor; and

"Whereas if those conditions are allowed to continue our workers will still be in the army of unemployed, causing great suffering among the workers and their families and reducing the American standard of living with low wages: Therefore be it

"*Resolved*, That we go on record as favoring the tariff bill now in the United States Senate with the American valuation clause on manufactured goods, and a copy of this resolution be sent to our United States Senators at Washington, D. C."

Membership, 58.

CHARLES JOHNSON,
Corresponding Secretary.

Mr. McLEAN presented petitions, numerously signed, of sundry citizens of Norwalk, Conn., which were referred to the Committee on Finance, and the bodies of the petitions were ordered to be printed in the RECORD, as follows:

Hon. GEORGE P. McLEAN,
United States Senate, Washington, D. C.:

We, the undersigned, employees of the Young Hat Co., of Norwalk, Conn., respectfully urge you and the other members of the Connecticut delegation to do all in your power to enact a tariff bill as soon as possible in order to give adequate protection to men's straw hats, as we do not want to be put on a wage level with the employees of concerns manufacturing hats in foreign countries.

—

Hon. GEORGE P. McLEAN,
United States Senate, Washington, D. C.:

We, the undersigned, employees of the Crofut & Knapp Co., of Norwalk, Conn., respectfully urge you and the other members of the Connecticut delegation to do all in your power to enact a tariff bill as soon as possible in order to give adequate protection to men's straw hats, as we do not want to be put on a wage level with the employees of concerns manufacturing hats in foreign countries.

Mr. WILLIS presented a resolution adopted by Branch No. 17, the Chartered Society of Amalgamated Lace Operatives of America, of Elyria, Ohio, favoring very prompt passage of the pending tariff bill, which was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

THE CHARTERED SOCIETY OF AMALGAMATED LACE OPERATIVES OF AMERICA, LEVER SECTION, BRANCH NO. 17,
Elyria, Ohio, July 19, 1922.

Senator FRANK B. WILLIS,
United States Senate, Washington, D. C.

SIR: At a meeting of Branch 17, Elyria, Ohio, of the Amalgamated Lace Operatives of America held on July 18, 1922, it was

Resolved, That employment in the lace manufacturing industry has been decreasing steadily for the past 18 months or 2 years and to-day is extremely uncertain due to the fact that on many classes of laces domestic manufacturers can not compete with similar merchandise imported from abroad. That the delay in the enactment of the new tariff bill is against the interests of both the American manufacturers and the working men, and we call upon our representatives in the Senate and Congress to do all in their power to push the tariff bill to early completion so that the American manufacturers can again operate their mills for American labor and a living wage.

Trusting you will see the necessity of immediate action in this matter, we are,

Yours respectfully,

ARTHUR GILDER, *President.*
CLYDE M. HOTCHKISS, *Secretary.*

REPORTS OF THE COMMITTEE ON THE JUDICIARY.

Mr. NELSON, from the Committee on the Judiciary, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 3799) for the relief of Louis A. Hogue (Rept. No. 834); and

A bill (S. 3800) for the relief of C. Pateras & Sons and C. Lemos, owners of the Greek steamship *Constantinos Pateras* (Rept. No. 835).

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WADSWORTH:

A bill (S. 3862) fixing the rank of the officer of the United States Army in charge of public buildings and grounds; to the Committee on Military Affairs.

By Mr. ASHURST:

A bill (S. 3863) granting a pension to Alfred Haught; to the Committee on Pensions.

By Mr. SWANSON:

A bill (S. 3864) to extend the benefits of the employers' liability act of September 7, 1916, to James Robert Allen; to the Committee on Claims.

A joint resolution (S. J. Res. 231) for the relief of the citizens of Cradock, Va.; to the Committee on Public Buildings and Grounds.

CLAIMS AGAINST GERMANY—GERMAN PATENTS.

Mr. UNDERWOOD. Mr. President, some days ago I introduced a bill, being Senate bill No. 3852, providing for the appointment of a commission to ascertain the claims of American citizens against Germany and looking to the ultimate payment of those claims. A great deal has been said in reference to the property held by the Alien Property Custodian and its condition. I think it advisable at this time to review the facts surrounding this matter in order that they may appear in the RECORD in such a way as to be readily obtainable.

The office of Alien Property Custodian was created by the act of October 6, 1917, known as the trading with the enemy act. Under that act as originally passed he was a mere conservator of enemy property. After investigation and determination of its enemy ownership he was authorized to demand and receive all property of every kind and character situate in the United States and its insular possessions which belonged to persons, corporations, or firms resident in enemy territory. In pursuance of this authority he gave public notice that persons having charge of such property should make reports thereof to him, and within a few months he had received reports to the number of 40,000, which were followed by demands for the property so reported, which resulted in his taking over property in the United States and its possessions of all kinds and descriptions owned by the enemy and allies of the enemy to the value of perhaps $600,000,000. He found when this property was in hand that in a general way it consisted of two kinds: First, the individual investment of a private German subject who invested his savings generally in small amounts in bonds, mortgages, or other securities in the United States, and second, the investment of the large industrial and commercial concerns of Germany, generally financed by the imperial banks of that country in large industrial and commercial enterprises in America.

When he had taken account of all of the stocks and other securities received by him he found that he had a controlling interest in more than 200 corporations and firms in the United States engaged in various lines of manufacture and commerce. Having caused the German stock holdings in these companies to be transferred to him, the Alien Property Custodian, being the controlling stockholder thereof, nominated and elected directors to represent him on the board of all these corporations, and they undertook the management thereof.

After some experience in this work, two interesting facts developed: First, a large number of these corporations were mere "spy centers" filled with agents of the German Government who were officers or employees of the corporations and who were charged with the duty of making reports to Germany of industrial, commercial, and other conditions in the United States, and, second, all of them were making large profits, and most of them were engaged in lines of business which were enormously profitable on account of war conditions. In other words, they were engaged in the manufacture of products necessary for the war. Upon a contemplation of these facts it seemed to the Alien Property Custodian to be an unconscionable and even unmoral proceeding for him to spend his time and the Government's money carefully conserving this property of the enemy and so operate it as to result in enormous profits for the enemy stockholders growing out of the very war for which they and their friends in Germany were responsible. A. Mitchell Palmer was then Alien Property Custodian. He appeared before the Committee on Appropriations of the Senate, of which I was a member, and described this situation to the committee.

It was the darkest day of the war in March, 1918. The enemy was within 50 miles of Paris and the world believed that Paris would fall. General Haig, of the British forces, had issued his famous statement that England was fighting with her back to the wall. Secretary of War Baker had just come back from the front with the gloomiest reports of conditions there. All the civilized world was mobilizing every energy to defeat the German onslaught. A. Mitchell Palmer, as Alien Property Custodian, stated to the Committee on Appropriations of the Senate that he could make his work an effective part of the war machine by hitting the enemy where it would hurt if he could be given authority to loosen the strangle hold which Germany had secured upon the industry and commerce of the United States. He was asked how this could be done and replied that he should be given the power to sell enemy properties in his hands to American citizens, and with this power he would divest the Germans of their control of American industry. The committee unanimously adopted an amendment to the trading with the enemy act offered by myself, granting to the Alien Property Custodian authority to sell these properties. The amendment, as finally adopted, was as follows:

The Alien Property Custodian shall be vested with all of the powers of a common-law trustee in respect of all property, other than money, which has been or shall be, or which has been or shall be required to be, conveyed, transferred, assigned, delivered, or paid over to him in pursuance of the provisions of this act, and, in addition thereto, acting under the supervision and direction of the President, and under such rules and regulations as the President shall prescribe, shall have power to manage such property and do any act or things in respect thereof or make any disposition thereof or of any part thereof, by sale or otherwise, and exercise any rights or powers which may be or become appurtenant thereto or to the ownership thereof in like manner as though he were the absolute owner thereof: *Provided*, That any property sold under this act, except when sold to the United States, shall be sold only to American citizens, at public sale to the highest bidder, after public advertisement of time and place of sale, which shall be where the property or the major portion thereof is situated, unless the President, stating the reasons therefor, in the public interest shall otherwise determine: *Provided further*, That when sold at public sale the Alien Property Custodian, upon the order of the President stating the reasons therefor, shall have the right to reject all bids and resell such property at public sale or otherwise as the President may direct. Any person purchasing property from the

Alien Property Custodian for an undisclosed principal, or for resale to a person not a citizen of the United States, or for the benefit of a person not a citizen of the United States, shall be guilty of a misdemeanor and, upon conviction, shall be subject to a fine of not more than $10,000 or imprisonment for not more than 10 years, or both, and the property shall be forfeited to the United States. It shall be the duty of every corporation incorporated within the United States, and every unincorporated association or company or trustee or trustees within the United States, issuing shares or certificates representing beneficial interests to transfer such shares or certificates upon its, his, or their books into the name of the Alien Property Custodian upon demand, accompanied by the presentation of the certificates which represent such shares or beneficial interests. The Alien Property Custodian shall forthwith deposit in the Treasury of the United States, as hereinbefore provided, the proceeds of any such property or rights so sold by him.

That amendment was adopted by the House of Representatives without a roll-call vote, and in the Senate on a roll call only one vote was recorded against it. In the circumstances it amounted to a statement of the Congress of the war policy of the Government and a positive direction to the Alien Property Custodian to sell the properties of the kind described.

The Alien Property Custodian then started upon his selling program. In order carefully to guard the integrity of these sales, to make certain that they were sold only to the highest bidder after wide advertisement and that the price should be adequate, and the purchaser a properly qualified American citizen, he requested President Wilson to appoint a committee on sales, whose duty it was to pass upon each and every sale, upon the adequacy of the price, the character of the purchaser, and all other facts and circumstances connected therewith. The President appointed as members of this committee Cleveland H. Dodge, well-known capitalist and philanthropist, of New York, independent in politics; Otto T. Bannard, chairman of the board of the New York Trust Co. and once candidate for mayor of New York, a Republican; George L. Ingraham, former chief justice of the appellate division of the Supreme Court of New York, a Democrat; Ralph Stone, president of the Detroit Trust Co., a Republican; and Benjamin Griswold, jr., head of the firm of Alexander Brown & Sons, bankers, Baltimore, a Democrat. Every public sale made by the Alien Property Custodian was passed upon by this committee, which for months met every two or three days each week. No sale was approved by the Alien Property Custodian unless it was approved by the committee. Every sale which was disapproved by the committee was disapproved by the Alien Property Custodian. The committee's action was absolutely final. It seems perfectly clear that no collusion, fraud, or conspiracy with respect to these sales can be charged without impugning the integrity of this committee of high-class American citizens.

After the selling program had started it was discovered that many of the properties were dependent for their business upon patents issued by the United States to the German subjects who owned the control of these companies and that in selling these industries it was necessary also to convey these patents. The Attorney General held that the patents could not be seized by the Alien Property Custodian under the trading with the enemy act. That law had provided with respect to enemy-owned patents that the Federal Trade Commission could issue licenses to Americans to use German-owned patents, and after the war the German owners could recover the royalties as well as the patents. In other words, the same principle of careful conservation had been applied to the patents by the original act. The Alien Property Custodian again applied to Congress, giving the information that its policy of selling these properties could not be carried out unless there was a further amendment to the act, and the Congress unanimously passed a further amendment providing that patents might be seized and sold. That amendment provided as follows:

(c) If the President shall so require any money or other property including (but not thereby limiting the generality of the above) patents, copyrights, applications therefor, and rights to apply for the same, trade-marks, choses in action, and rights and claims of every character and description, owing or belonging to or held for, by, on account of, or on behalf of, or for the benefit of, an enemy or ally of enemy not holding a license granted by the President hereunder, which the President, after investigation, shall determine is so owing or so belongs or is so held shall be conveyed, transferred, assigned, delivered, or paid over to the Alien Property Custodian, or the same may be seized by the Alien Property Custodian; and all property thus acquired shall be held, administered, and disposed of as elsewhere provided in this act.

Any requirement made pursuant to this act or a duly certified copy thereof may be filed, registered, or recorded in any office for the filing, registering, or recording of conveyances, transfers, or assignments of any such property or rights as may be covered by such requirement (including the proper office for filing, registering, or recording conveyances, transfers, or assignments of patents, copyrights, trade-marks, or any rights therein or any other rights); and if so filed, registered, or recorded shall impart the same notice and have the same force and effect as a duly executed conveyance, transfer, or assignment to the Alien Property Custodian so filed, registered, or recorded.

Whenever any such property shall consist of shares of stock or other beneficial interest in any corporation, association, or company, or trust it shall be the duty of the corporation, association, or company or trustee, or trustees issuing such shares or any certificates or other instruments representing the same or any other beneficial interest to cancel upon its, his, or their books all shares of stock or other beneficial interest standing upon its, his, or their books in the name of any person or persons, or held for, on account of, or on behalf of, or for the benefit of any person or persons who shall have been determined by the President, after investigation, to be an enemy or ally of enemy, and which shall have been required to be conveyed, transferred, assigned, or delivered to the Alien Property Custodian or seized by him, and in lieu thereof to issue certificates or other instruments for such shares or other beneficial interest to the Alien Property Custodian, or otherwise, as the Alien Property Custodian shall require.

The sole relief and remedy of any person having any claim to any money or other property heretofore or hereafter conveyed, transferred, assigned, delivered, or paid over to the Alien Property Custodian, or required so to be, or seized by him shall be that provided by the terms of this act, and in the event of sale or other disposition of such property by the Alien Property Custodian shall be limited to and enforced against the net proceeds received therefrom and held by the Alien Property Custodian or by the Treasurer of the United States.

It will thus be seen that while the war was on, for reasons which were good and sufficient, the Congress, after full consideration, deliberately adopted the policy of disposing to American citizens of these holdings of the junker class in Germany in the great industrial and commercial concerns of America, and of substituting for such properties in any settlement which might hereafter be made with the enemy the proceeds of the sale of such properties when sold according to the provisions of law. If this Government should now undertake to set aside those sales or to account to the German owners for anything else than the proceeds of the sales it would be a deliberate repudiation of a policy of the Government during the war which had much to do with breaking the morale of the German people behind the lines and, consequently, with finally winning the war. My own firm conviction is that the policy announced by the Congress during the war in respect to these matters was right and that we ought to stand by it. The sale of these properties by the Alien Property Custodian was justified by all circumstances then existing. Our allies had done practically the same thing. In Great Britain all the German properties were liquidated. They were not even sold as going businesses, but were disintegrated and practically destroyed. Action very similar was taken in France. There is no doubt whatever that this Government under its war powers had the legal right to take the action which I have mentioned.

That during war Congress enjoys the power to confiscate enemy property has since the case of Brown *v.* United States (1814, 8 Cranch, 110) not been open to argument. In that case Chief Justice Marshall said in part:

* * * That war gives to the sovereign full right to take the persons and confiscate the property of the enemy, wherever found, is conceded. The mitigations of this rigid rule which the humane and wise policy of modern times has introduced into practice will more or less affect the exercise of this right, but can not impair the right itself. That right remains undiminished, and when the sovereign authority shall choose to bring it into operation, the judicial department must give effect to its will. * * *

The trading with the enemy act, although not enacted as an act of confiscation, nevertheless reserves to Congress the full and complete authority to dispose of the properties held by the custodian as it may choose, section 12 providing that—

After the end of the war any claim of an enemy or of an ally of enemy to any money or other property received and held by the Alien Property Custodian or deposited in the United States Treasury shall be settled as Congress shall direct.

An examination of the committee hearings and debates on the bill will show that Congress appreciated that there would be many matters to be adjusted between the belligerent countries when the war was over and deemed it advisable that all such property should be withheld from the former owners pending the conclusion of the respective claims that might be asserted. (65th Cong., 1st sess., H. R. 4960).

It is thus seen that by the act the former enemy owners are estopped to bring any character of action with regard to the recovery of their properties, or the proceeds of the sale of such properties, until Congress has legislated upon the subject. The only exceptions were specifically provided by Congress. By various amendments to section 9 of the act, which is the relief section (acts of July 11, 1919, June 5, 1920, February 27, 1921), Congress permitted, among other proper claimants, certain of the German and Austro-Hungarian subjects who under the treaties of peace had acquired citizenship in newly created States or allied nations, chiefly by reason of the changes made in sovereignty over territories which prior to the war formed a part of Germany and Austria-Hungary, to recover from the custodian in kind any property he held belonging to them, or, if it had been sold, the proceeds of such sale.

In searching the records for American patents owned by German subjects it was found that a very large number of them were without any connection with any American business enterprises. In other words, they were not being worked in this

country. They were patents which had been taken out by German subjects not with the purpose of promoting industry in America but for the purpose of stifling industry. They were taken out here in order to prevent the manufacture of the articles patented and so as to give a monopoly to the Germans who imported the same articles made in Germany. These patents were, loosely speaking, of two general classes; of course, there were others, but the largest classes were these two: First, patents involving guns, ordnance, and other war materials; and second, patents on the processes of making dyestuffs and other chemicals, generally known as chemical patents.

It will be seen at a glance that these two classes of patents contained a tremendous power for good or ill, depending upon their owner. With their help Germany had built up a great war machine, including a chemical industry which dominated the world, and whose products of high explosives and poisonous gases nearly put civilization to rout in the early days of the war. In these chemical patents also was bound up the future of the medical science, with all that that means for the welfare of mankind.

These patents were not property in the usual sense, like houses and lots and horses and cattle. They were privileges granted by the Government of the United States for the purpose of promoting industry in this country. The purpose of granting those privileges had been flouted by the Germans. The spirit of our patent laws had been violated and our hospitality abused when the Germans took out patents here for the sole purpose of building up in Germany the great industrial and war machine with which it expected to subdue the world in 1914. It seemed to the Alien Property Custodian—and to President Wilson, who gave the matter much consideration—that it would be highly proper to turn over these patents to the American people for their benefit.

To accomplish this purpose in this country the Alien Property Custodian did two things: First, he transferred to the War and Navy Departments the right to use all of the patents on war materials—about 5,700 in number—during the life of the patent for a nominal consideration. He also transferred to the Navy Department the title to the wireless patents and the wireless plants which Germany had built in this country at Sayville, Long Island, and Tuckerton, N. J., for a consideration of $100,000, which was practically nominal. Second, he conceived the plan of the Chemical Foundation, which was designed as a conduit through which all the German chemical patents should flow for the general public benefit of the people of the United States.

The Government had been using many of the German patents in connection with war materials, and under the original trading with the enemy act it would have been compelled to pay royalties therefor. The action of the Alien Property Custodian saved the Government from this.

In his report which was submitted to Congress on February 22, 1919, A. Mitchell Palmer, as Alien Property Custodian, fully apprised the Government of his plans and purposes with reference to the Chemical Foundation and the reasons which actuated him in forming that corporation and selling nearly 5,000 chemical patents to it for a consideration of $250,000. In that report he said:

> The amendment of November 4 to the trading with the enemy act presented for the first time an opportunity for what appears to me to be the most important piece of constructive work which has been possible in my department. Until the enactment of this amendment it had not been possible to take over German patents. These patents, as had been already indicated, formed a colossal obstacle to the development of the American dyestuff industry. Evidently they had not been taken out with any intention of manufacturing in this country or from any fear of American manufacture, which the Germans apparently thought could not be successfully carried on under conditions prevailing in this country in regard to costs and to the supply of technicians and skilled labor. Upon consideration, however, it seemed that these patents offered a possible solution for the problem, hitherto unsolvable, of protecting the new American dye industry against German competition after the war. If they were not taken out in order to prevent American competition, they must have been obtained as a weapon against competing imports. If they were sufficient to stop importation of competing Swiss, French, and English dyes, they would presumably serve in American hands to stop the importation of German dyes. This was particularly probable in the case of the product patents, since most of the coal-tar dyestuffs are definite chemical combinations to which a product patent is entirely applicable.
>
> The idea was accordingly conceived that if the German chemical patents could be placed in the hands of any American institution strong enough to protect them, a real obstacle might be opposed to German importation after the war, and at the same time the American industry might be freed from the prohibition enforced by the patents against the manufacture of the most valuable dyestuffs. Accordingly, these considerations were laid before various associations of chemical manufacturers, notably the Dye Institute and the American Manufacturing Chemists' Association. The suggestion was met with an instantaneous and enthusiastic approval, and as a result a corporation has been organized to be known as the Chemical Foundation (Inc.), in which practically every important American manufacturer will be a stockholder, the purpose of which is to acquire by purchase these German patents and to hold them as a trustee for American industry, "for the Americanization of such institutions as may be affected thereby, for the exclusion or elimination of alien interests hostile or detrimental to the said industries, and for the advancement of chemical and allied science and industry in the United States." The voting stock is to be placed in a voting trust, of which the trustees are to be the five gentlemen who for months have been acting as the sales committee which passes upon sales made by my department, that is to say, George L. Ingraham, former presiding justice of the appellate division, first department, New York Supreme Court; Otto T. Bannard, president New York Trust Co.; Cleveland H. Dodge; Benjamin H. Griswold, senior partner of Brown Bros., bankers, Philadelphia; Ralph Stone, president Detroit Trust Co.; and the charter is so framed that under the patents nonexclusive licenses only can be granted on equal terms to all proper applicants, and must be granted to the United States free of cost. The company is capitalized at $500,000, of which $400,000 is to be 6 per cent cumulative preferred stock and $100,000 common stock also limited to 6 per cent dividends. The first president of the Chemical Foundation (Inc.) will be Francis P. Garvan, of the New York bar, to whose clear vision and indefatigable industry I am chiefly indebted in the working out of this plan. By Executive order obtained under the provisions of the act, I have sold to this company for the sum of $250,000 approximately 4,500 patents; the remaining $250,000 has been provided for working capital, so that the company may be able to commence immediately and prosecute with the utmost vigor infringement proceedings whenever the first German attempt shall hereafter be made to import into this country. The charter of the corporation provides that surplus income is to be used for the retirement of the preferred stock and thereafter for the advancement of chemical and allied science and industry. The price thus paid was necessarily determined somewhat arbitrarily; the great majority of the patents were presumably valueless. The value of the remainder was entirely problematical and impossible to estimate. Substantially the entire industry having combined for the purpose of this purchase, it would have been impossible on public sale to find as a bidder any legitimate manufacturer. No other bidder could, therefore, have been found on public sale, except some speculative individual who might have bought them for purposes practically amounting to commercial blackmail. The combination was not objectionable to public policy since it was so organized that any genuine American, whether a stockholder of the company or not, could secure the benefits of the patents on fair and equal terms.
>
> It is submitted that the organization of this institution constitutes the most important step that has been taken for the protection of the new industry. Tariff protection has proved utterly unavailing in the past. The German industry as hitherto organized, and still more as now organized, has had so much to gain by extending its foreign trade and by destroying the industry in other countries that it would undoubtedly give away its goods in this country for nothing in order to recover the American market. The Chemical Foundation, however, should prove a power sufficient to discourage in a most effective manner any German attempts in this direction. If, as their newspapers boast, the Germans have during the war worked out entirely new dyes superior to their past productions, the protection afforded by it will be invaluable. It has been the uniform experience of the industry that the introduction of new classes of dyestuffs follows only several years after the patenting of the original inventions on which their manufacture depends. Accordingly, the later dyes of to-day depend largely upon the patents of three or four years ago. The patents transferred to the Chemical Foundation include many German patents of 1917, and even of 1918, and also many applications still pending. These patents undoubtedly include the results of the research upon which must be based the manufacture of any new dyes which the Germans are now able to produce and market. Accordingly, at the very least, the institution will be able to protect the American industry for a considerable period, and this should be all it needs. It appears to be the universal view of the more competent manufacturers in this country that given five years of freedom from German competition the American industry can hold its own. Probably only a measure such as the embargo which appears to have been imposed by the British and French against all foreign dye importations can furnish this protection to the degree necessary to insure the safety of the American industry; but short of such an embargo, the Chemical Foundation would seem to furnish all the aid that possibly can be given.
>
> At the same time, the new institution promises an incalculable benefit not only to the dye and chemical industries but to the whole American manufacturing world. The opportunities which it can offer and the rewards which it can hold out to competent research scientists should far exceed those of any institution unconnected with industry, and it may well, therefore, form the nucleus of the greatest research organization in the country.

It must be borne in mind that the Alien Property Custodian made this report to Congress on the 27th day of February, 1918, and it was not until the 10th day of April following, nearly two months, that the title to this property passed and the plan was consummated and carried out, and during those two months there was no objection raised, in the Congress or out of it, to the carrying out of this plan, although it was given absolute and full publicity in every one of its details.

This report effectually disposes of the charge that there was a fraudulent conspiracy on the part of those in the Alien Property Custodian's office who erected the Chemical Foundation and sold these patents to it. The charge has been repeatedly made that Mr. Garvan, as Alien Property Custodian, sold these patents to himself as president of the Chemical Foundation. It will be seen, however, from this report, which was made before Mr. Garvan became Alien Property Custodian, or had any thought of being appointed to that office, that the entire plan was devised and perfected and the sale made while Mr. Palmer was Alien Property Custodian. It was Mr. Garvan's announced purpose then to resign his subordinate place in the Alien Property Custodian's office and take the presidency of the Chemical Foundation without salary or compensation for expenses, but on March 4, 1919, Mr. Palmer was appointed Attorney General, and President Wilson, with full knowledge of the entire Chemical Foundation matter, made Mr. Garvan Alien Property Custodian. It is true that the actual assignment of the patents to the Chemical Foundation was not ready

until April 10, 1919, and it was signed by Mr. Garvan as Alien Property Custodian, but, as shown by Mr. Palmer's report, the entire matter had been concluded and consummated before Mr. Palmer went out of office, and the signing of the papers was a mere formality. Conspiracies to defraud are not committed in the open light of day. Conspiracies to defraud the Government are never reported to Congress by the conspirators in advance. How could any conspiracy be successfully charged here in view of the fact that the Alien Property Custodian, before the final act which transferred the property, made a full and complete report of his plans and purposes and the reasons therefor to the Congress of the United States, to which wide publicity was given at the time? If the Chemical Foundation had been a strictly private institution for profit, engaged in the manufacture of chemicals, the sale to it for $250,000 would have been properly subject to attack, for it would have given for a trifling consideration a monopoly in the production of chemicals. But it was just to avoid this kind of situation that the Chemical Foundation was formed. Its stock is controlled by voting trustees, who had served as a committee appointed by the President of the United States. It does not and can not engage in manufacture. Its profits above 6 per cent to its stockholders must go for the upbuilding of chemistry in the United States by education and research work. It must and does issue licenses for manufacture under the patents to all persons who apply therefor upon absolutely equal terms. It has been the only means of preventing monopoly and has been more responsible than any other cause for building up a great chemical industry in this country.

Now, President Harding has directed the present Alien Property Custodian to demand a return of these patents from the Chemical Foundation to the Government. The Chemical Foundation has refused to return them, and presumably the Attorney General will bring suit to set aside the sale by reason of constructive fraud growing out of the alleged inadequate consideration. The consideration was, in fact, adequate. In addition to the money consideration of $250,000, which may be admitted to be nominal, there was the further consideration that the Government itself should have the right to use the patents free of charge as long as these patents were in existence, and, further, and of paramount consideration, was the upbuilding of a great American chemical industry by the plan herein outlined, which should be for the benefit, security, and safety of the United States in peace and in war.

More than that, it was the only way in which the patents could be disposed of without creating a monopoly in somebody or some corporation, whereas going to this corporation it creates no monopoly and allows the use of the patent by every citizen of the United States upon the payment of nominal royalty charges.

The Germans are more interested to get these chemical patents back than they are to secure all the rest of their property, but there is reason to believe that they have hopes that if the present action against the Chemical Foundation is sustained and the sale voided by reason of inadequate consideration, they can drive the United States Government to the position where it must set aside many other sales of German property and return these properties to the German owners with all the profits which have accrued in the meantime. They have sent a commission to the United States, composed of eminent German lawyers, who take the position that with the President committed to the doctrine that German property could not be disposed of for any consideration that was inadequate, they will be able to compel the Government to set aside many other conveyances. The President has committed himself to the doctrine that the sale was a violation of a trust.

This is a mistaken theory of the law, for under the decisions the title to the property vested absolutely in the Government of the United States, and the Alien Property Custodian was not trustee for the German owners. He was a trustee only in the sense that every public officer is a trustee—"a public office is a public trust." But the Germans contend that he was a trustee for them, and as such trustee he had to be certain that every property brought its full value. Where will this lead? It will inevitably mean that the Germans, with the Chemical Foundation case as a precedent, will insist that the Government must return to the "trusteeship" the wireless plants and patents and all the patents on war materials; the great Hamburg-American and North German Lloyd Line terminals at New York, which were sold by the Alien Property Custodian to the President of the United States for about $7,000,000, and which the Germans can probably show to be worth much more than that. And then the Germans propose to collect on all patents used by American citizens and even by the American Government during the war for the very purpose of putting an end to the war which the Germans started.

One representative of the German claimants has been quoted as making this interesting statement:

> There was patented just before the war a most wonderful sight for a 3-inch gun. Nothing like it was in evidence. It was one that was the envy of all Army men who knew about it. Also it was one of the German patents seized by the Alien Property Custodian. He sold this to the Navy Department for about $100. Now, it just happens that there was a royalty agreement on this one patent alone providing for the payment of $35 for each gun sight made under the patent. Of course, the Army and Navy wanted it. Palmer, as Alien Property Custodian, sold it to the Navy. It was used on all the 3-inch guns that the United States had in France. At least 200,000 of these gun sights were made, and the royalties would exceed $8,000,000. With the idea now taken by the President there is nothing in the world to stop the collection of these royalties.

That is the viewpoint which the German lawyers take in reference to this action.

When it passed the trading with the enemy act Congress expressly reserved the right to make disposition of all enemy property after the war. I have already quoted the language of the law in making this reservation.

The Versailles treaty was so written as to preserve this power on the part of Congress. While the treaty provided several optional methods for the settlement of German claims against the United States and American claims against Germany, it left for future legislation by Congress the determination of the method which would be adopted in their settlement. The separate treaty of peace, in turn, reserved for the United States all rights reserved in the treaty of Versailles. Therefore it is up to the Congress to act. In my judgment there should be no further delay. I have, therefore, introduced a measure which carries out every obligation which this country has assumed with respect to property and claims of belligerents in full accord with the letter and spirit of the treaties.

Under this bill, if it shall become a law, all the American claims provided for in the treaties will be paid out of the enemy property in our hands, which by those treaties was left with the United States as a pledge to secure the payment of such American claims. There is no necessity for further negotiation with Germany in the matter. There is no need for an additional treaty. All the rights of both parties have been formally settled in the treaty now in effect, and under that treaty the Congress, having full power, should no longer delay in taking such action as will secure to the Government of the United States and to American citizens that measure of justice which has so long been denied them.

Mr. NELSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Minnesota?

Mr. UNDERWOOD. I yield.

Mr. NELSON. The bill which the Senator from Alabama introduced pertaining to this subject matter was referred to the Committee on the Judiciary and that committee has referred it to a subcommittee. The subcommittee has sent the bill to the State Department and to the Department of Justice.

We know from the public press, I take it, the fact that the Government has instituted or is about to institute a suit against the Chemical Foundation in respect of these German patents. A demand has been made upon Mr. Garvan, who was an employee of the Alien Property Custodian, I think, at the time these patents were sold, and the Government is about to bring a suit or has already brought it.

Now, I am greatly surprised at the conservative Senator from Alabama making such a profound argument. I have listened to the whole of it. The drift of it seems to be to defend and demonstrate the validity of the sale of the German dye patents to the Chemical Foundation. That seems to be the central part of his speech. I am not criticizing it as matter of fact, but it seems to me strange when the Government is about to bring a suit or has brought a suit to test the question in the courts, that we should attempt to try it here in the United States Senate. I am therefore, Mr. President, greatly surprised at the elaborate argument made here in behalf of the sale of the German patents to the Chemical Foundation. I did not know, I had not a suspicion when the bill came to the Senate that back of it was this move, and I am astonished at the conservative Senator from Alabama aiming to take a case of this kind out of the hands of the courts and to try it here in the Senate.

Mr. UNDERWOOD. Mr. President, I am more astonished than is the Senator that the conservative Senator from Minnesota should reach any such conclusion in reference to my intention. His is rather a remarkable statement. As I gave my statement to the press a few days ago and one of the young men of the press came to me afterwards and said, "I think your statement is a defense of the Chemical Foundation," he prob-

ably ran around to the Senator's office and told him in advance of the making of the speech that that was the subject, and I judge that the Senator took his line of thought rather from that statement than from the speech itself.

Now, Mr. President, the reason why I make the statement is not a question of trying to interfere with the courts, but I know that this attack on the Alien Property Custodian is coming from the German agents, the German lawyers in the country representing their clients, trying to get the property back. I know that they put up the Chemical Foundation as a man of straw to shoot at, to try to misrepresent to the American people what the rights of the claimants and the Government of the United States are in the property. I did not propose to let that proposition go by without putting in the RECORD the facts. There is not one word I said this morning that can be said to be argument. There is not one word of the statement that I put into the RECORD this morning in reference to the property taken by the Alien Property Custodian that is not a recital of fact. Is there anything in reciting honest facts to the Congress that is going to misinterpret a case before the courts of the land?

Mr. NELSON. But is it not an argument in its substance to show that the Government is mistaken in bringing the suit? Is not that the drift and purpose of the argument?

Mr. UNDERWOOD. I will say to the Senator that from my standpoint the Government is mistaken. I will not say as a matter of law, because that is a question for the courts to determine; but as a matter of looking after the great interests of the American people it is a mistake for the Government to take this action. because if the Government succeeds in having set aside the transfer of these chemical patents to the trust created for the benefit of the American people, what is going to happen? Where are they going? What is going to become of those patents if the transfer is set aside? Are you going to give them back to Germany, or where do they go? If you give those chemical patents back to Germany, they go to the German cartel, a trust in Germany.

Mr. NELSON. Mr. President, will the Senator allow me to interrupt him?

Mr. UNDERWOOD. I will.

Mr. NELSON. The Senator is assuming what is not demonstrated. He assumes that the Government is bringing suit to cancel the sale for a nominal price for the purpose of turning the property back to the Germans.

Mr. UNDERWOOD. Oh, no.

Mr. NELSON. That is an unwarranted assumption.

Mr. UNDERWOOD. The Senator's hearing is not good.

Mr. NELSON. As to the beneficiaries who got all these patents for the nominal sum of two hundred and fifty thousand and odd dollars, I am surprised to see the Senator shed tears over them.

Mr. UNDERWOOD. The only trouble with the Senator from Minnesota is that his hearing is not good this morning. He was listening to me, but he did not hear. I did not say they were going to turn this property back to the Germans. I asked, if we set aside the sale, what are you going to do with the property? If the Senator will allow me, I am going to ask him some more questions about what he is going to do with the property. That was only my first question. I asked the Senator if his plan was to turn the patents back to the Germans, to a monopoly in Germany.

Mr. NELSON. If the Senator will allow me to explain my position, I take it that the Government of the United States, if it again obtains control of these patents, will retain them for the benefit of the American people. I had rather trust the Government of the United States to handle them for the American people than to have that done by the Chemical Foundation, which obtained them for a merely nominal price.

Mr. UNDERWOOD. I applaud the Senator from Minnesota for coming to that conclusion, because that is my conclusion. I did not expect that the Senator was willing that these patents should be turned back to a German monopoly, once more to prey on the American people, and I did not say he was; but, I asked, What are you going to do with them?

Mr. NELSON. I have told the Senator what I think the Government will do with them. The Government will retain the patents for the benefit of the American people.

Mr. UNDERWOOD. Of course. Now, we are coming right down to the point. That shows how the whole case is punctured; that there is not anything in it except propaganda conducted by men in this country who four years ago were in arms as enemies of the people of the United States. The Senator from Minnesota is right. This property should not be turned back to the Germans, but it should be retained and used for the benefit of the American people. What was done in this matter?

Mr. NELSON. Mr. President, will the Senator from Alabama yield to me?

Mr. UNDERWOOD. Certainly.

Mr. NELSON. The Senator from Alabama talks about propaganda, but I desire to say that the only propaganda I have noticed—and I have received pamphlets and books and circulars and letters—in reference to this matter comes from the Chemical Foundation. I have discovered propaganda from no other source.

Mr. UNDERWOOD. Then the Senator from Minnesota has not read carefully, because, as I myself have noticed, the newspapers are full of such matter; but that is neither here nor there; the Senator from Minnesota is not responsible for what he has not seen. The Senator from Minnesota and I, however, are not apart; we are in agreement. The Senator says that this property should be held and should not be given back to the Germans—I am not in favor of giving it back to the Germans—that it should be held by the Government of the United States for the benefit of the American people.

What was done by President Wilson in reference to this matter? What was his action? He did exactly what the Senator from Minnesota proposes, and in the only way in which he could do it. He had this condition to face, as to whether he would hold this property and let the Germans obtain the patent rights and secure the profits and get the patents back after the war, or whether he would hold the patents for the American people.

Mr. NELSON rose.

Mr. UNDERWOOD. If the Senator will wait for a moment, I will explain the matter to him; but, of course, if the Senator wishes to ask me a question, I am always glad to yield to him. If he will listen to me for a moment, however, I think I shall show him what had to be done. Under the law when this property came to be disposed of, it had to be disposed of and sold to somebody. The Alien Property Custodian act provided that it must be sold and disposed of to somebody.

Mr. NELSON. Now, will the Senator yield to me for a moment?

Mr. UNDERWOOD. Yes; I am perfectly willing to yield to the Senator.

Mr. NELSON. The difference between the Senator from Alabama and me on this question, I think, is that the Senator from Alabama would like to have the Chemical Foundation retain these patents, and I should like to have them go into the hands of the Government.

Mr. UNDERWOOD. I will say to the Senator that, so far as I am concerned, I have no personal interest as to whether the Chemical Foundation retains the patents or whether somebody else obtains control of them. I only desire that they shall not go back to the German cartel and that the American people shall have the benefit of them. I have no interest one way or the other. But I desire to continue what I started to say. When this question faced President Wilson and he had to act, he could not conserve these patents for the Government; there was no law by which he could forfeit them to the Government. He did not want to sell them to private citizens in the United States, as he could have done, who would have probably purchased the patents at that time at an inadequate price, because they were not of great value during the war, although they were of great value after the war. If he put them up and sold them, as he did the wireless plants at Sayville and Tuckerton, the patents would have fallen into the hands of individual citizens, who would have created a monopoly—not a German monopoly but a United States monopoly—of these very valuable patents.

Now, what did the Government do? It created a corporation that had no financial interest in the matter whatever except to get 6 per cent on $500,000, which practically amounts to a loan.

Mr. WATSON of Indiana. Will the Senator permit an interruption?

Mr. UNDERWOOD. I will.

Mr. WATSON of Indiana. My attention has been diverted, so that I have not heard the Senator's remarks throughout; but I should like to ask the Senator whether or not it is the Senator's view that the Chemical Foundation, as such, holds these patents in fee simple, or simply as the trustee of the Government or the trustee of the owners?

Mr. UNDERWOOD. I think, of course, that the Chemical Foundation was organized in order to hold these patents. The transfer of the patents to the Chemical Foundation was an absolute sale.

Mr. WATSON of Indiana. An absolute sale?

Mr. UNDERWOOD. Yes; but as organized the Chemical Foundation stands as trustee for the American people, and the

trustees are not Mr. Garvan or Mr. Palmer. They had to do something to make a start.

Mr. WATSON of Indiana. Will the Senator permit a further interruption?

Mr. UNDERWOOD. Certainly.

Mr. WATSON of Indiana. The Chemical Foundation originally paid $250,000 for these patents?

Mr. UNDERWOOD. Yes.

Mr. WATSON of Indiana. How was the money raised and who subscribed it?

Mr. UNDERWOOD. I am going to tell the Senator right now. The Chemical Foundation sold $400,000 worth of cumulative preferred stock at 6 per cent, which is being paid off from the earnings of these patents and will be canceled. They sold $100,000 worth of common stock, with dividends limited to 6 per cent, with no power on the part of the stockholders to vote the stock. Therefore it practically amounted to a loan.

Who are the real controlling factors in the Chemical Foundation? They are not Mr. Garvan; they are not the stockholders, because it was a mere loan. The names of the men to whom the power is given to vote the stock and to control the corporation are as follows: George L. Ingraham, former chief justice of the appellate division of the Supreme Court of New York; Otto T. Bannard, president of the New York Trust Co.; Cleveland H. Dodge, to whom I referred awhile ago; Benjamin Griswold, jr., head of the firm of Alex. Brown & Sons, bankers, of Baltimore; and Ralph Stone, president of the Detroit Trust Co. Two of these gentlemen are Republicans, two of them are Democrats, and one, Mr. Dodge, is independent in politics. They are men whose character and standing may not be questioned by anybody in the United States. They have the voting power of the stock in their hands as trustees, and control in that way the Chemical Foundation for the benefit not of the stockholders, because the stockholders merely made a 6 per cent loan, but they control it in order that there may not be a monopoly created of these patents and that anyone in the United States who is willing to pay a reasonable royalty may use the patents when they want to. Of course, there was no other way under the law for President Wilson to insure that these patents would not go back to the German cartel—the German monopoly—or be sold to private citizens of the United States and a monopoly created in America, and that they would be preserved so that every American citizen might have a free and full opportunity to use them for his own benefit.

That is identically what the Senator from Minnesota is in favor of, except he does not approve of the machinery which has been set up to carry on this work for the benefit of the American people. The Senator would merely throw the property into the lap of the United States and have some bureau chief exercise authority and control over it. That is the only difference.

Mr. WATSON of Indiana. Mr. President, would it interrupt the Senator if I should ask him another question?

Mr. UNDERWOOD. No; I am delighted to yield.

Mr. WATSON of Indiana. The Senator has named certain gentlemen who he says hold and vote the stock as trustees. Trustees for whom? Trustees for what?

Mr. UNDERWOOD. They are trustees of the Chemical Foundation, but they own the stock. In one sense they are not trustees, but practically they are trustees for the American people. They have no pecuniary interest in the matter.

Mr. WATSON of Indiana. Let me ask you, Senator, another question. I understood the Senator to say awhile ago that the Chemical Foundation owns the patents in fee simple?

Mr. UNDERWOOD. Certainly the corporation owns them.

Mr. WATSON of Indiana. The corporation owns the patents in fee simple?

Mr. UNDERWOOD. Undoubtedly.

Mr. WATSON of Indiana. Of course, if that be true, then the suit of the Government will not lie. They can not be compelled to turn back to the Government property which they own in fee simple.

Mr. UNDERWOOD. I think the Senator is right about that, but I will not pass on that point——

Mr. WATSON of Indiana. I understand; but I am merely trying to ascertain the Senator's viewpoint.

Mr. UNDERWOOD. The Senator from Minnesota charged me a moment ago with attempting to enter into a legal discussion. I will not do that at this time.

Mr. BORAH. Mr. President, a fee-simple title can be set aside on account of fraud.

Mr. WATSON of Indiana. Of course, the sale could be set aside for fraud——

Mr. UNDERWOOD. Undoubtedly.

Mr. WATSON of Indiana. For, of course, fraud vitiates every contract.

Mr. UNDERWOOD. I am not discussing the question as to whether there was technical fraud, as to whether the sale of the patents could be set aside by the courts on account of inadequate consideration. That is a question for the courts to determine; but the idea that there was any actual fraud is absurd when it is considered that the whole proposition was laid before Congress two months before it was consummated and before the American people, and not a protest was made.

Mr. NELSON. Mr. President, will the Senator allow me to ask him another question at this point?

Mr. UNDERWOOD. I will.

Mr. NELSON. The Senator from Alabama has lauded the eleemosynary plan of the beneficent Chemical Foundation, which bought this property for a song and are going to administer it for a song, and so forth. Is there anything in the law of its creation which will prevent the Chemical Foundation from changing its program and adopting a different policy? Is there any law restraining them from doing that?

Mr. UNDERWOOD. The terms of the charter on which it acquired the property restrain them from doing anything of the kind. It acquired these patents in consideration of holding them for the American people and not making money out of them. That is in the charter itself. Of course, if it should violate that charter, it could be compelled by law to use the patents for the benefit of the American people and not for personal gain. There is not a thing in that.

As to the legal point that there must be adequate consideration, I do not think that is essential; but I am not going to decide or attempt to decide that law point. I only say that if that contention be carried to its utmost limit and the sale to the Chemical Foundation may be set aside for a technical fraud on the ground of inadequate consideration, then the sale of the great war patents to the Army and Navy Department may be set aside for technical fraud; the sale of the wireless plants in New Jersey and Long Island may be set aside for technical fraud; the sale of the great docks at Hoboken may be set aside for technical fraud, and we are on the way to turning back this property to the German owners. I make this statement, but I think the question should be fought out.

Mr. NELSON. Mr. President, will the Senator yield to me?

Mr. UNDERWOOD. Certainly; I yield.

Mr. NELSON. I will not interrupt the Senator, of course, if it is disagreeable to him.

Mr. UNDERWOOD. Not at all. I am very glad to discuss the question with the Senator from Minnesota.

Mr. NELSON. It seems to me that the Senator's attitude is that the Chemical Foundation ought to retain these patents after they have bought them under a sale for a nominal price. Now, let me put the question direct. Is the Senator opposed to the United States acquiring possession and control of those patents instead of the Chemical Foundation for its own use? There is where I think we differ. I am in favor of the Government acquiring those patents and holding them for the benefit of the people of the United States; and, if I understand the Senator correctly, he wants the Chemical Foundation to hold them.

Mr. UNDERWOOD. The Senator does not understand me correctly. As far as I am personally concerned it is a matter of absolute indifference to me whether these patents are administered in the public interest by the Chemical Foundation, or whether they are administered by the Government of the United States for the public. I am not concerned about that at all; but I am concerned about this sale being set aside for the purpose either of restoring these patents to the German monopoly or of selling them to people here who want to create a monopoly in the United States. There is where I object; and the reason why I have gone into this matter is not that I differ with the Senator from Minnesota in the idea that these patents should be controlled in the public interest. They are controlled in the public interest now, and if the court decides the other way I am perfectly willing for the Government to control them; but I am not willing to make an admission of record that this sale is illegal because of lack of consideration, when that admission of record goes to the validity of the title to the great piers at Hoboken, the civil plants, and the patents of the War Department, and may involve this Government of ours in endless disputes and turmoil.

I am not concerned about who owns these plants. I have merely made this morning a statement of facts, not of argument. There is not a fact stated in this statement that I read to the Senate that can be challenged as a fact. It is very carefully preserved in that way. What I want to do is to let the Ameri-

can people know that these attacks are being made upon this property by German lawyers, and they have a right to do it. They represent their clients; but they are German lawyers, trying to destroy the integrity of this property and its ownership by the Alien Property Custodian, and at the same time the Congress has withheld its hand and failed to give relief to American claimants who suffered in the Great War.

Mr. McCUMBER. Mr. President——

Mr. UNDERWOOD. I yield.

Mr. McCUMBER. I want to ask the Senator a question or two for information. If I understand him correctly, the $250,000 which was the moving consideration was obtained upon a sale of preferred stock. Am I correct in that?

Mr. UNDERWOOD. That is what the Alien Property Custodian reported to Congress, and I am sure he was correct, of course.

Mr. McCUMBER. What was the amount of preferred stock that was sold? Can the Senator inform me as to that?

Mr. UNDERWOOD. Yes; that is stated in the report, which has been before Congress a long time.

Mr. McCUMBER. I am asking for information. I have not it in my mind.

Mr. UNDERWOOD. Four hundred thousand dollars of preferred stock, bearing only 6 per cent interest, and $100,000 of common stock, limited to 6 per cent interest, was the entire capital that was raised.

Mr. McCUMBER. That was, then, $350,000?

Mr. UNDERWOOD. Five hundred thousand dollars was the total amount of capitalization that was raised—$400,000 of preferred stock and $100,000 of common stock.

Mr. McCUMBER. But what I want to get at, if I can, is this: In the sale of the stock, how much was the $400,000 worth of preferred stock, which was to bear 6 per cent interest, sold for? Was it sold for par?

Mr. UNDERWOOD. Yes; they sold it for par.

Mr. McCUMBER. They sold it for $400,000, then?

Mr. UNDERWOOD. They sold $400,000 of preferred stock for $400,000, and they sold $100,000 of common stock for $100,000, and the company had in its treasury at the end of the sale $500,000. Of that, $250,000 was paid to the Government of the United States, and the other $250,000 was used to start the running of this company.

Mr. McCUMBER. It has never been clear to my mind why, if this company was organized practically as a trustee, it was necessary to pay to the Government of the United States a quarter of a million dollars; and if the Senator has any information on the subject I wish he would explain to me why the Government reached out its hands and took a quarter of a million dollars from a corporation which was a nominal corporation organized only for its benefit and as its trustee, it acting on behalf of the people of the United States.

Mr. UNDERWOOD. I will say to the Senator that I think the sale could have been made for $1 and would have been just as legal as if it were made for $250,000, as long as the purpose was to organize a corporation to hold these patents in trust for the American people; but that is just my opinion. As to why the particular sum of $250,000 was paid instead of $100,000 or $500,000, I can not answer any more than I can answer why the sum of $100 was paid by the Navy Department for this particular patent, a gun sight, that this German agent referred to, that I read to the Senate a while ago. I do not know why the Government paid $100 for that patent instead of paying $1 or $100,000. It was a nominal amount, because they were selling practically to themselves for the benefit of the American people; and the real consideration in the transfer of these patents to the Chemical Foundation is that the patents are there, not held by a monopoly, kept away from the German cartel, which is a monopoly, not transferred to a monopoly of American citizens, but held for the benefit of the American people. I do not know why this was done, but I understand that out of the royalties that are being collected this preferred stock is being paid off, and therefore the Government of the United States is not injured by having received $250,000 instead of $1. The real consideration was the grants that it made in the public interest.

The thing with me is this: I know that the Senator is perfectly sincere in his position, but I know that every argument that has attacked this property—many of them made by sincere and honest American citizens—has had its inception in the brain of a German lawyer, who is trying to throw out his viewpoint to tear down our holding this property for American citizens.

Mr. McCUMBER. Mr. President, I do not think I have any particular interest one way or the other in the matter.

Mr. UNDERWOOD. Oh, I said the Senator did not. I know he does not.

Mr. McCUMBER. I am trying to find out where we stand in reference to it.

Mr. UNDERWOOD. Certainly.

Mr. McCUMBER. I have not even a conviction of what ought to be done; but here is the question: What interest has the Chemical Foundation in the matter at all other than the interest of trustee?

Mr. UNDERWOOD. None.

Mr. McCUMBER. All it does is to collect the money from the holders of the patents and use that money to pay the 6 per cent upon the loan and to take up the preferred stock and other stock.

Mr. UNDERWOOD. Except this, that it can not go into the manufacturing business, but under the terms of its charter whatever profits it gets out of the sale of these patents must be used for educational purposes in building up a chemical institute in the United States. It is in the public interest.

Mr. McCUMBER. Then the stockholders have no interest in that?

Mr. UNDERWOOD. None whatever.

Mr. McCUMBER. And the corporation has no interest in it, except as the individuals are desirous of building up the industry in the United States?

Mr. UNDERWOOD. It is purely, as I understand it, an eleemosynary concern, just like these great college foundations are eleemosynary concerns, where some rich man comes along and gives a number of million dollars to create a foundation for education. This is merely an arrangement by which, after paying the 6 per cent interest due on this money, all of the surplus money is used in the public interest.

Mr. McCUMBER. I have some arguments before me, however, in which the Chemical Foundation takes the ground that it has paid good consideration, full and adequate consideration, for these patents, that only a few of them were worth anything, that it has had to spend considerable money, and it seems to take the position that it is entitled to them, and to do whatever it sees fit to do with them, of course under the terms of its charter.

Mr. UNDERWOOD. Undoubtedly, I think, that is true. The sale was either valid or it was not valid; but so far as the Chemical Foundation is concerned, of course until the courts set aside the sale these trustees, Mr. Dodge and the others who control this stock and control the policies of the foundation, are going to regard it as a valid sale. Then they have these patents as the result of a valid sale, to exercise a trust in the interest of the American people, and that is to see that nobody gets a monopoly of these patents during their life, and that any surplus from the payment of royalties shall go to building up an American chemical industry in the way of educating the American people along that line. That is all there is in it. There is no pecuniary profit to an individual.

Mr. McCUMBER. Then the only thing in which the Congress is interested and the only thing in which the American people are interested is as to whether this trusteeship shall be exercised by the Government or whether it shall be exercised by the Chemical Foundation?

Mr. UNDERWOOD. Undoubtedly.

Mr. McCUMBER. It seems to me that if that were all there were in it, the Chemical Foundation would not be exhibiting the intense interest it is exhibiting in this matter, as long as it has no financial gain to be had.

Mr. UNDERWOOD. I think where gentlemen are appointed trustees, and where they are interested in building up a chemical educational institution in this country, they would naturally want to carry out the trust that had been imposed upon them; and I am inclined to think that this is a wise way to do it. So far as I am concerned, it is immaterial to me personally whether the Government administers this trust in the interest of the American people or whether the Chemical Foundation administers it. The thing that I am trying to bring before the Senate is not that.

I knew at once why the Senator from Minnesota [Mr. NELSON] was diverted this morning, because when I handed my manuscript—because I wanted some publicity to it—to the press I immediately got the reaction that that paper was a defense of the Chemical Foundation, when what I was trying to do was to lay before the Senate the facts in reference to this alien property, which could only be done by reviewing these facts. I saw at once that somebody else was trying to divert attention again from the real issue, trying to mislead the Congress and mislead the American people again from the real issue, and that is as to whether these American citizens whose families and friends were drowned in the *Lusitania*, whose ships were sent down at sea by German submarines, whose

property was destroyed, are going to have an opportunity to have a court or a commission established by the Congress before which they can come and present their claims. That is what these German lawyers have been trying to foreclose and prevent ever since the German treaty was signed, and they will continue to do so as long as they represent their clients; and they are throwing up a smoke screen by talking about the Chemical Foundation and talking about lack of consideration here and there.

The real and only issue in which I am interested is to have the Congress of the United States either act upon the bill I have presented, to give the American claimants who have just rights an opportunity to be heard, or, if the Congress is not satisfied with the bill I have presented, let somebody else present a bill by which the door will be opened and they may not any longer have to stay out in the wilderness whilst this alien property is being whittled to pieces, piece by piece, in the interest of German claimants, so that in a short time there will be nothing left to administer upon.

Mr. CUMMINS. Will the Senator yield to me for a question?

Mr. UNDERWOOD. I am ready to yield the floor.

Mr. CUMMINS. I want to ask the Senator a question.

Mr. UNDERWOOD. I yield.

Mr. CUMMINS. There is some confusion in the minds of some Senators, I think, with regard to the exact situation. I ask the Senator from Alabama if the Alien Property Custodian has now or ever had any authority to confiscate property?

Mr. UNDERWOOD. The Senator and I might disagree on the legal terms. I think the amendment I offered to the trading with the enemy act, authorizing the Alien Property Custodian to sell the property—for which amendment both the Senator from Iowa and myself voted—being a war measure, amounted to a confiscation of the property. But that may be in dispute and it is academic. There is no occasion for us to go into that question, because——

Mr. CUMMINS. It is not entirely academic.

Mr. UNDERWOOD. I hope the Senator will allow me to answer his question and to say why I think it is academic. It is because, no matter whether we took it as a trustee to hold for the benefit of the Germans or whether we confiscated it, the rights to the property as it now stands were fixed by the German treaty, that treaty incorporating in it the provisions of the Versailles treaty in reference to this property. Whether we confiscated it or whether we held it as trustee, its status to-day is that it is held as a pledge put up by the German nation for these American claims. That is its status.

Mr. CUMMINS. I do not disagree with the Senator from Alabama about the effect, or attempted effect, of the German treaty; but, as I understand the law under which the Alien Property Custodian acted, there is no power or authority for confiscation. There is authority to take, and subsequently the custodian was given authority to sell. When he came to sell these German patents it was his duty, of course, to sell them for the highest price which he could secure through advertisement and public bidding. If it is true that through the organization of the Chemical Foundation, and through other arrangements made at that time, the Alien Property Custodian did not sell the property at a fair and reasonable price, then, of course, criticism would necessarily arise with regard to that transaction. That is just as true of the sale or license that was given by the Alien Property Custodian to the Navy Department.

I think it ought to be well understood, in thinking of the suit which the President has authorized or directed the Alien Property Custodian to bring, that the ultimate disposition of the proceeds of the sale of these patents is not involved at all. The Senator from Alabama may be perfectly right in saying that if we retake this property and it is then resold for its real value, the proceeds ought to be held by the Government for the payment of the claims which American citizens have against Germany. I am not passing upon that at all. I am simply trying to make it clear that it was the duty of the Alien Property Custodian at that time to sell these patents for the best price he could obtain, leaving the money for such disposition as Congress might afterwards determine.

Mr. UNDERWOOD. I can not say that I agree with the Senator at all; but if the Senator takes that viewpoint, of course it involves this question: If that were the viewpoint the Government had occupied at that time, it would have had to sell these chemical patents on the open market to the highest bidder, and that bidder would have been some one who was financially interested, and therefore of necessity they would have been sold to somebody who wanted to use the patents to create a monopoly. If the Senator were right, the law possibly would have driven the Government to that; but I do not think he is right. In the first place, the Senator says we can not confiscate. I want again to call his attention to the quotation I made this morning.

Mr. CUMMINS. I did not say Congress could not confiscate.

Mr. UNDERWOOD. I thought the Senator said that.

Mr. CUMMINS. I said Congress had not given the Alien Property Custodian any authority to confiscate.

Mr. UNDERWOOD. I think the amendment to the act authorizing the sale amounted to confiscation, and it left no discretion or review. The Alien Property Custodian was the agent who acted, but the title ran in the name of the President of the United States, and the act did not provide for any review of the action of the President of the United States. However, the President of the United States did create a review, voluntarily, by the formation of the board which he appointed, of which Mr. Cleveland Dodge was the chairman, who did review the situation in reference to all sales where the question of value was considered.

It is admitted, and must be admitted, that the sale of the wireless plants to the Navy Department and the sale of the Hoboken docks to the War Department were not for their real value, but they went to the Government. I think this other sale was of value, because, outside of the money consideration, there was other value. But I contend that, so far as the Germans are concerned, even if this property had not been confiscated, their rights in it were foreclosed under the German treaty signed at Berlin.

Mr. CUMMINS. I am not disputing that.

Mr. UNDERWOOD. Then, if they have no right, how can the Government dispute its own act?

Mr. CUMMINS. Is it not true that the Alien Property Custodian did advertise for bids upon these patents or pretend to do it?

Mr. UNDERWOOD. I do not think he did. If he did, it is not within my information.

Mr. CUMMINS. I am not sure of it, but I think he did.

Mr. UNDERWOOD. Of course, I will not deny a statement I have no information about; but I do not think he did. I think that when the question of disposing of these patents came up, the first proposition considered was to sell them in the open market for their value, and then, realizing that that would create a monopoly in these valuable patents, the authorities determined to organize an instrumentality of some kind, which afterwards turned out to be the Chemical Foundation, to hold the patents for the interest of the American people. That was all there was to it.

Mr. CUMMINS. But, taking the Senator's own view of it, that the money we get for the German property seized during the war ought to be used for the purpose of paying American claims against Germany arising out of the war—and I am not disputing it at this time—we are immensely interested in seeing that the amount of the German property which we hold is sufficient to discharge and liquidate those claims.

Mr. UNDERWOOD. I agree with the Senator in that respect; but he must remember that at the time this action was taken, and this property was sold to the Chemical Foundation, there was ample property to pay all American claims, but since that time the Congress itself has passed acts which gave back to German citizens, or the wives of German citizens, a large amount of property, and the Alien Property Custodian himself, under section 9 of the act, has given away a good deal of property. So probably now there is not more than just sufficient to pay American claims, and if they dispose of any more of it there probably will not be enough. But at the time these patents were disposed of there was ample property to take care of American claims.

Mr. CARAWAY. May I interrupt the Senator?

Mr. UNDERWOOD. Certainly.

Mr. CARAWAY. Is there any more reason why the Government should pursue the patents than that it should pursue the Hoboken docks, or the wireless stations, or the gun sights, or innumerable other pieces of property they have obtained for absolutely nominal considerations?

Mr. UNDERWOOD. None that I know of. They are all in the same category, and if one goes down the others go with it.

Mr. ROBINSON. Is it not true that the former owners of this property still claim it?

Mr. UNDERWOOD. Undoubtedly.

Mr. ROBINSON. Is it not also true that they are seeking a method by which they may get legal title out of the Chemical Foundation for the purpose of asserting their claim to recover?

Mr. UNDERWOOD. Undoubtedly; that is my judgment.

Mr. ROBINSON. So it is not, upon the part of everyone concerned, admitted that even if the sale be set aside the property

would revert to the Government, to be held and used for the benefit of the people of the United States?

Mr. UNDERWOOD. Not at all.

Mr. ROBINSON. If the sale to the Chemical Foundation is set aside, the issue will then arise as to what shall be the disposition of the property, and the former German owners claim they are entitled, as private citizens, to have their property returned to them.

Mr. UNDERWOOD. Undoubtedly, and the importance of this particular case is that it does not relate only to the chemical patents, but, if it is successful, it goes to the root of the balance of this problem.

Mr. ROBINSON. All property which formerly belonged to private citizens and private corporations?

Mr. UNDERWOOD. Undoubtedly.

Mr. ROBINSON. So that it affects the validity of practically the transactions of the Alien Property Custodian during the former administration relating to private German property?

Mr. UNDERWOOD. Undoubtedly.

Mr. President, in conclusion, I want to say, in justice to the Senator from Iowa, that he is chairman of the subcommittee which has this bill in charge and that he has given me assurance that on next Thursday at 10 o'clock he will open the hearings and proceed to the consideration of the bill. My great interest and my only interest in the matter is that his committee may reach an early consideration of the measure.

Mr. WALSH of Montana. Mr. President, I want to say a word occasioned by the remarks of the senior Senator from Minnesota [Mr. NELSON]. I have served with the senior Senator from Minnesota on the Judiciary Committee for over nine years, and I hold him in very high esteem. As a rule, we are found in accord on the questions which come before that committee. I am not able, however, to share in his criticism made this morning of the Senator from Alabama for presenting succinctly the facts in relation to this Chemical Foundation.

Under all ordinary circumstances I would thoroughly agree with the Senator from Minnesota that, the matter being a subject of pending litigation, it might very properly be left to the consideration and determination of the courts. But I can not disabuse my mind of the idea that there is a political aspect to the litigation. The present administration has been in control now for almost a year and a half. The litigation is started upon the very eve of an election which is to take place in November, before which time it will be entirely impossible to secure a determination of the controversy. Meanwhile all the partisan press in the country carries the information that this valuable property, perhaps of the value of $10,000,000, was sold to a private corporation for $250,000, the Alien Property Custodian becoming the president of that corporation, for the express purpose, the remainder of the facts being undisclosed, of securing whatever political advantage may come from the imputation upon the officers of a former administration naturally carried in such a recital. Accordingly I think the Senator from Alabama is strictly within his rights and has performed a distinct public service in laying before the Senate and the country the facts in relation to the organization of the Chemical Foundation and the transfer of the patents to it.

Mr. WATSON of Indiana. Mr. President, will the Senator yield?

Mr. WALSH of Montana. Upon some other matters discussed by the Senator from Alabama I am in entire disagreement, and I shall have something to say about that presently. I now yield to the Senator from Indiana.

Mr. WATSON of Indiana. Is it not a fact, permit me to ask the Senator from Montana, that suits were first brought by the Chemical Foundation for the recovery of certain royalties?

Mr. WALSH of Montana. I understand so.

Mr. WATSON of Indiana. And that immediately after those suits were brought the President ordered the other suit in order to clear up the whole situation?

Mr. WALSH of Montana. Some such statement as that has been made before. The fact is that the Chemical Foundation brought certain suits to recover royalties. It is also a fact that the President ordered suit to be brought to recover back the patents. Those are facts which are indisputable. The relation between them, except in point of time, is not altogether clear.

Mr. WATSON of Indiana. I understood the Senator to say the one suit was brought by the Government at this particular time largely because of its political aspect.

Mr. WALSH of Montana. That is my judgment.

Mr. WATSON of Indiana. What I am trying to get at is that the suit was brought in response to the other suit, and it was not brought until the other suits were brought, and that brought into controversy the title of the property and it became necessary to settle the question of title in order properly to defend against the royalty suits if they were to be defended against.

Mr. WALSH of Montana. The two facts exist. The suits for royalty were brought and the suit to recover the patents was brought. Whether the moving consideration was to clear up the title, as suggested by the Senator from Indiana, or the moving consideration was political, is a matter of speculation, I have given my judgment about it.

Accordingly, I think the Senator from Alabama was entirely within his rights in presenting the facts at this time to the Senate. I do not care to take that up, but I do not want it to pass sub silentio that in March, 1918, the Congress of the United States resolved and determined to confiscate the German property, sell it, and utilize the proceeds as general revenues. I can not believe that the Congress had any such purpose whatever in the enactment of the legislation to which reference has been made, as indicated by me a few days ago.

Mr. CARAWAY. Mr. President, may I interrupt the Senator?

Mr. WALSH of Montana. Certainly.

Mr. CARAWAY. The Senator does not question the idea that Congress intended to take the particular property and dispose of it? His only contention is that whatever was taken must have been held in trust.

Mr. WALSH of Montana. It was to be held subject to such further disposition as Congress might make.

Mr. CARAWAY. Whatever property itself was seized the Government divested itself of the title to a great deal of it by selling it to private individuals. There is no question about that.

Mr. WALSH of Montana. I have no doubt at all about that. They converted the title to a large portion of the property and passed it into the hands of private owners whose title to the same, in my judgment, is entirely incontestable.

Mr. CARAWAY. Then the only question is that the proceeds were, in the Senator's opinion, to be held in trust to be determined finally by Congress whether they should be paid to the owners of the property or paid to the Government of the United States.

Mr. WALSH of Montana. The Government reserved the right to make such disposition as it saw fit of the proceeds. But I would not like to have the answer which I made to the Senator as indicating that in my judgment every sale made by the Alien Property Custodian is incontestable. Each must be judged by the attendant circumstances. A sale may be contested upon various grounds. I assert simply that assuming the sale to have been made in good faith and for an adequate consideration, the title passed.

I want to say a word about the subject, however, of the claim that under the act of March 18, 1918, the confiscation of all property seized was accomplished. That act does nothing more than give the right to sell the property. It is perfectly obvious that the Government of the United States intended to take the title to the property out of the hands of the Germans and transfer it to citizens of the United States. Whether that was a wise policy or an unwise policy it is too late to discuss now. Congress authorized that to be done at the time. My own judgment about the matter, as I reflect upon it now, is that it could not have been done with any expectation that it was going to have any effect whatever upon the prosecution of the war. It could not, in my judgment, in any wise affect the result of the war, whether the Government of the United States continued to hold the property through the Alien Property Custodian until the termination of the war or whether it transferred the property to private owners in the United States. It is said that it assisted in breaking the morale of the German people. I can not believe that it had the slightest effect in that direction. It undoubtedly looked toward conditions as they should exist after the war terminated. It was prompted by exactly the same consideration that led the Governments of Europe engaged in the war before we went into it to enter into an agreement to the effect that after the war was over they would insist upon trading with Germany only upon onerous conditions, which would operate to prevent her from regaining her commercial and industrial ascendancy as it existed prior to the war.

But, Mr. President, reference has been made by the Senator from Alabama to conditions which then existed and to the desperate state of the affairs of the Allies in the horrible war that was then going on. Quite right, Mr. President, and I submit that that was no time to consider the very serious question as to what should ultimately be done with the property, and it was not considered.

The great question as to whether our record of a century and a quarter against the policy of the appropriation of the private

property of an enemy should be departed from was not canvassed at all. The fact about the matter, as disclosed by the record, is that the amendment was offered by the then chairman of the Committee on Appropriations, Mr. Martin, and was adopted without any discussion of that interesting and important question. The Senator from Alabama is apparently in error in the statement he makes that he made a statement upon the floor of the Senate with reference to the policy he now contends was then proclaimed by the law. It must have been before the Committee on Appropriations, because it was passed in the Senate without any discussion whatever. No one called the attention of the Senate at that time to the stirring words of Alexander Hamilton in speaking of the Jay treaty, which I read, as follows:

> No powers of language at my command can express the abhorrence I feel at the idea of violating the property of individuals, which, in an authorized intercourse in time of peace has been confided to the faith of our Government and laws, on account of controversies between nation and nation. In my view every moral and every political sense unite to consign it to execration. * * * It would have been an inestimable gem in our National Constitution had it contained a positive prohibition against such a practice, except perhaps by way of reprisal for the identical injury on the part of another nation.

Nor was attention called to the words of Chief Justice Marshall, as follows, in the case of Brown against the United States, referred to by the Senator from Alabama:

> Although in practice vessels with their cargoes found in port at the declaration of war may have been seized, it is not believed that modern usage would sanction the seizure of the goods of an enemy on land which were acquired in peace in the course of trade. Such a proceeding is rare and would be deemed a harsh exercise of the rights of war.

Nor the brief review of the entire question by John Bassett Moore, now a distinguished justice of the international court, as follows:

> Referring to the practice of nations and the writings of publicists, he—

That is, Chief Justice Marshall—

> declared that, according to "the modern rule, tangible property belonging to an enemy and found in the country at the commencement of war, ought not to be immediately confiscated"; that "this rule" seemed to be "totally incompatible with the idea that war does of itself vest the property in the belligerent government"; and, consequently, that the declaration of war did not authorize the confiscation. Since effect was thus given to the modern usage of nations, it was unnecessary to declare, as he did in the course of his opinion, that "war gives to the sovereign full right to take the persons and confiscate the property of the enemy, wherever found," and that the "mitigations of this rigid rule, which the humane and wise policy of modern times has introduced into practice," though they "will more or less affect the exercise of this right," "can not impair the right itself." Nor were the two declarations quite consistent. The supposition that usage may render unlawful the exercise of a right, but can not impair the right itself, is at variance with sound theory.

I would regard it as singularly unfortunate if the country should believe that the Congress of the United States had, without discussion of the subject, repudiated these splendid sentiments which have been repeatedly expressed by our jurists and publicists and this splendid doctrine to which we have adhered, should have been abandoned by the United States without even a word said in defense of it. But if it had, I should say that we ought now to appeal "from Philip drunk to Philip sober" and reconsider the determination, if it ever was arrived at.

Mr. BORAH. Mr. President——

Mr. WALSH of Montana. I yield to the Senator from Idaho.

Mr. BORAH. The Senator has said that the amendment offered by Mr. Martin was not discussed in the Senate. I think the Senator is in error as to the amendment not being discussed, but the subject of the policy of the Government did not enter into the discussion.

Mr. WALSH of Montana. That is what I meant.

Mr. BORAH. In other words, the amendment itself was discussed and it was conceded by all parties that it did not change at all the original measure as it passed the Congress. The purpose of the amendment offered by the Senator from Alabama to the committee and afterwards offered by the Senator in charge of the bill, Mr. Martin, was to correct certain language which the conferees had put into the measure after it passed both Houses of Congress. But the original act providing authority for the Alien Property Custodian had in it the same provision that the amendment contained and therefore the debate showing that the original act was not intended as an act of confiscation is perfectly pertinent to the amendment also.

Mr. WALSH of Montana. That is what I intended to say. There was some reference to the provisions of the amendment.

Mr. President, I had occasion, as a member of the subcommittee considering the question of the confirmation of the nomination of Mr. Palmer as Attorney General, to participate in very extensive consideration of his activities as Alien Property Custodian. In that connection an attempt was made to throw some suspicion upon his acts in that capacity, but the showing was so perfectly complete as to his entire good faith and fidelity in discharging the duties of that high position that there was not even a dissenting voice on the committee, as my recollection is, with respect to the recommendation which the committee ought to make.

No one felt that there was any substance to the criticism made at that time, and the examination was reasonably thorough. So, Mr. President, whatever may be said concerning the validity of this sale by the Alien Property Custodian to the Chemical Foundation upon the basis of the power conferred upon him by Congress, I am entirely confident that the officers of the Government acting in that respect were actuated by the very highest motives and performed their duty in perfect good faith, and in the confident belief, however mistaken they may have been, that they were authorized to make the transfer which was made. I feel that it is only appropriate that this statement should be made at this time and that the facts in relation to the matter should be set out, because it is a reasonable inference, and one which I fear may be quite generally drawn from the bare statement of the outline, that there was something questionable from a moral standpoint in the transaction.

Mr. ROBINSON. Will my friend, the Senator from Montana, yield for a question?

Mr. WALSH of Montana. I yield.

Mr. ROBINSON. I am seeking information as to his viewpoint. The Senator has stated that his interpretation of the act of Congress in relation to this subject is to the effect that there was no intention to confiscate these properties. If that be true, why did the United States Government insist, both in the Versailles treaty and in the separate treaty with Germany, which was finally ratified, that the German Government effectuate the arrangement which was agreed to and virtually cede this property to the Government of the United States and make it or its proceeds available for the payment of claims which American citizens had against the German Government?

Mr. WALSH of Montana. Mr. President, that is a very pertinent question, and I think its answer is perfectly plain upon the transactions had. The Congress of the United States up to this time, if I am correct, has never declared its purpose with reference to the disposition or application of the proceeds of the sales of these German properties, nor of the avails which have been derived from their occupation and use.

It is perfectly well known that a division of opinion exists in this country with respect to that matter. Some of us feel that we can not consistently with public morals and with the policy which has been pursued in the past do otherwise than restore the avails of these properties to the owners. On the other hand, the Senator from Alabama [Mr. UNDERWOOD] believes—and many in this country believe with him—that the avails ought not to be given back, but that they ought first to be utilized for the satisfaction of the claims of our citizens against the German Government.

Our representatives in the executive department in negotiating the treaty of Versailles and in negotiating the treaty of Berlin very properly insisted that the German Government should surrender all claims to that property, leaving to the Congress of the United States the right to do with it whatever in its judgment seemed to it best.

Mr. ROBINSON. But does not the language employed in both treaties imply a purpose upon the part of this Government to use the proceeds of this German property for the payment of the claims of American citizens against Germany? I do not think any other construction may be placed upon the language employed in the German treaty. In view of the language that was in the Versailles treaty and the incorporation into the German treaty of certain articles contained in the Versailles treaty no other purpose could have been in the mind of the Executive, according to my viewpoint, than to make the fund arising from the sale of this property available for the payment of claims of American citizens against the German Government.

Now, another question.

Mr. UNDERWOOD. If the Senator will allow me to interpolate a sentence, the treaty says that identical thing.

Mr. WALSH of Montana. Certainly. There is no doubt about that.

Mr. ROBINSON. There is no room for a different construction. So far as the executive department was concerned, and so far as the Senate can commit itself in the ratification of a treaty to a legislative policy, the legislative policy was determined in that treaty.

Now, I want to ask the Senator another question.

Mr. WALSH of Montana. I wish to say to the Senator that I do not regard it in that way at all. I understand the treaty

simply to be a declaration upon the part of Germany that "it is satisfactory to us that you apply the proceeds and the avails in this way, if you see fit to do so." I fully agree with the Senator from Alabama that by virtue of these two treaties the Congress of the United States is fully at liberty to do whatever it sees fit with this property; but I do assert that Congress has never until this good day declared what it is its purpose to do.

Mr. ROBINSON. Now I understand the Senator's position on the proposition, and that brings me to the other question which I wanted to ask him.

Mr. STANLEY. Mr. President, the Senator from Arkansas interrupted the Senator from Montana for the purpose of seeking information. If the Senator from Arkansas will allow me, I should like to ask him a question for information. Is it the contention of the Senator from Arkansas that the fact that we were subrogated to certain rights under the Versailles treaty entails upon us any moral or legal obligation to exercise those rights or presumes any intention upon the part of the Government to exercise them? We knew nothing about what was the intention of other nations; but, out of a superabundance of caution, could we not have claimed the same concession that Germany had made to other nations without its entailing upon us the necessity of taking advantage of the concession obtained under the treaty?

Mr. ROBINSON. I think that under the treaty we contracted with the German Government to apply the proceeds from the sale of this property to the payment of the claims of American citizens against the German Government. At least we reserved the right to do so. The German Government has an interest in that she is a party to the contract; her liability is reduced in that way. The contract is a mutual obligation. It can not be said that Germany is bound by the provisions of our contract with her and that the United States is under no obligation by reason of the fact that Germany ceded any claims that she or her nationals might have to this property and agreed to reimburse her nationals. Germany was liable for these claims and Germany entered into a contract with us that we might take the proceeds of this property and apply it in the payment of claims due Americans for which she was liable. We are bound either to collect these claims out of this property or leave American claimants without remedy. I agree with the Senator from Alabama.

I wanted to ask the Senator from Montana a further question, although I think he has made clear what his answer will be.

If an action shall be instituted to set aside the sale made by the Government to the Chemical Foundation and that action should prevail, what will be the legal status of the property then, and what will be the duty of the United States respecting all the private property involved in the suit?

Mr. WALSH of Montana. I think that is perfectly clear. If the sale is annulled by the court for any reason, the property goes back to the Government of the United States, represented by the Alien Property Custodian, and it will be just exactly the same as other property now held by the Alien Property Custodian which has not been disposed of; for instance, stocks and bonds.

Mr. ROBINSON. And which the Senator thinks, if I understand him correctly, should be returned without question to the former owners.

Mr. WALSH of Montana. That is my judgment.

Mr. ROBINSON. I believe the Senator from Montana himself pointed out that he did not agree with the statement then of the Senator from Minnesota, that the only effect that such a suit would have would be to restore directly to the custody of Government agents this property, and that the Government then would be under obligation to administer the property for the benefit of the citizens of this Nation. The Senator's viewpoint is that the effect of the suit will leave it within the power of Congress to take any action that it chooses, and that it is morally bound to return the property to its former owners.

Mr. WALSH of Montana. I do not understand that there is any difference between the Senator from Minnesota and myself with respect to that matter except——

Mr. ROBINSON. Yes; there was this difference——

Mr. WALSH of Montana. I do not think there is any difference. We both agree that the property——

Mr. ROBINSON. The Senator from Minnesota——

Mr. WALSH of Montana. Let me state my position.

Mr. ROBINSON. Certainly.

Mr. WALSH of Montana. The Senator from Minnesota has stated that when the property goes back it will be the duty of the Government to administer it for the best interests of the people of the United States.

Mr. ROBINSON. Yes; and that, of course, implies——

Mr. WALSH of Montana. Just a moment. Just how the Government will administer it for the best interest of the citizens of the United States the Senator from Minnesota has not stated. That may mean that the Government should keep the property and put it into the hands of a corporation created by the Government and hold the property or its avails indefinitely, or the Senator from Minnesota may agree with me that it is to the best interest of the people of the United States that it be given back to the German owners.

Mr. ROBINSON. Now, if the Senator will permit me, I can not by any possible application of the rules of construction give to the language of the Senator from Minnesota the last meaning of which the Senator from Montana says his language is capable. My understanding of the statement of the Senator from Minnesota was that this property should be taken away from the Chemical Foundation because that foundation does not properly represent the people and the Government of the United States, and that it should be taken back by the Government and used for the benefit of the people of this Nation. The Senator from Minnesota is in the Chamber, and he can say whether, in his opinion, if the suit shall prevail the property should be returned to its owners.

Mr. WALSH of Montana. The Senator from Minnesota has not yet been asked that question.

Mr. LODGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Massachusetts?

Mr. WALSH of Montana. I yield to the Senator from Massachusetts.

Mr. LODGE. Mr. President, unfortunately, I was not present when this discussion began, having been detained at one of the departments; but there is an element involved in this question which seems to me to have been passed over. There is no doubt whatever about the trend of international law and still less about the traditional position of this Government from the days of Hamilton down in regard to the confiscation of private property. But, Mr. President, the right to take the property and prevent its being used by an alien enemy against us I do not think has ever been affected by that at all. That action we took. Then the treaty of Versailles made provision for giving to the United States and to the other powers the right to use such property, if they saw fit, for any purpose they chose, and we reserved that right in the treaty with Germany; but I do not quite understand those provisions to mean that we are bound to complete the confiscation of that property and use it to the exclusion of all other funds for the settlement of our claims against Germany. If Germany should pay all her claims, I think it would be entirely open to our Government to return, if it saw fit, the money taken and put in the hands of the Alien Property Custodian during the war in order to protect our interests against an alien enemy.

The point I wish to call attention to in connection with the bill is this——

Mr. ROBINSON. Mr. President, if the Senator will pardon me, I do not know that I disagree with him as to his last statement, but, in the practical aspect of the question, in all probability the only way by which payment of the claims of American nationals against Germany can ever be secured is in the way contemplated by the Versailles treaty and German treaty, by the appropriation of the proceeds of this private property.

Mr. LODGE. I agree to that proposition that we have the right to do it under the treaty.

Mr. ROBINSON. There is not the slightest likelihood, in my opinion, of the contingency last referred to by the Senator from Massachusetts ever occurring. Germany is not going to pay these claims. She is, in the first place, unable to do so under existing conditions, and, in the next place, she has agreed that we may pay ourselves out of this property. Of course, I still think that we would have the right to make whatever disposition of the property we wanted to make. I do not understand that returning the property to its former status would preclude the Government from taking any action in disposing of it that it saw fit. On the other hand, I am assured that many would like to see the suit against the Chemical Foundation prevail, because it would give the former owners a chance to get back the property.

Mr. LODGE. I did not intend to enter into the question of the title of the Chemical Foundation to the patents which it has. The point I desired to make, and which I really rose to make, if the Senator will kindly allow me to, was this:

We are already engaged in negotiating with Germany for the establishment of a commission to determine the amount of our claims, which is the usual course to take. We have an

Anglo-American commission sitting at this moment, and as soon as an agent is appointed it will continue to sit.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me to interrupt him, he says "the usual course."

Mr. LODGE. The almost invariable course, if the Senator will allow me to explain what I was going to say.

Mr. UNDERWOOD. I was going to call the Senator's attention to the fact that there are dozens of cases where claims of this class have been determined solely by an American commissioner.

Mr. LODGE. Mr. President, there is a distinction perfectly well known both in history and in diplomacy, and that is that when the Government is caring for the claims of its citizens that is one thing, but when the Government assumes the claims itself it takes a step to which the next step would be armed force. That is when the Government makes the claim its own. In this case what the Government is seeking to do first is to determine the amount of the claims. For that purpose we have almost invariably, I think—because I do not now recall a case in which we have made a private claim our own; there may be such—joined with the nation against which we had the claim, unless we could do it wholly through diplomatic channels, and agreed as to the amount if we could. That is the first and normal step. The completion of that treaty has been delayed by the unfortunate assassination of Rathenau, the German minister; but we have been pursuing that course, and I think the proper course diplomatically, in order to reach as a preliminary what Germany owes us. Nobody knows now what she owes us. You can not take the claims without investigation. This bill admits that. You can not take the claims as they happen to be named. The usual way to determine them is by a commission of the two powers which shall reach an agreement as to the amount of the claims. If we are going to throw that step aside and at once determine the claims for ourselves, from which there can be no appeal, and say to Germany, "Here are the claims as we figure them out," we are taking a very much more serious step.

I had hoped that we should agree on the amount of the American claims which Germany ought to pay us; and then, if she declines or is unable to pay, I do not think there is any question that under the treaties, as the Senator from Arkansas has pointed out, we have the right to use this fund. Meantime, however, it seems to me that when the claims are assessed it is better at least to give Germany the opportunity to pay, and if she does pay from other funds or in other ways then we could follow out our traditional policy and return German funds.

I only wanted to express the hope that the subcommittee of the Committee on the Judiciary, when they take up this matter, will remember that the State Department has it under negotiation, that it is under negotiation now, and that there is one method of reaching a settlement, the payment of the American claims, on which I do not disagree at all with my friend the Senator from Alabama that that ought to be considered before we adopt another and a wholly different method.

Mr. NELSON. Mr. President, will the Senator yield to me a minute?

Mr. LODGE. Certainly.

Mr. NELSON. This bill of the Senator from Alabama has been referred to the State Department.

Mr. LODGE. Has it?

Mr. NELSON. Last week it was referred to the State Department, and I suppose we will get information as to what steps the department has taken.

Mr. LODGE. I am very glad to know that. That is just what I was suggesting.

Mr. NELSON. It has also been referred to the Department of Justice.

Mr. WALSH of Montana. Mr. President, I merely desire to say that the point raised by the Senator from Massachusetts now touches the question of the character of the legislation or the course that ought to be taken toward the adjustment of these claims. I may say that I would not care to submit to any arbitral tribunal the question as to the liability of Germany on most of the claims that are preferred by the Government of the United States in behalf of its citizens, but I fully agree that inasmuch as the primary liability to the Government of the United States is upon the part of the Government of Germany it ought to have a representation upon any tribunal which is to determine the amount of those claims.

Mr. LODGE. That is all I intended. I did not mean an arbitral tribunal in the broad sense as to the right.

Mr. UNDERWOOD. Mr. President, I want to say just a word in reference to the suggestion of the Senator from Massachusetts.

In the first place, the bill that I have introduced provides for the ascertainment of the American claims. Then it provides that an opportunity shall be given to Germany to pay them; and then, if they are not paid by Germany, they can be paid out of this property in the hands of the Alien Property Custodian.

Mr. President, I think there is a very marked difference, and the issue will probably be very clearly drawn. I voted with the Senator from Massachusetts in ratifying the German treaty of peace. One of the reasons why I did so was because in that treaty Germany had provided, at least as I understood, for the settlement of these American claims, the American claimants ratifying to that extent the powers in the Versailles treaty.

As I understand that treaty and understood it then, Germany did not claim the right to have any voice in ascertaining these American claims. She has foregone that right, as she has in all her claims in the settlements with our allies. She has not had a voice in the amount of the reparations or the amount of the claims that have been set up. She has not even had a voice in the amount of the indemnity that she should pay; and it seems to me that if we are to take the position now that we are to invite the German Government in to determine whether or not she ought to pay reparations to the heirs of the people who died on the *Lusitania*, it is a complete backdown from the position we have heretofore taken.

Mr. LODGE. Mr. President, if the Senator will allow me, I never intended anything of the sort. I never suggested anything of the sort.

Mr. UNDERWOOD. I misunderstood the Senator, then.

Mr. LODGE. I said simply as to the amount of the claims. As the Senator from Montana pointed out, I am not urging an arbitral tribunal to decide whether Germany owes us anything for the destruction of the lives on the *Lusitania*, but it seems to me she ought to have a hearing as to the total amount of the claims.

Mr. UNDERWOOD. But the decision as to the amount of the claims is the decision itself.

Mr. LODGE. Oh, I do not think so.

Mr. UNDERWOOD. In a number of these cases, if Germany were in court, she might raise the question as to whether she owes anything to the victims of the *Lusitania*, because she has denied it up to this time; but as to a number of ships that she sank with her torpedoes before we went into the war she probably would not dispute the fact that an indemnity was due, but the decision as to the amount of the claim would be the real decision. Germany has not demanded of our allies that she shall sit in court. She could not. She was a conquered nation, and she committed these acts of war, and I think the issue is very clearly drawn.

Mr. LODGE. She has been discussing the amount of her reparations for about four years and has not made them yet.

Mr. UNDERWOOD. Yes; but she has only discussed what she would pay.

Mr. LODGE. The amount—precisely.

Mr. UNDERWOOD. How much she can pay.

Mr. LODGE. That is all. That is all I propose to discuss.

Mr. UNDERWOOD. She has objected to the amount; but the Senator suggests, as I understand, that this legislation be postponed or that the State Department will postpone it until we can have a tribunal established by another treaty—because it can be done only by another treaty——

Mr. LODGE. Certainly.

Mr. UNDERWOOD. Because the first treaty fixes the rights up to this time. It fixes our right to act alone; and if we are to have another treaty, and it is to be decided then, it means that this legislation will not pass, and that the American claimants against Germany will have no court into which they can go to present their claims and get payment; and if the matter goes to an international tribunal there is no telling how long it will last. That is the very thing to which I object. I think it is very doubtful.

Mr. LODGE. It seems to me, if the Senator will allow me, that he is intepreting what I said in a way very differently from what I intended, and giving it a construction which I did not intend. I am sure the Senate in taking up this matter ought at least to consult with the department charged with our foreign relations before it decides to pass legislation here. I think that is only ordinary courtesy.

Mr. UNDERWOOD. Of course, I have no objection in the world to consulting with the State Department; but I think right now, under the German treaty as it exists, we have a perfect right to establish a tribunal.

Mr. LODGE. I do not deny that at all.

Mr. UNDERWOOD. I am glad the Senator does not; and if that is the case we have the right to establish a tribunal and

give these American claimants a chance to establish their claims before their witnesses die, and while they have an opportunity to present their evidence. Then there is no real issue between us; but I want to say this to the Senator: In looking over the authorities—I can put them in the RECORD later; I can not call the names—I recall a number of instances in which a tribunal of American citizens only was established to decide claims of this kind. That was done in the Spanish war case in 1831, growing out of a question of facts of this kind.

Mr. LODGE. Oh, that was done because Spain undertook to pay certain claims, and we undertook to pay certain other claims. It is like the case with Mexico.

Mr. UNDERWOOD. That is exactly the case here. Germany turns over to us certain property which we agree in the treaty to use for our citizens, and she agrees in the same treaty to reimburse her own citizens at home. It is not a confiscation.

Mr. LODGE. Oh, no. I say, that has been done many times.

Mr. UNDERWOOD. By way of taxing them she takes this property under her power of government and turns it over to us to pay our claims, and she says: "In lieu of that we will pay the owners of that property back in Germany."

Mr. LODGE. Oh, yes; that has been done frequently; but that is by agreement with the other power, of course.

Mr. UNDERWOOD. To be sure. That agreement is made. Here is the agreement. Here is the property. Of course my bill contemplates that after we file the claims Germany may have an opportunity to pay them before we exercise our right to have them paid out of the property; but here is the property and here are the claims. Why should we go into a tribunal made up of one American, as I understand, and one German, and an arbitrator, to determine the rights of these American citizens, when Germany has conceded them? I can not see any reason for that.

Mr. LODGE. I do not propose that.

Mr. UNDERWOOD. But I wanted to call the Senator's attention to this: With Spain in 1831 we made a settlement of claims when there were only American citizens on the tribunal. The tribunal that made the settlement of the claims growing out of the Mexican War was composed only of American citizens; and in looking through the authorities I have run across dozens of similar tribunals set up where an international claim existed, but only American citizens sat in the tribunal. I do not see any reason in the world why we should hesitate in this matter and forego the rights of our people who have suffered, and who have had no opportunity to have their claims passed on because their own Government will not give them a court in which to stand.

Mr. LODGE. Mr. President, I think they ought to be paid every dollar, and if necessary, and we can not get the money in any other way, I think we have a right to take this fund, and I favor doing it. But I see no reason in the world why it should be done without any regard to the usual methods, or without discovering what Germany is ready to pay, and what she is ready to do.

Mr. UNDERWOOD. The usual method is the method I have proposed to pursue. There is precedent after precedent for this procedure, and so far as Germany is concerned, Germany has already said, in the treaty of Berlin, that we may go ahead and settle in this way.

Mr. LODGE. There is no "precedent after precedent," because there has never been a case in our history where we have seized a lot of enemy property and held it as we are holding this property to-day.

Mr. UNDERWOOD. There is no issue between us and Germany about the enemy property, and the Senator must concede it. I say that the precedent exists in the fact that an American tribunal alone can decide the rights of American citizens as against this country, that an American tribunal alone shall find the verdict.

Mr. LODGE. We have security in the fund in the hands of the Alien Property Custodian, which has never occurred before, to my knowledge. Before we finally confiscate private property, I think we want to be very careful of our steps. Before we shatter a doctrine of that sort finally, we want to have the best possible ground to stand on.

Mr. UNDERWOOD. The Senator has already admitted that Germany has yielded this property. We are not shattering any doctrine. It is not a question of confiscation. It ceased to be a question of confiscation when the treaty of Berlin was ratified. It then became a contract.

Mr. LODGE. It will cease to be a question of confiscation when we take it, but at present it is security, and I believe in holding it until every dollar owing our claimants is paid, and, if necessary, in using that fund. But I regret the necessity, because I regret the final confiscation of private property.

Mr. ROBINSON. That is the way I understood the Senator in the beginning. He made himself clear to me that in his opinion this property should be held until the German Government pays, and if it does not pay these claimants, then the property should be subjected to the payment of the claims.

Mr. LODGE. Precisely.

Mr. ROBINSON. I want to ask the Senator a question which to my mind has great practical importance. In view of the financial condition of Germany and of the political conditions in Germany, how long does the Senator think American claimants should have their rights withheld in order to await the action of Germany and the determination of the question as to whether Germany is ever going to pay or not, and thus enable us to return the property to these private German citizens?

Mr. LODGE. Within a very reasonably limited time.

Mr. ROBINSON. Does not the Senator think, in view of the political conditions——

Mr. LODGE. I think the question ought to be settled now, if the Senator asks me that question.

Mr. ROBINSON. I agree with the Senator. I think we ought to proceed in some way at once. I have not the slightest hope that Germany would ever pay these claims, in view of the arrangements she has made in the treaty of Versailles and the arrangements she has made with us in the German treaty. I do not think we need ever expect these claims to be paid in any other way than through the properties which we have seized and which she has agreed we may use in that way. If we do not intend to subject that property to the claims of our nationals, and leave German citizens for their remedies against the German Government, it will be generations before any relief will come to our citizens who have these claims against Germany.

Mr. LODGE. The only point I desire to make is that if we are to abandon the policy of this Government in regard to private property, as we are undoubtedly about to do, I think we ought to have our case so clear that no question in regard to it could arise to plague us in the future. I want it dealt with at once.

Mr. ROBINSON. I have not the slightest objection to that statement. I concur in the conclusions of the Senator, but I can not see the benefits to be derived from waiting, in view of the conditions in Germany. There is not the slightest possibility that she will pay these claims, and if we ever expect our nationals to recover anything, the only way they can do it is by subjecting this property to the payment of the claims. I admit it is a very great hardship, and I am not precluding myself from the determination of the matter, if it is presented to Congress, from the standpoint of all good conscience and on a fair consideration of the precedents, but from a practical standpoint there is no benefit to be derived from waiting on the German Government to take action. She has no resources that she can make applicable to the payment of these claims, and she will not have in a long time.

Mr. UNDERWOOD. Under the treaty of Versailles—which, of course, binds Germany with our allies, if not with ourselves—she has no power to pay us, because all her revenues are bound up in the reparations she is bound to pay to the Allies. She will not have the opportunity to pay us until she settles her obligations to the Reparation Commission, which may be 50 years from now.

Mr. ROBINSON. That is one condition which is insurmountable. Another is her financial and economic situation, considered apart from the limitations imposed upon her actions by the Versailles treaty. If she were unrestrained and had the disposition, she could not do it until the most radical changes—changes we do not expect to occur in the early future—should take place. So, as a practical proposition, I think we might just as well go ahead and do what we are going to do, either return this property to the private owners and leave American citizens who have claims against Germany with no practical method of collecting their claims, or go ahead and carry out the implications of the Versailles treaty and our treaty with Germany and subject this property to the claims, and do it at once.

Mr. UNDERWOOD. That is the reason why I rose to object to the suggestion that any delay shall be had in legislation on the part of Congress until we make another treaty of peace with Germany. I do not take any interest in the suggestion which the Senator from Massachusetts has made, that we owe Germany some further obligation in this matter. We worked that out in the treaty of Berlin. Our rights are fixed. She recognized that we were going to take this property for our citizens, because she has agreed herself to reimburse her citizens, not

for the value of the claims but for the value of the property taken. Therefore, why should she be invited in to make a tribunal to determine the amount of the American claims? I believe that it would be not only unjust but such a proceeding would be repulsive to the American people, who feel that they won the war, that they suffered all these hardships, not by their fault but by an act of war on the part of Germany.

For us to wait for Germany to enter into a new tribunal to determine the rights of our own citizens in this matter, after it has been settled, is a thing I can not agree to at all. I think it is up to the Congress now to pass a law on the subject. I introduced a bill merely because nobody else has done so. It was not my responsibility, but when nobody else introduced a bill to take care of American citizens I did so. I am not wedded to that bill. If somebody else has a better bill, let him propose it and have it passed. But there is no doubt in my mind that this Government and this Congress will be recreant to their duty to American citizens if they delay this matter an hour longer than is necessary for the consideration of the case and a prompt determination of the question whether they are going to pass legislation or not.

Mr. LODGE. Mr. President, I do not want to have it delayed at all. I think it ought to be settled one way or the other. But the Senator overlooks entirely, and has throughout, that this is not the property of the German Government. It is private property, here under the protection of our laws, and lawfully here, and we have seized it and we hold it as security for just American claims. I am ready to pay out of that security if we can not get payment in any other way. But I dislike excessively not to give Germany the opportunity, at least, to admit the justice of our claims and pay them in some other way if she can. If she can not, we must take this private property, which is not the property of Germany but the property of private individuals, and run counter to what we have always held to be our policy in the past. We shall have to do it, I am afraid. I regret that we shall have to do it. I do not wish to have it delayed, but I do not wish to have overlooked the fact that the property we are taking and holding as security is private property, protected by all our laws heretofore and by our own policy, and property to which we get a legal title only by these two treaties. We undoubtedly have a legal title and can take the property.

THE TARIFF.

Mr. McCUMBER. Mr. President, having spent nearly three hours in the discussion of a subject which is not before the Senate at all—though I hope we have advanced the consideration of the subject to that extent—in humility may I now ask that we return to the consideration of the tariff bill.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. I ask that the Senate now consider paragraph 1017.

Mr. BORAH. What does paragraph 1017 cover?

Mr. McCUMBER. It covers sacks or bags made of plain woven fabrics.

Mr. UNDERWOOD. The Senator is correct in saying that we did divert from the subject before the Senate for a long time. But this is a matter we are going back to, and will the Senator not ask for a quorum in order that the absentees may know that we have taken up this subject?

Mr. McCUMBER. Very well. I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). The Secretary will call the roll.

The roll was called, and the following Senators answered to their names:

Ashurst	Harreld	Oddie	Stanley
Ball	Heflin	Overman	Sterling
Borah	Jones, Wash.	Phipps	Swanson
Bursum	Kellogg	Pomerene	Trammell
Capper	Kendrick	Ransdell	Underwood
Caraway	Lenroot	Rawson	Wadsworth
Colt	Lodge	Robinson	Walsh, Mass.
Culberson	McCumber	Sheppard	Walsh, Mont.
Curtis	McNary	Shortridge	Warren
Dial	Nelson	Smith	Watson, Ind.
Frelinghuysen	New	Smoot	Willis
Gooding	Nicholson	Spencer	
Hale	Norbeck	Stanfield	

Mr. TRAMMELL. I desire to announce the unavoidable absence of my colleague [Mr. FLETCHER] on account of illness.

The PRESIDING OFFICER. Fifty Senators have answered to their names. There is a quorum present.

Mr. SMOOT. I send to the desk a proposed substitute for paragraph 1017.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 137 the Senator from Utah proposes to strike out paragraph 1017, the matter beginning with line 24 down to and including line 2 on page 138, and to insert:

PAR. 1017. Bags or sacks made from plain woven fabrics of single jute yarns or from twilled or other fabrics composed wholly of jute, not bleached, printed, stenciled, painted, dyed, colored, nor rendered noninflammable, 1 cent per pound and 10 per cent ad valorem; bleached, printed, stenciled, painted, dyed and colored, or rendered noninflammable, 1 cent per pound and 15 per cent ad valorem.

Mr. SMITH. I understand this is to take the place of paragraph 1017?

Mr. ROBINSON. It has no relation to cotton bagging. These are bags the only importations of which are along the Pacific coast, and the rates are practically the same as those carried in the existing law.

Mr. SMOOT. The twills are very much less.

Mr. ROBINSON. The present rate is 10 per cent on the plain jute bags and 35 per cent on the twilled. The amendment reduces it to 10 per cent except in case of bleached, painted, and so forth, in which event it is 15 per cent, the 1 cent per pound being the compensatory duty made imperative by the rate carried on the raw material.

Mr. SMOOT. And the 5 per cent difference being between the bleached, printed, and so forth, and the not bleached, printed, and so forth.

Mr. ROBINSON. Of course, there is no duty on the raw material under the existing law, but in the pending bill by paragraph 1008 there is a duty of 1 cent per pound placed upon the raw material. In the amendment which the Senator from Utah now proposes there is a compensatory duty of 1 cent per pound, and in addition to that 10 per cent, except in the case of bleached, and so forth, in which event it is 15 per cent.

Mr. SMITH. May I ask the Senator from Utah what reason there is why a duty is imposed on the raw material when we do not produce of this nature of material anything like a sufficient quantity for domestic use in this country?

Mr. SMOOT. I suppose the Senator means jute?

Mr. SMITH. Yes; I mean the jute.

Mr. SMOOT. But this is on the burlap, I will say to the Senator.

Mr. SMITH. I understand it is burlap, but the burlap itself is a form of the bagging material of which our sacks are made, and is made out of the jute fiber.

Mr. ROBINSON. All this relates to jute.

Mr. SMITH. I understand that, but I want to know why we should pay a duty on the raw material when it is not produced here.

Mr. ROBINSON. We do not produce it at all.

Mr. SMITH. We do not produce a pound of it.

Mr. ROBINSON. I would like to have some one explain it.

Mr. SMOOT. The Senate has already agreed to the 1 cent per pound.

Mr. ROBINSON. But, as the Senator from South Carolina has stated, there is no justification for it whatever.

Mr. SMITH. I can understand very well why there should be the compensatory duty to which the Senator from Arkansas refers, when the committee have put a duty of 1 cent a pound on the raw material, but I can not understand on what ground we are going to tax the raw material of which under no consideration do we make sufficient amount to meet the necessities of the case.

Mr. SMOOT. That we discussed, and there are some others who think the same as the Senator from South Carolina, but as long as that duty is imposed we have to provide a compensatory duty.

Mr. SMITH. I understand, but I thought the Senator from Utah, having charge of the schedule for the committee, could propose that we take the duty off the raw material and then lower the duty on the finished product.

Mr. SMOOT. In order that the Senate may understand what this is, outside of the 1 cent compensatory duty, I will state that it is a 10 per cent duty upon the plain woven fabric that goes into the bagging when not bleached, printed, stenciled, painted, dyed, colored, or rendered noninflammable. When it is bleached, and so forth, it is 15 per cent, or a simple 5 per cent differential. Under the existing law, as already stated, there is 10 per cent upon the first. Upon the twilled, to which we have added here, together with the burlap, 5 per cent and given a rate of 15 per cent, under the existing law the rate is 35 per cent and under the Payne-Aldrich law 45 per cent. Therefore all twills are reduced over one-half outside of the compensatory duty.

Mr. ROBINSON. Mr. President, I agree absolutely with the statement of the Senator from South Carolina that there is no

justification whatever for the duty imposed in paragraph 1008 on the raw material which enters into this product. That duty has been considered, however, by the Senate. An examination of the subject discloses that we do not produce burlap in commercial quantities, and, since we have to import the raw material, the only possible justification for a duty on it is for revenue. In my judgment it is not a good article for a revenue duty. There is no propriety in imposing the raw-material rate in paragraph 1008. All of the raw-material rates on hemp, jute, and jute yarns in the bill are unnecessary and unjustifiable. I know there are many Senators on the other side of the Chamber who have studied the subject and are of the same opinion. I do not violate anyone's confidence, but I know some of them, who have studied it, who doubt the wisdom of imposing these high duties on the materials. However, since the Senate has disposed of that by imposing the duties, for the present I am not going to consume further time in discussing it, but when the opportunity is presented for individual amendments the Senate will have a chance then to pass upon the question again.

The PRESIDING OFFICER. The question is on agreeing to the substitute offered by the Senator from Utah for the committee amendment as printed in the bill.

Mr. BORAH. The Senator from Utah made a statement in regard to this matter, but my attention was distracted for the moment. I should like to ask the Senator from Utah how this rate compares with the rate of the present law?

Mr. SMOOT. On the unbleached the present law provides the same protective rate of 10 per cent. However, we have provided a rate of 1 cent a pound compensatory duty for the raw material, as has been stated by the Senator from Arkansas as well as by me. As to these fabrics when dyed and bleached, so far as the twilled fabric is concerned the rate is less than half of that imposed by the existing law, being 15 per cent ad valorem; in other words, the protection not only on the twilled but on the fabric that goes into the bag itself is 10 per cent when unbleached and 15 per cent when bleached.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next committee amendment.

Mr. SMOOT. The next amendment is paragraph 1017a, relative to cotton bagging.

The READING CLERK. On page 138, after line 2, it is proposed to insert:

PAR. 1017a. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, or other vegetable fiber, not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch, counting the warp and filling, and weighing not less than 15 ounces nor more than 32 ounces per square yard, six-tenths of 1 cent per square yard; weighing more than 32 ounces per square yard, three-tenths of 1 cent per pound.

Mr. SMITH. I understood the Senator from Utah to say that he had an amendment to propose to that paragraph. If he has not, I merely wish to call the attention of the Senate to the fact that the fabric on which it is proposed to levy a duty by the paragraph is a single-yarn fabric. So far as I know, the bulk of it is used for the covering of cotton. Therefore a duty imposed upon it will be just that much, of course, to be taken out of the value of the cotton which it covers.

As I have hitherto explained to the Senate, the situation is about as follows: The cotton producers of this country are not even paid for the bagging and ties that cover the cotton, but under our tare arrangement, both at home and abroad, 30 pounds of the weight of a commercial bale of cotton is deducted for tare. That means that we lose the bagging and the ties which are bought under protection, while our cotton is sold under free trade. We not only have that disadvantage but we have deducted from the weight of the bale, as I have stated, 30 pounds. If the producer does not happen to put into the bale 30 pounds of tare—that is, if the producer of cotton, as some do, put on only 25 pounds of tare, and has 30 pounds deducted—he not only loses the ties and bagging but loses 5 pounds of his cotton.

Furthermore, there is not a pound of this material produced in this country. This single-yarn stuff is made from the coarser forms of jute and weighs about 2 pounds to the square yard. There has been established in my State a manufacturing plant for the making of bagging, but it was a purely artificial arrangement for the convenience of those who desired to take advantage of the situation under protection and import into this country fiber of which not a pound was produced here. Those who desired to avail themselves of the use of such bagging had to pay the duty on the raw material and then the duty on the finished product, levied wholly for the purpose of building up a concern in this country whose foundation rested in India. If anything should occur to England which would cut off the supply of jute from India, the factory in America would not be worth the scrapping. The raw material is not produced here, and the machinery could not be adapted to the manufacture of anything else. The establishment is designed solely for the production of bagging and nothing else, and it depends entirely for every pound of raw material on India.

It is complained that in India, as has been set forth in a brief which has been handed to me by one of the Senators, coolie labor is employed for from 15 to 20 cents a day. It is stated that Americans are going to India and establish factories in Calcutta for the production of bagging which they can send here and sell at a price with which American producers can not compete. It is certainly begging the question in order to make an argument for protection in the case of an article which we do not produce and every pound of which has to be imported into this country to set up high protection for the manufacture at home as against foreign importations. The Ludlow bagging concern, as I understand—at any rate it is so stated in this brief—is going to India because when the Underwood tariff law took the duty off bagging it was not profitable to buy and import the foreign raw material and manufacture it here, although when it was absolutely protected it might do anything it pleased. With the protection removed, it goes to India, where it can get cheap Indian labor for 15 or 20 cents a day and manufacture a cotton product into an American utility and sell it here to us at about half what it would cost if made in America.

Mr. SMOOT. The Ludlow Co. is not going to India, but they have already gone and are manufacturing the fabrics in India to-day.

Mr. SMITH. That only substantiates what this brief is attempting to show. Now it is the competitors of the Ludlow Co. who are complaining that unless they are protected in this bill they will have to go to India and compete from there. Well, let them go to India, because if the cotton producers in this country and the other allied interests, such as the potato growers of Maine and other States along the coast, who use rough forms of jute baggings for their products, can thereby get these receptacles for the purpose of casing their products for the market at a less price, I submit that it is not only the part of good statesmanship but of business that we allow these people to go to India and convert that Indian product into a form that we can use, rather than let them import the raw material at a high cost and manufacture the finished article here, and force those who are compelled to use it to pay an extra price.

Mr. SMOOT. I may have misunderstood the Senator from South Carolina, and therefore I desire to ask him did I correctly understand him as saying that this article is used for potato bagging?

Mr. SMITH. Yes; the burlap is.

Mr. SMOOT. No.

Mr. SMITH. The finer counts of these burlap bags are made out of jute.

Mr. SMOOT. I thought the Senator meant that cotton bagging was used for that purpose. I did not want it understood that the article covered by this paragraph is used for bagging for potatoes or grain.

Mr. SMITH. No; this fiber is so coarse that anything small would go through the spaces between the threads. To put it into concrete form, I am protesting against transporting from India the coarse forms of jute, paying freight and all incidental expenses necessary to get it here, converting it in American mills into bagging, and then paying a duty on that, when the finished product may be manufactured in India cheaply, sent here, and sold ready for the packing and baling of cotton.

Mr. President, in view of these facts, and in view of the further fact that the difficulties surrounding the production of cotton are now almost insuperable, I shall ask that the committee amendment be disagreed to. I understand that disagreeing to this amendment will put the commodity on the free list.

Mr. SMOOT. If the amendment is disagreed to, then, of course, it will become necessary to mention it in the free list particularly.

Mr. SMITH. Very well.

Mr. ROBINSON. Mr. President, since, under the parliamentary situation, amendments can not now be offered placing cotton bagging on the free list, and being convinced that it ought to remain on the free list, where it has been for some time, I am going to offer an amendment to the committee amendment which will materially reduce the rate. Such an amendment will substantially test the sense of the Senate as to whether cotton bagging should remain on the free list.

As stated by the Senator from South Carolina, this paragraph relates to the manufactured product which is used solely for wrapping cotton. It is now on the free list. The imposition of this duty will cost the American cotton producer probably something like half a million dollars, because it will inevitably result in increasing the price of cotton bagging. That is the purpose of it.

It is true, according to the information furnished by the Tariff Commission, that two large concerns which have heretofore operated in the United States, for the purpose of getting the benefit of the cheap labor of India, are planning to manufacture cotton bagging in that country; and the American manufacturers who expect to continue operations here are complaining that they will be driven out of business unless some duty be imposed on importations of the product of these American concerns which are going to India.

The importations now are very small compared with the domestic production. In 1919 the total production was something like 75,000,000 square yards, and in 1920 it was 97,000,000 square yards. The imports during the fiscal years from 1911 to 1920 averaged a little more than 7,000,000 square yards, valued at a little more than a half million dollars. In the calendar year 1920 the imports amounted to 7,261,904 square yards, valued at $730,719. Senators may readily see that with the importations increased very slightly the value of the total imports had increased by almost 50 per cent, which means that already the American cotton farmer is paying for cotton bagging about 50 per cent more than he was paying about 10 years ago, and if this duty shall be imposed the price will be again advanced in all probability.

I move to amend the committee amendment by striking out "six-tenths," in line 9, and inserting in lieu thereof "one-tenth," and by striking out "three-tenths," in line 11, and inserting in lieu thereof "one-twentieth." That will leave the proportion the same, but it will leave this article practically on the free list.

Mr. SMITH. Mr. President, I should like at this point to inquire of either the Senator from Arkansas, who is in charge of the schedule on behalf of the minority, or the Senator from Utah, who is in charge of it for the majority. The committee is the author of this amendment. In paragraph 1017a cotton bagging has been separated from the bagging covered by paragraph 1017. Why would it not be in order now to amend the amendment proposing to insert paragraph 1017a so as to put cotton bagging upon the free list rather than to lower the duty?

Mr. SMOOT. The way to do that would be to disagree to the committee amendment and then later offer an amendment to the free list covering cotton bagging. If we did not specifically mention it in the free list, it would fall under the enumerated clause of manufactured articles.

Mr. SMITH. I understand that, but I was attempting to obviate the necessity of taking up those things when we get into the Senate, when specific amendments might be offered. I thought it might expedite matters.

Mr. ROBINSON. I have looked into that, and I am convinced that under the parliamentary agreement under which we are proceeding it is not now in order to move to place cotton bagging on the free list. If it were, I should certainly do so, because, as I have already stated, I think it ought to remain there. It is unjust to burden the American cotton-growing industry with this duty. I think it is unnecessary; and if it be true that those who have heretofore manufactured most of this commodity have reached the conclusion that the industry ought to be carried on in another country, and they have expatriated themselves and their industry for the purpose of conducting it in India, the best thing the American people can do is to let it be manufactured in that country, because the bulk of it is being manufactured by these concerns that now claim they are moving their business to India.

As stated by the Senator from Utah the other day, there are some manufacturing enterprises in which this country can not successfully compete with other countries; and this commodity is such a necessary article, and is in such common use, so essential to the prosperity of the cotton business, that I believe we would be justified in placing it upon the free list. If those who have manufactured it heretofore choose to move their industries to a foreign country in order to be able to make it cheaper than they are now manufacturing it, I do not know of any reason why the American farmer, who consumes it, should be required to pay for it an additional amount in the form of a tax.

Mr. McCUMBER. Mr. President, I call attention to the fact that the Senator from Arkansas has just stated that this tariff will add about $500,000 annually to the cost of cotton bagging in this country. Just exactly how he arrives at that conclusion, of course, I am not prepared to say. The entire imports of cotton bagging during 1921 were 3,372,000 square yards valued at $309,897. An additional cost of $500,000 would be more than the entire value of the goods imported. The value was 9 cents per square yard. The real ad valorem duty, however, amounts to 6⅔ per cent, which is certainly not a very heavy duty; and when we recall that only about 6 per cent of all the bagging used in the United States is imported at all, a duty of 6⅔ per cent upon the bagging that is imported would not amount to a great deal.

The Senator, I assume, takes the position that the duty will raise the cost of every yard by an amount equivalent to the duty imposed upon that which is imported. Even with that, however, I do not think it would amount to as much as the Senator contemplates.

Mr. ROBINSON. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Arkansas?

Mr. ROBINSON. I thought the Senator had concluded.

Mr. McCUMBER. No; I just want to put a few matters in the RECORD.

Mr. ROBINSON. Then, if the Senator has concluded the discussion of this particular matter, I should like to say that in my judgment, irrespective of the imposition of this duty, cotton bagging, particularly new bagging, will hereafter be manufactured abroad. The two concerns that have heretofore manufactured the bulk of it in this country have announced their purpose to remove their plants to India, and those now engaged in the manufacturing industry contend that it will be impossible for them to compete with these American concerns who are beginning to manufacture in India. I am speaking upon the theory that the importations will be largely increased, and that the price of this commodity will be increased by substantially the amount of the duty; that the American farmer who consumes cotton bagging hereafter will pay just about as much more for the product than he would be required to pay if no duty were imposed as the amount of the duty; and in that view of the matter a 12,000,000-bale crop would bear something like $450,000 additional expense for wrapping. This would be approximately the figure that I have stated. I do not pretend to say that I or anyone else can state with accuracy what the additional cost to the American cotton farmer will be by reason of this duty.

Mr. McCUMBER. Mr. President, I think the Senator's own argument will dispel the idea of the farmers paying at least more than they are paying now, because, if I correctly understand the argument of the Senator, it is that the firms that are going abroad to manufacture this product will be able to drive the American manufacturer out of the market. The only way in which they can drive the American manufacturer out of the market is by selling for a less price than the American manufacturer can produce it for, and sell it at a profit; and if they do that, they are bound to bring down the price, tariff or no tariff.

Mr. ROBINSON. Yes; Mr. President——

Mr. McCUMBER. But, if the Senator will allow me, I think there are other reasons than this to establish the fact that the tendency of prices probably will be downward instead of upward, no matter whether this little tariff of 6⅔ per cent ad valorem is placed upon the product or not. Let us remember that only 6 per cent of the product used in the United States is now imported at all. Now, let us take the other 94 per cent and see by whom it is produced. The Senator will find that there is a great deal of competition, not only as between manufacturers manufacturing the product new but they also have to compete against those who use second hands, against those who manufacture out of old sugar bags, and so forth. Therefore there is a great deal of complaint on the part of the manufacturers, and therefore they have to sell down as low as possible to hold the trade as against those who use the old second hand jute bagging and patch it over, and those who make bagging out of sugar bags.

Only 48 per cent of the product used in the United States, which includes the 6 per cent which is imported, is a new product. Ten per cent of the yardage used is made up of old sugar bags; 8 per cent is made up of old bags which have been rewoven, and 28 per cent is of the second line. With all of those five or six different interests in sharp contest with each other, I think we need have little fear of prices going upward because of a levy of 6⅔ per cent ad valorem upon the 6 per cent which is imported.

Mr. ROBINSON. Mr. President, of course the object of American manufacturers in going to India to manufacture this product is to make a greater profit by manufacturing it cheaper. It does not necessarily follow that they will sell it cheaper. I do

not think the Senator is justified in the conclusion that there will exist material competition in the sale of new bagging, because that never has existed. During last year I ask the Senator from South Carolina if he could buy a yard of bagging in Charleston for a price in any degree different from what it would cost him in any other city in the South, and he told me he could not. The price is absolutely regulated; and the result will be that the price to the American consumer of cotton bagging will be advanced by just the amount of duty we levy upon it. Of course, the total amount that the duty will cost the American cotton farmer will be dependent upon the amount imported.

Mr. POMERENE. Mr. President, all of which means that this will be an additional burden on an already established industry, with no possibility or little possibility of developing a new one.

Mr. ROBINSON. Yes; that is true.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arkansas [Mr. ROBINSON] to the amendment of the committee.

Mr. ROBINSON. I ask for the yeas and nays on that amendment.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. CARAWAY (when his name was called). I transfer my pair with the junior Senator from Illinois [Mr. MCKINLEY] to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "yea."

Mr. KELLOGG (when his name was called). I have a pair with the senior Senator from North Carolina [Mr. SIMMONS]. In his absence I withhold my vote.

Mr. MCCUMBER (when his name was called). I have a general pair with the junior Senator from Utah [Mr. KING], who is necessarily absent from the Senate. I transfer that pair to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. NEW (when his name was called). I transfer my general pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Pennsylvania [Mr. PEPPER] and vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Missouri [Mr. REED] and vote "yea."

Mr. WATSON of Indiana. I transfer my pair with the Senator from Mississippi [Mr. WILLIAMS] to the Senator from Washington [Mr. POINDEXTER] and vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from New York [Mr. CALDER] with the Senator from Georgia [Mr. HARRIS];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON].

Mr. BALL. I have a general pair with the senior Senator from Florida [Mr. FLETCHER], which I transfer to my colleague [Mr. DU PONT] and vote "nay."

Mr. HALE. I transfer my pair with the Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. WATSON of Georgia. I have a general pair with the Senator from California [Mr. JOHNSON]. In his absence, I withhold my vote. If permitted to vote, I would vote "yea."

Mr. STANLEY. I have a general pair with the junior Senator from Kentucky [Mr. ERNST]. Being unable to get a transfer, I withhold my vote. If permitted to vote, I would vote "yea."

Mr. DIAL. I have a pair with the Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the Senator from Montana [Mr. MYERS] and vote "yea."

Mr. JONES of New Mexico (after having voted in the affirmative). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Nevada [Mr. PITTMAN] and allow my vote to stand.

I desire to announce that the senior Senator from North Carolina [Mr. SIMMONS] is necessarily absent, and that he is paired with the Senator from Minnesota [Mr. KELLOGG]. If the senior Senator from North Carolina were present, he would vote "yea."

Mr. TRAMMELL. I desire to announce the unavoidable absence of my colleague [Mr. FLETCHER] on account of illness.

The result was announced—yeas 18, nays 35, as follows:

YEAS—18.

Ashurst	Gerry	Robinson	Underwood
Borah	Heflin	Sheppard	Walsh, Mass.
Caraway	Jones, N. Mex.	Smith	Walsh, Mont.
Culberson	Overman	Swanson	
Dial	Pomerene	Trammell	

NAYS—35.

Ball	Gooding	McNary	Smoot
Broussard	Hale	Nelson	Spencer
Bursum	Jones, Wash.	New	Stanfield
Cameron	Kendrick	Nicholson	Sterling
Capper	Keyes	Norbeck	Wadsworth
Colt	Lenroot	Oddie	Warren
Cummins	Lodge	Ransdell	Watson, Ind.
Curtis	McCumber	Rawson	Willis
Frelinghuysen	McLean	Shortridge	

NOT VOTING—43.

Brandegee	Glass	McKellar	Poindexter
Calder	Harreld	McKinley	Reed
Crow	Harris	Moses	Shields
Dillingham	Harrison	Myers	Simmons
du Pont	Hitchcock	Newberry	Stanley
Edge	Johnson	Norris	Sutherland
Elkins	Kellogg	Owen	Townsend
Ernst	King	Page	Watson, Ga.
Fernald	Ladd	Pepper	Weller
Fletcher	La Follette	Phipps	Williams
France	McCormick	Pittman	

So Mr. ROBINSON's amendment to the committee amendment was rejected.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on agreeing to the committee amendment.

Mr. ROBINSON. Mr. President, I want the attention of the Senate for just a moment. We will have another vote on the question as to whether a tax shall be imposed on cotton bagging. The House of Representatives, in paragraph 1517, left it on the free list. By the amendment which is now under consideration the Senate committee proposes to take it off the free list and impose on it duties based upon the two classes produced in this country. In the first part of the amendment the committee seeks to impose a duty of six-tenths of 1 cent per square yard, and in the other part of the amendment a duty of three-tenths of 1 cent per pound on that classification.

If the committee amendment is not agreed to, by following up and disagreeing to another committee amendment striking out paragraph 1517, which paragraph puts the article on the free list, we can at this time settle the subject and leave cotton bagging on the free list.

I want to point out to Senators who voted a moment ago to impose this duty that, as a matter of fact, this is not a protective duty. There is not a manufacturer of cotton bagging in the United States who regards it as a protective duty. Every manufacturer of cotton bagging who has discussed the subject, within my knowledge, has contended that a duty of from a half cent to a cent and a quarter is necessary in order to make the rate protective. One manufacturer, corresponding with the Senator from North Carolina about the subject, has said that while a duty of not less than 1 cent per square yard is necessary to make the rate protective, if the Senate will impose a duty of six-tenths of a cent per square yard he will try to get along, but nearly all of the others have insisted upon a much higher rate of duty than that which the committee has proposed.

The result is that I think we may fairly conclude that this is a revenue rate, and, as I have already said, I do not believe we ought to seek to raise revenue on this article, which is indispensable to the marketing of one of the largest crops in the United States. I do not care to consume time further.

Mr. POMERENE. May I ask the Senator a question?

Mr. ROBINSON. I yield to the Senator from Ohio.

Mr. POMERENE. What, as estimated, will be the cost to the cotton producers of the country if this amendment is agreed to?

Mr. ROBINSON. I think that hereafter, whether a duty be imposed or not, cotton bagging will be manufactured abroad. I think the conditions of the industry are such that, with the two principal manufacturers moving their plants to India in order to get the benefit of cheap labor, we are going to import practically all of the bagging we use hereafter. It is impossible to say what percentage of bagging used will be affected by this rate; but a few moments ago I said that, figuring upon the basis of a 12,000,000-bale crop and the wrapping of practically the entire crop in new bagging, the cost would be approximately $450,000, figuring 50 per cent as the ratio between old bagging and new bagging, which is about the ratio the Tariff Commission reports. I would say that it could not be less than a quarter of a million dollars.

On this question I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. SMITH. Mr. President, before the vote is taken I want to say that I have not looked into the bill sufficiently to say, but I was under the impression that this item is taken care of. The Senator from Arkansas calls attention to the fact that if the committee amendment in paragraph 1517 is disagreed to and the committee amendment here is disagreed to, then the bagging will be left on the free list, just as the House contemplated doing. I submit to Senators on the other side that this is not protecting an American industry, but is really subtracting from an already established industry. It is simply putting a burden on an industry which has carried the balance of trade for this country for something like 50 or 60 years. So far as revenue is concerned, the revenue produced would not in any way compensate for the enhanced value of cotton that could be baled in these bags.

Mr. SMOOT. There appeared before the committee representatives of the manufacturers of bagging in the United States, with the exception of Ludlow and the American Manufacturing Co. As I understand it, the American Manufacturing Co. is a subsidiary of the Ludlow Manufacturing Co., and they, too, have gone to India for the purpose of making cotton bagging. Of course, they would like to have it on the free list, but every other manufacturer, those located in New York, Massachusetts, New Jersey, Virginia, North Carolina, Georgia, Louisiana, and Texas, represented to the committee that if the committee wanted this industry to survive in America they would have to give a duty upon this bagging. We manufacture about 90 per cent of the bagging used in the United States, or have done so in the past.

Mr. ROBINSON. What percentage of the new bagging is made in this country by the Ludlow people and the American Manufacturing Co.?

Mr. SMOOT. I have not the figures before me; therefore I can not say.

Mr. ROBINSON. I am informed by the expert that it is over 90 per cent of the new bagging.

Mr. SMOOT. I am quite sure that the Ludlow Manufacturing Co. can destroy the balance of the manufacturers of this article in the United States. Then they could fix the terms to be paid for the product, of course. I think that was their object in going to India.

Mr. SMITH. May I suggest to the Senator that if the American manufacturer can not compete with the men in Calcutta upon a product that is peculiar to that country and that we can not possibly make in this country, then it goes without saying that it will come cheaper from the manufacturers in India than in America. The finished product would be cheaper. Now, so far as the price of bagging is concerned I, as a considerable purchaser of that article all my life, have never seen bagging vary in price. There was a uniformity of price throughout the country. If there was any competition the purchasers of it were never aware of that fact.

Mr. POMERENE. Does the Senator mean that the price did not vary from year to year?

Mr. SMITH. I mean that whenever we bought from one company we paid exactly the same as when we bought from another company.

Mr. ROBINSON. The prices were absolutely alike so far as the retail trade was concerned. We could not buy a pound of bagging at one point in the South for one one-hundredth part of a cent less than it could be bought for anywhere else. It is absolutely controlled.

Mr. SMITH. So far as any competition is concerned, the only competition we have seen at all—and that was really not competition in manufacture—was where they had some industry that had sprung up putting together the piece bagging in the factory, where the factories had taken the old bagging and put it on the picking machine, remaking the bags and selling it back to the trade.

Mr. POMERENE. Mr. President, will the Senator yield while I ask the Senator from Utah a question?

Mr. SMITH. Certainly.

Mr. POMERENE. A statement was made by the Senator from South Carolina and by the Senator from Arkansas as well to the effect that there is one and the same price in every cotton market in the Southern States for cotton bagging. Does not that indicate to the Senator's mind that there is some sort of a combination or one sales agency which fixes the price? It can not happen by accident that the price is the same everywhere.

Mr. SMOOT. I understand that the quoted price is the same, and then there is a discount according to the quantity used.

Mr. SMITH. But that is uniform.

Mr. ROBINSON. The discounts are always uniform. There is no competition whatever in this commodity so far as the retail trade is concerned, and there has not been in 30 years.

Mr. SMOOT. I think most likely the Senator is right as to the retail trade, and that is just what I was coming to. I admit that I think the Senator was right when he said the price in the retail trade was absolutely the same. I do not think there is any doubt about that, but——

Mr. SMITH. If the Senator will allow me, there is one possible feature in the matter. It is possible that the importation of the product from abroad can not reach any very excessive price, for the reason that there has been a tremendous substitution for cotton bagging of what is called sugar sacking; that is, the old sacks in which sugar is imported. They rip those open and use them to cover with.

I want to call the attention of the Senator from Arkansas and Senators from other Southern States to what occurred when the farmers of the South revolted against the absolute monopoly of the bagging business—I am not sure of the date, but I can ascertain the exact time. The price had been doubled, and they boycotted the Bagging Trust and bagged their cotton in old quilts, and so forth, and some of the cotton was packed without any bagging at all, and they broke the trust figures.

Mr. ROBINSON. I remember that occurrence very distinctly.

Mr. SMITH. It was the most notorious and unblushing exhibition of power that was ever known. There are letters here to the effect that the Ludlow people want to go to Calcutta and establish their factories in order to get cheaper labor, that they can not manufacture it here without a protective duty, but they can expatriate themselves and go to India and there manufacture it and make a profit. If it is profitable to the consumers of America, who do not produce a pound of it, why not let them go? They produced a combination here to such an extent that the farmers of the country absolutely revolted and signed a pledge to the effect that until the price of bagging came down to where it was reasonable and one that had obtained theretofore, they would not use a pound, and they did not use a pound until they broke the power of the trust and got the bagging back to something like reasonable figures.

Mr. SMOOT. I do not care about voting in order to accommodate these people who expatriated themselves from America and went to India to manufacture bagging with cheap labor to enable them to enter this market free of duty. I do not agree to that, and that is the only reason why I think there ought to be a duty on this article.

Mr. SMITH. It should also be taken into consideration that they are the ones who produce 90 per cent of all the bagging.

Mr. SMOOT. In substantiation of what the Senator says as to the use of other kinds of materials than what is termed "new cotton bagging," I want to say that all the cotton bagging used in the United States in years past has only taken 48 per cent of new cotton bagging. Six per cent of it is imported; 10 per cent is of old waste sugar sacks; 8 per cent of rewoven cloth—that is, they take the old cloth, pick it up again, and weave it into cotton bagging—and 28 per cent is of second-hand cotton bags. That is the proportion in which the bags are used in the United States to-day.

Mr. SMITH. That may be true; but it does not enter into this argument at all, because the raw material is imported here from India and the parties manufacturing have a monopoly here. What is the difference between a monopoly in America protected by your high protective tariff and a monopoly in India and free trade here?

Mr. SMOOT. The only difference is, if it was manufactured in India, they could dictate the price to America, and we would have to pay the price because it is not manufactured here. If there is a monopoly in the United States and there is a duty upon that article, and they bring it in here, they have to pay a duty, and then we get that much money out of it. But I have no sympathy whatever with either one of those conditions.

Mr. POMERENE. There will probably be this difference that if there was a monopoly here they would have to pay some internal-revenue tax, but if they have a monopoly over there they would join with those other Americans who are doing business abroad and ask Congress to relieve them from all internal-revenue tax.

Mr. SMOOT. And from duties of every kind.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Utah yield; and if so, to whom? The present occupant of the chair is going to exercise his right to enforce the rule against interruptions without addressing the Chair.

Mr. SMOOT. The Chair can do that now, and I yield the floor.

Mr. SMITH. I was under the impression that I had the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee, on which the yeas and nays have been ordered.

Mr. SMITH. Before the vote is taken, Mr. President, I desire to say a further word. I can not see where we are justified in placing a duty upon an article the raw material of which or the foundation of which is wholly within a foreign country and which can not be established here except upon a supply obtained from abroad. We could not offer the argument that we want to build up an industry here in order that, in case of an emergency, we would be independent of a foreign country. We have not the raw material. If the raw material is cut off, the factory must close. It is notoriously true that they claim that under the Underwood law they could not make any money, and yet they made 90 per cent of the new bagging that was used in this country, and I believe the American manufacturers made about 94 per cent of it. That would leave only 6 or 7 per cent that was imported into the country.

But if they move their factories abroad under free trade, this article being on the free list, they will be in a better position to sell it at a less price and make a greater profit, because they get their labor for 15 or 20 cents a day there as against $1.50 a day here, and the additional advantage of shipping the finished product rather than shipping by water the raw material, which is always uneconomical, and then converting it here and distributing it in the interior as the finished product. If they finish it in India, they conserve space, get rid of waste, and distribute it from the seaboard towns in the form in which it comes, which would be a saving in the item of freight, as well as in the item of labor, and they should be enabled to and doubtless would sell a great deal cheaper than they are now selling for when they have to bring in the raw material and convert it here.

Mr. HEFLIN. Mr. President, I hope Senators on the other side of the Chamber will not vote to impose this tax upon the cotton producers of the United States. That is just what it is. If there is an industry in the country that needs to be aided now, it is the cotton industry. Here is an article the price of which is shown by Senators who live in the cotton-producing States to be absolutely controlled by a trust. There is no competition in the trade. These people now, in order to get the opportunity to raise the price on bagging, threaten to leave the United States. Mr. President, that is an old, old story—an industry flourishing, the price of its product controlled absolutely, no competition to disturb it in the market, now holding up the lawmaking body and threatening to leave the country unless the taxing power is employed to put money, more money, into its pockets.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield to the Senator from Utah.

Mr. SMOOT. They are not threatening to leave. They have already done it, and are now shipping goods into the United States. Ludlow & Co. have gone to India and the American Manufacturing Co. have gone to India. They are erecting their mills there to make this bagging and ship it back into this country. It is not a mere threat.

Mr. HEFLIN. Then we had better let them go to even a warmer climate than India. [Laughter.]

Mr. SMOOT. But that does no good to the consumer in this country.

Mr. HEFLIN. We had better do that than to permit them to use the taxing power of the United States to increase the price of bagging to the cotton farmers in the United States. That is the point I am making. The Senator from Arkansas [Mr. ROBINSON] and the Senator from South Carolina [Mr. SMITH] are truly right in their contention, and I hope this tax will not be imposed upon bagging. It simply means the wrongful taking by law of money out of the pockets of hard-pressed cotton farmers and giving it to the Bagging Trust.

Mr. ROBINSON. Mr. President, with respect to the last statement made by the Senator from Utah, while I think it is undoubtedly true that both the American and the Ludlow companies are preparing to begin the manufacture of bagging in India, their activities have not yet extended so far as the Senator from Utah thought; at least, that is the statement of the Tariff Commission in a letter to the senior Senator from North Carolina [Mr. SIMMONS]. It is undoubtedly true that they are preparing to begin operations there.

Mr. SMOOT. I can show the Senator the manifest which proves that they have already shipped goods. I called attention to it the other day when we had the matter under discussion.

Mr. ROBINSON. I do not know that that is very material. As I have already stated, the important point is, of course, that they have expatriated their industries and removed them to India in order to get the benefit of the cheap labor there. So now they will not object to the imposition of a duty which will enable them to raise the price of their product in conjunction with other manufacturers, for we have shown conclusively that the price is controlled by the manufacturers, or at least it is controlled by somebody. There is no competition in the selling of bagging.

I want to put in the RECORD an interesting and important letter from the Tariff Commission to the Senator from North Carolina [Mr. SIMMONS] setting forth all the facts in connection with the removal of the Ludlow and the American manufacturing companies to India and the advantages which the Indian industry has over the domestic industry, and setting forth also other important facts. I also wish to have printed in the RECORD a letter from Mente & Co., manufacturers of burlap and bags, a telegram from the Carolina Bagging Co., and a letter from Young & Metzner (Inc.), all contending that a duty of approximately 1 cent per pound or more is necessary if the rate is to be made protective, although Young & Metzner, as I have already stated, indicate that they will try to get along on the rate proposed in the bill.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

UNITED STATES TARIFF COMMISSION,
Washington, February 21, 1922.

Hon. FURNIFOLD MCL. SIMMONS,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In reply to your letter of February 16 relating to the production of bagging in India by American companies, it is a fact that the American Manufacturing Co. and a subsidiary of the Ludlow Manufacturing Associates, which produce practically all the new bagging woven in the United States, are now each erecting or have recently completed a mill in India. The subsidiary of the Ludlow Manufacturing Associates, known as Ludlow Jute Co. (Ltd.), was incorporated in January, 1920, with a capital of $5,000,000, all of which is owned by the parent company.

The combined output of cotton bagging by the American Manufacturing Co. and by the Ludlow Manufacturing Associates normally constitutes about 60 per cent of domestic consumption. In 1920 the output was low, amounting to 48 per cent of the total. The remaining 52 per cent of the bagging consumed in 1920 consisted of (1) imported bagging, 6 per cent; (2) re-woven old bagging, 8 per cent; (3) sugar-bag cloth made by cutting up heavy jute bags which were originally used as containers for imported raw sugar, 10 per cent; (4) secondhand bagging, 28 per cent. The consumption of secondhand bagging in 1920 was much larger than usual, amounting to over twice the quantity used prior to 1914.

The American Manufacturing Co. has three domestic mills producing bagging. These are located at Brooklyn, N. Y.; Charleston, S. C.; and St. Louis, Mo.; whereas the production of the Ludlow Manufacturing Associates is confined to one of a group of mills located at Ludlow, Mass.

Both companies have shipped abroad a part of the bagging machinery formerly operated in this country. One company has already signed up and sent a number of its skilled workers to India. It is not known if the second intends to do likewise.

With tariff legislation on bagging still pending and with our data at hand incomplete regarding the amount of machinery shipped or intended to be shipped abroad, the commission is unable to state what effect the establishment of mills in India will have upon the bagging manufacturers who remain in this country.

The bagging mills under construction abroad will enjoy the advantages which have made India the world's leading manufacturer and exporter of jute products. Normally India's exports of cloth and bags are equal to about 40 per cent of the world's consumption of jute manufactures. The next largest manufacturer and exporter of jute products is Dundee, Scotland, whose shipments are limited practically to the very highest type and constitute about 12 per cent of the world's consumption. In the fiscal year ended March 31, 1921, India's shipments of cloth, principally burlap used in making bags, was 1,352,000,000 yards; and of heavy bags, chiefly of the type used in sacking raw sugar, 533,000,000 bags. The combined weight of the cloth and bags was about 825,000 tons, valued at $170,140,000. In contrast, the domestic consumption of bagging, which is the only type of jute fabric produced in this country, amounted in the same time to 97,042,000 yards, or about 86,620 tons.

India's advantages for producing jute manufactures are, briefly: (1) Production of the world's supply of jute in close proximity to centers of manufacture, thus enabling her to save freight charges. Jute is the world's cheapest fiber, and in quantity produced is second only to cotton. (2) Low labor costs. The average weekly wages paid in January, 1921, to four classes of American operatives, as obtained from domestic bagging manufacturers by the commission, amounted to $16.58 for a week ranging from 48 to 55 hours; and in January, 1920, to corresponding classes of jute workers in a Calcutta mill, as reported by the Indian Government, to $1.85 for a week ranging from 54 to 60 hours.

Indian bagging is generally superior to the bulk of domestic bagging. In turn, the domestic product is of a better quality than that imported from the United Kingdom, which has been the chief source of our imports in the past. Indian bagging, though superior in quality to the English product, is entered at a lower price. The average value per square yard of imported Indian bagging was 5.1 cents in the fiscal year 1912, 5.2 cents in 1914, and 8.4 cents in 1921, as compared with English bagging entered in the same years at 6.9 cents, 7.9 cents, and 13.2 cents, respectively. The superiority of Indian bagging over the best domestic bagging arises from the fact that it is more closely woven and made from all new jute butts. The bulk of domestic production is

manufactured chiefly from old, worn bagging and from cordage wastes. American cotton as a whole is the poorest baled in the world.

Indian bagging is used chiefly in the Mississippi Delta, where the best grades of American cotton are grown and where the demand is for the best covering available. The wholesale selling price of the best quality of Indian bagging in the United States in the cotton season of 1921 ranged between 10 cents and 10¼ cents, as compared with 7½ and 10 cents for the best domestic grades manufactured by the American Manufacturing Co.

The commission has in the course of printing a report on jute cloths, which discusses in detail the domestic and import trade in cotton bagging. As soon as this report is printed, which will be within the next two weeks, I shall be pleased to forward you a copy.

Very truly yours,

THOMAS O. MARVIN, *Chairman.*

—

NEW ORLEANS, U. S. A., *January 20, 1922.*

Hon. F. McL. SIMMONS,
Finance Committee, United States Senate, Washington, D. C.

DEAR SENATOR: The writer wishes to thank you for the courteous attention shown him when he called on you with Mr. Fauntleroy, of New Orleans, on the subject of getting protection on jute bagging for covering cotton.

We herewith inclose you a short brief that we got up. We made it as short as possible so it will not take much of your time in reading, and would like you to read same carefully, and assure you if it was not absolutely necessary for us to get this protection to remain in this manufacturing business we would not be so persistent. This really means we can not exist without a duty of 1 cent per pound on jute bagging, since the two important factories—the American Manufacturing Co. and the Ludlow Associates—have moved their plants to Calcutta and, on account of the cheap coolie labor, will be able to sell at really a lower price than it will cost us to manufacture the goods even though the raw material was given to us free.

In former briefs these two manufacturers have always stated that if the raw material was given them free they could not compete against the cheap coolie labor of India and sell goods to compete with Calcutta manufacturers.

Anything you can do to assist us in securing a duty of 1 cent per pound on jute bagging for covering cotton will be appreciated.

Yours very truly,

MENTE & CO. (INC.),
J. C. WERNER, *President.*

—

HENDERSON, N. C., *March 29, 1922.*

Hon. FURNIFOLD M. SIMMONS,
Finance Committee, Washington, D. C.:

Understand agitation for free jute bagging for cotton coverings is being worked up through southern agents representing companies who have removed their plants from this country to Calcutta. That their purpose is to destroy the independent plants remaining in this country with comparatively high labor cost is obvious. With competition obliterated, Indian monopoly on bagging would be far more costly in the end to the producer of cotton. We believe you will agree with us that one-half cent per pound would be a more equitable adjustment, because under the present ruling of six-tenths cent per square yard jute patches, weighing from 2½ to 3 pounds per yard, 24 to 30 inches wide, would receive very little protection. Bagging weighing 3 pounds per yard has a value of about 50 per cent more than 2-pound bagging, and for that reason we suggest the change. Would certainly appreciate any effort you may see fit to make in our behalf.

CAROLINA BAGGING CO.

—

LONG ISLAND CITY, N. Y., *May 17, 1922,*

Hon. FURNIFOLD McL. SIMMONS,
United States Senate, Washington, D. C.
(H. R. 7456, par. 1017a.)

DEAR SIR: Careful reading of the reports in the CONGRESSIONAL RECORD of the discussion on the tariff bill has impressed on our minds that any duty in excess of difference of cost of production is not favored by many of the Senators.

When paragraph 1017a of the bill, imposing a duty of six-tenths of 1 cent per yard on jute bagging for covering cotton, is reached we wish to have it in the minds of the Senators that this duty is not in excess of the difference in cost of production—in fact, it is much less.

We state specifically that wages in our bagging department, based strictly on factory labor only, average $24.75 per week of 54 hours, as low as we think labor here can endure.

Wages in the bagging mills of India, where our two largest American makers have moved their mills recently, are from $1.38 to $1.50 per week of 72 hours.

Allowing that three Indian laborers are required to do the work of one workman here, we have a comparative cost of $4.50 per week in India as against $24.75 per week here, a difference impossible to overcome without protection.

This need of protection is now imperative as against our own expatriated American makers. This is our first request for protection; we could compete with makers while their mills were here.

On a production basis we should have a duty, to equalize manufacturing costs, of about 1¼ cents per yard, but we will try to continue business under a duty of six-tenths of 1 cent per yard, and we hope for your support of this rate of duty.

Southern Senators should recall the cost to their constituents of the last monopolistic control of bagging here, and we respectfully remind them that the continued operation of the independent mills in the United States is the only guaranty against a foreign monopoly in the production of bagging for covering cotton.

Yours very truly,

YOUNG & METZNER (INC.),
JAS. W. MANSON, *Vice President.*

The PRESIDING OFFICER. The question is on the committee amendment on page 138, on which the yeas and nays have been ordered.

The Assistant Secretary proceeded to call the roll.

Mr. CARAWAY (when his name was called). Making the same announcement as to my pair and transfer as on the previous vote, I vote "nay."

Mr. DIAL (when his name was called). Making the same announcement as to my pair and its transfer as on the former ballot, I vote "nay."

Mr. KELLOGG (when his name was called). Making the same announcement of my pair as before, I withhold my vote.

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the last vote, I vote "nay."

Mr. STANLEY (when his name was called). I have a general pair with the junior Senator from Kentucky [Mr. ERNST]. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and vote "nay."

Mr. WARREN (when his name was called). Transferring my general pair with the Senator from North Carolina [Mr. OVERMAN] to the senior Senator from Maryland [Mr. FRANCE], I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as to my pair and its transfer as on the last roll call, I vote "yea."

The roll call was concluded.

Mr. BALL. Making the same transfer of my pair as on the previous vote, I vote "yea."

Mr. NEW. Making the same announcement as to the transfer of my pair as made on the last vote, I vote "yea."

Mr. HALE. Making the same announcement as to the transfer of my pair as on the previous vote, I vote "yea."

Mr. JONES of New Mexico. Making the same announcement as to the transfer of my pair as on the previous vote, I vote "nay."

I also desire to repeat the announcement which I made heretofore as to the absence of the Senator from North Carolina [Mr. SIMMONS] and to state that if he were present he would vote "nay."

The roll call resulted—yeas 31, nays 17, as follows:

YEAS—31.

Ball	Gooding	Lodge	Smoot
Broussard	Hale	McLean	Spencer
Bursum	Harreld	McNary	Stanfield
Cameron	Jones, Wash.	Nelson	Wadsworth
Capper	Kendrick	New	Warren
Colt	Keyes	Norbeck	Watson, Ind.
Curtis	Ladd	Oddie	Willis
Frelinghuysen	Lenroot	Phipps	

NAYS—17.

Ashurst	Heflin	Smith	Walsh, Mass.
Borah	Jones, N. Mex.	Stanley	Walsh, Mont.
Caraway	Pomerene	Swanson	
Dial	Robinson	Trammell	
Gerry	Sheppard	Underwood	

NOT VOTING—48.

Brandegee	France	McKinley	Ransdell
Calder	Glass	Moses	Rawson
Crow	Harris	Myers	Reed
Culberson	Harrison	Newberry	Shields
Cummins	Hitchcock	Nicholson	Shortridge
Dillingham	Johnson	Norris	Simmons
du Pont	Kellogg	Overman	Sterling
Edge	King	Owen	Sutherland
Elkins	La Follette	Page	Townsend
Ernst	McCormick	Pepper	Watson, Ga.
Fernald	McCumber	Pittman	Weller
Fletcher	McKellar	Poindexter	Williams

The PRESIDING OFFICER. On the committee amendment the yeas are 31 and the nays are 17. The Senator from Minnesota [Mr. KELLOGG] is present, but paired, making a quorum. The yeas have it, and the committee amendment is agreed to.

Mr. SMOOT. Mr. President——

Mr. BORAH. I wish to know if I correctly understand the parliamentary situation. If I should want a separate vote in the Senate on paragraph 1017 and paragraph 1017a, is it necessary to reserve that vote at this time?

The PRESIDING OFFICER. If a separate vote in the Senate is desired on an amendment which is adopted as in Committee of the Whole it is customary, at any rate, to reserve the right to have such vote.

Mr. BORAH. Then I reserve a vote in the Senate on those two paragraphs.

The PRESIDING OFFICER. The Senator from Idaho reserves the right to ask for a separate vote in the Senate on paragraphs 1017 and 1017a.

Mr. SMOOT. I now ask that the Senate return to paragraph 1517, and ask that the amendment in that paragraph may be agreed to.

Mr. ROBINSON. That amendment follows as a logical result from the two votes last taken.

The PRESIDING OFFICER. The amendment to paragraph 1517, page 213, will be stated.

The ASSISTANT SECRETARY. On page 213, after line 19, the Committee on Finance propose to strike out paragraph 1517, as follows:

PAR. 1517. Bagging for cotton, gunny cloth, and similar fabrics, suitable for covering cotton, composed of single yarns made of jute, jute butts, seg, Russian seg, New Zealand tow, Norwegian tow, aloe, mill waste, cotton tares, or other material not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads to the square inch, counting the warp and filling, and weighing not less than 15 ounces per square yard; and waste of any of the foregoing articles suitable for the manufacture of paper.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment will be stated.

The ASSISTANT SECRETARY. On page 214, after line 4, the Committee on Finance propose to insert a new paragraph as follows:

PAR. 1517. Waste bagging and old sugar sack cloth.

Mr. SMOOT. Now, I wish to modify the amendment by striking out the word "old" before the words "sugar sack cloth" and to insert the word "waste," so as to read:

Waste bagging and waste sugar sack cloth.

Mr. ROBINSON. That is a mere verbal amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee as modified.

The amendment as modified was agreed to.

Mr. SMOOT. I ask that the Senate now return to paragraph 1020, in reference to common China, Japan, and India straw matting, and so forth. I have heretofore proposed an amendment to the paragraph.

The PRESIDING OFFICER. The Secretary advises the Chair that an amendment to the amendment is pending.

Mr. SMOOT. That is true.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. After the word "cotton," in the amendment proposed by the Senator from Utah [Mr. SMOOT] on behalf of the Committee, the Senator from Arkansas [Mr. ROBINSON] proposes to insert the words "20 per cent ad valorem."

Mr. POMERENE. Let me ask the Secretary to read that amendment as it would stand if amended as proposed.

The ASSISTANT SECRETARY. So that if amended the paragraph will read:

PAR. 1020. Common China, Japan, and India straw matting, and floor coverings made therefrom, 3 cents per square yard; carpets, carpeting, mats, matting, and rugs, made wholly of cotton, 20 per cent ad valorem; flax, hemp, or jute, or a mixture thereof, 35 per cent ad valorem; all other floor coverings not specially provided for, 60 per cent ad valorem.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arkansas to the committee amendment.

Mr. ROBINSON. I think we had better have a yea-and-nay vote on the amendment. It has heretofore been discussed.

Mr. POMERENE. Do I understand that the amendment offered by the Senator from Arkansas has already been adopted?

Mr. ROBINSON. No. Did the Senator from Utah agree to accept the amendment?

Mr. SMOOT. No.

Mr. ROBINSON. This amendment was presented on last Friday just before the Senate took a recess; and when a purpose to have a record vote was announced the Senator from Utah asked to have the matter go over. It had been pretty fully discussed.

My amendment, if adopted, will continue the present rate on the cheapest grade of carpeting that is available for use, while the rate which the committee proposes will probably prevent all importations of this grade; it is designed and expected to accomplish that purpose. I do not know of any reason why poor people ought not to have an opportunity to obtain this ordinary form of carpeting without a high rate of duty. For that reason I propose the present rate, under which very little is imported, and request a record vote on my amendment. The committee amendment will simply enable the home manufacturers to put up the price, which is already too high, on these necessary commodities.

I ask for the yeas and nays.

Mr. SMITH. Mr. President, if the Senator from Arkansas will allow me to ask him a question, this is an article that is made out of the coarser and cheaper forms of cotton?

Mr. ROBINSON. Yes; it is the very cheapest and commonest kind of carpet that is made, made out of rags.

Mr. SMOOT. Many times, and perhaps in more cases than otherwise, they are novelties that somebody picks up in some country and ships here to this country.

Mr. ROBINSON. Yes; but the mere fact is, as I see it, that by the committee rate we are putting a high duty, a prohibitive duty, on a very common article which is used almost exclusively by the poor; and I do not think we are justified in doing it.

Mr. SMOOT. I think most of them are mats for use in bathrooms. Almost all of them come from Japan. They are the rag mats and carpets that come in. They are the only ones that do come in.

Mr. ROBINSON. Mats are just as necessary for bathrooms as they are for bedrooms, under modern conditions of civilization. I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Arkansas to the amendment of the committee, on which the yeas and nays have been requested and ordered. The Secretary will call the roll.

The Assistant Secretary proceeded to call the roll.

Mr. DIAL (when his name was called). Making the same announcement as on the former ballot, I vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as on the previous vote as to the transfer of my pair, I vote "yea."

Mr. KELLOGG (when his name was called). I transfer my pair with the senior Senator from North Carolina [Mr. SIMMONS] to the junior Senator from Michigan [Mr. NEWBERRY] and will vote. I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. NEW (when his name was called). Transferring my pair as on the previous ballot, I vote "nay."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the previous vote, I vote "yea."

Mr. STANLEY (when his name was called). Making the same announcement as to transfer, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. BALL. Making the same transfer as on the previous vote, I vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from New York [Mr. CALDER] with the Senator from Georgia [Mr. HARRIS];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON].

The result was announced—yeas 16, nays 34, as follows:

YEAS—16.

Ashurst	Heflin	Robinson	Swanson
Borah	Jones, N. Mex.	Sheppard	Underwood
Dial	Overman	Smith	Walsh, Mass.
Gerry	Pomerene	Stanley	Walsh, Mont.

NAYS—34.

Ball	Hale	McCumber	Spencer
Broussard	Harreld	McLean	Stanfield
Bursum	Jones, Wash.	McNary	Sterling
Cameron	Kellogg	Nelson	Wadsworth
Capper	Kendrick	New	Warren
Colt	Keyes	Oddie	Watson, Ind.
Cummins	Ladd	Phipps	Willis
Curtis	Lenroot	Ransdell	
Gooding	Lodge	Smoot	

NOT VOTING—46.

Brandegee	France	Moses	Reed
Calder	Frelinghuysen	Myers	Shields
Caraway	Glass	Newberry	Shortridge
Crow	Harris	Nicholson	Simmons
Culberson	Harrison	Norbeck	Sutherland
Dillingham	Hitchcock	Norris	Townsend
du Pont	Johnson	Owen	Trammell
Edge	King	Page	Watson, Ga.
Elkins	La Follette	Pepper	Weller
Ernst	McCormick	Pittman	Williams
Fernald	McKellar	Poindexter	
Fletcher	McKinley	Rawson	

So Mr. ROBINSON's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question recurs on the amendment of the committee.

The amendment was agreed to.

Mr. SMOOT. Mr. President, on line 25, paragraph 1020, I ask to strike out the numeral "60" and to insert "45."

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On line 25, in the proposed amendment of the committee, in lieu of "60," the sum proposed to be inserted, insert "45."

Mr. ROBINSON. Mr. President, that is a very substantial modification of the former amendment; and while I had hoped that the committee might reduce it further and make the rate 40 per cent, I shall not ask for a record vote.

The VICE PRESIDENT. The question is on the amendment of the committee, as modified.

The amendment, as modified, was agreed to.

Mr. SMOOT. Mr. President, in paragraph 1021, page 139, line 1, I ask that "9" be stricken out and "7" inserted.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. On page 139, paragraph 1021, it is proposed to strike out "9" and insert "7," so that, if amended, it will read:

Matting made of cocoa fiber or rattan, 7 cents per square yard.

Mr. ROBINSON. Mr. President, I offer an amendment to the committee amendment. I move to strike out "7" and insert "5," which is the present rate.

The VICE PRESIDENT. The question is on the amendment of the Senator from Arkansas to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on the amendment of the committee.

The amendment was agreed to.

Mr. SMOOT. On line 2 I move to strike out "7" and insert "5," so as to read:

Mats of cocoa fiber or rattan, 5 cents per square foot.

Mr. ROBINSON. I move to amend the committee amendment by striking out "5" and inserting "3," and upon the amendment I merely wish to say that I am proposing to continue in effect the present rate.

The amendment to the amendment was rejected.

The amendment was agreed to.

The next amendment was, under "Schedule 11—Wool and manufactures of," on page 139, line 8, after the word "camel," to strike out "28 per cent ad valorem: *Provided*, That the duty shall not exceed 7 cents per pound. The duty on such wools, imported on the skin, shall be 24 per cent ad valorem, but not to exceed 6 cents per pound," and to insert "in the grease, 12 cents per pound; washed, 18 cents per pound; scoured, 24 cents per pound. The duty on such wools imported on the skin shall be 11 cents per pound: *Provided*, That such wools may be imported under bond in an amount to be fixed by the Secretary of the Treasury and under such regulations as he shall prescribe; and if within three years from the date of importation or withdrawal from bonded warehouse satisfactory proof is furnished that the wools have been used in the manufacture of rugs, carpets, or any other floor coverings, the duties shall be remitted: *Provided further*, That if any such wools imported under bond as above prescribed are used in the manufacture of articles other than rugs, carpets, or any other floor coverings, there shall be levied, collected, and paid on any wools so used in violation of the bond, in addition to the regular duties provided by this paragraph, 20 cents per pound, which shall not be remitted or refunded on exportation of the articles or for any other reason. Wools in the grease shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water only on the sheep's back or on the skin," so as to read:

PAR. 1101. Wools, not improved by the admixture of merino or English blood, such as Donskoi, native Smyrna, native South American, Cordova, Valparaiso, and other wools of like character or description, and hair of the camel in the grease, 12 cents per pound; washed, 18 cents per pound; scoured, 24 cents per pound. The duty on such wools imported on the skin shall be 11 cents per pound: *Provided*, etc.

Mr. LENROOT. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The Secretary will report the amendment to the amendment.

The ASSISTANT SECRETARY. Add at the end of the paragraph the following proviso:

Provided further, That in no case shall the duty or duties imposed in this paragraph exceed 60 per cent ad valorem.

Mr. WALSH of Massachusetts. May I ask if the Senator does not intend to offer that amendment to the next paragraph?

Mr. LENROOT. I intend to offer it to both paragraphs.

Mr. WALSH of Massachusetts. If it is offered to the other one, it will apply to this as well.

Mr. POMERENE. Mr. President, I am obliged to leave the Chamber for a little while, and if the Senator has no objection I should like to ask him a question. Reducing these specific rates to an ad valorem basis, what, in his judgment, would they amount to?

Mr. LENROOT. In the first paragraph?

Mr. POMERENE. In the first paragraph.

Mr. LENROOT. I think the figures show that this year's imports are somewhat higher than last year's, but based upon last year's import prices it would make the rate 7.2 cents per pound, instead of 12 cents, in the grease.

Mr. POMERENE. That is, giving the specific rates on wool in the grease. What would the ad valorem be? The Senator's amendment provides that the duties shall not exceed 60 per cent ad valorem, and I am trying to find, if I can, what reduction that would mean.

Mr. LENROOT. It would reduce the specific rate, based upon last year's prices, from 12 cents per pound in the grease to 7.2 cents per pound in the grease. In other words, the present ad valorem equivalent, based upon last year's prices, is 100 per cent, and this reduces it to 60 per cent.

Mr. POMERENE. So that the Senator's amendment, reduced to common parlance, means that this would be a reduction, based upon present prices, of about 40 per cent?

Mr. LENROOT. Based on 1921 prices.

Mr. POMERENE. Yes.

Mr. LENROOT. It would be a reduction of about 40 per cent.

Mr. BURSUM. The Senator does not pretend to say that the ad valorem rate, figured on 33 cents, is 100 per cent?

Mr. LENROOT. Not based on 33 cents; it is based upon 24 cents—the scoured basis.

Mr. BURSUM. Thirty-three cents is the rate.

Mr. LENROOT. No; 24 cents. I am speaking now of the first paragraph, not the second.

Mr. BURSUM. Carpet wools?

Mr. LENROOT. Yes.

Mr. BURSUM. Carpet wools come in free, if they are used in the manufacture of carpets.

Mr. LENROOT. That is another question entirely, which we will discuss also.

Mr. McCUMBER. I want to call attention to the fact that carpet wools are supposed to be free. The duty we are imposing upon them is rather in the nature of a penalty for using them for clothing when they are brought in free. It is not intended so much to measure what ought to be the reasonable duty as to prevent them from being used for clothing purposes, which is always a fraud upon the administration of the law.

Mr. LENROOT. Yes; and before this debate is concluded I shall ask the committee to explain why they are willing to admit this wool free when used in carpets, but when used in clothes for the people they propose to charge 100 per cent ad valorem.

I want to discuss both of these paragraphs together very briefly before I come to a discussion of the amendment I have proposed.

I appreciate the necessity of maintaining the sheep industry in the United States. I appreciate the necessity of having such duty as will enable the industry to be maintained upon a cost basis, with a reasonable profit, and I am not going to oppose the committee proposition of 33 cents per scoured pound upon the finer wools. Such efforts as I shall make will be confined to the coarser wools, concerning which the Senator from Utah stated Saturday we produce only 1 per cent of our total consumption in this country.

But I do want to say a few words upon the cost of production of wool in this country. In the summary of the Tariff Commission on the cost of production of wool in the range States, prepared for the Finance Committee, the cost of the production of a pound of wool in 1919 is stated to be 45 cents per pound, including a charge of 6 per cent upon the investment. Excluding such charge, the cost of a pound of wool is found to be 37 cents.

The average price received in 1919 was 54.27 cents, leaving a profit of 9.54 cents per pound, including interest, or 17.04 cents per pound, excluding interest. That, I should say, as Senators know, is based upon the report of the Tariff Commission alloting total receipts from wool and mutton upon a basis they have arrived at, part to wool and part to mutton.

In this debate the cost is stated constantly to be 45 cents per pound, and that is the figure used by all the representatives of the woolgrowers in the hearings. The Senator from Idaho

[Mr. GOODING] has repeatedly stated that the cost of growing wool in the United States, as found by the Tariff Commission, is 45 cents a pound.

Mr. GOODING. That is in the grease, of course.

Mr. LENROOT. Certainly; in the grease.

Mr. GOODING. And the commission found that it cost just as much to grow one class of wool as the other.

Mr. LENROOT. We will come to that a little later. Of course, the Senator from Idaho will admit that in that cost of 45 cents per pound there is included 6 per cent interest upon the investment, will he not?

Mr. GOODING. Yes; that is the report, but I want to say, at the same time, that the farmers have been paying 8 and 10 per cent, so that is hardly a fair rate of interest on which to base an argument.

Mr. LENROOT. That is another question. The only point I am making now is that included in this cost is interest upon the investment, figured at 6 per cent.

I do not criticize this, but I call attention to the fact that the farmer raising sheep insists that before he can be said to make any profit he must first be allowed 6 per cent interest upon his entire investment.

The Esch-Cummins law has been severely criticized by some farmers as being too liberal in allowing returns to the railroads; and I may say, in passing, by some Senators it has been criticized as being too liberal in the return provided for in that law, some of the Senators who contend, when we come to wool and when we come to other farmers' products, that before we commence to figure any profit at all the farmer must be permitted a 6 per cent return upon his investment.

The point I want to make is that the maximum which the Interstate Commerce Commission was permitted to consider in fixing rates in the Esch-Cummins law was 6 per cent—and that, by the way, expired last year—exactly the same percentage that the woolgrower insists he should receive as part of his cost before making any profit.

Mr. GOODING. Mr. President, the Senator does not think it is a fair comparison to take the small investment of the farmer, who is forced to pay 8 or 10 per cent for what money he has to borrow, with the railroad, which can go on the market and borrow it at 4½ to 6 per cent and has millions involved?

Mr. LENROOT. Mr. President, at the time the Esch-Cummins law was passed no railroad could borrow money for less than 6 per cent. But the Senator from Idaho must understand that I am not criticizing the basis the Senator from Idaho takes with reference to what the farmer is entitled to consider in his costs, but I do object when any Senator criticizes the Esch-Cummins law because it permits a 6 per cent return and then insists that the farmer must have a 6 per cent return before he is to be considered as making any profit at all. That is the only point I make. I say that what is a rule for a farmer, if we would be just, should be applied to the railroad as well, whether it be 6 per cent or 4 per cent, or whatever the money may cost.

Mr. GOODING. Mr. President, if this Government will guarantee the farmer 6 per cent, he will be satisfied.

Mr. LENROOT. That is just the point I am coming to. I wonder if the woolgrowers of America would be willing to accept legislation regulating the wool industry in the same way that we have regulated the railroads? Does the Senator from Idaho think that they would?

Mr. GOODING. I want to say to the Senator that unless this Government stabilizes farm products in the near future the farmers of this country will not grow enough to sustain life here. This is the third successive crop of wheat that has been grown which will not pay the expense of production within 25 cents a bushel. Unless something is done for the farmer he can not go on and lose year after year.

Mr. LENROOT. The Senator is talking about something he and I have no quarrel about.

Mr. GOODING. But when the Senator compares the 6 per cent of the farmer as being a fair return, where there are only a few dollars involved——

Mr. LENROOT. I do not claim that.

Mr. GOODING. The Senator is holding that up——

Mr. LENROOT. I am not holding it up. I am objecting to Senators saying that 6 per cent is an unfair return to a railroad when they want 6 per cent included as interest on the farmer's investment before he gets any profit at all. That is the only point I am making.

Mr. BURSUM. Mr. President, I suggest to the Senator that he is putting up a straw man which does not exist.

Mr. LENROOT. Let us see if it does not.

Mr. BURSUM. There can be no relative comparison between operating railroads and the growing of sheep, which is a very hazardous business at best, dependent upon rainfall, subject to all kinds of diseases to which the sheep are subject, great losses occurring even under the best of conditions.

The sheepman or the woolgrower has no monopoly. He has no exclusive franchise to sell to the people and fix his prices, while on the other hand the railroad, of course, is a public-service corporation, is granted an exclusive franchise to do business all along its line, and is not subject to weather conditions, to drought or rainfall, and can not be compared with the sheep industry in any way.

Mr. LENROOT. Mr. President, I can not yield further.

Mr. BURSUM. I say it is setting up a ghost which can not possibly exist.

Mr. LENROOT. I must be very stupid in my attempts to express what I have in mind.

Mr. STANLEY. Mr. President——

Mr. LENROOT. I can not yield now. I will yield to the Senator a little later.

I wish to ask the Senator from New Mexico if the woolgrower is entitled, as a part of his cost, to 6 per cent interest on his investment whether the owner of a railroad is entitled to 6 per cent upon his investment?

Mr. BURSUM. That is a long question.

Mr. LENROOT. That is my whole point.

Mr. BURSUM. That is simply the estimate of the Tariff Commission. I do not know that the woolgrower has brought that matter up or that Congress or any other body has legislated upon the subject. As a matter of fact, the woolgrower has a great deal of capital invested which is not taken into account in expenditures, such as rent——

Mr. LENROOT. That is taken into account in the Tariff Commission's report.

Mr. BURSUM. I doubt it. With all due respect, I doubt it. I happen to know a little about that business, because I have been engaged in it a few years and know that the charge has been constantly increasing on the growers of wool in the matter of investment in ranches. It will run all the way from 50 to 100 per cent in ranges upon which to grow the wool and raise the sheep.

Mr. LENROOT. I do not question the investment. Of course the Tariff Commission does take that into consideration.

Mr. BURSUM. I will say to the Senator that all in the world the sheep and woolgrowing industry is asking for is a chance to live and make ends meet. They are not asking a chance to profiteer.

Mr. LENROOT. I am not criticizing that desire on their part.

Mr. BURSUM. They ask a chance to be able to preserve their industry.

Mr. LENROOT. I am not saying the woolgrower should be allowed but 6 per cent.

Mr. BURSUM. I will say to the Senator that the expenses in the past 30 years have increased more than eight times over the cost of producing the wool.

Mr. LENROOT. I am insisting that Senators who put before the Senate the cost of growing wool, including a return of 6 per cent before they shall count any profit, can not very consistently attack the provision of the Esch-Cummins law that directed the Interstate Commerce Commission in fixing rates to fix such rates as in the judgment of the commission would enable the roads to pay to their owners 6 per cent.

Mr. GOODING. Mr. President——

Mr. LENROOT. Have I made myself clear?

Mr. BURSUM. I do not think anyone begrudges the 6 per cent the railroads are making.

Mr. LENROOT. I am very glad the Senator is not one of those who are criticizing the Esch-Cummins law for being too liberal to the railroads.

Mr. BURSUM. I do not look upon it in that way at all.

Mr. LENROOT. I am very glad to know that.

Mr. BURSUM. There might be some question as to the advisability of the Esch-Cummins law but not from that standpoint.

Mr. GOODING. Mr. President——

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I promised to yield to the Senator from Kentucky.

Mr. STANLEY. Mr. President, perhaps it would be just as well to lay the ax at the root of the tree. This colloquy is not without its lesson. The Government is out of its province when it assumes or attempts to guarantee a fixed return or an adequate return to any business, and when everybody demands a return and everybody has to pay it becomes reductio ad absurdum.

Mr. LENROOT. I can not agree with the Senator from Idaho that there is any guaranty in the tariff rate to the woolgrower or any guaranty in the provisions of the Esch-Cummins law to the owners of the railroads.

Mr. GOODING. Mr. President, the Senator's statement seems to be most remarkable when he compares the farmer with the railroad. If there is any watered stock in any farm of the country, I have never heard of it. I have heard of such a thing as watered stock in the railroads. I believe it is generally assumed that about 40 per cent of the stock of most of the railroads is watered stock upon which they are permitted to earn 6 per cent.

Mr. LENROOT. But the Esch-Cummins law does not permit one dollar of watered stock to be included.

Mr. GOODING. They have not discovered the watered stock yet, have they? Everybody knows it is there. The Senator from Wisconsin knows it is there.

Mr. LENROOT. If the law does not permit it, the law can not be blamed for the watered stock being there.

Mr. GOODING. Every citizen, I do not care how humble he is, knew when the law was passed that there was watered stock in all the railroads, or in a majority of them, anyhow.

Mr. LENROOT. I am not questioning that at this time. I do wish my good friend from Idaho could catch the drift of what I say.

I do not object to the farmer including in the value of his investment the increased value of the farm, although his farm may be worth much more than he ever put into it. Does the Senator from Idaho think that the farmer should be restricted in arriving at the cost of his farm and his profits only to the dollars that he put into it? The Senator does not think that?

Mr. GOODING. The farmer, as far as that is concerned, would be glad to get a profit on the actual labor put into his farm. There is not a farm in the country that would sell now for the cost of the improvements and what the farmer has put into it in labor. No class of business gets so little return as does the farmer. The Senator knows that.

Mr. LENROOT. The Senator said a little while ago that if the Government would guarantee profits to the woolgrower as it does to the railroads under the Esch-Cummins law they would be satisfied.

Mr. GOODING. No; I did not say that. I did say, however, that unless something was done to relieve the man on the farm, something done to stabilize conditions on the farm, we could not grow enough to sustain life. The struggle is too hard.

Mr. LENROOT. But the Senator forgets what he said just before that, and that is what I am referring to. I want to make this proposition, and I am not doing it in criticism of the return the farmer receives. I am drawing some comparisons this afternoon between the position that Senators take upon one proposition and the absolutely inconsistent position they take upon another proposition, and that is all. Let us apply the Esch-Cummins law to the woolgrower of America and see how many would be willing to accept it. We would first have the Secretary of Agriculture fix the price of all wool in the country.

Mr. BURSUM. Mr. President——

Mr. GOODING. Mr. President——

Mr. LENROOT. I will not yield just now. We would first have the Secretary of Agriculture fixing the price of all the wool in America. Then the law would say to the woolgrower, "If you can make 6 per cent on the price we fix, well and good. If you can not make 6 per cent, the loss will be yours, Mr. Woolgrower. But, Mr. Woolgrower, if you make more than 6 per cent on the price we fix the Government is going to take one-half of everything you make over 6 per cent."

Mr. GOODING. Mr. President, will the Senator yield?

Mr. LENROOT. That is what the Esch-Cummins law principle applied to the woolgrower would do. I want the woolgrowers and the farmers of the United States to realize that proposition. Now I yield to the Senator from Idaho.

Mr. GOODING. I want to say to the Senator from Wisconsin that all the railroads should be able to earn 6 per cent, because the freight rates to-day are 51 per cent higher than the pre-war freight rates. The farmer pays the increased freight rates all the time. Out in my State the farmer is getting 65 and 70 cents a bushel for wheat after he pays the freight rate. The wheat can not be grown for less than a dollar a bushel. How long will they keep that up? The Esch-Cummins law guarantees 6 per cent to the railroads——

Mr. LENROOT. It does not, and they do not get it.

Mr. GOODING. Some of them do.

Mr. LENROOT. Yes; some of them do, and the Government will take half of all they make over 6 per cent.

Mr. GOODING. The railroads that serve my section of the country do.

Mr. LENROOT. Perhaps they do.

Mr. GOODING. Out there they are making more money on their railroads than they ever did before the war.

Mr. LENROOT. Now, let us see about that. In 1921 the net returns to the railroads on the valuation fixed by the Interstate Commerce Commission was 3.16 per cent.

Mr. GOODING. That is on all the railroads.

Mr. LENROOT. While the Senator now insists that the woolgrower shall have 6 per cent before he begins to count any profit at all.

Mr. GOODING. No; I do not insist that the woolgrower should have 6 per cent. Those are the figures estimated in the cost of the wool in the grease, or on the grease pound.

Mr. LENROOT. The Tariff Commission in its report has given two figures, one based on 6 per cent, which comes to 45 cents, and one without 6 per cent, which comes to 37 cents; but the Senator from Idaho has not used the 37-cent figure in the Senate, and I do not see how he could.

Mr. BURSUM. The Senator states that the Tariff Commission says it costs 37 cents to raise wool?

Mr. LENROOT. Yes.

Mr. BURSUM. As a matter of fact, the wool is not selling for more than 30 to 35 cents under the present emergency tariff, which is much higher than the rate proposed in the pending bill. Under that statement of fact, the woolgrower would be losing money, even under the present law, and yet the Senator would reduce it to a lower rate.

Mr. LENROOT. Oh, no; not at all.

Mr. BURSUM. Taking the figures which the Senator just quoted, that is apparently what he wants.

Mr. LENROOT. My friend seems to be terrified about something he thinks I am going to do, rather than about anything I have said or done thus far.

Mr. BURSUM. We are taking the Senator as he makes his argument.

Mr. LENROOT. Apparently I have not made clear what I am trying to do. My effort has been thus far to insist that when the farmer insists that he shall receive 6 per cent as part of his cost he ought not to complain because the Esch-Cummins law provided that for two years rates should be fixed as in the judgment of the commission would yield 5½ or 6 per cent.

Mr. BURSUM. Who is complaining about the railroads? What has the pending question got to do with the railroads? The pending question is the tariff on wool.

Mr. LENROOT. That is the pending question, and I am raising this question with reference to the railroads because the Senator from Idaho [Mr. GOODING] indicated that the woolgrowers of America would be delighted if they could have the same treatment as the Esch-Cummins law gives the railroads.

Mr. GOODING. The statement I made was with reference to the farmers, that they would be delighted to have a similar guaranty.

Mr. LENROOT. But there is no guaranty in the Esch-Cummins law.

Mr. GOODING. The rates are fixed so they may earn it, and if they do not all earn it, most of the railroads do. Many of them do what they are doing in my State, and that is to see how much money they can spend in making permanent improvements and charging them up to maintenance. They are doing work in my State that has been left undone since the railroad was constructed, in order to use up their money and charge it to maintenance. They are building up their branch roads and building them into permanent main lines, and charging it all up to maintenance and then earning 6 per cent net, so far as the Oregon Short Line is concerned.

Mr. LENROOT. That is wrong if it is true. I want to ask the Senator from Idaho if he would favor the policy that the Secretary of Agriculture should fix the prices on all farm products and have the law require that if the farmer did not make 6 per cent on those prices the loss should be his, but if he made more than 6 per cent the Government should take half of the excess above 6 per cent?

Mr. GOODING. Mr. President, to my mind it is most unfortunate that the Government has got to do any regulating. I think when the Government reaches the point where it has to regulate in order to protect its people against the selfish interests of the country, it is a very serious matter. The question arises whether we are going to regulate the different industries of the country in order to keep them from making unreasonable profits, which we know they are doing, or else we have got to provide legislation so that the farmer, who only gets about 28 per cent of the cost of what the people pay for his products, which, of course, does not give him a fair

return at all, shall be adequately protected; in other words, the farmers in the last three years have practically lost money enough on the farm to build all the railroads in America. The farmer has lost not merely millions but he has lost billions of dollars.

Now comes the Senator from Wisconsin [Mr. LENROOT] and proposes a duty of 7 cents a pound—the lowest duty that has ever been proposed by any Republican—on wool which may go into clothing when the emergency tariff law gives 15 cents a pound.

Mr. LENROOT. Mr. President, I decline to yield further.

Mr. GOODING. Very well.

Mr. LENROOT. The Senator from Idaho ought to be more accurate in his statement. He says the amendment which I offered and which is now pending proposes the lowest rate of duty on wool that has ever been proposed by any Republican. The duty which I have proposed, based upon the 1921 price of wool, Mr. President, is a higher duty per pound than was provided in the Payne-Aldrich law. The Senator from Idaho may not know that, but it is true.

Mr. GOODING. The Senator from Wisconsin says that his amendment proposing a duty of 7 cents per pound will afford a higher duty than that in the Payne-Aldrich law. He is mistaken as to the Payne-Aldrich law. I understood him, in reply to the Senator from Ohio, to state that his amendment on a specific basis would be equal to 7 cents a pound on wool in the grease.

Mr. LENROOT. The duty I have proposed would be 7.2 cents per pound.

Mr. GOODING. That is lower than was the Payne-Aldrich law rate.

Mr. LENROOT. The highest rate of the Payne-Aldrich law, as the Senator from Idaho ought to know, under this paragraph was 7 cents a pound. The duty in that law ranged from 4 cents to 7 cents a pound.

Mr. BURSUM. The rate was supposed to be 11 cents per pound, as I now recall.

Mr. LENROOT. No; it was not. I am surprised that these wool experts do not know what was in the Payne-Aldrich law.

Mr. BURSUM. The Senator is talking about carpet wool?

Mr. LENROOT. Absolutely.

Mr. BURSUM. I was speaking about the other wool.

Mr. LENROOT. I am talking about the amendment which is now pending.

Mr. BURSUM. What I was going to say about the proposed amendment offered by the Senator from Wisconsin is that if in practice it works out as did the Payne-Aldrich tariff it is very possible that it will reduce the duties on wool at least one-half.

Mr. LENROOT. Mr. President, the provision now pending is for a duty of 12 cents a pound on wool in the grease and 24 cents a pound on scoured wool. My amendment is that the duty shall not exceed 60 per cent ad valorem. That is very plain.

Mr. BURSUM. The workings of an ad valorem duty have never been fair to the producer. The producer gets no chance. It is an encouragement to fraud; it is an encouragement to cheat the producer and to cheat the public.

Mr. LENROOT. Would the Senator rather have the provision in the Payne-Aldrich law of 7 cents?

Mr. BURSUM. I would rather have a specific duty, whatever it may be.

Mr. LENROOT. Well, perhaps we can get together on that. Then I should have no objection to making the specific duty on the carpet wool 7 cents a pound, if the Senator is willing to support it.

Now, Mr. President, I want to discuss the question of the cost of production.

Mr. BURSUM. I am not willing to support the Senator's proposition. A specific duty would be fairer, for, at least, it would show exactly what the duty was, while an ad valorem duty is not a fair duty, and its administration is not practical so far as raw wool is concerned.

Mr. LENROOT. What I propose is not an ad valorem duty, in the ordinary sense. It is merely a maximum rate which I propose.

Mr. GOODING. Will the Senator yield to me?

Mr. LENROOT. Yes; I yield.

Mr. GOODING. I should like to call the Senator's attention to the manner in which an ad valorem duty will work. The manufacturer is the sole market for the woolgrower in this country, and of course he takes advantage of every opportunity that he can. He goes into the world market and he buys the cheapest wool that he can buy and he brings it in here. In that way he beats down the American price. He is absolute master, and, under the Senator's amendment, he will do exactly what he did under the old Schedule K. Now, the proposition of the Senator from Wisconsin is no better, only it is on a smaller scale, than was Schedule K. The Senator from Wisconsin, of course, is not advancing the proposition in the interest of the manufacturer, but that will be the working of it, and that is the purpose of it. A month ago it was understood that there was going to be an effort here——

Mr. LENROOT. Mr. President, I decline to yield.

Mr. GOODING. Let me say this much——

Mr. LENROOT. I can not yield to the Senator to make a speech here every five minutes, with due respect to him.

Now, Mr. President, the Senator from Idaho says that if this ad valorem proposition is adopted the American manufacturer, being the sole purchaser, can go and beat down the American price. Does not the Senator know that this bill, as reported by the Committee on Finance, is based not upon American valuation but upon foreign valuation? The 60 per cent will apply upon the world price. Does the Senator say that the American manufacturer can control the prices of the world? And he will have to do that in order to make the Senator's objection tenable.

Mr. GOODING. Will the Senator yield to me?

Mr. LENROOT. I yield.

Mr. GOODING. I will say to the Senator that we use about 25 per cent of all the wool in the world; that the American manufacturers go abroad and buy their wool; that they are a mighty factor in controlling the price of the wool of the world; and it is to the interest of the manufacturers to beat down to the lowest point the price of wool.

Mr. LENROOT. I wish to pass on to another suggestion in reference to the labor cost; and I desire again to make it plain that I am not objecting to the cost of producing wool as contended for by the Senator from Idaho. During this debate there have been some Senators who insist that the only protection that should be given to an American producer, whether he be manufacturer or agriculturist, should be the difference in labor cost. I have always believed that there are differences in cost of production that should be reckoned with other than mere difference in labor cost. When we come to apply the difference in labor cost to the production of wool the Tariff Commission gives us some very interesting information. In the letter sent by the commission to the Committee on Finance, being a summary of and a chapter on the cost of production of wool as taken from the report of the United States Tariff Commission on the woolgrowing industry, they go into the cost of production of wool.

Among other things, they made an investigation of the labor cost in the range States, and they found that in 1920 the labor cost was 31 per cent of the total cost of 35.8 cents per pound of wool, excluding interest; in other words, the total labor cost was 12.1 cents per pound. Assuming now the shrinkage of the territory wools to be 66⅔ per cent, under the paragraph that will follow the one now pending, imposing a duty of 33 cents per scoured pound, the duty upon wool in the grease will be 11 cents per pound, or within 1.1 cents per pound of the entire labor cost in the production of wool as found by the Tariff Commission; in other words, if the duty were to cover only the difference in labor cost to warrant the proposed rate of 33 cents per scoured pound, the labor cost would have to be eleven times the labor cost of producing the foreign wool.

Again, Mr. President, I am not urging this as an objection to this duty, but when the woolgrower says that there are differences in cost of production other than labor in his own industry he ought to be willing to make the same concession with reference to other industries. As I have said, upon the great bulk of the wools that we grow here I think we need a duty at least as high as was fixed in the House bill, and perhaps as high as is proposed by the Senate committee upon the finer wools; but it ought to be understood that the actual duty imposed by this bill as compared with the actual duty in the Payne-Aldrich law upon raw wool is 83 per cent in excess of the duties imposed by the Payne-Aldrich law; in other words, as the Tariff Commission found, and as the chairman of the committee stated the other day, while the Payne-Aldrich law assumed to give to the farmer 11 cents a pound on wool in the grease and 33 cents a pound scoured, by reason of the lighter shrinkage and by reason of the skirting of fleece, the actual duty paid upon the importation of wools under the Payne-Aldrich law, instead of being 33 cents a scoured pound, was only 18 cents a scoured pound, while under this bill it would be 33 cents as proposed by the committee for every scoured pound, irrespective of the value of the wool.

Mr. BURSUM. Mr. President——

Mr. LENROOT. I yield.

Mr. BURSUM. If this wool is used for carpets, then it comes in free?

Mr. LENROOT. Yes.

Mr. BURSUM. So that the 33 cents would not be paid?

Mr. LENROOT. The 33 cents applies to the next paragraph and not this paragraph.

Mr. BURSUM. I understood the Senator was speaking of the first paragraph.

Mr. LENROOT. I am speaking now of the second paragraph. It is true, Mr. President, the manufacturer under the Payne-Aldrich law received a compensatory duty based upon 33 cents a pound, although the actual duty paid was only 18 cents, and it has been assumed by the committee that all of that protective duty hidden in the compensatory duty was paid by the consumer. Whether it was or not I do not know; I do not suppose anybody knows. I have not a doubt in the world that a part of it was, but I can not quite follow the chairman of the committee when he assumes that under the Payne-Aldrich law it was all passed on to the consumer. I had not supposed, Mr. President, that anyone holding to the doctrine of protection took the position that all of the protective duty was passed on to the consumer; that the consumer paid every dollar of rates that were imposed in a tariff law. Yet that is the position which the distinguished chairman of the committee takes in justification for this new rate. When, however, we come to get the facts we find that, under one paragraph at least, the compensatory duty in this bill is 5 cents a pound higher than any compensatory duty in the Payne-Aldrich law. That is made necessary by the fact that when we impose 33 cents duty on the scoured pound, every dollar of which the manufacturer has to pay, as the Senator from Utah has stated, then the additional 11 cents a pound in some cases does not cover the essential compensatory duty, and it becomes necessary to add 5 cents a pound more for that reason. Am I correct, I will ask the Senator from Utah?

Mr. SMOOT. I will say that the Senator is correct in his statement.

Mr. LENROOT. Mr. President, we must maintain this industry. The production of wool throughout the world is decreasing, and the people of the United States must have wool; and so, irrespective of this, so far as the great bulk of wools that are grown in this country are concerned, I shall vote for this duty of 33 cents a pound. When, however, we come to the lower and the coarser wools, concerning which there is very little production in this country, where the ad valorem rate proposed by the committee runs as high as 137 per cent based upon wool prices of last month, then I say we have come to a point where such rates can not be defended.

I have in my hand the prices in the world's markets of wool of different grades on May 15 last. I had the prices of June, but these seem to be those of May. Fine wool in the world's markets on May 15 last was quoted at 95 cents, one-half blood at 75 cents, three-eighths at 58 cents, one-fourth at 43 cents, and low at 24 cents; and yet the committee proposes to apply the same duty per pound on wool valued at 24 cents a pound as upon wool that is valued at 95 cents per pound.

Mr. BURSUM. Mr. President, is it not true that the Payne-Aldrich bill did practically the same thing? The same rate of duty was applied to all of the different grades of wool. There was no such thing as the quarter-blood or three-eighths blood or half-blood or fine wool. They were not taxed at different rates. As I recollect, there was only one separate rate, which was on graded wools, as I recall.

Mr. LENROOT. Does the Senator think that is an argument that would appeal to me? He may not know that I voted against the Payne-Aldrich bill, and very severely criticized it at every opportunity.

Mr. BURSUM. But the Senator was suggesting the Payne-Aldrich bill as a justification for his attack on this bill.

Mr. LENROOT. Oh, no, no, Mr. President. What I meant by that was that bad as the Payne-Aldrich bill was, and condemned as it was by the American people at the first opportunity, when a rate is now proposed that is in excess of the rate imposed in that bill I do not see how any Senator can stand on this floor and defend it. When I refer to the Payne-Aldrich bill and say that a rate is higher than that, that does not mean that I approve of the Payne-Aldrich bill. That simply means that bad as the Payne-Aldrich bill was, a particular rate that is higher is worse than that.

Mr. President, I have given those rates, and what do they amount to in ad valorems? On the fine wool the ad valorem would be 35 per cent; on the one-half blood, 44 per cent; on the three-eighths blood, 56 per cent; on the quarter-blood, 77 per cent; and on the low, 137 per cent.

Mr. BURSUM. But, Mr. President, what percentage of the total amount of wool does the low grade represent?

Mr. LENROOT. Not a very large percentage.

Mr. BURSUM. About 4 per cent.

Mr. LENROOT. About 1 per cent of the production. Am I correct?

Mr. BURSUM. About 4 per cent of the consumption.

Mr. SMOOT. Not of the production; about 1 per cent of the consumption.

Mr. BURSUM. About 4 per cent all told.

Mr. LENROOT. It is about 1 per cent of our production, is it not?

Mr. SMOOT. Put it this way: Four and one-half per cent of the total consumption is of the lower-grade wool, including the quarters, and of that 4½ per cent 80 per cent is imported and 20 per cent is raised in the United States, and 20 per cent of 4½ per cent is nine-tenths of 1 per cent.

Mr. LENROOT. Very well. Then, Mr. President, under the admission of the Senator, we are proposing to impose a duty of 137 per cent upon a wool where our own production of that kind of wool is only nine-tenths of 1 per cent of the total production.

Mr. President, how can that be justified? You say the production is not large, and yet you propose to pass on to the American consumer that 137 per cent, and that is pyramided at least once before it gets there, for what purpose? To protect nine-tenths of 1 per cent of the American production.

Mr. BURSUM and Mr. GOODING addressed the chair.

The VICE PRESIDENT. Does the Senator from Wisconsin yield, and, if so, to whom?

Mr. LENROOT. I yield to the Senator from New Mexico.

Mr. BURSUM. I suggest to the Senator from Wisconsin that that is hardly fair. While it may seem a small percentage, the great difficulty in this proposition is the matter of classification. If the Senator from Wisconsin were familiar with the wool business he would realize how very difficult it would be to administer the law under his proposed amendment and to segregate this very small percentage among all the wool of the country. He would realize how it would encourage fraud and injustice on the grower, in that he would not be receiving the amount of protection which it is intended that he shall receive in this law.

The amount of wool of this low grade which the Senator mentioned is not large, if there were some way by which it could be separated and honestly administered under the law; but you can not do it under your amendment. No ad valorem duty going onto a specific duty will have any other effect than to injure the grower of wool and demoralize the ratings under the law. The effect will be practically this: Instead of having 4 per cent of the low-grade wool when you come to settle for your duty you will have probably 50 per cent of that class which did not belong under that rate, and it will be impossible to separate it.

Mr. LENROOT. Do I understand from the Senator that an expert can not tell the difference between a quarter blood and a three-eighths or a low?

Mr. BURSUM. Not when you are dealing with millions of bales and shiploads of wool. It will be practically impossible.

Mr. LENROOT. I am not an expert upon wools, and the Senator is; and yet they are sold in the world's markets by those very grades today, and the Senator must know it.

Mr. BURSUM. Yes; but they are sorted before they are sold. They do not come in in that way. I call the attention of the Senator to the fact that not so very long ago a shipment of wool came in under our present law as carpet wool where fine wool was on the inside of the bale and carpet wool on the outside.

Mr. LENROOT. Oh, that is just plain fraud.

Mr. BURSUM. Under the provision offered by the Senator they would not have to practice such fraud in order to defraud this tariff rate.

Mr. LENROOT. I do not see what that has to do with it, because it is 60 per cent ad valorem, whatever the price and value may be.

Mr. BURSUM. Yes; but where do you get your price and value?

Mr. LENROOT. Where do you get it on importing anything?

Mr. BURSUM. You get it on a bill of lading, or you get it on an invoice. That is where you get it.

Mr. WADSWORTH. Mr. President——

Mr. LENROOT. I yield to the Senator from New York.

Mr. WADSWORTH. The Senator from New Mexico has depicted the insuperable difficulty of telling whether this wool is of the low grade or the three-fourths or the three-eighths.

Mr. LENROOT. He believes anyone can tell about the shrinkage in these wools.

Mr. WADSWORTH. That difficulty, or a difficulty of a similar kind, did not seem to dismay the committee at all. Look at pages 140, 141, 142, and half of 143, and note that the appraisers are going to be trusted, at least, to distinguish between a shrinkage of 60 per cent and a shrinkage of 63 per cent, a shrinkage of 57 per cent and a shrinkage of 60 per cent, in great bales of wool.

Mr. BURSUM. That is much easier to distinguish.

Mr. WADSWORTH. Without opening out the wool?

Mr. LENROOT. Of course, the Senator from New York will understand that while they could put fine wool on the inside of a bale and coarse wool on the outside if my amendment is adopted they could not do it under the committee amendment. Of course, he must understand that. [Laughter.]

Mr. WADSWORTH. That is so. I had not thought of that.

Mr. LENROOT. Mr. President, there is, I am very frank to say, one difficulty in applying a maximum ad valorem. I am not an expert either in growing wool or in the manufacture of wool, but I have consulted some experts—one of them a Senator on this floor—and I am informed that there will be no serious difficulty about carrying this into the tops, the yarns, and the cloths, except in one or possibly two paragraphs; but if there be difficulty in one or two paragraphs, and if, perchance, in those paragraphs a greater compensatory duty is given than is absolutely necessary, nevertheless the people will not be compelled to pay this outrageous ad valorem equivalent upon all that they have to purchase in the way of woolen goods. The great bulk of it can be separated; the great bulk of it can be given a lower compensatory duty for these coarse wools; and to the extent that it can be done, just to that extent will the people of the United States get the benefit of it.

Mr. President, getting back to the pending amendment with reference to carpet wools, under the importations of last year the rate proposed by the committee is equal to 100 per cent ad valorem on these low, coarse wools, the lowest that are known—100 per cent ad valorem!

Mr. POMERENE. Mr. President, does the Senator mean on the average?

Mr. LENROOT. On the average. That is to say, the total imports of carpet wools in 1921 average 12 cents a pound in the grease.

Mr. BURSUM. Mr. President, the carpet wools come in free.

Mr. LENROOT. I am not talking about duty; I am talking about value. If the value of carpet wools last year was 12 cents a pound, and you now impose a duty of 12 cents a pound, that is 100 per cent ad valorem.

Mr. BURSUM. But we do not, if they are manufactured into carpets; they come in free. What the committee has sought to do is to prevent a rank fraud through buying carpet wools, bringing them in free, manufacturing those wools into clothing, and then claiming the compensatory duty on the clothing basis. That is the reason for this provision. It is to prevent fraud on the people, fraud on the Government, and fraud on the producer.

Mr. LENROOT. Of course, if the Senate is going to sustain the committee, not only in this paragraph but in the next one, imposing a rate of 33 cents a pound on the scoured wool, with these low wools, and then be foolish enough to give the manufacturer a compensatory duty of 33 cents a pound, of course the Senator would be right; but I hope the Senate will have sense enough, if it does make a difference between those low wools, to get them down somewhere near where they ought to be, and we will carry that reduction into the other paragraphs of the wool schedule, so that the people of the United States will get the benefit.

Mr. BURSUM. Does not the Senator agree that if these wools are manufactured into carpets they come in free?

Mr. LENROOT. Yes. What has that to do with the question?

Mr. BURSUM. It has everything to do with it.

Mr. GOODING. Mr. President, I ask the Senator if he stands on the Republican platforms? Our platforms have always declared for a duty measuring the difference in the cost of production at home and abroad. Is he willing to give that to the woolgrower on the different classes of wool grown in America?

Mr. LENROOT. Yes; upon the great bulk of it.

Mr. GOODING. The Senator admits that it costs 45 cents per pound to produce wool?

Mr. LENROOT. Not based on the Republican platform.

Mr. GOODING. That is the finding of the Tariff Commission, that it costs 45 cents a pound in the grease.

Mr. LENROOT. No; they said that it costs 45 cents a pound if you include 6 per cent on the investment.

Mr. GOODING. Everybody will give the farmer 6 per cent.

Mr. LENROOT. Certainly; he ought to have more than 6 per cent.

Mr. GOODING. Let me tell the Senator that at that rate it cost $1.12½ to grow a pound of scoured wool. He admits that carpet wools came in last year at 12 cents a pound. I can not tell him what that would be on the scoured pound, but we do know that in London to-day the wool he is talking about, and even higher grade wools than that, are selling for 25 cents a scoured pound. A 60 per cent duty on 25 cents a pound is equal to 15 cents. So this class of wool can be laid down in Boston, duty paid, for 40 cents per scoured pound.

Forty cents from $1.12½ is the difference between the cost of production in this country and abroad, which he has not any protection for at all. There is not any question at all about that, if I have made myself plain. That is on the farm; that is not in Boston, after the freight is paid.

Mr. LENROOT. The Senator and I ought not to have any quarrel now. He says the same wool is selling in London at 25 cents a pound. If that is true, my 60 per cent amendment will not have any effect, because the rate of 12 cents a pound will apply.

Mr. McCUMBER. Mr. President, I assume, of course, that so far as carpet wool is concerned we purpose to allow it to come in free. Not to go into the question whether we ought to do so or not, but assuming it is all right that the low class of wool that is used only for carpets should come in free, should the manufacturer then be allowed to mix, say, 10 per cent of that wool with other wool in such a manner that you could not detect it and then get the full compensatory duty?

Mr. LENROOT. Could he mix it so that it could not be detected?

Mr. McCUMBER. The experts tell me that if you put about 10 per cent or less in the cloth it can not be detected.

Mr. LENROOT. It has to be yarn of less than 50, has it not?

Mr. McCUMBER. It does not depend on the size of the yarn, but the question is whether we can put a small admixture of carpet wool into the yarn, and, if that small admixture is put into the yarn, whether you would give the manufacturer the benefit of his 33 cents upon the scoured content when on one-tenth of it he is not entitled to any consideration at all? The real purpose of this duty, as I have stated, is to impose a penalty. If the manufacturer uses any portion of that free wool in the manufacture of clothing, he is given a duty based upon the 33 cents. He says he does not want it for that purpose, but for carpet purposes. He buys it for carpet purposes, and then he puts a portion of it into the cloth and gets the compensatory duty. We say that the penalty shall be so much per pound. The Senator says that the penalty shall not exceed 60 per cent ad valorem; and, after all, it is simply a difference in the penalty you will place upon the persons who attempt to commit the fraud against the Government.

Mr. LENROOT. The Senator is assuming that in the argument I am making I am supporting the compensatory duty of 33 cents a pound on wool. I am not.

Mr. McCUMBER. The Senator is assuming that this wool is going into clothing?

Mr. LENROOT. Yes.

Mr. McCUMBER. If it goes into clothing, then the manufacturer gets his 33 per cent.

Mr. LENROOT. He will not if we do not give it to him, and I do not propose that we shall give it to him.

Mr. McCUMBER. Then you would not give him the compensatory duty upon that in which he is entitled to receive it, because of the fact that you can not always tell whether he is putting the carpet wool into his yarn?

Mr. LENROOT. Of course not, but I think in this bill the committee has given, in one case I came across, the full compensatory duty upon an article where, if there were a few threads of wool in it, it carried the 33 cents a pound compensatory duty.

Mr. McCUMBER. It is not in the bill.

Mr. SMOOT. Does the Senator from Wisconsin make the statement that there is a paragraph in the bill like that?

Mr. LENROOT. There is a paragraph like that still in the bill. I will correct myself to-morrow if I am mistaken.

But, again, this bill gives to the manufacturer greater than 33 cents compensatory duty, because if the article is of chief value of wool, if 51 per cent in value is of wool and 49 per cent is of cotton, then he gets the full 33 cents a pound compensatory duty, does he not?

Mr. SMOOT. There could not be a case of that kind. The cotton does not cost what the wool does.

Mr. LENROOT. I said in value.

Mr. SMOOT. There could not be such a case

Mr. LENROOT. Why could there not be?

Mr. SMOOT. Because of the fact that we would have to have 90 per cent cotton and 10 per cent wool to take the cotton rate.

You could not put 10 per cent of wool in cloth and make woolen goods.

Mr. LENROOT. Does the Senator mean to say that this phrase "of chief value of wool" means nothing?

Mr. SMOOT. I will tell the Senator frankly what it means. There are many goods made with a cotton warp and an all-wool filling. In fact, some of the very finest linings, and particularly some of the velveteens, goods of that character, are so made. The cotton warp forms a small part of the weight of the goods. That class of goods is just as expensive to make as all wool, and perhaps in some cases, where they are really fine yarns, more expensive than if they were all wool, and we use the words "of chief value" because of the fact that we want no unfair provision in the bill, such as that carried in the Payne-Aldrich law.

Mr. LENROOT. I have the provision to which I referred. The Senator said it was not in the bill, and the chairman of the committee said it was not in the bill. I want to read it and see if it is not in the bill. It is provided in paragraph 1114 that—

Fabrics with fast edges not exceeding 12 inches in width, and articles made therefrom; tubings, garters, braids, laces, galloons, veils and veiling, bands, belts, suspenders, braces, cords, and cords and tassels; all the foregoing if wholly of wool, 49 cents per pound; if in part of wool, whether or not wool constitutes chief value, 33 cents per pound.

Mr. McCUMBER. That has already been modified in the committee.

Mr. LENROOT. Does the Senator charge me with knowledge of what the committee has done?

Mr. McCUMBER. I think the committee has reported it already.

Mr. LENROOT. I am talking about the bill which Senators have upon their desks, and which the committee did report as I stated it reported it, a paragraph in this bill under which, if there are two threads of wool, the committee proposes to give 33 cents a pound compensatory duty.

Mr. POMERENE. Allow me to suggest in this connection, Mr. President, that we have been repeatedly confronted with the statement that these amendments have been modified. I submit that when the Finance Committee has agreed upon an amendment it ought to be reported at once, so that we can have an opportunity to study it.

Mr. LENROOT. I should not be charged by the chairman of the committee with making a misstatement when I find something in the bill as reported by the committee, and have had no notice of any change to the contrary.

Mr. SMOOT. Mr. President, these are fabrics not exceeding 12 inches in width. Those are not cloth, and I thought the Senator said cloth.

Mr. LENROOT. No; I said there was such a paragraph in the bill.

Mr. SMOOT. I thought the Senator said a "cloth" paragraph in the bill. Perhaps it would be just as well to explain this now, rather than to explain it when I take the floor.

Mr. LENROOT. Has the committee changed it?

Mr. SMOOT. I do not think so, in this instance.

Mr. LENROOT. The chairman of the committee just stated the committee had changed it.

Mr. McCUMBER. The chairman of the committee is right. The committee has made that change or directed it to be made.

Mr. SMOOT. I did not know whether it had or not, but even if it has not, I want to say to the Senator that in the case of wool veils and veiling, under this paragraph, if there were any wool in them at all, or even without any wool, carry a higher rate, even with this compensatory duty. If that did not work that way, it would fall in paragraph 1430, and these classes of goods are not cloths. They are like tubings, and garters, and braids, and veils and veiling. I forgot whether we changed it or whether we did not, but even if we did not change it, it is not cloth.

Mr. LENROOT. There is, then, a hidden protection in the compensatory duty in this paragraph.

Mr. McCUMBER. Let us correct matters. If we made a mistake, let us correct it and correct it now. The Senator from Ohio is right when he says we ought to suggest amendments some days before, and this certainly ought to have been reported before. But several days ago the committee amended paragraph 1114, on page 149, by inserting after the word "wholly," in line 16, the words "or in chief value," and then afterwards we amended the 55 so that it would be 50.

Mr. LENROOT. Will the Senator state that again? I would like to have it in my own copy.

Mr. POMERENE. May I ask the chairman of the committee to read the whole amendment as it has been finally perfected by the committee?

Mr. McCUMBER. Paragraph 1114 provides, as amended:

Fabrics with fast edges not exceeding 12 inches in width and articles made therefrom; tubings, garters, suspenders, braids, cords, and cord tassels, all the foregoing, wholly or in chief value of wool, 49 cents per pound and 50 per cent ad valorem.

Mr. WALSH of Massachusetts. Why does not the chairman of the committee submit to the Senate the committee amendments changing the text of the bill?

Mr. McCUMBER. It was because we are trying to whittle this wool schedule, by referring to the very latest figures, down to the bone, from our standpoint of protection. While we agreed upon this rate several days ago, we did not agree upon the reduction from 55 to 50 until Saturday, and therefore it is time to get the matter before the Senate in this form as we desire to approve it. Whatever criticism may be aimed for not presenting this a day or two beforehand, there can be no criticism in the fact that we have cut the duty upon the very latest facts.

Mr. LENROOT. Will the chairman of the committee be good enough to admit that I was justified in the statement I made?

Mr. McCUMBER. Oh, yes, as it was originally reported; but I had my mind upon the last action of the committee.

Mr. SMOOT. I want to call attention to the fact that the original language was "all the foregoing, if wholly of wool, 49 cents a pound; if in part wool, whether or not wool constitutes the chief value, 33 cents a pound."

There is 16 cents a pound difference in the compensatory duty. It was originally written at 33 cents to take care of whatever there might be in it outside of wool itself, and a compensatory duty of only 33 cents is given instead of 49 cents. If the change is made, then, of course, we will have to strike out the other provision and have the whole of it as 49 cents.

Mr. LENROOT. That is what it is now, 49 cents.

Mr. SMOOT. If of chief value.

Mr. LENROOT. Mr. President, this illustrates the point I was trying to make. It is urged that there are two divisions of wool, one the coarse wool and one the finer wool, the coarse wool carrying a lower rate, determined by a maximum ad valorem. It is stated that can not be carried in the way of compensatory duties throughout the schedule, but it must be admitted they are carrying compensatory duties in the schedule now—and I am not criticizing it; perhaps there is no way of avoiding it—where they are giving a full compensatory duty upon an article when only part of it in chief value is of wool.

We can separate, and I have been advised that we can separate, the coarse wools from the finer wools and carry them through the schedule. We may make mistakes in one or two instances. We may make in some paragraph a larger compensatory duty than is necessary for the manufacturer, but the committee have done it in nearly every paragraph of the bill so far. If we did it in one case and in the rest of the paragraphs saved the American people large amounts of money it would be well worth doing. With regard to the manufacturer passing these duties on to the consumer, I want to ask the chairman of the committee if he believes all these duties are passed on to the consumer?

Mr. McCUMBER. As the Senator has for the third time made that statement, I want to correct it. In the first place, he will find no statement of mine to the effect that the duty was carried on to the consumer. What I did state or attempted to make clear was that the provision gave to the manufacturer a 33 cents per pound differential, whereas in his method of purchasing he only paid a difference of 18 cents a pound.

Mr. LENROOT. That is true.

Mr. McCUMBER. I did not state that he carried that to the consumer. I do not know whether he did or not. If the condition of the trade was such that he could charge enough to carry it on, I have no doubt that he did so. If it was not such that he could carry it on to the consumer, he perhaps did not do so. What I desired to say was that we intended to give him a benefit of 33 cents a pound on the scoured contents that went into his manufactured fabric; that, as a matter of fact, in buying his skirted wool and other wools abroad, they did not shrink the 66 per cent and, therefore, while he bought the wool that only shrunk from 30 to 40 per cent or 50 or possibly 52 per cent, he got the benefit of protection on the basis of 33 per cent. That is as far as I went in that discussion. I did not say whether he carried it on or whether he did not. I do not know whether he did or not.

Mr. LENROOT. Of course, if he did not carry it on, then the consumer did not pay it. But the consumer will have to

pay every penny of the 33 cents that is imposed by the bill. As the bill now stands, the consumer will have to pay it upon the low coarse wools as well as upon the fine ones. The consumer will have to pay 33 cents a pound upon wool valued at 24 cents a pound, as well as 33 cents a pound upon wool valued at $1 a pound.

Mr. McCUMBER. I do not know that I disagree with the Senator. He may or may not have to pay it, according to whether there is a good demand or whether the demand is slack. Very often it is found in the trade that the foreign producer stands some of the loss. Sometimes they can take the full amount and impose it upon the public. Sometimes they can not impose half of it, sometimes very little of it. It depends so much upon the trade and conditions that it is impossible to say whether it will be all carried on or not.

Mr. LENROOT. The American manufacturer has to import nearly half of the wool he uses, has he not?

Mr. McCUMBER. All right.

Mr. LENROOT. And he has to pay 33 cents a pound upon it, has he not?

Mr. McCUMBER. Yes.

Mr. LENROOT. And that becomes part of his cost, does it not?

Mr. McCUMBER. Yes.

Mr. LENROOT. Then before he can figure 1 penny of profit he has to figure 33 cents a pound on the 24-cent wool as well as on the $1 wool, has he not?

Mr. McCUMBER. I would want to know what he sold for before I could determine whether it is necessary for him to raise the price of his cloths to the extent of the additional duty. Possibly he has been selling for enough profit so that he can absorb the duty without carrying it up.

Mr. LENROOT. I am talking about cost of production to the manufacturer. On the 24-cent wool under the committee's proposition as it stands, under the second paragraph, he will have to pay, if he imports it, 57 cents a pound for the wool.

Mr. McCUMBER. Yes, that is true; that is absolutely true. We do not intend to allow him to have a 33-cent basis in his cloth and at the same time import his wool on only an 18-cent basis.

Mr. LENROOT. And he ought not to have the 33-cent basis on the coarse wool, nor should he have a 33-cent basis on his cloth made out of the coarse wool.

Mr. McCUMBER. That is a question as to what the farmer thinks he ought to have and what the Senator thinks he ought to have.

Mr. LENROOT. Oh, no. I said he ought not to have that in the coarse wool that we do not grow in this country, and that he ought not to have that compensation in the cloth.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LENROOT. I yield.

Mr. POMERENE. In reply to a statement made by the Senator from Wisconsin a moment ago, the Senator from North Dakota in substance said there might be various circumstances which would change the situation so far as the payment of the 33 cents was concerned. Of course, we must all admit that there are various circumstances and that they to some extent affect the value. I think the Senator must admit, assuming all the circumstances to be the same, that then the 33 cents must be paid.

Mr. LENROOT. It is inevitable, of course.

Mr. McCUMBER. If the Senator will allow me, it is not inevitable. For instance, with a duty of 25 cents a bushel upon wheat, year after year, I could show that we were importing the wheat. They did not charge 25 cents a bushel more to the American consumer and miller. During those years the difference of 25 cents a bushel on wheat amounted actually to about 11 or 12 cents, so the duty is not always all carried on. Sometimes the foreign producer takes part of the loss and the American consumer takes up the other part.

Mr. LENROOT. The Senator will admit it is part of his cost of production.

Mr. McCUMBER. Why, certainly.

Mr. POMERENE. And in any event, the consumer holds the bag.

Mr. BURSUM. Mr. President——

Mr. LENROOT. I yield to the Senator from New Mexico.

Mr. BURSUM. I submit to the Senator from Wisconsin that it is not always the rule, and it does not work out in practice that the cost of the wool would be the exact amount of the tariff plus what may be the foreign price. For instance, at the present time, on the lowest grade of wool stated here, the very cheapest wool from abroad can be bought for 22 cents in London; yet that wool is only worth 44 cents on the Boston market, although we have a duty of 45 cents upon the scoured basis.

Mr. LENROOT. Is that 22 cents scoured?

Mr. BURSUM. That is scoured wool I am speaking of, 22 cents a pound scoured. It is worth 44 cents on the Boston market, and we have a 45-cent duty. These things are largely controlled by conditions of the market throughout the world. We might have a surplus here.

Mr. LENROOT. If he imports that 22-cent wool, then he has to pay 67 cents for it here?

Mr. BURSUM. Yes; but he may buy it for less abroad. The duty may not change the price.

Mr. LENROOT. That again illustrates this bogey that is being put up that we can not carry these compensatory duties on to the low-grade wool in the bill. Senators say now the farmer is not getting full compensation, and they say he presumably will not get the full compensation of 33 cents a pound, but that we are going to carry it into the bill for the manufacturer, whether he pays the domestic price and the full amount of the duty or not.

Mr. SMOOT. That is under existing law, and it comes about in this way.

Mr. LENROOT. I mean under the pending bill.

Mr. SMOOT. I think it refers to existing law. That is because of the fact that it comes here in the grease.

Mr. LENROOT. Oh, no. The Senator from New Mexico was asked the specific question by me if he referred to the scoured pound, and he just stated—and I presume he knows what he is talking about—that the scoured pound in London was selling at 22 cents, that the duty was 45 cents, making 67 cents in this country, whereas the Boston price of that scoured pound was 44 cents.

Mr. SMOOT. Of course that is under existing law. That is where they ship it here in grease under a rate of 15 cents a pound, and with the low shrinkage it makes that difference.

Mr. BURSUM. It would not equalize that difference in the duty.

Mr. SMOOT. What I mean to say is that under the 33-cent duty it would make no difference what the shrinkage was as the bill is reported here, but under existing law to-day it can be shipped in at 15 cents in the grease, and if the shrinkage is only 20 per cent then the scoured wool would be only 18 cents.

Mr. BURSUM. But anyway the scoured wool is 22 cents in London. The duty is 45 cents, the freight is about 2 cents, and the price in Boston is 44 cents. The difference is not absorbed. Competition at home, wools which we have on hand, is helping to fix the price.

Mr. LENROOT. Now I would like to ask the Senator from New Mexico as a practical wool man whether he thinks the woolgrower will receive the full benefit of the 33 cents a pound? Does he think so?

Mr. BURSUM. Well, to a large extent, but not entirely.

Mr. LENROOT. Just to the extent that he does not it is proposed under the bill to give the manufacturer a compensatory duty larger than he has to pay. Is not that true?

Mr. BURSUM. My understanding is that the manufacturer is allowed 4 pounds to the yard on the duty.

Mr. LENROOT. No; it is more than that.

Mr. SMOOT. It all depends upon the value of the goods. Upon the basis of the value of the goods we know whether it is all wool or whether it is not all wool, and it runs all the way from 30, I think, up to 49.

Mr. BURSUM. Of course the manufacturer ought not to have anything in excess.

Mr. LENROOT. He ought not to, but, of course, it may not be determined exactly.

Mr. BURSUM. That is probably true.

Mr. LENROOT. That is the point I am making now with reference to this division of coarse wools and fine wools; it can not be determined exactly; of course not.

Mr. SMOOT. There is not any question, if there is no change made, that every bit of clothing wool that comes in here will have to pay 33 cents.

Mr. LENROOT. I understand that.

Mr. SMOOT. I am referring to what the Senator said.

Mr. LENROOT. Yes; but, of course, it is possible—and I think that is what is in the mind of the Senator from New Mexico [Mr. BURSUM]—that the American buyers might say to the American woolgrower, "We will not pay you the full amount of the 33 cents that Congress tried to give you."

Mr. SMOOT. No legislation in the world could prevent that.

Mr. LENROOT. Of course not. But the only point I make here is that, although the farmer can not get the full amount we are giving the manufacturer the full amount, and necessarily so. I am not critizing it, but I am simply saying that

to divide these coarse and fine wools into different compensatories is no more uncertain or difficult than some of the things that have already been done in the bill, except as to one or two paragraphs.

Mr. STANFIELD. Will the Senator from Wisconsin yield to me?

Mr. LENROOT. I yield.

Mr. STANFIELD. The Senator's amendment only applies to the low-grade wools, the so-called carpet wools?

Mr. LENROOT. My amendment applies only to carpet wools, but I will say that to the next paragraph I shall offer a similar amendment. Under present prices, however, it would not apply to any wool finer than quarter blood.

Mr. STANFIELD. The Senator is discussing the manufacture of carpet wool into clothing?

Mr. LENROOT. Yes; into clothing.

Mr. STANFIELD. I should like to ask the Senator from Wisconsin what kind of clothing is manufactured from carpet wool?

Mr. LENROOT. Carpet wool is used in cheviots. I can tell the Senator exactly in a moment. The Tariff Commission says:

> Some are employed in coarse blankets, robes, and upholstery cloths, or, when mixed with pure wool, in the manufacture of rough tweeds or cheviots.

Mr. SMOOT. I will say to the Senator that most of it is used for backing for heavy-weight overcoats. I think that is where our great difficulty has come, and with the cheviots and tweeds.

Mr. STANFIELD. I should like to ask the Senator from Wisconsin, further, how he thinks that the question could be determined as to the amount of carpet wool that had been mixed with the finer wool and manufactured into this particular kind of cloth?

Mr. LENROOT. In the particular case of which the Senator speaks, with reference to overcoats, I do not know that it could be done.

Mr. STANFIELD. Or in the case of cheviots?

Mr. LENROOT. There would be but one grade of wool, and that would be the lower, coarser kind, and it would take the lower compensatory duty.

Mr. STANFIELD. How could the appraiser administer that?

Mr. SMOOT. I will say to the Senator that cheviot or tweed can not be manufactured from carpet wool. Cheviots and tweeds are made of coarse wool which is mixed with medium wool. They spin the mixed wool because they can thereby get a certain size thread out of it, but it is impossible to tell how much of each is in the yarn.

Mr. LENROOT. That is probably true of carpet wools as distinguished from quarter-blood and the other low-grade wools. I do not understand, however, and I have not understood from the Senator from Utah, that there would be any difficulty, except in one or two paragraphs, in having two classifications of the coarse wools in this schedule, not separately classify carpet wools, because all of them would take the same ad valorem of 60 per cent but quarter blood and lower and all the other wools.

Mr. STANFIELD. I understood the Senator to say that he was not concerned as to the duty to be proposed on the finer grades of wool.

Mr. LENROOT. I am not.

Mr. STANFIELD. Where does the Senator propose to make the limitation?

Mr. LENROOT. On quarter bloods.

Mr. STANFIELD. Quarter bloods and down?

Mr. LENROOT. Yes; quarter bloods and down.

Mr. STANFIELD. And on three-eighths and above the Senator would have the duty remain as it is?

Mr. LENROOT. Yes.

Mr. STANFIELD. Does it not occur to the Senator that that would perhaps result in all of the iniquities of the old Schedule K, under which the manufacturer claimed that he was entitled to a compensatory duty on wool shrinking 66⅔ per cent, whereas he was actually importing and using wools shrinking only about 40 per cent? Would not the same rule apply in this case, because of the inability of appraisers to administer the provision and tell how much of the coarser wool and how much of the finer wool is in the mixture?

Mr. LENROOT. Does the Senator mean to refer to imports in the raw state or of the manufactured product?

Mr. STANFIELD. I mean in the manufactured state, having reference to the compensatory duty. The point I am attempting to make is this: Would it not leave it open for the manufacturer to claim an unfair compensatory duty which would do the consumer no good, but would give to the manufacturer added protection?

Mr. LENROOT. Just to the extent that it may be determined the consumer would get the benefit of it, presumably, because we would provide a lower compensatory rate upon the coarser yarn and upon the coarser cloth than upon the finer grades. That is the point.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I yield.

Mr. GOODING. The Senator is familiar with the manipulation of Schedule K by the manufacturers?

Mr. LENROOT. I am very familiar with that.

Mr. GOODING. There is no question that the Senator is putting up a most splendid argument in the interest of the manufacturer who wants to take advantage of this schedule, as he did of Schedule K. I can not see how any man who ever condemned Schedule K can vote for the Senator's amendment. If the Democrats vote for it, I want to say that their mouths are forever closed so far as Schedule K is concerned, because the working of the law under the proposed amendment will be practically the same as under Schedule K, only on a smaller scale; that is all; and that is the purpose of it.

Mr. LENROOT. Perhaps the Senator can not see it, but I think that nearly every other Senator would see, if we vote first for a lower duty upon the raw material, the raw wool, and then a lower compensatory duty upon articles made out of that raw wool, that we are not favoring the manufacturer but we are favoring the public who buy it.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. I yield.

Mr. BURSUM. How would the Senator segregate the coarser wools from the finer wools when once manufactured? How could they be segregated? Upon what would the compensatory duty be levied? Upon the price of the low, coarse wool or upon the price of the high-grade wool? How would the manufactured product be separated in order to determine how much of low-grade wool was used? It seems to me impossible, for the reason that it is conceded that the low-grade coarse wools can only be used in a mixture with other finer wools.

Mr. LENROOT. Mr. President, the Senator, I take it, is familiar with the Payne-Aldrich law, is he not?

Mr. BURSUM. I recollect something about the old Payne-Aldrich law. I think I recall——

Mr. LENROOT. The Senator is aware of the fact that under the Payne-Aldrich law there were two classes of clothing wool, if you please, sir. The criticism of the Payne-Aldrich law was not of the compensatory duties on those two classes of wool, but the criticism of the Payne-Aldrich law was, first, that the protective rates were exorbitantly and outrageously high. The criticism, next, was that, while assuming to give to the wool-growers protection of 11 cents a pound on wool in the grease and of 33 cents upon the scoured pound, as a matter of fact, the manufacturer was importing the wool and paying only upon the basis of 18 cents on the scoured pound instead of 33; and he had a hidden protection of 15 cents a scoured pound under the Payne-Aldrich law in addition to the exorbitantly high protective rate. But the criticism was never made, to my knowledge, that provision was made for two classes of wools in the Payne-Aldrich bill or that that provision could not be administered.

Mr. BURSUM. But the Senator has not answered my question. The question is, If a piece of cloth is manufactured from two grades of wool, partly from fine wool, which is a high-priced wool, and partly from a coarse wool, which is a low-priced wool, how will the compensatory duty to be given to that cloth be determined?

Mr. LENROOT. The Payne-Aldrich law treated of two classes of wool, making a difference based upon value, as the Senator knows.

Mr. SMOOT. Mr. President, I will say to the Senator that all compensatory duties were based on one class of wool in the Payne-Aldrich law.

Mr. LENROOT. I did not remember that.

Mr. SMOOT. If the Senator will notice that law he will see that wherever a compensatory duty is provided for fabrics, it is based upon class 1 wool.

Mr. LENROOT. I should like to look into that to satisfy myself. I would rather take the opinion of the Senator from Utah than that of any wool expert, because he is a wool expert and has been in the business himself; and before I offered this amendment I spoke to the Senator from Utah—and I do not

think I am violating any confidence, because the conversation certainly was not confidential—who said that there were some paragraphs where it would be difficult to carry the compensatory duty; and he referred especially to overcoats.

Mr. SMOOT. It would be impossible.

Mr. LENROOT. It is not impossible, because we can provide a duty that would be equal to the scoured pound and then certainly the manufacturer would be protected.

Mr. SMOOT. I mean to say that it is impossible to write in the law any specific compensatory duty that would cover those goods.

Mr. LENROOT. Exactly; it is impossible in the bill as it is drawn, because we can not cover the cotton warp and the wool.

Mr. SMOOT. We have covered that.

Mr. LENROOT. The bill gives a full compensatory duty, which is the same, and protection in addition.

Mr. SMOOT. That is only on a certain kind of goods, but it costs even more with a cotton warp than with a wool warp.

Mr. LENROOT. If it costs more, that is covered by the protective duty; I am speaking of the compensatory duty.

Mr. SMOOT. I am speaking of the compensatory duty.

Mr. LENROOT. The compensatory duty, as I understand, is to provide compensation for the amount of wool that goes into the fabric.

Mr. SMOOT. That is true.

Mr. LENROOT. For the duty imposed upon that wool; and when, under the guise of compensation, we give so much a pound, based upon it being all wool, although only a part of it is wool, then I say we have as much indefiniteness and uncertainty as we would have by dividing two classes of wool and carrying the compensatory duties there. But, Mr. President, I can not conceive that it is going to be impossible to frame a piece of legislation that can not differentiate between wool valued at 22 cents a pound and wool valued at a dollar a pound.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. I do.

Mr. BURSUM. If all of that were true, yet the Senator has admitted upon the floor that the net result of his amendment would be still to give the manufacturer the benefit of the 33 cents levied.

Mr. LENROOT. I have not admitted any such thing.

Mr. BURSUM. And to take away from the grower the 11 cents.

Mr. LENROOT. The Senator must not misquote me in such a way. If the Senator has done me the honor of listening to me at all he knows that I have been saying just the contrary here for an hour.

Mr. BURSUM. The distinguished Senator from Wisconsin, if I understood him correctly, just a moment ago referred to the possibility of a manufacturer recovering the 33 cents a pound compensatory duty, even though the article be not all wool and there be some cotton, and that at least the same opportunity would be afforded in the case of the compensatory rates upon these lower-grade wools, which, to my mind, if I understand the English language, is an admission that the manufacturer would continue to receive his 33 cents compensatory duty.

Mr. LENROOT. Mr. President, it is not anything of the kind. What I said was that there would be no more uncertainty in dividing these wools than there is in the present bill, because the manufacturer now in some cases, if I understand the bill correctly, is receiving full compensation although the fabric may not be entirely of wool. What I did say was this: In the case the Senator from Utah mentioned, where he said it would be impossible to arrive at a proper differentiation, I said that in that case, even though you gave him the full 33 cents in that paragraph, if we had a less compensatory duty throughout the schedule for the coarse wools the public at least would get the benefit of all the reductions that we did make, and they would not pay any more in any case than the committee now proposes.

Mr. SMOOT and Mr. GOODING addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Wisconsin yield, and, if so, to whom?

Mr. LENROOT. I yield to the Senator from Utah.

Mr. SMOOT. I think the Senator has followed each of the different paragraphs; and he will find in paragraph 1109 that, in the case of woven fabrics weighing more than 4 ounces to the square yard, wholly or in chief value of wool, valued at not more than 60 cents a pound, the duty is 26 cents a pound and 40 per cent ad valorem. We give only 26 cents a pound compensatory duty there. Why? Because anyone knows that a blanket selling at 60 cents a pound first has a cotton warp; second, it is not all wool. We know that. More than likely there will be 10 per cent of cotton and 50 per cent of wool waste in that blanket.

Speaking offhand, now, just as a manufacturer, I should say that that would be about what that blanket would be composed of—a full cotton warp, 50 per cent wool waste, 10 per cent cotton, and the balance wool. Therefore we divide it upon that basis, and instead of giving a duty of 49 cents a pound we give 26 cents a pound compensatory duty on it. That is the way these duties are figured out, and there would not be any question about it; if that is the price of that blanket per pound, we know just as well as we know that we live that it can not be all wool.

Mr. LENROOT. Yes; that is true. Here is a very good illustration of just what I am talking about. That very paragraph will impose a duty—protective and compensatory duties combined—of 100 per cent ad valorem on an article valued at 50 cents a pound. That is what it does. It is a very good illustration of the very objection I am making here to a duty of 33 cents a pound on all these coarse wools. Blankets will be made out of these coarse wools, and yet, under the paragraph that the Senator uses for an illustration, on a blanket valued at 50 cents a pound the committee proposes an ad valorem duty of 100 per cent.

Mr. SMOOT. Mr. President, the duty on the blanket itself is only 20 cents per pound.

Mr. LENROOT. I mean this woven fabric. If it is valued at not more than 60 cents a pound, there is 26 cents per pound compensatory duty and 40 per cent ad valorem duty. If it is valued at not more than 50 cents a pound, there is 20 cents a pound protection and 26 cents compensatory duty. That is 46 cents—not quite 100 per cent ad valorem, but very close to it. It is over 80 per cent ad valorem.

Mr. SMOOT. I am aware of that. I do not say that that is not so under the provisions of the bill as it is.

Mr. LENROOT. Yes. Now, Mr. President, if that woven fabric weighs more than 4 ounces per square yard, I will ask the Senator if it is not made of this coarse wool—I mean at that price?

Mr. SMOOT. Mr. President, the filling of that fabric more than likely would be made of quarter bloods if it were a cotton warp, and more than likely it would be a cotton warp; but if it were not a cotton warp they would have to have a wool strong enough to hold it, and that would be above quarter blood.

Mr. LENROOT. It would be worth more than 60 cents a pound then.

Mr. SMOOT. No; if it weighs more than 4 ounces to the square yard of course it is men's wear. This is women's wear below that. The 4 ounces is the dividing line, and generally it comes into the coarser goods just above the fine goods in women's wear. If it were men's wear, it could be 4 or 5 or 6 or 7 or 8 ounces to the square yard. That will all depend, of course; but to get it down to this weight, if it were only 4½ ounces of course they could not use that coarse wool, because they could not get the thread fine enough to make that weight of cloth; but if it were 8 ounces they could make it out of that coarse yarn. I do not mean carpet yarn; I mean clothing yarn. Carpet yarns are too frizzly and too brittle, and in order to make a warp it would be impossible to use it and have it strong enough to be woven; but it could be mixed with other wools.

Mr. LENROOT. Mr. President, I am not going to occupy the floor longer. I have already occupied it much longer than I should. I am frank to say for myself that until it is proven better than it has been that it is not possible to separate these coarse wools from the finer ones—and if it is necessary for the committee to take some time to consider that matter I should be willing that they should—I certainly am not willing to vote for a duty upon raw wools amounting to 137 per cent ad valorem.

I proposed the other day a maximum ad valorem of 75 per cent on gloves, in which a great deal of labor is involved and a great deal of machinery is involved.

I am not willing, upon a product of which we produce only 1 per cent, to impose upon the people any such ad valorem duty as 137 per cent; and I am satisfied that if this amendment be adopted with reference to carpet wools, and if a similar amendment be adopted with reference to the other wools, the committee will be able to find some way to carry into this schedule proper compensatory duties.

Mr. POMERENE. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Ohio?

Mr. LENROOT. I yield.

Mr. POMERENE. The committee in its wisdom has seen fit to provide here a specific duty of 33 cents a pound on the clean content of the wool. Of course, that specific duty is the same whether the wool is worth 15 cents a pound or 50 cents a pound, naturally.

Mr. LENROOT. It is.

Mr. POMERENE. The duty is the same—33 cents a pound on the clean-wool content. That clean-wool content, without the duty, may perhaps be worth 50 cents or $1 or $1.20 or $1.50 a pound, as the Senator from Utah suggests. If that clean-wool content is worth only 15 cents without the duty, it does not seem to me quite the right thing that it should pay an additional 33 cents to come in, or, if it is worth 50 cents, that it should pay 33 cents again, or, if the clean content is worth $1 or $1.20, that then the duty on that wool should be the same that it is on the 15-cents-a-pound clean content. I do not think that provision is right.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I yield to the Senator.

Mr. GOODING. I think I have said this before, but it is true:

It costs just as much to grow a pound of this coarse wool as it does to grow a pound of the finer wool. The question is, Are you going to permit the industry to exist? Are you going to destroy one branch of the industry which is positively and absolutely necessary to build up a flock of sheep?

I do not know why one farmer should have a duty of 11 cents a pound, or 33 cents on the scoured basis, and another farmer, his next-door neighbor, who happens to have this low-grade wool, should have 7 cents, and with this ad valorem duty it might be even 5 cents; and it will have an effect on the neighbor's flock that has fine wool, because they will displace it wherever they can with this cheaper wool, and that is the purpose of it. There is not any question about following it as far as the wool is concerned. They can tell quarter-blood wool from half blood or three-eighths, but they can not follow it in the cloth where it is mixed. That is the point.

Mr. LENROOT. Mr. President, the Senator can argue that in his own time. I can not take the time to yield for that purpose.

Mr. President, in conclusion I think we ought to recognize that a duty of 33 cents a pound upon the finer wool is going to increase the cost of clothing in this country. I want to say to Senators upon this side of the Chamber that we are going to have difficulty enough with the consumers in our large cities in justifying the protection that we are giving to the wool-growers of America in these better wools; but we can not justify the enormous ad valorem duties that it is also proposed in this bill shall be given upon these coarse wools, amounting to over 100 per cent ad valorem as against 35 per cent ad valorem upon the finer wools.

Mr. President, it seems to me that Senators ought to stop and consider that proposition. So far as I am concerned, I do not propose by my vote to impose upon the American people any such duty as is proposed by the committee upon these low-grade wools that are not produced in this country to any appreciable extent, but that duty will help to increase the cost of living to the American people.

Mr. McCUMBER. Mr. President, the present rate of duty on the scoured content of wool is 45 cents per pound. The Senator from Wisconsin [Mr. LENROOT] says that if we impose the duty which we have imposed under this bill, which is 33 cents per pound, we are bound to drive the cost of clothing upward. I will leave the Senator to figure out how that is to be accomplished.

I am certain that with wool on the free list many yards of cloth, perhaps the most produced for American clothing, was about $5 per yard. I know that, notwithstanding the fact that since that time we have placed a duty of 45 cents per pound upon the scoured content, the prices of the same articles of clothing have gone down 50 per cent, or about half.

The Senator from Wisconsin takes the position that the prices are going up again, notwithstanding the fact that we have lowered the rate from 45 to 33 cents per pound. I can not agree with him. I do not think they will go up. I think they will go down, according to the conditions of the trade. They have already gone down with a 45-cent rate, and I think they will continue to go down somewhat, because they have not yet reached the lowest figures.

Mr. LENROOT. Mr. President, the Senator says the amount paid under the present law is 45 cents per scoured pound. Will the Senator state the actual duty paid on wool shrinking 25 per cent?

Mr. McCUMBER. I stated that the specific duty upon the scoured content of the imported wool is 45 cents a pound. Some wools will shrink 66 per cent, some of them will shrink only 20 or 30 per cent, but whatever the shrinkage is we are basing the duty not upon the grease content, with the assumption that it will shrink 45 per cent or 66 per cent; we are basing it now actually upon the scoured content, and that is the duty that is now being fixed.

Mr. LENROOT. Does not the wool come in now upon the grease content at 15 cents per pound?

Mr. McCUMBER. If it is the grease, unwashed, yes.

Mr. LENROOT. If it shrinks 50 per cent, that is 30 cents per pound, is it not?

Mr. McCUMBER. Thirty cents per pound if washed and 45 cents per pound if scoured. Anyway, it is a higher duty than the present duty.

Mr. LENROOT. It is not. The present duty of 33 cents a scoured pound upon wool shrinking 25 per cent is higher than the present emergency tariff.

Mr. LODGE. Mr. President, since the 1st of January last a hundred million pounds of wool, the largest amount for any similar period, have come into the port of Boston. The quantity is more than a hundred million pounds now. That is being held in bond because the men who imported the wool, who are going to use it in manufacturing, know that they will get it in at a lower rate than now prevails.

Mr. McCUMBER. Do Senators suppose for a single moment that if those importers of wool believed that this was a higher duty than that which obtains now they would be sending the wool in in bonds and holding it until this law shall pass?

Mr. LENROOT. The Senator must be fair to me.

Mr. McCUMBER. I try to be.

Mr. LENROOT. I referred only to the coarse wools, with a very light shrinkage. I admit that upon the finer wools the rate proposed in the pending bill is lower than the rate in the emergency tariff law, but upon the coarser wool, with light shrinkage, it is higher.

Mr. McCUMBER. Let us get at the real paragraph we are discussing, that covering wools used in carpet manufacturing. That is really what those wools are used for; it is really what they are imported for. They are not usually imported for clothing.

Of that wool we produce in the United States but a small proportion of what is consumed in the United States. Under the Underwood law carpet wool and all other wool came in free. The question arose with the committee as to whether they ought to put a duty upon the carpet wool. Taking into consideration the meager amount produced in the United States as compared with the vast amount consumed in the United States, the committee was of the opinion that we would not disturb the Underwood tariff law so far as it affected these very low grades of carpet wools.

Everyone knows that if you use any percentage of those carpet wools in cloths used in making clothing you detract from the character of those cloths. You can not always distinguish whether or not the low grade is used. The manufacturers may use in their yarn possibly some grades of those carpet wools which are brought in free. They may use 10 or 15 per cent of that kind of wool and immediately claim protection on the ground that they had paid 33 cents, and upon cloth we have given them protection in every instance on the basis of their paying 33 cents upon the scoured content.

I am not arguing whether that is just or unjust, but if we do that, then we must protect the American public and the American Treasury against fraud and deceit. We can not allow the manufacturer of cloth to bring in this wool free and use 10 or 15 or 20 per cent of it, and then insist upon his protection of 33 cents a pound upon the cloth that is produced from it.

Therefore we say that if you use any of this in the cloth, which injures the cloth, which is a fraud upon both the Government and the purchaser of the cloth, you have to pay 12 cents a pound upon the grease content or 24 cents upon the scoured content. That is all there is to it. They do not intend to use it, except that they may use it surreptitiously, and the committee determined that, so far as it could prevent it, they should not so use it. We do not prevent their using it. We say that they can use it in clothing provided they pay so much duty. We put it a little higher, for the very reason that we do not want them to use it for clothing, and for the very

reason that it is an invitation to commit a fraud if we allow them to bring it in and mix it in any manner without paying a rather high duty.

We say that the duty shall be 12 or 24 cents. The Senator from Wisconsin says it shall be so much, but not to exceed 60 per cent. It is a question, as I stated before, whether we want to penalize above 60 per cent, or whether we desire to never make the penalty above 60 per cent. I am assuming all the time that this low wool which we allow to come in free is to be used for carpet purposes only, because that is the only purpose for which we allow it to come in free.

The Senator has gone a little beyond the carpet question, and he has claimed that these rates are higher than the Payne-Aldrich rates. I asked the actuary of the Treasury Department to make a careful estimate of the ad valorem rates under the Payne-Aldrich law, and the ad valorem rates under the pending bill as we reported it, by paragraphs. We have since cut 5 per cent ad valorem in most of these rates, but I will take his statement, made before the cut.

It is true that on the raw wool, which came in imported with much less than 60 per cent of loss, the duty we now impose is considerably in excess of the Payne-Aldrich rate. Under the Payne-Aldrich law the average was 44.31 per cent. Under the pending bill, which protects the producer of the wool, and assures him that he will have the full protection of the equivalent of 33 cents per pound upon the scoured contents, it is 61 per cent.

On the wool waste, under the Payne-Aldrich law, the duty was 38.96 per cent. Under this bill it would be 49 per cent.

Now, let us get to the manufactured fabrics and see what the conditions were.

Wools, and so forth, advanced, including tops, and so forth, Payne-Aldrich rate, 105 per cent; rate under the pending bill, 58 per cent.

Yarns, Payne-Aldrich rate, 82.38 per cent; rate under the pending bill, 77 per cent.

Woven fabrics, Payne-Aldrich rate, 100.66 per cent; the rate under the pending bill, 76 per cent.

Pile fabrics, Payne-Aldrich rate, 102.34 per cent; rate under the pending bill, 76 per cent.

Blankets: Payne-Aldrich rate, 73.42 per cent; rate under the pending bill, 65 per cent.

Felts, not woven: Payne-Aldrich rate, 97.01 per cent; rate under the pending bill, 52 per cent.

Fabrics with fast edges, and so forth: Payne-Aldrich rate, 87.06 per cent; rate under the pending bill, 71 per cent.

Knit fabrics: Payne-Aldrich rate, 95.76 per cent; rate under the pending bill, 64 per cent.

Knit articles: Payne-Aldrich rate, 95.63 per cent; rate under the pending bill, 61 per cent.

Wearing apparel, not knit: Payne-Aldrich rate, 77.29 per cent; rate under the pending bill, 59 per cent.

Carpets and rugs: Payne-Aldrich rate, 60.66 per cent; rate under the pending bill, 53 per cent.

Manufactures not specially provided for: Payne-Aldrich rate, 94.5 per cent; rate under the pending bill, 55 per cent.

The total of wools and manufactures thereof would bring the figures to within about one-tenth of 1 per cent above the Payne-Aldrich rates. But you will see in all the manufactured products an enormous decrease.

Mr. President, I shall to-morrow put in the RECORD a table showing the value of the imports, but I wish to put it in a little more fully than I can do to-day. It will give a general idea of the very great reduction on manufactured articles in the matter of an ad valorem basis rate.

Mr. WALSH of Massachusetts. Mr. President, I ask permission to have inserted in the RECORD various letters from manufacturers and others protesting against the rates proposed by the committee in the woolen schedule.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ANDREW J. SOLIS & CO.,
52 Chauncy Street, Boston, Mass., April 27, 1922.

Hon. DAVID I. WALSH,
United States Senator from Massachusetts,
United States Senate, Washington, D. C.

MY DEAR MR. WALSH: Inclosed please find my article. I hope you will find it worth while. I do not apologize for what I say regarding second-rate politicians. Will you please let me hear that this has reached you; and I shall watch for your action regarding it at the proper time, when the woolen schedule has been reached.

Thanking you for your kindness in this,

Sincerely yours,

ANDREW J. SOLIS.

A stream can not rise higher than its source, and that is why when second-rate politicians secure control of the Ways and Means Committee, the Senate Finance Committee, and other influential committees the country suffers from lack of vision and from a vagary of visionary schemes, some stupid but mostly vicious.

These men are riding for a fall, their proposed unbalanced tariff will bring disaster and not prosperity to the country, their aim, through methods which range from paternalism to State socialism, is to inflate the cost of raw material regardless of consequences.

The force behind these measures is the senatorial power of sparsely-settled States, which enables them to enforce consumption taxes, which have no bearing on the policy of protection, on the great consuming and manufacturing centers of the country. Thus, we find that a total constituency of 4,700,000 people represented by 20 Senators outvoting the interests of a single constituency of 10,000,000 people represented by only two Senators. Then we find that the power to force unjust and high taxation on the great consuming centers, placed in the hands of one Senator representing a constituency of 400,000, when a Senator representing a constituency of 4,000,000 people has no influence in protecting the interests of his State against the greed of class legislation.

Nevada	106,000
Wyoming	179,000
Arizona	250,000
New Mexico	410,000
Idaho	431,000
Utah	434,000
Montana	650,000
South Dakota	698,000
North Dakota	739,000
Oregon	835,000
Total (20 Senators)	4,732,000
New York (2 Senators)	10,380,000
Utah	434,000
Massachusetts	4,000,000

The pending tariff and chain of laws qualifying the tariff to force inflated values on the country are all farmer demands, regardless of party rule, justice, or expediency, and are based mostly on war paternalism. The senatorial farm bloc has many highly interesting and visionary propositions all subsidiary to the proposed tariff. Among others is the proposed law, introduced by Senator LADD, now in committee, which requires the expenditure of an appropriation of $1,000,000,000, with which to purchase the entire production of wheat, cotton, corn, and wool for resale to consumers at a fixed price.

The price for wool to be fixed at 55 cents per pound in the dirt, or $1.76 per pound clean, which means on a clean cost of $1 per pound above normal.

On wool alone the country would pay the sheep raisers for the American clip of 100,000,000 clean pounds $100,000,000 over price each year, or $1,000,000,000 every 10 years.

This is no Utopian dream, even if it is almost unbelievable paternalism, because we have in operation to-day laws quite as vicious.

We have an embargo on wool, which embargo has not only disrupted business, but it has inflated wool values 150 per cent in three months, which, to say the least, is a rather unusual method of reducing the high cost of living. Then we have the pending permanent tariff, in which, as written in the law, a duty of 33 cents per pound is placed on the scoured content of wool, regardless of grade or condition. With a possible duty of 49½ cents per pound on the scoured content, authorized by the additional duty of 50 per cent by Executive proclamation, all of which is camouflaged, to fool the public, by a flat duty on raw wool based on shrinkage, which in every case under the written rates figures 33 cents on the scoured content, but under the possible proclaimed rates would figure 49½ cents on the scoured content. This is a "joker" in the law which would carry the wool duty under certain conditions 4½ cents higher than in the emergency tariff.

This squarely places the burden of the whole wool duty on the poor man's wool supply, and this without considering the workability of collecting duty and handling commercially through the customhouse over 200,000,000 scoured pounds of imported wool, and which in addition bequeaths to business an endless litigation with the Government.

In times past the talk of levying a duty on the scoured content was always used as a miserable pretense of lowering the wool duty, but now, although unable to supply more than one-third of America's wool requirements, the woolgrowers' pretense is no longer in evidence, arrogant, and indifferent to the people's needs, their argument for inflation through an unjust wool tax rolls on echoing and reechoing through the Halls of Congress with parrotlike precision: "The sheep raisers interests are paramount; the sheep raisers interests are paramount."

Then there is that other subsidiary inflation law recently enacted by the farm bloc, which places in the hands of a governmental bureaucrat the power to fix the price of wool through the cooperative farm act, which calls for a price fixed on cost, plus 8 per cent. Thus, without a market barometer as supply and demand ebbs and flows, we find that fixed prices established by law means that domestic wool in the future can be inflated indefinitely to the price of foreign wool plus the duty, and the last vestige of domestic competition to reduce value is lost to consumers through authorized monopoly and price fixing through farm pools.

To afford some mitigation of this evil condition and to protect the public the wool duty ought to be levied on an ad valorem basis, as it is by this method only market value can be in any way regulated, and at the same time the iniquity of placing the highest burden of an indefensible tax on wool of the poor man's clothing supply can in a measure be remedied. Farm-bloc Senators aggressively maintain demands, conceding even the overt acts of monopoly. Senator NORRIS in advocating the enactment of this price fixing excused it on the grounds that the Government of the United States was unable to enforce its own laws.

We quote him as follows:

"The Steel Trust continues to control prices of steel products, and therefore farmers—woolgrowers—should also be allowed to control prices. We have dissolved trusts, but we find them doing business at the old stand."

What is true of the Steel Trust is also true of the Woolen Trust, the Oil Trust, the Harvester Trust, and every other trust with Wall Street stock-market connections.

Can we not see where this is leading? The destroying of private enterprise by encouraging private monopoly is bad enough, but when it is acknowledged that the Government can not enforce its own laws it is no longer a Government of law, because the people are at the mercy of some superruling class who are stronger than the will of the governed. That is why the majority of Americans, from consuming centers, must accept vague promises for substantial relief. The best judgment of five or six political bosses is called majority rule, and

from all obtainable evidence, the unavoidable suspicion is with us that legislative action of the future has been "hocked" to interests ever hiding behind the skirts of a legislature. Senator NORRIS proves by his statements that the country is "framed" by class legislation. Already the proposed tariff and auxiliary farm laws show that honest protection is in the discard and in its place has been substituted a system of gratuities.

The weakness of tariff legislation of the present day is the concealing of excessive and oftentimes unnecessarily high tariff rates by methods and phraseology. Fictitious valuation is an example. Dilettantists advocate this feature of the pending bill and argue for its support, without considering that it is dishonest, inasmuch as it defrauds the public by concealing the greater part of the duty in the assessment, not of actual value but on values which have been increased fictitiously. This method was first adopted January 10, 1827, by Chairman of the Ways and Means Committee Mallory, of Vermont, when introduced in the "woolens bill" with the principle of the "minima," the first fictitious valuation measure ever introduced.

The rates were applied as follows:

"Cloth which cost 41 cents per yard was held to be worth $2.50 per yard and the duty was collected on the fictitious value of $2.50. Wool which cost over 10 cents was held to be worth 40 cents per pound."

This was the principle of all tariffs and proposed tariffs from 1826 to 1828, inclusive. The difference between FORDNEY and Mallory is quite marked, because Mallory did not advance his duty rates over the tariff of 1816, relying on his applied minimum of fictitious value to get his increased duty. FORDNEY not only established his 150 to 200 per cent fictitious value but he also applied excessive duties of previous tariffs, thus making a double duty, the greater part of which was concealed in the fictitious values established by law.

Whether this valuation on which duties are levied is to be proclaimed or otherwise, the principle is the same, and any change of method is on a parity of trying to remedy the iniquities of Schedule K by calling it Schedule 11. If it is within the power of Congress to delegate its rights, fixed by the Constitution, then the duties of this proposed law are 50 per cent higher than the rates expressed and written in the law, with the right of the Executive not only to embargo merchandise but to carry on a tariff war by exclusion with every nation in the world. A rather dangerous weapon in the hands of anyone, even the President of the United States.

I believe in honest protection, which is disinterestedly placed for the benefit of all, but the present undertaking brings us again to the parting of the ways.

We are face to face with a 20-year reactionary swing back, again a protective tariff is perverted into a direct tax on consumption by the overt acts of monopolists and farmer blocs sanctioned by a senatorial majority, consisting of a minority representation.

The distressing effects of allowing private monopoly to dominate industry is apparent. According to the census during that other period of tariff juggling, although the capital invested in the woolen manufacturing increased, the number of manufacturing units decreased. The Director of the Census states that the capital invested in the woolen machinery increased from $256,000,000 in 1899 to $415,000,000 in 1909, but that the number of establishments decreased from 1,221 in 1899 to 912 in 1909, which proves that individual manufacturers are being driven out of business, not by foreign competition but by illegally perverting the law and constructing a monopoly which dominates business to the detriment of legitimate industry, and farmers now seek to imitate for themselves these overt acts.

The fruitage of perverting a tariff from public benefit to private monopoly and class interest has plainly left its mark on the body politic of the American people. Our self-complacent politicians direct us to abandon our struggle for reform and return to the old methods, although experience proves these methods responsible for the present system of commercial communism, the private enterprise destroying system, the gambling promoting system, which combines machinery production with margin speculation.

The result of all this is that the intelligent, the patriotic, and everyday American is the victim of misapplied legislation; they are being ground between the upper and nether millstones of class distinction, class legislation, and monopoly; they are being destroyed by creating class in a nation whose fundamental law declares that all men are created equal; they are being destroyed by unequal living expense brought about by political exigency, industrial trusts, farmer blocs, and speculators—each out "to get theirs."

This commercial communism which allows supercontrol of industry and by-sectional legislation is not protection; it is un-American and is against the spirit of 1776. It is fatal to the success of the woolen industry or any other industry, as it destroys individual initiative. It is a national catastrophe, as it affects adversely the efforts of those seeking to establish new enterprise, which a protective tariff is supposed to encourage. Therefore, before the proposed law becomes operative a provision should be provided which will compel the disintegration of so-called trusts by limiting the number of operatives which may be worked under the control of one management. In this way, and if we resist the present conspiracy of inflation, industrial America will be saved to industry rather than remain at the mercy of some invisible power.

Your pending bill, entitled "An act to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes," will not provide revenue, will not promote foreign commerce, and, while encouraging private monopoly, will not encourage American industry. It will promote inflation, which begets deflation, and a reoccurrence of deflation at this time means widespread bankruptcy in the United States.

ANDREW J. SOLIS.

BOSTON, MASS., *June 23, 1922.*

Hon. PORTER J. MCCUMBER,
Chairman Finance Committee,
United States Senate, Washington, D. C.

DEAR SIR: Referring to the matter of the proposed new wool duties, I trust that you are giving attention to the well-taken points in the criticisms against the proposed rates that have been named for wool. These rates are excessive, and if put into effect would cause a great reaction against the Republican Party.

Furthermore, they are not equitable rates, as the percentage of duty figures out so much more on the lower grades of wool than on the finer grades of wool.

Then, again, no specific duty is equitable for wool. The rates should be ad valorem, and the ad valorem plan is the only reasonable, scientific, and equitable plan. If we must have a duty on wool, it should be at least a just duty, with no unfair discrimination, particularly as the discrimination is against the consumers of the cheaper clothing.

I hope all of this will have your considerate attention, and the importance of the protests will be heard before serious damage is done.

Yours very truly,

ISAAC M. SLOCUM.

AMALGAMATED CLOTHING WORKERS OF AMERICA,
OFFICE OF THE PRESIDENT,
New York, July 12, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

MY DEAR SENATOR WALSH: I am sending you inclosed a statement setting forth the objections of the Amalgamated Clothing Workers of America, an organization of over 175,000 workers in the men's clothing industry, to the wool schedule in the pending Fordney-McCumber tariff bill, and would ask your careful perusal and consideration of it.

Very truly yours,

SIDNEY HILLMAN,
General President.

NEW YORK, *July 12, 1922.*

In behalf of the 175,000 members of the Amalgamated Clothing Workers of America, I am writing to protest against the passage of the wool schedule in the pending tariff bill. The enactment of a duty of 33 cents a pound on raw wool with still higher "compensatory" rates on woolen cloths, as proposed, will place a heavy load on the men's clothing industry, materially affect the well-being of the wage earners in the industry, and greatly increase the price of clothing to the consumer.

Already, before the passage of the tariff bill, it has proven a great menace to the clothing industry. This spring, upon the termination of their agreements with the manufacturers in the clothing manufacturing centers of Chicago, Rochester, and Baltimore, the organized clothing workers accepted wage reductions, thus lowering costs and permitting the sale of clothing to the retail consumers at lower prices.

These wage reductions affected 40,000 workers in Chicago, 12,000 in Rochester, and 8,000 in Baltimore.

The consumer has not, however, secured the benefits of these sacrifices made by the workers. No sooner had the wage reductions become effective than an increase in woolen prices was put into effect by the American Woolen Co. and other woolen concerns. Two further increases in the price of woolen cloths have since been made. The reason given for the increase in woolen prices has been the higher duties imposed by the emergency tariff act and the extraordinarily high rates of duty in the pending tariff bill. The increase in the cost of men's clothing by reason of the higher prices of woolens is much greater than the saving made in labor costs because of the wage reductions accepted by the union. Prices of men's clothing instead of falling are therefore rising. Though the clothing workers' wages have been reduced and labor costs cut, prices have increased, and the ability of the consumer to buy clothing lessened.

Nor have higher prices for woolens resulted in increased wages for the workers in the woolen mills. The wages of the workers in the mills have been cut 22½ per cent, thus permitting the American Woolen Co., for example, to increase its net profits from $6,000,000 in 1920 to over $9,000,000 in the depression year of 1921. The net profits of the company in 1921 were three times as large as in 1910 and 1911, when the celebrated "Schedule K" of the Payne-Aldich tariff act was in effect. The rates in the present bill levy a duty almost twice as great as did the Payne-Aldrich act.

The pending tariff bill, moreover, levies a higher duty, proportionate to value, on the lower grades of wool, thus placing a greater tax upon the clothing of the worker. The result may be an increase in the use of "shoddy" with consequent loss to everyone.

The clothing industry has suffered much from the industrial depression. The clothing worker, subject even in more normal periods to much seasonal unemployment, has had to contend with loss in employment because of the general industrial conditions. The passage of the wool schedule in the tariff bill would greatly retard a revival in this important industry. Increase in price of clothing resulting from the high tariff at a time when the purchasing power of the mass of people is low because of wage reductions and unemployment will undoubtedly have a most depressing effect upon the demand for clothing.

A high tariff raising woolen prices would increase unemployment and make still more remote a revival in the industry.

Moreover, the wool tariff would prove a great burden to wage earners in other industries and to virtually all of the farmers in the country. Only a small proportion of the farmers of the country raise sufficient wool to market in commercial quantities. All farmers, however, who wear woolen clothing would be taxed, and heavily, if the wool schedule is passed in its present form.

There can be no justification for the passage of the proposed wool schedule. Its passage, in my opinion, would result in placing a great burden on one of the important industries of the country, endanger the standards of the wage earners in the industry, increase unemployment, and place a tax of several hundred millions of dollars on the consumers of clothing—wage earners and farmers alike.

I earnestly urge that you vote against the proposed wool schedule and that it will be rejected.

SIDNEY HILLMAN,
President Amalgamated Clothing Workers of America.

MARKS ARNHEIM (INC.),
New York, June 9, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: I am inclosing copy of advertisement which we are running in the principal New York newspapers this week and which, I am sure, will interest you.

In view of the fact that you are leading the fight in the Senate against the majority report of the Finance Committee on the proposed new tariff bill, you will, I am sure, be interested to learn that we initiated the campaign of opposition against the increased duties on wool which, during the past few weeks, has assumed such tremendous proportions not only in New York, but throughout the country. Indeed, evidences are being multiplied daily showing that the public approves our stand and will go the limit to defeat a proposal which is calculated to place a new burden on the shoulders of the consumer.

Wishing you success in the splendid fight you are waging, and assuring you of my desire to render you every possible assistance that lies in my power, I am,

Yours very truly,

W. W. ARNHEIM.

—

MARKS ARNHEIM (INC.),
New York, June 16, 1922.

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: To everyone in close touch with general economic conditions, the fundamental weakness of the tariff legislation contemplated by Congress and its inevitably vicious results are daily becoming more evident.

As at present planned this tariff specifically means higher prices, radically higher prices, immediately. It makes these burning questions arise in the public mind:

Are we going to reconstruct or are we going back to the war prices that have wrought such general havoc throughout our entire country?

Is not the present state of business and the present frame of the public's mind the worst possible time in which to do anything to make living costs higher?

Shall we close our ports to the commerce of the world with a tariff wall and strangle that healthful competition which furnishes the only definite basis for lowering the cost of living and promoting general prosperity?

I write this feelingly as a citizen and advisedly as a merchant. No one can be in a better position to foresee the immediate results of such legislation than a merchant in my position.

Is Congress determined to add more burdens to the consuming public? This I hesitate to believe, as I have implicit confidence in the wisdom and patriotism of the men who represent us in both Houses of our National Legislature and their genuine solicitude for the welfare of the consuming masses of our people.

How can Congress reconcile this definite move to increase living costs with the statement of the Interstate Commerce Commission that rail wages can be reduced now without hardship because living costs are going down?

The great program of reconstruction started at the close of the war has been carried on without interruption and with splendid success. Why retard this great work now for the sake of benefiting certain selfish interests that are willing to add new burdens on the consuming masses in order to reap new benefits for themselves?

I have talked with hundreds, thousands, of people with whom I come in contact, and I know I speak for them. I feel, indeed, that I speak for the entire American public.

Yours very truly,

W. W. ARNHEIM.

—

HOBBS, TAFT & CO.,
Boston, June 14, 1922.

Hon. DAVID I. WALSH,
United States Senator from Massachusetts,
Washington, D. C.

DEAR SENATOR WALSH: I am informed that you are to lead the fight on the floor of the Senate against the duty on wool as proposed by the Committee on Finance. Although a Republican, I am of the strong belief that the Finance Committee's schedule is bad legislation and would do the Republican Party and, what is more important, the country at large a very great injury if it ever became law. I feel, therefore, that I am in no way disloyal to the Republican Party in writing you as I do.

I have given the wool schedule very careful consideration and have written three letters on the subject, all of which I inclose. I realize what a busy man you are, and therefore have blue penciled the paragraphs which seem to me the most important. In preparing your arguments against the wool tariff I do not think you would find it time wasted to look these over.

I have shown these letters to some of the most prominent members of the trade, and they have confirmed my facts, so that I think you could use them without danger of being misinformed. In fact, I have always tried to understate the case in order to be absolutely sure of my position.

Senator GOODING stated the other day in the Senate that the average duty in the agricultural schedule was only about 21 per cent. If this is the case, why should the duty on wool be so very much above this figure?

I saw it suggested in the paper the other day that if the woolgrower was in such dire need it would be better to subsidize wool rather than place a high duty on it. If this were done, of course it would mean an outlay by the United States Treasury instead of an income from duties, but it certainly would be a tremendous relief to the consumer.

Wishing you every success in your efforts to have this bill modified, I am,

Respectfully yours,

CONRAD HOBBS.

—

BOSTON, MASS., *July 21, 1922.*

The Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: The proposed duty of 33 cents per pound on raw wool as outlined in Schedule 11 of the Fordney-McCumber tariff bill is, in my judgment, most excessive and unwarranted and I desire to enter most vigorous protest against its adoption.

A protective tariff I am in favor of, but this certainly is far beyond the point of protection and can be viewed in the light of being only in favor of a certain few and against the interest of the general public.

Yours truly,

WILLIAM J. BREEN & CO.,
By WILLIAM J. BREEN.

—

BOSTON, MASS., *July 21, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR WALSH: If you will look on page 13 of Thursday's Transcript, you will be interested to read Mr. Brigham's article on the tariff, and especially you will be interested to read the last paragraph, in which he tries to define Senator LODGE'S position as an upholder of the combine between the woolgrowers and the wool manufacturers of the country.

We inclose copy of a letter from Mr. Moir, our president, in answer to Mr. Brigham's article, which I think will interest you to read.

Yours very truly,

CARDED WOOLEN MANUFACTURERS' ASSOCIATION,
W. C. HUNNEMAN, *Director.*

—

WHY THE DUTIES ON WOOL SHOULD BE AD VALOREM—THE CASE OF DIAMONDS.

To the EDITOR OF THE REPUBLICAN:

In writing some weeks ago to F. J. Hagenbarth, president of the National Wool Growers' Association—who are obsessed with the idea that specific rates of duty on wool are the only correct, practical, and just way to assess wool duties—I put this query up to him:

"How can you justify the 33-cent specific duty rate to the different growers who raise different qualities of wool, where on dollar wool the 33-cent rate would equal 33 per cent and on wool worth only half as much the 33-cent rate would equal 66 per cent and on wool worth 33 cents per pound the 33-cent rate would equal 100 per cent?

"If 33 per cent is enough protection for the highest quality of wool, why is not it sufficient for wool worth 33 cents per pound or lower? If wool worth 33 cents per pound needs 100 per cent protection, why deny the same to the grower who raises wool worth $1 per pound?

"These are some of the puzzling questions that we can not understand. If you use specific rates, either on the grease wool or the scoured wool, you get these gross inequalities that are unjustifiable.

"The only way out is to use an ad valorem rate high enough to give adequate protection, and thus give the same rate of protection to all qualities of wool, for the market price in normal times always determines the grade of quality or value."

Tariff duties are assessed on imports in two ways—by specific duties or ad valorem duties. Specific duties are a specified, fixed sum assessed on some unit of measure, as on the weight of the article—so much per pound, per ounce, per ton, or so much per dozen, per gross, per square foot, per cubic foot, etc. Ad valorem duties are a per cent on the value of the article, as 1 per cent, 5 per cent, 25 per cent, 50 per cent, etc., figured on the invoice cost.

Therefore, on all articles of commerce that have a wide range of market price a specific duty would be discriminatory—higher (in proportion to value) on the low-priced article and lower on the high-priced article. This is a fundamental principle of tariffs and never changes.

Among the many articles of commerce that have a wide range of value and therefore call for ad valorem rates is wool, the market price on which varies from, say, 10 cents to 40 cents a pound in the grease and from perhaps 15 cents to $1 or more per scoured pound.

A Maine worsted manufacturer wrote me recently he had been using a coarse South American crossbred wool that cost 8½ cents in the grease and shrunk 30 per cent, making the clean cost 11¾ cents. If the "33-cent scoured wool" rate prevails, the duty would be 300 per cent on this class of wool.

No specific duty on wool can be justified any more than a specific duty could be justified on diamonds, for if there is one class of merchandise more than any other which has a wide range of market value it is cut diamonds. They have always carried ad valorem rates; specific duties on them would be the height of the ridiculous. Some diamonds may have a value of perhaps $30 or $40 a carat, and diamonds have been brought into Boston within a year that have been valued at $1,000 a carat. The duty is 20 per cent ad valorem on all, irrespective of their quality.

Do you think woolgrowers would vote in favor of a specific duty, say, of $10 per carat, which would be equal to 25 per cent on $40 stones, but only 1 per cent on $1,000 stones? No; ad valorem rates are the only ones applicable to diamonds, and it is equally true of wool or any article with a wide range in market price.

W. C. HUNNEMAN.

BOSTON, *June 2, 1922.*

—

BOSTON, MASS., *April 17, 1922.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: Regarding the present tariff bill, we beg to inform you that the wool schedule is not approved by either the manufacturers or importers, and we herewith inclose a written copy of our statement of views regarding carpet wools.

Respectfully yours,

THE FORINO CO.
J. WEINBERG.

—

ANDERSEN COAL SALES CO.,
Boston, July 21, 1922.

Senator D. I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR: I desire to register my vigorous protest against schedule 11 of the Fordney-McCumber tariff bill, which proposes a duty on raw wool of 33 cents a pound.

It is excessive, unwarranted, and beyond the point of necessary protection.

It has been universally conceded that Schedule K of the Payne-Aldrich bill was too high—schedule 11 exceeds it. It will increase prices to the many for the benefit of the few, which is uneconomic at this time.

Kindly give this protest your earnest consideration.

Very truly yours,

C. P. ANDERSEN.

—

CLINTON CHAMBER OF COMMERCE,
Clinton, Mass., June 21, 1922.

Hon. DAVID I. WALSH,
Washington, D. C.

DEAR SENATOR: We have just recently learned of a proposed measure now pending before Congress, viz, the McCumber-Fordney tariff, proposing to levy a duty of 33 cents per pound on the clean content of raw wool.

It seems to us that if this measure should pass and become a law it would be a calamity, especially at this time, and that it would work a great hardship upon the majority of our people.

Should this extra high duty be imposed it would of necessity greatly increase the price of the finished product, and, conservatively estimated, the retailer would be obliged to sell the average garment for at least a $5 advance from his present price.

We have been straining every effort to bring down the selling price of clothing, and now to add this high tariff it will not even allow prices to remain as they now are but will very materially increase them.

We therefore petition you for your assistance to defeat the passage of such a measure.

Awaiting, as we trust we may receive soon, your favorable reply, and thanking you in advance for your help in behalf of what we believe to be the right stand, we are,

Very respectfully yours, the clothiers of Clinton,

J. W. FORRESTER & Co.
McQUAID BROS. CO.
HILLS & WIESMAN.
W. WALLACE & CO.
W. L. HUBBARD & CO.
HARRY N. JUREL.
HARRY MODOFF.
BARNES DRY GOODS CO.
MORRIS LONG.
KLEIN FRANKEL.
E. S. BEDRICK.

Mr. McCUMBER. Mr. President, I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock a. m.

The PRESIDING OFFICER (Mr. WADSWORTH in the chair). Is there objection? The Chair hears none, and it is so ordered.

ABANDONED COTTON ACREAGE.

Mr. HEFLIN. Mr. President, about two weeks ago I introduced, and there was passed by the Senate, a resolution calling upon the Secretary of Agriculture for a report immediately on abandoned cotton acreage. The resolution was overlooked by the clerks and was not sent to the Department of Agriculture, so it is too late to get in the report this month. I now submit a resolution providing for an extension of time until the 25th of August, so that it will come out in the September report. I ask unanimous consent for the present consideration of the resolution.

The resolution (S. Res. 325) was read, considered by unanimous consent, and agreed to, as follows:

Whereas the Crop Reporting Bureau of the Agricultural Department has heretofore made no report on abandoned cotton acreage until the 1st of December each year; and

Whereas failure to obtain a good stand of cotton in many places and the increased ravages of the boll weevil in other sections of the cotton-producing States have caused abandoned cotton acreage to be larger than usual; and

Whereas the cotton producer, the spinner, and the public are entitled to know as early as the information can be obtained what percentage of cotton acreage has been abandoned: Therefore be it

Resolved, That the Secretary of Agriculture be, and he is hereby, authorized and directed to immediately confer with the commissioners of agriculture in the cotton-growing States and with the agricultural agents of the various counties in said States, and ascertain just what, in their opinion, is the percentage of cotton acreage abandoned since planting in the spring up to August 25, 1922.

Resolved further, That the Secretary of Agriculture shall publish said information in his September 1 Crop Condition Report.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After seven minutes spent in executive session the doors were reopened, and (at 6 o'clock and 12 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Tuesday, July 25, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 24 (legislative day of April 20), 1922.

SOLICITOR OF THE TREASURY.

Richard Randolph McMahon, of West Virginia, to be Solicitor of the Treasury, vice Lawrence Becker, resigned.

REGISTERS OF THE LAND OFFICE.

Earl B. Coffin, of California, to be register of the land office at Susanville, Calif.

Sydney M. Wharton, of New Mexico, to be register of the land office at Fort Sumner, N. Mex., vice William R. McGill, term expired.

UNITED STATES PUBLIC HEALTH SERVICE.

Dr. Frederick A. Franke to be assistant surgeon in the United States Public Health Service, to take effect from date of oath. This doctor has passed the necessary examination required by law.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

AIR SERVICE.

Capt. Earl Hamlin De Ford, Infantry, with rank from July 1, 1920.

First Lieut. Walter Raymond Peck, Infantry, with rank from July 1, 1920.

POSTMASTERS.

ALABAMA.

William J. Holloway to be postmaster at Opp, Ala., in place of Clarence Byrd, resigned.

CALIFORNIA.

Irene Beckley to be postmaster at Grimes, Calif., in place of Edward Smith, resigned.

Bertha E. Kelley to be postmaster at Palms, Calif., in place of L. W. McBride, resigned.

COLORADO.

Arthur I. Weaver to be postmaster at Creede, Colo., in place of H. D. Barnhart. Incumbent's commission expired January 24, 1922.

ILLINOIS.

Lulu L. Meyer to be postmaster at Deerfield, Ill. Office became presidential July 1, 1920.

Ida C. Revell to be postmaster at Stillman Valley, Ill. Office became presidential January 1, 1921.

Ulysses G. Dennison to be postmaster at Winnebago, Ill. Office became presidential April 1, 1922.

Raymond W. Peters to be postmaster at St. Joseph, Ill., in place of A. A. Funk, resigned.

KENTUCKY.

Gideon D. Ison to be postmaster at Blackey, Ky. Office became presidential October 1, 1921.

Everett Hickman to be postmaster at Burlington, Ky. Office became presidential October 1, 1920.

Edith Ashby to be postmaster at Uniontown, Ky. Office became presidential October 1, 1920.

William M. Maffett to be postmaster at Cynthiana, Ky., in place of J. B. Simpson. Incumbent's commission expired September 6, 1920.

George V. Auxier to be postmaster at Russell, Ky., in place of Jacob Fisher. Incumbent's commission expired February 4, 1922.

MAINE.

Luther C. Spiller to be postmaster at Mechanic Falls, Me., in place of F. A. Millett, removed.

Reed H. Ellis to be postmaster at Rangeley, Me., in place of T. C. Haley, resigned.

MASSACHUSETTS.

Charles H. Spaulding to be postmaster at Lexington, Mass., in place of J. H. Kane. Incumbent's commission expired January 24, 1922.

MICHIGAN.

Andrew W. Reinhard to be postmaster at Brimley, Mich. Office became presidential July 1, 1922.

MINNESOTA.

Raymond R. Swanson to be postmaster at Bronson, Minn. Office became presidential January 1, 1922.

Herman O. Hoganson to be postmaster at Perley, Minn. Office became presidential July 1, 1922.

Gustof A. Johnson to be postmaster at Hallock, Minn., in place of A. D. Bornemann. Incumbent's commission expired June 6, 1922.

James A. Christenson to be postmaster at Preston, Minn., in place of M. E. Gartner, resigned.

William A. Clement to be postmaster at Waseca, Minn., in place of Charles Spillane. Incumbent's commission expired January 24, 1922.

MISSISSIPPI.

William A. Shelby to be postmaster at Rosedale, Miss., in place of L. W. Nugent. Incumbent's commission expired July 21, 1921.

MONTANA.

Frank D. Worcester to be postmaster at Geyser, Mont. Office became presidential October 1, 1920.

T. Lester Morris to be postmaster at Corvallis, Mont., in place of J. M. Cochran, resigned.

NEVADA.

Helen M. Willis to be postmaster at Ruth, Nev., in place of T. B. Voog, resigned.

NEW JERSEY.

Israel C. Harris to be postmaster at Alloway, N. J. Office became presidential January 1, 1922.

Clair McFarland to be postmaster at Monroeville, N. J. Office became presidential July 1, 1922.

Harry J. Corwin to be postmaster at Paterson, N. J., in place of J. P. McNair, resigned.

NEW MEXICO.

John A. Dickson to be postmaster at Fort Bayard, N. Mex., in place of P. J. Reynolds, resigned

NORTH CAROLINA.

Claud S. Rowland to be postmaster at Pinetown, N. C. Office became presidential October 1, 1921.

Calvin Y. Holden to be postmaster at Wake Forest, N. C., in place of O. K. Holding, resigned.

OKLAHOMA.

Richard H. Everett to be postmaster at Broken Bow, Okla., in place of J. E. Wallace. Incumbent's commission expired February 4, 1922.

OREGON.

George C. Peterson to be postmaster at Bay City, Oreg. Office became presidential January 1, 1921.

Charles B. Wilson to be postmaster at Newberg, Oreg., in place of John Larkin. Incumbent's commission expired July 21, 1921.

PENNSYLVANIA.

Frank T. Stiner to be postmaster at Moylan, Pa. Office became presidential October 1, 1920.

George W. Murphy to be postmaster at Hawley, Pa., in place of J. F. Drake, resigned.

Harry C. Koller to be postmaster at Myerstown, Pa., in place of P. F. Leininger, deceased.

TEXAS.

George Rice to be postmaster at Jayton, Tex. Office became presidential October 1, 1920.

VERMONT.

George H. Millis to be postmaster at Groton, Vt., in place of G. N. Clark. Incumbent's commission expired January 13, 1921.

William C. White to be postmaster at Northfield, Vt., in place of G. F. Hubbell, resigned.

VIRGINIA.

John W. Ketron, jr., to be postmaster at Lebanon, Va., in place of A. A. Ferguson, removed.

WASHINGTON.

Raymond M. Badger to be postmaster at Winthrop, Wash. Office became presidential January 1, 1921.

WISCONSIN.

George W. Taft to be postmaster at Necedah, Wis., in place of F. E. Christensen, resigned.

Charles W. Pfeifer to be postmaster at Sheboygan Falls, Wis., in place of George Wildermuth. Incumbent's commission expired January 24, 1922.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 24 (legislative day of April 20), 1922.

MISSISSIPPI RIVER COMMISSION.

Col. George M. Hoffman, United States Army, to be a member of the Mississippi River Commission.

UNITED STATES DISTRICT JUDGE.

Robert M. Gibson to be United States district judge western district of Pennsylvania.

PROMOTIONS IN THE ARMY.

MEDICAL OFFICERS' RESERVE CORPS.

George Edmund de Schweinitz to be brigadier general.

SIGNAL OFFICERS' RESERVE CORPS.

Clinton Goodloe Edgar to be brigadier general.

ENGINEER OFFICERS' RESERVE CORPS.

William Barclay Parsons to be brigadier general.

FIELD ARTILLERY OFFICERS' RESERVE CORPS.

Burke Haddan Sinclair to be brigadier general.

MEDICAL CORPS.

Thomas Franklin Weldon to be captain.

AIR SERVICE.

Capt. Dudley Blanchard Howard, Infantry, Regular Army, by transfer.

First Lieut. John Dean Barrigar, Field Artillery, Regular Army, by transfer.

PROMOTIONS IN THE NAVY.

NAVAL RESERVE FORCE.

Edwin B. Niver to be chaplain.

John J. Brokenshire to be chaplain.

POSTMASTERS.

IOWA.

Frank K. Hahn, Cedar Rapids.
Benjamin S. Borwey, Eagle Grove.
Alfred G. Rigby, Independence.
George Banger, La Porte City.
Janette E. Gilliland, Melbourne.
Phillip T. Serrurier, Sabula.
Frank M. Hood, Sergeant Bluff.
Flossie K. Pfeiff, West Burlington.

SOUTH CAROLINA.

Edward H. Jennings, Charleston.

WASHINGTON.

Herman S. Reed, Redmond.
Otto F. Reinig, Snoqualmie.
Gladys Jacobs, Vashon.

WITHDRAWAL.

Executive nomination withdrawn from the Senate July 24 (legislative day of April 20), 1922.

POSTMASTER.

William B. Sasser to be postmaster at Opp, in the State of Alabama.

SENATE.

TUESDAY, *July 25, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	France	McCumber	Shortridge
Borah	Frelinghuysen	McKinley	Simmons
Brandegee	Gerry	McLean	Smith
Broussard	Gooding	McNary	Smoot
Bursum	Hale	Nelson	Spencer
Calder	Harreld	New	Stanley
Cameron	Heflin	Newberry	Trammell
Capper	Jones, N. Mex.	Nicholson	Underwood
Caraway	Jones, Wash.	Oddie	Wadsworth
Colt	Kellogg	Overman	Walsh, Mass.
Culberson	Kendrick	Pepper	Walsh, Mont.
Cummins	Keyes	Phipps	Warren
Curtis	Ladd	Rawson	Watson, Ind.
Dial	Lodge	Robinson	Willis
du Pont	McCormick	Sheppard	

Mr. GERRY. I desire to announce that the Senator from Nevada [Mr. PITTMAN] is absent owing to illness in his family, and that the Senator from Georgia [Mr. WATSON] is absent on account of illness.

The PRESIDENT pro tempore. Fifty-nine Senators have answered to their names. There is a quorum present.

PETITIONS.

Mr. CAPPER presented resolutions adopted by the Leavenworth Chamber of Commerce and the Kansas City Clearing House Association, both in the State of Kansas, favoring enforcement of the United States Supreme Court decree directing the divorcement of the Central Pacific Railway from the Southern Pacific Co., etc., which were referred to the Committee on Interstate Commerce.

RAILROAD SITUATION IN COLORADO.

Mr. PHIPPS. I ask unanimous consent to have read at the desk a short resolution which I have received from the Trinidad-Las Animas County (Colo.) Chamber of Commerce.

There being no objection, the resolution was read and referred to the Committee on Interstate Commerce, as follows:

THE TRINIDAD-LAS ANIMAS COUNTY CHAMBER OF COMMERCE,
Trinidad, Colo., July 21, 1922.

Hon. LAWRENCE C. PHIPPS,
United States Senate, Washington, D. C.

DEAR SENATOR PHIPPS: At a special meeting of the board of directors of the Trinidad-Las Animas Chamber of Commerce, held in this city Thursday afternoon, July 20, 1922, the following resolution was unanimously adopted:

"Whereas the present deplorable situation resulting from the strike of the railway shopmen is of common knowledge and resolves itself into the undeniable fact that this strike is not against the railways as employers but against the Government of the United States, and that it is an indisputable fact that when the arm of our Government

is opposed we are either Americans and Government supporters or we are not: Therefore be it

"*Resolved by the board of directors of the Trinidad-Las Animas County Chamber of Commerce*, That as the Railway Labor Board was duly organized under Federal law for solving problems which arise between railroad employers and employees, and upon public sentiment depends the success of the board's operations, and wage earners employed by the railroads have accepted decisions by said board increasing the pay of railroad employees, and the employing railways acquiesced in said decisions, we conceive it to be our duty as directors of the chamber of commerce and as citizens to give our fullest possible support to the President in his call upon the railroads and their employees to acquiesce in the decisions of the Railway Labor Board, whether such decisions affect the interests of the railroads or of their employees; therefore be it further

"*Resolved*, That we call upon all our citizenship to take a stand as to whether or not they are for our American institutions and whether or not a very small minority of the people in the United States can tie up their arteries of transportation and interfere with the United States mail by refusing to accept the rulings of the United States Labor Board, thereby defying our Government and imperiling our institutions upon which our freedom is based."

I have been instructed as secretary of this organization to transmit the above resolution to you for your information.

Very respectfully yours,

THE TRINIDAD-LAS ANIMAS COUNTY CHAMBER OF COMMERCE.
WILLIAM E. INGLIS, *Secretary*.

EXAMINING DIVISION OF CIVIL SERVICE COMMISSION.

Mr. STERLING. Mr. President, on behalf of the Select Committee on Civil Service appointed to investigate the Civil Service Commission and the examining division of the commission under Senate resolution 199, I submit a report (No. 836), which I send to the desk. I simply wish to say that there was a committee of five members appointed to conduct the investigation. Four members of the committee have joined in signing the report. The other member of the committee unfortunately was not in the city, and I understand that he will not be here for some time. I regret that he is not now here so that we might at least have conferred with him before submitting the report, but there has been already an extension of time, and the time has come when the report should be submitted. I ask that the report may be printed and lie on the table.

The PRESIDENT pro tempore. In the absence of objection, it will be so ordered.

PROPOSED COAL COMMISSION.

Mr. BORAH. I ask permission to introduce a bill to be referred to the Committee on Education and Labor.

The bill (S. 3865) to establish a commission to be known as the United States Coal Commission, was read twice by its title.

Mr. BORAH. This measure, I desire to say, is not intended to deal with the present immediate condition with reference to the coal industry. I should not want to have that impression obtain. It has for its purpose, however, the preparation which may be necessary in order to deal with the coal industry in the future.

I move that the bill be referred to the Committee on Education and Labor.

The motion was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DIAL:

A bill (S. 3866) for the relief of George J. Hunter; to the Committee on Claims.

By Mr. KENDRICK:

A bill (S. 3867) authorizing the addition of certain lands to the Medicine Bow National Forest, Wyo., and for other purposes; to the Committee on Public Lands and Surveys.

SALARIES OF UNITED STATES ATTORNEYS AND MARSHALS.

Mr. BROUSSARD submitted an amendment intended to be proposed by him to the bill (S. 425) fixing the salaries of certain United States attorneys and United States marshals, which was referred to the Committee on the Judiciary and ordered to be printed.

LABOR CONDITIONS IN NEW ENGLAND COTTON INDUSTRY.

Mr. GERRY submitted the following resolution (S. Res. 326), which was read:

Resolved, That the Senate Committee on Education and Labor, or any subcommittee thereof to be appointed by it, is hereby authorized and directed to make a thorough investigation of the labor conditions existing in the cotton industry in New England, and report its findings to the Senate.

Mr. GERRY. Mr. President, I have offered the resolution just introduced because for a considerable time past there have been very serious labor conditions in New England, which have given rise to great hardship among the people. I believe that those conditions should be investigated; and I also believe that at this time, when we are debating the tariff, and we have just considered the committee amendments in the cotton schedule, it is very appropriate that we should take up and find out more in detail the cost of production and what labor is receiving in this industry.

I move that the resolution be referred to the Committee on Education and Labor.

The motion was agreed to.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from Wisconsin [Mr. LENROOT] to the committee amendment. The Secretary will state the proposed amendment to the amendment.

The READING CLERK. It is proposed to add at the end of paragraph 1101 the following proviso:

Provided further, That in no case shall the duty or duties imposed in this paragraph exceed 50 per cent ad valorem.

Mr. WADSWORTH and Mr. HEFLIN addressed the Chair.

The PRESIDENT pro tempore. The Senator from New York.

Mr. WADSWORTH. Does the Senator from Alabama desire to present something for printing?

Mr. HEFLIN. I desire to make some remarks.

Mr. WADSWORTH. I shall not speak long.

Mr. President, I assume that it is proper to discuss at the same time the amendment offered by the Senator from Wisconsin [Mr. LENROOT] to the pending paragraph, and also the amendment which he has announced he intends to propose to the succeeding paragraph. I think the two may well be discussed together, as they both involve the same principle, namely, a maximum limitation upon the equivalent ad valorem duty to be collected upon wools imported into the United States.

At the outset, Mr. President, let me say that I am in complete accord with the Committee on Finance in its proposal that there shall be a duty of 33 cents a pound upon the scoured content of the finer grades of wool. I think the proposal which the committee has made is infinitely preferable, of course, to the Payne-Aldrich rate, which resulted in great disappointment to woolgrowers, and a species of tactics on the part of the manufacturers, and, perhaps, of the importers, which, to say the least, were contrary to the spirit of the law which was enacted by the Congress at that time. The imposition of a duty on the scoured content of the wool, I think, is the sound and most practicable way of reaching this problem, and I make no complaint against the imposition of the duty of 33 cents on the scoured pound of wool such as fine, one-half blood, and three-eighths. I think our wool producers are entitled to that degree of protection.

The wool industry in this country is of immense importance. It should be sustained, for it produces an article which the people need every day in their lives. For the wool industry of this country to be permitted to perish, even though it perish slowly and by degrees, would be contrary to the national interest. It turns out after an examination of this problem, however, that of the coarse or low-grade wools, so called, we produce a very small amount proportionate to our total production. I think the figures given yesterday by the senior Senator from Utah [Mr. SMOOT] were to the effect that of all the wools we produce in this country only 1 per cent is of the so-called low-grade; and of all the wools that we consumed in this country, both of the domestic and the imported, only 4 per cent is of that low grade.

The imposition of 33 cents a scoured pound, when carried down to include the coarser wools, results in the imposition of an exceedingly heavy rate—I think out of all proportion—upon the low-grade wools. As the Senator from Wisconsin stated on yesterday, the rate in the case of low-grade wools, which have the smallest degree of shrinkage, would run as high, at least based upon the prices of a month ago, as 127 per cent ad valorem equivalent.

Mr. KELLOGG. Mr. President, will the Senator yield to me?

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Minnesota?

Mr. WADSWORTH. I yield.

Mr. KELLOGG. I notice in a publication in 1912, issued by what is known as the National Association of Wool Growers, a table showing the production of wool by States, and in one column is the percentage of fine wool and in the other column of medium wool. That medium wool is not the coarse grade to which the Senator from New York refers?

Mr. WADSWORTH. I do not understand that it is.

Mr. KELLOGG. Then, practically there is none of that coarser wool produced in this country.

Mr. WADSWORTH. It comprises a very small percentage of the whole wool production, and yet it has an important function, as it were, from the consumers' standpoint. The coarser wools or low-grade wools, as they are called, are used to a certain extent in the manufacture of the cheapest clothing. In the rougher grades I think it is not inaccurate to say that those wools are used to a considerable extent, and in a somewhat important way in the manufacture of the poor man's clothing. The curious spectacle is exhibited by the rates as now proposed by the committee of the lightest tariff duty being imposed upon the rich man's clothing and the heaviest duty upon the poor man's clothing. The finer cloths are made largely, as I understand, from the so-called fine or half-blood wools. The equivalent ad valorem rate emanating from a 33 cents a pound duty on the scoured content rate on the fine is 35 per cent; on the half blood it is 44 per cent; and on the three-eighths it is 56 per cent. Those three grades of wool are the better grades or are the grades more frequently used in the manufacture of the better quality of clothing.

Mr. POMERENE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Ohio?

Mr. WADSWORTH. I yield.

Mr. POMERENE. Are the figures now being given by the Senator from New York based upon present prices of wool?

Mr. WADSWORTH. They are based upon the prices of May, 1922.

Mr. GOODING. I wish to correct the statement made by the Senator from New York in reference to the medium wools. In that classification of medium are included low-grade wools. That wool is all classed together in the table to which the Senator from Minnesota [Mr. KELLOGG] has referred. That table shows the percentage of fine and low grade and quarters and all the other grades. They are usually classed as medium wools. They are all shown there—the mixed and the braids, too.

Mr. WADSWORTH. The term "medium" is a somewhat all-inclusive term.

Mr. GOODING. Yes; it takes in half-blood wool and from half blood down.

Mr. WADSWORTH. But the term "low grade" or "quarter blood" is from three-eighths down?

Mr. GOODING. If the Senator from New York cares to be informed as to the figures, I will read the table which gives the quantity and the grades of wool produced by the States. I should like to read it to the Senator.

Mr. KELLOGG. There seems to be a dispute as to the quantity of low-grade wool which we import, the price of which in 1921 ranged from 15 cents to 22 cents in the foreign market, and now ranges, say, from 15 cents to 25 cents, or something like that, and I was trying to ascertain whether corresponding grades of wool are produced in this country to any extent.

Mr. WADSWORTH. To a very small extent.

Mr. GOODING. Mr. President, I will have to disagree with the Senator from New York as to that.

Mr. KELLOGG. The Senator from Idaho says they are; I do not know.

Mr. GOODING. Fully 10 per cent of the class of wool comparable to what are called the New Zealand cross-breds is grown in this country. It is now selling for 25 cents on the London market. That class of wool is largely grown on the farm. I should be glad if the Senator will let me put in the RECORD the figures contained in the bulletin of the National Association of Woolgrowers, so that he will be fully advised.

Mr. WADSWORTH. I am perfectly willing that the Senator should do that.

Mr. GOODING. I am sure the Senator wants to be correct.

Mr. WADSWORTH. Certainly.

Mr. POMERENE. For what year are the figures referred to by the Senator from Idaho?

Mr. GOODING. The figures are for the year 1912.

Mr. WADSWORTH. I think, however, the Senator will admit that since 1912 either fashion or some other element has intervened, with the result that there is a much greater demand for the fine wools than for the coarse wools.

Mr. GOODING. No; I can not agree with the Senator. The sheep used on the farm are largely what are called dual-purpose sheep. The ewes are coarse and large and produce lamb as well as wool. Maine produces 10 per cent fine—that is, merino wool—and 90 per cent medium wool.

Mr. WADSWORTH. Is the Senator going to read the whole table in my speech?

Mr. GOODING. I thought perhaps the Senator would care to know just what the figures are by States, so that they may be readily understood from the RECORD. New Hampshire produces 25 per cent of fine and 75 per cent medium; Vermont 20 per cent fine and 80 per cent medium. Massachusetts produces all medium wools, and no fine wools at all; in other words, the wools grown in Massachusetts are half blood down to low quarter. Connecticut produces all medium, and that is likewise true of Rhode Island. New York produces 33 per cent fine and 67 per cent medium; New Jersey all medium wools. Pennsylvania 60 per cent fine and 40 per cent medium; Delaware produces all medium; Maryland all medium; West Virginia 75 per cent fine and 25 per cent medium; Ohio 60 per cent fine and 40 per cent medium; Michigan 25 per cent fine and 75 per cent medium; Indiana 15 per cent fine and 85 per cent medium; Illinois 25 per cent fine and 75 per cent medium; Wisconsin 20 per cent fine and 80 per cent medium; Minnesota 20 per cent fine and 80 per cent medium; Iowa 30 per cent fine and 70 per cent medium; Missouri 15 per cent fine and 85 per cent medium. The States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Tennessee produce all medium and no fine wool at all.

Those figures are all for 1912, but there has not been any change in character of sheep grown since that time, so far as breeds are concerned. They are practically the same to-day as they were then. So it is not the farmers of the West, as the Senator would have us believe, who are vitally interested in the coarser wools.

Mr. WADSWORTH. Mr. President, I have not said anything about the West; I have not tried to make anybody believe anything about the sheep men in the West as distinguished from the sheep men elsewhere. I have just as much interest in the sheep men of the East as I have in those in the West, and on a very small scale I am in the business myself in the East.

Mr. President, as I was saying a moment ago, the equivalent ad valorem rates in the three finer grades under the committee amendment run from 35 per cent up to 56 per cent. On the lower grades, however, the production of which in this country is exceedingly small as compared with the upper three grades, the equivalent ad valorem rates are 77 per cent for one-quarter bloods and 137 per cent for low grades. It is only against the last two that I am making any complaint. I do not believe that an equivalent ad valorem of 137 per cent or even 100 per cent or of 90 per cent——

Mr. WALSH of Montana. Mr. President, to which bracket does the Senator refer as being the two which he assails? I have been trying to follow the Senator, but I do not know to what particular classes he is addressing himself.

Mr. WADSWORTH. I am criticizing the committee rates as applied to one-quarter bloods and low grades.

Mr. WALSH of Montana. Where does the Senator find those expressed?

Mr. WADSWORTH. They can be identified in the bill by a comparison of the relative shrinkage.

Mr. WALSH of Montana. That is what I wanted to know. Where does the Senator commence and where does he leave off the changes which he suggests or is prepared to suggest?

Mr. WADSWORTH. Let me say to the Senator that I do not suggest any changes in the rates as fixed on pages 140, 141, 142, and the first part of 143, except the adoption of the amendment which is to be offered by the Senator from Wisconsin, fixing 60 per cent as the maximum equivalent ad valorem. The one-fourth blood averages a shrinkage of 33 per cent and a yield of scoured wool of 67 per cent. One might identify that in that long list.

Mr. WALSH of Montana. That would be commencing on line 13, page 142?

Mr. WADSWORTH. Line 13; yes.

Mr. WALSH of Montana. The Senator proposes to make some changes in the language following line 13, page 142?

Mr. WADSWORTH. I understand that it is the purpose of the Senator from Wisconsin [Mr. LENROOT] to offer an amendment, which probably will go in after line 8 on page 143, to this effect:

Provided, however, That no duty shall be collected in excess of 60 per cent equivalent ad valorem.

Mr. WALSH of Montana. That would apply to the whole paragraph, would it not?

Mr. WADSWORTH. Yes; that is true, but its effect would be confined to the two lower grades of wool, because the equivalent ad valorem on the three upper grades of wool is less than 60 per cent anyway.

Mr. WALSH of Massachusetts. In other words, Mr. President, its effect would be to put a maximum duty of less than 33 cents a pound upon the lower grades of wool?

Mr. WADSWORTH. Upon the lower grades of wool and only the lower grades. I have no criticism to make of a duty of 33 cents a pound on the upper grades. That is the kind of wool that we produce in this country in overwhelming proportions. The great majority of wool producers are engaged in the production of those three upper grades, probably mostly three-eighths and one-half bloods.

Mr. McCUMBER. Mr. President, I suppose the Senator has in mind, of course, just how he will fix the compensatory duty upon cloth when he adopts an ad valorem rate upon wools which may be one-tenth of one class and two-tenths of another and three-tenths of another and one-half of another. I certainly should be glad to be enlightened on that subject, because I confess I would not know how to do it.

Mr. WADSWORTH. Mr. President, that matter was discussed at great length yesterday afternoon by the Senator from Wisconsin [Mr. LENROOT], the Senator from Utah [Mr. SMOOT], the Senator from New Mexico [Mr. BURSUM], and others.

Mr. McCUMBER. And the Senator from Wisconsin admitted that he knew no formula whereby it could be worked out, but he thought it might be.

Mr. WADSWORTH. The Senator from Wisconsin, as I recollect—and I think I heard every word he said—admitted that there were certain difficulties in one or two instances, but he contended that those difficulties would not result in any greater degree of vagueness or indefiniteness than some of the provisions already in this bill. For myself, I believe with the Senator from Wisconsin that this thing can be worked out. I do not think it is an impassable barrier. There may be one or two difficulties which will cause some trouble; but the trouble which they will cause, in my humble judgment, is not to be compared to the trouble that will be caused when it is known all over this country that the cheapest garments are the heaviest taxed.

Mr. McCUMBER. Mr. President, I want the Senator to get right down to the real point that I am trying to bring to his attention. To simplify it, if he will allow me, if we put a duty of 25 cents a bushel upon wheat, and it takes 4½ bushels of wheat to make a barrel of flour, we have no difficulty in deciding that the duty on the flour should be $1.12½; but if we say that Scotch fife is worth $1.25 a bushel, and that blue stem is worth $1 a bushel, and that marquis is worth 75 cents a bushel, and then we adopt an ad valorem rate, and we mix these different kinds of wheat in different quantities, how are we going to say what the duty shall be upon a barrel of flour? If it is 25 cents a bushel, it is $1.12½, no matter whether it is made of 75-cent wheat or $1 wheat or $1.25 wheat; the flour would take the duty upon that bushel; but when it is mixed in all different kinds of ratios, I can not see for the life of me how we could possibly arrive at any one point and say that that shall be the duty upon the barrel of flour. I must admit that it is an impossibility, and I can not see the possibility of making a differential upon the different kinds of fabrics of wool which may have all of these mixtures in their make-up and say that the duty on a yard of cloth shall be so much. I should like to have the Senator explain how it can be done.

Mr. SMOOT. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Utah?

Mr. WADSWORTH. I yield.

Mr. SMOOT. It has been stated several times on the floor of the Senate that the cloth made into the poor man's suit carries a higher rate of duty than the cloth made into the rich man's suit. That can not be. I call the Senator's attention to paragraph 1109. That is where the cheap cloths come, and the cheap cloths are in the first part of that paragraph:

> Woven fabrics, weighing more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 60 cents per pound, 26 cents per pound and 40 per cent ad valorem.

That is where the cheap cloths fall that go into the cheap suits. The duty is not 50 per cent; it is not 49 per cent; it is 26 cents a pound and 40 per cent ad valorem. I do not want to take the time of the Senator, but when I get the floor I want to explain to the Senate why those rates are fixed as they are, and I want also to explain to the Senate why it will be impossible to administer the provision proposed by the Senator if it is enacted into law.

I want to say frankly to the Senator from New York that I had a great deal of sympathy with the amendment, and thought if there was any way out of it I would be glad to support it. I worked nearly all night Saturday night, I worked the greater part of Sunday, and I worked Sunday evening, trying to get out some kind of a plan that could be administered if this amendment was agreed to; and I say to the Senator frankly that I have come to the conclusion that it is an absolute impossibility to administer it justly, and I can not see how it is possible. The only way we can get away from it at all and not have another rate that would give the manufacturer an undue compensatory duty, such as was given him in the Payne-Aldrich bill, is to do just exactly as we have done in this particular bill, in my opinion.

Mr. WALSH of Massachusetts. Mr. President, may I suggest to the Senators from Utah and New York that the House had no difficulty in levying a specific duty on the clean content, with a proviso for a maximum ad valorem, and they worked out compensatory duties, and the Senate committee have followed in large part the compensatory duties levied by the House committee.

Mr. SMOOT. No, Mr. President; the Senate knew too well that the House provision could not be administered.

Mr. WALSH of Massachusetts. The Senator agrees that they attempted to levy a specific duty on the clean content, with a maximum ad valorem.

Mr. SMOOT. Certainly.

Mr. WALSH of Massachusetts. And he says they failed when they came to translate that into compensatory duties.

Mr. SMOOT. Mr. President, if the House provision had become law as it is now, we would have had a Payne-Aldrich bill multiplied time and time again.

Mr. WALSH of Massachusetts. I am very glad to have that public information that the House was about to repeat the disastrous consequences of the Payne-Aldrich bill.

Mr. SMOOT. It would only be in the case of the wools referred to to-day, those coarse wools which are at an abnormally low price to-day in all the world. In fact, you see in nearly every week's London quotations, when they come to quarter bloods, that there is no demand; they are unsalable. Week after week they can not sell them at any price.

Mr. WADSWORTH. Mr. President, I can not pose as an expert in this matter as can—and very justly so—the Senator from Utah. It is very difficult for me to believe, however, that with all the experience that our administrations in the past have had in the appraisal of values and the examination of goods that are imported into this country, whether in the raw-material stage or in the manufactured stage, some way can not be worked out by which there can be distinguished in a piece of cloth that element which is not finer than 50s quality, which, I understand, is the maximum of quality that goes with the lowest grades of wool. I may be wrong about it, but I have some faith in the proposition that this thing can be worked out if it is approached in a sympathetic spirit.

I am not attacking this thing as a whole. I am not attacking the work of the Finance Committee as a whole. I think it has done excellent work in the greater portion of its task in connection with wool; but I do want the Senate to understand what the effect will be with respect to these lowest grades of wool. It is going to be almost impossible to defend the imposition of any such equivalent ad valorem duty. No explanation can be given of it, and if you go back to the people and say, "Oh, well, we had to do it, because there was no other way except to do it," you will not get a very encouraging reply from anybody. There must be some way.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from New York yield to the Senator from Idaho?

Mr. WADSWORTH. I yield.

Mr. GOODING. Is the Senator advised as to where these coarse wools are imported—in what ports they are imported?

Mr. WADSWORTH. I am not. I do not care where they are imported.

Mr. GOODING. Evidently the State of New York must be very largely interested in these coarse wools. I will read the importations of the different classes, and I will read just the millions.

There were imported into Boston, of class 1, 250,000,000 pounds—these are the figures for 1920—class 2, 7,000,000 pounds; class 3, 7,000,000 pounds.

New York: First class, 67,000,000 pounds; second class, 8,000,000 pounds; third class, 55,000,000 pounds.

Philadelphia: First class, 3,000,000 pounds; second class, 999,000 pounds; third class, 8,000,000 pounds.

So that 75 per cent of all the coarse wool the Senator is now discussing, which very largely displaces our quarters, low quarters, and braids, comes into New York. If that is true, evidently these wools which the Senator is now discussing are manufactured into carpets and other coarse fabrics in the State of New York very largely.

Mr. WADSWORTH. Mr. President, it is utterly immaterial to me where these wools are brought in or where they are manufactured into a finished product. The only thing I am interested in is this: No matter where they are brought in or

where they are manufactured, they are used finally all over the United States. Everybody is affected in one way or another. It is going to be very difficult, I say in all seriousness, to explain how it is that the wool that is manufactured into carpet pays no duty and the same wool when used in clothing pays 100 per cent. Clothing is just as necessary as is carpet. A good many people get along without carpets, but I have yet to meet the people who get along for any length of time without clothes. It is this inconsistency against which I am directing my remarks, not in any spirit of hostility to the woolgrowers or to any element of our population engaged in the business, directly or indirectly.

Mr. McCUMBER. Mr. President, may I ask the Senator whether he thinks, if we produce, say, 1 per cent of carpet wools, that we should place a duty upon the other 99 per cent to take care of that 1 per cent?

Mr. WADSWORTH. No; I have not suggested that.

Mr. McCUMBER. The Senator can not see any difference; but is there not a little difference, where we produce 1 per cent of one product and 50 per cent of another product used in the United States, in determining whether we should have one free and whether we should have a protection on the other?

Mr. WADSWORTH. Yes; if you will be consistent in the two uses and not have such a tremendous spread between.

Mr. McCUMBER. Suppose we produced no high-grade wool in the United States. Then the Senator would not be in favor of a duty on it, even though we had to put a 50 or 60 per cent duty upon the wool that was produced in the United States and went into the manufacture of clothing.

Mr. WADSWORTH. I did not say I would be against any duty on it. I said that I was against a duty of over 100 per cent.

Mr. McCUMBER. But the Senator was making his argument upon the assumption that he could see no reason whatever for a duty of any per cent we might see fit to place upon the clothing wool.

Mr. WADSWORTH. Oh, no.

Mr. McCUMBER. Here is the point: Suppose this duty is necessary for the protection of the clothing wool, no matter what it is; is the Senator willing to give the duty upon the wool that goes into clothing necessary to protect the American producer of wool?

Mr. WADSWORTH. Generally speaking; yes.

Mr. McCUMBER. Very well. Then because we have to put what might be regarded as a high duty on that character of wool, is the Senator in favor of putting a duty upon carpet wool, where we do not need it, even though it might not be one-tenth of a per cent of what the other was?

Mr. WADSWORTH. I have not urged putting a duty on carpet wools at all.

Mr. McCUMBER. I know; but it seems to me the Senator's argument is based upon the assumption that if we put a certain duty upon clothing wools there is no excuse for not putting some duty upon carpet wools. I can not agree with the Senator in that.

Mr. WADSWORTH. No; I approach it from this angle, that if we let carpet wools in free, we might be a little gentle, at least, in putting a duty upon the same wool used for clothing. I do not consider 100 per cent a gentle duty. I think 60 per cent on that kind of a product is enough.

Mr. McCUMBER. That depends on whether you want to give protection to the producer of the wool.

Mr. WADSWORTH. I think that will give it.

Mr. McCUMBER. If it takes a hundred per cent to protect him, I am in favor of giving it to him. If the Senator can show that it does not take a hundred per cent, I would be willing to cut it down to whatever percentage is necessary.

Mr. WADSWORTH. We may all have our ideas as to the cost of producing wool of the different grades, but it is up to the committee to prove that it takes a duty of 137 per cent to protect the American producer of the lowest grade wool.

Mr. McCUMBER. Does it cost any less to produce a pound of low-grade wool in the United States than of high-grade wool?

Mr. WADSWORTH. That depends on where it is produced, and an infinite variety of circumstances surrounding it.

Mr. McCUMBER. As a general rule, is there any difference between the cost of producing the higher grade and the cost of producing the lower grade? The sheep which produce the low-grade wool consume as much, and the labor in taking care of the sheep will be as high. I can not see that you can draw a line and say that a coarser wool costs less per pound to produce than the finer wool. It may be worth less, but the actual cost, if I have read the record correctly, is about the same. Therefore it would require as much duty to protect the one as to protect the other.

Mr. WADSWORTH. Mr. President, that is a question of calculation in different regions of the country. I would be sorry for the future of the wool industry in the United States if we came to the conclusion that 137 per cent ad valorem was necessary for its protection. I know what would happen. The imposition of any such duty over any period of years would result finally in the abolition of all duties, and we would not have any wool industry. That is what I fear.

Mr. McCUMBER. In answer to that, what I fear is that if you insist upon the duty upon the manufactured product, and refuse it to those who produce the wool, you will bring about exactly the same result, the abolition of the protection upon your manufactured product.

Mr. WADSWORTH. The Senator is exactly right, and I shall never insist upon any such thing. In fact, I shall insist against it.

Mr. LENROOT. I want to ask the chairman of the committee whether any woolgrower in America is producing quarter bloods and lower as a business for the purpose of growing wool?

Mr. McCUMBER. Mr. President, it does not make any difference whether he is producing it for mutton or whether he is producing it for wool. The two uses together make up the costs and the value, and we have to consider both the mutton and the wool with every class of sheep in determining the cost and the profit.

Mr. WADSWORTH. There is a different relative value in different grades of sheep.

Mr. GOODING. Mr. President, let us make that clear. Many flocks upon the farm are quarters and low quarters and braids.

Mr. WADSWORTH. They are the mutton sheep, are they not?

Mr. GOODING. They are growing wool, and that must be taken into consideration.

Mr. WADSWORTH. Is not the greater proportion of the income from the lambs?

Mr. GOODING. In those cases it is. At the same time the commission has found that it costs 45 cents to grow a pound of all classes of wool.

Mr. WADSWORTH. Forty-five cents, including 6 per cent interest on the invested capital.

Mr. GOODING. They pay even as high as 10 per cent for money. All this discussion, of course, is in the interest of the poor man; there is not any doubt about it. The Senator is not discussing it from any other point. It is not in the interest of the manufacturer, because this coarse wool is imported and comes through New York Harbor and is manufactured in New York State. I do not charge that.

Mr. WADSWORTH. The Senator does not charge it; he just mentions it.

Mr. GOODING. If the Senator will permit me, with a 45-cent duty on this imported wool to-day, a suit of clothes will cost the poor man $1.68 more. That includes the cost of the wool, the duty, and everything that goes with it. That duty is going to be reduced to 12 cents a pound when this bill passes. Then, when you take the low quarter, selling in Boston to-day for 44 cents on a scoured basis, a suit of clothes is going to cost him $1.32 more, made out of all wool, a yard wide. If you go back to January of this year, when wools were 15 and 20 and 40 per cent lower than they are now, the clothes were very much cheaper. Take the price of this coarse wool in Boston. A suit of clothes will cost the poor man about $1.10 more the suit if you give wool from 30 to 35 cents more on the scoured basis. That is all there is to this question.

I know the Senator from New York does not understand this, but a month ago there was an organization perfected, and the word went out that there was going to be a reduction on the low-grade wool, the cheap wool, at the present time, and overnight the price of wool went down 2 cents in all the Western States. They stopped buying for a time. They are not doing much now. The market has not gotten back to where it was. The Senator, of course, did not understand that. I am not charging that to him.

Mr. WADSWORTH. I am very much relieved, Mr. President. I do not intend to detain the Senate any longer. I merely wanted to make this general observation. I am sincerely and intensely interested in these agricultural rates. I think that the agricultural interests of the country are entitled, generally speaking, to the treatment given in this bill, and that that treatment should continue over a considerable period of years, as long at least as present economic conditions, expressed in world-wide figures, prevail.

What I fear is—and I address these remarks in all kindness to those Senators who have had special charge of the agricultural schedules, and upon occasion are termed the agri-

cultural bloc—what I fear is that in spite of the great good which has been done by or through them in the writing of these agricultural rates, generally, in this tariff bill, due to some glaring error which will arouse the animosity of millions of people who do not happen to be engaged in agriculture, there shall be a revulsion of feeling, and instead of making a correction here and there which may be needed in the agricultural schedules in years to come, the whole set of schedules will be attacked and torn down and destroyed and the American farmer put back where he had to start from some few years ago, before he was given any protection to amount to anything. It is that against which I warn. It is that which gives rise to my calling the attention of the Senate to an equivalent ad valorem duty of 137 per cent on a certain class of wool of which we raise only a small percentage. That is the kind of thing that is apt to destroy the agricultural schedules, and I am for their maintenance. I fear the effect of this thing.

Mr. WILLIS obtained the floor.

Mr. GOODING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. WILLIS. I yield.

Mr. GOODING. Mr. President, I merely want to make one observation. The Senator from New York seems to be very much alarmed by these high duties. Only last week he addressed the Senate, and I think put up a very good argument, showing that the glove manufacturers in his State needed a duty of from 92½ to 119 per cent, and I voted for it because I believe they do need it, with the world's conditions as they exist. He should have been alarmed about these high duties before to-day, it seems to me, when we are considering an agricultural product. The Senate gave him 75 per cent. I do not think the glove manufacturers have enough protection. I do not care how high a duty is. If the industry needs it, whether it is the rice industry, or the peanut industry, or any other industry, I have been voting for it, and I am going to continue to vote for it.

Mr. HEFLIN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Alabama?

Mr. WILLIS. The Senator from Alabama told me that he has some remarks which he desires to make at this time. I have been recognized by the Chair and have the floor, but I will yield briefly to the Senator.

FEDERAL RESERVE BOARD.

THE GOVERNOR MUST GO.

Mr. HEFLIN. Mr. President, I rise to protest against the pernicious activities of the Federal Reserve Board in inspiring friendly news articles for certain newspapers and suppressing news items unfavorable to its reprehensible and dangerous conduct.

I want to read to the Senate a letter from an officer in the National and State Bankers' Protective Association, of Atlanta, Ga. It reads as follows:

DEAR SENATOR HEFLIN: I inclose herewith copy of a decision rendered June 26, 1922, making permanent an injunction granted by Judge Wolverton, United States judge for the district of Oregon, in favor of the Brookings State Bank, of Oregon, against the Federal Reserve Bank of San Francisco, which explains itself.

I do not see any references to this decision in the newspapers of this section of the country. I had a telegram with reference to it from the plaintiff and inquired of the Associated Press representative if they would carry the story, and he said it would be handled by the Pacific coast department.

Did the papers in Washington carry any news story of the decision on June 27? If not, it is pertinent to ask why an item of this sort, that is of interest to banking and business interests throughout the country, does not receive the same publicity that decisions that can be colored to appear as victories for the Federal reserve banks on the par clearance question are given.

Mr. President, I submit again to the President of the United States, to the Senate, and to the country that the Federal Reserve Board governor has dragged the Federal Reserve Board into partisan controversies and political activities to an alarming degree. The board's power is being used for purposes never dreamed of by those who created it. Let me again call the attention of the President and the Congress to a decision handed down by the Supreme Court of the United States in which it severely condemns the conduct of the Federal Reserve Board.

Is it not strange, Mr. President, that no item of news went out from Washington telling the people of the country of that important decision of the highest court in the land? Is the Federal Reserve Board using its powerful influence to suppress news unfavorable to it? An editorial was sent me from a paper out in one of the States asking why it was that this news was not sent out from the Capital? I ask the Senate and I ask the country now: Why is it that the decisions of the Federal district courts and the Supreme Court condemning and criticizing the conduct of the Federal Reserve Board are kept out of the newspapers of the country?

Mr. President, I am going to read in my time briefly from the decision of the Supreme Court to which I referred to show how a Federal reserve bank accumulated checks amounting to thousands and tens of thousands of dollars and rushed in upon a poor little country bank and demanded payment all in one day. Here is what the Supreme Court said about that conduct, and I ask that it be printed in 8-point type.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HEFLIN. The Supreme Court said:

"The defendants say that the holder of a check has a right to present it to the bank upon which it was drawn, for payment over the counter, and that, however many checks he may hold, he has the same right as to all of them, and may present them all at once, whatever his motive or intent. * * * Most rights are qualified. A man has at least as absolute a right to give his own money as he has to demand money from a party that has made no promise to him; yet if he gives it to induce another to steal or murder, the purpose of the act makes it a crime.

"A bank that receives deposits to be drawn upon by check of course authorizes its depositors to draw checks against their accounts, and holders of such checks to present them for payment. When we think of the ordinary case, the right of the holder is so unimpeded that it seems to us absolute. But, looked at from either side, it can not be so. The interests of business also are recognized as rights, protected against injury to a greater or less extent, and in case of conflict between the claims of business on the one side and of third persons on the other lines have to be drawn that limit both. A man has a right to give advice, but advice given for the sole purpose of injuring another's business, and effective on a large scale, might create a cause of action. Banks, as we know them, could not exist if they could not rely upon averages, and lend a large part of the money that they receive from their depositors on the assumption that not more than a certain fraction of it will be demanded on any one day. If without a word of falsehood, but acting from what we have called disinterested malevolence, a man by persuasion should organize and carry into effect a run upon a bank, and ruin it, we can not doubt that an action would lie. A similar result, even if less complete in its effect, is to be expected from the course that the defendants are alleged to intend, and to determine whether they are authorized to follow that course it is not enough to refer to the general right of a holder of checks to present them, but it is necessary to consider whether the collection of checks, and presenting them in a body, for the purpose of breaking down the petitioner's business as now conducted, is justified by the ulterior purpose in view.

"If this were a case of competition in private business, it would be hard to admit the justification of self-interest, considering the now current opinion as to public policy, expressed in statutes and decisions. But this is not private business."

Now, Senators, get this suggestion:

"The policy of the Federal reserve banks is governed by the policy of the United States with regard to them and to these relatively feeble competitors. We do not need aid from the debates upon the statute under which the reserve banks exist to assume that the United States did not intend by that statute to sanction this sort of warfare upon legitimate creations of the States."

And the business men and bankers of the country never knew about that decision of the United States Supreme Court.

Now listen, Mr. President, to this:

"It is alleged that, in pursuance of a policy accepted by the Federal Reserve Board, the defendant bank has determined to use its power to compel the plaintiffs and others in like situation to become members of the defendant, or at least to open a nonmember clearing account with defendant and thereby, under the defendant's requirements, to make it necessary for the plaintiffs to maintain a much larger reserve than in their present condition they need."

They were attempting to drive them out of business, to kill them, or to make them come in and join the system. Is it any wonder that the Federal Reserve Board did not want the business men and bankers to know that the highest court in the country had condemned its conduct? Listen to this:

"To accomplish the defendant's wish, they intend to accumulate checks upon the country banks until they reach a large amount, and then to cause them to be presented for payment over the counter, or, by other devices detailed, to require payment in cash in such wise as to compel the plaintiffs to maintain so much cash in their vaults as to drive them out of business, or force them, if able, to submit to the defendant's scheme."

Is not this a strong arraignment of the inexcusable conduct of the Federal Reserve Board's conduct in trying to destroy a country bank? Do you wonder that they wanted to keep that news out of the newspapers? Does anybody doubt that they did keep it out?

Now, Mr. President, here is another case almost identical with the one I have just mentioned. On June 26, 1922, in the case of the Brookings State Bank of Oregon against the Federal Reserve Bank of San Francisco, Judge Wolverton, United States district judge of Oregon, made permanent an injunction against the Federal Reserve Bank of San Francisco. His decision is in line with the one I read by the Supreme Court, but the news of this decision was likewise suppressed.

Mr. President, there seems to be no extreme to which this board will not go with its cruel, coercive policies and punishments. Is it any wonder that State banks are asking the President not to reappoint Governor Harding? Is it any wonder that members of the Federal reserve banking system are asking the President not to reappoint him?

Now, this decision of the Federal district court sustaining the position of a State bank recently in the State of Oregon is worthy of more than passing notice. I have scores of letters about it. I have had newspaper clippings about it. Quite a lot of literature upon the subject has strangely disappeared from my desk that I expected to use to-day. But, Mr. President, here is a letter from an officer of the National and State Banks' Protective Association asking a Senator at the Capitol why it is that the papers do not carry the news when Federal district courts and the Supreme Court decided a case against the Federal Reserve Board's oppressive orders and policies. I ask the question now.

Oh, Mr. President, I know that this bold and unbridled power that I am condemning is a dangerous power. It has its press agents to attack me in every quarter of the country. I firmly believe that inspired editorials attacking me are written and accounted for with coin at the instance of the Federal Reserve Board. A speech made in this body, which pleased the Federal Reserve Board, defended its policy, and the board took that speech and printed it by the thousands and hundreds of thousands and broadcast the country with it without a cent of cost to the man who made it.

Mr. President, is it right and fair to permit such perversion of the Federal Reserve Board's power? How long can a Senator who is not rich continue his fight for the rights and interests of the people against a paid press agency and the circulation in unlimited supplies of speeches attacking that Senator's position? If a Senator makes a speech favorable to them, they have him praised by their press agents and circulate his speech in large numbers without cost or expense to him. This is done at the expense of the banks and the Government. If a Senator assails their position and dares to criticize their conduct, they refuse to permit some of the newspapers to carry to the country the news of the fight that he is making. Senators, is that right and is it fair? Should the Federal Reserve Board, a Government institution, be permitted to do such things? Senators, this conduct is fraught with grave danger to the country.

Let me submit to the President and to the Senate what occurred with reference to similar conduct by another banking system at another time. Back in the days of President Jackson the banking system of his time went into politics. The President himself had a measure that he wanted to put through Congress for the good of the American people. The banks wanted a certain other measure passed. They went to the President and told him that he must couple them together or at least consent to the passage of their measure, too. President Jackson said, "No; I am against your measure. The other measure is right and ought to pass." Then they said, "We will not permit your measure to pass." He said, "Can you do that?" They said, "Yes." He said, "That is too d—— much power for any institution in the country to have, and I will take it from you," and he did take it from them. He drove them out of politics. I want to show what the Federal Reserve Board is doing toward meddling with politics and controversies of every kind right under the very eyes of a Republican Senate. A few months ago a Member of Congress in the other branch assailed the policy of the Federal Reserve Board. What happened to him? He received a letter written by a member of the Federal Reserve Board, no doubt inspired by the governor of the board, telling him that he had better "lay off" of it, telling him that they would oppose him in the primaries, telling him to watch out, that he would have opposition.

I want to tell the Senate that to-day that Member of the House who was thus threatened by the Federal Reserve Board has opposition. Are they carrying out the threat that they made to him? Are you going to permit such as that to go on, Senators? What would Jackson have done if he had gotten hold of a letter that the head of the banking system had written to a Member of Congress who dared assail its policy and threatening to have him defeated if he kept it up? What would Jackson have done? He would have removed him from office.

Is the power and the influence of this great banking system to be used to suppress the truth and prevent just and righteous attacks from being made upon the policies of the Federal Reserve Board? Are those who want to see the Federal Reserve Board kept true to the purposes for which it was created to be maligned and discouraged in their worthy efforts?

Now, what else do we find? We find them not only threatening a Member of the House but they criticized me in the letter which they wrote, saying that I had better "lay off" and that the other fellow had better "lay off." Well, they have already threatened me. A newspaper reporter from this city sent to my State an article in which he said, naming the man, that Governor Harding and his friends were grooming a certain gentleman to oppose Senator HEFLIN in his next race for the Senate. I mention this to show you how the governor of the board is using his office in the attempt to frighten a Senator away from the honest discharge of his duty. Some of the papers that he has thus early inspired to attack me are also boosting the gentleman that "Governor Harding and his friends" have suggested, and the political game of the Federal Reserve Board goes merrily on. All this is being paid for out of the funds of the banks, which I think includes Government money, because, I repeat, the earnings of those banks, if not misused or squandered for political purposes, would to the extent of 90 per cent of them go to the Government of the United States. Senators, do you believe that the people of the United States are going to submit to such practices?

Mr. President, I have here the letter from the bank of Dallas, Tex. I want to comment upon it in this connection. In that letter it is said:

> As indicated in my reply to the second question, the fund was provided by charging the same to our expense account and therefore came out of our earnings.

Well, Mr. President, everyone who is familiar with the provisions of the Federal reserve act knows that after the running expenses are paid, after dividends are paid, 90 per cent of the money left goes into the Federal Treasury. Now I hold that this board had no right to expend from $4,000 to $7,000 in circulating to thousands and thousands of people in the United States a speech made by one Senator full of inaccurate and incorrect statements criticizing and assailing another Senator and his speech. Therefore every dollar of the money which was used by the Federal reserve banks under the order of the governor of the Federal Reserve Board was misused. They had no right to expend that money in that way.

Mr. President, the other day when discussing this matter the Senator from Connecticut [Mr. MCLEAN], who has objected to granting me permission to secure the names of the people to whom this other speech was sent, said that I would deny the Federal Reserve Board free speech. I told him that there were various ways that the board had of reaching the country; that the newspaper columns were open to it; that pamphlets were written under its inspiration; that magazine articles were written and paid for by it; that speeches were made by members of the board and its agents and officials of the banks, their circulation paid for by the Government or the banks, and that there was no denial of free speech or free communication from the board to the people. I have here a newspaper, the Charlotte Observer, which is published in Charlotte, N. C. Governor Harding was down there a few months ago and made a speech, and that newspaper carried it all; here it is, and it covers one side of the newspaper. Does that look as though the governor of the Federal Reserve Board has no opportunity to get his views before the people?

Mr. President, there never was such a press agency in the world as this man has established. I asked the other day for permission to circulate my speech amongst the people who read the other speech sent out at the expense of the Government and the banks, a speech which assailed my position and which I claim is full of inaccurate statements; but the Senator from Connecticut persisted in his objection to my having that permission. Here is a letter from Quincy, Mass., just received, which reads:

> MY DEAR SIR: I am a reader of the RECORD. I want to congratulate you upon your exposé of the Federal Reserve Board. Keep up the good work. I am informed by credible authority that one of the banks here has made $150,000 in the past two years on Liberty loans and other United States securities. If all the factions here in Massachusetts will unite there is no doubt the senior United States Senator, H. C. LODGE, can be defeated.
>
> Yours respectfully, CHARLES W. HANSCOM.

Mr. President, here is a New England man—and I take it he is a Republican—congratulating me upon the fight that I have made, and here is another New England man, a United States Senator, who will not even permit me to obtain the names of the people to whom a speech was sent attacking the position which that man congratulates me for taking.

I want to analyze the position of the Senator from Connecticut for just a moment. The Senator from Connecticut said that he had taken an oath when he came into this body to support free speech. Well, Mr. President, I claim that the Senator is denying free speech to me. There were two speeches made in the Senate, the speech by the Senator from Virginia [Mr. GLASS], which was nearly five hours in length, and my reply, which was five and a half hours long, on the greatest question that has come before the American people in many years. Here is the situation: The Federal Reserve Board that conducted the deflation policy was defended by the Senator from Virginia, and was indicted, arraigned, criticized, and condemned by me; and the facts that sustained my contention were furnished me by a former Comptroller of the Currency, Hon. John Skelton Williams, who himself was at the time a member of the Federal Reserve Board. I submit to the Senate and to the country and to all fair-minded people everywhere, that if this board picks out that speech and prints it and distributes it, I, another Senator, and being the Senator assailed and the Senator taking the other side of the controversy, calling into question the conduct and deflation policy of the Federal Reserve Board, have a right to send my speech to those citizens who read the speech on the other side of the question; yet the Senator from Connecticut denies me the right to do that and then talks about free speech and fair play.

Mr. McLEAN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Connecticut?

Mr. HEFLIN. I yield to the Senator.

Mr. McLEAN. Of course the Senator from Alabama knows that I can not deny him the right to send his speech to anyone whom he desires to have read it. I did, however, object to the consideration of the resolution presented by the Senator from Alabama which called upon the banks to disclose to the public their private correspondence. I am but one Member of this body, and that was my view about the matter. I did not think it was any concern of the Senate or that the Senate had any jurisdiction over the subject. The Senator at that time insisted that the governor of the Federal Reserve Board had no right to send out the speech of the Senator from Virginia [Mr. GLASS], and he criticized me very severely because I objected to the resolution requesting private institutions to disclose their private correspondence. That is as far as my objection went; but now the Senator has offered a resolution censuring the governor of the Federal Reserve Board because he sent out the speech of Senator GLASS.

I think if the Senator from Alabama could comprehend the position which he takes that he would be the first to denounce it as offensive to every principle of right and justice and in direct contravention of the constitutional guaranty of freedom of speech.

That is all I have to say upon the subject. If the Senator can not look at it in the right light and he wants a vote of the Senate on the question he can have it at any time, as far as I am concerned. If he wants a vote now on his resolution censuring Governor Harding for sending out the speech of another Senator in defense of the board and in answer to a speech of the Senator from Alabama severely criticizing the board, he can have it at any time. His resolution is pending and he can have a vote now if he wants it. I simply wanted the resolution printed so that the Senate could realize its full purport, and because its adoption would simply make the Senate ridiculous, in my opinion.

Mr. HEFLIN. Mr. President, I have told some of the Senators that I would not take up the time to try to pass the resolution to-day because I was satisfied the Senator from Connecticut would object. He always has objected; he is the persistent Senator on the other side who has kept me from getting the information that I want. Mr. President, I believe all the constituents of the Senator, when I get the facts properly before them, as I will, will agree that he has done wrong in denying to me the right to send my speech to the people who read the speech attacking me and trying to refute the position which I have taken in the interest of truth, right, and justice.

I believe that the Senator is the only one in this body who can not draw the distinction between the Federal Reserve Board giving its views through the Federal Reserve Bulletin, giving out interviews in the newspapers, writing articles in magazines, and making speeches at public gatherings, and sending out a speech that is made in the Senate attacking another Senator and using the Government's funds to carry on a campaign in behalf of one idea and one Senator against another idea and another Senator. I have not asked for the correspondence of a single Federal reserve bank. I did want the letter sent out with the Glass speech, but I have abandoned that for the time being. I simply want the names and post-office addresses of American citizens who have had sent to them a speech attacking me and assailing my position so that I can send my speech to the same people. Is there anything unfair about that? I believe every Senator in this body will draw the distinction that I have made except the Senator from Connecticut. I would that the Senator from Massachusetts [Mr. LODGE], the leader of the other side, would induce the Senator from Connecticut to withdraw from his position. I trust that the Senator from Massachusetts will aid me in securing the list of those to whom 142,000 copies of the speech of the Senator from Virginia were sent.

Mr. McLEAN. Mr. President——

Mr. HEFLIN. I yield to the Senator briefly.

Mr. McLEAN. I tried to make it clear to the Senator that he can have a vote now if he wants it on his pending resolution.

Mr. HEFLIN. I told the Senator I had promised him and others I was not going to call it up for action to-day. I have already stated that. This news is going into his State from time to time, and I am going to keep it going in there through the medium of the hundreds of copies of the CONGRESSIONAL RECORD that go there, so that the people there shall know the truth. There is not a fair-minded man in the world—I do not care who he is—who will say if a speech is made in this body on a public question attacking another Senator and copies of it are sent out at the expense of a Government institution, at the instance of the Federal Reserve Board, that that other Senator is not entitled to know at least to whom that speech was sent in order that he may, of his own motion and out of his own purse, send them his speech if he wants to do so. That is the distinction I am trying to get into the head of the Senator from Connecticut.

Mr. McLEAN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama further yield to the Senator from Connecticut?

Mr. HEFLIN. Yes, sir; I yield to the Senator. Every time I yield to him he gets deeper and deeper in the mire. I yield.

Mr. McLEAN. The Senator from Alabama may be right about that. Let us find out. He has insisted several times that I was the only Member of this body who would object to the adoption of his pending resolution. I think, in fairness to me, he ought to let it come to a vote, and we will find out whether or not I am the only man in this body who is in the mire.

Mr. HEFLIN. Not to-day, because I promised that I would not call it up, and I am going to keep my word.

Mr. McLEAN. I do not know who the Senator promised that he would not bring up his resolution; but if he is going to make these statements accusing me of being the only Member of this body who is opposed to his pending resolution, I think he ought to be willing to risk a vote.

Mr. HEFLIN. I will bring it up. I may add something more to it before I bring it up. I should like to have a roll call on it when I do get it up.

Mr. McLEAN. I hope so; and I am rather confident that the Senator will modify his resolution, for I am satisfied that it would receive but few votes in this body. I repeat what I said before. I think the Senator from Alabama, if he could comprehend the position in which he has put himself, would be the first man in this body to denounce the proposal contained in his resolution.

Mr. HEFLIN. Mr. President, I realize exactly what sort of position I am putting some Senators in. The Bible tells us to announce on which side we are, and it says: "Who is on the Lord's side and who is on the side of Mammon?" That is the question here: Who is on the side of the people, who is on the side of fair play, who is on the side of just dealing—myself or the Senator from Connecticut?

I am trying to drive the Federal Reserve Board and banks out of politics, and the Senator from Connecticut is defending them and holding them in and encouraging them and aiding and abetting them in every way that he can upon this floor. I have witnessed it from time to time. I do not think there is any doubt in the minds of Senators here as to where the Senator from Connecticut stands. The Senator was probably raised in an environment that fitted him peculiarly for the service that he is rendering to the great Wall Street banking interest that holds the country by the throat and paralyzes every walk of business in its confines. I am assailing the mis-

use of a great power. I want to read again, for the benefit of the Senator, this quotation, which I have read before and not a line of it has ever been carried from the press of the Capital to the papers of the country. It is a quotation from Lincoln, the great martyred President. Here it is:

> Any movement to artificially deflate before the debt can be paid, to change the medium of circulation upon which the debt was contracted, would be a crime.

That is what I am fighting. What was done in this country? Debts were contracted. Who induced the people to contract them? The Government. What did it tell them? It said, "Buy Liberty bonds. Pay for them on the installment plan. You will never be pushed. You can get the money from the banks." Inflation was indulged in. Prosperity was here. People bought goods at the top-notch price. They went into debt for everything; and then what happened? Why, in the midsummer of 1920 deflation fell like a thunderbolt, caught these people by the throat, and compelled them to try to pay their debts incurred under inflation, as Lincoln says, with a deflated dollar. The Senator from Connecticut can not understand why I am trying to make that crime odious in the eyes of the living and odious in the eyes of those who shall come after us; and I intend to do it if I live.

If the Senator could see the letters that I have from his own State and from other sections of the country, he would see how the people out amongst the rank and file are feeling. I know how the purse-proud plutocrats who made their millions and hundreds of millions and even their billions out of the distress and losses of the people of the South and West, 60,000,000 of them, feel about it. They say, "Suppress this fellow. Do not give any publicity to his speech. Send out everything you can attacking him. Circulate the speeches of those who assail him. Pay for them out of the banks' earnings. Pay for them out of the money of the Government. Suppress him, fight it out, and make all those hereafter who dare to criticize any policy of the system know what fate awaits them."

That is the position of the millionaire Senator from Connecticut, who stands here and champions the cause of the plutocratic banking fraternity of Wall Street. This is not any child's play, and I will inform the Senator from Connecticut before this battle is over that he will realize that it is far from being a butterfly parade. It strikes at the very root of the people's business. They demand honest treatment, fair treatment of the business of the American man. I do not care whether he is a crossroads merchant or a hod carrier, a hoe hand, a farmer, a merchant, a clerk, a doctor, a preacher, a teacher, or what not; I demand fair treatment for him, and every dollar of currency and credit he needs to carry on his business. This country can do it, and has done it. I denounce the Federal Reserve Board's deflation policy as the robber scheme of Wall Street.

I want to read from Mr. Lincoln a few more lines. I am going to read this so often that I will have it haunting the Senator from Connecticut when these bank palaces of Wall Street loom in his visions and his dreams. I want Lincoln's words to ring in his ears as he sees the distress amongst the people in the South and West, men and women prosperous two years ago reduced to a state of poverty now. I want him to remember the words of Lincoln:

> I warn the American people not to permit a repetition of the crimes of history. Following great periods of inflation, if drastic artificial deflation is attempted disastrous results must follow. I warn them not to permit the money powers to take advantage of the condition of the people.

What did they do here? They took advantage of the condition of the people. What did they do? They permitted every farmer in the South and West to buy material for making the crop of 1920. They never even whispered "deflation" until the crop was planted, until agricultural implements had been bought at a high price, until fertilizers were bought at a high price, until tractors and other machinery to conduct the farm had been bought, and the farmers had gone into debt, and the merchants had let out their goods, and the banks were tied up with loans. Not a step was taken until that was done. Then deflation commenced, and they took advantage of the people, and that is what Lincoln was talking about:

> I warn them not to permit high and usurious interest rates, contraction of the currency, or any change in the circulating medium that will affect the debt contracted until it has been discharged.

There is the eternal doctrine.

Lincoln was right, and the Federal Reserve Board's deflation policy was criminal.

I stand for that doctrine. What would he think if he could come back and walk into this Chamber and see the head of the great Banking and Currency Committee of the Senate, the Senator from Connecticut, defending this deflation policy, inaugurating legislation for the purpose of carrying it out, the author of the progressive interest rate that charged from 7 per cent to 87½ per cent, the usurious rates that Lincoln denounced, growing out of the amendment offered and enacted at the instance of the Senator from Connecticut? What would Lincoln think? What would he say if he could find these men committing such crimes parading under the name of the party of Lincoln? He would lash them with thorns and scorpions, and then you talk about the Senator from Alabama, and say that "if he could realize" he would probably change his views!

Change my view, when I have seen the hollow look in the eyes of men, women, and children made miserable and desperate under this deadly deflation? Change my view, when I have looked upon mounds of earth where sleep men who killed themselves because of that policy? Change my view, when I have seen half the mother herds of the West driven to the market place and slaughtered and sold to enforce collections under that deflation policy? Change my view and remain silent, when I see our great banking system perverted and dragged into politics?

Mr. McLEAN. Mr. President, I dislike very much to interrupt the Senator.

Mr. HEFLIN. Make it very brief, please, because I want to finish my remarks.

Mr. McLEAN. If the Senator will pardon me once more, I will try not to interrupt the thread of his remarks again.

The Senator knows that the deflation policy which he condemns so severely was brought about when Mr. Wilson was President of the United States.

Mr. HEFLIN. President Wilson was sick, and did not know anything about this deflation. It was carried on while he was prone upon his back.

Mr. McLEAN. He was all the President we had at that time.

Mr. HEFLIN. You will find out from the speech that I made here February 9, 1922, who it was that started this policy, and it tells the story about the Senator from Connecticut. Maybe that is the reason why he does not want this speech to be circulated to the people who read the one sent out by the board. There it is, five hours and a half long; and I challenge the Senator, as the head of the Banking and Currency Committee, to refute these figures here about contraction and deflation, and I challenge him to refute any one of them.

Mr. McLEAN. Mr. President, I was about to add to the fact that this deflation policy was brought about when Mr. Wilson was President of the United States the further fact that the Federal Reserve Board at that time was composed of Democrats. I think the board at that time was composed entirely of Democrats.

Mr. HEFLIN. No, sir; there never have been but two Democrats on it at any one time—not over three, at any rate, according to my understanding.

Mr. McLEAN. The Senator is mistaken about that; but never mind.

Mr. HEFLIN. The Senator can make his speech in his own time. I do not want my speech filled up with these misunderstandings that the Senator has. I have studied this question.

Mr. McLEAN. I just wanted the Senator from Alabama to realize that he had magnified the importance of my influence over the deflation policy, as I had nothing whatever to do with it. So far as the officials of the United States were concerned in it in any way, they were composed entirely of Democrats.

Mr. HEFLIN. Was not the Senator the author of the progressive interest rate amendment?

Mr. McLEAN. No; I was not. That bill was prepared by the Federal Reserve Board.

Mr. HEFLIN. The Senator introduced it, did he not?

Mr. McLEAN. I did, at the request of the Federal Reserve Board.

Mr. HEFLIN. At the request of the Federal Reserve Board governor?

Mr. McLEAN. I did.

Mr. HEFLIN. That proves exactly my contention.

Mr. McLEAN. And it passed with very few dissenting votes. I do not know that there was any opposition to it. There was some slight opposition, I believe. I think very likely the Senator from Alabama opposed it.

Mr. HEFLIN. I was not here. It was in April, 1920, and I was making my race for the nomination to the Senate in the primary at that time. I wish I had been here.

Mr. McLEAN. I simply wanted to call the attention of the Senator to the fact that I had absolutely nothing to do with the deflation policy of the Democratic administration. The bill that the Senator refers to gave the board a wide discretion.

Mr. HEFLIN. Oh, Mr. President, it is interesting to hear the Senator from Connecticut at last deny any connection with deflation. He is the chairman of the Banking and Currency Committee of the Senate. He introduced the amendment that set this machinery in motion that charged an interest rate ranging from 7 per cent to 87½ per cent, usurious interest rates that murdered business, and the Senator now excuses himself by saying that the Federal Reserve Board governor asked him to do it, and he did it, and yet he had nothing to do with it. He was a Member of the Senate. He was, as now, the chairman of that committee. They asked him to introduce the amendment. He did introduce it. He asked that it be made a law. Is he not a party to it?

By their fruits ye shall know them.

If he did not indorse it, why did he not decline to introduce it? If he was not for it, why did he not fight it after he introduced it? By the fact that he introduced it, the fact that he sought its passage, the fact that he secured its passage, and all this ruin has come out of it, he is tied up with the governor of the Federal Reserve Board and ought to be made by his constituents to bear his share of the blame that attaches and for the ruin that it wrought.

Mr. McLEAN. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Connecticut?

Mr. HEFLIN. I yield. I ask the Senator if he repudiates the deflation policy?

Mr. McLEAN. My only criticism of the Federal Reserve Board is that it did not begin to deflate a year earlier. The Senator knows very well that the delay was due to the fact that at that time Mr. McAdoo, Secretary of the Treasury, instead of issuing bonds or trying to secure the additional money required by taxation, issued three or four billions, and I think nearly five billions, of short-time certificates, and those certificates could not be absorbed by the public. Consequently the banks had to hold them, and in view of the rate which the Government paid the banks—I think it was 5 per cent at that time—it was impossible for the Federal Reserve Board to raise the discount rate, and it was entirely due to that mistake in judgment, which I think was a very serious one on the part of the Secretary of the Treasury, that the Federal Reserve Board could not begin its deflation policy earlier.

Mr. HEFLIN. Mr. President, the Senator says that is the only criticism he has to offer. The Senator knows, or should know, that the progressive interest rate, ranging from 7 to 87½ per cent, was applied only to the cotton section, the grain, and cattle sections of the United States. The banks at Atlanta, Dallas, St. Louis, and Kansas City had the progressive rate applied to them, but the other eight banks in the commercial territories and industrial territories did not have it applied to them. It was used only in the agricultural sections, to the ruin of the agriculture of the United States; and the Senator says he has no criticism except that it was not done soon enough.

I know men, of my own personal knowledge, who killed themselves on account of it. The Senator regrets they did not do it a year sooner, I presume. I know farmers whose farms were taken from them. I know men who were home owners who are now tenants. I know able-bodied men who were employed, making a living wage, and doing well, who are now out of employment, walking the streets, begging for something on which to live. And the Senator regrets that that was not brought about a year earlier.

Mr. McLEAN. If the deflation policy had been begun a year earlier the farmers would not have been led into the condition in which they found themselves, and for that reason they would have been saved many millions of dollars. I want to say to the Senator from Alabama that if the Government should follow his policy and attempt to cure inflation by more inflation we would find ourselves in precisely the position Russia, Germany, and Austria are in to-day.

Mr. HEFLIN. I did not yield to the Senator for a speech of that character. I would rather he would make it in his own time, because it is the character of speech that will not stand alone.

Mr. President, the Senator says we would have been in the fix Russia is in. I want to inform the Senator, who ought to know, as he is the chairman of the Banking and Currency Committee, that the gold reserve in the United States was lower in the fall of 1918 than it was in the year of deflation, 1920, and I challenge him to disprove that statement. The gold reserve was not even seriously approached in 1920. There was no danger from that source. There was no occasion for drastic, deadly deflation at the time it was brought about. That is why I am complaining. If it had been a matter of life and death it would have been a different proposition altogether, but there was nothing in the situation that justified or excused in any way the kind of deflation that was brought about. I charge that Wall Street saw an opportunity to make hundreds of millions of dollars out of Liberty bonds by driving them out of the hands of the people in the country, by refusing loans on them at the banks, and by getting them down in price and getting them into their own hands.

They thought they could make their hundreds of millions and they did it, just as I said they would. I said that Wall Street speculators wanted to beat the price of cotton down from 40 to 10 cents and make millions and hundreds of millions, and they did. I said those speculators wanted to beat the price of wheat and corn and oats down and make hundreds of millions, and they did. I said they wanted to force the cattle on the market, so that they could speculate and make millions and hundreds of millions on them, and they did. This thing was not a matter of just deflating for deflation's sake. It was carried on for the purpose of making money for the people who inspired it and ordered it. That is what I am talking about. That is what I know is true, and that is what the American people shall know. I do not intend that any highbrow shall stand in this place or elsewhere and deceive the people, and say that it had to be done. I am showing that it did not have to be done, and that the way it was done was a crime. That is what I am showing.

Mr. President, John Skelton Williams suggested a way. The editor of the Manufacturers' Record, Mr. Edmonds, suggested a way. Ex-Governor Stokes, of New Jersey, suggested a way. Colonel Armstrong, the author of the book dealing with deflation called "The Crime of '20," suggested a way; and I and others suggested a way; and it was not the mere running of a printing press. It was for keeping the gold reserve intact and issuing the credits which were unused, which we had at that time, without endangering the gold reserve. That is what could and should have been done.

Now I am going to read some figures to the Senator which will be in the RECORD, and it is open to him every day, as long as he is in this body, to refute them if he can.

I charge that on May 28, 1920—page 748, Federal Reserve Bulletin, 1920—loans, discounts, and bought paper held by all the 12 Federal reserve banks amounted to $2,938,031,000.

August 31, 1921—page 1240, Federal Reserve Bulletin, 1921—$1,527,255,000.

January 25, 1922, $932,882,000.

It was coming down, and down in a hurrry, like dropping something off Pikes Peak; and yet the Senator and others deny that there was deflation.

Contraction of credits by the 12 Federal reserve banks. I charge, and challenge the Senator from Connecticut to refute these figures, that from May 28, 1920, to August 31, 1921, contraction of credits by the 12 Federal reserve banks was $1,410,776,000, and from May 28, 1920, to January 25, 1922, was $2,005,149,000.

Contraction of Federal reserve notes in circulation, I charge, from May 28, 1920, to August 31, 1921, was $625,555,000.

May 28, 1920, to January 25, 1922, it was $923,020,000.

There is a way to settle this issue. I challenge the Senator from Connecticut, the chairman of the Banking and Currency Committee, to refute the figures that I have given.

They are as firm and impregnable as the Rock of Ages. If they are true the statements which the Senator from Connecticut is protecting, and which are being sent out in the Glass speech, are not true and are not the facts in the case.

That is a simple, plain, straightforward statement, and if that other speech contains misinformation it is wrong to circulate it, leaving out of consideration the question that another Senator was attacked and assailed in that speech. There are the figures. I challenge the Senator, the chairman of the Banking and Currency Committee, I challenge any member of the committee with him, to refute these figures.

Mr. President, the Senator says deflation was not commenced in time. I knew they were trying to have deflation before it was brought about. It was started when the senior Senator from Illinois [Mr. McCORMICK] passed through this body, a Republican Senate, a deflation resolution, on May 17, 1920, and just before that the amendment offered by the Senator from Connecticut, which enabled them to cut the throat of legitimate business the country over, had been enacted, and deflation was commenced.

The Senator says it did not commence soon enough. It has practically ruined the farmers of the country. It has bankrupted nearly every merchant in the South and West. It has tied up and literally choked to death the country banker. It has thrown out of employment 7,000,000 wage earners in the

country. Men fairly well to do have been hard pressed to raise money to pay their taxes. That is the deadly fruit of deflation, and the Senator from Connecticut helped to bring it about, defends it now, and only says that it did not commence soon enough to suit him.

Mr. President, he says ex-Secretary McAdoo would not permit it to start sooner. No; McAdoo would not permit it to start at all, as it was conducted. McAdoo had aided the South and aided the West with money when they were in dire distress. McAdoo would never have been a party to the deflation policy conducted and carried out. He is a friend to honest business. They never could have put any robber scheme over under the name of McAdoo while he held the office of Secretary of the Treasury.

If they had done as the Senator from Connecticut suggests, Liberty bonds would not have been sold, demoralization would have come quicker, and the deception would have been greater.

The Senator from Connecticut and others like him might just as well get it out of their heads that they can fool the people or Members of Congress any longer by having two or three astute politicians and expert bankers learn all they can about the banking business and get up and talk learnedly and deceive the public as to what has been done. We know now that the money supply of the country must be so handled that business can have it and credit be extended, or business will not prosper. We all know now that to contract the currency, to call money in, to force the collection of loans in drastic fashion in time of stress, to deny credit kills business, closes industry, turns laborers out of employment, and destroys agriculture. It is plain and simple. Thank God, some of us who represent the people have studied this question, and we know what has happened and how the people have suffered. We do not intend that Wall Street shall have this feast and hoard billions of dollars out of the distress and misfortune of sixty-odd million people of the South and West. Is there a way to get this truth to the country? Read the letters I am getting from every State in the Union and see. Yes; the CONGRESSIONAL RECORD is carrying the facts as we give them from the Government's record, and the truth is becoming known. Letters are coming in from every section indorsing my position. Why should not they indorse it when I stand here with the figures I have quoted and which have gone out in the CONGRESSIONAL RECORD?

I challenged the Senator from Connecticut to refute the figures and he is as silent as the tomb. I challenge him for tomorrow, for the next day, and for every day until this Congress adjourns to refute the figures that I have given on drastic and destructive deflation. If those figures are correct my position is correct. If those figures are correct the position of the Senator from Virginia [Mr. GLASS] is incorrect. The people are entitled to have the correct position. If they have the Glass speech, I contend that they have the incorrect position. My position being the correct one, I submit that they are entitled to have it. But I can not even get the names of those to whom the other speech, full of inaccurate and incorrect statements, has been sent at the expense of the Government and the Government banks.

Mr. President, before I conclude I want to touch very briefly again upon a subject to which I have previously referred. Here is the Federal Reserve Board carrying on a political propaganda, taking the speech of one Senator attacking the position of another Senator and sending it out and then writing to a Member of Congress—yes; daring to write to a Member of Congress—telling him to cease his criticisms of them or they will use their power to defeat him in the primary. Senators sit here and permit this Federal Reserve Board power to be perverted from the ends of its institution and used to intimidate and drive away from attacks upon their conduct Members of Congress sent here to represent their constituents and sworn to support the Constitution of the United States. Senators, it is my duty and the duty of all Senators to cry out against such dangerous conduct; but you are in power and can stop it if you wish to do so.

What else? Why, Mr. President, a speech is made in this body by a Senator, which appeals to them, which defends their conduct. Did they threaten him? Oh, no. What did they do in the other case? They wrote the Congressman a letter and threatened him with opposition in the primary. That is the substance of their threat. Is that the function of the Federal Reserve Board? What did they do to the Senator who defended their policy? They patted him on his back. They took his speech without expense to him at all, printed it and circulated it throughout the system, 142,000 copies of it, at an expense of between $4,000 and $7,000. What did they do to the Senator who assailed their position? They had their yelpers whom they have hired in the newspaper world to attack him on every side. What else? They refused even to tell him to whom they had sent the speech attacking him. Who defends them in that? The Senator from Connecticut [Mr. MCLEAN].

Mr. President, I did want to say something this morning about a gentleman who was on the pay roll of the board, but I shall do that at another time. From time to time, without wearying the Senate and consuming too much of its time, I shall wage this war against the governor of the Federal Reserve Board, who is using his office and using his power and every agency under his command to have himself reappointed. It would be a calamity to the country, a calamity to the business life of the Nation to reappoint him. It would be the worst thing the President could do, and I am hoping and praying for the good of the system itself and in the interest of restoring the Federal Reserve Board to confidence in the minds and hearts of the people of the country, that it will not be done. In the name of the honest, efficient, and fair administration of the Federal reserve banking system I hope and pray that the President will not reappoint him—and I predict that he will not.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. WILLIS. Mr. President, in the controversy between the Senator from Alabama [Mr. HEFLIN] and his distinguished friend the Senator from Connecticut [Mr. MCLEAN] we have drifted far afield. I shall address the Senate only very briefly, and in the time I shall speak I shall direct my remarks to the subject under consideration, namely, the amendment offered by the Senator from Wisconsin [Mr. LENROOT] to the amendment of the committee. I shall not undertake to go into the details of the production of wool or the manufacture of wool, because others here are more competent to do that than am I.

I want in the first place rather to call attention to the utterly unfair and untruthful representations that have been made throughout the country by propagandists against the bill. I say this without, of course, any reference to anything that anyone has said in the Senate, because there has been no misrepresentation here so far as I know. I approach this from a viewpoint friendly to the attitude taken by the able Senator my friend from Wisconsin [Mr. LENROOT]. He will recall that when he led the fight a few days ago, which he led quite successfully, in favor of lower rates of duty on the coarser yarns and the coarser grade of cotton cloth, I had the honor to follow his leadership. I can not follow him now, because I believe the facts are quite different in this case from what they were in that case, and because I think the reasons do not justify the adoption of the amendment which the Senator from Wisconsin has offered.

Now, Mr. President, what is the nature of the opposition in the country to the committee amendment in schedule 11, the wool schedule? I think it is the most unfair, the most deceptive, the best calculated to misrepresent, of any propaganda that I have ever seen in the country. I am speaking now because I want thus publicly to make answer to a letter which came to me this morning from a citizen of Pennsylvania, a gentleman in the city of Philadelphia, whose name I shall not give, because I do not believe this is the proper place for personal attacks upon citizens. His letter to me was prompted, I suppose, by something he had seen in some newspaper relative to a statement I had made in an address outside of the Senate and in some letters I had written to people who had written to me evidently under a total misapprehension of the facts.

A gentleman in my State had written me saying that if the proposed tariff rate of 33 cents per scoured pound of wool were enacted into law the prices of suits and overcoats would thereby be increased from $5 to $7 each. Of course, I wrote to the gentleman calling his attention to the facts. Of course, that could not possibly be true. All of the wool in a suit and all of the wool in an overcoat, including the duty, could not possibly cost $5. It is simply misrepresentation, and particularly is that true when it is stated, as it was stated and has been stated in the form letters which Senators have received, that because of the proposed change in the law it would be necessary immediately to bring about this increase in the retail price of clothing.

How perfectly absurd and inexcusable and indefensible is that proposition is apparent when it is realized that the present amendment, as the committee have reported it, proposes a reduction, not an increase, because it is, of course, well known that the present law provides a duty of 45 cents on the scoured pound, while the duty here proposed by the committee is 33

cents on the scoured pound. If these propagandists are to increase the price of a suit of clothes $5 because we decrease the rate of duty on wool 12 cents a pound, I wonder how much they would increase the price if we took the tariff off altogether?

I say it is propaganda calculated to deceive, and it has deceived some very good people. I do not know who these self-appointed guardians of the people's interests are. I have saved all the form letters which have come to me. I have quite an interesting collection of them, all printed on the same kind of paper, all couched in the same language. Where do they come from? Who is paying for them? It is inconceivable that hundreds of men in different sections of the country should happen to think of the terms of the bill in exactly the same way and to couch their statements in exactly the same phrases. Of course, it is perfectly apparent that certain gentlemen are getting up these form letters and sending them out and, through misleading circulars, are getting constituents of Senators to send the letters in here in the hope that they may frighten somebody by oft repetition of falsehoods and half truths.

I hold in my hand one of the form letters to which I have referred. Every Senator, I suspect, has received scores like it. I shall not take the time to read it all. As I said, I have large numbers of them, all printed on the same kind of paper, evidently gotten out in the office of some importers' organization somewhere, who are opposed to the passage of the bill because they are only interested in the maintenance of their own profits which they exact from the business which passes through our ports in case we continue to import a major portion of our wool and woolen goods. They are more interested in the maintenance of those profits than they are in the building up of the industries of the country and the prosperity of the American people.

I may say here that I think one of the things which enters into the propaganda is the influence of certain international bankers in the country who, because of their investments, are more interested in foreign countries and in foreign bonds than they are in the prosperity of this country. They are, therefore, willing to stand behind this propaganda of misrepresentation in order to build up somewhere else and make their bond holdings more secure, not caring particularly what happens in this country. Starting out with that sort of idea, they make these misrepresentations. I say they have deceived many honest people. I have here letters from manufacturers in my own State protesting against the protection for the farmers' products, and I have in another folder letters from the same men asking for protection on their own products. Well, either we shall have a protective tariff to take care of every legitimate industry in the country, including agriculture and wool-growing, or else there will not be any protective tariff for anybody. If legitimate protection is to be denied to the American farmer, in my judgment the American farmer will see to it that if he has to sell in a free-trade market others are to sell in a free-trade market.

What did these propaganda letters say? Here is one:

I desire to register my vigorous protest against schedule 11 of the Fordney-McCumber tariff bill that proposes a duty on raw wool of 33 cents a pound.

Now, Mr. President, just why did they state it that way in the letter—"a duty on raw wool of 33 cents a pound"? Because they want to use half truth as a means to deceive; that is why. Every Senator and everybody else who has investigated the question knows that no such proposition is contained in the pending bill. The 33 cents a pound duty is on the scoured content, but, supposing that the average citizen will not take the pains to look that up, the paid propagandist couches his letter in that form and says that this bill proposes a duty of 33 cents a pound on raw wool. That is misrepresentation No. 1.

The fact is—which everybody knows, as I have just stated—that 33 cents on the scoured pound of wool is approximately 11 cents a pound on the raw wool. It would not have been so much of a bogey if they had stated it as it is; if they had stated the duty as being 11 cents a pound, that would not have frightened the people so much. Consequently they put it in the other form, so as to create as unfavorable an impression as possible.

As I started to say, I replied to some of these letters simply stating the facts. I also made some addresses outside of the Senate, which apparently have been commented upon in the press. I do not know just how this gentleman was induced to write to me.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Ohio yield to the Senator from New Mexico?

Mr. WILLIS. I yield.

Mr. BURSUM. Is it not true that the reason a great many oppose the duty being based on the clean wool and favor the duty being based on wool in the grease is because the duty on the wool in the grease affords an opportunity to cheat the Government and to cheat the public and to profit by that reduction in the duty?

Mr. WILLIS. That is true without doubt, because it will make possible the very monstrous scandal which occurred under the Payne-Aldrich law.

Mr. BURSUM. Absolutely.

Mr. WILLIS. And I very much fear, though I know the Senator from Wisconsin [Mr. LENROOT] does not intend it, that if his amendment shall be adopted we shall have a repetition of the indefensible situation which was created by the skirting clause of the Payne-Aldrich law. This gentleman in Philadelphia, evidently having seen something that I had said, writes me as follows:

Everybody who handles the wool—

I had made the statement which is, of course, simply a matter of arithmetic, that, taking the usual amount of wool that would be used and figuring the rate as it is proposed in the pending bill, the actual amount of duty on the wool in a suit of clothes would probably not be more than $1 or thereabouts. He says:

Everybody who handles the wool, from the finished wool up to the time it is ready to sell to the consumer, must add the additional profit which pyramids, and by the time it reaches the consumer the original $1 advance is considerably increased. For instance, if the wool man pays $1 advance and he does business on a 10 per cent profit he must naturally sell it to the yarn spinner at $1.10. The yarn spinner's gross profit is 25 per cent—

Senators will observe that this gentleman is viewing with great equanimity and great complacency the fact that the yarn spinner is to make a profit of 25 per cent; he figures that as being something absolutely necessary; that the wool man must make a 10 per cent profit; the spinner must make a 25 per cent profit; the manufacturer must have his gross profit of 25 per cent, which must be added to the $1.55. It is all right for the spinner to make 25 per cent; it is all right for the manufacturer to make 25 per cent; that must be provided for; but as soon as anybody suggests that the farmer who produced the wool is to have a little protection on his product, then these self-appointed guardians, the representatives of the free-trade importers, shed crocodile tears worrying about the dear consumers, whom they have plundered all these years, and they are trying to lay on the farmer and on the tariff their sins in so plundering the consumer.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from New Mexico?

Mr. WILLIS. I yield.

Mr. BURSUM. Is it not a fact that the propaganda being sent out by certain importers and by some manufacturers to the effect that the proposed tariff, if adopted, will increase the cost is absolutely misleading, and is done for a malicious purpose and to serve their own ends; and also that that fact is apparent from the circumstance that there are around 100,000,000 pounds of wool now in bond waiting to come into this country upon the passage of the pending tariff bill should the bill be enacted into law?

Mr. WILLIS. Which incidentally, the Senator from New Mexico will, of course, recognize is the best possible proof of the statement which I made, that the pending bill proposes not to increase the present rates but to reduce them.

Mr. BURSUM. It proposes to reduce the rates.

Mr. WILLIS. That is why wool is piled up in the warehouses to-day, a hundred million pounds of it—awaiting the passage of the bill. Notwithstanding that fact, however, the propagandists fill the country with lamentations, on the theory that the passage of this bill is going to increase rates. To use no harsher term, that statement is a gross, unjustifiable, inexcusable, malicious misrepresentation. Other terms might be applied to it which I shall not use. This gentleman goes on:

The yarn spinner's gross profit is 25 per cent, which would be his price, $1.55; the manufacturer's gross profit is 25 per cent, which must be added to the $1.55, making his selling price $1.93; the jobber or clothing manufacturer's profit is 25 per cent.

To this must be added the retailer's profit; and goodness only knows what that will be; but it is known that we pay from $75 to $80 for a suit of clothes, when the total cost of the wool in such a suit would in a particular case not exceed $5—wool, duty, and all. It is somewhere along the line here among manufacturers, jobbers, and middlemen that the added expense comes in.

I again call attention to the fact that the gentlemen who are carrying on the campaign of misrepresentation throughout the

country are taking it for granted that the 10, 15, or 25 per cent profit of the middlemen and the manufacturers must be maintained, but as soon as anyone says anything about profit for the farmer or about any protection to him, then the country is supposed to be in very great danger. Unless proper protection is given to the wool industry it will go out of existence in the United States, and the American people will be dependent upon foreign countries for their supply of wool and mutton.

As I have shown, the proposed duty is not 33 cents a pound on raw wool, as is stated in the letter, but 33 cents a pound on the scoured content, which amounts to approximately 11 cents a pound on the raw wool.

In another letter the writer says:

It has been universally conceded that Schedule K of the Payne-Aldrich bill was too high—

I hold no brief for the Payne-Aldrich bill.

Schedule 11 exceeds it.

That is interesting if true. The Senator from North Dakota [Mr. MCCUMBER] yesterday placed in the RECORD, at page 10604, some figures which I think are illuminating in answer to that very proposition that the pending bill increases the Payne-Aldrich rates. For example:

Wools, and so forth, advanced, including tops, and so forth, Payne-Aldrich rate, 105 per cent; rate under the pending bill, 58 per cent.

Yet these gentlemen say that the rate is increased. As a matter of fact it is reduced from 105 per cent to 58 per cent. Take another item——

Mr. LENROOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Wisconsin?

Mr. WILLIS. I yield.

Mr. LENROOT. I know the Senator wishes to be accurate. While the rate on the face of the Payne-Aldrich bill was one thing, the rate actually imposed was a very much lower rate, as the Senator well knows. As a matter of fact, instead of 33 cents per scoured pound proposed to be imposed by the Payne-Aldrich bill the actual rate was 18 cents a pound.

Mr. WILLIS. The Senator will understand that I am not controverting the proposition that this bill as the committee have reported it imposes a higher rate on wool than was actually provided under the operation of the Payne-Aldrich law. I understand that perfectly well. Of course, on its face on scoured wool the rate was the same under the Payne-Aldrich law as here, but in the workings of that law, because of the skirting clause, with which we are all familiar, as a matter of fact the Payne-Aldrich law gave what was equal to about 18 cents protection on the scoured pound instead of 33 cents.

Mr. LENROOT. It was not alone due to the skirting clause. The lighter wools came in as well.

Mr. WILLIS. That is correct. I am not controverting the proposition that the rate provided in the pending bill is higher on raw wool than the rate provided in the Payne-Aldrich law as it actually worked out in practice, though it is not higher probably than the rate in the Payne-Aldrich law was intended to be. I am now, however, talking about the manufactured product, such as woven fabrics.

The Payne-Aldrich rate on such fabric was 100.66 per cent; under the pending bill the rate is 76 per cent. Yet the propagandist says the rate is higher. Of course, a fact does not stand in the way of the man who wants to fill the mind of the country with falsehood. He does not bother about a little thing like a fact, but just pushes it aside with a wave of the hand.

On pile fabrics under the Payne-Aldrich law the rate was 102.34 per cent, while under the pending bill it is 76 per cent. On blankets the Payne-Aldrich rate was 73.42 per cent and under the pending bill 65 per cent. There are many more instances where the rate is reduced. I merely wish to call attention to them at this point in my remarks. On knit fabrics, for example, the Payne-Aldrich rate was 95.76 per cent, but under the pending bill it is 64 per cent. Yet these gentlemen outside of the Senate, who have appointed themselves as the people's guardians, say the rate has been increased. As a matter of fact, on knit fabrics it is decreased from 95 per cent to 64 per cent. On wearing apparel not knit the Payne-Aldrich rate was 77.29 per cent, while under the pending bill it is 59 per cent. On carpets and rugs the rate of the Payne-Aldrich law was 60.66 per cent, but under the pending bill it is 53 per cent. On manufactures not specially provided for, under the Payne-Aldrich law the rate was 94.5 per cent, and under the pending bill 55 per cent, and so on. In other words, under the terms of this bill it is proposed now for the first time to give to the producer of wool that which in fact he was supposed to get under the Payne-Aldrich law, and, therefore, in effect the rate on raw wool would be higher; but upon the manufactured product, as shown by the figures I have quoted, not only are the rates under the pending bill not higher than they were under the Aldrich law, but they are very much lower. So misrepresentation No. 2 is disposed of.

Mr. President, the bill as reported by the committee is based upon the plan which the Tariff Commission has thoroughly examined and most explicitly recommended. I shall not take the time of the Senate now to read what the Tariff Commission says about that, but I ask permission to insert at this point of my remarks the observations of the Tariff Commission.

The PRESIDING OFFICER. Without objection, the matter will be inserted in the RECORD.

The matter referred to is as follows:

[Extracts from document entitled "The Woolgrowing Industry." Letter to the Committee on Finance, United States Senate, Sixty-sixth Congress, third session, submitting a summary of and a chapter on the cost of production as taken from the report of the United States Tariff Commission on the woolgrowing industry.]

The Tariff Board in 1911 came to a definite conclusion on some of these points. They showed in a report on Schedule K that the "4 to 1" ratio of compensation was more than adequate, and that some additional protection was thereby granted to wool manufacturers. The board also pointed out that there was no longer any good reason for distinguishing between Class I and Class II wools, because improvements in combing machinery now make it possible to use much shorter staple wools than formerly in the manufacture of worsteds. They favored levying the wool duty on the basis of the scoured content, and maintained that this would be superior to any ad valorem method or to any method of specific duties levied on grease wool at rates varying with the estimated shrinkage.

* * * * * * *

Improvements in machinery are constantly bringing about a greater interchangeability in the use of different kinds of wool, and the case seems clear for doing away with the distinction. Furthermore, no matter which branch of the industry is more adversely affected by discrimination against the heavy shrinking wools, conditions will be equalized by imposition of the duty upon the scoured content. This would do away not only with discrimination between heavy shrinking and light shrinking wools, but also with the discrimination against scoured wool which resulted from the triple duty on it. This has been cited as discrimination against the woolen branch of the manufacturing industry, which bought more wool in the scoured condition than did the worsted branch.

The Tariff Board objected to ad valorem duty, not only because of the difficulty of administering it but also because when prices increase and protection is less needed the ad valorem duty rises, while a specific duty when prices are high becomes in effect a lower duty. When prices fall the converse of this proposition applies. In this way the ad valorem duty on wool gives the domestic woolgrower less protection when he needs more, and vice versa. Some manufacturers have, however, opposed this reasoning on the ground that the situation is entirely to the woolgrower's interest, while from the manufacturer's point of view an ad valorem duty would tend to equalize conditions for them in competition with foreign manufacturers. Inasmuch as their criticism is directed against the duty on wool, their reasoning seems illogical, as the compensation duty is intended solely to offset their higher costs for raw material. A duty on the scoured content of imported wools could only raise domestic wool prices by the amount of the duty, and a proper compensatory levy on importations of manufactures of wool is all that is necessary to offset that, irrespective of the rise or fall of world prices for wool.

—

[Extract from document submitted by Tariff Commission, entitled "Recent Tendencies in the Wool Trade, with Special Reference to their Tariff Aspects, 1920–1922."]

In practice, in order to secure the largest possible amount of clean wool for every dollar of duty paid on imports in the grease, American buyers bought only the lighter shrinking foreign wools. Such wools had their shrinkage further reduced by removal of belly, neck, britch, and leg wool, and the dirtier portions along the lower part of the flanks. Then, too, this "skirting" was often more heavily done in the case of wools suitable for the American trade, or bought for shipment to America. Woolgrowers have severly criticized the specific grease pound duty for the foregoing reasons. Because of the preponderance of light shrinking wools in imports of fiber suitable for the manufacture of clothing, they have also criticized this duty on the ground that, through the importation of virtually nothing but light shrinking wools, the apparent protection given the domestic growers was greatly reduced. The Tariff Board found that the grease pound duty of 11 cents on wools actually imported was equivalent to a duty of only 18 cents per pound of clean content. The increase in price per grease pound of domestic wools, owing to the duty of 11 cents per grease pound under the acts of 1890, 1897, and 1909, has been estimated at approximately 8 cents. In any case, since the average shrinkage of domestic wools is about 59 per cent—i. e., 100 pounds in the grease gives about 41 pounds of clean scoured wool—the figures of the Tariff Board indicated an effective protection on domestic wools of only 7.38 cents per pound instead of the apparent protection of 11 cents.

A specific duty per clean pound meets the objections to a specific duty per grease pound, which permits imports of heavy shrinking wools only at a very high duty per pound of clean content. With a specific duty per clean pound, all wools, wherever grown and whatever their shrinkage, are on an equal footing with reference to the duty on wool in the condition as used by the mills. That is, the wool supplies of the world are open for selection by American buyers, and whatever the shrinkage, the duty is based only on the clean content of the wool, and not on the grease and dirt in addition to the clean content, as with specific grease pound duties. Such a duty, of course, shows a varying ad valorem equivalent on the clean value of different grades of wool, but on a normal market this variation, as will be shown later, is much narrower than that of the equivalent clean content duty of specific grease pound duties. A specific duty per scoured pound also meets the approval of woolgrowers in that it protects them approximately to the full extent of the duty written in the bill. The Tariff Board, after an exhaustive investigation of the different bases for levying a duty on raw wool, said:

"A full consideration of the above facts would seem to indicate that some method of assessing a specific rate on the clean content would remedy most of the primary faults of Schedule K; that it would best safeguard the important revenues derived by the Government from wool duties; that it would insure greater stability in the industries directly concerned than any other system."

The Tariff Commission also investigated this matter and likewise decided in favor of a specific duty per scoured pound. The National Association of Wool Growers also favored a specific duty per clean pound in 1913.

Mr. WILLIS. Mr. President, I wish to be frank in this discussion, as I am in all the discussions in which I participate. There exists a little element of injustice and a little inequality in that apparently a higher rate is levied on the coarser grades of wool. I said when I first took the floor that I approached this question from a viewpoint rather friendly to the position taken by the Senator from Wisconsin, but I have studied the question as carefully as I know how and obtained all the information possible from experts whose business it is to know, and there is no way under the sun that I have been able to figure out or that anyone has been able to figure out for me whereby the amendment proposed by the Senator from Wisconsin can be made workable.

Why can it not be? Here is the difficulty about the matter: If the 60 per cent limitation is adopted, as the Senator from Wisconsin proposes, the inevitable result will be that these coarser, light shrinkage wools will be imported not for the purpose of carpet making—carpet wools under the terms of the bill come in free of duty—but they will be brought into this country and will be used in the manufacture of clothing. There is no way under the sun that any expert can separate them. Suppose the manufacturer used so much of donskoi, a Russian wool, a coarse wool, and so much medium, and so much fine. After those wools have been worked up into the cloth there is no way that any expert on earth can figure out the proportions and say what the compensatory duty ought to be. The result will be—the Senator from Wisconsin did not so intend it, but the inevitable result will be, if this 60 per cent amendment is adopted—that you will have in this law a loophole, the same as you had in the Payne-Aldrich law. The cheaper wools will come in; they will be used in the manufacture of clothing; and while the farmer will have the 33 cents a scoured pound charged up against him, as a matter of fact he will not be getting it, while the manufacturer will be getting his compensatory duty and the consumer's price of clothing will not be reduced.

The virtue of the committee proposition is that it is clear; that it will give to the wool producer just what it says it will give him. It is written on the square. It can be administered. I think the proposition offered by the Senator from Wisconsin can not be administered and that it would render ineffective the penalty against fraudulent importations; and here is a peculiar situation: These coarse wools are now inordinately low, and consequently the rate seems to be, on an ad valorem basis, very high; but fashions will change. Tweeds and cheviots will come into fashion, and then these wools will come up again, and then these rates will not be the high ad valorem rates that they now seem to be; but the inevitable result of the amendment, if it is adopted as drawn by the Senator from Wisconsin, will be that you will be again indirectly defrauding the farmer and the producer of wool without in any way benefiting the consumer, as was done in the Payne-Aldrich law of 1909.

So, Mr. President, because the Tariff Board and the Tariff Commission found officially, upon most careful investigation, that this method of levying the duty on the basis of the scoured content is the fairest and best, and because, in my very humble opinion, the adoption of this amendment will make a hole in this law that you can drive a four-horse team through, and will lead to the same dissatisfaction and to the same scandal that grew out of the operation of the Payne-Aldrich law—because I believe that, I shall vote against the amendment offered by the Senator from Wisconsin and in favor of the committee amendment.

Mr. LODGE. Mr. President, before a vote is finally taken on the pending amendment, which goes to the very center of the whole question, I desire to say a few words on the general aspect and meaning of the wool schedule as I understand it.

The rates in the wool schedule in the pending bill must be determined on their merits and on existing economic conditions, and I say this because they are constantly being compared with the rates of the Payne-Aldrich bill. Those who are opposed to the protective policy are anxious to show that the rates in this bill are higher than those of the tariff of 1909, because Schedule K in that bill, whether justly or unjustly, achieved a bad reputation and much unpopularity. Those who believe in protection and defend this bill are much concerned to show that the rates here, as a whole, are lower than those of the tariff of 1909, and that where they exceed them the excess is slight and compensated elsewhere.

It really does not matter, and ought not to matter, whether these rates, tested by the legal and actually enforced rates of the Payne-Aldrich Act, are higher, or, if tested by the theoretical and also legal rates of the act of 1909, lower than those of the earlier law. The real question to be decided is whether, under existing conditions—very different from those of 1909, in view of the extravagantly depreciated currencies in Europe and of labor costs there and elsewhere—the rates here proposed will give due and sufficient protection to the American woolgrower and the American manufacturer of woolens.

So far as the comparison with the act of 1909 is concerned the rate of the Payne-Aldrich bill on the scoured content of wool was 33 cents a pound, exactly the same as that proposed in this bill. The difference on which the point has been made that these rates far exceed those of the Payne-Aldrich bill arises from the fact that under the Payne-Aldrich bill the duty was fixed on wool in the grease at 11 cents a pound with a differential of 22 cents for washed wool, or 33 cents for scoured wool, and 44 cents for cloth.

The reason that the Payne-Aldrich duties appear lower than those in the pending bill is because of this arrangement in regard to the duties based on wools in the grease, which was accompanied by deductions for shrinkage and skirted wools, the result being that the woolgrower, instead of receiving 11 cents, received 7 cents, and in many cases not over 5 cents a pound protection. The fact in practice was that the ostensible duty of 33 cents on the pound of scoured content was never actually received, and the woolgrower was therefore attacked for a very high protective duty which he never obtained. It was neither a fair nor an honest arrangement for either woolgrower, manufacturer, or consumer.

In this bill the arrangement on wool in the grease is abandoned and the rates are fixed at 33 cents flat on the scoured content. The Payne-Aldrich arrangement, as I thought at the time and still think, was especially unfair to the woolgrower, who was made to appear to have a high rate of protection which he never received. This bill, whether the rates are too high or too low or simply just, at least has the merit of being perfectly straightforward, and everyone is able to know exactly what the rate is.

It has seemed to me that the rate might have been adjusted so that there could have been allowance for the cheaper wools, the duty of 33 cents being admittedly a perfectly proper one on all the fine wools. But the main object must be an efficient schedule, and one which will maintain the industry without regard to comparisons with past tariffs. The committee has given compensatory duties, based on the 33 cents a pound for scoured content, to all woolen manufacturers, and also a protective duty, which was a fair and necessary arrangement, accepted by the woolen manufacturers. It is also to be remembered that if this bill fails we are not thrown back on the Underwood rates but on the rates of the emergency tariff act, which will continue in force until a new schedule is passed. The rate on scoured wool under the emergency tariff is 45 cents a pound, and the old difficulty about shrinkage is met, or attempted to be met—for I think the same provision was in the Payne-Aldrich bill—by the provision that wools washed in any other manner than on the animal's back or on the skin shall be considered as scoured wool. Then there is the further provision directed against the skirted wool of the Payne-Aldrich bill that wool sorted or increased in value by the rejection of any part of the original fleece shall bear twice the duty to which it would otherwise be subject, but not more than 45 cents per pound, which is the rate per pound on the scoured content.

If this emergency tariff remains, which it would in the case of the loss of the present bill, the duty on the scoured content of wool would be 45 cents instead of 33 cents; and this bill carries a reduction, therefore, of 12 cents a pound on the scoured content. As I stated yesterday, the fact that over a hundred million pounds of wool imported since January 1 are now stored in Boston in bond, awaiting the passage of this act, shows conclusively that those most interested know that this bill made law means to them a large saving in duties, a great reduction from the duties now existing.

It is idle to claim, and ingenuity is wasted in trying to demonstrate, that there is no gain over the present existing law by the passage of this bill. The people who have invested millions of dollars in imported wools, who have them now in bond, are holding them there with the object of bringing them in under the bill now pending, because they know that there will be a great saving in the duties on wool.

To leave the present rates in force would be most unfortunate for the woolen industry, in which Massachusetts and all our Eastern States are so largely interested. If the 33-cent rate on the scoured content is materially lowered throughout, it will probably bring a very great reduction in the protective as well as the compensatory duties on all our woolen manufactures, and this would be a most serious injury to the thousands of men and women employed in the mills. We could make no reductions in cost sufficient to meet foreign competition which would not be fatal to our wage schedule and destroy the advantage which our operatives now get from protective duties.

This brings me to a general consideration of the woolen industry of the United States, including both growers and manufacturers, which is too much lost sight of in differences as to specific rates and duties.

I ought to say, first, that this schedule, as has been the case in previous bills, is the central and most important and most contested schedule of the whole tariff bill. If it fails, it may carry the whole bill down with it, and it is a schedule on which, in my judgment, desiring, as I do, to pass a bill, and a protective bill, it is essential that we should unite. If further changes can be made in conference, well and good; but I think our duty now is to pass this bill, for the sake of the tariff itself, and the question now pending, of course, strikes at the basic element in the wool schedule, the duties on the wool.

There are certain industries and certain manufactured articles which have a character entirely different from the productions of most industries, valuable as they all are. I refer to those, very few in number, which, in addition to their importance to our industrial life and to the diversification and increase of employment, are also vital to the defense of the country in case of war or to the daily needs and economic existence of the people at large. Sugar is a case in point. The control of the sea by Great Britain during the Napoleonic wars, when the sugar consumed in Europe and elsewhere was cane sugar, meant the deprivation of this essential article of consumption to the people of Europe. Napoleon, therefore, started the industry of beet sugar in France. The beet-sugar industry could only be built up by bounties and protective duties or other special encouragements in the face of the competition of the cane sugars, but Napoleon believed that it was so vitally necessary to national independence that any cost almost was justified. One country after another in Europe followed the policy of France until the production of beet sugar in France, Germany, and Russia, to go no further, reached immense proportions under Government encouragement and finally caused such a surplus in the world's supply of sugar that the price of sugar fell very low and resulted in the ruin of many of the sugar islands which were obliged to compete in all the principal markets without the encouragement and help of the Government exercised through bounties or highly protective duties.

When the beet-sugar industry of Europe was abnormally diminished, and in many cases extinguished, by the Great War, we all remember what the difficulties and what the suffering produced by the shortage of sugar were and the high prices which it commanded, because at first the cane-sugar regions were not prepared to meet the sudden and high pressure of a world demand. I use this merely as an illustration of the proposition as to the existence of certain articles which have an essentially necessary character apart from economic or industrial uses. Sugar is an article of food consumption which the nations have deemed of such importance that they have been willing to spend enormous sums in the way of bounties and protective duties and privileges to stimulate its production. It is not at all a simple case of protection. It represents the endeavor of nations to make provision for times of danger by assuring the production of an essential article of food. We had the same experience in regard to dyes.

Germany had established a practical monopoly in the making of dyes and chemicals. The war came and the nations which had been relying for their industries and for their defense on German imports found themselves without any dyes, either for commercial use or for the production of explosives; and we all know of the money and energy which were expended in building up the dye industry and endeavoring by embargoes, as well as high duties, to establish the industry generally that each nation might be sure of the industry in its own country, and thus avoid the perils to which they all had before been exposed.

To take the illustration of war alone, it is as necessary to clothe the soldier as it is to arm him. It is as essential in time of peace to be able to clothe the people by our own industries without being helplessly dependent on foreign countries as it is to provide for and supply all the foodstuffs necessary to sustain life. Woolgrowing and the woolen industry have, therefore, an importance to every nation which is not shared by any other industry except cotton, and in the case of cotton we are well protected, as the Senator from South Carolina pointed out the other day, by the fact that American cotton possesses a quality with which no other country growing cotton can compete, except to a very limited degree. With wool, the situation is different, for it requires two widely distinct industries to support it. In the first place, it is necessary to have sheep. Our sheep had increased to 52,000,000 in 1910 and touched at one time 62,000,000. They have now declined to 45,000,000, practically the same number as we had in 1890 when, of course, the demand for wool was very much less than it is to-day. This decline is probably owing to the diminution in the great ranges where our sheep were pastured, and this diminution has not been met by small flocks kept by individual farmers which in the aggregate, if restored, would probably more than make up for all the loss of the ranges.

There are many countries crowded in point of population which nevertheless raise large numbers of sheep and produce a great deal of wool. That is true of Great Britain to a very high degree and simply proves that sheep can be successfully produced in great numbers in a country which for agricultural purposes is practically all in the hands of farmers. There is no reason of climate or pasture to prevent the existence of large numbers of these small flocks kept by farmers throughout all the Northern States, at least, of the Union, but for some reason it is not done. I have heard various causes mentioned, but my own judgment would be that the main cause is economic; that is, that it is very difficult in the United States to get the necessary labor, and the rate of wages is, of course, very high. It seems to me a matter of the first importance to the United States to increase and maintain the sheep, and under our economic conditions, as conditions now exist, this is impossible, especially as the ranges diminish, without tariff protection. This will not, in my judgment, be sufficient in the long run, and I hope to see both State and Nation take steps to develop sheep raising and encourage the farmers to restore the small flocks, which must in the end be the constant and most trustworthy source of supply.

As the question stands to-day, it seems to me that the woolgrower and the sheep owner, unless we wish to have this great industry extinguished, can not live in competition with the vast and unoccupied spaces of Australia, for example, or the cheaper labor of Europe unless they are amply protected, and the sheep industry and the wool which we get from the sheep are essential not only to the industries of the country but still more to its safety and well-being in times of stress. This makes inevitable a high rate of duty on American wools fully justified alike by every principle of protection and by the highest interests of the country, apart from the value which is derived from the building up of any useful and important industry. Therefore, assuming that the woolgrower must receive a generous rate of protection, the other branch of the woolen industry, the manufacturing, must also be sustained. We have to meet the competition of lower rates of wages in manufacturing wool. We have to maintain a scale of wages higher than other countries, the reduction of which would be a most severe injury to thousands of operatives, and the American woolen mills are also vitally necessary to the woolgrower.

The interests, therefore, of both the woolgrower and the woolen manufacturer run together and are, in fact, inseparable, and they must be prepared to help each other and not suppose for a moment that one can live if the other is destroyed. If the raising of sheep is extinguished in the United States, the manufacturers of woolens will go with it for they will be in the first place at the mercy of the foreign woolgrower, who can put them out of business at any moment, and who will be interested in doing so in order to benefit his own mills and factories. The State which I represent is one of the States chiefly interested in the manufacture of woolens, and it would be an almost ruinous disaster to the State to have these woolen industries, which have gone on for so many years, broken down and destroyed. In order to maintain them, they must have protection and a like protection must be given to the American woolgrower. My native city of Boston is the great wool market of the United States, a fact in which I take a great deal of pride. It is the center of the trade, and that trade would vanish if the mills which consume the wool were to be injured or broken down or if American wools were to disappear from the market.

Those of us who represent manufacturing States must make up our minds that the well-being of the woolgrower is fully as important to us as the well-being of our own manufacturer, and the woolgrower on the other side must understand that the American manufacturer is vital to the maintenance and prosperity of his flocks. If, instead of helping each other, they at-

tack each other there can be but one end; for separated both will be ruined; united both will be maintained by the good sense of the American people, who use and consume their product and who must realize the enormous value of the production of wool and the accompanying production of woolens not only to the industrial success of the United States but to its safety in times of danger.

If we have no American wool, there will be no competition with the foreigner, and consumers would bitterly regret the day when they were left to the tender mercies of foreign woolgrowers. If we have no manufactures, the woolgrower will have no domestic market and will be driven from the field. The strength of a nation does not rest on political, physical, and intellectual independence alone. Economic independence is as essential as any of the others. If a nation in the largest sense is to endure, to be at once safe and powerful, it must be, so far as possible, economically independent. It must be able to care for itself in the dark hours in the essential elements by which civilized life is made possible. One of those elements ranking with food in importance is the ability to clothe itself, and in our climate there must be warm clothing. Before the days of factories and machinery the sheep were in every farmstead and the spinning wheel in every house. When John Ball was leading the Wat Tyler insurrection he preached from a text of his own, now very familiar:

When Adam dolve and Eve span,
Who was then the gentleman?

We do not now associate Eve with a spinning wheel, but the English laboring man and peasant did so in 1381 and could only picture their condition by a man digging and a woman spinning. The making of warm clothing from first the skins, then the hair, fur, or fleece of animals is one of man's earliest instincts and is a true one. The Chancellor of Great Britain sits upon a wool-sack emblem of the foundation of England's trade and prosperity. Every nation must be able to clothe itself. We can not afford to have this power lost or dissipated in our modern, mechanical civilization when it flourished in the earliest days before the roar of machinery was heard in the land. We must maintain the woolgrower and the spinner of wool always, for their work makes an element in the completeness of our independence as a nation. Our duty is to see that they are protected against a competition deadly to the American standard of living and that they shall both have an assurance of profit which will amply repay their toil and enlarge their opportunities and their field of industry. This does not rest merely on the policy of protection of which it is a vital part, but on the greater law of self-preservation.

The cry that the retailer is going to raise the price is the cry of the moment, for the benefit of the politics of the moment; but under this question of the protection of the woolgrower and the wool spinner lies one of the basic principles of our economic independence. An increase in the raising of sheep in the United States is well worth all the money the people will ever spend upon those interests to make us, in peace or war, in sunshine or in storm, always independent, so that under any pressure which may come we shall always be able to clothe our own people.

Therefore, Mr. President, I feel very deeply the importance of this schedule, and whether I agree with every rate in it or not does not greatly matter. One great purpose of this bill is what ought to be one of the chief purposes of every other tariff bill, to give the woolgrower and the wool spinner alike protection enough to make their industries profitable and inviting to them. No money could be better spent, if we have to spend the money, and it would do the States no harm if they went further and gave more direct encouragement to the farmer in the raising of his sheep. That is the underlying reason why the wool schedule is always the central and the most contested schedule of every tariff bill, because it is the schedule that is more important to the welfare and independence of the country than any other single industry. The people of the United States can not permit themselves for a moment to fall into a condition where they must look to other nations to be clothed.

Mr. GOODING. Mr. President, I have discussed the wool tariff on several occasions and I shall take but a few minutes at this time to discuss the pending amendment. To my mind it is a tragedy that the live-stock industry of the country must every few years fight for its very existence. The foundation of all government rests upon the fertility of the soil. Live stock is nature's remedy for keeping up the fertility of the soil. It is not necessary that live stock must be kept on every farm. It is not necessary that the barnyard should be cleaned out and its output distributed upon the farm. But it is necessary to grow something upon the farm that live stock consumes. If we are going to keep up the fertility of the soil we must have a crop rotation of the proper kind. Corn takes very little of the fertility of the soil where there is proper cultivation, but it requires live stock to make a market for corn. So on down the line. If we are going to maintain the fertility of our soil we either have to have live stock upon the farm or grow those crops that live stock consumes. Wheat, sugar beets, practically everything that the human consumes tends to exhaust the soil; but clover, corn properly cultivated, practically everything that live stock consumes, is a fertilizer to the soil and places in the soil the nitrogen which is exhausted by the crop that the human consumes.

That is borne out by the history of civilization. When the soil of any nation has been exhausted the virile forces of the manhood of that country have gone down with the soil. It was true of Rome. When Rome went down to destruction they were only growing in that empire 4 bushels of wheat to the acre. If you will show me a farm anywhere where live stock has been maintained since the plow turned over the first furrow, I will show you a farm where the soil is just as rich as it was when it was first cultivated. Show me a farm where live stock has not been maintained or some crop has not been grown that live stock consumes and I will show you a farm where the soil has deteriorated; and I will also show you, if the struggle is too long continued, where the citizenship, like the soil, has gone backward. Only a few years ago in the great State of Ohio one-third of the male population of two counties of that great State were indicted for selling their votes. Investigation in those counties showed that the soil was so depleted that it was practically impossible for those who cultivated it to keep the wolf from the door.

So it seems to me strange that an industry which is so vital to civilization and to the life of the Nation must make a fight for its existence in this way. I am very glad to hear the senior Senator from Massachusetts [Mr. LODGE] speak as he has of the great live-stock industry, because I have always felt that all the people of Massachusetts were not against that great industry. If we listened to the junior Senator from Massachusetts [Mr. WALSH], we would be inclined to conclude that they do not believe in Massachusetts that it is possible for the sheep industry to exist in America; in other words, that it is a pioneer industry, which soon passes away; that as soon as the country becomes settled other live stock and other industries take its place, and that the sheep industry, like the hemp industry, which was once a great industry in America, passes away in a few years after we come to a permanent settlement of the country. That is not true in the West. It is not true in any part of this great country of ours.

I want to read something about the number of sheep in the country to show the junior Senator from Massachusetts that away back in 1840, before there was a sheep west of the Missouri River, the number of sheep in the country was not inconsiderable. I shall read only the millions. In 1840 there were 19,000,000 sheep in the United States; in 1850, 21,000,000; in 1860, 22,000,000; in 1870, 40,000,000. At that time, including Texas and all the States west of the Missouri River, there were only 4,000,000 sheep in the Western States. In 1880 there were 40,000,000 sheep, and at that time we had but 18,000,000 sheep west of the Missouri River. The peak in the number of sheep in the country was reached in 1903, when we had 63,964,876. I ask permission that the table to which I have referred may be printed in the RECORD without reading.

The PRESIDING OFFICER (Mr. LADD in the chair). Without objection, it is so ordered.

The table referred to is as follows:

Sheep population in United States, 1840–1920.

[Source: Statistical Abstract, 1920.]

	Sheep in United States.	Far West and Texas.
1840	19,311,374	
1850	21,773,220	
1860	22,471,275	
1870	40,853,000	4,666,000
1871	31,851,000	
1872	31,679,300	
1873	33,002,400	
1874	33,938,200	
1875	33,783,600	
1876	35,935,300	
1877	35,804,200	
1878	35,740,500	
1879	38,123,800	
1880	40,766,000	18,233,000
1881	43,569,869	
1882	45,016,224	
1883	49,237,291	
1884	50,626,626	
1885	50,350,242	

Sheep population in United States, 1840–1920—Continued.

	Sheep in United States.	Far West and Texas.
1886	48,322,331	
1887	44,759,314	
1888	43,544,755	
1889	42,599,079	
1890	44,336,000	19,203,000
1891	43,341,136	
1892	44,938,365	
1893	47,273,553	
1894	45,048,017	
1895	42,298,064	
1896	38,298,783	
1897	36,818,643	
1898	37,656,960	
1899	39,114,453	
1900	41,883,000	23,669,000
1901	59,756,718	
1902	62,039,091	
1903	63,964,876	
1904	51,630,144	
1905	45,170,423	
1906	50,631,619	
1907	53,240,282	
1908	54,631,000	
1909	56,084,000	
1910	52,448,000	24,666,000
1911	53,633,000	
1912	52,362,000	
1913	51,482,000	
1914	49,719,000	
1915	49,956,000	
1916	48,625,000	
1917	47,616,000	
1918	48,603,000	
1919	48,866,000	
1920	47,114,000	

Mr. GOODING. Mr. President, the present tariff bill is not an increase over any protection that has ever been given to the sheep industry heretofore. In fact, it is a material reduction from most tariff rates, with the exception of those in the Dingley law and the Payne-Aldrich law. If we go back to 1867, we find that we had a duty then of 10 cents a pound upon wool which was valued at more than 32 cents and an ad valorem duty of 11 per cent, which was equivalent to 13.5 cents; when valued at more than 32 cents a pound the duty was 12 cents and 10 per cent ad valorem, an equivalent duty of 13.2 cents per pound.

The act of 1872 reduced the duty to 9 cents a pound when valued at 32 cents and 9.9 per cent ad valorem, or 12.2 cents; when valued at more than 32 cents a pound it was 10.8 cents a pound and 9 per cent ad valorem, equivalent to 13.7 cents. The act of 1872 was a horizontal decrease of 10 per cent, which accounts for the percentages shown. In the act of 1875 duties were restored—that is, the 10 per cent was restored—and the duties made the same as in the act of 1867.

In the act of 1883 the duty on wool valued at 32 cents a pound was fixed at 10 cents a pound, and over 32 cents a pound at 12 cents. So that it might be said the average duty on first and second class wools, or that grade of wools, was about 11 cents a pound. Then came the act of 1890, which gave 11 cents a pound and 12 cents a pound; that is, 11 cents on first-class wool and 12 cents on second-class wool. Then came the act of 1894 placing wool on the free list. The act of 1897 fixed the duties of 11 cents and 12 cents, respectively. In the act of 1909 there was no change. Under the act of 1913 wool again went on the free list.

Then the emergency bill was passed in 1921, giving the highest duty to wool ever known in this country—a rate of 15 cents on the grease pound, 30 cents washed, and 45 cents scoured.

So the rate in the pending bill may be said to be the same as in the Payne-Aldrich law so far as the grease duty is concerned, with a difference that the pending bill bases it on the scoured content. It is merely going to give the woolgrowers of the country, in my judgment, somewhere near the full duty. They have never had the full amount of the duty, and never will have it, even with the emergency tariff rate of 45 cents a pound.

The manufacturer is the sole market for the American woolgrower. He buys his wool on the market just as cheaply as he can, and he always succeeds in beating the price down below the amount of the duty. On Ohio fine unwashed wool to-day we are getting a benefit of 35 cents a pound protection and not 45 cents. On territory fine staple we are getting a benefit of 36 cents a pound and not 45 cents. On Ohio half blood we are getting 25 cents protection and on territory half blood 30 cents; that is, when we take the market price in London and the market price in Boston. There ought to be by every right a difference of 45 cents, the full amount of the duty, but the manufacturer never has paid it, and he never will pay it. He is not paying it now.

On territory quarters we are getting 25 cents duty and on territory low quarters we are getting 23 cents protection, and not 45 cents. On territory braids we are getting 19 cents protection, and not 45 cents. So the manufacturer in this case has 26 cents protection more than he is entitled to, and the woolgrower gets that much less.

I have discussed the question of the tariff on wool and gone into Schedule K. I shall not take the time of the Senate to go into it further. I think the country has heard enough of Schedule K.

The Tariff Board finds the difference in the cost of production in this country as compared with the Argentine of a pound of all classes of wool is 34.6 cents. That is the difference between the cost of production in this country and the cost of production in the Argentine. So we are not getting on any class of our wool the actual cost of production at all. When we compare with New Zealand and Australia, where one man cares for 20,000 sheep the year round and where his total forage cost is only 9 cents a head, 33 cents a pound is not going to protect the American woolgrower at all.

Now, I want to take up Mr. Goldman's letter for just a moment, because the schedule which I placed in the RECORD the other day was not quite correct when it comes to the average weight in a suit of clothes. The Tariff Board finds the average weight is 12 ounces and that it takes 3½ yards of 12-ounce cloth to make a suit of clothes. When credit is given for all the waste that takes place from the time the wool is scoured down to the tailor's clippings, 3 pounds of scoured wool make 3½ yards of 12-ounce weight, the average weight of which men's clothes are made, and yet Mr. Goldman says that a tariff of 33 cents is going to increase the price of a suit of clothes $4.

With the duty at the present time 45 cents, and Ohio fine unwashed Delaine wool worth $1.31, all the wool in an all-wool suit of clothes costs only $3.93. When this bill is passed there is going to be a reduction on the scoured basis of 12 cents a pound, and by every right there ought to be a reduction in the price of the suit of clothes. Territory fine staple wool sells at the present time in Boston for $1.26 cents, and in a suit of clothes made of such wool all wool will cost $3.78. Ohio half blood sells at the present time in Boston for $1.08, and the wool in a suit of clothes made of that grade is going to cost $3.24. Territory half-blood wool sells at $1.15 in Boston, and all the wool in a suit of clothes made of that grade is going to cost $3.45. Territory three-eighths staple wool sells for 89 cents in Boston, and all the wool in a suit of clothes made from such wool is going to cost $2.67. Territory quarter-blood wool sells in Boston at the present time at 72 cents per scoured pound—and these are all scoured pounds which I have been discussing—and all the wool in a suit of clothes made of that grade is going to cost but $2.16. Territory low-quarter wool sells at the present time at 56 cents a pound in Boston, and all the wool in a suit of clothes made of that grade is going to cost $1.68.

Then coming to braid wool, selling at the present time for 44 cents, all the wool in the suit of clothes, if Senators please, made of that class of wool is going to cost only $1.32, and this is with a duty of 45 cents a pound. There is not a man in America who is so poor that he can not afford to pay even $3.93 for the wool in a suit of clothes, if he can be assured that it is all wool and not shoddy.

So it seems to me, Mr. President, so long as we know that the farmer is not getting the cost of production, if we are going to save the life of this industry, which is so vital to the American people, and assists so markedly in keeping up the fertility of the soil, we should retain the rate of 33 cents per pound proposed by the committee. If we cut the rate, it can have but one effect, and that is to do serious injury to a great industry which we ought to encourage, and as to which there should be no division of opinion at all on the question whether or not it should live or perish.

Mr. SMOOT. Mr. President, when this proposal was made last Saturday I thought it could be successfully worked out and properly administered on goods entering our ports. When I attempted, however, to frame a provision for the purpose of carrying the proposed amendment into effect and to apply it to the various stages from the wool to the cloth as the wool would pass through the woolen mill, I found that it was a most difficult thing. I thought, perhaps, it could be worked out on medium wool, and yet my experience told me, before even trying the experiment, that it would be next to impossible of administration. I soon learned that that was the case when I took into consideration as to each bracket of this paragraph, that the wool of which the cloth was made was medium wool.

I then undertook to provide for quarter bloods, which are known as 50 English quality, knowing to how fine a thread that wool can be drawn out and the character of goods into which such wool goes. I thought, perhaps, in that instance the proposal could be worked out and meet every situation. That, too, Mr. President, proved a failure after a study of hours and hours. I spent nearly all of last Saturday evening and a considerable portion of the Sabbath trying to frame some provision whereby not only the woolgrower himself would be protected, but the manufacturer should not proportionately receive any more compensatory duty than was given to the woolgrower. After all the study that I have been able to give to the subject, in the light of the experience which I have had in handling wools and yarns, I am compelled to say to the Senate that the provision is impossible of administration.

I want to tell the Senate why it is impossible. For instance, take cheviots and tweeds, which are made of a coarser wool than are the cassimeres. They do not require the same fineness in the thread, either in the warp or in the filling. A manufacturer can take a good medium wool, mix into that wool 10 or 20 per cent of the low-grade wool, make the thread that goes into a tweed or a cheviot out of the mixture of those wools, and no appraiser at any port of entry can ever tell what proportion of that wool is coarse wool and what proportion of it is medium wool. It can not be done.

Mr. President, if we lower the rate to 60 per cent in a case of that kind, under the abnormal prices of to-day, we can not go to the cloth paragraph and change the compensatory duty upon the wool which enters into tweeds or cheviots; that would be unfair.

Again I wish to call the attention of the Senate to the fact that the prices of coarse wools to-day are abnormal. Taking the world market, never in the history of the world has the difference between the prices of the fine wools and the prices of the coarse wools been so great. If there should be a normal demand for the coarse wools—and there will be at some time in the near future just as surely as the wool is grown—the abnormal prices for coarse wools will not be maintained. As I said last evening, taking the quotations of the London market each week, it will be found that the coarse wools are not now salable. They have been forced down, on the scoured basis, as low as 14 cents, and yet they can not be sold because there is no demand for them. I have bought coarse wools many times and I have paid for them as high a price as I have for the finest wool. I remember upon one occasion when cheviots were in fashion and no one in the United States would wear anything else during that season, the price of the coarse wools went higher than the price of the fine wools. If the prices return to normal, if the price of the coarse wools should become even one-half of the price of the fine wools, then the rates which we propose here are not going to be excessive.

But, Mr. President, we allow a compensatory duty on the wool as it is, based upon normal prices, and when that basis is disturbed, if it shall be disturbed, the compensatory duty to the manufacturer then becomes unjust when the prices are low, and it would not be just to the manufacturer when they are exceedingly high. So this bill is framed upon that basis. As we reach each paragraph of this schedule Senators will notice that the compensatory duties vary in the different paragraphs. As I have said, the compensatory duty depends upon the price of the goods by the square yard or the pound. That is the only way we can tell whether the goods are all wool or whether they are a mixture of low-grade wool with fine wool or a mixture of wool and cotton or whether there is a cotton warp and a wool filling.

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. SMOOT. Yes; I yield to the Senator from Minnesota.

Mr. KELLOGG. I understand the Senator to say that the only way to make the compensatory duty to the manufacturer is to have an equal specific duty per pound on all grades of wool.

Mr. SMOOT. On all grades of wool whenever there is a compensatory duty.

Mr. KELLOGG. Very well. Then, we are obliged to have a rate of duty either too low on one class of wools or too high on another.

Mr. SMOOT. That all depends upon the price of the wool, I will say to the Senator; but the compensatory duties, as I said before, are not the same.

Mr. KELLOGG. I appreciate that, but I understand the Senator to say that a compensatory duty can not be made unless the rate of duty per pound is the same on all grades of wool.

Mr. SMOOT. Mr. President, I did not put it that broadly—all grades of wool used in the cloth. I will say to the Senator that that is the only plan which can be properly administered; but you know from the price of the goods that it is not fine wool, nor is it all wool, and you know whether it is a mixture or whether it is not. Therefore the compensatory duty is different all the way through the bill, and that is the only way in which it can be handled.

Mr. POMERENE. Mr. President, will the Senator yield for a further question?

Mr. SMOOT. Yes.

Mr. POMERENE. The question which has been suggested by the Senator from Minnesota is one which I think I referred to on yesterday, and it is a very pertinent question; but if you are going to place a specific duty of 33 cents a pound on the scoured content of wool, whether it is of the coarser or cheaper grade or the other grade, ought you not to go further and provide also that there shall be a specific duty of so much per yard on the cloth, whether it is made out of the cheaper wool or the higher-priced wool, whether it is worth 50 cents a yard or $5 a yard?

Mr. SMOOT. Oh, no; I do not think so, and that is the reason why the compensatory duty is different in the various paragraphs according to the value of goods.

Mr. POMERENE. That being so, it must follow, I should think—at least, it is a fair argument—that the first plan is wrong, if you have a different duty.

Mr. SMOOT. No; I will say to the Senator that this is the theory: If the Senator will take the bill he will notice certain rates upon wool waste, beginning with mungo and advancing in value until you get to noils, and the rates upon all of those wool wastes are different, and they are worked out upon the difference in the value of them as mixtures with the wool.

Now, in some goods you can use a hard-end waste. In other goods you can not do so. In fine goods you can use the soft ends up to the time that they are made into a sliver or a roving, or the soft ends that may be taken from the spinning mule that have not been twisted, that have fallen as roving to the floor. That kind of waste is just as good and a little better than the wool itself, particularly the clean content of the wool; and, if the Senator will notice, throughout the bill that has been taken into consideration in the compensatory duties that are given on that class of goods.

For instance, Mr. President, we know that if we make a real fine piece of goods there is no waste in it. It has to be made of pure wool, because they can not draw the threads fine enough if they have waste in it, or in some cases finish it satisfactorily. We know this from experience in the manufacture of cloth; but when we have a tweed or a cheviot with a 20 filling or an 18 filling or a 22 warp we know that the manufacturer need not put all wool in the cloth. We know that he is going to use some of the wool waste that he makes in his mill. In many cases they can use 10 per cent of cotton in yarns and nobody would ever detect it unless you should take a sulphuric-acid bath and put the yarn or the cloth in it and have all of the wool eaten out, leaving the cotton itself, and that will give you the percentage of the cotton that is in the yarn or cloth. That is the only way you can test it. It can not be tested in any other way.

Mr. WALSH of Montana. Mr. President, I understood the Senator from Wisconsin yesterday to say that if the amendment which he tenders is adopted, he will look to the committee with confidence, as I understood him, to arrange in some way so that the compensatory duty should be scaled accordingly. I understand the Senator from Utah now to say that the committee, having wrestled with that problem, finds it an impossible one.

Mr. SMOOT. Yes; it is impossible.

Mr. WALSH of Montana. I was merely going to say, in that event, that while I must confess that I feel rather favorably disposed toward the amendment of the Senator from Wisconsin——

Mr. SMOOT. So did I, when it was first offered.

Mr. WALSH of Montana. Of course, however, that has to be worked out; and if the committee is unable to present a plan for equalizing the compensatory duty, of course we shall naturally look to the Senator from Wisconsin to take care of that situation.

Mr. SMOOT. I will say to the Senator from Montana that the committee has had the appraisers from the port of New York, it has had the men from the Tariff Commission, and they all say that the provision can not be administered; and I will call attention to some classes of goods where it can not be administered.

For years and years the Provo Mills made tricots—tricots that were known from one end of this country to the other. The light-weight tricots—that is, the 14-ounce tricots—we could not back at all. They had to be all straight medium wool in filling and warp; but when we came to make the heavy-weight tricot, the 18 to 20 ounce tricot, we would put a backing on it, and it was made of a coarser class of wool, and no manufacturer would think of doing otherwise. It would be economically wrong. The heavy-weight cloth with the backing of coarse wool is just as good as if it were all fine wool, but every face thread upon that cloth was a fine thread made of fine wool.

For instance, Mr. President, take overcoating. Take a 27-ounce overcoating or a 24-ounce overcoating. Nobody is going to make an overcoating of a certain kind unless he puts a backing upon it. The threads upon the face are all fine threads if it is a first-class overcoating. Of course if it is a coarse overcoating they would not be, because then you would not require the thread to be fine and it would not be affected in the least; but it would be if you were going to have a fine-faced overcoating, and in those cases I do not believe there is a living soul who can tell what proportion of medium or coarse wool there is unless you take the cloth all to pieces, and even then I doubt whether it can be done.

If it were part cotton, or if it were a vegetable fiber of any kind that was used as a mixture with wool, that is very easy to tell, because all you have to do is to put it into a sulphuric-acid bath, eat the wool out, take the cotton left and weigh it, and you know just what proportion there was used of cotton and wool.

Mr. KELLOGG. Mr. President, will the Senator yield for one moment?

Mr. SMOOT. Yes.

Mr. KELLOGG. Does the Senator propose to levy on imported cloth, the cheapest kind of cloth, made from part coarse wool, the same rate of duty as on the fine cloths?

Mr. SMOOT. No; Mr. President.

Mr. KELLOGG. Why?

Mr. SMOOT. Because of the fact that it does not cost as much per yard to make.

Mr. KELLOGG. It does not cost as much to make because part of it is cheap wool?

Mr. SMOOT. Not only that, but let me tell the Senator what difference there is in the labor cost.

Mr. KELLOGG. If you are going to determine what part is cheap wool and reduce the duty on the cloth because of that, why can you not determine it where you have different rates of duty on the different grades of wool?

Mr. SMOOT. Because one is determined on the size of the thread and the value, and in the other case it is indeterminable because of the fact that you do not know what proportions were used. You can not do it because both grades are wool, a coarse wool and a fine wool.

For instance, take paragraph 1109:

> Woven fabrics, weighing more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 60 cents per pound, 26 cents per pound and 40 per cent ad valorem.

After reading that I am going to answer the Senator's question: "Why is that compensatory rate given, and why is 40 per cent given upon that as a protective rate instead of 50, or, as the bill was originally reported, 55?" This is the reason: In the first place, we know that that cloth at 60 cents a pound can not be all wool; that the threads of that cloth probably have part cotton in them and more than likely 50 per cent of wool waste—perhaps hard end waste, perhaps roving waste—and if you made a thread as coarse as No. 8, there is hardly any waste that you could not put in and secure that fineness of thread; and, to explain, when you are spinning that thread, if it is No. 18, that would mean that from a pound of wool a thread had to be spun 18 times 540 yards. That is what that means. If you have a fine cloth with a No. 40 thread, that means that 1 pound of wool has to be spun 40 times 540 yards into a thread. I explained the principle when the long-staple cotton was up, and the same thing applies to wool that applied to cotton, with the exception that cotton takes 840 yards to the number and wool takes 540 yards.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SMOOT. Yes.

Mr. LENROOT. I would like to ask, in connection with the illustration that the Senator gives——

Mr. SMOOT. Just one minute, until I finish this. Then, again, Mr. President, on the cloth that will fall under this paragraph, with 26 cents a pound compensatory duty instead of 49—just a little over half—when that is put into the loom and woven into a piece of cloth, I do not suppose there would be a piece that would fall under that value that would have more than 24 picks to the square inch. You take a fine piece of cloth and it has many times 60. The loom can run at just exactly the same speed or the same number of picks per inch on one as it can on the other. It takes more than twice the time to weave a yard of the one cloth that it does to weave the other.

That is why we have 40 per cent instead of 50 per cent as the protective duty, and so it goes through all of the paragraphs of this bill. They are made upon the basis of what goes into the wool, and they are made upon the basis of how finely that wool must be drawn into a thread; and then the protective rate is given upon the character of the cloth and the cost of producing that and making it into cloth.

Now I yield to the Senator from Wisconsin.

Mr. LENROOT. Mr. President, taking the illustration the Senator gives, in the case of the first fabric, where it is valued at not more than 60 cents per pound, 26 cents per pound compensatory duty is provided.

Mr. SMOOT. Yes.

Mr. LENROOT. Now I should like to ask the Senator what duty would be provided if that was all pure wool?

Mr. SMOOT. Mr. President, I will say to the Senator that it could not be all pure wool at 60 cents a pound.

Mr. LENROOT. I am asking, for my purposes, what it would be. I am not asking what it could be. If it was all pure wool, what compensatory duty would be provided?

Mr. SMOOT. If it was a fine cloth——

Mr. LENROOT. No; of this cloth, weighing not more than 4 ounces per square yard.

Mr. SMOOT. It would not be made of pure fine wool.

Mr. LENROOT. Whether made or not, if it was all wool—and it could be all wool, of course; could it not?

Mr. SMOOT. Yes; it could be all wool, but not at that price.

Mr. LENROOT. I am not speaking about the price; I am getting the fact. If the fabric covered by this first clause was all wool, what compensatory duty would be provided?

Mr. SMOOT. It would be 49 cents; but I want to say to the Senator that such a case would not be known in commerce.

Mr. LENROOT. That is another thing. I am asking the Senator a question, and I shall be obliged if he will confine himself to the question.

Mr. SMOOT. Certainly.

Mr. LENROOT. Very well. Then the committee, in fixing this compensatory duty, figured that there would be twenty-six forty-ninths. Is that correct?

Mr. SMOOT. To the value of twenty-six forty-ninths.

Mr. LENROOT. Now, will the Senator inform the Senate how much wool the committee figured would go into this woven fabric under this clause?

Mr. SMOOT. Mr. President, that cloth will first have cotton warp, and that is a very small weight in the cloth itself. They can make that thread out of 75 per cent waste easily, and there would be a balance of about 20 per cent wool. We calculate the duties which are imposed on the different wastes with their rate of duty that would enter into that cloth.

I want to say that in a mill—I do not care what kind of a mill it is—they can not make cloth or yarn or any other fabric without waste, and that waste has to be taken care of. Some mills make the most of it into blankets, others into low-grade cloths, and some sell their waste.

Mr. LENROOT. I would like to ask the Senator whether in this fabric weighing more than 4 ounces per square yard one piece of fabric may contain more pure wool than another?

Mr. SMOOT. It could.

Mr. LENROOT. Would it?

Mr. SMOOT. I think the manufacturer would have to put about the same proportion in the goods that fall under the 60 cents a pound classification, or else he could not compete with other manufacturers who did. You would have to take about the proportions I stated in order to get the cloth within the 60 cents a pound classification.

Mr. LENROOT. Does any of the fabric which comes under this clause sell at less than 60 cents a pound?

Mr. SMOOT. If there is any, it is very little indeed. That is the lowest bracket I can think of that could be included in the wool schedule.

Mr. LENROOT. Take the next clause, "valued at more than 60 cents, but not more than 80 cents per pound," 40 cents per pound compensatory. Does the same amount of wool come into that piece of fabric under that clause?

Mr. SMOOT. Does the Senator mean on the spread?

Mr. LENROOT. Yes.

Mr. SMOOT. No; I should think there would be a difference, because the amount of the wool that goes into it regulates the price of the cloth.

Mr. LENROOT. Yet you give 40 cents compensatory duty, irrespective of the amount of wool in the fabric.

Mr. SMOOT. Absolutely, and you can not help it.

Mr. LENROOT. That is just the point I am getting at. The Senator now admits that the committee is unable to determine the exact compensatory duty with reference to what is already in the bill, but because it can not determine the exact compensatory duty under my amendment he thinks it is impossible. That is the position in which the Senator finds himself.

Mr. SMOOT. There is quite a difference between the one and the other. This duty can be administered. When this enters the port of entry we know the value of it; we know the value is between 60 and 80 cents; and therefore the provision can be administered. The price will greatly depend on the amount of waste and the amount of wool that is in the cloth, and the manufacturer who manufactures that knows what is in it, and his competitor must know what is in it, and perhaps within that bracket we will have 65 cents, 70 cents, 75 cents, 80 cents; but when you compare the 65-cent cloth with the 80-cent cloth you will find that there is quite a difference in the fabric itself. But the provision can be administered, whereas the other can not be administered, because you can not tell whether there are two grades of wool in the cloth or not.

I want to say to the Senator from Wisconsin that I worked as hard upon that proposition, to carry out his thought, as it was possible for me to do. I gave the very best that was in me in an effort to reach a conclusion in favor of his amendment, with a view of putting it in the bill. I know what will come. I know that what the Senator has said will be hawked from one end of this country to the other, that a certain grade of wool which will enter into the making of cloth will bear 139 per cent duty. That would be true under the conditions if it were not for the competition between the manufacturers themselves, just the same as it was true that there were 12 blankets brought into the United States in 1909 which bore an ad valorem rate of 485 per cent.

If anyone can tell me how we can overcome that and at the same time carry out the theory of the compensatory duty for the woolgrower and give him 33 cents upon the wools he grows, I am perfectly willing to support it, and I would be delighted if it could be done. If it could be done, I would stand here side by side with the Senator from Wisconsin and fight for it from beginning to end. But such a duty can not be administered.

Mr. BURSUM. Is it not true that the present low value of the low grade of wool, which is under discussion, is simply temporary, and that it is low on account of the great surplus that accumulated during the war; that it is a drug on the market, and that if that wool should increase ultimately in value from its pre-war value, which was about 31 cents, as the finer wools have increased, the values would likely increase to about 60 cents a pound?

Mr. SMOOT. Before the Senator came into the Chamber I told the Senate that many times I have paid more for coarse wool, per clean content, than I have for the fine, and I also said that prices were abnormal all over the world as a result of conditions brought about in part by the war.

Mr. BURSUM. Is there not just as much reason for an antidumping clause in this bill as there was at the time we passed the emergency tariff bill? Do not the same conditions exist with reference to the surplus of wool in the world market to-day as existed in the case of the commodities we sought to protect with an antidumping clause in the emergency tariff bill?

Mr. SMOOT. The trouble is that no antidumping law would apply to this class of wool under conditions existing in the world to-day, because of the fact that they are offering that wool to anyone in the world, to their own people, or to anybody who will take it, at the prices at which they are offering it to America. So an antidumping law would not apply to that at all. It is a condition existing in the wool market to-day, and nothing can change that until there is a change in the style of goods, and when that change comes you will see that the prices of these wools, which are so abnormal to-day, will rise not a hundred per cent but 200 per cent or more. If I wanted to speculate in wool to-day and I had the money available, there is nothing in all the world in which I could be surer of getting an immense profit than in the purchase of these coarse wools in the markets of the world to-day.

All you will have to do is to hold them until the cheviot or tweed style is in vogue, until there is a demand for that, and you will see the price go up, as it has when these wools are being used, not only in the United States but in the world. It is bound to come. It is just as sure to come as is the sun to rise to-morrow morning. I can not say whether it will be next year or two years from now, but I am sure that it will come, as it always has in the past.

Mr. POMERENE. Mr. President, if that is true, then when the Senate seeks to place the same specific duty on these wools it would be guaranteeing the speculation and the investment in these cheaper-grade wools to which the Senator refers.

Mr. SMOOT. I do not think so. I do not think it would have that effect at all. If I were going to buy wools, I would not buy them in this country. I would buy them on the London market and have them held. My insurance would be less there, and perhaps my warehouse expenses would be less. I certainly would not come here and pay the duty on them and hold them here, and have that much more money locked up in them.

If it were possible to take care of this by an amendment, I would propose any kind of an amendment to reach it, but it is not possible.

Mr. McCUMBER. Mr. President, would the Senator desire to reach it by any kind of an amendment that would take care of the prices as they are to-day——

Mr. SMOOT. It is impossible.

Mr. McCUMBER. When, as a matter of fact, this lower-class wool, on account of its being a drug in the market, brings only about one-third of the price it brought in 1914, while the price of the higher class is double what it was in 1914? Where the spread in 1914 between this class, under normal conditions, and the finer class of wool was 50 per cent, to-day the spread is 400 per cent between those two, and it is unfair to base a tariff law upon the supposition that there will be 400 per cent difference between the lower-grade wool and the finer grade of wool, as is the case to-day.

Mr. SMOOT. Mr. President, if anyone had told me in 1914 that you could buy on the London market a low-quarter wool on a scoured basis for 14 cents, 8 cents less than the price of cotton, I would have said it was impossible; that such a thing could never happen.

Mr. GOODING. Mr. President, I may say that I have on my desk a report of the American woolen manufacturers, which shows that for a number of years this coarse wool we have been discussing sold for a higher price in the grease than the finer wool, but on the scoured basis there has been usually about a 5-cent difference on the pound in favor of the finer wool. To-day the low grade is selling in Boston for 44 cents a pound, and the finer wool for $1.31 a pound, which shows just what the Senator from Utah has stated, that it is abnormally low. In London it is selling for 25 cents a pound. Of course, it will come back in time.

Mr. WALSH of Massachusetts obtained the floor.

Mr. HEFLIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Alabama?

Mr. WALSH of Massachusetts. I yield to the Senator.

Mr. HEFLIN. Mr. President, Senators on the other side who are pleading for a high-tariff tax on wool seem to forget that the woolen industry was very injuriously affected by the deflation policy I discussed this morning. I want to read from the report on the wool trade from the United States Tariff Commission. Speaking of conditions in the spring of 1920, about which I talked this morning, it states:

> By April rising interest rates had begun to affect the merchandizing of wool and wool manufactures in both Europe and America, and the cancellations of orders previously placed at almost any price were already reaching the mills.

I told Senators that it was deflation which closed the woolen mills, which affected the buyers of wool in the country, and the people who wear woolen clothes and thus injuriously affected the sheep growers of the United States. That is just as true as that we live and are in this Chamber to-day discussing this question.

> Then, in an effort to release frozen credit—

I wish my friend from Connecticut were in the Chamber now.

> Then, in an effort to release frozen credit, the Federal Reserve Board decided on a policy of credit curtailment for nonessential industries, which, though not intended to affect the wool trade, for a number of reasons proved disastrous.

Some Senators on the other side come into this Chamber and endeavor to build up the falling fortunes of some by the use of the taxing power. Instead of using the power of this Government to release these money instrumentalities and permit credits and currency to go where they are needed, to help build up the woolen trade, the cotton trade, the grain trade, and every other kind of trade in the country, they are undertaking to employ the taxing power to take money out of the pockets of people who are not able to pay and put a tax upon wool, lifting up conditions that were thrown down by reason of efforts to make good to a few people by employing the taxing power to lay still heavier burdens upon the masses of the people of the country.

Mr. WALSH of Massachusetts. Mr. President, I desire to discuss two propositions—first, the amendment offered by the Senator from Wisconsin [Mr. LENROOT], and, secondly, the question of the extent to which the cost of woolen clothing would be increased by the rates levied in the pending bill.

First, as to the amendment offered by the Senator from Wisconsin, it is not satisfactory. It does not go far enough. The ad valorem rate of 60 per cent named by the Senator ought to be much lower. But we are confronted with the fact that it does result in lowering the duty upon the cheaper wools imported into the country, and for that reason I shall vote for the amendment offered by the Senator from Wisconsin. I repeat, it is after all a trivial reduction in the very high and excessive rate of 33 cents per pound upon clean wool fixed in the committee amendment.

I think I ought to point out, however, just what classes of wool would be affected by the amendment of the Senator from Wisconsin. My information leads me to believe that about 20 per cent of the cheaper wools used in the manufacture of clothing would be substantially affected by his amendment; in other words, that class of wool known as one-quarter blood would be substantially reduced by the adoption of the Senator's amendment. The Tariff Commission tables inform us that about 20 per cent of this class of wool is used in the making of clothing; that is, to be exact, 10.73 per cent is produced in the country and 9.49 per cent imported. So that 20 per cent of the cheaper wools which go into the making of the clothing of the poor would be reduced in price by reason of the amendment offered by the Senator from Wisconsin if it should become operative.

Now, let us see just what is the equivalent ad valorem on the different classes of wool imported into the country.

Mr. WALSH of Montana. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Montana?

Mr. WALSH of Massachusetts. I yield.

Mr. WALSH of Montana. I did not quite understand the Senator's statement. Are we to understand that 20 per cent of all clothing consists of wools of this character?

Mr. WALSH of Massachusetts. Twenty per cent of all raw wool that is used in the manufacture of clothing—a fraction over 10 per cent produced in this country and a fraction over 9 per cent imported—would be affected by the duty which the amendment proposes shall be placed upon that class of wool.

Mr. WALSH of Montana. Twenty per cent of the wools used in the manufacture of clothing would be affected?

Mr. WALSH of Massachusetts. Exactly; 10 per cent of which we produce in this country and about 10 per cent of which we import.

Mr. President, translated into terms of ad valorem, the rate of 33 cents per pound represents, as far as the fine merino wools are concerned, the following ad valorem values: Patagonia wool, 46.3 per cent; Cape South Africa, 44.4; Australian 64s, 35 per cent; Australian 70s, 30 per cent. All of these merino wools, being the merino wools imported into this country, fall below the rate named by the Senator from Wisconsin in his amendment, to wit, 60 per cent. Therefore, based upon present prices the amendment offered by him would have no effect at all upon the high-grade wools. In other words, they would all be subject to the duty of 33 cents a pound.

But when we come to the crossbred wools, translating the present prices and the rate of 33 cents per pound into terms of ad valorem equivalent, what do we find to be the showing? On the South American crossbreds, first, we find 50s, in terms of ad valorem equivalent, would be 93.7 per cent; 40s, 120 per cent; 30s to 40s, 156 per cent. As to New Zealand, on 50s, 82 per cent; 40s, 135 per cent; 30s to 40s, 183 per cent. The 30s to 40s are of little consequence. As was said by the Senator from Utah [Mr. SMOOT], they are used for making braid and the importations are trivial; I think about 2 per cent. But the 40s and 50s are very important, because they are within the class to which I have referred as being affected by the amendment of the Senator from Wisconsin. So those wools, if we permit the rate of 33 cents to remain in the bill without amendment, would be taxed on their present value 123 per cent, 156 per cent, 82 per cent, and 93 per cent, respectively. The ad valorem rate of 60 per cent proposed by the amendment of the Senator from Wisconsin would reach these crossbreed wools and would be reduced to a specific rate considerably below 33 cents per pound.

Mr. GOODING. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield.

Mr. GOODING. I ask the Senator if it is fair to charge up that high rate of duty or percentage that he speaks of, if the woolgrower does not get the benefit of the duty? The wool he is speaking of to-day is only bringing 44 cents on a scoured basis in Boston. The duty is 45 cents at the present time. Surely the public should not be charged with that tremendous increased percentage the Senator is discussing when they can buy the wool for less than the duty. That is the condition. The Senator will not disagree to that.

Mr. WALSH of Massachusetts. There has been a good deal said about present duties, and an attempt has been made to claim that the rate of 33 cents is less than the rate under the present law.

Mr. GOODING. But the Senator does not answer my question.

Mr. WALSH of Massachusetts. Will the Senator please wait? I should like to answer it in my own way.

Mr. GOODING. There is a supposed protection of 124 per cent, but the wool producer does not get one-half of it. There is no question of doubt about that.

Mr. WALSH of Massachusetts. The emergency tariff law has not been operative, it is not operative, and only within very recent weeks has the severity of the rates named in that law become apparent. My distinguished colleague, the senior Senator from Massachusetts, just a moment ago said more against that law than any man on this floor has said. He said that if the rates in the emergency tariff law were allowed to remain on the statute books it would destroy the wool industry. Why? Because these rates are so excessive and so extortionate that they amount to an embargo upon one-half of the wool that goes into the clothing of the American people.

Why has it not destroyed the industry already? If it has amounted to an embargo, why has it not destroyed the wool business already? Because, fortunately for the country, there was an oversupply of wool and the wool-manufacturing industry was depressed when that law became operative, and not until this spring were the woolen manufacturers made to realize that the domestic production was not sufficient, that the wool which had been stored here and the oversupply of wool they possessed was exhausted, and when they went into the foreign market to buy wool they found this embargo operating against them. So it is not fair to make comparisons between the present law and the proposed law or between the present prices in clothing and the likely prices of clothing, or what the effect of the pending bill would be upon clothing based on conditions in the past, and no man knows that better than the Senator from Utah [Mr. SMOOT]. If the emergency law remains upon the statute books there will be no wool industry, and there will be a panic in the country because of the inability of our woolen manufacturers to get wool at any reasonable price anywhere out of which to make the clothes and blankets needed by the American people.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. Yes.

Mr. SMOOT. I think it is due the Senate to know why the senior Senator from Massachusetts [Mr. LODGE] made that statement. If he did make it, I did not hear it. Of course, he did make the statement, or the junior Senator from Massachusetts would not say so.

Mr. WALSH of Massachusetts. One very strong feature of the argument of the senior Senator from Massachusetts was, "If you do not take the pending bill, you will have something worse, the emergency law. This rate is better than the emergency law, and the emergency law, if continued, means very serious injury, if not the destruction of the wool industry." He was quite correct in making that argument, because the pending bill is better than the emergency law, for that law spells ruin unless repealed.

Mr. SMOOT. Yes, for the woolen manufacturer; and I admit now that with the duty upon wool at that time there was no compensatory duty given to the clothing manufacturer. He had a protective rate of 35 per cent when wool was on the free list, but when 15 cents a pound was added to it under the emergency tariff law that 35 per cent rate was not changed and no compensatory duty given to him for the 15 cents a pound on wool. Of course the Senator knows, and I have admitted, that could not run on forever. The junior Senator from Massachusetts knows that it could not do that.

Mr. WALSH of Massachusetts. Will the Senator agree with me, then, that if the emergency tariff law is allowed to stand as it is to-day it means the destruction of the woolen business of the country?

Mr. SMOOT. If the emergency tariff law remains as it is to-day the woolen manufacturer would begin and would have begun already to take action. If the foreigners had thought for a moment it was going to remain on the books they would have flooded this market with woolen goods because of the fact that the American manufacturer was at a bad disadvantage. He

pays 15 cents a pound on wool in the grease and only has the same protective rate of 35 cents that he had with free wool, and of course he could not stand it.

Mr. BURSUM. But that is not on account of the price of wool.

Mr. WALSH of Massachusetts. To come back to my first proposition, because I do not care to take very much time in discussing my position on the matter, I want to repeat that the amendment offered by the Senator from Wisconsin will reduce the duty levied upon wools that are imported into the country and which go into the manufacture of clothing of the poor. A vote in favor of his amendment is a vote for a reduction of the rates on the cheaper wools, lowering the rate below 33 cents per pound. To vote against his amendment is a vote to keep up the high duties upon the cheap wools and to levy upon the cheap wools a higher ad valorem rate than upon the finer merino wools; to levy upon the wool in the clothes of the poor which will amount to from 75 to 150 per cent over the foreign cost, while we levy a rate upon the wool in the clothes of the rich which will amount to less than a 50 per cent increase over the foreign cost.

Mr. WALSH of Montana. The Senator makes a powerful argument in supporting the amendment offered by the Senator from Wisconsin and in the interest of the consumer, and very properly so. I inquire of the Senator if the consumer will get any benefit whatever from the amendment offered by the Senator from Wisconsin unless the compensatory duties are correspondingly reduced?

Mr. WALSH of Massachusetts. That is true, of course.

Mr. WALSH of Montana. Now, permit me to inquire of the Senator whether he has worked out any plan that is practicable for the reduction correspondingly of the compensatory duties?

Mr. WALSH of Massachusetts. I will say to the Senator that I am taking one thing at a time; that the proposition now is the duty upon raw wool.

Mr. WALSH of Montana. But we are expected to vote upon this other question.

Mr. WALSH of Massachusetts. When the time comes to discuss the amendments and to apply the compensatory duty, I think it will be possible to fix a compensatory duty that will meet the situation. What are the compensatory duties in this bill? Does anybody contend for a moment that they are scientific and accurate? It is impossible to make them so. It is impossible to figure compensatory duties down to the last cent and to the last fraction. They are at best a mere estimate of what is fair to the spinner and to the manufacturer in view of the duty levied of 33 cents per pound on scoured wool. They have been prepared for the Committee on Finance by the Tariff Commission with their best experts, just as in the House of Representatives a provision similar to the amendment offered by the Senator from Wisconsin [Mr. LENROOT], prepared for them by the experts of the Tariff Commission, fixed a compensatory duty that was as fair and just as they could make with all the information they possessed.

The Senator from Utah says that the House bill, if it were enacted into law—and it is well to remember that we may yet have it, for this bill has got to go to conference—would be worse than the Payne-Aldrich law. He has denounced the Payne-Aldrich law, but he says the Senate bill is all right. So we are asked to take the word of a Senator who has denounced the Payne-Aldrich law, who has denounced the House rate, and yet who voted for the Payne-Aldrich law. It is this Senator who says the amendment offered by the Senator from Wisconsin can not be worked out, but that if it is attempted to be worked out it may lead to the abuses of the Payne-Aldrich law.

Mr. SMOOT. Of course the Senator does not want to misrepresent me in any way. I stated that the provision in the Payne-Aldrich law was unjust, and nobody can deny it. I called attention here the other day to it.

Mr. WALSH of Massachusetts. But the Senator from Utah has stated that the pending bill as it passed the other House was worse than the Payne-Aldrich law.

Mr. SMOOT. I did say that the House provision was bad and in a greater degree. Will the Senator from Massachusetts yield in order that I may make a correction?

Mr. WALSH of Massachusetts. On the final vote we will be called upon to decide between the House provision and what the Senate now agrees to.

Mr. SMOOT. The Senate will decide that. Awhile ago in referring to the emergency tariff law I said that in that law a compensatory duty was not given for the duty upon wool; but, after again thinking it over, I desire to say that I believe I was mistaken in that, and that a rate of 45 cents per pound was allowed as a compensatory duty upon the cloth. Paragraph 19 of that law provides:

> Wool and hair of the kind provided for in paragraph 18, when advanced in any manner or by any process of manufacture beyond the washed or scoured condition, and manufactures of which wool or hair of the kind provided for in paragraph 18 is the component material of chief value, 45 cents per pound in addition to the rates of duty imposed thereon by existing law.

That being the case, Mr. President, then all the difference in that respect between the existing law and the proposition of the pending bill as reported would be that between 45 cents and 49 cents; and under this proposed law some of the compensatory duties begin as low as 30 per cent.

Mr. WALSH of Massachusetts. The compensatory duties in the bill now before the Senate run from 26 to 49 cents. They are all guesses as to how much wool is put into the cloth of a certain value.

Mr. SMOOT. I will say to the Senator that they are not all guesses.

Mr. WALSH of Massachusetts. I think it is only fair to say that they have been worked out as best as they can be, but, after all, they are estimates; one can not determine accurately what a cloth of 60 cents value contains exactly of wool and that the compensatory duty therefore should be definite and absolutely certain.

Mr. SMOOT. I want to say that the emergency tariff law does provide a 45 per cent compensatory duty based upon 15 cents a pound on wool in the grease, and so far as a compensatory duty is concerned the manufacturers in the United States have an advantage in that law over the pending bill.

Mr. WALSH of Massachusetts. I ask to insert in the RECORD the table from which I have hitherto read, which indicates the equivalent ad valorem of the duty of 33 cents per pound on the various wools which are imported into this country at present prices.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The table referred to is as follows:

Table showing ad valorem equivalent on value per clean pound of specific grease pound and scoured pound wool duties, based on foreign valuations as of March 4, 1922.

Grade of leading imports of wool.	Scoured pound equivalent of specific grease-pound duty of 11 cents (Payne-Aldrich).	Ad valorem equivalent on foreign value per clean pound of specific duties on the scoured pound of—	
		25 cents (House).	33 cents (Senate).
Merinos:	*Cents.*	*Per cent.*	*Per cent.*
Patagonia	44.0	35.1	46.3
Cape, South Africa	29.7	33.7	44.4
Australian—			
64s	22.0	27.2	35.9
70s	20.0	25.5	33.6
Variation in points		9.6	12.7
Crossbred:			
South American—			
50s	15.5	71.0	93.7
46s	14.7	93.6	123.6
36/40s	14.5	118.5	153.4
New Zealand—			
50s	15.7	62.5	82.5
46s	15.3	97.2	135.8
36/40s	14.7	138.9	183.3
Variation in points		76.4	100.0

Mr. WALSH of Massachusetts. It is to be noted that the rate of 33 cents per pound of clean wool increases the duty on cheaper wools excessively. The rate of 33 cents increases the price on the finer wools less than 50 per cent, but the cheaper wools used in the clothing of the common people are increased from 75 per cent to 150 per cent.

The Tariff Commission, when requested by the Committee on Ways and Means to submit an outline for a wool tariff on the clean-content basis, recommended that there should be a limitation on the burden imposed on coarse low-shrinkage wools. As shown on page 17 of the Tariff Commission's report, "Recent Tendencies in the Wool Trade," the Tariff Commission submitted several tentative methods by which this could be accomplished, and the Committee on Ways and Means adopted the one of an ad valorem percentage limitation and wrote into the bill that no rate should exceed 35 per cent ad valorem. This proviso the tariff agricultural bloc protested against and succeeded in eliminating from the Senate bill.

Mr. SMOOT. The Senator from Massachusetts has stated that the House had adjusted its compensatory duties on the basis of a 35 per cent limitation.

Mr. WALSH of Massachusetts. I said no such thing. I said the House adjusted its compensatory duties after consult-

ing with, advising, and getting the judgment of experts of the Tariff Commission. That is all I said.

Mr. SMOOT. I will say, Mr. President, that the compensatory duties in the House bill, with the 35 per cent limitation, would give to the clothing manufacturers of the United States on the low values an undue protection, probably 200 per cent; at any rate, much greater than that accorded by the bill as reported by the Senate committee.

Mr. WALSH of Massachusetts. I am very glad to have the statement of the Senator, and I appreciate, as almost every Senator here must, that the Senator considers himself a better authority than are the experts on this subject; that his opinion is more valuable than that of those who, day in and day out and week in and week out and year in and year out, are studying this problem.

Mr. President, I desire to return to another phase of this subject suggested by reason of arguments made by the Senator from New York [Mr. WADSWORTH] and the Senator from Wisconsin [Mr. LENROOT], both of whom have pointed out the serious political consequences of the adoption of the high rate of duty proposed on wool. I wish to read from a leading Republican magazine, none other than The Protectionist, published by the Home Market Club, of Boston, Mass. The Protectionist is the leading exponent of protection in this country. It is supported and published by the Home Market Club, of Boston, and has been known for years to have been devoted to the cause of protection and the advocacy of the Republican policy of protection.

Mr. McCUMBER. Mr. President, may I ask the Senator a question right there?

Mr. WALSH of Massachusetts. I yield.

Mr. McCUMBER. The Senator says that the Protectionist is an exponent of protection. I wish to ask the Senator if in all the pages of that magazine he has ever found that it was in favor of protection for agricultural products?

Mr. WALSH of Massachusetts. Mr. President, I have not read all the pages of the magazine——

Mr. McCUMBER. It has been an ardent advocate of protection for the manufacturer.

Mr. WALSH of Massachusetts. But I know that the magazine has been greatly interested in protection; that it has taught protection and supported the Republican Party and supported the protection program of the Republican Party. If it has not in the past supported protection for agricultural products, then it is because it did not think it was necessary, but it has supported every attempt made by the Republican Party to establish high protective duties.

Mr. WALSH of Montana. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Montana.

Mr. WALSH of Montana. I will say for the information of the Senator from North Dakota that we had the editor of the Protectionist before us at one time, and he was asked the direct question as to whether the magazine supported the duty on raw wool, and he said that it did.

Mr. WALSH of Massachusetts. I read from an article published in the July number of the Protectionist:

WOOL SCHEDULE DANGEROUS.

Protectionist Senators are approaching the wool schedule (11) with some nervousness. Schedule K, the old wool schedule, wrecked the Republican Party twice, and Schedule 11 presents grave dangers. The raw-wool duties were calculated by Senator GOODING, of Idaho, a sheepman, who says that twice he has been ruined by insufficient protection, and as Mr. GOODING has been the dominating mind of the farm bloc, and as the bloc has the votes to make or mar the present tariff revision, he has had his way, and the bill provides for a duty of 33 cents a pound on wool, scoured content, a higher duty than ever appeared in any tariff bill upon many grades of wool, particularly those going to make the clothing of the poor man.

What a wonderful campaign document for the Democracy!

Mr. GOODING. Mr. President——

Mr. WALSH of Massachusetts. I will ask the Senator to wait until I finish reading the article.

Mr. GOODING. I beg the Senator's pardon.

Mr. WALSH of Massachusetts. The article continues:

With the Payne-Aldrich rates reduced to a scoured-content basis, the actual duty decreased from the fine to the low-grade wools, but in the Senate bill the proposed duty so penalizes the lower-grade wools that they will pay duties running as high as 220 per cent, against only 30 per cent on the wools used in the clothing of the rich.

No wonder the Senator from New York and the Senator from Wisconsin, who have some appreciation of just how far tariff burdens can be thrust upon the public, protest against this rate and indicate its disastrous consequences to their own political party.

Such imposts are politically and economically indefensible and will give the Democrats their greatest talking point in the coming campaign. The House desired to increase the wool duties but carefully limited the amount to 35 per cent of the value, but the collections under the Senate bill may run sky-high—

Meaning that under the 33-cent rate without some such amendment as the Senator from Wisconsin proposes being adopted, the rates will run sky-high—

if the bill is enacted as it stands—

And I ask Senators to mark this statement—

the poorer consumer will pay a higher rate on wool than under any tariff bill ever enacted.

That is not a statement by a Democrat or by a progressive but by the Protectionist, the leading publication advocating protection in this country.

The foregoing is the talk circulating through the Senate, and it is having a profound effect. The manufacturers have brought no pressure to bear for a modification of the rates, for they are taken care of with compensatory duties, and they fear that any attempt to overturn the rates to which the farm bloc is pledged would wreck the bill. They believe the measure to be politically and economically unsound in its wool schedule, but they are in no position to reform it. But a score or so of Republican Senators are coming up for reelection this fall, and they know there are more voters in their States who wear clothes than who raise sheep.

One solution of the problem, if it is not too late to advance it, might be to grant a subsidy on wool, paying the farmer perhaps 6 cents on every pound of wool he raises and let the tariff take care of itself. Distinguished Republican economists may be found who declare that if this plan could be adopted the farmer would fare better than under the proposed plan; more sheep would be raised on more farms and over a wider area; manufacturers would not live for the next few years or so in deadly fear of a tariff comeback that spelled free trade, and clothing would be cheaper. The best friends of the Republican Party and the policy of protection to-day are not the farmer statesmen.

That is the Republican warning that I want to ask the Senate to reflect upon before we take this vote.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. WALSH of Massachusetts. I yield to the Senator from Idaho.

Mr. GOODING. I will ask the Senator what he thinks the poor man can afford to pay for the wool in a suit of clothes that is all wool. What will be a reasonable price?

Mr. WALSH of Massachusetts. I suppose the Senator is going to tell me how expensive clothing is and what a very high price is charged for clothing, and how little of the price that is charged for clothing is received at the outset by the woolgrower. That is what he is trying to demonstrate, of course.

Mr. GOODING. No; I am going to show the Senator that at the present time, in the case of the suit of clothes that is being sold to-day, the cost of the actual wool in that suit of clothes, if it was Montana three-eighths staple, which is very fine—the best western wool that is grown—is $2.07. If it is Ohio quarter blood, it is $1.68. If it is Soda Springs quarter blood—that is in Idaho—it is $1.62. If it is Soda Springs low quarter blood, it is $1.32. If it is braid, it is only $1.05—$1.05 for all the wool, and all the duty, and everything else.

I submit that it is not fair to charge up to the woolgrower or to alarm the people by this "excessive duty" that you are discussing when the wool is brought upon the Boston market for less than the present duty, regardless of what it costs to grow it, ship it to market, scour it, and get it in condition for the manufacturer to use it—less than the duty at the present time.

Another word, if the Senator pleases—I know he is always fair, and means to be fair—and that is this: If the amendment of the Senator from Wisconsin prevails, we could buy this wool to-day in London, or, if we had it on the free list, we could buy it in New York, for 25 cents a scoured pound. A duty of 60 per cent would mean 40 cents for a pound of scoured quarter-blood wool, of which the Senator admits that fully 10 per cent is grown in this country, as I understood him—about 10 per cent of quarter, low quarter, and braid.

Mr. WALSH of Massachusetts. Yes, sir.

Mr. GOODING. I think the Senator is correct in that. That means that that wool could be brought in here for 40 cents a pound on the scoured basis. At the same time the Senator from Wisconsin placed in the RECORD the fact that the Tariff Board found that it costs 45 cents a pound on the grease basis to produce a pound of wool in this country. On the scoured basis that would mean about $1.12 a pound.

Mr. WALSH of Massachusetts. That was in 1920, when labor, feedstuffs, overhead expenses, and everything else was at the peak.

Mr. GOODING. That was in 1920; yes. There may be a little reduction; but, even if there is, it is not great; so you are not going to give the woolgrower half what it costs to produce it in this country.

That is all there is to this question—whether you are going to permit an industry to exist upon which the very basis of

civilization rests—the live-stock industry. It is not a question in my mind of how much the duty should be; it is how much it needs to live; that is all; and the same thing applies to any other industry.

I think we must be fair, and I know the Senator intends to be fair; but I want to say to the Senator from Massachusetts that if the New England people continue to do as they have done in the past—and they have not been fair—and force raw materials on the free list, we are not going to continue to ship wool to Boston. We can not do it. It is economically all wrong to do it now; but we have been sending you the raw material for years and years and paying excessive freight rates over long lines of railroads, manned by expensive labor, and then we have been paying a high freight rate back to the West again on the finished product. There is not anything left for us to do except to move the manufacturers nearer to the source of supply of this raw material that we are discussing, if you please, and that is what is going to happen. If you force New England to become a goat pasture, the people of New England themselves will be to blame for it and nobody else.

Just give us a chance to live, as you have had a chance to live. That is all the West is asking. I want to say to the Senator, too, that this fight is going to go on. There is no question but that the West is going, when it gets an opportunity and Canada gets ready, to move the Atlantic Ocean out to somewhere near Chicago through the St. Lawrence and the Great Lakes. If it is a nice thing to have an ocean, we will move a little of it out there, at least, so the great vessels that carry freight all over the world can come somewhere near the center of population of America. We shall be forced to do that.

Mr. WALSH of Massachusetts. Mr. President, I think the Senator's remarks will make very interesting reading among the Republicans of New England who will be asked to support the Republican Party in the future.

Mr. GOODING. All we are asking is a square deal; that is all. I have been standing for the manufacturers for years.

Mr. WALSH of Massachusetts. Will the Senator permit me to continue now? I have been very lenient in yielding to him.

Mr. GOODING. Yes; the Senator has. I will say that.

Mr. WALSH of Massachusetts. I refuse to permit all the people of New England to be denounced for their selfishness in seeking protection. The Senator's indictment is against the Republican Party. He has made more speeches in the Senate denunciatory of the policy of the Republican Party than any other man on this floor. He has repeatedly denounced it as selfish, as greedy, as having absolutely no concern for the consumers or the agricultural interests of this country, but being devoted solely and alone to the interests of the manufacturer. He has said again and again that the Republican protective policy has been a policy to enrich the manufacturers of this country. He has used language stronger than any Democrat has used on this floor.

Mr. GOODING. Mr. President, if the Senator will permit me, I will say that again. Not until the emergency tariff bill was passed, and not until the bill was framed that is here before the Senate, with the Senator from North Dakota [Mr. McCUMBER] at the head of the present Finance Committee, did the farmers of this country ever get a square deal from the Republican Party. This is the first time.

I have denounced the Republican protective measures that have been passed in the past as far as the farmer is concerned. He never did have a square deal before. This is the first time he has ever had it; and I thank God we have had as chairman of that committee a man who has always been a friend of the farmer. They may send all the Senators they please here from North Dakota, but they will never send a better friend of the farmer than the chairman of the Finance Committee during all the years he has been in the Senate.

Mr. WALSH of Massachusetts. Mr. President, I still think that the policy the Senator ought to pursue should be one of voting to reduce the outrageous and extravagant and excessive duties that he charges have been levied in the past upon manufacturers, and that he is now supporting, for he knows the very rates he denounces are being repeated in this bill, instead of pleading to give the farmer what the manufacturers have had. He knows that they have not and can not get in any tariff bill the protection that the manufacturers have had. He knows that the manufacturer competes with Europe, and that the farmer sells to Europe, and that there is an entirely different protective principle involved when a group of Americans are competing with a group in Europe, and a group of Americans are selling to Europeans the things that are produced in America.

Mr. CARAWAY. Mr. President——

Mr. GOODING. Is not the farmer competing with Europe in farm products in this market?

Mr. WALSH of Massachusetts. I yielded to the Senator. I will have to ask him to let me continue my argument now.

Did the Senator from Arkansas wish to ask me a question?

Mr. CARAWAY. I was going to suggest, but possibly it is not worth while now, that the Senator seems to be so well pleased with his bill, which gives on an average 21½ per cent protection to the farmer, that he is wanting 200 or 300 per cent for the manufacturer. He says that is just. I was wondering, if he believes that a tariff should protect the farmer—and he seems to think so—why should he be content to ask for the farmer only 21½ per cent, and vote for the manufacturer 150 to 200 per cent?

Mr. WALSH of Massachusetts. I am not complaining about the position of the Senator from Idaho, but I want the country to know it.

Mr. CARAWAY. I do, too.

Mr. WALSH of Massachusetts. It amounts to this: The Republican Party in the past has stood for greed, has stood for special interests, has stood for levying on the American consumers toll to enrich the manufacturers of the East, and the Senator proposes now that the farmers of the West shall have some of the profits that he thinks the manufacturers of the East have had. He has a big stick in his hand, metaphorically speaking, and he says to his Republican colleagues, "Unless you give us the rates we want, down go your rates, and the day of greed and selfishness in the drafting of tariff bills will end."

EFFECT OF HIGH DUTIES ON WOOL.

Mr. President, if I understood the discussion of yesterday, the Senator from Wisconsin [Mr. LENROOT], the Senator from North Dakota [Mr. McCUMBER], and the Senator from New Mexico [Mr. BURSUM] each at one time or another in their speeches admitted that these duties on raw wool would be reflected in increased prices. Thus we have not the claim made here that it will not become operative, that there will not be any increased prices. It is pretty generally admitted that whatever we write into this wool schedule in the way of protective duties is going to come ultimately out of the pockets of the American consumers.

We have also cleared the field of discussion, so that we know that the duty levied in this bill is, according to the Senator from Wisconsin [Mr. LENROOT], 83 per cent higher than the duty levied in the Payne-Aldrich bill. According to the Tariff Commission, judging by the average imports in the past, it is at least 50 per cent higher; and when Senators assert that it is no higher than the rates in the Payne-Aldrich bill they can not produce facts to support their statement. We have, in addition, the information from the Protectionist that the duties in this bill are the highest duties ever levied. So we can proceed with these admissions: First, that whatever duty we levy here is going to come out of the consumer; second, that the duties levied here are higher than any that have ever before been levied.

During this discussion quite a few Senators have referred to "the present law," having in mind the emergency law, with its embargo rates. It has been said again and again—the Tariff Commission report states it—that only this spring did the excessively high rates in the emergency law begin to become operative in this country. I found, in looking through my file of communications the other day, a number of letters written in January and February and March from the manufacturers of New England, stating that their supply of wool was disappearing and that they were obliged to go into the markets of the world, and that they found for the first time just what the emergency law meant, and they were asking for the passage of this tariff law, no matter what rates were in it, in order to get rid of the embargo provisions of the emergency law. So, after all, the emergency law is not the standard with which to make comparisons. The only real test as to what the increased cost is going to be must be based upon what the cost was under the Underwood law before the war and what the cost will be under this bill after we get back to normal conditions.

A few days ago the Senator from North Dakota, with great and powerful dramatic effect, raised his hand and said, "Here is a piece of cloth that cost $5 a yard in 1920, and here is a piece of the same kind of cloth which cost $2.25 in 1921." Of course, everybody knows that the prices of everything increased during the war, and everybody knows that the peak of prices was reached in 1920. Everybody knows there has been a steady but constant decline in prices since 1920, including wool and wool cloths. This spring, because the emergency law was beginning to operate, there have been substantial increases in the price of wool cloths by the wool manufacturers of this country, and they have boldly and frankly and plainly stated that

it was due to the fact that the emergency tariff law compelled an increase in price.

I have on my desk the last report of the American Woolen Co. for this year. What do they say about wool duties? What do they say about whether or not they are reflected in increased prices?

They have abandoned their foreign selling offices. They have given up any attempt to create an export trade in woolen cloths, because the high rates on wool in the emergency tariff law and the proposed legislation prevent the possibility of developing any export trade. You are not only destroying whatever prospects there are for an export business but you are destroying your own business here at home, because there is a limit to what people will pay.

Have you ever heard of a "buyers' strike"? A buyers' strike is a strike by consumers against high prices. With wages going down, with no increase in the salaries of the salaried men and women of this country, we are proposing here to put into every clothing store window of this country signs to the effect that the prices of clothing has increased. Is there no limit to which the people can be expected to go in paying increased prices for clothing?

You are burning your own bridges. If you continue, you will greatly reduce the consumption of wool in this country. Our people will have to go and will go to cotton goods, or to cotton goods mixed with shoddies. This is a bill, so far as this schedule is concerned, to make it impossible for the American people to wear good, warm, all-woolen clothes, and to buy them at reasonable prices. It will compel our manufacturers to devise means of reducing the amount and quality of wool in dress goods and cloths in order to keep prices down.

Mr. President, there has been a good deal said about the cost to the public, and I have gone to a good deal of trouble to try to determine some facts to assist in estimating the extent to which this rate on raw wool will increase the cost of clothing to the public. For some weeks past Senators on the other side have made various statements about the extent to which these duties would be reflected in increased costs, but as yet no estimates have been made on this side of the Chamber. What I have to say is gathered entirely from information furnished by the Tariff Commission.

The Senator from New York [Mr. CALDER] received some communication from a clothing manufacturer in his State some weeks ago stating that the prices of suits and of overcoats were to be increased from $5 to $7, and that Senator, wanting to refute the statement of his constituent, and to enlighten him as to the fact that he was misinformed, and was overestimating the increased cost, sent the letter of his constituent to the Tariff Commission, and asked to be furnished with the information as to what the increased cost should be. The Senator from New York put into the RECORD the memorandum and the table which the Tariff Commission sent back to him, and based upon that table and that information I have made the deductions I am about to present. I should prefer not to be interrupted until I present my views on this subject of costs.

THE COST OF THE WOOL DUTIES TO THE PUBLIC.

Mr. President, in determining the cost of the wool duties to the public it is necessary to bear in mind, first, the cost of the duty upon raw wool, and second, the cost of the protective rates which have been levied upon the various manufactures. It is, of course, impossible for anyone to estimate either of these costs with precision, but it is possible to show in a large way what tremendous burdens will be imposed upon the consumer by the rates in this schedule.

Objections may be lodged against the entire schedule on the ground that the rates exceed those which would be necessary to cover the difference between conversion costs here and abroad (so far as can be shown by the data available), and that in some very important instances they are as bad as the repudiated rates in the old Schedule K.

Even if the rates in the present bill were barely sufficient to protect the industry, the question of the cost to the public would still be a very important one. But, with these rates far in excess of the amount required, the cost to the public is, indeed, a matter of very serious importance. I do not wish to imply that the industry is not entitled to protection, for I am convinced that with a reasonable amount of protection and with an honest and efficient financial and business administration the industry could prosper very well in this country. This protection, however, should be not only moderate, but should be applied without discrimination against one branch of the industry at the expense of the other. The inequitable, unjust, and scandalous manner in which the rates have been drawn up under former protective tariff acts, such as the Payne-Aldrich, has shaken the whole moral foundation for protection for this industry. Discrimination has been practiced and greed encouraged. Protection accorded to some branches of the industry has been so excessive as to result in extortionate profits and to destroy every incentive for the efficient conduct of the industry. The placing of the industry on a sound basis, under a régime of moderate protection, has been rendered far more difficult than it otherwise would have been.

Yet some manufacturers had the temerity to come again before the House Ways and Means Committee when it was drawing up the present bill and ask for a new Schedule K, which was practically a reenactment of the old and thoroughly repudiated Schedule K, and which would have given them a renewed license to exploit the public. Remembering the political disaster brought on by the old Schedule K, neither the House nor the Senate were willing to accept the most odious features, such as the concealed protection, in the old Schedule K. But the enormous increase in the duty upon raw wool, together with the virtual reenactment of the old Payne-Aldrich protective rates on wool manufactures, will nevertheless result in a burden upon the public at least as large as that imposed by the old Schedule K. Indeed, that higher prices are to be exacted from the public is already apparent from the fact that the high rates on raw wool in the emergency law, which have only recently begun to be effective in any substantial degree, and the prospect of the reenactment of these high rates in the present bill, are already being reflected in recent marked increases of prices of cloths and dress goods. A nation-wide protest from clothiers and merchants has followed these increases.

COST OF WOOL DUTIES TO THE INDIVIDUAL.

In estimating the cost of the raw-wool duty, let us first consider how it affects the individual by figuring how it will work out upon the garments which he wears. In this connection it is necessary first to show to what extent this duty will pyramid as the raw wool passes through the various stages of manufacture and distribution and finally is consumed in the garment worn by the individual.

There has recently been a wealth of discussion in the press and elsewhere regarding the cost of the raw-wool duty to the individual. Some of the wool growers have been arguing that upon an average suit of clothes the total cost of the duty would amount to only $1.15½. On the other hand, prominent clothing manufacturers have been contending that the duty will involve an additional cost of $5 per suit of clothes and as high as $7 per overcoat. Those who are arguing that the increase in cost will be very slight are unwilling to admit that there will be—or should be—any pyramiding of the duty as the wool passes through the hands of the various middlemen. Those who argue that the increase of cost will be around $5 per suit and $7 per overcoat, on the other hand, are contending that the pyramiding process will be practically complete and are assuming that the raw-wool duty will be fully effective.

Fortunately there is available a memorandum prepared by the Tariff Commission which contains a very conservative estimate of how this duty may pyramid and what its ultimate cost (within certain limitations) will prove to be to the consumer. I refer to the Tariff Commission's memorandum to Senator CALDER, which at the request of the Senator was printed with his comments thereon in the CONGRESSIONAL RECORD of July 14, pages 10246 and 10247. The memorandum is as follows:

JUNE 29, 1922.

Memorandum to Senator CALDER relative to a communication of the New York Clothing Trade Association in regard to the duty on raw wool.

The main question raised in the statement of the New York Clothing Trade Association is whether the proposed duty of 33 cents on raw wool, clean content—shown in their statement as 33 per cent, but presumably intended as 33 cents, since this is the actual basic rate proposed—will necessitate an increase of $5 in the price of a suit of clothes and $7 in the price of an overcoat.

It is impossible for anyone to state with certainty how much a duty of 33 cents per clean pound will enhance the price of a suit or an overcoat, even when assuming a standard specification of each article. That such a duty will tend to increase and certainly to check a decrease in the price of these articles seems inevitable, but no exact calculation can be made because of the variable factors involved. It is to be borne in mind that the price of wool may not be enhanced by the full amount of the duty. To be sure, the compensatory duties on the tops, yarn, and cloth are based on the assumption that the duty on the raw material will be fully effective, and if there were no competition in the domestic industry the failure of wool prices to rise by the full amount of the duty would make no difference in the price to the public. But since the duty is competitive, it may be prevented from reaping the full advantage of the compensatory duties under these conditions, except in periods of marked business activity. In such periods the duty on raw wool is likely to be fully effective. In estimating, therefore, the effect of the duty on the price of a suit or overcoat the assumption that the 33-cent duty per pound of clean

wool will enhance the cost to the weaver, and hence necessitate an increase of his price by the full amount of the compensatory duty—that is, 49 cents—is open to some qualification.

Another set of variable factors arises in connection with the pyramiding of the duty as the wool passes from the raw state through the various manufacturing and distributing stages to reach the consumer in the form of wearing apparel. Considerable latitude must be allowed in estimating such pyramiding. One result may be arrived at by adding to the compensatory duty of 49 cents the percentage of overhead and profit, respectively, of the wool dealer, the top maker, the spinner, the weaver, the cloth jobber, the clothing manufacturer, and the retailer. Or a different conclusion may be had by assuming that the wool passes through fewer hands; that all operations from the purchase of the raw material to the weaving of the cloth are integrated in the same establishment; that the margin for overhead and profit are therefore less than the aggregate margins of the specialized establishments; and that no cloth jobber intervenes between the weaver and the clothing manufacturer. Again, there may be some difference of opinion as to what margin for overhead and profit may be regarded as typical in certain instances.

The best method of making the calculation seems to be to assume that the duty will be fully effective and to add a conservative margin in each instance to cover the overhead and profit of the clothing manufacturer and the retailer, then to make such adjustments as may be deemed necessary to cover variable factors. These selling margins may be taken, respectively, as 10, 15, and 50 per cent. A margin of 10 per cent to the cloth maker—say, 6 per cent for profit and 4 per cent for selling expense—would appear to be a very conservative estimate. A margin of 15 per cent to the clothing manufacturer accords with the average conditions shown in the 1916 report of the Department of Commerce entitled "The Men's Factory-Made Clothing Industry." A margin of 50 per cent to the retailer on his purchase price—equivalent to 33⅓ per cent of his selling price—was taken as typical. In the report of the old Tariff Board on Schedule K, page 884, where the board stated: "Retail prices are taken as 50 per cent more than the net wholesale price, which the board considers a fair estimate of the lowest figures at which such garments are sold." An effective duty on clean wool of 33 cents per pound is equivalent to 49 cents per pound on all-wool cloth. Pyramiding 49 cents by 10, 15, and 50 per cent, respectively, gives 93 cents per pound of cloth in the garment.

Parenthetically, attention should be directed to the possible criticism that the various "middlemen" are not justified in adding their normal margin to that portion of their costs attributable to the duty, and that when competition is keen they will be unable to do so. Upon reflection it becomes clear that the addition of this margin rests upon a firmer basis than the mere custom of adding a fixed percentage. The enhancement in the cost of the cloth or clothing, as the case may be, resulting from the duty, involves an immediate increase in such expenses as interest charges, taxes, insurance, and an ultimate increase in wages. Fundamentally, it is difficult to differentiate an increase by reason of the duty from an increase in costs attributable to other causes.

The following table shows how a cost of 93 cents per pound of cloth would work out on suits and overcoats of the specifications shown. Additional columns, deducting 10 and 20 per cent, respectively, from the 93-cent computation, to make allowance for possible failure of the duty to pyramid to 93 cents, are also shown. Among the garments listed, suits made of 12-ounce cloth and overcoats of ordinary weight can probably be regarded as most typical. Each garment is, of course, assumed to consist wholly of virgin wool:

	Weight of cloth per linear yard (54–56 inches wide).	Linear yards required.	Weight of cloth in article.	Cost of duty per article.		
				Based on 93 [1] cents per pound of cloth.	Based on 93 [1] cents less 10 per cent.	Based on 93 [1] cents less 20 per cent.
	Ounces.		*Pounds.*			
Suits	10	3½	2 5/16	$2.03	$1.83	$1.62
	12	3½	2⅝	2.44	2.20	1.95
	14	3½	3 1/16	2.85	2.56	2.28
Overcoats:						
Ordinary style—						
Lined	20	2¾	3 7/16	3.20	2.88	2.56
Unlined	20	3	3¾	3.49	3.14	2.79
Heavy ulsters—						
Lined	28	3½	5 1/16	5.29	4.76	4.23
Unlined	28	3½	6⅛	5.70	5.13	4.56

[1] 93 cents includes merchandising costs and profit.

It is quite evident to anyone who will read this memorandum carefully that it is a very conservative estimate of how the cost of the duty will work out. For example, instead of computing the pyramiding by taking the maximum number of middlemen and making a maximum allowance for selling expense and profit in each instance, the Tariff Commission has very plainly, in the interest of moderation, chosen the minimum number of middlemen and has made allowances for selling expense and profit which are indeed conservative. They have been very careful also to explain that the duty upon raw wool probably will not be fully effective. Yet, with all these qualifications it is apparent that they are of the opinion that this 33-cent duty on raw wool will amount to practically 93 cents per pound of cloth *in the garment*, which would amount to approximately $2.50 on the average suit of clothes and $3.50 on an ordinary overcoat, and around $5.50 on a heavy ulster. To be sure, the commission has inserted additional columns making deductions of 10 and 20 per cent, respectively, on these computations of cost in order, presumably, to make allowance for the failure of the wool duty to become fully effective and for the failure of the pyramiding process to become complete. Yet they have shown such moderation in their assumptions as to the number of middlemen through whose hands the wool will pass and as to the percentage for profit and selling expense which will be applied in each instance, that one can not escape the conclusion that 93 cents is a very fair estimate of the probable cost of the 33-cent duty upon raw wool per pound of cloth *in the garment*.

The junior Senator from New York, in commenting upon this memorandum, has apparently sought to present an interpretation of it which a careful reading of the memorandum will not sustain. He states that this memorandum demonstrates "that the raw wool duty in a suit of clothes weighing 2⅝ pounds, exclusive of the merchandising cost, is about 92 cents, while the duty on an overcoat, exclusive of the merchandising cost, would be approximately $1.71." An examination of the memorandum fails to disclose the figures which the Senator has quoted. Nor is it apparent just how these figures may have been derived from any figures which appear in the memorandum. But even if the Senator were able to justify his figures from this memorandum, it would still be unfair to put the proposition in the manner in which he has put it. No computation which excludes the merchandising costs can be accurate or helpful, for these, as the Tariff Commission's memorandum plainly shows, are a genuine and substantial addition to the original cost of the duty. Try as they may, the proponents of this duty can not explain away the fact that it will involve a very serious increase—or serve to prevent a decrease—in the cost of clothing to the public.

If a political party can enact legislation that requires an increased cost in men's suits and overcoats and women's dresses from $2.50 to $5 and remain in control of the legislative branch of the Government, it will be the first time such a political miracle has occurred in America.

At the same time it is to be borne in mind that when we refer to an increase of, say, $2.50 per suit of clothing and $5 per overcoat, we are referring only to the probable cost of the *raw wool* duty. These figures do not take into consideration other factors which will serve to increase the cost of garments to the public, such as the increases in protective rates on wool clothing and the increases in the protective rates on wool cloths and other materials entering into garments, such as linings and trimmings.

The following table shows the increases in duties upon the principal materials entering into the manufacture of a suit of clothes and further serves to indicate how seriously the cost of production of clothing will be increased:

Materials.	Underwood law.		Senate bill.	
	Paragraph.	Rate.	Paragraph.	Rate.
Wool cloth:				
Value not over 60 cents per pound.	288	35 per cent	1109	26 cents per pound plus 40 per cent.
Value 61 to 80 cents per pound.	288	.....do	1109	40 cents per pound plus 50 per cent.
Value 81 cents to $1.50 per pound.	288	.....do	1109	49 cents per pound plus 50 per cent.
Value over $1.50.	288	.....do	1109	49 cents per pound plus 55 per cent.
Linings:				
Cotton	252	27.5 per cent maximum.	903–905a	45 per cent maximum.
Silk	318	45 per cent	1205	55 per cent minimum.
Trimmings:				
Buttons	339	35–45 per cent vegetable ivory.	1410	1½ cents per line per gross plus 40 per cent.
	339	40 per cent (not specially provided for).	1411	45 per cent.
Haircloth	353	6 cents per square yard (equivalent 6 to 18 per cent).	1426	35 per cent.
Canvas padding	408	Free (all jute)	1008a	60 per cent (linen).
	284	35 per cent (chief value jute).	1008a	55 per cent (jute).
	283	30 per cent (linen)		
Cotton thread	251	15 per cent	902	25 to 45 per cent.
Silk thread	313	.....do	1204	40 per cent minimum.

It is apparent from the foregoing table that upon every item entering into a suit of clothes the Senate bill imposes very substantial increases in the duty. In the case of cotton lining and cotton thread the rates in the amendment introduced by the Finance Committee were even higher than those here indicated, but their recent rejection on the floor of the Senate has resulted in some decrease.

COST OF WOOL DUTIES TO THE PUBLIC, IN THE AGGREGATE.

But, returning to the question of the cost of the raw-wool duty to the public, let us inquire how great the cost will be, not upon an individual garment but in the aggregate. Estimates of the aggregate cost have been various. For example, a pamphlet issued by the Carded Woolen Manufacturers' Association estimates that it will amount to $310,284,000. This is computed upon the assumption of an allowance for profit and selling expenses of 10 per cent, 15 per cent, 17½ per cent, 22½ per cent, and 33⅓ per cent, respectively, to the wool dealer, spinner, weaver, clothing manufacturer, and retailer, upon which basis the 33-cent duty on raw wool would pyramid to $1.01⅛ per pound of cloth in the garment. This pyramided duty is then multiplied by the annual rate of consumption of clean wool—taken as 306,000,000 pounds—giving, as stated, $310,284,000 as the total cost to the public.

But if it be contended that this association has a special interest in securing a reduction of the duty upon raw wool and that its figures are exaggerated, let us assume that the duty will pyramid to only 93 cents per pound in the manner indicated in the Tariff Commission's memorandum above quoted. Let us bear in mind, further, that this 93 cents is not the cost of the duty per clean pound of wool, but is rather the cost of a 33-cent duty upon clean wool *per pound of cloth in the garment*. It is then apparent that in computing the total cost to the public this 93 cents should be multiplied, not by the average quantity of *clean wool* consumed annually by the American public but rather by the number of pounds of *cloth* made from clean wool and consumed annually in garments and other articles. This latter figure can not be obtained from the census because the figures showing the quantity of cloth, blankets, and so forth, produced in the United States include large quantities of goods containing substitutes for new wool. It would, therefore, be unfair to multiply the total quantity shown in the census by the 93-cent pyramided cost above noted. The best means of deriving the desired figure seems to be to ascertain the number of pounds of clean wool consumed annually by the American public and then to make a deduction covering the net wastage during the processes of manufacture into cloth.

The production of wool in the United States during the past 40 years has averaged very close to 300,000,000 pounds in the grease. With a shrinkage of 60 per cent this yields about 120,000,000 pounds of clean wool. Imports of class 1 and 2 wool—disregarding class 3 carpet wool—that may be required from abroad may be estimated as at least 100,000,000 pounds clean content per year. During and since the war import figures would appear to justify a considerably higher estimate than this, but the above estimate is based upon the assumption of a substantial duty upon raw wool and takes into consideration the pre-war importation as well as that during and since the war. On these estimates, then, our total consumption of clean wool per year would amount to about 220,000,000 pounds. In converting this wool into cloth there is an initial wastage of about 33⅓ per cent, but the great bulk of these wastes are utilizable in woolens. The invisible and unrecoverable waste would not be so large as materially to reduce the estimate of the number of pounds of cloth made from new wool. Making a rough allowance for this, however, let us say that the 220,000,000 pounds of clean wool which we have taken as the annual consumption are equivalent to 210,000,000 pounds of cloth made from virgin wool. Upon this basis, the cost of the duty to the American public would amount annually to two hundred and ten million times 93 cents, or $195,300,000.

This is a much lower figure than the estimate of the Carded Woolen Manufacturers' Association above referred to, but it is even so a very staggering one. By this 33-cent duty it is proposed to tax the public at least $195,300,000 for the purpose of enabling the domestic woolgrowers to obtain 33 cents per clean pound more for their wool than the world market price. With a domestic production equivalent to about 120,000,000 pounds of clean wool annually, this 33-cent duty would amount to $39,600,000 to the woolgrowers. It is thus proposed to tax the public almost $200,000,000 in order to put about $40,000,000 into the pockets of the woolgrowers.

Incidentally, as regards this estimate of $195,300,000 as the cost of the wool duty to the public, it should be noted that this is the cost only on the *virgin* wool which enters into garments and other articles consumed by the public. It takes no cognizance of the increased price of *reworked* wool—shoddy, mungo, and so forth—which will occur by reason of the increased duty upon raw wool and the accompanying increases in the duties upon the reworked wool. Considering that the recovered wool fiber—shoddy, and so forth—produced, and mostly consumed, in the United States amounted in 1914 to 84,836,759 pounds and in 1919 to 96,391,273 pounds, it is obvious that the increased cost of reworked wool resulting from this tariff bill will in itself be an item of enormous importance to the public.

If the majority party believe that they can exact this unjustifiable and outrageous toll from the American people without a vehement protest they will have an awakening in the approaching elections.

COST TO THE PUBLIC OF THE PROTECTIVE DUTIES ON WOOL MANUFACTURES.

The foregoing discussion is designed to show the cost only of the *raw-wool* duty to the public. On top of all this there will be large increases in the prices of the wearing apparel and the other articles which the public consumes resulting from the protective rates levied upon these articles.

I am not unaware of the prolific arguments invoked by those who are supporting the rates in this bill to the effect that, after all, the duties upon wool manufactures do not really result in any substantial increase in prices to the public, because competition in the domestic industry will keep the prices down.

This line of argument is amusing. It assumes, apparently, that representatives of this industry, who flock like herds of sheep to the National Capitol when a tariff is under revision in an effort to secure high protective rates upon these goods, are here merely as sight-seers, and that they urge great increases in the duties only in order to allow them to compete more sharply than ever before and to force the prices down to the point where they were before the duties were raised. The suggestion that the protective tariff rates are not reflected in increased prices is only advanced when some one points out that the consumers have a very direct interest in tariff duties.

To attempt to compute in dollars and cents the actual cost of these protective duties upon wool manufactures would be futile, because they vary upon the different products in the schedule and because the total value of the manufactured wool products consumed annually by the public, upon which any estimated average ad valorem duty might be applied, would be at best only a very general estimate. We do know, however, from our analysis of the rates in the Senate bill that the average protective ad valorem rate would be very high. On cloths and dress goods, for example, it would probably average close to 50 per cent. On other wool products it varies; on some of them it is more than 50 per cent and on others less. Considering that a duty of 33 cents per pound on clean wool will involve a cost to the public of at least $200,000,000, it is not difficult to see that an average ad valorem duty of, say, 45 per cent on wool manufactures will involve an additional cost to the public which will be stupendous.

Mr. President, in levying these high duties on wool and wool manufactures, it is evident that the purchasing capacity of the consumer has been ignored, and the wool schedule is again made a vehicle for the interchange of benefits in which the public is forgotten. People whose wages have already been reduced and those without substantial increase in salary or income, constituting over 95 per cent of our consumers, if forced to meet abnormally high prices and high taxation, can go without that which the producer would sell. You may, if you choose, call it a buyer's strike, but it is due to the fact that you can not get "blood out of a stone." As you promiscuously distribute these special favors in the nature of governmental subsidies, you forget that high prices are without permanent benefit to anyone. High prices have before and they may again impoverish the buyer, ruin the seller, and finally deprive labor of employment.

Mr. WALSH of Montana. Mr. President, before the Senator from Massachusetts proceeds I think it is appropriate to remark that during this most invaluable contribution which the Senator from Massachusetts is making to this very important debate there are but five Republican Members in the Senate, only one of whom, the Senator from Minnesota [Mr. KELLOGG], seems to be giving the slightest attention to what the Senator from Massachusetts is saying.

Mr. WALSH of Massachusetts. Of course, they do not want to hear what is being said. It indicates that they do not intend to be influenced by any argument or by the Tariff Commission. There are Senators on the other side of the Chamber who in the course of the debate already have repudiated the information furnished by the Tariff Commission, and have practically said that it is worthless, that their experience, their self-interest, either as woolgrowers or manufacturers, is of more value and more consequence than is the disinterested report of honest and fair men who naturally would prefer not to exaggerate this information.

Mr. SMOOT. Will the Senator from Massachusetts yield to me?

The PRESIDING OFFICER (Mr. CAMERON in the chair). Does the Senator from Massachusetts yield to the Senator from Utah?

Mr. WALSH of Massachusetts. I yield for just a moment, because I want to hasten on.

Mr. SMOOT. Mr. President, the Senator from Massachusetts has referred to the self-interest of Senators, whether wool-growers or woolen manufacturers. I wish to say to the Senator that I do not know of any woolen manufacturer in the Senate but myself; and I have no interest whatever in a woolen mill to-day.

Mr. WALSH of Massachusetts. But the Senator did have; he admitted that himself.

Mr. SMOOT. Years ago I had, until a fire burned the mill down.

Mr. WALSH of Massachusetts. The Senator also admitted that he had voted for the Payne-Aldrich bill, and he denounced that bill; and also said that the pending House bill was worse than the Payne-Aldrich law, and he has led us on and on here to believe that everything has been rotten in the past, but that this is a pure wool schedule.

Mr. SMOOT. The New York newspapers made the statement yesterday that I admitted my interest in the woolen industry as a manufacturer. There is not a word of truth in that statement. I have not a head of sheep, nor have I had since Cleveland's election, when I sold every head of sheep that I then had. I do not own any interest in a woolen mill at all; but I speak as a manufacturer.

Mr. WALSH of Massachusetts. Will the Senator from Utah tell us when he was a woolen manufacturer?

Mr. SMOOT. That was before I came to the Senate.

Mr. WALSH of Massachusetts. How many years ago was that?

Mr. SMOOT. That was 20 years ago.

Mr. WALSH of Massachusetts. So that the Senator from Utah has not been in touch with the woolen business for 20 years?

Mr. SMOOT. Oh, no; I have not been in touch with it from the personal standpoint.

Mr. WALSH of Massachusetts. The Senator has not been as a manager or a director or a superintendent or in any way connected with it?

Mr. SMOOT. Not in the least.

Mr. WALSH of Massachusetts. Or has any investment in it?

Mr. SMOOT. I had an investment of a few thousand dollars in the Provo Woolen Mill when it was burned down.

Mr. WALSH of Massachusetts. When was that?

Mr. SMOOT. About 10 years ago.

Mr. WALSH of Massachusetts. Was that investment in existence at the time the Payne-Aldrich law was in effect?

Mr. SMOOT. I think it was.

Mr. WALSH of Massachusetts. What kind of woolen cloth did that mill make?

Mr. SMOOT. It was making blankets and cashmeres and suitings and overcoatings and yarns.

Mr. WALSH of Massachusetts. Of course, each Senator must answer for himself as to whether his interest is such that he ought not to vote on or discuss this bill.

There are, however, some parliamentary bodies in the world where men who have a selfish interest are forbidden to vote upon a measure such as we are now acting upon. I think the Senator from North Carolina [Mr. OVERMAN] is aware of the fact that when on a previous occasion in this body there was a suggestion made that Senators had a selfish interest or had a personal interest in votes that were cast here there was an investigation ordered by the Senate.

Mr. OVERMAN. Yes; a resolution providing for an investigation of the so-called lobby was presented by the senior Senator from Iowa [Mr. CUMMINS], and to that resolution an amendment was offered by the senior Senator from Missouri [Mr. REED] directing the Committee on the Judiciary to inquire of every Senator on this floor what his interest was in the matters which were to be legislated upon in the tariff bill, and the investigation developed some very strange things.

Mr. WALSH of Massachusetts. In what year was that?

Mr. OVERMAN. That was in 1912.

Mr. SMOOT. I wish to say, however, to the Senator from Massachusetts that it developed that the senior Senator from Utah had no personal interest whatever in any matter affected by the tariff. In fact, I have been so careful in whatever investments I have made that they have not been affected in any way, shape, or form by the tariff.

Mr. WALSH of Massachusetts. I am glad to hear that, because the Senator from Utah has repeatedly stated that he was a manufacturer, I suppose referring back to his experience of 20 years ago; but I inferred from his allusion that he was still interested in the manufacture of woolen cloth and that he was still a manufacturer.

Mr. SMOOT. I speak of woolens as a manufacturer.

Mr. WALSH of Massachusetts. It is not necessary for the Senator to make any further explanation.

Mr. SMOOT. I desire to say to the Senator now that I shall so long as I live consider myself a manufacturer. It is the only business that I ever really learned, and I derived more pleasure from it than from any other activity of my life. I do not care what may happen to me financially; I know that I can go into a woolen mill, and I can run a woolen mill and make a living. I think every man ought to learn a trade, and I wish that every boy of mine would learn some kind of a trade. I should not care what it was, provided it were some useful trade.

The only dollar I ever invested in the sugar business was an investment up in Idaho of $1,500, and I could not get that much money for my interest in that business now. The plant was moved from Idaho, it happened, into Utah. I have not had a personal interest outside of that.

Mr. WALSH of Massachusetts. I never heard that the Senator was engaged in the sugar business. I did hear that he was a trustee or director in some companies or corporations that were interested in that business, but I never heard that he personally conducted a beet-sugar business.

Mr. SMOOT. None whatever; no more than the Senator from Massachusetts has, with the exception that I have 440 shares of Utah-Idaho Sugar Co. stock that I bought in the plant in Idaho years ago. I have made that statement on the floor of the Senate heretofore. Directly or indirectly, I am not interested at all with that exception; and that stock to-day is worth about $1,300 or $1,400.

Mr. KELLOGG. Mr. President, will the Senator yield there? I should like to ask him a question.

Mr. WALSH of Massachusetts. I yield.

Mr. KELLOGG. I do not take it that the Tariff Commission gives it as its opinion that the duty levied in this bill would add that much over and above the duties provided in the emergency tariff act.

Mr. WALSH of Massachusetts. Oh, no; of course not. It is what the duty of 33 cents a pound on the raw wool will mean in the increased price of a suit of clothes.

Mr. KELLOGG. As compared with free wool.

Mr. WALSH of Massachusetts. Of course.

Mr. KELLOGG. I understand.

Mr. WALSH of Massachusetts. Mr. President, I have a table which will serve to show roughly the increases in duties upon the principal materials entering into the manufacture of a suit of clothes and how seriously the cost of production of clothing will be increased.

Mr. WALSH of Montana. Mr. President, before the Senator goes to that table I want to inquire of him whether this will be the situation if the amendment of the Senator from Wisconsin is adopted: The figures that he gives us as to the additional cost of clothing will be reduced only in respect to 20 per cent of the clothing?

Mr. WALSH of Massachusetts. That is all.

Mr. WALSH of Montana. And will be reduced only in the difference between the converted ad valorem rates, whatever they may be, and 60 per cent?

Mr. WALSH of Massachusetts. That is my opinion.

Mr. WALSH of Montana. So that these figures that the Senator has given us will obtain anyway with respect to 80 per cent of the clothing of the people?

Mr. WALSH of Massachusetts. There is no doubt about it.

This table is a table prepared at my request to show what duty has been placed in this bill upon the materials that go into the making of clothing other than cloth. The Senator will recall that during the discussion of some of the duties upon almonds and walnuts I introduced a table showing the tax upon the materials used by the candy manufacturers, and I showed that there were 77 articles used by the candy manufacturer that under this bill bore a duty. Now I am going to show what the increased duty is to the clothing manufacturer. Later I shall produce a table that will show that the manufacturer of boots and shoes has had 25 articles which go into the making of a shoe taken off the free list and a duty put upon them in this bill, and 25 more have had the duty increased.

That is the worst feature of this bill. It increases the cost of production all along the line. That is why progressive manu-

facturers are fighting this bill. That is why they want it defeated. That is why the Republican press are against this bill—because they realize that the protection has been so generally distributed and so elaborately passed around here, there, and elsewhere that the increase in the cost of production is going to be very serious.

I have here a table which gives the names of the materials, the rate under the Underwood law, the rate under the Senate bill, and the per cent of increase.

The per cent of increase over the Underwood law on wool cloth valued at not over 60 cents a pound is 230 per cent.

The per cent of increase over the Underwood law on wool cloth valued at from 61 to 80 cents per pound is 207 per cent.

The per cent of increase over the Underwood law on wool cloth valued at 81 cents to $1.50 per pound is 180 per cent.

The per cent of increase over the Underwood law on wool cloth valued at over $1.50 per pound is 130 per cent.

That answers the Senator's question of a moment ago. The increase on the high-priced cloth in this bill is 130 per cent. The increase on the poor man's wool cloth is 230 per cent.

Now we come to linings. In the case of cotton linings the increase over the Underwood law—I will not take the time to give the Underwood rate, or the rate of this bill—is 64 per cent. In the case of silk used for linings the increase is 12 per cent. Again, only the rich use silk in lining their suits. The rate of increase there, you will note, is very low.

On trimmings, buttons, the increase is 250 per cent. On hair cloth the increase is 216 per cent. On canvas padding the increase is 100 per cent on one kind and on another kind 57 per cent. On cotton thread the increase is 133 per cent. On the floor of the Senate the rate was reduced, but the increase is still 133 per cent. On silk thread the increase is 166 per cent.

Let us sum it up. On four articles the duty is increased more than 200 per cent; on five, from 100 to 200 per cent; on two, more than 50 per cent; and on two, less than 50 per cent. Yet Senators have the hardihood and the audacity to stand on this floor and, in the face of that record, tell us that the cost of clothes is not going to increase.

Mr. President, I ask that the table to which I have referred may be printed in the RECORD as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Materials.	Underwood law rate.	Senate bill rate.	Per cent of increase over present law.
Wool cloth:			
Value not over 60 cents per pound.	35 per cent	26 cents per pound plus 40 per cent.	230 per cent. (Average based on pound value of 20, 30, 40, 50, and 60 cents.)
Value 61 to 80 cents per pound.	do	40 cents per pound plus 50 per cent.	207 per cent. (Average based on pound value of 61, 65, 70, 75, and 80 cents.)
Value 81 cents to $1.50 per pound.	do	49 cents per pound plus 50 per cent.	180 per cent. (Average based on pound value of 81 cents, 90 cents, $1, $1.25, and $1.50.)
Value over $1.50	do	49 cents per pound plus 55 per cent.	130 per cent. (Average based on pound value of $1.60, $1.70, $1.90, $2, and $3.
Linings:			
Cotton	27.5 per cent maximum.	45 per cent maximum.	64 per cent.
Silk	45 per cent	55 per cent minimum.	12 per cent.
Trimmings:			
Buttons	35–45 per cent vegetable ivory.	1½ cents per line per gross plus 40 per cent.	250 per cent on 2-line button.
	40 per cent (not specially provided for).	45 per cent	11 per cent.
Haircloth	6 cents per square yard (equivalent 6 to 18 per cent).	35 per cent	216 per cent.
Canvas padding	Free, all jute 35 per cent, chief value jute.	60 per cent linen 55 per cent jute	100 per cent. 57 per cent.
Cotton thread	30 per cent linen 15 per cent	20 to 35 per cent	133 per cent.
Silk thread	do	40 per cent minimum	166 per cent.

Mr. WALSH of Massachusetts. Mr. President, do you wonder that the clothing manufacturers are protesting against this bill, when they have learned that all the materials which they use to make a suit of clothes are to bear a heavy duty, and when they know that the public are demanding a reduction in the cost of clothing?

It is apparent from this table that upon every item entering into a suit of clothes the Senate bill imposes very substantial increases in the duty.

At a time when everyone in this country is trying to cut down wages, to deflate, to cut down cost of production, and produce more, we are proceeding to increase the cost of production to every manufacturing establishment in this country; and that is why they are saying, "Take your protective duties off me, and give me some of these raw materials free or with a reasonable duty, and I will get along without protection." That is why they have changed their whole vision on the wisdom of a protective-tariff policy. That is why there are more men in the Republican Party to-day opposed to protection than ever before—because they realize that when it gets away from the protection of infant industries and becomes a bonus and a gift and a subsidy, it becomes an unbearable burden to the consumers and to the manufacturers who must use the raw material.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. Yes; I yield.

Mr. SMOOT. I just want to say this——

Mr. WALSH of Massachusetts. I will yield for a question. I wish the Senator would wait until after I get through to make his own speech, as I have no doubt he does not agree with what I am saying.

Mr. SMOOT. The wool manufacturers of the East or any other part of the country, and the manufacturers generally in times past, when they could get all the protection they wanted on the manufactured articles, were giving none to those that produced the materials that went into those manufactured articles. That time has passed.

Mr. WALSH of Massachusetts. So far as I have been concerned nobody is protesting against giving a reasonable protection. I have not done it. I have taken a position in favor of giving reasonable protection to some of these industries. What I am denouncing, and what the Republican press is denouncing in this country, are the extortionate and unreasonable rates levied in this bill. You can not get away from that by saying: "Oh, the manufacturer can not get along without doing something for the other man." The trouble with this bill is that you have given the manufacturer what he has had in the past, and you have burdened him with duties upon the material that go into the manufactured product that he can not bear.

Mr. SMOOT. The question is whether he can bear them or not. I say that he can.

Mr. WALSH of Massachusetts. Then, if he can bear them, you indict your party and yourself, because you have enacted here the same and often higher rates that are carried in the Payne-Aldrich Act.

Mr. SMOOT. No; the manufacturer not only had the rates that were in the Payne-Aldrich bill but he had all the rates between 18 cents and 44 cents compensatory duty. The Senator understands that.

Mr. WALSH of Massachusetts. I say that the rates in this bill are higher than ever named before; that in this bill protective duties have been levied upon more products than ever before, and that you have placed many of the manufacturing interests of this country in the position of being opponents of your own protection policy, and you are injuring your party and your own principles; as the Senator from New York says, you are injuring your own purpose. You are making protection unpopular where it ought to be popular. I do not know, as a Democrat, that I ought to complain, but that is what you are doing.

Mr. SMOOT. The Senator knows that on the other side of the Chamber we have had votes here for duties on raw materials. I could stand here and mention them. Does the Senator suppose those Senators think that they can have duties upon the raw material and not give a compensatory duty to the manufacturer? On the other hand, does the manufacturer think that he can have a duty and make everybody else in the United States a carrier of water and a hewer of wood for him?

The protective tariff is not going to be made that way in the future. If we are going to believe in protection, we are going to have protection—not spotted protection, but protection—and we are not going to give the manufacturers of the East any more protection than is necessary; and I say to the Senator now that they have a compensatory duty and a protective duty that will take care of their industry, and I admit that it is not as high as the other.

Mr. WALSH of Massachusetts. I will ask the Senator to be patient and wait until I finish my argument. I dislike this practice of certain Senators on the floor here, when they hear

an argument made that they find antagonistic to their own views, of getting up immediately and interrupting the Senator and making a speech. The Senator can make that speech when I get through. I insist upon my right to make my argument. The Senator can interrupt me for all the questions he wishes and catechize me and ask me to explain anything I have said, but I am not going to permit speeches to be made in answer to my arguments in the midst of my speech.

Mr. SMOOT. The Senator, of course, has that right, and he can object at any time. I will say to the Senator that I will yield to him at any time that he wants me to do so, either to ask questions——

Mr. WALSH of Massachusetts. I never yet have asked a Senator on this floor to yield to me to make a speech.

Mr. SMOOT. I have not made a speech. I have made an explanation, that is all.

Mr. WALSH of Massachusetts. Now, Mr. President, to come right back to the thing we are talking about, the Senator denounces these manufacturers.

Mr. SMOOT. No; I do not denounce them at all. I told the Senator the other day——

Mr. WALSH of Massachusetts. The Senator said they had been "getting theirs"; they had been getting the best end of it. The Senator said that. He does not dispute that, does he?

Mr. SMOOT. Because the woolgrowers got nothing.

Mr. WALSH of Massachusetts. The Senator said the Payne-Aldrich bill was nefarious, and he said the House bill was worse than the Payne-Aldrich bill.

Mr. SMOOT. No; I said that one provision that allowed a piece of goods coming into this country to carry a wool duty because it had one thread of wool in it could not be justified, and I say it again.

Mr. WALSH of Massachusetts. I want to ask the Senator if a man can not be an honest Republican and a good protectionist and advocate a duty of 25 cents per pound on raw wool? Must he take the exact rate which the woolgrower demands in order to be a good Republican?

Mr. SMOOT. Why, no; I did not say that, and nobody has intimated that.

Mr. WALSH of Massachusetts. In all the arguments I have heard made in this Chamber nobody has yet made an argument for free wool. All the arguments I have heard have been to try to force down this rate of 33 cents; but the Senator from Utah has led the forces that are contending for this rate, and has said that any rate less than this would not be satisfactory to him or to the country or to the Republican Party.

Mr. SMOOT. No; the Senator now has gone further than he ought to have gone. I never have made that statement upon this floor.

Mr. WALSH of Massachusetts. Will the Senator vote for a rate less than 33 cents?

Mr. SMOOT. Mr. President, I do not know what rate the conference committee will agree upon in the case of wool.

Mr. WALSH of Massachusetts. Will the Senator now, if a motion is made, vote for any rate, proposed by even a Republican, less than 33 cents?

Mr. SMOOT. No; I will not do it now, and the Senator knows why.

Mr. WALSH of Massachusetts. That is what I thought.

Mr. SMOOT. Another thing I will say to the Senator is this: You can not get your own side to vote for free wool. The Senator is talking about free wool. Let us see how many Democrats will vote for free wool.

Mr. CARAWAY raised his hand.

Mr. SMOOT. Yes; the Senator from Arkansas will.

Mr. WALSH of Massachusetts. Who is talking about free wool?

Mr. SMOOT. The Senator was just talking about free wool.

Mr. WALSH of Massachusetts. What did I say about free wool?

Mr. SMOOT. The Senator said that he would not give them free wool and that I would not give them free wool.

Mr. WALSH of Massachusetts. Did I make any such statement as that?

Mr. SMOOT. I will ask the reporter to read the statement the Senator made.

Mr. WALSH of Massachusetts. Does the Senator want to take up the time to refer to the reporter's notes?

Mr. SMOOT. If the Senator doubts it, I do.

Mr. WALSH of Massachusetts. All right; you can refer to the reporter's notes to find out just what I said about free wool. I said that nobody was talking in this instance about free wool.

Mr. SMOOT. No; no one was advocating free wool.

Mr. WALSH of Massachusetts. I said that we were talking about lowering this duty of 33 cents a pound.

Mr. SMOOT. The Senator said that no one was advocating free wool.

Mr. WALSH of Massachusetts. Yes; I said nobody was advocating it; nobody was talking about it.

Mr. SMOOT. That is exactly what I said.

Mr. WALSH of Massachusetts. No; the Senator said that I was talking about free wool.

Mr. SMOOT. Well, no one was advocating it—neither myself nor anyone else.

Mr. WALSH of Massachusetts. I do not want any personal controversy or argument about what I said or what I did not say. I say to the Senator that this rate is too high, that this rate is excessive, and if it is a fair and just rate it indicts the whole Republican House majority, who fixed the rate at 25 cents, with a clause providing that in the case of cheap wools it would be less.

Mr. SMOOT. As far as the rate is concerned, according to the report of the Tariff Commission, the 33 cents would be cheaper.

Mr. STANLEY. I assume the Senator from Utah means that the Democratic side would not as a body unanimously vote for free wool?

Mr. SMOOT. That is what I meant.

Mr. STANLEY. Not that no Democrats on this side would vote for free wool?

Mr. SMOOT. No; I did not say that.

Mr. STANLEY. I would welcome the opportunity.

Mr. SMOOT. Certainly; I know the Senator would.

Mr. STANLEY. There would be no more righteous vote I could cast, in the fear of the Lord and for my country.

Mr. WALSH of Massachusetts. There is no danger of getting free wool, and there is no danger of reducing this rate one cent. If the committee had brought in a rate of 50 cents per pound, it would go through this Chamber. There is an invisible club being wielded in this Chamber. It has been said again and again that the manufacturers were getting too much; that the day is past for protection for them; that the agricultural interests must come into their own now. This is an attack upon the manufacturing interests of this country, who have supported the Republican Party all these years and contributed lavishly to its campaign expenses. Many of them have grown prosperous and have expanded and enlarged because of the policy of protecting infant industries which that party has stood for. But the woolen industry is not an infant industry. It has been stagnant for 40 years, and if you should make this duty $1 a pound it would not revive that industry any more than the high duties upon flaxseed can revive that industry.

Mr. SMOOT. The Senator is in favor of free wool, then, I judge?

Mr. WALSH of Massachusetts. I will say to the Senator very frankly that I would vote for free wool. I will say further to the Senator that there is just as much reason for a protective duty of 33 cents per pound upon many other raw products as for such a duty upon wool. Of course a reasonable duty for revenue purposes would be proper and justifiable.

Mr. President, I have taken more time than I intended, but I felt it was of some importance to have from this side of the Chamber an estimate made of the cost of the duty to the individual and the cost to the public and some estimate made, although we really can not estimate it, of the cost to the public by reason of the protective duties upon woolen manufactures.

Mr. HITCHCOCK. Mr. President, of course, the Senator has only touched upon one or two articles of clothing. Wool enters into so many articles of clothing that it really would be a much larger item of cost upon the individual.

Mr. WALSH of Massachusetts. We have to determine how many pounds of wool are in a blanket, in a suit of clothes, in an overcoat, and we have the finding of the board that when that wool finally reaches the garment it is pyramided to the value of 93 cents per pound. With that information we can very easily determine, if we know the amount of wool in a given garment, what the increased cost to the public would be.

Now, Mr. President, I wish to conclude by stating that I shall vote for the amendment offered by the Senator from Wisconsin because it is a step forward in the attempt to reduce somewhat these outrageous rates. Politically speaking, it would be better for every Senator on this side of the Chamber to remain silent and let the bill go through with the rates unamended. But we owe something to our country. We owe it to our country to protest against the highest rates ever levied upon wool, levied in this crisis in the industrial life of our country.

The rate can not be justified except from the point of view of the woolgrower. They do not ask for a higher rate. This is the rate they named. Whoever heard of a manufacturer or

a producer of any article ever being given by an impartial tribunal the exact rate which they requested at the outset?

I am aware that this business has passed through a period of very serious depression. But, Mr. President, every industry in the country has passed through a period of depression. The woolgrowers have suffered no more than the cattle raisers. The cattle raisers have suffered no more than the cotton raisers. The cotton raisers have suffered no more than the manufacturers. The manufacturers have suffered no more than labor. If we are to levy tariff duties based upon the necessity of bolstering up depressed business, then why not begin with the men and women walking the streets of the country without any employment and without the wherewith to buy the necessities of life? If we are going to distribute bonuses and bounties and gifts by a tax levied upon the American people, why not begin with the unemployed?

Mr. President, these rates can not be defended. The cost to the American people will be stupendous. The American people will do to this bill and to the party that enacts it into law just what they did in the case of the Payne-Aldrich law. The day can not arrive fast enough to let them get to the voting polls next fall and register their protest against the imposition of this tax upon the consumers and against the placing of this burden upon the manufacturer as well as the consumer. It is indefensible. It is outrageous. But there is no use protesting. The die is cast. The high rate will be adopted. The amendment of the Senator from Wisconsin will be defeated. Every amendment proposed tending to reduce the rate proposed by the committee will be defeated. If the rate were 40 cents, it would go through just the same. It is from 33 to 50 per cent higher than the rate which the Republicans of the House adopted, but that is of no consequence, for the tariff agricultural bloc are the masters of the situation and they have named their terms. It is 33 cents per pound, or, what shall I say, a bolt, I suppose, against the rates on manufactures?

Mr. President, I am going to make a final protest against the rate and ask Senators upon the other side of the Chamber to pause and think of somebody else besides the woolgrower, to think of some of the millions of people in the country who have to buy clothes, who have to buy blankets, and who ought not to be penalized and taxed by such an outrageous increase in the duty upon raw wool, an increase of 50 to 81 per cent over the duties levied in the Payne-Aldrich law, which was so very quickly repudiated by the American people.

Mr. SMOOT. Mr. President, some time when I have a few spare moments I am going through the RECORD and gather together all the predictions that have been made on the opposite side as to the increased costs due to increased duties to the American people, covering the different schedules in the pending bill. I think in the end, if they continue those predictions in the same wild and exaggerated way as they have made them in the past, the amount predicted will be more than the cost of all goods consumed in the United States.

The Senator from Massachusetts [Mr. WALSH] has announced to-day costs computed for him probably by some clothing manufacturer that the rate of duty upon wool or the increased rates, as he said, will cost the American people three hundred-odd million dollars. Is it possible? No! I find that in 1919, with the values at nearly twice what they are to-day, the amount of cloths and flannels and dress goods made in the United States was $692,479,000.

Mr. SIMMONS. Mr. President, will the Senator permit me to ask upon what basis that is figured? Is it upon the retail selling price, or what is the basis?

Mr. SMOOT. It is the manufactured price.

Mr. SIMMONS. The Senator from Massachusetts was speaking about the retail price to the consumer.

Mr. SMOOT. I know that is what he was speaking of, and that is what I want to call attention to right now. The prices to-day are scarcely one-half what they were at that time. I have quotations here from five of the best mills in the United States.

Mr. WALSH of Massachusetts. Mr. President, does not the Senator know that the estimated value of the clothing in this country is over $2,000,000,000?

Mr. SMOOT. I am not talking about the estimated value of the clothing, but as to the value of flannels and the cloths and the dress goods, and the Senator made his prediction based on the increased duty on wools entering into a suit of clothes.

Mr. WALSH of Massachusetts. I was talking about the increased cost of the wool in the clothing to the country, and the clothing of the country amounts to over $2,000,000,000 in value.

Mr. SMOOT. I am not talking about the clothing. We are talking about the effect of the duty on wool. If it all was clothing wool and all went into dress goods and flannels, if all the cloth, every ounce of it, was wool, the whole value as shown for 1919 was only $692,479,000.

Mr. WALSH of Massachusetts. But the consumer does not buy cloth. He buys clothes.

Mr. SMOOT. Yes; and I want the consumer to know who makes that profit. I would like to have Mr. Goldman tell the American people who makes the profit. It is not the woolgrower. The claim is made that the proposed rate of duty upon the wool, if the prices were as quoted here by the Tariff Commission, would advance the price of goods more than all the cost of the goods and all the labor and all the material in them. It can not be. In other words, if they would give these people the cloth for nothing, make them a present of it, and then take the difference, it would show just who was making the profit. It is not the cloth manufacturer. It is not the woolgrower.

The Senator said the other day there were $72,000,000 worth of wool used in the clothing and that was multiplied and pyramided until it was over $300,000,000. Pyramided so that it will be increased 300 per cent. I have stated upon this floor many times that some time or other the American people would learn where the high cost of living came from, and that is in the mode of distribution of the goods after they are made. No better example has ever been made than the one just made by the Senator from Massachusetts to that effect.

I want to say that this is the most difficult schedule there is in the whole bill. The shrinkages of wool are so great and they are so varied——

Mr. McLEAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Connecticut?

Mr. SMOOT. I yield.

Mr. McLEAN. Did I correctly understand the Senator to say that the price of woolen cloth in 1919 was nearly twice what it is to-day?

Mr. SMOOT. I will say to the Senator that we are not making the same yardage. The price per yard of the cloths is only about one-half what it was in 1919.

Mr. McLEAN. Wool was free then.

Mr. SMOOT. Yes; but we all know why those values were so high. All prices were then out of all reason, but I do not want to take any advantage of that in the argument I am making. I know that the price of cloth to-day as compared with the price then is less than one-half. If they made as many yards as they made in 1919 the values would be correspondingly changed. At that time every wool-manufacturing concern in the United States was running full, and to-day they are not running 50 per cent. It seems to me it is time for Senators to stop and think. The propagandist statements sent broadcast throughout the country ought to be analyzed before they are swallowed hook and line.

Mr. WALSH of Massachusetts rose.

Mr. SMOOT. I know the Senator from Massachusetts is not responsible for it. I acquit him of it.

Mr. WALSH of Massachusetts. I would like to ask the Senator from Utah what he says would be the increased cost in a suit of clothes and an overcoat? Has he made any such calculation?

Mr. SMOOT. We will take a suit of clothes. I said the other day that the 3 pounds on an average is about the wool content on the lightweights, and the heavyweights, too. I even went further than that and said, "Let us say 4 pounds." If we have a duty of 33 cents a pound it is $1.32 upon the suit of clothes, allowing 4 pounds. I am speaking of the duty upon the wool, and that is in case all the cloth is made of all pure wool. The Senator knows it is not made of pure wool, and everybody else knows that it is not. I want to say, Mr. President, that the amount of the wool that is used in the manufacture of cloth varies, of course.

Mr. WALSH of Massachusetts. Will the Senator answer my question? There is a difference between us. I say $2.50 is the additional cost. Does the Senator say $1.20?

Mr. SMOOT. If it were 4 pounds, it would be $1.32. If it were only 3 pounds, it would be 99 cents.

Mr. WALSH of Massachusetts. I said $2.50, and the Senator makes no allowance for the merchandising costs, and so forth.

Mr. SMOOT. Mr. President, I am stating what the rate of duty is. If the manufacturers were given all of the wool for nothing, if the woolgrowers said to them, "You may have this wool for nothing; we are raising it for you and for your benefit; now please take our wool; we will even cart, unload, and put it in the mill and you need not pay us anything"; what difference would it make in the cost of a suit of clothes? The very finest wools that may be put in a suit of clothes are valued at $1.20 a pound; that would be $3.60 for the wool in a suit

of clothes. That is not the duty; that is the cost of the wool; but if all of it were given to the manufacturer and placed at his door and he were made a present of it, it would not reduce the price of the suit as much as is claimed the duty alone increases the price of a suit.

We were told the other day that as to one of these schedules the increased duty involved an additional cost of $50,000,000, but when one turned to the statistics he found that the value of all the articles produced in the whole schedule amounted to only about that much. It is all right, Mr. President, to put these sensational statements before the public, and they are always printed in headlines, but some time or other the truth is going to be known.

Before I was interrupted, however, I was stating that the wool schedule is the most difficult there is in the whole bill. We are dealing with a so-called raw material which shrinks all the way from 20 per cent up to 90 per cent. We have got to provide some basis for levying the duties. I remember in 1909 when Mr. Dolliver, of Iowa, insisted upon having an ad valorem rate upon wool, an ad valorem rate upon all the cloth, and having no specific duty and no compensatory duty mentioned in the bill. I remember the situation at that time; and I do not hesitate to say that I have not since then changed my mind a particle. Even under the scoured-content provision of the bill as it is now written there is not a living soul who can tell exactly what the scoured content will be. I know it can be ascertained within 2 or 3 per cent; I know that the Provo mills paid for my education, perhaps, while I was learning to gauge the shrinkage of wool so as to be equipped to purchase the millions and tens of millions of pounds of wool that I purchased for those mills. It cost them a good deal of money; but I say now that when I was buying millions of pounds of wool I could not say just what the shrinkage of the wool would be. I could say, however, within 2 or 3 per cent of what it would be. And the man who can not judge of the shrinkage of wool within 3 per cent the Government of the United States better not employ as an appraiser. If the Government does not have an appraiser who can judge the shrinkage within 1 or 2 or 3 per cent on every importation of wool into the United States, the importer will contest the rate of duty which is decided upon. There are, however, men who are educated in this matter. I know them, for I bought wool alongside of them for years and years, and I have seen time and again tests made in purchasing a clip of wool when all of the buyers would put down exactly what their view of the shrinkage of the wool might be, and it was very seldom when such purchasers of wool came together that the difference ever amounted to more than 2 per cent.

I wish it were possible so to frame a bill that all question of doubt as to shrinkage, whether 1 per cent or 2 per cent would be eliminated, but it is impossible to do so, I do not care what plan may be adopted.

Mr. President, is it better to have an ad valorem rate of duty than a specific rate of duty upon wool? I want to say to the Senator that under an ad valorem rate the valuation of wool which is imported into this country would show a much greater discrepancy than is possible under the scoured-content plan.

Mr. LENROOT. Mr. President, will the Senator yield to me?

Mr. SMOOT. Yes; I yield.

Mr. LENROOT. I am very much interested in the Senator's statement that the experts can not tell within 3 per cent of what the shrinkage of wool will be.

Mr. SMOOT. I said 3 per cent at the outside.

Mr. LENROOT. Now, I want to ask the Senator if that is so, if the committee's plan of all these brackets is not going to lead to endless litigation? Will it not be very much better, with the same 33-cent rate, to take the House provision upon the scoured content?

Mr. SMOOT. Yes; to a certain extent; and so far as the woolgrower is concerned, I will say, without a question of doubt, it is of no benefit to him, and if I had my way that is exactly what I would do.

Mr. LENROOT. From the standpoint of the Government also, and of everyone else, would it not be better to have it in that way?

Mr. SMOOT. I think so. There is this trouble about the bracket plan: The various brackets are based on 3 per cent gradations in the shrinkage; and in the administration of the law a contest may arise between the importer and the Government, the latter claiming that the wool falls in the class shrinking from 39 to 42 per cent, for instance, and the importer claiming the shrinkage is but 38½ per cent. That is the difficulty in the administration of the bracket system. When, however, we come to take an ad valorem rate and base the duty upon the price at which the wool is invoiced, I say now to the Senate that there will be a very much greater discrepancy in such a case than is possible under the bracket system or under the straight rate of 33 cents.

In the case of cotton there is no such difficulty; in the case of silk there is no such difficulty. The raw silk comes in free, and everybody knows just what it is. Cotton is purchased, and everybody knows just the weight of the purchase. It does not have to be scoured and no computation has to be made as to shrinkage. The only question is as to the length of fiber where there is any decision to be rendered.

Mr. President, if there is any business in all the world where there are leaks, it is in the woolen business. Just as soon as wool is clipped from the sheep's back every time it is handled there is a loss. The successful woolen manufacturer is a man who stops those leaks; and if he can not stop them in the same degree as his competitor stops them, he goes out of business. A retail merchant buys his goods, and all he has to think of is the turnover and the profit which he will make upon them; but when the manufacturer buys wool after it is clipped it goes, first, into a room where it is sorted, and there is a loss there; it goes next to the duster, and there is a loss there; it goes then to the washing machine, and there is a loss there; it goes to the picker room and goes through the picker, and there is a loss there; it goes to the cards, and there is a loss there; it goes to the spinning room, and there is a loss there. I want to repeat that it is the most difficult business in all the world of which to make a success. No man who has not had experience should go into the manufacture of woolen goods.

Mr. President, I want to say this much about the woolen schedule to indicate how difficult it is to arrange the rates satisfactorily to all concerned; but I desire to tell the Senate also that the plan proposed by the committee, while not perfect, is the best that could be devised, in my opinion, to make sure that the woolgrower will receive the rate of duty which is given to him.

There is a difference of view as to whether wool should be free or whether a duty should be imposed upon it, but I know that a majority of the Senate are in favor of a duty upon wool. When that is decided, the next question is how best to handle a compensatory duty for the manufacturer, and how best to impose the duties upon the items that fall under the different brackets of the schedule. I say, Mr. President, the plan which has been adopted by the committee is the most just plan that can possibly be put into the woolen schedule, in view of the imposition of a duty upon the raw wool. Of course, if we had free wool, and no compensatory duty to impose, then we could follow the plan of the Underwood-Simmons tariff law and provide an ad valorem duty upon the finished product.

Mr. POMERENE. Mr. President——

Mr. SMOOT. I yield.

Mr. POMERENE. I realize what great experience the Senator from Utah has had in the woolen business, and I realize, I think, that when the duty is placed upon the scoured content that that improves in that behalf this legislation over any that we have had heretofore; I think I see that pretty clearly; but the Senator now criticizes the amendment offered by the Senator from Wisconsin [Mr. LENROOT] on the ground that it is impossible to administer that provision if we make the duty on an ad valorem basis. I do not see that—and I say it with all due respect—I do not think the Senator has made that clear.

Let me make this further suggestion: The amendment offered by the Senator from Wisconsin does not, properly speaking, provide an ad valorem system for levying the duty. The specific rates remain, but the amendment provides, if I understand it correctly, that while the specific rates shall prevail, as set forth in the bill, the specific duties shall not be in excess of an ad valorem rate of duty of 60 per cent.

It does seem to me, from my meager knowledge of this subject, that if we have a specific rate of so much per pound, and we know what the price is—and we are talking of foreign valuation now—when we have that value, and we know that so many pounds of scoured content of wool have come in, and that the duty is 33 cents a pound, we ought to be able to estimate whether or not that 33 cents per pound specific duty on the scoured content is going to be in excess of 60 per cent of the foreign valuation.

Mr. SMOOT. Yes; but that is not the difficulty in administration. The difficulty in administration is that, for instance, in the same piece of cloth there is one class of wool that will be dutiable at 33 cents, and there is another class of wool, with the limitation of 60 per cent, that would be dutiable at 18 cents. When we give a compensatory duty under those circumstances no living soul can tell what it should be. If it were a straight ad valorem duty, I have already said that that could be admin-

istered; but you can not properly impose a compensatory duty when an ad valorem and specific duty on wools entering into the cloth are widely different.

Mr. POMERENE. Of course I was addressing myself to the ad valorem duty in so far as it relates to the raw wool.

Mr. SMOOT. If it were a straight ad valorem duty on all, then it could be imposed with an ad valorem duty; but it can not with a compound duty with different rates.

Mr. POMERENE. I think that is true; but we have ways and ways of getting information. We are not necessarily bound by invoices. Of course, ordinarily, I take it, the invoices are accepted at the customhouse. I think that is true ordinarily; but if there is any difficulty about this it does seem to me that a scheme could be worked out whereby we could provide a fairly equitable compensatory duty, even based upon the ad valorem rate.

Mr. SMOOT. Mr. President, I ask unanimous consent that when the Senate closes its session to-day it recess until 11 o'clock to-morrow morning.

The PRESIDING OFFICER. Is there objection?

Mr. UNDERWOOD. Mr. President, let me ask the Senator whether it is proposed to have an executive session this evening?

Mr. SMOOT. If any Senator desires it; but I have not heard anyone ask for it.

Mr. CURTIS. No nominations have come in, so there will not be an executive session, unless it is desired by some Senator.

Mr. UNDERWOOD. I just wanted to know.

Mr. CURTIS. There will be none.

Mr. UNDERWOOD. I have no objection to the request.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Utah? The Chair hears none.

The question is on the amendment proposed by the Senator from Wisconsin [Mr. LENROOT] to the amendment of the committee.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. WALSH of Montana. Mr. President, before a vote is taken on this matter I desire to say that I represent in part in this body the greatest wool-producing State in this Union. I am entirely satisfied that the rates provided for in paragraph 1102 are unjustifiably large. I am desirous of voting for very much lower rates. I shall talk about that later.

I should like very much to vote for the amendment offered by the Senator from Wisconsin. The wools to which it would be applicable are not produced in any considerable quantity at least in our section of the country, and the effect would be indirect and not direct. But, Mr. President, I shall not vote to reduce the rates on the raw wool unless I can be fully assured that the compensatory duties upon the manufactured products are going to be reduced proportionately and in accordance with those rates.

The situation is thus at the present time: The Senator from Wisconsin [Mr. LENROOT], tendering his amendment, puts it up to the committee to propose a plan for a proportionate reduction of the compensatory rate. The committee advises the Senate that it is an insoluble problem; that at least the committee is unequal to the task of solving it. If that is the case, we then reduce the rate upon the raw product so that it shall be not to exceed 60 per cent, while the manufacturer will get a compensatory rate, according to the statement made here, of 130 per cent, or someth ng of that kind, upon certain classes of products.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. WALSH of Montana. I yield.

Mr. LENROOT. I will say to the Senator very frankly that I myself would not offer this amendment upon the raw wool unless I intended to follow it up with offering reductions in the compensatory figures proposed by the Senate committee.

Mr. WALSH of Montana. I suggest to the Senator, then—and that was my purpose in rising—that before a vote is taken upon this amendment it would be wise for him to submit what he proposes in the way of a reduction of the compensatory rate upon the manufactured product, because, as at present advised, it would seem as though that could not be accomplished; and I shall not vote for this amendment until the matter of the reduction in the compensatory rate is discussed to some extent at least. If the vote is taken immediately, what I shall do when the bill comes into the Senate and I see what is done with respect to the reduction of the compensatory rate, I reserve for decision at that time.

Mr. LENROOT. Mr. President, as I stated a moment ago, of course I should not think of offering this amendment with reference to raw wool unless I had in mind carrying the reduction of the duties upon these low-priced wools into the compensatory clauses of the manufactured product.

Mr. President, I assume in the first place that it is not impossible for the committee to work out a basis for a reduction if this amendment is adopted. I appreciate, of course, that the committee can not exactly determine what would be a proper compensation if this amendment is adopted; and the committee has not been able to determine, and the committee has not determined, in the bill that has been reported by the committee, a proper compensation clause with wool at 33 cents a pound. It is impossible to be exact. The committee can not know how much cotton is in a given fabric with reference to the duty imposed; it can not know how much shoddy is in a given fabric, how much waste is in a given fabric, and so on. It assumes that in fabrics of a given value there will be so much wool and gives a compensatory duty for it.

It may be less, or it may be more; and so the committee, if this amendment is adopted, can make the same kind of an assumption and reduce the compensatory duties in the following paragraphs of the bill. I will say, further, that if they do not, I will undertake to do so myself, and I frankly say that if no other basis be found, I shall take this basis:

It has been stated that about 20 per cent of the class of wools that will be affected by this amendment go into the clothing of the country. That being so, this amendment, under the present price of wool, would make a reduction of about 12 cents a pound in the duty upon 20 per cent of the wool that is used in the clothing. If this amendment is adopted, I shall upon these low-priced fabrics work out a reduction in compensation based upon the assumption that at least 20 per cent of the wool that is employed in these low-priced fabrics is this low-grade wool. That will be at least fair, because if 20 per cent of all the wool consumed is this character of wool, in the very fine fabrics none of it is used. That must be true; and in the other fabrics, the coarse fabrics, therefore, more than 20 per cent must be used. So it seems to me that it can be worked out, if the committee will sympathetically try to work it out, upon a basis of that kind.

Mr. President, I want to say one word more. I think, before this vote is taken, the Senate should realize just where it is coming to a little later in this bill, with the duties that are now proposed, if the amendment that I have proposed be rejected.

I made some computations this afternoon, and in the bill as reported by the committee the duty that will be imposed upon tops valued at 40 cents a pound will be 115 per cent ad valorem. The duty on tops with the rate reported by the committee on the imports of 1921, averaging 64 cents a pound, will be 80 per cent ad valorem. Under the bill as reported by the committee the duty upon yarns valued at 30 cents a pound will be 117 per cent ad valorem. Upon yarns valued at 60 cents a pound the duty will be 100 per cent ad valorem. Upon woven fabrics—that includes the cloth that goes into the clothing that the people wear—with the duties proposed by the committee, fabrics valued at 80 cents a pound will pay 100 per cent ad valorem. Upon blankets valued at 50 cents a pound, made of the same kind of wool that is covered by the amendment for which the committee will give 33 cents a pound compensation, based upon the reduction of the estimate for cotton, shoddy, etc., that may go into it, the duty will be 70 per cent ad valorem.

I want to ask Senators on this side if they realize the difficulties they are going to encounter between now and November in going before the American people and defending such duties as are now proposed by the committee in this bill, and whether this side will not exercise a little wisdom, and, without injuring the American woolgrower, at least afford some reduction in these duties?

Mr. POMERENE. Mr. President, I want to say a word with regard to this question. I am not prepared to go into the discussion of it in all of its details, but I confess that I am not able to accept the statement made by the distinguished Senator from Utah when he says that if we should adopt the ad valorem duties on the finished products they would be incapable of proper administration.

Mr. SMOOT. The Senator did not understand me. I did not say that. I said that if we adopted the ad valorem duties upon wool, and had a compensatory specific with an ad valorem duty, that could not be administered. That is quite a different proposition.

Mr. POMERENE. It is not materially different. I recognize the fact that years ago the duties levied in the tariff bills were more largely specific than ad valorem, and it has seemed to me, since I have been in the Senate, that every time it has been suggested that there should be an ad valorem duty we have always been confronted with the thought that it would be incapable of administration. But none the less, it appears that in each successive tariff bill the ad valorem duties have been extended so as to apply to more articles than in the bill before.

The Senator from Utah seems to admit, if I understand him, that if we had nothing further to consider than the duty upon the raw wool, it would be entirely practicable to limit these specific duties to a maximum of 60 per cent ad valorem. His objection seems to be that if we do that we will have our troubles when it comes to the compensatory duty.

In comparing the Payne-Aldrich law with the pending bill the Senator tells us very frankly that the present duties, based upon the scoured content, will be very much more equitable and be a very great improvement over the duty placed upon the wool in the grease, and I think I agree with him. But with all his experience as a manuafcturer and as a legislator the Senator has seen a new light even on that subject. Formerly the Senator believed that a duty based upon the scoured content would be wholly practicable as a matter of administration.

Mr. SMOOT. As to the exact amount of shrinkage, no doubt; and I have said so to-day.

Mr. POMERENE. But the Senator none the less is willing to accept it, even though it is thus impracticable.

Mr. SMOOT. It is the best we can do. I have just said it in the Senate, and the Senator must have heard me, that no living being can tell what the exact shrinkage will be. They can tell it within 3 per cent.

Mr. POMERENE. I suppose that is true, Mr. President, getting down to a mathematical nicety.

Mr. SMOOT. That is all I am talking about.

Mr. POMERENE. But we are talking about practical things and seeking to do them in a practical way. When the Payne-Aldrich bill was before the Senate the Senator was just as positive that basing a duty upon the scoured content would be as impracticable as he now insists it would be to adopt the ad valorem system when it comes to the question of fixing a compensatory duty upon the finished product.

Mr. SMOOT. Evidently the Senator has not yet comprehended my criticism in that regard. That is where you have a part of the wools on a scoured basis, at 33 cents, and then at the same time put in the same paragraph a provision that none shall be admitted exceeding 60 per cent. That proposition has never been made to the Senate before.

Mr. POMERENE. I am not saying that it was.

Mr. SMOOT. I say again that as between the ad valorem duty and the scoured basis duty, neither of them can be mathematically exact. The appraiser at Boston may appraise the goods quite differently from the appraiser at New York, but the variation would not be more than 3 per cent. The ad valorem would be at least that much, and with the undervaluation perhaps a great deal more. The only other method would be on the basis of the grease pound, and if the compensatory duty of 11 cents a pound had been carried through and the woolgrower had gotten it nobody could have objected. But that has not been the case. The woolgrower has not received more than 5 or 6, and sometimes 7, cents a pound instead of 11.

Mr. POMERENE. I know how very positive the Senator is in a statement of his opinions, but during the debate on the Payne-Aldrich bill, when an amendment was pending to place a duty upon the scoured content, the Senator from Utah said, on June 8, 1909, as appears on page 2953 of the CONGRESSIONAL RECORD:

> I wish to state that that is not the reason why I would oppose any such proposition, but the reason is that it is absolutely impossible of administration. That is one objection. Another is that to administer it every pound of wool that comes into this country would have to be scoured.

Then, following something said by Senator Beveridge, the Senator again said:

> Every manufacturer of woolen goods first wants to assort his own wool, and the success or failure of a woolen mill many times depends upon the assorting of wool. One man may have a half dozen grades; another man, a manufacturer of woolens, may have only 3; another may have 10. The manufacturer wants to assort the wool for the particular goods that he makes to suit his own idea as to what the effect and result of the assortment will be.
>
> This amendment is impossible of administration. Take one fleece of wool; I can take out of one fleece of wool five grades of wool. Who is going to administer the provision? Is it going to be assorted at the port of New York or Boston, or whatever port it enters into the United States? Is it going to be scoured there?
>
> Mr. President, there are hardly two manufacturers in the United States that scour their wool the same way or with the same process. Why? One, perchance, will want to scour with caustic soda, another with caustic potash, another with a manufactured article for scouring wool, all depending upon the judgment of the manufacturer.
>
> Another thing, Mr. President, every manufacturer wants his wool in the grease.

Later on he said:

> Mr. SMOOT. I will say again, I am positive that it can not be administerd successfully, and no manufacturer in this country would approve of any such plan.

That is pretty positive language.

Mr. SMOOT. I have said the same thing to-day.

Mr. POMERENE. I know that; but the difficulty is that my very good friend, with all his experience as a manufacturer and as a legislator, has surrendered his former convictions, and he brings in this statement. If what he said in 1909 was true, I am afraid my good friend's name will be anathema to all the manufacturers and importers of the country.

Mr. SMOOT. I want to say to the Senator that I do not think the manufacturers want this rate at all, and I said so to-day. I did not know the Senator was going to repeat the statement I made in 1909 or I would not have made a statement to-day. I would have contented myself with saying that I agree with what I said then.

Mr. POMERENE. The Senator agrees with what he said then, but he has surrendered his convictions and accepted this other plan. I did not say this for the purpose of finding fault, because we all change our views——

Mr. SMOOT. I have not changed my views.

Mr. POMERENE. Convinced against your will, you will be of the same opinion still, I suspect.

Mr. SMOOT. I was speaking there of scoured wool.

Mr. POMERENE. I understand that.

Mr. SMOOT. No manufacturer wants the duty based on scoured wool.

Mr. POMERENE. I simply want to call the Senator's attention to the change in his situation, at least, whether his views are the same or not, with the hope that with further study he will be willing, with the assistance of the distinguished Senator from Wisconsin, to work out some scheme so far as the duties on the manufactured products are concerned.

Mr. WALSH of Massachusetts. Mr. President, I request unanimous consent to have printed in the RECORD a communication from Mr. William Goldman, clothing manufacturer of New York, in which he claims that the cost of the 33-cent duty on raw wool in a finished pound of cloth will be $1.06½ instead of 93 cents as claimed by me. In view of the great public interest in this matter of cost I think the communication from a clothing manufacturer will be enlightening.

Mr. SMOOT. I think the communication ought to go in the RECORD because if Mr. Goldman continues to climb, we shall have his estimate of the rate higher than all the goods made in the United States.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

NEW YORK, *July 24, 1922.*

Hon. D. I. WALSH,
United States Senate, Washington, D. C.

DEAR SENATOR WALSH: In view of the very conservative statement presented by you to the Senate to-day with regard to the implications of the raw-wool duty, let me hand you herewith copy of a statement of corrections and omissions to be made to the Tariff Commission's report, which I have just forwarded to Senator CALDER for the purpose of having it incorporated in the RECORD.

On the basis of this report you will notice that I make the cost of the 33-cent duty on wool in the finished pound of cloth $1.06½ instead of 93 cents. You will find this statement well worth reading in its entirety, because it shows how the costs on the individual garments are made very much higher than shown in the Tariff Commission's report.

Very truly yours, WILLIAM GOLDMAN.

The Tariff Commission's report to the effect that the duty of 33 cents on the clean content of wool would involve a cost to the consumer of 93 cents per pound of cloth, $2.85 on a full-weight suit of clothes (made of 14-ounce cloth), and $5.70 on an unlined ulster (cloth weighing 28 ounces) is inaccurate, and I desire to point out certain omissions and necessary corrections to that statement.

The Tariff Commission bases its findings on the average conditions shown in the 1916 report of the Department of Commerce entitled "The men's factory-made clothing industry," and assumes that this report would indicate that a 10 per cent mark up on cost (9 per cent on selling price) would cover overhead, selling expense, and profit for the woolen industry, and 15 per cent on cost (or 13 per cent on selling price) would cover these same items for the clothing industry.

These figures are so much under the actual experience of clothing manufacturers as to cause me to refer back to a very exhaustive report contained in the Tariff Board's report on wool and manufacturers of wool published in 1912, and which, on page 860 of volume 3, presents an accurate ascertainment on all grades of clothing of the percentages of mark-up required to cover selling expense, overhead, and profit for the clothing industry. These are as follows:

	Per cent.
Cheap ($8 and under)	17
Medium ($8 to $15)	19.6
High grade ($15 and over):	
Class A	19.1
Class B	23.1
Children's	19.2
Special order (tailor to the trade)	27

With an average cost for the entire industry of 20 per cent. This figure is, of course, on selling price.

The figures for the woolen trade are not worked out in a table of this kind in this same report, but those familiar with costs of distribution in this industry claim that 9 per cent on selling price is entirely too low to cover overhead, selling expense, and profit. A figure of 15 per cent on cost or 13 per cent on selling price would be a very conservative figure as indicating the mark-up for the woolen trade to cover these items.

To both of these costs, those of the clothing trade and of the woolen trade, must now be added 1¼ per cent to cover Federal and State taxes imposed since this report was published in 1912.

But because my figures for the woolen trade are estimated, I shall disregard the item of taxes in that industry, and using the same method of figuring as that used by the Tariff Commission we arrive at a cost of $1.06¼ per pound of cloth as reflecting the cost to the consumer of the 33-cent duty on raw wool, instead of 93 cents.

It is to be said, however, that in addition to these items of taxes the overhead has somewhat increased since that time for clothing manufacturers, due chiefly to a greater diversification of product on account of the style factor.

The Tariff Board has not included in its calculation, too, the trade discounts earned by the retailer in considering his mark up, and which are usually in addition to the 33⅓ per cent calculated by the Tariff Commission.

In the item covering the cost to the consumer of the suit of clothes there was omitted by the Tariff Board any mention of linings, which item is covered by a table on page 875 of this same Tariff Board report, and which calls attention to the fact that in the medium and high grade clothing—which would mean all wool clothing—the lining used for the inside of the coat and the back of the vest is woolen (mohair) and that about 2¼ yards are used. And mohairs are taxable under the proposed tariff the same as other wools.

The Tariff Commission in giving its figures for overcoats does not exceed 28-ounce cloths, whereas the type of ulster overcoat, which is the one of predominating sale at present, is made out of fabrics weighing from 30 to 32 ounces—31 ounces being a fair average. In computing therefore the cost on a winter overcoat it is necessary for the Tariff Commission to add another classification on overcoats to cover those overcoats of most general distribution.

It will be seen from the foregoing that the statements made by clothing manufacturers that the 33-cent duty would cost the consumer $1 on the finished pound of cloth, and that a full-weight suit of clothes will cost approximately $4 more and an overcoat $7.50, were all approximately correct and fairly reflected the situation.

RECESS.

Mr. SMOOT. I move that the Senate take a recess, the recess being, under the unanimous-consent agreement, until to-morrow morning at 11 o'clock.

The motion was agreed to; and (at 6 o'clock p. m.) the Senate, under the order previously made, took a recess until to-morrow, Wednesday, July 26, 1922, at 11 o'clock a. m.

SENATE.

WEDNESDAY, *July 26, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gerry	McNary	Smoot
Ball	Glass	Nelson	Spencer
Borah	Gooding	New	Stanfield
Brandegee	Hale	Newberry	Stanley
Broussard	Heflin	Nicholson	Sterling
Bursum	Jones, N. Mex.	Norbeck	Swanson
Calder	Jones, Wash.	Overman	Trammell
Cameron	Kellogg	Pepper	Underwood
Capper	Kendrick	Phipps	Wadsworth
Caraway	Keyes	Pomerene	Walsh, Mass.
Colt	Ladd	Rawson	Walsh, Mont.
Culberson	Lenroot	Robinson	Warren
Curtis	Lodge	Sheppard	Watson, Ind.
Dial	McCumber	Shortridge	Willis
du Pont	McKinley	Simmons	
Frelinghuysen	McLean	Smith	

Mr. GERRY. I was requested to announce that the Senator from Nevada [Mr. PITTMAN] is detained on account of illness in his family.

I was also requested to announce that the Senator from Georgia [Mr. WATSON] is absent on account of illness.

Mr. TRAMMELL. I desire to announce the unavoidable absence of my colleague [Mr. FLETCHER] owing to illness.

The VICE PRESIDENT. Sixty-two Senators have answered to their names. A quorum is present.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BURSUM:

A bill (S. 3868) granting a pension to Jose Padilla; to the Committee on Pensions.

By Mr. TRAMMELL:

A bill (S. 3869) for the relief of Lewis G. Norton; to the Committee on Public Lands and Surveys.

By Mr. McCORMICK:

A joint resolution (S. J. Res. 232) proposing an amendment to the Constitution of the United States relative to child labor; to the Committee on the Judiciary.

NATIONAL EXPENDITURES.

Mr. OVERMAN. Mr. President, the taxpayers of the country are entitled to know how their money is spent and what appropriations are made. In obedience to a provision of law the distinguished chairman of the Committee on Appropriations, the Senator from Wyoming [Mr. WARREN], a few days ago presented to the Senate an itemized statement in which he set forth all the appropriations made, and comparing the fiscal year 1923 with the fiscal year 1922 he showed that there was a balance in favor of the fiscal year 1923 of $319,000,000.

Mr. President, we have seen headlines in the newspapers followed by interviews by department chiefs and others with reference to the great savings by the present administration and the great economies which have been brought about by the Budget system. I want to say that that is all a "pipe dream." There is nothing in it, as the figures will show. Of the $319,000,000 that were saved, according to the statement made by the chairman of the Committee on Appropriations, more than $200,000,000 was saved by Congress and not by the Budget system.

The man who is entitled to the great credit for that saving is the distinguished and able Senator from Idaho [Mr. BORAH] who led the fight, supported by this side of the Chamber, to reduce expenses of the Navy to the extent of over $100,000,000. That was done by Congress. It was also under the leadership of the able Senator from Idaho, assisted by the junior Senator from Wisconsin [Mr. LENROOT], that we saved, in reducing the size of the Army, nearly $100,000,000 more. Those two great items together with some other reductions that Congress made largely account for the $319,000,000.

But, Mr. President, I have made a comparison of the appropriations for the fiscal year 1923 with those for the fiscal year 1915, the appropriations three years before the war with those five years after the war. Let us see what that comparison will show. It is a most remarkable statement. I have had experts in the Treasury Department give me the cold figures which speak the truth—not what some man says has been saved, not what some newspapers say has been saved, not what some member of the Budget Bureau says has been saved.

Mr. President, I am not here to criticize the Budget. I think it has a useful purpose, but when it is said that the Budget has made any such saving it is not true, and I call upon the chairman of the Appropriations Committee now to say whether, if we had appropriated according to the estimates sent down to the Committee on Appropriations by the Budget Bureau, we would have appropriated $200,000,000 more than we actually did appropriate. The Committee on Appropriations cut down to the extent of over $200,000,000 the estimates sent to the Congress by the Budget Bureau.

According to the statement from the Treasury Department, comparing the appropriations for the fiscal year 1923 with those for the fiscal year 1915, we find that for the fiscal year 1923 the appropriations are $3,181,000,000 plus, while for the fiscal year 1915 they were $793,000,000 plus, a difference in favor of the Wilson administration against the Harding administration of $2,388,906,000.

Mr. KELLOGG. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from North Carolina yield to the Senator from Minnesota.

Mr. OVERMAN. I yield.

Mr. KELLOGG. Does not the Senator know that about $1,300,000,000 of that was interest on the foreign debt and that about $600,000,000 of it was paid out for the benefit of the ex-soldiers?

Mr. OVERMAN. If the Senator will wait until I get through, I will take care of that. I am going to make a statement along that line in just a moment.

Mr. KELLOGG. The Senator stated there was over $2,000,000,000 in favor of the Wilson administration.

Mr. OVERMAN. Does the Senator deny it?

Mr. KELLOGG. I do absolutely deny it.

Mr. OVERMAN. The figures of the Treasury experts show that the appropriations were as I have stated.

Mr. KELLOGG. And I further say to the Senator that nearly $2,000,000,000 of it was due to the war.

Mr. OVERMAN. I am not talking about that now. I am coming to that directly. But the Senator can not deny that, as is shown by the books of the Treasury Department, the appropriations for the fiscal year ending June 30, 1923, were more than $3,000,000,000, and for 1915 they were $793,000,000 plus, showing a difference in appropriations for the two years of $2,388,000,000. Nobody will deny that; nobody can deny it.

Mr. SMOOT. The Senator from North Carolina ought to state in that connection the amounts paid out for interest on our obligations and to care for the veterans of the late war.

Mr. OVERMAN. I am coming to that; I want to be perfectly fair; but I can not say it all in one breath. The Senator from Minnesota rises here and criticizes this statement which is taken from the books of the Treasury Department.

Mr. KELLOGG. I wish to say that I was not criticizing the statement taken from the books of the Treasury, but I was criticizing the statement of the Senator from North Carolina; and it should be criticized.

Mr. OVERMAN. The Senator has not yet heard me through; I trust he will possess his soul in patience and hear me, and see if I do not make a fair statement. Giving credit for all the extraordinary war expenses—and that should be done—it will be shown that the expenditures of the Harding administration have been greater than those of the Wilson administration by $2,639,725,000. I ask, Mr. President, that the tables from which I am now quoting be inserted in the RECORD as a part of my remarks, in 8-point type, so that they may be read and understood by the Senator from Minnesota.

The PRESIDING OFFICER (Mr. LADD in the chair). Is there objection to the publication in the RECORD of the tables referred to by the Senator from North Carolina? The Chair hears none, and it is so ordered.

The tables are as follows:

TABLE I.—*Comparison of appropriations, fiscal years 1915 and 1923.*

	Appropriations fiscal year 1915.[1]	Appropriations fiscal year 1923.[1]	Decrease (−) or increase (+) 1923 compared with 1915.
Legislative (Congress):			
Regular annual	$13,956,639.60	$12,788,324.95	[2] −$1,168,314.65

Permanent and indefinite	9,317,600.00	7,786,300.00	−1,531,300.00
Total	181,834,200.95	332,950,792.67	+151,116,591.72
Navy Department:			
Regular annual	147,060,498.47	[8] 294,336,577.00	+147,276,078.53
Permanent and indefinite	1,881,477.00	3,433,672.00	+1,552,195.00
Total	148,941,975.47	297,770,249.00	+148,828,273.53

[1] Deficiencies and special acts are included in figures for 1915. In 1923 only the regular annual and permanent and indefinite appropriations passed up to July 1, 1922, are included. Deficiency and special acts for the service of 1923 to be passed in the future must be added for purposes of exact comparison.

[2] This decrease is due largely to the transfer of appropriations for printing and binding to the various departmental bills for 1923. Departmental appropriations for printing and binding for the fiscal year 1915 are carried under "Legislative."

[3] In 1915 these appropriations are for the Smithsonian Institution; in 1923 they are for Federal Board for Vocational Education, the Smithsonian Institution, and for the Territory of Alaska.

[4] Includes sinking fund, $60,717,000, and interest on the public debt, $22,900,000.

[5] Includes sinking fund, $283,838,800; interest on the public debt, $975,000,000; and public debt redemptions payable from ordinary receipts, $85,500,000.

[6] Includes appropriations for Panama Canal.

[7] Includes an increase of $16,125,054.45 for rivers and harbors over amount appropriated for 1915, and $7,500,000 for Muscle Shoals development, for which no appropriation was made in 1915.

[8] Includes an appropriation of $343,440 for "Temporary government for West India Islands."

TABLE I.—*Comparison of appropriations, fiscal years 1915 and 1923*—Continued.

	Appropriations fiscal year 1915.	Appropriations fiscal year 1923.	Decrease (−) or increase (+) 1923 compared with 1915.
Interior Department:			
Regular annual—			
Pensions	$169,150,899.20	$252,000,000.00	+$82,849,100.80

Total	13,225,716.08	24,466,209.80	+11,240,493.72
Increased compensation ($240 per annum)	.....	38,735,173.00	+38,735,173.00
Grand total:			
Regular annual	976,113,289.83	2,274,119,027.01	+1,298,005,737.18
Permanent and indefinite	131,196,407.00	1,434,181,182.63	+1,302,984,775.63
Increased compensation	.....	38,735,173.00	+38,735,173.00
Grand total	1,107,309,696.83	3,747,035,382.64	+2,639,725,685.81
Less Post Office (payable from postal revenues)	314,245,638.39	565,064,786.50	−250,819,148.11
Total, exclusive of Post Office [3]	793,064,058.44	3,181,970,596.14	+2,388,906,537.70

[1] Includes $1,923,552.11 for Post Office Department proper, payable from ordinary receipts (General Treasury). In 1923 all expenses of the Post Office Department are made payable from postal revenues.
[2] In the fiscal year 1923, $50,000,000 for this purpose is included in the Post Office Department appropriation act, which will be paid out of postal revenues.
[3] In the fiscal year 1915, Postal Service, payable from postal revenues only, was excluded as the expenses for Post Office Department proper were payable from ordinary receipts.

TABLE II.—*Comparison of appropriations, fiscal years 1915 and 1923.*

[The major expenses arising out of the World War have been excluded from the statement for the fiscal year 1923 in order that the two years may be more nearly comparable.]

	Appropriations fiscal year 1915.[1]	Appropriations fiscal year 1923.[1]	Decrease (−) or increase (+) 1923 compared with 1915.
Legislative (Congress):			
Regular annual	$13,956,639.60	$12,788,324.95	[2] −$1,168,314.65
Permanent and indefinite	800.00	800.00	.....
Total	13,957,439.60	12,789,124.95	−1,168,314.65

[1] Deficiencies and special acts are included in figures for 1915. In 1923 only the regular annual and permanent and indefinite appropriations passed up to July 1, 1922, are included. Deficiency and special acts for the service of 1923 to be passed in the future must be added for purposes of exact comparison.
[2] This decrease is due largely to the transfer of appropriations for printing and binding to the various departmental bills for 1923. Departmental appropriations for printing and binding for the fiscal year 1915 are carried under "Legislative."

Total	211,679,101.94	325,128,008.67	+113,448,906.73
Post Office Department (payable from postal revenues), regular annual (only)	[8] 316,169,190.50	565,064,786.50	+248,895,596.00
Agricultural Department:			
Regular annual	23,994,640.64	36,929,173.00	+12,934,532.36
Roads, construction of		[9] 10,000,000.00	+10,000,000.00
Permanent and indefinite	5,999,200.00	12,250,000.00	+6,250,800.00
Total	29,993,840.64	59,179,173.00	+29,185,332.36

[1] This total is exclusive of the following appropriations, which are considered as resulting from the World War: Emergency Fleet Corporation, $100,000,000; Veterans' Bureau, $418,063,843.45; United States Housing Corporation, $1,056,425; and the Alien Property Custodian, $370,000.

[2] In 1915 these appropriations are for the Smithsonian Institution; in 1923 they are for Federal Board of Vocational Education, the Smithsonian Institution, and for the Territory of Alaska.

[3] This total is exclusive of $43,600,000 deducted on account of expenses in the Bureau of Internal Revenue and the public debt service, which are considered as arising out of the World War.

[4] In 1915 this total includes $60,717,000, contribution to the sinking fund, and $22,900,000, interest on the public debt. In 1923 similar amounts are included to cover similar charges on account of the pre-war debt; but the charge on the public debt arising out of the World War, i. e., interest, contribution to the sinking fund, and public-debt redemptions out of ordinary receipts, are excluded.

[5] Includes appropriations for Panama Canal.

[6] Includes an increase of $16,125,054.45 for rivers and harbors over amount appropriated for 1915, and $7,500,000 for Muscle Shoals development, for which no appropriation was made in 1915.

[7] Includes an appropriation of $343,440 for "Temporary government for West India Islands."

[8] Includes $1,923,552.11 for Post Office Department proper, payable from ordinary receipts (General Treasury). In 1923 all expenses of the Post Office Department are made payable from postal revenues.

[9] In the fiscal year 1923, $50,000,000 for this purpose is included in the Post Office Department appropriation act, which will be paid out of postal revenues, or from the General Treasury in case of a deficit in the postal revenues.

TABLE II.—*Comparison of appropriations, fiscal years 1915 and 1923*—Continued.

[1] The appropriations for increased compensation are excluded as an expense arising out of the World War.
[2] In the fiscal year 1915 only postal service payable from postal revenues was excluded, as the expenses for Post Office Department proper were payable from ordinary receipts.

Mr. OVERMAN. Mr. President, in order to be perfectly fair and just to this administration—and I hope the Senator from Minnesota will listen, for he went off half cocked—there should be deducted from the difference of $2,639,725,000 in favor of the Wilson administration all expenditures which were made for extraordinary purposes growing out of the war, which the present administration was compelled to make. I have therefore deducted the following items: For the Emergency Fleet Corporation, $100,000,000; for the Veterans' Bureau, $418,000,000; for the United States Housing Corporation, $1,000,000; and for the Alien Property Custodian, $370,000. I have also deducted $38,000,000 on account of the bonus allowed to employees of the Government. I do not know whether or not I ought to deduct that, but I thought, in fairness, I would do so, in order that there might be no criticism whatever. So I have deducted even the bonus of $38,000,000. I have also deducted $43,000,000 on account of additional expenditures of the Bureau of Internal Revenue and the public debt service. That deduction will cover the additional appropriations to the Internal Revenue Bureau in connection with the collection of extraordinary income taxes. Is that fair and just? I also deduct the item—and I ask the Senator from Minnesota to listen—of $1,260,000,000 out of the public debt fund, including sinking fund and interest on the retirement of public debt from ordinary receipts, and $30,000,000 for the retirement of the public debt from the Federal reserve bank franchise tax. After deducting all these items the amounts which have been appropriated under the Harding administration for running the Government for the fiscal year 1923 exceeded by $596,000,000 the appropriations for the fiscal year 1915 under the Wilson administration.

The Senator from Minnesota will see that I have been fair and just in deducting the tremendous sum of money which I have stated with which the Harding administration ought not to be charged in estimating the legitimate ordinary running expenses of the Government. I asked the Treasury Department, whose officials prepared these figures, to obtain the facts, and after deducting from the $2,000,000,000 every cent paid out by the present administration for extraordinary matters growing out of the war, there is still left a balance of $596,000,000 in favor of the Wilson administration.

How was this brought about? I have the items of appropriation for the various departments. I have taken the appropriations for the Treasury Department, the War Department, the Navy Department, and every other department of the Government, and those appropriations for the fiscal year 1923, as compared with the appropriations for the fiscal year 1915, are as follows:

Under the head of "Executive and independent offices" the appropriations under the Harding administration for 1923 amounted to $23,000,000, as compared with $9,000,000 in 1915 under the Wilson administration, making a difference of $14,000,000. What has the Senator from Minnesota to say about that? He is as silent as the grave. There is a difference of $9,000,000 in favor of the Wilson administration as against the Harding administration in the running of one department only.

Under the head of the State Department the appropriations for 1923 were $10,000,000, as compared with $6,000,000 in 1915, making a difference of $4,000,000 in favor of the Wilson administration. What has the Senator from Minnesota to say about that? I am talking now of the legitimate expense of running the Government before the war and after the war in time of peace.

Mr. KELLOGG. Does the Senator ask me that question?

Mr. OVERMAN. Yes.

Mr. KELLOGG. I have this to say about it: The Senator from North Carolina knows that during the war wages and salaries were increased; that the departments were filled with employees; and when the Harding administration came in they were overflowing with employees who had to be discharged.

Mr. OVERMAN. And yet it is shown, with all the discharges made, that there is a difference of $9,000,000 in favor of the Wilson administration.

Mr. KELLOGG. Does the Senator from North Carolina claim that the wages and salaries are the same to-day as they were in 1915?

Mr. OVERMAN. I have left out the bonus; I have deducted that from the expenses of the Harding administration.

Mr. SMOOT. But the Senator from North Carolina also knows that there are about 75 per cent more employees to-day than there were in 1915.

Mr. OVERMAN. I know that; and that is where the trouble is. A great many of them ought to be discharged. The claim as to the great saving and economy under this administration I want to say is a "pipe dream."

Mr. SMOOT. The Senator from North Carolina is a very fair man.

Mr. KELLOGG. Will the Senator from North Carolina yield to me?

Mr. OVERMAN. I will yield to the Senator from Minnesota after I yield to the Senator from Utah [Mr. SMOOT].

Mr. KELLOGG. I beg pardon.

Mr. SMOOT. The Senator from North Carolina is a very fair man; but he must admit that the World War inaugurated activities of the Government and produced conditions under which it would be impossible at the present time to carry on the work of the Government with the same number of employees that there were in 1915. Everybody admits that.

Mr. OVERMAN. The Senator from Utah is right about that, and, as I have shown, I have deducted from the expenditures of the Treasury Department, where they are now collecting the income tax and other taxes, the sum of $43,000,000. I thought that was fair and just and that we ought not to compare the great appropriations for the Treasury Department at present with the appropriations of 1915, when we were not collecting all these income and other taxes. I admit that the department has to have more employees also in order to enforce the Volstead law.

Mr. KELLOGG. Mr. President, will the Senator yield?

Mr. OVERMAN. Yes; I yield.

Mr. KELLOGG. On March 4, 1921, nearly three years after the close of the war, does not the Senator know that the personnel of the departments had not been greatly reduced and comparatively few employees had been discharged during the three years?

Mr. OVERMAN. Then, why has not the present administration reduced the number?

Mr. KELLOGG. The number has been reduced since that time, but it was not reduced up to March 4, 1921.

Mr. OVERMAN. The figures presented by me show that there has been very little economy except by the Senator from Idaho [Mr. BORAH] and the Senator from Wisconsin [Mr. LENROOT], who were instrumental in saving nearly $200,000,000 by Congress, and supported from this side of the Chamber.

Mr. SMOOT. Does the Senator from North Carolina refer to the Senator from Idaho [Mr. BORAH]?

Mr. OVERMAN. I refer to the Senator from Wisconsin and also to the able Senator from Idaho, who lead in connection with the efforts to reduce expenditures for the Army and Navy. However, they are not given credit for the $200,000,000 reduction in the expenditures for the Army and Navy, although the fight which was made on this floor by the able Senator from Idaho [Mr. BORAH] and the able Senator from Wisconsin resulted in that great saving. Not even Congress is given the credit, but the Budget Bureau is given the credit, when, as a matter of fact, the Budget Bureau has asked that we appropriate $200,000,000 more than we did appropriate.

I have some other facts here to which I will call the attention of the Senator from Minnesota. For instance, in the case of the Interior Department——

Mr. SIMMONS. Mr. President, does the Senator mean to tell the Senate that the Appropriations Committee had to cut down the Budget estimate by $200,000,000?

Mr. OVERMAN. I do, and the able chairman of that committee, the Senator from Wyoming [Mr. WARREN], will agree with me as to that.

Mr. WARREN. Mr. President, I am not interrupting the Senator, because at best he can make out but a poor case. I am willing that he should complete his case before I make any remarks concerning it.

Mr. OVERMAN. I will let the Senate say whether it is a poor case or not, but the Senator from Wyoming will not deny the facts I have stated; he can not deny them. The Senator from Wyoming in stating in his remarks some days ago that there has been a reduction in appropriations this year as compared to last year of $319,000,000 does not show a single deficiency item for which it will be necessary to appropriate from time to time. As we know, there will come before the Congress in December next a deficiency bill, and no one can tell how large it will be, but a great sum will be appropriated.

Under the Interior Department for 1923 the appropriations are $325,000,000, as compared with appropriations in 1915 of $214,000,000, making a difference of $113,000,000 in favor of the Wilson administration.

The appropriations for the Agricultural Department for 1923 are $59,000,000, as compared with $30,000,000 in 1915, making a difference of $29,000,000 in favor of the Wilson administration.

Under the Department of Labor for 1923 there have been appropriated $6,000,000, as compared with $3,000,000 in 1915, making a difference of $3,000,000 in favor of the Wilson administration.

For the Department of Justice for the fiscal year 1923 $17,000,000 have been appropriated, as compared with $10,000,000 in 1915, making a difference of $7,000,000 in favor of the Wilson administration. In the appropriations for the District of Columbia there is a difference of $11,000,000 in favor of the Wilson administration.

After deducting all the extraordinary expenses incident to the war, I have tried to get down exactly to the expenses for running the Government legitimately, without regard to any expenditures growing out of the war. I know, Mr. President, that the present administration has been called upon to appropriate many millions of dollars for extraordinary expenses growing out of the war, and it is entitled to have those expenditures deducted in making the comparison. I have deducted every cent of those expenditures. I have merely taken the actual running expenses of the respective departments of the Government and shown by these tables prepared from the books of the Treasury Department that the Wilson administration was run for $536,000,000 less than the present administration; in other words, this administration is costing that much more than the Wilson administration, not counting war expenses, but simply the legitimate expenses of running this great Government.

Nobody can dispute the tables, and nobody will dispute the facts which I have submitted. I think I have answered the Senator from Minnesota, and, in line with his suggestion, I think I have made a fair statement when I have deducted the amounts to which he referred.

Mr. KELLOGG. Mr. President——

The PRESIDING OFFICER. The Senator from Minnesota.

Mr. OVERMAN. I yield.

Mr. KELLOGG. Is the Senator through?

Mr. OVERMAN. Yes.

Mr. KELLOGG. I wish to take the floor if the Senator from North Carolina has concluded his remarks.

Mr. President, I shall not take the time of the Senate to reply to the Senator. I do not dispute the figures which he gave from the tables presented by him, but his statement and his inferences are all wrong, and it is perfectly evident that they are wrong. The Senator knows that the number of employees of the Government during the war enormously increased and the number of those employed now is necessarily larger than it was in 1915. The Senator knows very well that the salaries paid are greater now than they were then. He further knows that in many of the departments, for instance, the Internal Revenue Bureau, the activities of which have enormously increased; the Veterans' Bureau, and other bureaus, the number of employees has greatly increased. The Senator also knows that on March 1, 1921, nearly three years after the close of the war, this Government was running at full blast and the departments were jammed full of employees, and the Government was costing the people at the rate of nearly $6,000,000,000 a year, and no effort whatever had been made to cut down the expenses of this Government.

I am not surprised that the Senator does not like the statements carried by the newspapers showing the great savings since March 4, 1921. I am not at all surprised that the Senator does not like them. The figures speak for themselves, and everybody knows it.

The President has coordinated the departments. He has signed a budget bill, which President Wilson vetoed. I do not claim that the Budget bill will do everything; but it helped to coordinate the departments and to save money for the Government. I say that the present administration has made a splendid record, and the Senator knows that it has made a splendid record.

I did not rise, however, to discuss the economies of the Government or the speech of the Senator from North Carolina.

Mr. SIMMONS. Mr. President, will the Senator permit me to interrupt him for one minute?

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from North Carolina?

Mr. KELLOGG. Yes; I yield.

Mr. SIMMONS. The Senator said that President Wilson vetoed the Budget bill.

Mr. KELLOGG. Yes; he vetoed the Budget bill.

Mr. SIMMONS. The Senator knows that, as everybody knows it; but the Senator also knows that President Wilson, while approving of the Budget bill that went to him, vetoed it because of the unconstitutionality of a certain provision in it; and when it was called to the attention of the country and the Senate, I think we all agreed that he was correct in his interpretation.

Mr. KELLOGG. I do not agree that he was correct. I have not the slightest doubt that that provision was constitutional, and I think the veto message was a mere excuse. That is my opinion.

Mr. SIMMONS. The Senator is the first lawyer that I have heard dispute the unconstitutionality of that provision.

Mr. KELLOGG. I do not think it was unconstitutional at all.

Mr. SIMMONS. I do not wish, however, to controvert that matter with him.

Mr. WALSH of Montana. Mr. President, it is quite significant that the feature objected to by President Wilson was not carried into the bill that did eventually pass and was approved.

Mr. KELLOGG. I do not think the Budget bill was unconstitutional. That is what I said.

Mr. WARREN. Mr. President——

Mr. SIMMONS. Mr. President, I want to state this——

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from North Carolina?

Mr. WARREN. If I have the floor, I am willing to yield.

Mr. SIMMONS. I beg pardon; I asked to interrupt for just a moment.

Mr. KELLOGG. Mr. President, I thought I had the floor.

Mr. WARREN. I understood that the Senator had finished. I am willing that the Senators shall have the floor for the remainder of the day if they wish.

Mr. KELLOGG. I am going ahead with a few remarks on the tariff.

Mr. SIMMONS. Mr. President, may I interrupt the Senator?

Mr. KELLOGG. I decline to yield just now.

Mr. SIMMONS. Very well. I was simply going to reply to a statement the Senator has just made.

Mr. WATSON of Indiana. Mr. President, will not the Senator from Minnesota permit the Senator f.om Wyoming first to make a brief statement on the financial situation?

Mr. KELLOGG. I will yield to the Senator for that purpose.

Mr. WARREN. Mr. President, I have only a few remarks to make at this time.

Mr. SIMMONS. Mr. President, I wish to inquire if the Senator from Minnesota meant to be discourteous to me?

Mr. KELLOGG. Oh, not at all. I beg the Senator's pardon if he thinks I was discourteous.

Mr. SIMMONS. I thought he refused to yield to me, and immediately yielded to the Senator from Wyoming.

Mr. KELLOGG. I thought the Senator was through.

Mr. SIMMONS. No; I stated that I desired to make a reply to the last statement of the Senator.

Mr. WATSON of Indiana. Mr. President, will the Senator pardon me just a moment?

Mr. KELLOGG. Yes.

Mr. WATSON of Indiana. I will say to the Senator from North Carolina that the Senator from Minnesota declined to yield, and said he wanted to make some remarks on the tariff bill, whereupon I asked him if he would not wait until the Senator from Wyoming had made his statement on the financial conditions, and then go on with the tariff.

Mr. SIMMONS. So little has been said about the tariff that, of course, I should be glad to hear the Senator from Minnesota on the tariff; but I really wanted to make just one additional statement about this budget matter.

Mr. KELLOGG. I have no objection.

Mr. SIMMONS. I do not think anybody desires or ought to desire to put President Wilson in a false position with reference to his attitude toward the Budget system. I had very much to do with the passage of that particular budget bill. I was one of the committee and one of the subcommittee that framed that bill, and I know the attitude of President Wilson with respect to it. I know that that bill had his approval, and the country knew that that bill had his approval, and that he would gladly have signed it, and he made that fact known as emphatically as he could; but he was restrained by his oath of office, because he was advised and believed that a certain provision of it was unconstitutional, and when the bill was reenacted that provision was left out.

Mr. KELLOGG. Now I yield to the Senator from Wyoming.

Mr. WARREN. Mr. President, as to the speech made and the figures submitted by the distinguished Senator, I shall touch only a few high points now in reply.

As chairman of the Committee on Appropriations I presented, not long since, in a condensed form the condition of the Treasury, the amount that we had appropriated for the coming year, the amount that had been appropriated the year before, the amount of the estimates, and so forth. My good friend, the Senator from North Carolina [Mr. OVERMAN], has discussed that, and has presented his figures, although I did not see them until late yesterday, so I am not going into that particular line of smoke screen to quote figures without number and column after column to befuddle hearers, figures which do not fix themselves in the mind of the hearer unless they are accompanied by a full statement on paper within sight.

The Senator says that we are spending more money than in 1915. A man would be insane and foolish to say that we are not. Furthermore, we expect to spend more; and the Senator probably will not live to see the year, nor will I, when Congress will drop back to the same expenses that we had in 1915. This is a growing country, and the expenses grow.

When I came to the Senate the total expenses of every nature in a year's Congress were less than half a billion dollars. Today half a billion dollars—more than we spent a few years ago for the entire Government—is spent in a year for taking care of disabled soldiers. We did not have that to do in 1915. We had so little expense then and so large an income that we were not called upon to maintain, for instance, any sinking fund. It is true that there was a law that required the maintenance of a sinking fund, but because of having plenty of funds we passed over that. Now we are paying half a billion dollars or so annually into a sinking fund.

We are paying in interest more than a billion dollars. We are paying various other things of that nature; and to give an idea of it, the Senator might have gone a little further.

The Senator makes some allowance for a few of the expenses added since 1915 but only a slight proportion of the many, many things which have been authorized and money expended for during the intervening years between 1914 and 1923—for instance, the Shipping Board and Fleet Corporation, but a trifle less than $4,000,000,000, and we are paying out many millions of dollars a year yet on that account, that being one of the hangovers of the war.

And there was the Federal control of transportation systems after 1915 and up to the present date, amounting to over a billion and three-quarters.

We paid employees of the Government larger wages by incidental advancements made in the several departments amounting to several millions, and in addition to that it cost for increased employees' compensation or bonus $38,750,000; it cost $1,000,000,000 for the wheat-guaranty fund and $100,000,000 for the European food relief; fuel control, nearly $200,000,000; operations under the mineral act, mining for precious metals, more than $50,000,000; War Finance Corporation and Capital Issues Committee, over $500,000,000; purchase by the Government of farm-loan bonds, $200,000,000; Bureau of War Risk Insurance, more than $200,000,000. Then we have the Federal Board for Vocational Education, in which we appropriate for cooperation with the several States. This was established since 1915, and increases every year. Then comes the maternity law, a million and a quarter to commence with, to expend in cooperation with the States. This last may be too small to speak of, but it is a part of the "uplift" that has been going on.

Then there is all of the highway road building that we have appropriated for.

The Senator might have taken 1915 as a starting point, as he has done, and then have gone up successively through the intervening years to the present.

In 1913, when Wilson came into power, we expended $617,382,178.34.

In 1915, which the Senator quotes, we expended $674,497,625.16.

In 1916 there was expended $678,677,858.70.

All of this was before the war, and yet it will be noticed amounts were rising each year.

In 1917 expenditures were $1,178,908,96[illegible].99.

In 1918 expenditures were $18,901,966,814.09.

In 1919 expenditures were $27,072,094,720.07.

In 1920, the war over and everyone trying, of course, to get back on terra firma, expenditures were $7,337,597,282.05.

The Republicans came in in 1921. We reduced expenditures in 1921 to $4,780,829,510.03.

In 1922 expenditures were $4,066,316,366.74.

The amount appropriated for 1923 is $3,747,035,382.64. That covers every dollar that we have appropriated.

We speak of the Budget. While it is not an unusual fact, still it is a condition worth noting. The junior Senator from North Carolina speaks rather discouragingly of the Budget.

Mr. OVERMAN. No, Mr. President; I said I did not criticize the Budget; that I thought it had many useful points, but that all this claim in the newspapers that it had saved any money was all wrong; there was nothing in it. I was not criticizing the Budget, because I think it is a very useful adjunct of the Government.

Mr. WARREN. I am glad to get that admission from the Senator, because that is more than I have ever heard before.

The Senator from North Carolina and his colleague, of course, indorse the Budget and indorse the good intentions of President Wilson, and of course they must indorse the good intentions of President Harding in signing the bill.

As to going further under the submitted smoke screen of clouds of figures, I do not intend to do it at this time. I may at some future time, but the authorizations made during Mr. Wilson's administration have been too many to take the time of the Senate to enumerate more than I have already done when important matters are before it. The Senator mentions a few of them, but in mentioning those he mentions only a portion.

I have given but a little résumé of some of the important large items, while there are innumerable more of lesser nature as to amounts and importance that could be named.

It is nonsense to talk about comparing the expenses of to-day with the expenses of 1915, and claim that the increase has any reference whatever to the conduct of the business of this Government by the Presidents, or at any time, for that matter. We are not in a wooden shoe. We are going to grow, but we are going to reduce the present expenses of running this Government. While we are growing and while we are having more property and better property to collect from, we are on the road, we are doing well, and we are reducing expenses every year. We can not get around that. We give the totals.

A Senator may stand on this floor and quote the general running expenses of the Government as distinguished from the total expenses, because, in the proposition that we have made to better the system of bookkeeping, we state separately the running expenses of the Government, and the appropriations that are annual, and those that are miscellaneous. We state those separately; but it is unfair to state that the expenses of the Government are the one figure as against the other—the statement that we make of the total expenditures. In this long list of expenditures there is not, I think, a single bracket where the proper running expenses of the Government, as we may term them under this division, are not separate from the various and sometimes exceedingly large amounts that are of a nature that are not quoted as general expenses.

We may take the Post Office Department, if you please. That costs several times as much as it did a few years ago. We are spending now some five or six hundred million dollars for that purpose and getting back a very large proportion of the expenditure. I can remember when $40,000,000 was a great sum to be appropriated for the Post Office Department.

But I am not going to follow these smaller matters. The matters of billions, which hung over from the war, we are meeting and paying out upon almost daily. During the last year we paid a large number of these hang-over claims of the war. We did not have those in 1915.

Mr. President, I may at a later time look into this matter further, but at present I simply say that my committee colleague, Senator OVERMAN, has been as fair as he can be in his presentation of the dull, dead figures of 1915, and I shall say further that the minority in the House and the minority in the Senate have endeavored to make the best showing they can. But the fact remains that we have greatly reduced the expenses of the Government, and propose to further reduce them, and the Senator from North Carolina is one of the faithful men working with us to reduce them. I shall give him credit for that.

Mr. OVERMAN. I want the Senator to understand that I was not criticizing his figures at all.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. KELLOGG. Mr. President, I desire to state very briefly my position on the amendment to the wool schedule offered by the Senator from Wisconsin [Mr. LENROOT]. I expect to vote for that amendment, and I wish to give my reasons. I realize the necessity of this country protecting its essential industries, and sheep raising and wool raising is one of the greatest industries necessary to the stability and prosperity of agriculture, as well as the production of a fabric necessary to clothe the people.

I agree with the Senator from Massachusetts [Mr. LODGE] that a nation can not afford to be helpless in the matter of the production of a great commodity necessary to clothe the people. But I am not willing to place upon the American people an unreasonable burden, even for the purpose of encouraging an essential industry. I do not believe that the amendment offered by the Senator from Wisconsin will discourage production, and I do believe the balance of the duties are ample to protect the woolgrowers in the grade of wool principally produced in this country.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Minnesota yield to the Senator from Idaho?

Mr. KELLOGG. I yield.

Mr. GOODING. I ask the Senator if he knows what percentage of wool would be affected by the Lenroot amendment?

Mr. KELLOGG. I do not know exactly the percentage, but I will state my views on that before I get through.

Mr. GOODING. I would like to have the Senator's attention on a few things, if he will permit me to ask him a few questions.

Mr. KELLOGG. I will take my own way to deliver my own argument, and the Senator can reply to it to any extent he pleases. I decline to yield to the Senator now.

Mr. GOODING. I thank the Senator.

Mr. KELLOGG. At this time, when the Nation is trying to readjust itself and to get prices near to normal, it is not wise to place an unreasonable duty on an essential raw material which enters into the production of clothing, not only such a duty as is necessary to protect the wool but one which I believe is unnecessary and goes too far.

There are certain grades of coarse wool which we do not produce to any extent, which are used in the manufacture of carpets, which come in free, of course, and also enter into the manufacture of cheap clothing to some degree, which grades are imported from foreign countries. The amount of those cheap wools which are imported appears from the statistics to have been from 35,000,000 pounds to 95,000,000 pounds per annum between 1918 and 1921. As I understand, those wools are not grown in this country to any appreciable extent. It is true that we do raise some low-grade wools, but the wools I am speaking of, the lowest grades, are not produced to any extent in this country.

It is true, of course, that we do not produce all the wool necessary of any grade, and that the wool industry ought to be encouraged, for it appears that we import from 200,000,000 pounds to 375,000,000 pounds per annum. Undoubtedly during the war, and for some time afterwards, importations were curtailed by reason of the war.

It seems to me that the objection to the Senate committee amendment is that we place the same duty, 33 cents a pound, upon the high grades, upon the medium grades, and upon the lowest grades of wool, the latter of which we do not produce to any great extent, and which we use to a very large extent in making carpets and cheap grades of clothing. I am not willing to place two or three times the rate of duty upon the cheapest wools that is placed upon the high-grade wools and the high-grade clothing. It seems to me we should not do that.

It is true that in 1921 the low-grade wools were very cheap. I have the prices for 1922 of scoured wools, and the duty on each grade under this Senate committee amendment. Fine wool is 95 cents per pound scoured. The duty on that would be 35 per cent, on the basis of 33 cents a pound. The next grade is 75 cents a pound. The duty on that would be 44 per cent. The next grade is 59 cents per pound, and the duty on that would be 56 per cent.

Those are the high-grade wools used for the best clothing, as I understand. The duty on them is only from 35 to 56 per cent. It is stated that that duty is necessary to protect the wool industry in this country. If it is, I want it imposed, because, of course, I do not believe it is in the interest of agriculture to destroy the sheep-raising business. It is one of the great and necessary industries of the farm.

But follow down these low-grade wools. The one-quarter grade is 43 cents. The duty there would be 77 per cent. Under the Lenroot amendment the duty would be 60 per cent. It would seem, as to that low-grade wool, that 60 per cent ought to be a reasonable protection. That grade does undoubtedly to some extent come in competition with the wools produced in this country. A large amount of the wools produced in this country would come within that category, and they would get 60 per cent. But those wools are used in the manufacture of cheaper clothing.

On May 15, 1922, the lowest grade wool was 24 cents a pound, and the duty on that would be 137 per cent. As I understand, that wool is not grown in this country and does not come in competition with the wool produced by our farmers. It is used, of course, for the manufacture of carpets and for a certain amount of the cheaper grades of clothing.

Mr. SIMMONS. The Senator said that was the lowest rate. What per cent did he say that would be?

Mr. KELLOGG. One hundred and thirty-seven per cent. That is based on prices of May 15, 1922. Of course, the percentage would vary with the prices. In 1921, when these low-

grade wools were very low, the rate would have been more on the very cheapest grades of wool. It depends very largely on the price, of course. But I have the prices given me as of May 15, 1922.

Mr. BURSUM. Mr. President, the Senator of course realizes that this wool is at the present time a glut on the world's market, that there is a great surplus. There is a surplus in this country, caused by the importation of wools by the Government, which were placed on the market, and which are reflected in the Boston price of 44 cents a pound.

Mr. KELLOGG. The Government has not imported any wool since the close of the war.

Mr. BURSUM. But they have been placed on the market since that time. They were sold at auction last year by the War Department.

Mr. KELLOGG. They must have been exhausted by this time.

Mr. BURSUM. The Government has disposed of them, but they have not been consumed. They are still in the hands of dealers, and the price in Boston is only 44 cents.

Mr. KELLOGG. That can hardly be the fact, because during 1922 over 3,000,000 pounds of this lowest grade wool were imported, and we took it out of the customhouses.

Mr. BURSUM. It is a glut on the market all over the world.

Mr. KELLOGG. Then why are we importing it in 1922?

Mr. BURSUM. Because it is so cheap.

Mr. KELLOGG. Those wools are not very cheap now. The lowest grade is selling at 24 cents.

Mr. BURSUM. I understand those were carpet wools, which come in free.

Mr. KELLOGG. Not all of them were carpet wools.

Mr. BURSUM. In a normal market those wools would be higher than they are now, and it would be as justifiable at this time to protect the sheep growers of this country from an immense importation of wools, at prices which are ruinous to the American grower, as it was to ask for an embargo in the emergency tariff law, the so-called antidumping clause. Furthermore, I will say to the Senator that the duty on these low-grade wools in this proposed amendment will more seriously affect the Senator's State and other similar farming States than it will the extreme West. Those wools come from fine sheep. You get those wools from Shropshire and Hampshire downs. They come from those grades.

Mr. KELLOGG. Mr. President, according to that statement there should be an absolute embargo on the importation of any wool. That is the position of the Senator, I understand.

Mr. BURSUM. Not on any wool. I say that there would be as much justification to ask for an embargo on the importation of high-class wools as there was to ask for the antidumping clause in the emergency tariff law.

Mr. SIMMONS. Mr. President, I understand the Senator from Minnesota is talking about the low-price wools.

Mr. KELLOGG. I am.

Mr. SIMMONS. The very lowest price wools?

Mr. KELLOGG. That is correct.

Mr. SIMMONS. The Senator says they are now a drug on the market.

Mr. BURSUM. They are—all over the world.

Mr. SIMMONS. And are selling for 44 cents.

Mr. BURSUM. In Boston.

Mr. SIMMONS. What was the price before the war?

Mr. BURSUM. Long before the war the price of fine wool was nothing like what it is now.

Mr. SIMMONS. What were the prices of these classes of wools before the war?

Mr. BURSUM. The only fair comparison would be to compare relative prices prior to the war. Prior to the war, before the effect of the World War began, prior to 1913, fine wools were selling at about 63 cents.

Mr. SIMMONS. But we are not talking about fine wools.

Mr. BURSUM. I am coming to them. These same wools at that time were 31 cents in the world's market outside. Fine wools are up as high as $1.35.

Mr. SIMMONS. Now?

Mr. BURSUM. Yes; fine wools. So that the relative values, as would be naturally the case, would demonstrate that the coarse wools ought to be worth probably 60 to 70 cents a pound.

Mr. SIMMONS. That would be nearly double what they were before the war.

Mr. BURSUM. Yes; because all other wools are double what they were long before the war. The fine wools are nearly double what they were before the war, and coarse wools should naturally take their places, relatively speaking, with the finer wools. I think they will take that place whenever the world is rehabilitated to the extent of its ability to absorb the great surplus which is on hand all over the world.

Mr. SIMMONS. Does the Senator think that a product which is now selling for 100 per cent more than it was before the war is in distress?

Mr. BURSUM. Yes; that is very possible. The cost of production is what counts. It is not the gross receipts.

Mr. SIMMONS. That ought to apply to everything; and that means that the Senator thinks that prices in the country to-day ought to be 100 per cent higher than they were before the war.

Mr. BURSUM. All prices are higher than they were before the war. So is labor. So are freight rates.

Mr. SIMMONS. Not 100 per cent higher. Most prices of agricultural products are not much higher than before the war.

Mr. BURSUM. Some of them are 150 per cent higher.

Mr. KELLOGG. Mr. President, I can not yield further for a colloquy between the Senators. If it is true, as the Senator from New Mexico said, that the lowest grade of wools are a glut on the market and are bringing 24 cents a pound now, a 60 per cent addition to that ought to be a reasonably fair protection. That is the point I make.

On the other hand, I have no sympathy with a great deal of the propaganda now being industriously circulated by importers to the effect that the duty proposed in the bill will increase the price of clothing from $3 to $5, $6, or $7 a suit. They know that statement is not true. They know that the rate proposed in the pending bill is a reduction under the rate provided in the emergency tariff law.

Mr. BURSUM. Yes; that is true.

Mr. KELLOGG. And they know when they make that statement that the entire cost of all the wool put in a suit would not amount to that much.

Mr. GOODING. Mr. President, I wonder if the Senator, after yielding so much to other Senators, would be kind enough to yield to me?

Mr. KELLOGG. Yes. I yield to the Senator from Idaho.

Mr. GOODING. I know the Senator wants to be fair. I am afraid, however, that the Senator has no real information as to the amount of wool that will be affected by the Lenroot amendment. Will he permit me to send to the desk a telegram and have it read? I think it is rather important that it should be read in this connection.

Mr. KELLOGG. The Senator may send the telegram to the desk and have it read when I shall have finished. I am nearly through. The Senator may have it read then.

Mr. GOODING. The only point I want to make is that I know the Senator does not want to destroy the sheep industry in America.

Mr. KELLOGG. I do not, of course.

Mr. GOODING. And that is what the Lenroot amendment will do.

Mr. KELLOGG. Of course, I do not wish to destroy the sheep industry. When I am through with my remarks I have no objection to the Senator having his telegram read and placed in the RECORD.

Mr. President, I know, of course, that propaganda has gone out over the country, industriously circulated by clothing importers in New York—statements that can not possibly be substantiated. The increased cost which they claim is more than all the wool in a suit would cost. Of course, the rate proposed is a reduction under the present emergency tariff rate. But it does seem to me, in view of the fact that we are trying now to get prices down to a reasonably normal basis, when 110,000,000 people must buy clothing, that we must, as well as protecting the farmer, also protect the purchaser—the man who has to buy the clothing.

Mr. GOODING. Mr. President, every Republican who believes in protection and stands upon the party platform should be willing to give to any industry the honest difference in the cost of production at home and abroad, at least an industry that has existence and that can be developed into a great industry. There is no question that the Lenroot amendment will affect 22½ per cent or more of all the wool grown in America. It will directly affect 60 per cent of all the wool grown upon the farm.

On the statement put into the RECORD by the Senator from Minnesota [Mr. KELLOGG] that wool can be bought abroad for 15 to 25 cents a pound on the scoured basis, a 60 per cent ad valorem duty would land the wool that can be bought for 15 cents in Boston at 24 cents, and the wool that can be bought for 25 cents at 40 cents for the scoured pound. Let us not forget, however, that when an invoice appears here with a bill of lading attached for the wool, the freight rate is not a part of the amount on which the duty is paid. That amount is merely the cost that is paid to the foreigner for the wool, which alone enters into the question of the duty paid. The Senator, I think,

knows that the Tariff Board has found that it costs $1 practically to produce a pound of scoured wool in America.

At this point, Mr. President, I send to the desk the telegram to which I referred a moment ago and ask that it may be read.

The PRESIDING OFFICER. The telegram will be read as requested.

The Assistant Secretary read as follows:

CHICAGO, ILL., *July 26, 1922.*

Hon. F. R. GOODING,
United States Senate, Washington, D. C.:

Lenroot amendment strikes blow at medium cross-bred wools, which include approximately 65 per cent domestic production. Is it possible that some of our mid-West Senators would throttle an agricultural industry rapidly developing in Corn Belt, where medium wools are grown almost exclusively? Strenuous protest being made from agricultural industry of all sections. American woolen opens 1923 spring at lower values than now prevailing on heavy weight. Believe consumers stand for a square deal for agriculture.

DIRECTOR OF WOOL MARKETING OF AMERICAN FARM BUREAU.

Mr. GOODING. Mr. President, I am quite sure that the Senator from Wisconsin and the Senator from Minnesota and those who are supporting this amendment have not realized how vitally their amendment will affect the wool grown upon the farm, especially that class of wool which is coming in competition with the cheap wool from foreign countries. A suit of clothes made of that class of wool contains wool only to the extent of from $1.16 to $1.32, including a duty of 45 cents. The facts are that with a duty of 45 cents on the scoured basis the men who are growing this coarse wool are getting to-day a duty of only 19 cents. The Tariff Board finds that it costs just as much to grow that class of wool as it costs to grow any other class of wool.

That is not the worst of it all. I want to say again that any Senator who votes for the Lenroot amendment will have his mouth forever closed as far as Schedule K is concerned, because when we come to take into consideration that it affects 22½ per cent of all the wool that is grown in this country and 60 per cent that is grown upon the farm, we know, of course, it gives the manufacturer an opportunity to go abroad, buy cheap wool, and bring it in here and destroy the wool industry upon the farms of America, for no farmer can grow a pound of wool for 25 cents or for 40 cents, or for anything less than the Tariff Board has found after an exhaustive investigation.

I think both the Senator from Wisconsin and the Senator from Minnesota must know and understand that it can not be followed into the cloth. The Lenroot amendment merely means the destruction of a great industry, and those Senators who vote for it must be ready to take the responsibility if the Lenroot amendment is agreed to, because I know what the result is going to be.

I want to say to the Senator from Wisconsin that when we came to the item of butter, 8 cents a pound duty was given on butter. There are different grades of butter. Eight cents a pound duty was given on substitutes for butter. If he would take the foreign valuation of butter substitutes in the Argentine to-day, he would have 100 per cent of an ad valorem duty on butter substitutes.

I do not know why the wool industry has been singled out to be destroyed. If the Lenroot amendment wins, Goldman wins—the biggest Shylock that America has ever known. I say that without reservation, because I investigated the jobbers of this country—Mr. Goldman's kind—a few years ago and I found that they were taking more for distributing a yard of cloth to the merchant tailors of the country than all the other effort toward producing that yard of cloth. He is the man who will win—Goldman, who is trying to create a condition in this country so that when the pending tariff bill is enacted into law he can go out and again rob the American people and lay it to the tariff. There never has been such an organized propaganda as has been put forth with reference to the wool schedule. Never were people more wrong and more outrageously dishonest and crooked—let us say crooked, although that is pretty rough language to use.

I want to say to Senators that if Mr. Goldman stated the truth when he said that a 33-cent duty on a pound of wool is pyramided until it reaches $1, then it is a most damnable indictment of the Senate for not protecting the people against such outrages. If the duties are pyramided on wool they are pyramided on the manufactures of wool, and they are pyramided on every other schedule that is in the tariff bill. Why has wool been picked out and singled out, if you please? Why is it that the farmer's wool, which he grows, is picked out and singled out to be destroyed? Tell me, if you please, how they can follow it and know that it is pyramided three times over, that the price of a suit of clothes, in which the wool, the manufacture, and everything else costs only $1.32, is going to be increased $4, and all such stuff as that?

I will say to the Senate that if they do not investigate the propaganda that has been put out over the country they are neglecting a great duty which they owe to the American people; because if it is true simply because a tariff must be put on any industry to protect it and save the life of that industry that the profiteers of the country shall use it as an excuse to pyramid and charge exorbitant prices, this Government can not live under any such conditions as that. Selfishness and greed create anarchy. Selfishness, greed, and anarchy have destroyed every civilization the world has ever known. It is working overtime in Russia to-day. There are many people who think it is time for a revolution here in America. I refer, Mr. President, to the selfishness and greed in this country such as Mr. Goldman is trying to bring about, such as he has been practicing for years, and such as Senators encourage—unknowingly, if you please, of course, because they do not understand the motives of such men as Goldman in this propaganda that he is putting out over the country. I am sure they do not understand the Lenroot amendment and the effect it will have on 60 per cent of the wool grown upon the farms. The Senator from Wisconsin did not understand that, or I do not believe it would have been offered.

There has been a good deal of discussion about it affecting 1 per cent of the wool consumed. That is carpet wool. That is wool that is grown down in Arizona called Navajo wool. When we come to quarters and low quarters and braids, and wool, if you please, at the present market price for wool spinning, it will affect an average of 40 per cent of all the wool in America.

If Mr. LENROOT'S amendment prevails, the woolgrowers will have the magnificent duty of a protection, with his 60 per cent ad valorem, of 9 cents on a scoured pound on the wool which can be bought abroad for 15 cents. In other words, again, these wools can be landed in Boston for 24 cents. On imported wools costing 25 cents abroad, with a 60 per cent ad valorem duty, these wools will be landed in Boston for 40 cents per pound.

Yet Senators stand here as Republicans upon a Republican platform which has always guaranteed to the American producer a tariff rate equal to the difference between the cost of production at home and abroad. Are Senators willing to give the farmers such a duty? If Republican Senators are not willing to stand upon their platform, let us have an understanding about it, for there is not any question about the truth of the whole matter. Twenty-four cents a pound for a scoured pound of wool landed in America! I am not going to take up the time of the Senate showing why that has come about. We all know that there has been a great war and that there was little market for the coarse wools; that they were a drug on the world's market. Oh, if Senators wish to start in and pick out schedules, then tell me, if you please, why the man who grows the coarse wool, which costs as much to produce as does the fine wool, should not have the same protection? We give protection to butter. There is no dividing line, no dead line, as to butter; that is all right. The highest duty that Congress has ever given was accorded, and I think that the article was entitled to it; but do not let us confine protection to Minnesota or Wisconsin and forget the remainder of the country and an industry that is for the benefit of all.

I wish again to say, Mr. President, that if we destroy the live-stock industry of America we destroy its civilization. The agriculture in this country can not survive without live stock, which affords nature's remedy for keeping up the fertility of the soil, without which the citizenship can not be maintained. Are we going to spend millions and hundreds of millions of dollars in developing a fertilizer plant in the country in order to keep up the fertility of the soil and yet destroy nature's remedy for keeping up that fertility?

We can not grow wool in this country to compete with the character of wool which is brought in here at 15, 20, or 25 cents per pound. The damnable thing about it all is—and I am not going to censure the manufacturers so much in reference to the matter, for everyone drives the sharpest bargain that he can—that the manufacturers will go abroad and buy the most inferior wool they can buy, under an ad valorem duty, and bring it in here, manufacture it into cloth, and the American people themselves will be the ones to suffer by the transaction.

If Senators will take the advice of experts on this question and if they understand the question, as they should understand it from the discussions which have taken place here, they must not claim to be friends of the farmers if they agree to this

proposition. Oh, there are many people in this world who are always posing as friends of the farmer, but when a question touches the railroads or when it touches the manufacturer there their friendship for the farmer stops.

Mr. KELLOGG. Will the Senator yield to me?

Mr. GOODING. Yes; I yield.

Mr. KELLOGG. Does the Senator claim to be a friend of the farmer?

Mr. GOODING. Yes; I do, and I know I am the friend of the farmer.

Mr. KELLOGG. Does the Senator claim to have been a friend of the farmer when he was trying to crowd down the throat of the Senate a duty on shingles that took money out of the pockets of every farmer in the country?

Mr. GOODING. Yes; and I would again vote for that duty. I think the farmers would have accepted it, if the question could have been left to them. They are given protection in all their efforts and on all their labor. When it comes to shingles I know this to be true, because I happened to be on the council of defense in my State when there was a great strike on in all the Western States where shingles are manufactured. The settlement was brought about in this way: In the woods of Washington and Oregon and Idaho the lumbermen were put on an 8-hour-day basis, something which does not exist in the lumber industry anywhere else in America. Over in Canada they have a 10-hour day; they also are employing Japs and Hindus in the woods; and no man can tell me they are not producing shingles in Canada cheaper than they are being produced in America.

I do not care anything about the reports of the Tariff Board on the question. They are a farce. Most of the time the Tariff Commission is putting in is in disagreeing, as we are here in the Senate, on tariff questions. The board is made up of free traders and protectionists. Every kind of expert is to be found serving the board that one may want. The most remarkable spectacle that I have ever seen occurs on the floor of the Senate every day. Experts sit with the Committee on Finance in the morning; they come into the Senate and divide up; one goes on the Republican side and the other on the Democratic side. I do not know what "dope" they hand out to each Senator, but I know that Senators do not then agree, while I know that they did agree in the morning. That is the kind of condition we have.

We ought to repeal the law which created the Tariff Commission. They justified Goldman, in a way, in the interest of whom? I wrote a letter to the Tariff Commission and asked them to tell me why, if the merchants pyramided on wool, they did not pyramid on the manufactures of wool. I have received a letter from them this morning in which they practically say nothing at all, as they do in every other communication; but I think any sane man, any honest man, must admit that if the merchants of this country are pyramiding on one duty they are pyramiding on all. I repeat, in order to emphasize the fact that at the present time a suit of clothes made of quarter-blood wool and containing no cotton threads and no shoddy, costs, so far as the wool is concerned, only $1.68. Then on the lower quarters, as they are called, the cost is $1.32. Let Senators who are shedding tears for the poor man and trying to destroy an industry upon which the fertility of the soil rests, if they succeed in doing it, be ready to meet the responsibility.

It may not be out of place, Mr. President, for me to say at this time that the sheep industry has been my life work, and therefore I know something about it. There has been whispered from time to time around here for many months something as to my being in a wool pool and selling a million pounds of wool and making a great deal of money out of it. Mr. President, it has become the custom in this country to pool the wool all over the country. The Farm Bureau is doing it; it is being done in every State in the Union; for years it has been done in the West. It is true there was a wool pool in Idaho at a little town called Shoshone, controlling about a million pounds. Probably I was the smallest owner in the pool. It sold the wool which it controlled for 30 cents a pound. I knew nothing about it until I read of it in the newspapers.

A brother of mine interested in the pool thought it would be a very nice thing to take care of my clip and let my wool go into that pool. He telephoned down to a partner whom I have living in the little town of Hagerman and told him that he could get in the pool if he wanted to, and that the price was 30 cents. My partner said, "All right." The next day wool around the little town of Hagerman, where the few sheep which I have left were being fed at winter quarters, sold for 31 cents a pound, and the wool of all the other pools that were formed in the West sold for from 31 cents a pound up to 38 cents a pound. I was unfortunate enough to be in the pool which sold its wool for 30 cents a pound. Something about that transaction has been whispered around the Senate Chamber for a long time. I do not think, however, that any Senator will accuse me of being dishonest or will intimate that that transaction controlled my motives in any way, so far as that is concerned.

I have been in favor of protection to every industry, and I have not cared what it was if it was an American industry, because I know, Mr. President, we have reached a milestone in the life of this Nation, and unless we develop every industry in this country which is now undeveloped—and I care not whether it be an agricultural industry, a mining industry, or a manufacturing industry—this country has reached its peak of greatness. We will stand still for a while, but then the backward trend will set in and there will be no help for us. I want to say again that unless we do what every other country in the world is doing, namely, close our ports against the importation of those commodities which we can manufacture and produce in this country we will never see all the men in this country employed; we will always have an army of unemployed. Unless the President takes the circumstances into consideration and exercises the power proposed to be given to him by the pending bill to apply the American valuation to some of the imports which are coming into this country we will go into the winter with six or eight million unemployed, and nothing can save us. We are to-day the lowest tariff country in the whole world, and we are the last country in all the world since the war to increase the protection to its manufacturers. I do not make an exception even of free-trade England. We are the only nation in the world where there is presented the spectacle of two great parties quarreling over the question of protection to domestic industries. In no other nation does such a situation exist.

Every other nation on earth has considered the tariff question an emergency matter, but we are making political football of the business interests of the country, which if we continue will prove disastrous.

Mr. LENROOT. Mr. President, I did not intend to say anything further on this amendment, but the references of the Senator from Idaho to me call for a very brief reply.

I wish to say to the Senator from Idaho, to the Senate, and to the country that, while the Senator occupies the position which he has assumed entirely in good faith, he is unwittingly the greatest enemy that the woolgrower and the farmer in America have to-day, because of the policies which he advocates.

Mr. GOODING. Will the Senator name those policies?

Mr. LENROOT. I am going to do so in just a moment.

Mr. GOODING. Very well.

Mr. LENROOT. The Senator stands for the sky the limit as to every rate which has been proposed in this bill. I do not know of a single rate which has been voted upon where the Senator has not voted for the highest rate proposed by the committee.

When we come to this particular matter of wool, the Senator does not realize, but the Senator ought to realize, that the effect of his policies will be to destroy the protective policy, to give a Democratic Congress and a Democratic President in 1924, and instead of a reasonable protection to the farmers of America, including the woolgrowers of America, he will once more have, under a Democratic administration, free wool. That is the inevitable result of the policies espoused by the Senator from Idaho.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Idaho?

Mr. LENROOT. I yield.

Mr. GOODING. I want to say to the Senator that I can defend any rate in this bill, especially when the duty does not represent the difference between the cost of production in the country and abroad; and the Senator's amendment will give by way of protection only 25 per cent of the difference between the cost of production in this country and abroad. I am not uneasy about defending a protective tariff of that kind, and I can defend every rate in this bill under the world conditions that exist to-day.

Mr. LENROOT. But unfortunately the Senator from Idaho can not convince the American people of the correctness of the position that he takes, that no tariff is too high to suit him. The Senator wants an embargo upon everything that we produce, and, if that policy could be carried into effect, he would strike a blow at every wheat grower in America, at every farmer in America who must have a foreign market for his surplus.

Where does the Senator think that Europe is to get the money or the credits to purchase the surplus wheat, to purchase the

surplus corn, to purchase the surplus agricultural products of America, if we are going to build a tariff wall so high that nothing can come in with which to pay for those products?

Mr. GOODING. Mr. President, I will say to the Senator that we will always buy a billion dollars' worth of foreign products that we do not produce.

Mr. LENROOT. How much?

Mr. GOODING. Pretty close to a billion dollars' worth of foreign products that we do not produce.

Mr. LENROOT. If the Senator has his way, will we?

Mr. GOODING. Why, we do not produce them in this country. I think the amount was $890,000,000 last year.

Mr. LENROOT. What will we get from Europe to pay for our wheat?

Mr. GOODING. I am more interested in——

Mr. LENROOT. No; answer my question.

Mr. GOODING. I will answer it. Europe will buy its wheat wherever it can buy it the cheapest. So will everybody else, regardless of any tariff or anything else. I am more interested in putting the laboring man to work in this country than I am in whether Europe ever pays us a single dollar or not.

Mr. LENROOT. Very well.

Mr. GOODING. There is nothing more destructive to honest citizenship than an army of unemployed.

Mr. LENROOT. Mr. President, I decline to yield further.

Mr. GOODING. It breaks down the morale of the people.

Mr. LENROOT. I decline to yield.

Mr. GOODING. No greater menace——

Mr. LENROOT. I decline to yield, Mr. President. Does the Senator understand me?

Mr. GOODING. Yes; I understand the Senator.

Mr. LENROOT. Mr. President, let us see where the logic of the Senator from Idaho leads us. He is willing, he says, that we put up a tariff wall so high that Europe can not establish any credits here; that Europe can not pay us for any of our surplus products. He is willing to drive Europe to Australia and to South America to purchase all of its wheat. He is willing that the 100,000,000 or 200,000,000 bushels of surplus wheat that is produced in this country shall not find any outlet abroad, and thus reduce the domestic price of wheat to 50 or 60 or 75 cents a bushel. That is the kind of a friend of the farmer that the Senator from Idaho is in the policy that he advocates; and what is true of wheat is true of other agricultural products.

Mr. President, let us see from another standpoint the friendship for the farmer in the policy advocated by the Senator from Idaho.

The farmer of the United States is entitled to two kinds of protection. He is entitled, first, to a reasonable protection upon the things that he produces in order that he may fairly compete with those who are producing like commodities abroad. He is also entitled—and this the Senator from Idaho forgets—to purchase at a reasonable price the things that he must have to live and exist. The Senator thinks only of the woolgrower, of the farmer who produces the things——

Mr. GOODING. Oh, Mr. President——

Mr. LENROOT. I do not yield.

Mr. GOODING. The Senator is mistaken about that.

Mr. LENROOT. I do not yield. I did not interrupt the Senator. The Senator has no regard for what the farmer must pay for the things that he must purchase.

I am not financially interested in wool, Mr. President. I am not financially interested in manufactures. I am not financially interested in anything that is covered by this tariff bill. I deem it my duty, as a Senator of the United States, to represent as best I can the producer, the manufacturer, and the consumer, who is lost sight of entirely by the Senator from Idaho. I have made a fight against rates in this bill to protect the farmer of the United States when the Senator from Idaho has been voting against him.

Let us take one illustration, and it is typical of the Senator's attitude throughout this bill. The question of a tariff upon cotton gloves came before the Senate a short time ago, when a rate was proposed amounting to 119 per cent ad valorem—a glove used by every farmer's wife and daughter in the United States. I proposed an amendment restricting the maximum ad valorem upon those things of common use to 75 per cent, for the protection of the farmer; but the Senator from Idaho voted for 119 per cent ad valorem on those gloves. The Senator from Idaho voted to make the farmers of the United States pay twice as much as they ought to pay.

Mr. GOODING. Mr. President, will the Senator yield now?

Mr. LENROOT. I will yield for a question, but not for a speech.

Mr. GOODING. Then I think I will wait until the Senator gets through.

Mr. LENROOT. Very well.

I have gotten rather tired, Mr. President, of these constant attacks upon those of us on the floor of the Senate who are standing for protection for American industries, but at the same time have some regard for the general public and the consumers of this country. The Senator may think that he can convince the people of Idaho that they would support his theory of building a tariff law so high that nothing can come in; but I say to the Senator from Idaho that if the Republican Party should be so unfortunate as ever to adopt his policy, and he should be reelected, he would be mighty lonesome in the Senate of the United States, because he would have very few Republican colleagues.

Mr. President, we do not need to go very far back to see the results to the woolgrower and to the farmer of the policy that the Senator from Idaho advocates, only he is so much more extreme than anything that has heretofore been proposed.

The Payne-Aldrich bill defeated the Republican Party. The Payne-Aldrich bill, because of the exorbitant rates in this very schedule, resulted in what? In free wool within three years.

Mr. GOODING. Mr. President, I will ask the Senator a question now, with his permission. I will not make any speech.

Mr. LENROOT. Very well.

Mr. GOODING. I want to say to the Senator that the objectionable thing about the Payne-Aldrich bill was not the high rates in that bill, but the fact that it was crooked, indefensible. The trouble was not with the rates of the bill.

Mr. LENROOT. Mr. President, let us see about that.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from New Mexico?

Mr. LENROOT. No; I will not yield now. Let us see about that. The American people are interested in the effects and results upon them. That is what the American people are interested in. The Payne-Aldrich bill was crooked, yet if it had not hurt the American people, the consumers of America, there would have been no such rebellion against it. There would have been no such political revolution as followed. It was because the American people were hurt; and the difference between the Payne-Aldrich bill and this bill is that while the effect upon the American people would be very much the same if this schedule should be adopted as originally reported, the manufacturer will not get the same benefit out of it, and the woolgrower will get a greater benefit out of it; but, so far as the cost of living to the American people is concerned, there is very little difference between the wool schedule as reported by this committee and the wool schedule as contained in the Payne-Aldrich bill.

Mr. BURSUM. Mr. President——

Mr. LENROOT. Now I yield to the Senator from New Mexico.

Mr. BURSUM. Does not the Senator believe that it is a little unfair to charge the defeats of political parties altogether to the merits of the Payne-Aldrich bill or other tariff bills? Is it not a fact that after the passage of the McKinley tariff bill there was a reaction in the country, and that there have been reactions at different times in our history after the enactment of tariff bills on account of propaganda and agitation that has caused the country to turn down the party in power, and that after years of experience, such as followed immediately after the defeat of the Republicans on account of the passage of the McKinley bill, and the hard times which the country suffered under practically free trade, the people then realized the benefits of protection, and restored the reins of Government to the party which was in favor of a protective policy; and are not these things likely to repeat themselves?

Mr. LENROOT. Mr. President, I hope the Senator has concluded.

Mr. BURSUM. It may possibly be true that we may be defeated; the party may be turned down; but it is very likely that if we are turned down, a short period of time will furnish such experience to the people as will again restore the country's confidence in the Republican Party on the basis of a protective policy.

Mr. LENROOT. What the Senator says about the McKinley bill is true; but, on the other hand, the Payne-Aldrich bill was in force not for two months, not for three months before an election, as the McKinley bill was, but the Payne-Aldrich bill was in force three years before the election which finally put the Democrats into power.

Mr. GOODING. Mr. President, will the Senator just let me give him the figures? I merely want to say that in that election Roosevelt and Taft polled 1,500,000 votes more than did Mr. Wilson, so it was not the tariff question, after all, that de-

feated the Republican Party. We ought to be fair in discussing these questions, it seems to me. It was the fact that there were two wings in the Republican Party; that is all.

Mr. LENROOT. Yes; one wing of the Republican Party condemned the Payne-Aldrich law, and if that wing could have been successful in that election we might have gone through, but not otherwise.

I have a very great admiration for the Senator from Idaho. He is one of the best fighters I ever saw in any legislative body anywhere. He is sincere and honest. I do not believe for a moment that any personal interest the Senator might have with reference to wool would make the slightest difference in his attitude. Indeed, he has shown that he is for unlimited high tariffs upon everything, and it is entirely consistent that he should take the position he does with reference to wool. But the Senator implied that the Finance Committee is giving high protection to products from Wisconsin and Minnesota and is unwilling to give fair protection to other sections of the country.

We raise sheep in my State, over a half million of them. I have not a doubt in the world that the position I am taking here to-day will be used against me politically in Wisconsin. But I do not care to serve one hour longer as a Senator of the United States unless I can stand here and express my own convictions, with the study I have given a subject, and if I am satisfied that a given rate of duty is ample protection to the woolgrower of Wisconsin, the woolgrower in the West, or any other portion of the country, I am going to stand for that rate and take whatever political consequences may result.

Mr. BURSUM. Mr. President, the attitude taken by the Senator from Wisconsin is very commendable, and that being his attitude I suppose he thinks the effect of this action on the fortunes of the Republican Party, or any other party, at the next election should be no concern and consideration of this body.

Mr. LENROOT. Mr. President, inasmuch as the Senator has made that statement, I am going to give him my judgment, without reflecting upon any colleague of mine here. I am going to give it as my judgment that if we should have a vote upon this proposition alone, without any other rate being involved, if the sole question before the Senate was as to what the duty upon coarse wools should be, I have not a doubt in the world but that this amendment would carry by an overwhelming majority.

I know what goes on about this Chamber, where Senators fear that if they vote against this rate or that rate there will be retaliation upon the part of some one else by voting against some rate in which they are interested. I appreciate that very fully, Mr. President.

Mr. GOODING. Mr. President, will the Senator yield just for a moment?

Mr. LENROOT. I yield.

Mr. GOODING. I want to say to the Senator from Wisconsin that I have been in the Senate now something like a year and a half, and until the tariff question came before this body I took very little part in the debates upon the floor. During that time there was no man in the Senate I learned to have a higher regard for than for the junior Senator from Wisconsin, and I still have that high regard for him. The only trouble has been, as I see it, that the Senator did not understand that 60 per cent of the sheep upon the farms would be affected by his amendment. We discussed here very fully the fact that it was only 1 per cent. There is carpet wool grown in this country which will be affected, and that is only about 1 per cent. I know the Senator intends to be just as good a friend to the farmer as I am. It may be that I do not know what we ought to do in his interest. God knows I try to do the best I can. I know what he has suffered. I know what he went through in the free-wool period. There is no question about that. There is no man in the Senate I have a higher regard for than I have for the Senator from Wisconsin.

Mr. LENROOT. Mr. President, I thank the Senator, and I may be permitted to say that I have already expressed my sentiments toward him personally.

Getting back to what I started to discuss when I was diverted, the Senator's intimation was that Wisconsin and Minnesota were securing rates which we were now trying to deny to the woolgrowers, and he referred to the duty of 7 cents a pound on butter. That is the rate on butter fixed in the bill. What ad valorem rate on butter would that be? It would be about 25 per cent, while the maximum I have proposed for the woolgrower is 60 per cent. So there is the difference between 25 and 60 per cent in favor of the woolgrower; that is all.

With reference to these low-grade wools, of course it is understood that the farmer who raises these coarse wools is not raising the sheep for wool; he is raising it for mutton. The wool is a by-product, and he ought not to expect to be put in the same class with the man who is raising sheep to grow wool, that being his primary purpose.

Mr. GOODING. The Senator would want to be corrected, I am sure. In all flocks of sheep the wether is sent to the market, whether it is the coarse or the fine sheep. It is only in the pure-bred herds that the exception is made. So there is no difference in that respect.

Mr. LENROOT. There is a difference. The Senator from Idaho knows a thousand times more about this than I do, but he knows that this low quarter blood and better is more profitable and better for mutton than the fine-wool sheep.

Mr. GOODING. I want to say to the Senator that the Tariff Commission found that it cost 45 cents a pound to grow this coarse wool, when the lamb was taken into consideration.

Mr. LENROOT. I spent an hour discussing that here the other day and I am not going to repeat the argument. The Senator from Idaho has discussed it many, many times in many speeches, and I do not propose to cover the ground again. One word more about the pyramiding. The Senator from Idaho says that the outside limit of the duty on wool in a suit of clothes is $1.32, and I agree with him. Then, by some peculiar process of reasoning which I have been unable to follow, he says he thinks there should be no profit on that investment of $1.32, the duty on the wool. He thinks that should be carried on to the consumer without any profit to the spinner, without any profit to the cloth manufacturer, without any profit to the jobber, without any profit to the retailer.

Mr. GOODING. Mr. President, I will ask the Senator to let me correct that. I said as far as the woolgrower was concerned. I understand that all other people are entitled to a reasonable profit.

Mr. LENROOT. Now, we are going to get together, because the crucial question is, What will this duty cost the American consumer who buys the clothes? That is the crucial question. I agree that some estimates are too high. The very lowest and most reasonable estimate, I think, will lead to the conclusion that this $1.32, by the time it is finally paid by the man who buys a suit of clothes, will rise to $2.50, without any undue or exorbitant profit to anybody.

I do not object to that in so far as it is a reasonable cost to impose upon the American people, but I do say that in this, as in every other rate in this bill, there comes a limit; that we do not have a right to insist the American people shall pay, that we do not have a right to insist that laboring men of America, who may be compelled by their circumstances to buy the cheapest and coarsest of clothes, shall be called upon to pay as high as 137 per cent ad valorem upon the wool that is contained in their clothes, pyramided as it is. That is the case I present to the Senate. That is the wrong I seek to avoid by the amendment I propose, and that is all.

In conclusion, I want once more to repeat that I am a better friend of the woolgrower than is the Senator from Idaho, because I want to see such rates imposed in this bill, not only upon wool but manufactures of wool, and every other article embraced within its pages, as will be sustained and indorsed by the American people. I do not want to see such rates in this bill as will result in a Democratic Congress next year and a Democratic President in 1924, with a return to free wool and a repetition of the suffering and the hardships the farmers have endured in past Democratic administrations.

Mr. McCUMBER. Mr. President, I am not so much interested in the question whether the Senator from Wisconsin or the Senator from Idaho is the only real friend of the farmer in the Senate. Nor am I so greatly interested in their almost calling each other names in the beginning of an argument and then passing the loving cup at its close. I am more interested in ascertaining what duty will afford reasonable protection for the woolgrower in the United States.

Senators on this floor quite often approach the subject from entirely different angles. Some of them from the beginning determined that they were going to vote against this bill, and they are trying to fortify themselves with ample excuses. There are some, even on this side of the Chamber, who could never be induced to vote for a Republican tariff bill—an adequate protective measure.

I shall not in any way attempt to argue with those Senators. Their minds were made up in the beginning. They intend to fight this bill all along the line. Nor will I take much time to discuss the subject with those who are looking for an excuse to vote against the bill or any schedule in it. When one is ear-

nestly looking for an excuse he will generally find one that is satisfactory to him.

My good friend from Minnesota [Mr. KELLOGG] thinks that we ought not to have a greater duty than 60 per cent upon the coarse wools. Let me ask him why he wants to give the farmer a greater degree of protection on one grade of wool than on another grade? Why should there be a difference in what the wool producer receives on a pound of wool? I know something about the State of Minnesota, my native State, as well as about the State of Wisconsin. The sheep that grows the coarse wool eats as many tons of hay in a year as the sheep that grows the fine wool. The labor in caring for a coarse-wool sheep is exactly the same as in caring for a fine-wool sheep. The cost of production per pound is absolutely the same.

Now, I want to ask the Senator from Minnesota and the Senator from Wisconsin to consider just one feature of their own arguments and say whether or not those arguments are just to themselves, just to the Senate, and to those whom they wish to convince. They are founding all of their arguments against this rate upon the lower grade of wool because of the excessively low price of that wool to-day. Their ad valorem rates are based upon that foundation. Why, Mr. President, 36-40s, the lowest grade of wool mentioned in the class covered by this amendment, in July, 1914, sold for 31 cents a pound. In May, 1922, that same wool, when everything else had doubled and trebled and quadrupled in value, had gone down to 22 cents, or about 45 per cent ad valorem. Is it fair to assume, in making your ad valorem computation, that 22 cents a pound, the price of the coarse wool that is now coming in, is to be the prevailing price in 1923 or 1924 or whenever we reach normal conditions? In 1914 the spread between these classes of wool and the higher classes was about 50 per cent. That is the normal spread. To-day it is 450 per cent. And yet Senators are asking us to make a low ad valorem rate upon an abnormally low price, and which based upon this low price would be no protection whatever. It is when these excessively low importing prices prevail that the greater protection is needed.

Mr. SIMMONS. Mr. President, will the Senator yield to me?

Mr. McCUMBER. I yield.

Mr. SIMMONS. I do not wish to interrupt the Senator for the purpose of engaging in argument about the matter, but this morning the Senator from New Mexico [Mr. BURSUM] made a statement, in reply to a question which I asked him, to the effect that the low-priced wools were selling before the war at 31 cents a pound and now selling for 44 cents a pound. I understand the Senator from North Dakota just said that the wool which sold at 31 cents before the war is now selling for only 22 cents. He may be talking about one wool and the Senator from New Mexico may have been talking about another kind of wool.

Mr. McCUMBER. Undoubtedly.

Mr. SIMMONS. I think, however, that the Senator from North Dakota——

Mr. McCUMBER. I am taking a particular class of wool. I am taking 36-40s in July, 1914, when the price was 15½ pence, which is equivalent to 31 cents. Now, 36-40s in September, 1921, was only 8 pence, which would be the equivalent to 16 cents. But taking 36-40s of this class in May, 1922, it was 11 pence, or 22 cents, as compared with 31 cents in 1915, or 45 per cent lower than during those days when the average price of products were not to exceed one-half the present prices. If the normal ratio prevailed between the coarser and the finer grades of wool, the price of this coarse wool would be three or four times what it is selling for to-day.

Mr. SIMMONS. Why, of course, there is no disagreement between the Senator and myself about that.

Mr. McCUMBER. I think not.

Mr. SIMMONS. He is talking about the application of the tariff. But at that time we were discussing the present prices of wool in this country as compared with prices before the war, with a view to ascertaining whether the woolgrowers in this country, especially those growing low-priced wool, were in any distress by reason of the low prices.

Mr. BURSUM. They would be in distress if we adopted the Lenroot amendment.

Mr. SIMMONS. At the time of the colloquy between the Senator from New Mexico and myself, we were discussing the question of the lowest-priced wool. The Senator from Minnesota [Mr. KELLOGG] just made a statement about the lowest priced wools and I asked the Senator from New Mexico, who had risen to make some observation, what those low-priced wools, which the Senator from Minnesota was discussing, had sold for anterior to the war. I understood him to say 31 cents a pound. I then asked what they were selling for now, and he said in the Boston market they were selling for 44 cents a pound.

Mr. McCUMBER. But I am not taking the Boston market. I am taking the Liverpool market. I am quoting the foreign price, and it is the foreign price with which we are dealing, not the American price in the American market, as the Senator well knows.

With the permission of the Senate I want to take up one other argument that has just been made by the Senator from Wisconsin [Mr. LENROOT]. It has been made again and again on the Democratic side of the Senate, but so far as I know the Senator from Wisconsin is the first Senator on the Republican side who has agreed with it, namely, that we must take Europe's products in order that we may sell our products. I do not agree with that.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. McCUMBER. Certainly.

Mr. LENROOT. Does the Senator say that the Senator from Wisconsin is the only Republican Senator who has ever made that statement? Does the Senator say that is not the prevailing Republican opinion in the United States?

Mr. McCUMBER. Yes; I say it is not. Why, Mr. President, if the Senator will go over the exports and imports of this country for the last 50 years he will find that the greater the spread between the exports and the imports in our favor the greater the prosperity in the United States. There is not a single exception. Our prosperous conditions are best when we sell three times as much as we buy. We do not need to purchase products of the kind that we produce. We will take from China her tea. We will take from Brazil her coffee. We do not produce them. But we produce wool and we produce cotton and we produce manufactured fabrics from them. The prosperity of the American people does not depend upon one yard of cotton cloth or one yard of woolen cloth being imported into the United States.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. McCUMBER. I yield.

Mr. LENROOT. I would like to ask the Senator if our exports should be maintained at three times the value of our imports, how are we to be paid for our exports?

Mr. McCUMBER. Great Britain deals with India. She has a big trade there. Great Britain deals with South Africa. She has a big trade there. She sells her products into those countries and she makes a profit, and out of that profit she must obtain whatever she must pay us. A poor policy, indeed, it would be to surrender our own production and have it replaced by British or French or Italian production so that we might get our debts paid.

Mr. LENROOT. Mr. President, will the Senator yield once more?

Mr. McCUMBER. Certainly.

Mr. LENROOT. Repeating my question, if our exports are three times in value our imports, with what will any foreign country pay us?

Mr. McCUMBER. Again I say the foreign country does not need to pay it out of profits obtained in our markets.

Mr. LENROOT. Oh, no; but will the Senator——

Mr. McCUMBER. The foreign Government can pay out of the profits obtained out of the country to which it sells its goods, and that does not necessarily mean the United States.

Mr. LENROOT. No; but will the Senator answer with what they will pay? That is my question. With what will they pay? Will it be gold? Must it not be either gold or goods?

Mr. McCUMBER. All right. Let us say it is gold or goods. I would take the gold and not the goods.

Mr. LENROOT. We have the gold now, and they have not any more with which to pay.

Mr. McCUMBER. I think they will have a way to pay us without taking our markets. I can not understand for the life of me what economic advantage it is to close an American mill in order that a foreigner may supply the products of that mill in order to pay us.

Mr. LENROOT. Mr. President, will the Senator yield for one further question?

Mr. McCUMBER. Certainly.

Mr. LENROOT. I would like to ask the Senator, then, if his reasoning does not lead him to the position of the Senator from Idaho, to wit, Why have any imports at all? Why not raise an embargo on everything we produce, according to the Senator's reasoning?

Mr. McCUMBER. Oh, Mr. President, I will answer that.

Mr. GOODING. Mr. President, if the Senator will yield, I wish to say to the Senator that practically every other country on earth has done exactly that thing. England and France are practically the only exceptions. Some of them have raised an

embargo entirely on all manufactured goods. Germany has done it, Austria has done it, Belgium has done it, and other countries have done the same thing.

Mr. McCUMBER. Mr. President, the prevailing reason, the only good reason, for allowing products to come into this country which compete with our own is to hold down and prevent any extortionate charges being made by the producers in our own country. We want foreign competition to prevent combination. We do not need it for any other purpose that I know of. If we could produce every pound of wool needed for consumption in the United States at reasonable prices, I can not understand the philosophy that we should import wool instead of raising it in the United States. The woolgrowers do not now produce sufficient to supply our demand. It would take them years to produce all we need in the United States. If they should have a tariff that would be prohibitive, they could mulct the American people in any sum they saw fit. Therefore we should build our tariff wall sufficiently high only to assure a fair price to our wool producers.

I wish to answer some of the arguments not only of the Senator from Wisconsin [Mr. LENROOT] but of the Senator from Massachusetts [Mr. WALSH] at the same time. Both those Senators have reiterated the old statement that Schedule K wrecked the Republican Party. I deny it. What did wreck the Republican Party? Taft had been President of the United States; he had made a good President. The policy of the Republican organization had always been to compliment their President by a second term, if he had given reasonable satisfaction. Roosevelt, the idol of the American people, ambitious for a third term, wanted to be elected President of the United States. The Chicago convention nominated Taft. Roosevelt and his followers refused to abide by the decision of the convention, and Roosevelt ran as an independent candidate, so there were two Republican candidates running. That gave the minority the Presidency of the United States.

Taft had become unpopular, for what reason? The only unpopular thing of which I know that he did was just exactly what the Democrats said he ought to have done. He advocated free trade with Canada. He said, "Bring in Canadian farm products free." The Republicans, with the exception of a few who would follow their President anywhere, fought that policy. The western Republicans were opposed to it, I think, practically to a man; it did not receive the majority of the Republican votes in the Senate; but the minority of those votes, together with a solid Democratic vote, carried the Canadian reciprocity bill through. The American people damned Taft more for that act than for any other thing he had done in American politics.

Mr. BORAH. I merely wish to correct the Senator and to say that it was the stalwart Republicans who supported the reciprocity bill very generally.

Mr. McCUMBER. Some of them did and some of them did not. I said they were opposed to it, except those who were inclined to follow the President no matter what his course might be.

Mr. BORAH. And that was the most of them here in the Senate Chamber.

Mr. McCUMBER. Well, the majority of the Republicans were against it. That was one of the reasons for the defeat of President Taft. Everyone knows that Schedule K was scarcely spoken of in the campaign of 1912, so far as I know, and I took some part, at least, in the campaign for Taft. It was not so much that the Republicans loved Taft less but Roosevelt more.

Mr. LENROOT. Mr. President, the Senator from North Dakota certainly has forgotten one of the most important features of that campaign. It centered very largely about President Taft's speech at Winona, Minn., in defense of Schedule K.

Mr. McCUMBER. Yes; there were some remarks made by Mr. Taft, but I say that that did not seem to have the influence that many other things had. It was "Teddy" Roosevelt and his popularity as against the nominee of the Republican Party; and, as has already been suggested by the Senator from Idaho [Mr. GOODING], there were, if I remember rightly, 1,500,000 more votes for the two Republican candidates than for the Democratic candidate who became the President of the United States.

I probably could call attention to some other things which defeated Taft, but I will state one thing that the Republicans did in 1909 which was their undoing. They refused to put print paper upon the free list; that was the real crime. Every great newspaper in the United States was in favor of free print paper, and through their organization and the president of the publishers' association they put this matter straight up to the committee. It is no secret. They said in substance: "Give us free print paper and we will support the administration; refuse to give it, and we will destroy you, if we can." Well, we took our chances—there were not very many cowards on the Republican side in those days—and we refused to give them free print paper and suffered defeat more for this cause than for any other. We stood for principle, and to the extent that this refusal assisted in our undoing we died for principle. That is the real thing that was back of the defeat of the Republican Party in 1912. That was the one thing that brought the great press of the country against him.

Immediately after that refusal the great magazines began an insidious battle against the administration; not directly, first striking at the President's Cabinet and others, but all the time cutting the grave clothes for the Republican Party. It was not Schedule K at all which defeated the Republican Party in 1912. One might just as well say because we give 7 cents a pound on Pima cotton it is going to wreck the Republican Party to-day.

Now, I wish to refer to the remarks of the Senator from Massachusetts [Mr. WALSH] on yesterday, merely to correct some of his statements. Twice he declared that I had admitted that the tariff upon wool proposed by the pending bill would be reflected in higher prices. Mr. President, I have made no such statement as that. What I did say, in answer to his question, was that the tariff, of course, would be considered as a part of the expense of manufacturing and would, therefore, be considered in the price of the goods; but I stated then, as I state now, that the price of woolen goods is not going up because of the proposed tariff. The price went up to $5 a yard under free wool, not because wool was free, but because the conditions of the country enabled the manufacturer to get that price; that is what fixed the price.

The prices have gone down since the passage of the emergency tariff bill not because the emergency tariff bill, which imposed a duty of 45 cents per pound on the scoured content, drove them down, but they went down simply because the American public would not pay greater prices. The manufacturer at all times will charge and will receive exactly what the trade will bear; and if the trade will bear a greater price than the $2.50 a yard now charged the price will go up. If the trade will not stand that figure, the price will go down, tariff or no tariff.

Mr. President, the Senator from Massachusetts made a very long speech upon the question of pyramiding, and attempted to show that if a few cents a pound duty are imposed on the raw product by the time the finished product reaches the ultimate consumer the additional cost will be in dollars. Mr. President, that depends upon the length of the pocketbook of the ultimate consumer. That is what settles the question of price. The duty will not be pyramided if the ultimate consumer will not pay for it. There are some things for which the ultimate consumer will always pay a good price. We purchased some 300 articles from the stores of New York to ascertain the prices at which those stores retailed articles which they purchased abroad for a very low price. There were two things we did not purchase—millinery and ladies' gowns. We did not have the capital to indulge in such luxuries. A woman will pay $40 for a hat which does not contain $3 worth of material, because that $40 seems to her to measure the real value of the hat. I think on imported millinery every dealer can pyramid his charges. But that is because the trade will bear it.

Mr. President, the duty will not be pyramided unless the conditions of trade allow it to be; and I believe that with our factories open, with manufacturers pushing the sale of their goods, there will be sufficient competition to hold the prices down.

The Senator from Massachusetts says that there is an invisible club that is being raised above the Members of the Senate. Oh, Mr. President, he is mistaken. It is not invisible; it is mighty visible, and we all know what it is. It is the great metropolitan press, representing the importers who buy a string of beads for 15 cents and want to continue to sell it for $15. That is the club that is hanging over the Senate of the United States, and the only club.

Mr. SIMMONS. Mr. President——

Mr. McCUMBER. Mr. President, I believe in teamwork. I think the Republican Party ought to stand together, get the best bill possible, and then work together for it. I know that the Republican Party always has the uphill work, the laboring oar, to maintain the things for which it stands. It believes in a protective tariff, a simple proposition; it believes in sound and stable currency, a simple proposition. Any party that looks to the ultimate good of the country as against an immediate little advantage always has uphill work. It is much easier for the average man to understand that a tariff makes his coat cost him $1.65 more than it is to make him understand that his

wage and his job may depend on that very tariff. So while the Democratic Party can always find a ready response when it appeals to prejudice the Republican Party must always be a party of education. It must appeal to reason.

Did the Senator from North Carolina wish to interrupt me?

Mr. SIMMONS. Mr. President, the Senator was appealing to his party, and I cast my eyes over there, and at the time he began his appeal I saw only one Republican in his seat.

Mr. McCUMBER. The Senators who will vote on this matter have their minds made up, enough of them. They will come in at the ring of the bell.

Mr. SIMMONS. I thought the Senator might yield to me to suggest the absence of a quorum, in order that he might have a better audience.

Mr. McCUMBER. Mr. President, in 1896 the Republican Party was faced with the proposition either of standing for sound money or of standing for free silver. The popular side was free silver, of course. The majority of the people seemed to think that if there were twice as much money in the country they would get more of it and they would be benefited by it.

Had we had an election in July of 1896 the Republican Party would have been swept off the face of the earth. It was a matter of education. We went at it unitedly, not with somebody stabbing us in the back. We guided the old Republican craft through those stormy times. There were those who were attempting to scuttle the ship even in those days, but we got through. There were others who jumped off and said, "It is stormy, and I do not think the old craft can stand it"; but it did stand it, and I do not know any of those that jumped overboard that ever came back. So in these tariff bills I have known Republicans to leap from the old ship. Some of them were strong enough swimmers or skillful enough to get around the rocks and land again some years afterwards, but the majority of them were not so successful. It may be that there are storms ahead, but the old ship of Republican protection is not sinkable. The waves may wash over it for a time, but it will ride them again. Give us but a few years of free trade and the people will not stop to question what any rate of protection duty shall be.

I have great admiration for the old Democratic Party because it stands for a principle, even though that principle may be absolutely at variance with my conviction of what is for the welfare of the country, and you can generally count upon its members to act unitedly. They are good teamworkers; and it is because of that that the old Democratic Party through many a defeat rises from the grave of adversity and challenges our party for supremacy.

Mr. President, we are going to try to make the very best tariff bill we can. We are not going to attempt to make a free trade bill, nor to put on any duties that will cut off importations. We do intend to give the American producer and the American manufacturer the best of it, if we can. If any Republican feels that he can not stand for that view of this case—that is, if he feels that he must have his own way on every proposition, or else that he will desert the ship—of course he is privileged to do so.

I have no complaint against any Senator who disagrees with me. I think, if I remember rightly, that the Senator from Wisconsin [Mr. LENROOT] voted to put a duty of $200 each upon the importation of foxes—a little bit of a fox, so long [indicating]—and yet he can not stand this duty upon a pound of wool. My policy is to allow the breeders to come in free, which has been the Republican policy. I condemn no Senator because he differs from me upon that subject; but I do not think he has a right to take the whole party to task because it insists that for the first time in the history of the country the farmer shall have protection upon the wool which he grows.

Mr. HEFLIN obtained the floor.

Mr. WATSON of Indiana. Mr. President, may I ask the Senator a question?

Mr. HEFLIN. Certainly.

Mr. WATSON of Indiana. Does the Senator expect to speak on the wool schedule?

Mr. HEFLIN. I do. It is a very interesting subject, Mr. President. I can not permit this opportunity to go by after all that I have heard on the other side, without saying a few words about this item; and I want to begin by reading from a great Republican daily.

The New York Herald of to-day in an editorial says:

A wool tariff by wool Senators.

This is bound to be an interesting editorial.

The shocking thing about the tariff duties on wool now being jammed through the United States Senate is not merely that they are extravagantly, inordinately, incomparably excessive. Other tariff duties framed by the Finance Committee and adopted by the general membership of the Senate are, from the point of view of economic sense and of consideration for the consuming public, so high as to be outrageous. The wool schedule, therefore, has plenty of bad company. But that is not all there is to say against the wool tariff.

The worst indictment of the wool schedule and of the men responsible for it, bad as is the wool tax itself, is that the wool duties were made and are being driven through the Senate under whip and spur by United States Senators who are financially interested, directly and heavily, in the growing of sheep and the production of wool. The circumstances are flagrant.

* * * * * * *

Their performance is the last word in personally interested, private-pocket statesmanship.

* * * * * * *

Yet Members of the United States Senate, up to their necks in the business of growing sheep and producing wool, have not hesitated to make the highest wool duties in the history of the country—have not hesitated in a matter deeply touching their own private pockets, to put an extra wool tax on the American people estimated at not less than $200,000,000 a year.

It is possible, it is even probable, since the Congress tariff makers are going the limit on all duties, that the Senators in question would be just as strong for their excessive wool duties if they did not have a dollar of private interest in the sheep and wool business. It is possible, it is even probable, that if they did not have a dollar in the business these Senators would put the wool duties still higher if they dared to do so, because they have simply gone tariff mad. But what do they think the American voters are going to do at the polls against a wool tariff monstrosity made by United States Senators, who themselves are personally and deeply interested in the sheep and wool business and taxing the consuming public an extra $200,000,000 a year?

Mr. President, that presents a very serious situation to the Senate and to the country. The time was when Members of both Houses who were interested as these Senators are would not participate in the debate or vote upon the question; but we find a combination of big wool interests here speaking for and voting for measures that put money in their own pockets. The Senator from Idaho is loud in his appeal for the adoption of this program to tax the American people to put money directly into the pockets of the wool kings of America. Are men here to be permitted to use the taxing power of the Government to take money from the people to enrich themselves? I submit that it is a perversion of legislative power as the fathers intended that it should be used.

The Senator from Idaho, in speaking so appealingly to the Senate for this tariff tax on wool, reminds us that the live-stock industry is imperiled; that we must come to the rescue of the cattle industry of the United States and the sheep industry of the United States, all covered under the head of the live-stock industry. Mr. President, I do not intend that Senators shall ever, as long as I am in this body, attribute the injury done to any particular industry by the deflation policy of the Federal Reserve Board to other than the real cause without having the RECORD show that somebody pointed out exactly what it was that brought about that distressing situation.

As the Senator from Idaho was speaking, I thought of what a western man testified before our Committee on Agriculture and Forestry. Here is what he said:

When this call came for money—

That was under the deflation drive of 1920 and 1921—

when the eastern banks called on the western banks for money, the western banks called on the cattle men, with the result that the cattle men simply pushed into the market what they had, liquidated their cattle; they played square, gave what they had to settle, and tried to settle. Then started an absolute flood of cattle going into the market back yonder, beginning in the spring, when the cattle should have gone to the range. In other words, instead of those cattle going to the range, as is customary and as should be the case, on account of this calling of loans they went to Chicago, Omaha, and Kansas City. As far as I could find out on my trip, there is probably not more than 50 per cent as many cattle on the range in the northwestern country as there was a year ago. This situation is due altogether, so far as I can see, to the fact that they had to liquidate.

There is the truth of the situation and there is the bitter fruit of drastic deflation.

Why is it that Senators on the other side will not join with me, the Senator from South Carolina [Mr. SMITH], the senior Senator from North Carolina [Mr. SIMMONS], the junior Senator from North Carolina [Mr. OVERMAN], the junior Senator from Georgia [Mr. WATSON], and the senior Senator from Georgia [Mr. HARRIS], and others I might mention, in condemning the deflation policy which brought this evil about? Why is it that the Senator from Idaho has not lifted his voice, during his whole term in the Senate of two years, when this ruin was being wrought to the wool industry and the cattle industry of his section? Why is it that Senators over there will not come out and point out the real evil, point out the thing that has done this great injury to the various industries of our country?

Are they afraid? Is this mysterious influence so powerful that Senators are intimidated? Why is it that they will not cry out against it? They simply tell us that the wool industry

is in bad shape, the cattle industry is in bad shape, and that they want a tariff tax to lift them out of the ditch, where they have been knocked by the deadly blow of deflation. Do you want to know how to aid these industries? You can do it by unloosing the money instrumentalities and permitting currency and credits to go where they are needed in the country. I could take a billion dollars, put it in circulation, and start things going in a little while. But they are not going to permit you to do that. They are going to continue to hold their carnival in stocks and bonds until they have finished their feast.

Things are picking up a little, due to the efforts of the War Finance Corporation, which I and others here helped to create. The Federal Reserve Board's policy has not helped toward getting away from the ruinous condition that deflation produced. Yet the Senator from Idaho and others are as silent as the tomb. What is it that makes them afraid to cry out against this system? Are men to occupy places in this body and permit some great giant concern to become so powerful in politics and business that men dare not assail and condemn it? Where is the courage that belonged to men who stood in this Chamber in the days that are gone and dared to smite, hip and thigh, evil influences that sought to ruin the country? I appeal to the spirit and the courage of the Senator from Idaho to cry out against the real evil.

Senator LADD, of North Dakota, is the only one of you who has had the courage to speak out against this big predatory interest, the real evil.

One of my brothers, while touring the Old World a few years ago, sitting upon a bench in a park in England, came across this poem in a newspaper and brought it to me:

> The law imprisons man or woman
> Who steals a goose from off the common;
> But lets the greater culprit loose
> Who steals the common from the goose.

I commend the thought contained in that poem to some of the Senators on the other side. Big concerns, big money interests, predatory power exerting influences to silence those who dare speak the truth and criticize their criminal conduct, undertake to present and keep to the front through the part of the press they can control and through other agencies issues which are inconsequential compared to the great and important issues involved. Some Senators will eagerly seize by the throat some small and unimportant issue, while they fail and refuse to speak above a whisper where some big concern is involved.

The Senator from North Dakota [Mr. MCCUMBER] says that Schedule K did not have anything to do with Republican defeat of 1912. Mr. Taft was already condemned by many Republicans before the split between the two factions of the Republican Party got under headway. I recall that while President, when Schedule K had been enacted, in the worst tariff law ever written until this monstrosity was brought here, Mr. Taft said, before they carried it to him for his approval, that Schedule K was "inexcusable and indefensible," using those words. Yet under the pressure of the powers of his party he signed his name to the bill.

The American people did repudiate that tariff law, and I say to the Senator from North Dakota that the hundreds of thousands who supported Theodore Roosevelt opposed Schedule K. Roosevelt himself attacked it upon the stump. Democrats criticized and condemned it. So that Schedule K and the Republican Party's Payne-Aldrich tariff bill were voted against by two-thirds of the voters in the progressive ranks and in the Democratic ranks in the election of 1912.

The Senator from North Dakota reminds us of 1896, when he said free silver was a mighty issue—and it was—and that his party stood for sound money. Silver is good money; gold is good money; Federal reserve notes are good money. All money put out and backed by the Government is good money. But I want to tell the Senator from North Dakota what the trouble was in 1896. It was the same kind of trouble we have to-day, and that we had during and following the drive of drastic deflation. There was not enough currency in circulation to answer the needs of the people. There was not enough credit accommodation to serve their business purposes. It was called in and made scarce for a purpose. That was the trouble. Somehow or other we did not seem to understand it then. I understand it perfectly now. Every other thoughtful man and woman in America is beginning to understand it. But the purse-proud "high brows" try to keep the people in ignorance upon this question.

What is the matter? We need more silver, more gold, more currency, of whatever kind it is, in actual circulation, backed by the sound policies of the Government, always in keeping with the principles of sound banking. They know that we stand for a sound financial policy, and yet they get up here and tell us, "You are in favor of running a printing press; you just want to issue money as Russia does or as some other power does." We do not want to do any such thing. We have a gold supply that would enable us to-day to issue $2,000,000,000 and more and never approach the reserve supply required by the law. It is simply a question of having the amount of money necessary to meet the business needs of the people issued.

I will tell you what they have done, and the country is waking up to it. Whenever money becomes plentiful and the people begin to prosper the money lords in Wall Street issue an edict, quietly and secretly. They have money called in and credits curtailed, and whenever they commence to do that the symptoms of hard times are seen, and then you hear people talking about a slowing up of business, and how trade generally is being injuriously affected. They do it quietly, secretly, cutting off the currency supply and calling in loans. They get ready to make a killing on stocks and bonds on the exchanges of New York. They whisper around, "Certain stocks are going down, are bound to go down, because it is feared that a panic is coming."

How many times have we heard that in the past? That is the way they played the game. Yet, when we established the Federal reserve banking system, we established a system that would absolutely prevent panic and prevent serious business distress, and a system that would furnish every dollar needed by every man and every woman, in every kind of business, in every State of the Union, and not until the control of that system passed into the hands of Wall Street did business distress and financial panic come to curse our people.

We are fortunate in having learned how this brutal and criminal trick is done.

I do not propose to go into that subject any further to-day. The wool schedule of the Payne-Aldrich tariff bill called forth bitter opposition from people in every section of the country. Here comes the cry from your own Republican paper in New York City opposing the wool schedule and calling this tariff bill a monstrosity, pointing out the fact that this schedule, which takes out of the pockets of the American people $200,000,000 annually, is to fill the purses of the big men interested in the wool industry.

Oh, Mr. President, it will not be long now before the people will have an opportunity to speak at the polls. The Senator from Wisconsin [Mr. LENROOT] served notice upon the Senator from Idaho [Mr. GOODING] that if he and others persisted in their course they would have a Democratic Congress and a Democratic President in 1924. There is nothing this side the judgment that would do so much to restore hope in the hearts of the American people as the restoration of the time-honored Democratic Party to power, a party that has never yet truckled to the predatory interests of the land; a party that has never been driven to do the will of the money kings of the country; a party which in all its long history, in season and out, has stood for right and fair treatment to the common man and woman; a party, in the language of the father of Democracy, Thomas Jefferson, devoted to "equal rights to all and special privileges to none." It is a party that is as old as the Government itself, a party that has seen other parties come and go, while this party lives on forever. Why does it live? Because it is the party of the people; it is the party that stands for justice to the humblest individual in the country. It safeguards the principles of constitutional government. That is why it has lived.

Do you know why we are not in power now, and why we have been driven out of power on other occasions? As soon as we got into power and the big interests knew that they had to walk the line of decent and honorable conduct, they commenced calling in the currency and deflating credits, in order to produce hard times, and then would go to the very people who had elected the Democratic Party and say, "Now you see what you have done. You have elected the Democrats, and they have produced hard times," when the truth is those who controlled the money supply did it themselves, when they called in the money and curtailed credits. They produced the hard times, and the people in that disturbing situation were deceived as to the cause, and while in that frame of mind turned right around and voted against the party which would have given them relief, which would have restored the instrumentalities to their proper functions in the Government.

That is what we have had. But I am living in the hope that the intelligent men and women of America have reached a time when they can not be deceived any more by such arguments as that. We are going to win in the coming election. We are going to carry the House, gain some seats in this body from the other side, and I think elect a President in 1924. I think the fear expressed by the Republican Senator from Wisconsin is well founded. The Senator from Wisconsin denounced this bill

himself, and this schedule in particular, and called on his party brethren to desert it, to abandon it, if they do not want to see the party driven from power. The New York Herald editorially to-day, I repeat, denounces what is being done here and calling the bill a monstrosity. This Republican mouthpiece condemning the work of the Republican Senate is certainly significant.

Oh, Mr. President, little by little, day by day, we get the issue to the country. I owe it to the people in the Nation, other Senators owe it to them, to make contributions to the discussion, hot as it is at the Capitol, to carry the truth home to the people whose rights are being taken away, who are being outrageously imposed upon, who are being robbed by the misuse or abuse of the taxing power. Let us continue the fight. Let them understand just how it is here because of those who think the Government belongs to them on account of contributions that they have made to win Republican elections. Let us have the people whose Government it is wake up to the fact that it is high time that the men and women of America were facing about and with unity of purpose marching in solid phalanx until the party is driven from power and the Government restored to the rule of the people.

Mr. ROBINSON. Mr. President, it is not my intention to discuss in detail the tariff on wool, but I rise with particular thought concerning a statement made by the Senator from North Dakota [Mr. McCUMBER] during an address which he delivered this morning.

Mr. SIMMONS. Mr. President——

Mr. ROBINSON. I yield to the Senator from North Carolina.

Mr. SIMMONS. I make the point of no quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Gerry	McLean	Simmons
Ball	Glass	McNary	Smith
Borah	Gooding	Moses	Smoot
Brandegee	Hale	Nelson	Spencer
Broussard	Harreld	New	Stanfield
Bursum	Heflin	Newberry	Stanley
Calder	Jones, N. Mex.	Nicholson	Sterling
Cameron	Jones, Wash.	Norbeck	Swanson
Capper	Kellogg	Overman	Trammell
Caraway	Kendrick	Pepper	Underwood
Colt	Keyes	Phipps	Wadsworth
Culberson	Ladd	Pomerene	Walsh, Mass.
Cummins	Lenroot	Ransdell	Walsh, Mont.
Curtis	Lodge	Rawson	Warren
Dial	McCormick	Robinson	Watson, Ind.
du Pont	McCumber	Sheppard	Willis
Frelinghuysen	McKinley	Shortridge	

Mr. TRAMMELL. I desire to announce the unavoidable absence of my colleague [Mr. FLETCHER] on account of illness.

The PRESIDING OFFICER. Sixty-seven Senators have answered to their names. There is a quorum present. The Senator from Arkansas will proceed.

Mr. ROBINSON. Mr. President, the schedule in the bill relating to wool is unquestionably, from my standpoint, one of the worst and most indefensible in the bill. It is of interest and concern to nearly all citizens of the country. I stated before the absence of a quorum was suggested that my immediate purpose in taking the floor at this time is to challenge a statement made by the Senator from North Dakota which, in my opinion, reflects upon the integrity of the press of America and which it seems can not be sustained by evidence.

The Senator from North Dakota ridicules the idea that Mr. Taft was defeated for a second term because of his changed attitude respecting tariff subjects, and particularly as they related to the wool schedule. The Senator from Wisconsin [Mr. LENROOT] pointed out the historical course taken in connection with the subject, the fact that Mr. Taft had made his first campaign, with the support of Mr. Roosevelt, largely upon a platform favoring the reduction of tariff rates, and that after his election he had apparently completely reversed his pre-election attitude and had signed a bill which he himself had characterized as utterly indefensible.

The Senator from North Dakota then repeated with emphasis a declaration which he had previously made to the effect that Mr. Taft's defeat was not due to Schedule K but to the newspaper publishers of America. He said, as nearly as I can quote him from notes taken at the time, "We all know that a committee representing the newspapers of the country came here and urged free print paper. They told the Finance Committee that if we would grant this the newspapers would support Mr. Taft, but if their request was refused they would wreck the administration." Continuing, the Senator from North Dakota said, in substance, that the Finance Committee had rejected that corrupt demand, had stood for principle, and because it would not yield to the demand of the newspapers of America to place print paper upon the free list the Republican Party had been exalted to a place of martyrdom and had suffered defeat.

Mr. President, if the statement of the Senator from North Dakota is accurate, if his declaration is true that because the newspapers could not intimidate the Finance Committee into doing something which the Finance Committee regarded as wrong, the newspapers of the country turned against the Republican Party and brought about its defeat, it is a terrible and an appalling indictment against the press of the United States, the men who own it, and the men who control its policies.

I call upon the Senator from North Dakota for definite and complete information; and I ask him to tell the Senate and the country whether the declaration by that committee to which he has referred was made in open or secret session of the Committee on Finance. I challenge the Senator from North Dakota to tell the Senate and the country who constituted the committee which appeared before the Finance Committee of the Senate and threatened that committee with the united and concerted opposition to Republican candidates and policies if the Finance Committee refused to accede to its demand.

Important as are the provisions of the wool schedule, the issue presented by the declaration of the Senator from North Dakota is far more important. It goes to the integrity of the press of the United States; it assails, in my judgment, the honor and the honesty of the newspapers of this Nation. There ought to be the fullest publicity concerning this matter. There can be no justification for concealment or for secrecy respecting it.

Who were the committee? Whom did that committee represent? Were the statements reduced to writing or was an attempt made to utter them in confidence? It matters little now what were the underlying causes of the defeat of Mr. Taft for a second term unless the declaration of the Senator from North Dakota that it was encompassed through corruption on the part of the press of the Nation be true.

How does it happen that the years have come and gone; how does it happen that Mr. Taft went down to defeat, overwhelming and humiliating, and that the real cause has been withheld from the public and not published until to-day? When the newspaper representatives made that challenge to them that they must either write into the Payne-Aldrich tariff act a provision sent in by the newspapers of the country and advocated and desired by them or suffer the united opposition of the press of the Nation, why did not the Finance Committee then publicly accept the challenge and meet the issue?

I am not asking these questions for political purposes or for political effect; I am asking them for information. The statement of the Senator from North Dakota was to the effect that when the Finance Committee, with courage and dignity, stood for principle and rejected the demands of the representatives of the newspapers of the Nation, those papers unitedly turned against the Republican Party and its nominee, and for that reason Taft went to his political grave. If that be true, why were the facts withheld at the time? If it be true, why are the details now withheld?

My recollection is that the Republican press of the United States did not turn against Mr. Taft; my recollection is that comparatively few metropolitan newspapers supported Mr. Roosevelt. I can recall from memory now only one great group of Republican newspapers that did repudiate Mr. Taft and support Mr. Roosevelt.

The truth is that Mr. Taft made a campaign under the auspices of Mr. Roosevelt upon certain principles. He had declared over and over, as stated by the Senator [Mr. LENROOT], that the time for prohibitive tariffs had passed; that the time had arrived when wisdom and justice required a general and material reduction in tariff rates. Upon that issue in his first campaign, championed and encouraged and advised by the gallant Roosevelt, he rode to victory in triumph. No sooner, however, was he elected than he turned his back upon the ladder by which he had climbed to power; reversed his attitude on the one great question which more than any other had inspired the confidence and secured the votes of the American people. From a champion of tariff reduction, he became the apologist for the most indefensible statute ever enacted concerning the tariff. When he did that Roosevelt repudiated him, and thousands, aye, millions of others who had supported him in his first campaign took the same course that Mr. Roosevelt did. Like any other President, he had the organization of his party within his own control, or within the hands of those he did control; and the result was his second nomination was forced through that organization and in spite of the bitter objection and resentment of Republican voters throughout the Nation.

As already stated, nearly all the Republican newspapers, that is, the recognized Republican newspapers, if my memory serves me correctly, continued a lukewarm support. The Munsey

papers, to which I have already indirectly referred, changed their attitude, and, perhaps, some others did so; but the indictment of the Senator from North Dakota against the press of America that because they could not control the consciences of the members of the Finance Committee of the Senate they turned against the Republican Party and encompassed its overwhelming defeat in Mr. Taft's second campaign is unjust, and, in my opinion, unfounded; and I call and shall continue to call for specific and definite information respecting the subject.

This is a question that, having once been raised, can not be treated with indifference or unconcern. If the newspapers of the United States pursued the course that the Senator from North Dakota says they took, then they are unworthy to give expression to public events and public thought. If the charge is unfounded, if it is based upon the irresponsible and unauthorized utterances of individuals who spoke without authority to represent the newspapers of the Nation, I take it that they repudiate the statement as an unjust slander.

Again, I ask, when was the statement constituting a threat of the worst nature made by this newspaper committee? Who constituted the committee? Who was its spokesman? Were the statements made in public or in private? Why have they not been published heretofore? Why did Mr. Taft and his associates in the campaign which resulted in his humiliating defeat suffer that to occur without complaint and without resentment, when an honest exposure of the causes which were driving him to the wall in hopeless political ruin would have resulted in bringing to his standard honest men throughout the Nation who are unwilling that the politics of the country should be dominated by selfish or corrupt influences?

Let us have answer to these questions. The Senator from North Dakota assumed to speak with authority. He professed to know all about the matter. When the Senator from Wisconsin [Mr. LENROOT] challenged him he manifested impatience, if not resentment. Let us have the facts.

While the wool schedule as written in this bill will impose almost unbearable burdens on the American people, it never can accomplish the harm that results from practices such as that described by the Senator from North Dakota. If the newspapers of my country—which I have come to regard as agencies for the distribution of news and for the elevation of the standards of citizenship and of public service—have descended so low that in order to get an advantage by placing upon the free list a commodity which they use, they are willing to wield their power for the election of a candidate whose representatives are ready to make that concession, I want to know it. If, on the other hand, they are willing from resentment and in a spirit of revenge to combine to destroy honest public representatives who can not in good conscience yield to their demands, if they are willing to convert themselves concertedly and unitedly into political agencies to achieve vindictive purposes for a refusal on the part of Congress to enact legislation to please them, the sooner the country finds it out the better and the safer it will be. Let us have the facts.

Mr. STANLEY. Mr. President, I have been profoundly impressed by all that the eloquent and forceful Senator from Arkansas [Mr. ROBINSON] has so well said; and I rise in my place with some diffidence to comment briefly upon this vital and startling situation.

This is no petty charge, made by no petty man, and in no obscure place. This is, in a way, an impeachment of the honor of the press in the Senate of the United States by the acknowledged spokesman of his party upon a great question. The chairman of the Finance Committee, speaking with authority, chiding his party, rallying them to the support of a political organization with the authority of a commander, condemning the recalcitrant, defying the disobedient and the rebellious, announces on the floor of the Senate that the attitude of the press of the United States was determined not by any public sense of duty, not by any regard for the truth, but that their editorials, false as dicers' oaths, sprang from petty resentment and the denial of special privilege; that first the press of a great Nation came to the Finance Committee, openly or secretly—it does not appear, but we are left to presume that they came to the Finance Committee as Nicodemus came to Christ, by night—and intimated that it would be better to grease the press, better to fix this great agency of publicity, or there would be trouble; and that the Finance Committee, with the courage of a hero, the virtue of a martyr, and the loquacity of a sphinx, refused to do it, but said nothing about it.

Mr. President, I remember as well as if it were yesterday in my youth I heard that great rostrum orator, Dougherty, of Philadelphia, in that wonderful and never-to-be-forgotten address on "Orators and oratory." He gave a graphic account of the passing of the orator. He described, as only Dougherty could, the majesty of Clay, the resounding periods of Webster, the invincible logic of Calhoun, the gallantry and magnetism of Hayne. He told of a period when the public sat at the feet of great and accomplished forensic orators who molded public opinion, and who guided by their genius and inspired by their eloquence the great public of America. He told of the passing of the silent thousands who sat enthralled under the spell of those mighty men, whose tones still linger within this historic building and whose lives are an inspiration to generations yet to come, and to them he paid the tribute that not one of the great orators of that day had ever "sold the large space of his great honors for so much trash as may be grasped thus" [indicating]; not one had ever soiled his garments or stained his tongue of fire by the putrid touch of corruption; and, said the great Dougherty, "The age of the orator has passed, because he no longer informs the public. The press has superseded the orator on the rostrum, in the Senate, in Congress, for the reason that to-day"—even in Dougherty's time—"we took up the morning paper and saw what has transpired the day before. The press of the United States to a greater or less extent is not only the purveyor of news, it is the molder of public opinion."

The honor of public men, the fate of public policies, the attitude of the Nation in peace and war are in a great measure dependent upon the wisdom of this mightiest influence for good or evil, for right or for wrong, and we are told that that thing may be bought and sold for a petty duty upon print paper; that an effort was made to get the press of America, crawling on its belly, to eat out of the filthy hands of the purveyors of graft, and that they repudiated it. Repudiated it when and how?

The press of the country did demand free print paper, and there never was a more righteous demand. I remember that long inquiry into the cost of producing print paper in the United States and Canada, conducted by the indefatigable JAMES R. MANN, of Illinois. The report of that investigation showed that the labor cost in the production of print paper was greater in Canada than in the United States. There was no ground for that duty. That plea of equalizing the cost of production at home and abroad had no place there. There was no pauper labor in Canada to threaten the pulp mills of the United States.

More than that, as a member of the Committee on Agriculture it was brought home to me that to-day millions and hundreds of millions are being spent to save and to conserve the forests of America. The forests of America are not endangered by the wise cutting of timber. There are forests in Germany to-day, or were prior to the war, and all over Europe, in a finer condition than they were five centuries ago, from which five centuries have cut their timber. By the wise and scientific cutting of timber forests are increased in value. The thing that denudes the hillsides, that adds to the terrific force of ever-recurring and destructive floods, is the cutting of timber as you cut grain, all of it as you go; and a paper mill takes everything, from a sapling to a saw log.

You are wasting the resources of a country, you are spending millions from the Federal Treasury, to conserve forests that were being denuded to feed the paper mills instead of availing yourselves of the illimitable spruce of Canada. The tax upon print paper was not only a tax upon the metropolitan press but it was a tax upon every schoolbook. It was a tax upon intelligence. Of course, I can not blame the Republican Party for placing a tax upon intelligence. That was a measure of self-defense. Because the press denounced that naked, unscientific abomination its integrity must be impugned.

Again, because now without regard to party alliances, without regard to the fate of political organizations, inspired by a sense of common justice, reflecting a universal revolt, the press of the country, Democratic and Republican, bull moose and cow moose, mugwump, and every other kind of press, from the weekly newspaper to the metropolitan papers of the great cities of New York and Chicago and New Orleans, all join in expressing their just abhorrence of this aggregation of blunders and legislative crimes, this heterogeneous mass of unscientific monstrosities, because the press now condemns your effort to please everybody everywhere who has a pull or a vote, and to spread this graft over farm and field and factory, to fill everybody's mouth who can condemn and silence everybody's opposition who can oppose you, a bill destructive of every industry, pregnant with state socialism, ill-considered, misbegotten, abominated by the intelligence of America, as expressed by the press of America, you once again seek to meet the intelligent argument of the great dailies of the country by impugning the integrity of the papers, by spreading the poison over this country that they are subsidized and bought by a handful of merchants who are importing from foreign countries, as if all the importers in the United States have the wherewith which one great protected industry can command in an hour.

The practice of indulging in careless and wanton attacks upon the character of public men has become so universal that when you do catch a rascal nobody pays any attention to the exposure of it. This thing of damning the press without regard to its guilt or innocence is a protection to that part of the press which is subsidized. It is unjust, it is unfair, it is indefensible—this attack upon that part of the press which has the courage of its convictions.

The Senator from Arkansas is right. The press should demand, the Senate should demand, and the people should demand to know whether this great instrumentality for informing the public, for molding its opinion, comes from the heart and soul of great journalists, doing a great work in the fear of God and in the love of their country, or whether they are a lot of petty grafters piqued because they are no longer in the pay of the Finance Committee, which, by some strange oversight, overlooked one powerful beggar for graft, the first powerful beggar who was ever disappointed.

Mr. SMOOT. Mr. President, in the absence of the Senator from North Dakota [Mr. McCUMBER] I want to recite what I know happened in 1909, and from which it might be the Senator from North Dakota drew his conclusions as stated to-day. Whether those conclusions are right or not, it is not for me to say, but, in reply to the request of the Senator from Arkansas, I think it is the proper time now to state just what happened regarding the duty on print paper when the Payne-Aldrich bill was being considered in committee.

The Senator from North Dakota was a member of the Finance Committee in 1909. I also was a member of that committee at that time. Senator Aldrich was chairman of the committee. As Senators know, there were no open hearings held on the Payne-Aldrich bill by the majority Members of the Senate. The hearings which had been held before the Ways and Means Committee of the House were taken as a basis for the consideration of the bill by the Finance Committee of the Senate.

As I remember, the House had placed a duty upon newsprint paper of $2 per ton. When the bill was under consideration by the Finance Committee the then senior Senator from Maine, Mr. Hale, also a member of the Finance Committee, insisted that $2 a ton was not sufficient to protect that industry, Maine at that time, I believe, producing more wood pulp and print paper than any other State in the Union.

Mr. John I. Norris, representing the Newspaper Association of America, requested that the committee hear him on the question of the House duty upon print paper. The committee decided that the proper course to pursue was to appoint a subcommittee to hear Mr. Norris, and the committee appointed a subcommittee consisting of Senator Aldrich and myself. One evening was set apart for that subcommittee to hear what Mr. Norris had to say in relation to the duty on print paper.

Before that meeting, however, the majority members of the Finance Committee tried to agree upon a compromise rate on print paper. It seemed as if that was impossible in the committee, and the subcommittee of the Finance Committee met Mr. Norris, who made his statement as to why he thought print paper should be upon the free list.

Senator Aldrich and myself tried to reach some compromise with him, he representing the Newspaper Association of America. I think for two hours and a half that question was discussed, and I remember very well making a final appeal to Mr. Norris, asking him if, under the circumstances and conditions then existing, we could not make some compromise, telling him that if we could the subcommittee would take it to the full committee with a recommendation that the full committee adopt it.

I remember well the reply made by Mr. Norris and how emphatic he made it, and if I had my diary here I could give his answer word for word. But I have repeated it many times in the past, and I think I can repeat it now almost word for word. This is what Mr. Norris said:

"I will not consider a compromise of any kind. We demand free paper, and if I had the power I would lay a tribute upon the newsprint manufacturers of America, and if a duty is placed upon newsprint paper the Republican Party will be driven from power."

If it is the last word I ever utter in this world, that was, in substance, what John I. Norris said to the subcommittee.

The subcommittee reported that to the full committee, and I have no doubt but that the Senator from North Dakota was there at the time the report was made. As to what happened, or what influence it had upon the newspapers of the country, I have never stated; but that is what took place.

Mr. ROBINSON. Will the Senator yield for a question?

Mr. SMOOT. Certainly.

Mr. ROBINSON. Does the Senator state that Mr. Norris's reply to his appeal for a compromise was that "if a duty is levied on print paper the Republican Party will be driven from power"; that if the Republican Party would put print paper on the free list the newspapers would support Mr. Taft, and if they did not put it on the free list they would oppose him and wreck his administration, or anything like that?

Mr. SMOOT. Nothing was said like that, nor did I draw any such conclusion from what was said.

Mr. ROBINSON. That last statement is interesting, if the Senator will pardon me. I presume he took the floor to vindicate the position taken by the Senator from North Dakota——

Mr. SMOOT. Oh, I arose to state what happened in 1909, when the question of a duty on print paper was being considered.

Mr. ROBINSON. Let me finish my statement. I am asking the question so as to get his conclusion. Does the Senator from Utah, who heard the statement made by the Senator from North Dakota [Mr. McCUMBER], support his statement and conclusion, namely, that Mr. Taft was not defeated because of his attitude respecting the wool schedule or tariff question, but because of the refusal of the Finance Committee to put newsprint paper on the free list?

Mr. SMOOT. I would go further and say there were a good many things that occurred that brought about the defeat of Mr. Taft for President in his second campaign. I am not going to take the time now to enumerate them. I think that one of the greatest causes was his advocacy of reciprocity between this country and Canada. I have always thought so. There were numerous other causes, of course, that I might mention.

The reason why I rose was because I wanted, as long as the question had been brought to the attention of the public, to have the public know just what took place. I say, Mr. President, that this is what took place, and this is the statement as it was made by Mr. Norris. Mr. Norris simply said that the Republican Party would be driven from power. He was representing the Newspaper Association of America. I do not think the newspapers of the country authorized Mr. Norris to say what he did.

Mr. ROBINSON. Let us take that up a little——

Mr. SMOOT. Wait a moment. I want to say to the Senator that that is what he did say, and I think most of the newspapers and magazines of the country opposed a duty on print paper. If the Senator would look back through the columns of the press in those days, he would find they were almost universally opposed to the duty on newsprint paper.

Mr. ROBINSON. That is true, and they were right then and they are right now in opposing it. But what I resent, if the Senator will permit such language in his time, is the statement by a Senator of the United States that the press of America, through their authorized representative, knowingly and deliberately presented to the Finance Committee of the Senate of the United States a proposal that if they would put newsprint paper on the free list the press of the Nation would support Mr. Taft, and if they did not do it the newspapers would wreck his administration. That is almost literally a part of the language used by the Senator from North Dakota. Now, the Senator from Utah straddles the issue.

Mr. SMOOT. The Senator from Utah does not straddle the issue. I did not hear what the Senator from North Dakota said, and I am not going to put any words in his mouth or put any construction upon what he meant or what he said. I simply took the floor for the purpose of making public an historical fact, and I wanted it to appear just as it occurred. I am not going to color it one way or the other, and the Senate can draw its own conclusion.

Mr. ROBINSON. Mr. President, will the Senator yield for a further question?

Mr. SMOOT. Certainly.

Mr. ROBINSON. Did the Senator from Utah understand at the time that Mr. Norris, for the newspaper association, was making a threat to the Finance Committee that if they did not put print paper upon the free list the newspapers of the country would turn against the administration and fight it?

Mr. SMOOT. I understood that Mr. Norris, when he made that statement, had in his mind that as far as he was concerned he would do everything in his power and use all the influence of the position that he held to drive the Republican Party from power. That is exactly what I understood Mr. Norris meant by his statement.

Mr. ROBINSON. Mr. President, when the statement of the Senator from North Dakota [Mr. McCUMBER] was challenged, when a demand was made for specific and definite information, the only purpose the Senator from Utah [Mr. SMOOT] could

have in submitting the statement he made was to vindicate in part the attitude and conclusion of the Senator from North Dakota. After I took the floor the absence of a quorum was suggested. I had announced, before the absence of a quorum was suggested, what my purpose was in taking the floor, that it was to investigate and discuss the statement made by the Senator from North Dakota.

The declaration of the Senator from Utah is interesting in connection with long past transactions of the Finance Committee. He states that the Finance Committee appointed a subcommittee to deal with the question of the duty on newsprint paper, and that the then Senator from Rhode Island, Mr. Aldrich, and he, the Senator from Utah, were placed upon that subcommittee and that they sought to make some kind of compromise; that he himself appealed to Mr. Norris for some compromise. Mr. Norris, representing the Newspaper Publishers' Association of America, said, "There is and can be no compromise. If the Republican Party puts newsprint paper upon the dutiable list, the Republican Party will be driven from power."

That upon its face is very different, significantly different, from the declaration made by the Senator from North Dakota [Mr. MCCUMBER]. He said more than once, and reaffirmed his declaration when the Senator from Wisconsin [Mr. LENROOT] challenged it when he was making it, that the real reason Mr. Taft was defeated was not because of his attitude on the tariff question, nor his relationship to the wool schedule, but it was because the Finance Committee stood on principle and refused to barter with the representatives of the newspapers of America, who had threatened the Finance Committee that unless newsprint paper was put upon the free list the Republican Party would be driven from power through the concerted and united action of the press—an indictment which can not be treated indifferently.

The Senator from Utah now quotes from memory a statement made 13 years ago. He said if he had his diary he was satisfied that it would further refresh his memory. I would like to see his diary. I imagine if my friend the Senator from Utah kept a diary of the events that occurred in the secret sessions of the Finance Committee in those days, it would reveal other facts of interest to the American people. But the significant thing is that he kept that threat locked within his breast, concealed from the public of the United States, and permitted his friend Mr. Taft, who only carried the States of Utah and Vermont in his second campaign, to go down to overwhelming, discreditable defeat through an influence which, according to his statement now, was deliberately and corruptly exercised to accomplish his defeat. Eight votes in the Electoral College, from Utah and Vermont, were all that Mr. Taft received.

This pitiable, almost pathetic, repudiation by the electors of America, according to the Senator from North Dakota, came because of the incorruptible, unassailable, and virtuous attitude of the Finance Committee, represented by the then Senator from Rhode Island [Mr. Aldrich] and the Senator from Utah [Mr. SMOOT], and so lacking in sympathy for a just cause was the Senator from Utah that he remained silent, so far as the public was concerned, for 13 long years respecting that statement, from 1909 until 1922. How did it happen? What was the motive in concealing this alleged corrupt purpose, deliberately formed and frankly asserted by representatives of the newspaper association of America, to wreck Mr. Taft's administration, to drive from power the party represented by the Senator from Utah? The Senator from North Dakota was silent, the Senator from Utah was silent, from 1909 to 1922.

I have not the slightest doubt that Mr. Norris knew and almost everybody else knew the rising tide of public sentiment against the administration represented by the then Senator from Rhode Island and by the Senator from Utah. I have not the slightest doubt that Mr. Norris wanted newsprint paper upon the free list. But I do not believe, and the Senator from Utah has not said that he believes and will not say that he believes, that Mr. Norris had any authority, or claimed to have any authority, to barter the influence of the press of America for a miserable mess of pottage, for exemption of print paper from duty in the Payne-Aldrich tariff law.

The significance of this issue can not be overlooked. I know the Senator from North Dakota meant what he said. I wonder, since he is in the Chamber now, if he can offer any justification, any explanation, of the statement that he made at least twice during his address this morning, that the real cause for Taft's defeat was not to be found in the Payne-Aldrich law or in the wool schedule, but it was to be found in the vindictive action of the press of America, which, because it could not obtain exemption from a duty on newsprint paper, openly asserted its purpose to wreck Mr. Taft's administration and to drive the Republican Party from power; and in pursuance of that combination and conspiracy, all of the great newspapers of America turning against Mr. Taft, his administration was wrecked and the Republican Party was driven from power.

Mr. WATSON of Indiana. Mr. President, I do not know that the recital of personal experiences is of very serious consequence in the debate that is now being engaged in by the Senate. Indeed, it throws no very great light upon the subject in hand. And yet, inasmuch as the newsprint paper question has been brought before the Senate, and the relation of Mr. Herman Ridder and Mr. Norris to that question in 1908 and 1909 has been discussed, I think perhaps it would not be out of order, as throwing some light upon the situation, if I were to relate what I personally know about it. I use the personal pronoun only that I may show my relation to the situation.

At that time I happened to be the whip of the House of Representatives and had been for some time. I was likewise a member of the Ways and Means Committee of that body, which considered and formulated the Payne-Aldrich tariff law.

At that particular time I happened to be living with the then Speaker, JOSEPH G. CANNON, who at that time lived on Vermont Avenue, and, therefore, I had first-hand knowledge of the matters concerning which I speak.

Mr. ROBINSON. Mr. President, will my friend yield to a question?

Mr. WATSON of Indiana. Yes.

Mr. ROBINSON. Did the Senator keep a diary?

Mr. WATSON of Indiana. No; and I did not pay board.

Mr. SMOOT. I think it would be very much better if many more Senators would keep diaries.

Mr. ROBINSON. Well, they should bring them here as evidence when they undertake to speak from them.

Mr. WATSON of Indiana. I will say this to my genial friend from Arkansas, that what I am about to relate I have related time without number on the stump in my State, and in Illinois, and all over Uncle JOE CANNON'S district, and repeatedly since at banquets where he was being entertained, in order to show the incorrigible fiber of the old man's manhood. That is all I know about it, and there are gentlemen yet living who were present and who can attest the truthfulness of my remarks if my friend doubts it.

The first time this question came up in the other House—and I think that the minority leader of the Senate [Mr. UNDERWOOD] will remember the fact, for my recollection is that at that time he was a member of the Ways and Means Committee, though I am not certain as to that—was when JOHN SHARP WILLIAMS, who was then the Democratic floor leader and a member of the Ways and Means Committee, introduced a resolution into the House providing for free print paper and free wood pulp. I think the Senator from Alabama will remember that. In regular course of procedure the resolution came to the Ways and Means Committee, and when the vote was taken, just pro forma, it was voted down and given no further thought. But the newspaper publishers and the magazine editors of the country did not take it so lightly, and immediately thereafter in large numbers they swarmed into Washington and imperatively and imperiously demanded that that resolution should be taken up and be reported out by the Ways and Means Committee and put up to the House to pass it.

Mr. Herman Ridder, who was afterwards the treasurer of the Democratic National Committee, and a very sturdy and honest character, was then the president of the American Newspaper Publishers' Association, if I remember correctly the name of the organization. Among others, he journeyed here to Washington for the purpose of seeing that the resolution to which I have referred should be reported out by the Ways and Means Committee and should be passed by the House of Representatives. He made his first appearance that I knew anything about one morning at Uncle JOE CANNON'S house, on Vermont Avenue. Mr. Busbey, at that time and now Mr. CANNON'S secretary, was present. Certain conversations were there engaged in as to the passage of that resolution. Mr. Ridder at that time did not bring forth any threats of destruction upon the Republican Party, but took the opposite track, saying to the Speaker that if he would permit the resolution to come up he would be made President of the United States. The Speaker said to him that he would rather not have that subject mentioned to him again there or on any other occasion.

Two or three days subsequently, after all of the many newspaper men and magazine publishers had an opportunity to talk to the Republican Members, and particularly to the members of the Ways and Means Committee—and I was interviewed by a

very great number of them myself, some from my own State, whose particular favor I have not always enjoyed from that day to this—Mr. Ridder came again to the House of Representatives. I happened to step out of the front door leading over to the Senate and met Mr. Ridder. He said to me, "I want to see the Speaker again." I replied, "Very well; I will take you around to him." So I took Mr. Ridder around to see the Speaker. We went into his private room, where there were then some five or six gentlemen present.

I remember very well who they were. They were all Members of the House of Representatives except Mr. Busbey, who was also present. Mr. Ridder said, "Uncle Joe"—for he called him familiarly "Uncle Joe"—"I spoke to you the other day about this matter and you passed it over very lightly, but I come back now for the purpose of impressing upon you what I have in mind, and that is the necessity of passing this measure if the Republican Party is to secure the support of the newspapers and magazines of the country." Uncle Joe passed that off with a light remark or two. Then Mr. Ridder said to him, "Now, Mr. Speaker, you have been in the House of Representatives a great many years; you have served faithfully; you have had a very wonderful career, and you had just as well close that career as President of the United States. If you will permit this resolution to come up—and you have the authority and the power to do it—we will hold a great banquet here of the newspaper and magazine publishers of the United States; we will start your boom for the Presidency, and we will make you the President of the United States." Uncle Joe rose to his feet when that remark was made and went over toward Ridder and said, "Ridder, I remember reading in a book when I was a boy—induced to read in it by my mother; I have not read as much in that book perhaps as I ought to have read—about a certain individual taking another individual up into a high mountain and waving his arm around and saying to him, 'I will give you all of this if you will fall down and worship me,' when he knew that he did not own a G— d—— foot of it." [Laughter.] That is the exact language employed by Uncle Joe, and everybody knows that is the exact language he would employ. Ridder turned upon him and said, "Then we will destroy you; you will not only never be Speaker again but you shall never be elected to the House of Representatives again; and we will destroy the Republican Party unless this is done." Then Uncle Joe said to me, "Jim, tell Neal to come here." Neal was the colored man who stood for many years at the Speaker's door. I stepped there and called Neal in. Uncle Joe said to him, "Neal, this is my private room, which is set apart by the rules of the House for my use and occupancy. I have no right to say who shall come to any other of these rooms or into the hall, but if this fellow comes in here again, throw him out and I will be responsible for it." Then he said to Ridder, "Get out of here, and don't you ever enter my room again." Ridder went out, and one by one the others drifted out except myself.

I sat there smoking one of Uncle Joe's choice cigars, until finally he came over to me and put his hand on my shoulder, and said, "Jim, what do you think of it?" "Well," I said "Uncle Joe, from the standpoint of principle you have done exactly the right thing, but from the personal standpoint you have done the wrong thing." "Well," he replied, "does not everybody know that I am responsible? I have authority under the rules either to recognize Mr. WILLIAMS to call the resolution up or not to recognize him, and therefore I am responsible. Does not everybody know that if I should recognize him under the rules of the House the resolution would be subject to every amendment to each of the 4,000 items in the tariff law that any Member of the House might want to propose, and that we would soon be revising the tariff on the floor of the House without previous consideration or formulation by any committee? Suppose we could put it through under whip and spur, under the rules of the House and our organization, and it went over to the Senate, does not everybody know what will happen in the Senate, and does not everybody know they would revise the tariff on the floor of the Senate and debate it until election day and the Republican Party would be destroyed?" Then he said, "I will never consent to any such thing as that." I said, "Uncle Joe, why should you take upon yourself all this burden? Why do you not put it up to the House or to the Republican Members of the House and let them decide it?" He replied, "No; the responsibility is mine, and I intend to decide it." I answered, "Very well; you can decide it if you like, but Mr. Ridder is right about it; these men will destroy you; they will drive you out of public life." I remember just as well what the old man said to me as I remember the last word uttered by my friend from Arkansas. He said, "Well, they may destroy me; they may drive me out of public life; but after I am gone no man shall ever be able to say that I betrayed my party or turned my back on any principle in which I believed." Thereupon he strode out of his room.

Senator Hemenway, then Senator from Indiana, and I were great friends, and he was also a companion of the Speaker, and a very intimate one. I called him that evening, and we went over to the Speaker's house and endeavored in every way we could to dissuade Uncle JOE CANNON from that course, saying that he would be destroyed by the newspapers and magazines if he persisted in the course, and that in all probability the Republican Party would be beaten; but the old man closed the conversation at midnight by saying to us, "Boys, you are young and I am old, and you will live a good while; but all of us had better have millstones about our necks and be cast into the middle of hell than to agree to that proposition." That is exactly what happened on that occasion.

After that, when the tariff bill was under formulation, the same men came back, and, animated by the same purpose and inspired by the same determination, made the same threats, and they carried them into execution; but not, indeed, in 1908, I will say to my friend; for what happened? Canadian reciprocity came on, and then it was that our friend Norris, a very ingenious man—John I. Norris, not George Norris, I will say to the Senator from Utah——

Mr. SMOOT. I may have gotten the name wrong.

Mr. WATSON of Indiana. John I. Norris became an agent in some way of the Treasury—and it was entirely proper, of course; I have nothing but words of praise for Mr. Norris; he very ingeniously carried out the work committed to his keeping—and the publishers got free print paper, and it was the only thing the United States got out of the Canadian reciprocity proposition, as I now recall.

But what did Taft get? He got the united opposition of the whole farming community of the entire West. It was utterly impossible when 1912 came around to rally any of them to his support. I know, for I tried. I was elected a Taft delegate at large to the national convention, and I was the Taft floor leader in that convention. So I know something about that fight, and I know of the difficulty in securing men for Taft from any of the farming sections in all the western section of the country. They were not for him, and they were not for him on account of Canadian reciprocity, and that one thing more than anything else militated against Mr. Taft in 1912.

Those threats that were made, I want to say to my friend from Arkansas, I do not attribute to the whole newspaper fraternity of the United States, but to their accredited representatives and to their authorized and recognized president, coming here for the purpose of saying, "If you do not do this thing that we want done, we will destroy the Republican Party."

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

Mr. WATSON of Indiana. I yield.

Mr. ROBINSON. The Senator's statement has just disclosed that his party did yield finally and newsprint was put upon the free list.

Mr. WATSON of Indiana. Not in that tariff.

Mr. ROBINSON. Prior to Mr. Taft's second campaign.

Mr. WATSON of Indiana. No, no; not until after Taft became President and Canadian reciprocity came on.

Mr. ROBINSON. I understood——

Mr. UNDERWOOD. Mr. President, I want to call the Senator's attention to the fact that the Republican Party did not put newsprint paper on the free list.

Mr. WATSON of Indiana. We did not put it on the free list.

Mr. ROBINSON. But the Senator stated just a moment ago that they did.

Mr. WATSON of Indiana. In Canadian reciprocity.

Mr. ROBINSON. But that went through in Taft's administration.

Mr. UNDERWOOD. Canadian reciprocity did not go into effect. Canada never accepted it.

Mr. WATSON of Indiana. But that part of it went into effect.

Mr. UNDERWOOD. Oh, no.

Mr. WATSON of Indiana. Why, to be sure; and they have free print paper and free wood pulp to-day because of it.

Mr. ROBINSON. The point I am making is, if the Senator will permit me, that there is an irreconcilable conflict at least in the conclusions reached by the Senator from Indiana and the Senator from North Dakota.

Mr. WATSON of Indiana. Not at all.

Mr. ROBINSON. The Senator from Indiana says that in the Canadian reciprocity act, which was passed during Mr. Taft's

administration, and which was passed prior to his second campaign, newsprint was put on the free list; and while the Canadian reciprocity act did not go into effect, he has just said that the newspapers, after having demanded it as a condition of supporting the Republican candidate, refused to carry out their implied promise.

Mr. WATSON of Indiana. No; not at all. The Senator puts words in my mouth.

Mr. UNDERWOOD. Mr. President——

The PRESIDING OFFICER (Mr. MCNARY in the chair). Does the Senator from Indiana yield to the Senator from Alabama?

Mr. WATSON of Indiana. I yield.

Mr. UNDERWOOD. If the Senator will allow me, I do not want him to take credit for something that is not due. Newsprint paper was put on the free list in the bill passed by the Democrats after Mr. Wilson became President of the United States.

Mr. WATSON of Indiana. Which I have already stated. If I did not, I intended to. It was not put on the free list by the Republicans in 1908.

Mr. ROBINSON. The Senator stated a moment ago that it was not put upon the free list in the Canadian reciprocity act. That is the statement that the Senator made.

Mr. WATSON of Indiana. By Canadian reciprocity. That is what I claim now.

Mr. ROBINSON. And the Senator followed that up by saying that notwithstanding they had put it upon the free list, when he went out and tried to get the newspapers to support Taft in his second campaign they would not do it.

Mr. WATSON of Indiana. No, no, no. The Senator may be right in charging me with error——

Mr. ROBINSON. That is what I am doing.

Mr. WATSON of Indiana (continuing). In saying that they secured free print paper by means of Canadian reciprocity. It was put in the reciprocity treaty, and I had the impression that that was the one part of it that went through. I may be in error about that, but it does not make any difference whether that is true or not. That was simply an inaccuracy of recollection.

Mr. ROBINSON. Of course, that only reflects upon the statement of the Senator from Indiana that after the Republicans had done that he went out in the campaign for Mr. Taft and did all he could, and that he knew what he was talking about, and that he could not get the newspapers to line up for Mr. Taft notwithstanding the fact that newsprint had gone on the free list in that treaty.

Mr. WATSON of Indiana. Oh, not at all.

Mr. ROBINSON. The Senator made that statement.

Mr. SIMMONS. Mr. President, let me ask the Senator whether the conversation he has just related between Mr. R dder and Mr. CANNON was with reference to putting print paper on the free list in the Canadian reciprocity treaty?

Mr. WATSON of Indiana. Not at all. It was about passing a joint resolution that had been introduced in the House of Representatives by JOHN SHARP WILLIAMS in the early part of 1908. That was before we began to formulate the Payne-Aldrich tariff bill at all. Afterwards, the question came up again; but I mention this only in order to show the insistence and the persistence of our newspaper friends in their efforts to secure free print paper and free wood pulp, and their determination finally, when they could not do it, to destroy the Republican Party.

Mr. ROBINSON. Mr. President, will the Senator yield to a question?

Mr. WATSON of Indiana. To be sure.

Mr. ROBINSON. I want to understand the Senator's position. If I understand the Senator from Indiana, he supports the declaration of the Senator from North Dakota that the newspapers did, through their accredited representatives, threaten the authorities of the Republican administration that unless they put newsprint upon the free list the newspapers would act concertedly to encompass the defeat of the Republican administration, and that they did carry out, or attempt to carry out, that threat.

Mr. WATSON of Indiana. Yes. I did not hear the Senator from North Dakota make the statement, but I know that we incurred the hostility of those gentlemen, and I know that this conversation occurred that I tell you about, and I know that in 1912 Uncle JOE CANNON was beaten, and I know that in 1912 nearly all the Republicans were beaten.

Mr. ROBINSON. The Senator has quoted the former Speaker of the House of Representatives, who stood steadfast in the purpose to refuse to grant recognition in the House for the purpose of calling up the joint resolution to which he has referred. The Senator commends the Speaker for that act, I take it.

Mr. WATSON of Indiana. I do.

Mr. ROBINSON. Why, then, did the Senator use his utmost endeavor to get the Speaker to recognize some one to call up the joint resolution?

Mr. WATSON of Indiana. For this reason, I will say to my friend: In the first place, I was commending the Speaker for adhering to principle as he did, which is always to be commended in any man.

Mr. ROBINSON. But the Senator——

Mr. WATSON of Indiana. In the next place—I will tell the Senator if he will kindly wait a minute.

Mr. ROBINSON. Very well.

Mr. WATSON of Indiana. In the next place, I did not believe that the Speaker should bear off into the wilderness on his own shoulders the sins of the whole party, and I did say to him that I thought he ought to put it up to the Republican Members. That he declined to do. He said: "It is my responsibility, and I will discharge it." I did not believe that he ought to do that, because I thought that if these gentlemen got after him personally they would make it pretty hot for him, and they did; but I did believe that he ought to put it up to the Republican membership and let the Republican membership decide it in a caucus; so I urged that course, and so did my friend Hemenway, but we were not able to dissuade the Speaker from the course he had adopted. My friend knows that that was not always easy of accomplishment. It was not always easy of accomplishment to move Uncle Joe from a chosen course.

Mr. SIMMONS. Mr. President, I do not quite understand the Senator.

Mr. WATSON of Indiana. I am very sorry.

Mr. SIMMONS. If I understand the Senator now, this conversation took place some time in 1908 and referred only to a joint resolution which had been offered in the House of Representatives by the present Senator from Mississippi [Mr. WILLIAMS] about print paper.

Mr. WATSON of Indiana. That is my recollection.

Mr. SIMMONS. Between that time and the time when Taft became a candidate for the Presidency, in which campaign it was alleged that the Republican press was against him because of this print-paper business——

Mr. WATSON of Indiana. I am not sure about these dates.

Mr. SIMMONS. Between that time and his becoming a candidate we passed a reciprocity bill here.

Mr. WATSON of Indiana. No; I think not.

Mr. SIMMONS. Oh, yes; we passed a reciprocity bill before the campaign in which Mr. Taft was defeated.

Mr. WATSON of Indiana. No; I think not. The Senator is wrong about that.

Mr. SIMMONS. The Senator has just said that the reciprocity treaty——

Mr. UNDERWOOD. If the Senator will allow me, I have the reciprocity treaty in my hand.

Mr. SIMMONS. Just one minute. The Senator has just said——

Mr. WATSON of Indiana. The reciprocity treaty, if my friends will permit me, was passed in 1911. Taft became President on the 4th of March, 1909.

Mr. SIMMONS. Then I probably was referring to Taft's second campaign.

Mr. WATSON of Indiana. We all get these dates confused, and I may be inaccurate in my recollection as to some of them.

Mr. MCCUMBER. Mr. President, inasmuch as my statement has been attacked by Senators, I think it proper to make a very brief reply.

I do not think that in all my political life I have done a great deal of truckling to get newspaper support of any kind. But I shall not condemn those that do so if they think it worth their while. I was a member of the Finance Committee in 1909. It was the first year that I had been a member of that committee. I attended every session. I not only attended every session, but I also attended, when I was invited, the little meetings outside of the regular sessions. I think what I have stated with reference to the threat made by the publishers' association in 1909 has been pretty fully corroborated by the Senator from Utah [Mr. SMOOT] and the Senator from Indiana [Mr. WATSON]. I did not seek to go into any particulars. I wanted to show that the hostility of the press which was directed for a whole year against Taft was due to the fact that the committee failed to put print paper upon the free list; and I reiterate that, not with a voice as loud as that of the Senator from Arkansas but with a conviction that no voice can drown.

Now, let us see. I was at one of these meetings. I was one of those Senators who would have been very willing to have free print paper. I was for conserving our timber supply; I was for conserving our coal supply; and I was perfectly willing that Canada should furnish the pulp and the paper.

Mr. ROBINSON. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Arkansas?

Mr. McCUMBER. Certainly.

Mr. ROBINSON. Was the Senator also willing to conserve his political supply?

Mr. McCUMBER. Very well; I am going to give the Senator the facts, simply because he has challenged them. I did not care about calling the dead from the grave, but I was present at one of these meetings in which the representative of the American Newspaper Publishers' Association was present. One of the strongest Senators on the committee against free print paper was Senator Hale, of Maine; and I think except for his earnest and strenuous battle for a tariff upon print paper it would have been placed upon the free list. We knew, of course, the power of the great press of the country and we were trying to compromise, and on one of these occasions we were discussing the subject with this representative, not in committee but when a few Senators were present. I can not and would not attempt to give exactly the language that was used. I can remember one "cuss word" that was used by the representative of the publishers' association. He said, in substance, that if we would put print paper on the free list we would have no concerted action of the press of the country against us, but he said: "We will not yield one penny." We wanted to compromise from, I think, some $6 a ton to about $2.45, and he used this expression: "No; we won't compromise one damned cent, and if you fail to give us free print paper we will destroy the Republican Party and the Republican administration, if we can do it." Those are practically the words that were used.

Prior to the next election they got what they wanted in the Canadian reciprocity agreement, provided Canada would accept it; and so the Senator from Arkansas is mistaken when he says that these great papers were still fighting President Taft. They were not. The Republican papers of the State of New York were supporting President Taft in his second campaign.

The Democratic papers may have been fighting him, but that is not true of the Republican press generally of the State of New York, as I now remember.

Mr. UNDERWOOD. I am very much interested in what the Senator is stating. He should bear in mind that the Canadian reciprocity bill, as it passed the House in the first years of the Taft administration, failed of passage in the Senate.

Mr. McCUMBER. Certainly; I think I ought to remember it. I did what I could to talk it out of existence.

Mr. UNDERWOOD. If the Senator will allow me, it was not passed until President Taft called an extra session of Congress, called the Democratic Party into power in the House, and I introduced a bill for Canadian reciprocity, which came to the Senate and was signed by the President. It was afterwards rejected. So that the Republican Party had no credit for the passing of the bill.

Mr. McCUMBER. I am giving the Senator the discredit of that bill, if he wants it.

Mr. UNDERWOOD. What I want the Senator to do is to give the Democratic Party the credit of defeating a monopoly that was about to destroy the press, and ultimately putting newsprint paper on the free list, when the present tariff law was passed. It was not until that time that newsprint paper was put on the free list.

Mr. McCUMBER. Mr. President, I have generally given the Democratic Party credit for most of the evils that have befallen the country.

Mr. ROBINSON. Will the Senator from North Dakota yield?

Mr. McCUMBER. I just want to take one minute, and then I will close, and I think we ought to have a vote upon the pending question.

I simply want to reiterate the statements I have made. They were made in good faith. I think that was one of the great causes which tended to make President Taft unpopular. It was an insidious propaganda that was pounding at him from every side, through the magazines and through the general press of the country, and that continued until the reciprocity pact was brought into the light. Mr. President, it was not Schedule K; it was the division in the party between Roosevelt and Taft that made Mr. Wilson President.

Mr. UNDERWOOD. Mr. President, I would like to ask the Senator how he reconciles those statements, that the country turned from Taft because of Canadian reciprocity and went to the Democratic Party, which championed Canadian reciprocity? It was a Democratic House that put it through; it was the Democratic Party that supported it in the Congress preceding. It was Democratic Senators on the floor of the Senate who supported Canadian reciprocity. If that was the cause of Mr. Taft's defeat, why did the country turn from Taft, who favored Canadian reciprocity, to the Democratic Party, which championed Canadian reciprocity?

Mr. McCUMBER. Mr. President, the country did not turn; it simply divided between Taft and Roosevelt. There was no gain in the vote of the Democratic candidate at all. Two Republican candidates simply divided the Republican vote and elected a Democratic President by a minority vote. The West was against Taft on account of reciprocity. The agricultural sections of the East were against Taft on account of his reciprocity stand. It is true, undoubtedly, that many of the manufacturing interests were in his favor. They thought through reciprocity they would extend the scope of their trade without any injury to themselves and the loss, if any, would fall on the farmer.

Mr. SMOOT. Mr. President, this is about how the country turned to Wilson in that year. The popular vote of the combined candidates over the Wilson vote was 2,448,560. It is just as the Senator has said, it was a division of the Republican vote. Wilson did not get enough votes to carry this country if we had had one Republican candidate.

Mr. ROBINSON. Mr. President, with respect to the last statement of the Senator from Utah, everyone knows that the combined votes of Mr. Taft and Mr. Roosevelt exceeded the vote cast for the Wilson electors alone, but I point out the fact that, notwithstanding that is true, there occurred a political revolution in the United States in that election. The House of Representatives became Democratic by an overwhelming majority, and so did the Senate. In fact, as suggested to me by my colleague, the House became Democratic by a large majority in 1910, while Mr. Roosevelt was hunting big game in Africa.

We have had an interesting meeting this afternoon. It has been in the nature of an experience meeting; not in the nature of a revival, mark you, but rather of a confession, in which the conspirators, if I may use that word humorously——

Mr. STANLEY. Mr. President, the Senator from Arkansas, with all due respect, is not right yet. It was not a revival, it was not a confession; they are on the mourners' bench.

Mr. ROBINSON. Very well, Mr. President.

Mr. CARAWAY. I should like to suggest that really it is a post-mortem.

Mr. ROBINSON. I find that without the assistance of my colleague, the junior Senator from Arkansas, and the Senator from Kentucky I have been enabled to express my meaning with accuracy. Whether you term the testimony of the Senator from Utah, the Senator from Indiana, and the Senator from North Dakota a confession or the result of a revival, or a mere expression of repentance, I leave it to those who have heard the debate to determine. The fact is that they have failed to make their case. I wanted all the facts, and I accomplished my purpose. I presume that every Senator in attendance to-day who knows anything about this subject has told the truth, the whole truth, and nothing but the truth.

The testimony at last rests upon the conclusion of the Senator from North Dakota, the statement made by the Senator from Utah, and the statement made by the Senator from Indiana. The Senator from Utah was trying to get some sort of compromise with the representatives of the newspapers for political purposes. There is no other conclusion to be arrived at than that what was in his mind at that time was a fear of this representative of the newspaper association.

Mr. SMOOT. The Senator does not want to misjudge me, I know.

Mr. ROBINSON. Not for anything in this world would I do an injustice to my friend the Senator from Utah.

Mr. SMOOT. I want to correct the Senator.

Mr. ROBINSON. I can do him absolute justice and still differ with him about almost every public question.

Mr. SMOOT. I want to say to the Senator that I thought that under the conditions existing at that time newsprint paper ought to have a duty upon it. I felt it just as sincerely as I felt that it was necessary to have a duty on any other article mentioned in the bill.

Mr. ROBINSON. I have no doubt about that. While the Senator does not go to the extent of the statesman from Idaho [Mr. GOODING] in his advocacy of tariff duties, he believes in a tariff upon almost everything. I disagreed with the Senator from Utah in 1909, and I disagree with him now, as to the duty on newsprint paper. I think it is a direct tax upon intelligence. I think it is unjustified from the standpoint of economics or

from any other standpoint that ought to appeal to public men who are representing the general public interests. But I have no controversy with my friend the Senator from Utah. The only point I make is that when he volunteered to testify in support, impliedly, of the charge made by the Senator from North Dakota that the cause of Mr. Taft's defeat was not the tariff or the wool schedule, but was the vindictive action, the concerted and united action, of the press of America, induced by the refusal of the Finance Committee to place newsprint paper upon the free list, he failed in the facts stated to support the conclusion of the Senator from North Dakota. His statement was merely that the representative of the newspaper association uttered a prophecy that the Republican Party would be driven from power, and his prediction proved true. It was scourged out of authority by the action of the American people.

The Senator from North Dakota at first said that the repudiation of the Republican press, because of the refusal of his administration to comply with the demand that print paper be put on the free list, was the one substantial cause of Mr. Taft's defeat. Now he says it is true that most of the metropolitan Republican papers continued to support Mr. Taft. That is a very important modification of his original statement. Nevertheless, he adheres to the conclusion that the real cause of the reaction in the election which defeated Mr. Taft in his second campaign was the influence of the newspapers and magazines of the country.

The Senator from Indiana characteristically testified. He became reminiscent. He recalled days that are accomplished and political figures that are vanishing. I would not for a moment question the sincerity or good intentions of the Senator from Indiana, but when I recall that within 90 days the Senator from Indiana volunteered on this floor to testify to a conversation he had had with the Attorney General, which the Attorney General subsequently totally and emphatically repudiated, I justify myself in questioning the accuracy of the memory of my friend the Senator from Indiana. If he could not remember correctly a conversation with the Attorney General a few weeks before, how can he expect his friends to rely implicitly upon his recollection of events that occurred 12 or 15 years ago?

His statement is that Herman Ridder, a Democrat, representing some news publishers' association, made a threat to the representatives of the organization of the Republican Party in Congress that if they did not put print paper upon the free list the newspapers would unite in opposing the administration. His statement is that he did everything in his power to induce the Speaker to permit the resolution to be brought forward, no doubt knowing that the resolution would pass if the Representatives of the American people in Congress could have an opportunity to vote upon it. In one breath he justifies the Speaker for the exercise of an autocratic power in refusing to permit the House of Representatives to vote upon the resolution, and in the next breath he tells us to what extent he, the Senator from Indiana, went to prevent the Speaker from pursuing that course and to secure consideration of the resolution.

In view of the history of this tariff legislation and the way the advocates of protection have secured any rate they desired by merely expressing their desire, the one impressive and incredible thing about the story of the Senator from Indiana is that the request was not granted.

The PRESIDING OFFICER. The yeas and nays having been ordered, the Secretary will call the roll.

The reading clerk proceeded to call the roll, and Mr. ASHURST responded in the negative.

Mr. SIMMONS. Mr. President——

Mr. ASHURST. Mr. President, one response has been made to the roll call. This is the second time this has happened to-day. I insist that the roll call shall proceed.

The PRESIDING OFFICER. The Secretary will call the roll.

Mr. SIMMONS. Mr. President, this is the second or third time an attempt has been made to get a quick vote by an immediate call of the roll when a Senator was on his feet. I ask unanimous consent, under the circumstances, that I may be permitted to proceed.

The PRESIDING OFFICER. The Chair did not understand the request of the Senator from North Carolina.

Mr. SIMMONS. I ask unanimous consent that I may proceed. I was on my feet at the time the Chair directed the Secretary to call the roll.

The PRESIDING OFFICER. The Senator from North Carolina asks unanimous consent that he be allowed to proceed.

Mr. SIMMONS. I will not, under the circumstances, insist upon it.

The PRESIDING OFFICER. The Secretary will call the roll.

Mr. SIMMONS. But I want to say now, if I may be permitted to do so, that there is too much hurry about taking these votes.

Mr. ROBINSON. Mr. President, the question has not been stated. I rise to a parliamentary inquiry. What is the pending question? Is it the amendment of the Senator from Wisconsin [Mr. LENROOT] to the amendment of the committee?

The PRESIDING OFFICER. The pending question will be stated.

The READING CLERK. The question is on the amendment offered by the Senator from Wisconsin to the amendment of the committee to add, at the end of paragraph 1101, the following additional proviso:

Provided further, That in no case shall the duty or duties imposed in this paragraph exceed 60 per cent ad valorem.

The PRESIDING OFFICER. The Secretary will proceed with the call of the roll.

The reading clerk resumed the call of the roll.

Mr. BALL (when his name was called). I transfer my pair with the senior Senator from Florida [Mr. FLETCHER] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. CALDER (when his name was called). I am paired with the senior Senator from Georgia [Mr. HARRIS]. In his absence I withhold my vote.

Mr. DIAL (when his name was called). I am paired with the Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. McCUMBER (when his name was called). I transfer my general pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Nevada [Mr. ODDIE] and vote "nay."

Mr. McLEAN (when his name was called). On this vote I have a pair with the senior Senator from Montana [Mr. MYERS]. I transfer that pair to the senior Senator from Maine [Mr. FERNALD] and vote "nay."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the senior Senator from Missouri [Mr. REED], I vote "yea."

The roll call was concluded.

Mr. UNDERWOOD. I wish to announce that the Senator from Mississippi [Mr. HARRISON] is paired with the Senator from West Virginia [Mr. ELKINS]. If the Senator from Mississippi were present, he would vote "yea."

Mr. WATSON of Indiana. I have a general pair with the senior Senator from Mississippi [Mr. WILLIAMS], who is necessarily absent. I am informed that if the Senator from Nevada [Mr. PITTMAN] were present he would vote as I shall vote. Therefore, I transfer my pair with the Senator from Mississippi [Mr. WILLIAMS] to the Senator from Nevada [Mr. PITTMAN], and vote "nay."

Mr. GLASS. I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM]. Not knowing how he would vote on this question, I am compelled in his absence to withhold my vote. If permitted to vote I would vote "yea."

Mr. JONES of New Mexico (after having voted in the negative). I am advised that my general pair, the Senator from Maine [Mr. FERNALD], upon this question would vote as I have voted, and I therefore permit my vote to stand.

Also, I desire to confirm the statement made by the Senator from Indiana [Mr. WATSON] regarding the vote of the Senator from Nevada [Mr. PITTMAN]. If the Senator from Nevada [Mr. PITTMAN] were present and not paired, upon this question he would vote "nay."

Mr. STANLEY (after having voted in the affirmative). Has the junior Senator from Kentucky [Mr. ERNST] voted?

The PRESIDING OFFICER. That Senator has not voted.

Mr. STANLEY. I am unable to obtain a transfer and for that reason withdraw my vote. If permitted to vote I would vote "yea."

Mr. McCUMBER (after having voted in the negative). I think I ought to explain the transfer of my pair with the junior Senator from Utah [Mr. KING]. I tried to ascertain what his vote would be upon this question and was informed by his office that he is in favor of a reasonable tariff upon wool. I am

in favor of a reasonable tariff upon wool, but inasmuch as we might possibly disagree as to what constitutes a reasonable tariff on wool, I felt that I should recognize the pair and have it transferred.

Mr. CURTIS. I wish to announce the following general pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON].

I also wish to announce that the junior Senator from Nevada [Mr. ODDIE] is necessarily absent. If present he would vote "nay."

The result was announced—yeas 22, nays 43, as follows:

YEAS—22.

Borah	Hitchcock	Pomerene	Trammell
Caraway	Kellogg	Rawson	Underwood
Cummins	Lenroot	Robinson	Wadsworth
Dial	McCormick	Simmons	Walsh, Mass.
Gerry	Nelson	Smith	
Heflin	Overman	Swanson	

NAYS—43.

Ashurst	Frelinghuysen	McKinley	Sheppard
Ball	Gooding	McLean	Shortridge
Brandegee	Hale	McNary	Smoot
Broussard	Harreld	Moses	Spencer
Bursum	Jones, N. Mex.	New	Stanfield
Cameron	Jones, Wash.	Newberry	Sterling
Capper	Kendrick	Nicholson	Walsh, Mont.
Colt	Keyes	Norbeck	Warren
Curtis	Ladd	Pepper	Watson, Ind.
du Pont	Lodge	Phipps	Willis
France	McCumber	Ransdell	

NOT VOTING—31.

Calder	Fletcher	Myers	Shields
Crow	Glass	Norris	Stanley
Culberson	Harris	Oddie	Sutherland
Dillingham	Harrison	Owen	Townsend
Edge	Johnson	Page	Watson, Ga.
Elkins	King	Pittman	Weller
Ernst	La Follette	Poindexter	Williams
Fernald	McKellar	Reed	

So Mr. LENROOT's amendment to the amendment of the committee was rejected.

Mr. SIMMONS. Mr. President, when I rose just as the Secretary began to call the roll I did not intend to make a speech. I intended to read a couple of letters, which can be read hereafter just as well as they could have been read at that time. My expression of resentment at the speed of the Chair and the Secretary was not because I was disappointed in not being permitted to make a speech. Nearly all the speaking that has been done upon this particular paragraph of the bill, especially to-day, has proceeded from the opposite side of the Chamber. There has been but very little discussion on this side of the Chamber.

I do not understand why all at once there has been inaugurated here a movement by which, almost before a Senator who has the floor has taken his seat, the Secretary begins to call the roll. Ordinarily we have had a statement by the Chair of the pending question, which has been made without any appearance of speed, and the Secretary would then proceed, when he was ordered to do so, to call the roll in a reasonably moderate way. But twice to-day I have noticed that as soon as the Senator addressing the Senate sat down, there was a peremptory order, "Call the roll," and the roll call was speedily begun. I think this is the second time during the day that has happened. I do not think that is quite in conformity to the dignified way in which we have conducted the business in this Chamber.

Mr. LODGE. Mr. President, if the Senator will allow me——

Mr. SIMMONS. Certainly.

Mr. LODGE. Certainly I do not believe in cutting anyone off, but the call of the roll on this question was ordered 48 hours ago and actually one name had been called at that time when, I think, the Senator from Wisconsin [Mr. LENROOT] rose, and the debate has gone on ever since.

Mr. SIMMONS. But it is not the custom of the Chair after roll call has been ordered to have it begin without stating the question.

Mr. LODGE. He ought to state the question. I thought the question had been stated.

Mr. SIMMONS. I do not think the question was stated, but there was a peremptory order to the Secretary by the Chair to call the roll, and the Secretary with unusual speed started to call the roll.

Mr. President, Senators are not jumping jacks; they are not expected to sit in their seats with their hands on their desks ready to jump up instantly when the Senator who has had the floor sits down. If this practice is to continue we shall all have to do that, or we shall be confronted by the situation which confronted me. I do not like to complain; I ordinarily do not complain, but I have noticed this incident to-day, and I felt some little resentment, because I got upon my feet just as quickly as I possibly could after the Senator who was addressing the Senate took his seat, but I found the Secretary calling the roll. I trust that hereafter, Mr. President—and I am not saying this in any bad temper——

Mr. ASHURST. Mr. President——

Mr. SIMMONS. The Senator responded to his name quickly, but I am not complaining of him at all.

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Arizona?

Mr. SIMMONS. I yield.

Mr. ASHURST. Any Senator who would attempt to shut off the esteemed Senator from North Carolina [Mr. SIMMONS] would be guilty not only of unfairness, but of an impropriety. The alacrity with which I responded was due not to the fact that I am opposed to the amendment but because, more than three hours ago the question was stated, my name was called and I voted but the roll call did not proceed. I made no complaint at that time as I thought other Senators might wish to speak, and I did not insist on the point of order, although I had voted, but I felt that when the roll was called for the second time I ought to insist on my point of order. I assure the Senator from North Carolina that if the debate had for the past three hours been confined to the pending question, I would not even have responded to my name; I would have been glad to have the debate on the main question go on; but I will say that Senators must be prepared for a prompt response from me when they wander from the question, and I desire to tell the Republican Senators now that they have wasted our time to-day and for days past, and they can not henceforth accuse any of us on this side of filibustering.

I do not want to hear another word in this Congress from a Republican Senator about a Democratic filibuster. I have kept a rather brief record which shows that Republican Senators are speaking three hours to our one.

Mr. SIMMONS. Mr. President——

Mr. CARAWAY. Mr. President, will the Senator from North Carolina yield to me?

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Arkansas?

Mr. SIMMONS. I yield.

Mr. CARAWAY. I was on my feet and addressed the Chair two or three times before the Senator who had the floor had sat down, and before the Chair ordered the Secretary to call the roll, but, of course, I got no recognition. The Senator from Arizona [Mr. ASHURST] and the Chair, I thought, had an understanding.

Mr. ASHURST. If the Senator from North Carolina will yield to me, I desire to say that is true only in so far as the Chair and myself believe in transacting the business of the Nation and not talking about political history of 10 or 12 years ago. The Chair and I have the understanding that we have this Nation to serve instead of relating experiences and gossip of events that happened years ago.

Mr. CARAWAY. I suggest that the Senator from Arizona said nothing about the matter so long as the Republicans stood on the other side and talked, but it was only when the Democratic Senators on this side tried to get recognition that he intervened.

Mr. SIMMONS. I do not blame the Senator from Arizona [Mr. ASHURST]. I do not think he enters into this controversy at all. His name was called, and he answered it quickly, as he usually does; but what I am complaining of, Mr. President, is that, notwithstanding the fact that the yea-and-nay vote had been authorized two or three hours before, I think it has been the custom in this Chamber before the Secretary is directed to call the roll for the Chair to state the pending motion. Because the Chair did not state the pending motion in a few minutes after the roll call was started there was an inquiry all over the Senate Chamber as to what was the pending question upon which we were voting. I may be mistaken about it, but I do not think the Chair stated the pending question.

The PRESIDING OFFICER. The present occupant of the chair will make this statement of fact: More than two hours ago the roll was ordered called, and a response was made by the Senator from Arizona [Mr. ASHURST] when his name was called. Prior to that time the Secretary stated the pending question.

Mr. SIMMONS. But at the time the Chair ordered the roll call did the Chair announce what was the pending question?

The PRESIDING OFFICER. The last time the Chair ordered the calling of the roll the Chair did not state the pending question, but it had been stated a little earlier.

Mr. SIMMONS. The question had been stated a little while earlier? That is what I thought.

The PRESIDING OFFICER. The Chair desires to conclude his statement. The point of order was very properly made by the Senator from Arizona and was sustained by the Chair.

Mr. SIMMONS. All the Chair said, according to my recollection was, in a quick tone, "Call the roll"; and with equal quickness the Secretary began to call the roll. There was no opportunity for a Senator to get the attention of the Chair after the Senator who was addressing the Senate had sat down.

I do not want to dignify this little incident, but I am referring to it because I think it is a very bad practice. I think Senators ought to have a reasonable time when they are discussing these measures, after the Senator who is addressing the Senate sits down, to rise and in a dignified way address the Chair and proceed with their arguments, and that a Senator ought not to be put in a position where he must be constantly on the alert and ready to jump up at any minute in order that he may protect his rights. I care nothing about the matter personally; I hope no Senator in this Chamber believes that I would care anything about such a small matter; but the practice has obtained here in the last three or four days with reference to this measure, and I intended sooner or later to call attention to it.

Mr. WALSH of Massachusetts. Mr. President, I do not intend to make any motion to reduce the rate provided by the committee amendment; in view of the last vote, it would be useless; but I wish to call attention to the fact that a vote against the Senate committee amendment is a vote to restore the House rate, which is 25 cents per pound on the clean content of the wool instead of 33 cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. WALSH of Montana obtained the floor.

Mr. WADSWORTH. Mr. President, I should like to suggest that the Senator from Massachusetts is not correct in his statement.

Mr. SMOOT. The Senator from Massachusetts——

The PRESIDING OFFICER. The Senator from Montana has the floor. Does he yield to the Senator from Utah?

Mr. SMOOT. I was simply going to say that the Senator from Massachusetts had reference to the wrong paragraph.

Mr. WALSH of Massachusetts. I beg pardon. The Senator is right. I had in mind the second paragraph instead of the first.

Mr. SMOOT. That is what I was going to say.

Mr. WALSH of Montana. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Montana will state his parliamentary inquiry.

Mr. WALSH of Montana. I understand the question now pending stated in a parliamentary way is to strike out everything on page 140 included within lines 9 to 15 and to substitute therefor paragraph 1102 as reported by the committee.

The PRESIDING OFFICER. The Chair is informed by the Secretary that that point has not yet been reached.

Mr. WALSH of Massachusetts. I was under the same apprehension.

The PRESIDING OFFICER. The Senate is now considering the amendment in paragraph 1101.

Mr. WALSH of Montana. Will the Chair state the pending question?

The PRESIDING OFFICER. The Secretary will state the pending amendment.

The ASSISTANT SECRETARY. In paragraph 1101, on page 139, the committee proposes in line 8, after the word "camel," to strike out "28 per cent ad valorem: *Provided*, That the duty shall not exceed 7 cents per pound. The duty on such wools, imported on the skin, shall be 24 per cent ad valorem, but not to exceed 6 cents per pound," and to insert "in the grease, 12 cents per pound; washed, 18 cents per pound; scoured, 24 cents per pound. The duty on such wools imported on the skin shall be 11 cents per pound: *Provided*, That such wools may be imported under bond in an amount to be fixed by the Secretary of the Treasury and under such regulations as he shall prescribe; and if within three years from the date of importation or withdrawal from bonded warehouse satisfactory proof is furnished that the wools have been used in the manufacture of rugs, carpets, or any other floor coverings, the duties shall be remitted: *Provided further*, That if any such wools imported under bond as above prescribed are used in the manufacture of articles other than rugs, carpets, or any other floor coverings, there shall be levied, collected, and paid on any wools so used in violation of the bond, in addition to the regular duties provided by this paragraph, 20 cents per pound, which shall not be remitted or refunded on exportation of the articles or for any other reason. Wools in the grease shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water only on the sheep's back or on the skin," so as to read:

PAR. 1101. Wools, not improved by the admixture of merino or English blood, such as Donskoi, native Smyrna, native South American, Cordova, Valparaiso, and other wools of like character or description, and hair of the camel in the grease, 12 cents per pound; washed, 18 cents per pound; scoured, 24 cents per pound. The duty on such wools imported on the skin shall be 11 cents per pound: *Provided*, etc.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the Committee on Finance will be stated.

The ASSISTANT SECRETARY. On page 140 the committee proposes to strike out all of paragraph 1102, as printed in the House bill, and to insert a new paragraph 1102, as follows——

Mr. WADSWORTH. Mr. President, may I ask the Senator in charge of the bill if it is necessary for the Secretary to read the entire amendment, which embraces two and a half pages?

Mr. SMOOT. If there is no objection on the part of any Senator, I think it may be considered as having been read.

The PRESIDING OFFICER. The Chair will state that by unanimous consent the reading may be dispensed with at this time.

Mr. WADSWORTH. I myself had expected to offer an amendment to the committee amendment. Is it in order now?

The PRESIDING OFFICER. Is there objection to dispensing with the reading of the amendment? The Chair hears none, and it is so ordered.

The amendment reported by the Committee on Finance was, on page 140, after line 8, to strike out:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, alpaca, and other like animals, imported in the grease or washed, 25 cents per pound of clean content; imported in the scoured state, 26 cents per pound; imported on the skin, 24 cents per pound of clean content: *Provided*, That none of the foregoing shall pay a higher rate of duty than 35 per cent ad valorem.

And to insert:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, Cashmere goat, alpaca, and other like animals, imported in the grease or washed, shall pay duty at the following rates:

If the shrinkage in cleaning exceeds 93 per cent, 1.6 cents per pound.

If the shrinkage in cleaning exceeds 90 and does not exceed 93 per cent, 2.6 cents per pound.

If the shrinkage in cleaning exceeds 87 and does not exceed 90 per cent, 3.6 cents per pound.

If the shrinkage in cleaning exceeds 84 and does not exceed 87 per cent, 4.6 cents per pound;

If the shrinkage in cleaning exceeds 81 and does not exceed 84 per cent, 5.6 cents per pound;

If the shrinkage in cleaning exceeds 78 and does not exceed 81 per cent, 6.6 cents per pound;

If the shrinkage in cleaning exceeds 75 and does not exceed 78 per cent, 7.6 cents per pound;

If the shrinkage in cleaning exceeds 72 and does not exceed 75 per cent, 8.6 cents per pound;

If the shrinkage in cleaning exceeds 69 and does not exceed 72 per cent, 9.6 cents per pound;

If the shrinkage in cleaning exceeds 66 and does not exceed 69 per cent, 10.6 cents per pound;

If the shrinkage in cleaning exceeds 63 and does not exceed 66 per cent, 11.6 cents per pound;

If the shrinkage in cleaning exceeds 60 and does not exceed 63 per cent, 12.5 cents per pound;

If the shrinkage in cleaning exceeds 57 and does not exceed 60 per cent, 13.5 cents per pound;

If the shrinkage in cleaning exceeds 54 and does not exceed 57 per cent, 14.5 cents per pound;

If the shrinkage in cleaning exceeds 51 and does not exceed 54 per cent, 15.5 cents per pound;

If the shrinkage in cleaning exceeds 48 and does not exceed 51 per cent, 16.5 cents per pound;

If the shrinkage in cleaning exceeds 45 and does not exceed 48 per cent, 17.5 cents per pound;

If the shrinkage in cleaning exceeds 42 and does not exceed 45 per cent, 18.5 cents per pound;

If the shrinkage in cleaning exceeds 39 and does not exceed 42 per cent, 19.5 cents per pound;

If the shrinkage in cleaning exceeds 36 and does not exceed 39 per cent, 20.5 cents per pound;

If the shrinkage in cleaning exceeds 33 and does not exceed 36 per cent, 21.4 cents per pound;

If the shrinkage in cleaning exceeds 30 and does not exceed 33 per cent, 22.4 cents per pound;

If the shrinkage in cleaning exceeds 27 and does not exceed 30 per cent, 23.4 cents per pound;

If the shrinkage in cleaning exceeds 24 and does not exceed 27 per cent, 24.4 cents per pound;

If the shrinkage in cleaning exceeds 21 and does not exceed 24 per cent, 25.4 cents per pound;

If the shrinkage in cleaning exceeds 18 and does not exceed 21 per cent, 26.4 cents per pound;

If the shrinkage in cleaning exceeds 15 and does not exceed 18 per cent, 27.4 cents per pound;

If the shrinkage in cleaning exceeds 12 and does not exceed 15 per cent, 28.4 cents per pound;
If the shrinkage in cleaning exceeds 10 and does not exceed 12 per cent, 29.4 cents per pound;
If the shrinkage in cleaning does not exceed 10 per cent, 33 cents per pound.
The duty on such wools, imported in the scoured state, shall be 33 cents per pound.
The duty on such wools, imported on the skin, shall be 1 cent less per pound than is imposed in this paragraph on other wools of the same class and condition.

Mr. WALSH of Montana. I desire to address myself to the first part of the pending motion, which is the motion to strike out paragraph 1102 as adopted by the House. I inquire of the Chair, would it now be in order to amend the portion proposed to be stricken out by striking out the proviso, which reads:

Provided, That none of the foregoing shall pay a higher rate of duty than 35 per cent ad valorem?

The PRESIDING OFFICER. In the opinion of the present occupant of the Chair such a motion is now in order.

Mr. WALSH of Montana. Then I move to amend the House text by striking out that part of the proviso. I make the motion, Mr. President, in the hope that if the paragraph is so amended it, rather than the substitute for the paragraph proposed by the committee, will have the approval of the Senate; in other words, the question will then be directly presented as to whether the Senate will approve of the duty of 25 cents on the scoured pound, as proposed by the House, with the exception suggested, or will adopt the Senate proposal, which is practically the equivalent of 33 cents per pound of scoured content. Mr. President, I think that ought to be an acceptable solution of this vexed question. I think, upon reflection, every Senator will concede that the proviso found in paragraph 1102 as it came from the House is scarcely just.

Much may be said in favor of the peculiar position which this particular commodity—wool—occupies in connection with legislation of this character. It has been pointed out heretofore how desirable it is that our country should have a domestic supply and should not be obliged to rely under all circumstances upon a foreign supply, as it would if, for any reason, the industry were ruined. There is, however, another reason which, it seems to me, ought to have very serious consideration in this connection, and that is that there are vast areas of land out in the western country, where the greater portion of the wool is produced, which is and always will be incapable of cultivation and tillage; that is, it is mountain land, rocky, which produces natural forage, but is incapable of cultivation. That land is particularly adapted for the prosecution of the sheep industry.

Mr. POMERENE. Mr. President——

Mr. WALSH of Montana. I yield.

Mr. POMERENE. I am not quite clear that I understand the import of the Senator's amendment. Do I understand that it is to restore all of the House provision, save and except the proviso?

Mr. WALSH of Montana. Yes. If the proviso is stricken out we will then be presented with the question of fixing the duty at 25 cents per scoured pound or 33 cents.

Mr. POMERENE. Admitting that those rates are proper, does not the Senator think that there should be some regulation so far as the quality of the wool is concerned?

Mr. WALSH of Montana. I am obliged to take exactly the same position with respect to that that I did with respect to the amendment of the Senator from Wisconsin, and I dare say that the attitude of the Senate will be the same with respect to the matter. I will say quite freely to the Senator from Ohio with respect to this that if you can devise any plan by which the reduction will be carried into the compensatory duties upon the finished product I shall be very glad to entertain a proposal to make the rate lower upon the lower grade of wools; but up to the present time no one has suggested how that can be accomplished.

Mr. President, I was going to say that the natural habitat of sheep is in the mountain country. No variety of wild sheep is grown except those that occupy the high mountains, and accordingly the breeding of sheep in all countries is conducted in mountainous regions as a rule. It will be singularly unfortunate if the vast value of forage there that is available for the culture of sheep should be lost by reason of the destruction of the industry. If it be possible to preserve it with some kind of governmental aid a very little addition will result in the production of a vast amount of wealth which otherwise would be entirely lost. So there are considerations which make a more or less powerful appeal for some consideration of this particular commodity. But, Mr. President, I have no hesitancy at all in saying that the rates proposed in the Senate substitute are, in my judgment, unreasonably and unjustifiably high; but see how this proviso would operate. It would operate in this way, and I ask the particular attention of the Senate with respect to it:

Whenever the price of wool goes down, if you put on this ad valorem limit, the protection that is given is proportionately reduced. In other words, when the sheep raisers need the protection most they get the least of it, and accordingly it assists in the destruction of the industry.

Mr. McCUMBER. Mr. President, may I ask the Senator a question to get at just exactly what he desires to have the vote on? My understanding is that he first wants to perfect the House provision by striking out the proviso on lines 13 to 15, inclusive.

Mr. WALSH of Montana. Yes.

Mr. McCUMBER. Then does he propose to support the House provision as against the Senate provision?

Mr. WALSH of Montana. As against the Senate amendment.

Mr. McCUMBER. And have the vote directly upon that question?

Mr. WALSH of Montana. Exactly. I hoped that we might get a square vote upon 33 cents per scoured pound or 25 cents per scoured pound.

Mr. McCUMBER. I can see no objection to that.

Mr. SMOOT. None whatever, Mr. President. I will say to the Senator that as far as I am concerned I will accept the amendment, because I would have offered the amendment if the Senator had not, if the House provision had prevailed over the Senate provision. The Senator, I think, has taken the right course by perfecting the House provision, and, as far as I am concerned, there is no objection to his proposal.

Mr. WALSH of Montana. Very well. I just want to give a few figures to show the operation of this.

So long as the price of wool in the grease exceeds 23.8 cents per pound, the proviso would not come into operation at all. Until it got as low as 23.8 cents per pound in the grease the specific rate would become applicable; but whenever the price of wool in the foreign market, the export price, falls below 23.8 cents per pound, then the ad valorem rate would become operative and it would operate thus:

If wool abroad fell to 20 cents, the duty then would be only 7 cents. If, unfortunately, the price of wool should fall to 15 cents, when the woolgrowers would most need whatever protection could be given to them, the duty would be only 5.27 cents; and if it should fall to 12 cents a pound abroad, the duty would be only 4.2 cents per pound. In other words, Mr. President, the more vigorous, the more dangerous, the more destructive the competition becomes the less and less protection the producer gets. Accordingly, I am very much gratified, indeed, that the chairman of the committee has signified his willingness to accept this amendment, so that we will have a straight vote upon these two rates.

The PRESIDING OFFICER (Mr. LADD in the chair). The amendment will be stated.

The ASSISTANT SECRETARY. In lieu of the amendment proposed by the committee, proposing to strike out all of the House text, the Senator from Montana [Mr. WALSH] moves to strike out the proviso in that text beginning on line 13, as follows:

Provided, That none of the foregoing shall pay a higher rate of duty than 35 per cent ad valorem.

Mr. WALSH of Montana. Mr. President, before the vote is taken I want to say a further word in explanation of the position I take.

I think it has been pretty well demonstrated that by reason of the skirting clause and other provisions of the Payne-Aldrich law, the actual, effective protection that was given by that law never did exceed 7 cents per pound, and often went as low as 4 cents. I think it is the general belief of the woolgrowers of the West that that law gave a protection of not exceeding 7 cents, and, as I indicated, it sometimes ran as low as 4 cents. This provision to which I have signified my adherence gives an actual protection to the woolgrower of 8½ cents a pound. If he is given a higher protection, a better protection than he was given under the Payne-Aldrich law by a cent and a third a pound, I believe the woolgrower ought to be, and I think he will be, satisfied.

Mr. GOODING. Mr. President, I should like to call the attention of the Senate to the fact—and I have mentioned this before, but I think this is a good time to repeat it—that the Tariff Board has found that it costs 34.6 cents more, on the scoured basis, to grow a pound of wool in this country than in the Argentine. If we are going to protect an industry and give it a chance to live, that protection ought to be high enough so that it represents at least the honest difference, as we call it, between the cost of production at home and abroad. If we are not, we might just as well strangle it first as last, and put it on

the free list, and let the men who are in the business find something else to do. Whenever you do, however, as far as the West is concerned, where there is but very little humus in the soil, and where only one or two crops can be grown without fertilization, such as alfalfa, that country will have to give up an effort to exist, because without the alfalfa and without a rotation of crops to bring up the fertility of the soil and without a forage that sheep consume that country must go back, and the people must give up an effort to exist out there. At least one-third of all the arid portion of this country must be in alfalfa every year to keep up the fertility of the soil, and if you have less than that at any time the soil goes backward, and the people will have to give up the fight.

So, if we are going to let the industry live at all, let us give it at least somewhere near the honest difference in the cost of production between this and a foreign country. If we are Republicans believing in protection which represents the honest difference in the cost of production, we ought not to hesitate about it at all.

Mr. WALSH of Massachusetts. Mr. President, as I understand the situation now, the pending question is the committee amendment to paragraph 1102; and the Senator from Montana [Mr. WALSH] moves that the House text, omitting the proviso, be substituted for the committee amendment.

Mr. SMOOT. No. The pending amendment is to strike out the proviso in paragraph 1102 as written by the House; or, in other words, the Senator from Montana is perfecting the House provision, and then the vote will recur upon the Senate amendment to the House provision as amended.

Mr. WALSH of Massachusetts. I think I understand the situation. We are voting, then, upon whether we shall strike out the House provisions of paragraph 1102?

Mr. SMOOT. Yes.

Mr. BURSUM. Mr. President, if I correctly understand the amendment of the committee, the committee proposed an amendment as a substitute for the House provision. Is that right?

Mr. SMOOT. Yes; that is true.

Mr. BURSUM. Then how can another amendment be submitted now to perfect the House provision?

Mr. SMOOT. Because under Rule XVIII either the amendment or the original proposition can be perfected. The Senator from Montana now offers an amendment to the House provision to perfect that provision, and that is in order.

Mr. BURSUM. That is, to take out the proviso?

Mr. SMOOT. To take it out; and as far as I am concerned, and I think the same thing is true of the members of the Senate Finance Committee generally, I am perfectly willing to accept the amendment offered by the Senator from Montana.

Mr. BURSUM. That is to make the road clear to have a vote on the amount of the duty?

Mr. SMOOT. As between a straight 25 cents a pound and 33 cents a pound.

Mr. BURSUM. That will come on a subsequent vote?

Mr. SMOOT. Yes.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Montana.

The amendment was agreed to.

Mr. WADSWORTH. Mr. President, I desire also to offer what might be termed perfecting amendments to the House text. The Senate has just voted to perfect it by striking out the proviso, following the amendment of the Senator from Montana [Mr. WALSH]. Personally I am not satisfied that 25 cents per pound of clean content will be sufficient in every case. I think it will be insufficient in a great many cases. I therefore move to amend the House text on line 11 of page 140 by striking out "25 cents per pound" and inserting "28 cents per pound"; on line 12, by striking out "26 cents per pound" and inserting "28 cents per pound"; and on line 13, by striking out "24 cents per pound" and inserting "27 cents per pound."

The real purpose of the amendment, of course—as is apparent to anybody who has the text before him—is to fix the specific duty at 28 cents per pound on the scoured content, to be followed clear on down through all the grades of wool. With 28 cents as the specific duty on scoured content, the fine wools will be bearing an ad valorem equivalent to 29 per cent, as contrasted with an ad valorem equivalent of 35 per cent under the Senate committee amendment. That percentage of equivalent ad valorem, starting with the finest wools and going down through the half bloods, three-eighths, and one-quarter bloods, to and including the low or coarsest grades, will reach an ad valorem equivalent of 116 per cent, as contrasted with 137 per cent provided for as an ad valorem equivalent in the Senate committee amendment.

In all seriousness, let me submit to my colleagues that those ad valorem equivalents would certainly seem sufficient, varying from 29 per cent on the finest wools to 116 per cent on the coarsest. It would also seem sufficient to impose a straight specific duty on all these grades of wool of 28 cents per scoured pound.

If the proposal made by the Senator from Montana should be adopted by the Senate it would eliminate the difficulty which the Senator from Utah has described so often, of carrying these rates with a maximum ad valorem into the compensatory duty. That difficulty is completely wiped out and no more importance can be placed on any utterance with regard to it. A reduction from 33 cents to 28 cents does in a very considerable degree mitigate the extraordinary situation which exists with respect to the ad valorem equivalents among the coarsest wools, and will go very, very far in eliminating the criticism which the Senator from Wisconsin and some of the rest of us believe will inevitably be leveled against this wool schedule in the event the Senate committee rates are allowed to stand as printed.

I ask the Senators who have the preservation of the wool industry at heart to reflect, first, that this is a great, big country, with 110,000,000 people engaged in every conceivable occupation; that it is mighty difficult to persuade them that the Congress has a right—moral, legal, or otherwise—to impose an ad valorem equivalent of 130 per cent; and to think, next, that, failing to persuade them, the danger will be that they will turn and rend these rates at some future session of the Congress, a thing which I would regret infinitely. When I say "these rates," I mean the agricultural rates generally, as contained in this bill.

I think the proposal of 28 cents per scoured pound will protect the wool industry of this country, and I believe if we were given an opportunity and time, we could bring woolgrowers to Washington who would admit that 28 cents is sufficient protection. I know it is difficult to persuade some of those who think of nothing but wool, but I am trying to think of something else at the present time.

Mr. BURSUM. Mr. President, I would like to ask the Senator from New York how the 28 cents would cure the ill of which he complains in reference to the low-grade wool?

Mr. WADSWORTH. I do not think it cures it entirely. I said it mitigated it. It does reduce the equivalent ad valorem duty by over 20 per cent in the highest figures.

Mr. BURSUM. While the ill might be mitigated as to the lower grade, it would be slaughtering the great bulk of the industry.

Mr. WADSWORTH. I hope the Senator will not use the word "slaughtering." A duty of 28 cents is not going to permit the woolgrower to be "slaughtered."

Mr. GOODING. Mr. President, I want to say just a word to the Senator from New York, and more especially with respect to that part of his remarks in which he talked about the people not standing for the excessive rates called for. I again want to remind the Senator that only last week he stood in this Chamber for a duty of 192½ per cent in one class, and 119 on the other, in the matter of gloves.

Mr. WADSWORTH. Never 192 per cent.

Mr. GOODING. I meant to say 92 per cent, and again 119 per cent. The rate the Senator asked for before the committee was 150 per cent.

Mr. WADSWORTH. Again the Senator is mistaken. I never asked for 150 per cent before the committee.

Mr. GOODING. It was asked for by the glove people.

Mr. WADSWORTH. The Senator mentioned me. I did not ask for 150 per cent.

Mr. GOODING. The Senator asked for 119 per cent, did he not?

Mr. WADSWORTH. I did, for an industry that is closed down and dead.

Mr. GOODING. God knows the sheep industry was dead until the emergency tariff law passed.

Mr. WADSWORTH. It is not dead now.

Mr. GOODING. The emergency tariff law revived it, but it was dead. We merely want to give it a chance to live. I want to say again to the Senator from New York, and to any other Senator, as far as that is concerned, that when it is shown conclusively that 28 cents is not the difference in the cost of production between this country and foreign countries, any man who believes in the principle of protection can go out and defend these rates before any audience in any part of America.

Mr. LENROOT. Mr. President, I shall be very brief, but I would like to ask the Senator from Idaho, or the Senator from

Utah, to state the average shrinkage in the case of quarter bloods and under.

Mr. GOODING. It would depend on what part of the country it is grown in.

Mr. SMOOT. The average shrinkage in the United States, I think, is about 38, 39, or 40 per cent in quarter bloods and below.

Mr. WADSWORTH. About 33 per cent.

Mr. BURSUM. Will not the Senator speak so that we on this side can hear?

Mr. SMOOT. The question was, What is the average shrinkage in wools produced in the United States in the case of quarter bloods and lower? And I said from 38 to 40 per cent.

Mr. BURSUM. It will reach up to as high as 50 per cent.

Mr. SMOOT. The Senator asked me for the average shrinkage; and that, I think, is what the Tariff Commission gives, and that is what I think it would figure. Of course, as soon as you get the mediums, fine mediums, and fines, there is a different story.

Mr. BURSUM. The average shrinkage in the western country in wools of low grade—that is, carpet wools—is 50 per cent.

Mr. SMOOT. The Senator did not confine himself to carpet wools.

Mr. LENROOT. Thirty-three and one-half would be a fair average, would it not?

Mr. SMOOT. The Senator did not ask me about carpet wools. He asked me about quarter bloods.

Mr. LENROOT. The point of my inquiry was this: Will 33 cents a scoured pound upon the fine wools, shrinking 66⅔ per cent, give a protection of 11 cents a pound in the grease?

Mr. SMOOT. That is correct.

Mr. LENROOT. Upon the coarse wools 33 cents a pound will give a protection of 22 cents a pound in the grease. Am I right?

Mr. SMOOT. I will figure that out.

Mr. GOODING. Mr. President, I want to say that, as far as Idaho and the West generally are concerned, the coarse wools shrink anywhere from 50 to 55 per cent, unless it is the Soda Springs wool. There is no wool I know of in America that shrinks 33 per cent unless it is washed. I think I have the records here from the manufacturers, if I can find them.

Mr. SMOOT. It is slightly over 22 per cent.

Mr. LENROOT. That is the point I wanted to bring out, that, as a matter of fact, a duty of 33 cents on the scoured pound will, upon the average, afford a protection of 11 cents a pound upon the fine wool, and the same rate will afford a protection, if the shrinkage is 33⅓ per cent, of 22 cents a pound on the coarse wool, and if the shrinkage is 50 per cent, instead of 33⅓ per cent, the protection upon the coarse wool in the grease would be 16⅔ cents a pound, as against 11 cents a pound upon the fine wool.

Mr. SMOOT. The Senator has figured it correctly, I think. If it were 50 per cent, and the wools were 15 cents, it would be 30 cents scoured.

Mr. LENROOT. So, Mr. President, the point I want to make is that the rate of 33 cents a pound, as proposed by the committee, does give a very much higher rate of duty upon the coarser wools than upon the finer wools.

Mr. STANFIELD. The Senator is undoubtedly aware of the fact that the difference in the shrinkage is due to the amount of grease and dirt in the fleece. The grower is not concerned about the protection on the grease and dirt.

Mr. LENROOT. My only point was that when we are figuring the amount of protection on the wool in the grease, it does give that protection on the wool in the grease.

Mr. STANFIELD. But there is the dirt and grease, which does not need protection.

Mr. LENROOT. If fine wool in the grease is worth 50 cents a pound and the coarse wool in the grease is worth 24 cents a pound—my rates are all too high, of course; but I am giving those figures simply for purposes of illustration—in the one case the 33 cents duty will add 11 cents a pound to the 50-cent wool and 22 cents a pound to the 24-cent wool, but to the grower it gives about the same protection per pound.

Mr. BURSUM. I submit that the difference is only due to the fact that there is more dirt and more grease in one wool than in the other.

Mr. LENROOT. The Senator from Wisconsin is not a sheepman, but he does understand that.

Mr. BURSUM. The duty is based on clean wool and nothing else.

Mr. LENROOT. I understand that.

Mr. BURSUM. While we are on this question, of course, it is impossible to impose any duty on a specific plan or any other plan which would give absolute justice to every grade and class of wool.

Mr. LENROOT. I understand that.

Mr. BURSUM. Under an amendment providing for a maximum of 60 per cent, I have analyzed what would be the effect——

Mr. LENROOT. I do not yield for the Senator to make a statement of that sort. That is water which has gone under the bridge. That has been settled by the Senate. I have accepted the decision of the Senate. I hope the Senator from New Mexico will let it go at that. I am not renewing the proposition. I have not offered any amendment.

Mr. WADSWORTH. Does not the Senator know that you can not talk without interruption here? So why try?

Mr. BURSUM. We passed on only one paragraph.

Mr. LENROOT. I have just stated that I was beaten upon that, fairly beaten, and I accept the decision of the Senate. I have not offered a 60 per cent amendment in this paragraph, and I am not going to offer one.

Mr. BURSUM. I understood the Senator had offered an amendment to the first paragraph and a similar amendment to the second paragraph.

Mr. LENROOT. If my amendment to the first paragraph had prevailed, I probably would have offered it to the second, but it did not prevail. So the Senator has it his way; and is he not satisfied?

Mr. BURSUM. I simply wanted to submit this analysis for the RECORD, for the enlightenment of Senators.

Mr. LENROOT. Every time I get upon my feet I am not permitted to talk consecutively for five minutes, and I wonder why?

Mr. BURSUM. I beg the Senator's pardon. I will not interrupt him any more.

Mr. LENROOT. As I said, I am not going to offer any amendment to this section, but I do want to take this opportunity, because I hope I will not have to speak again upon this paragraph, of entering my protest against the amendment of the committee, in the form it proposes to impose the duty, as against the plan of the House, giving the duty, whatever is to be imposed, upon the scoured content, and I am very eager to know how the committee can by any possibility justify this bracket system they have reported to the Senate. Under this bracket system, if wool comes in, for instance, with a shrinkage of 67 per cent, it will take a rate of 10.6 cents per pound. But 1 per cent higher will mean just 1 cent per pound difference in duty. How can that be justified? The endless litigation that is sure to result from the bracket system must be admitted.

Mr. GOODING. Mr. President, I think if the Senator from Wisconsin will support the schedule with the brackets out and make it straight 33 cents the committee will take that amendment. We will agree to that if the Senator will agree to it.

Mr. LENROOT. I very much hope the bracket system will be stricken out, because that certainly would be something gained; but, of course, the Senator from Idaho does not want to make trades with me on the floor here in that way.

So, Mr. President, I simply enter my objection. If the committee are going to insist upon the bracket system it seems to me before it is voted upon they ought to be willing to defend it, so that we may know, whether it be 33 cents or 28 cents upon the scoured content as determined is fair to everybody, that it will be fair to the consumer and fair to the grower. The bracket system can not possibly be fair.

Mr. WADSWORTH. Do I understand there is any objection to my proposal to perfect the House text by substituting 28 for 25?

Mr. SMOOT. There may be objection to it, especially if we strike out the House provision and put in the paragraph without the brackets.

Mr. WADSWORTH. In any event the issue would be 33 or 28.

Mr. SMOOT. Yes; I know that.

Mr. WADSWORTH. What I want to know is this: Would the Senator rather have the issue between 23 and 33 on the one side, or between 28 and 33 on the other side?

Mr. SMOOT. We might as well have the question determined between 25 and 33, and then if the Senator wants a vote on reducing it from 33 to 28, he can get at it in that way. There are a number of Senators who do not feel like voting for 28. Of course, they would vote for it as against 25, but they do not want to be placed on record as voting for 28 cents.

Mr. WADSWORTH. I suppose I must be very careful about the sensibilities of some of my colleagues. If that is the case, of course, I shall relieve them of all embarrassment.

Mr. LENROOT. No Senator would be in the position of voting for 28 as against 33 if this is accepted, because they still would have the opportunity of voting upon 23.

Mr. WADSWORTH. The Senator from Wisconsin fails to appreciate the tender sensibilities of some Senators.

Mr. JONES of Washington. Mr. President, it seems to me we ought to have the House provision perfected if we want to vote for it or against it. If it requires unanimous consent to do what has been suggested, I shall not object to it myself.

Mr. WADSWORTH. I merely asked if there was any objection to perfecting the House provision.

Mr. JONES of Washington. Perfect it, and then we will vote upon the question as between that and the Senate committee provision.

Mr. McCUMBER. There could be no objection to making the motion. The Senator has that right.

Mr. WADSWORTH. I have made the motion.

Mr. McCUMBER. I shall vote against it.

Mr. WADSWORTH. My amendment would make it 28 instead of 25.

Mr. McCUMBER. I would like to vote against that and then vote in the next paragraph for 33.

Mr. WADSWORTH. Mr. President, a parliamentary inquiry. In the event the Senate declines to permit perfection of the House text by increasing 25 to 28 cents and the committee amendment of 33 cents is substituted for the original 25-cent rate of the House, would it then be in order to offer an amendment to reduce 33 cents to 28 cents?

The PRESIDING OFFICER. In the opinion of the Chair it would not be in order.

Mr. WADSWORTH. May I ask, if Senators are willing to say in advance what they will do, if no change is made in the House text before the issue is joined as between the Senate committee amendment and the House text as now perfected by the Senator from Montana, will it then be in order to move to insert 28 cents instead of 33 cents?

Mr. McCUMBER. It is possible I do not understand the question, but it seems to me the Senator can move at any time before we vote on it to amend the proposed committee amendment. If the committee amendment is 33 cents, there is no question in my mind but that the Senator can move to strike out "33" and insert "28," if that is what he wants.

Mr. WADSWORTH. The Senator knows perfectly well that the Senator from New York would have to send for a professor of mathematics to make any such change in the committee amendment. See what it does. It starts in with the bracket providing 93 per cent shrinkage and 1.6 cents duty per pound and runs over two and a half pages down to a shrinkage of not to exceed 10 per cent and a rate of 29.4 cents. We would have to work out all of those decimals. All I ask is that we do it in a sensible way. If the Senator insists that we shall not change the House text in the direction which the Senator himself desires by comparison, I shall have to ask for a roll call in order to get the views of the Senate as to whether it prefers 28 cents to 25 cents. That is all there is to it.

Mr. McCUMBER. If the Senator will allow me, the Senator can move as a substitute for all the brackets an amendment that will simply read 33 cents upon the scoured content, if he so desires, or he can say 28 cents upon the scoured content. There is nothing to prevent the Senator in a single sentence moving to amend the Senate committee amendment in that way.

Mr. WADSWORTH. Move to amend the Senate committee amendment?

Mr. McCUMBER. Certainly; by substituting for all these brackets a declaration that the duty shall be 28 cents upon the scoured content.

Mr. WADSWORTH. It is just as easy to do it one way as another. I thought my way was just as easy. It will take a roll call, and only one roll call in any event. I am more than willing to follow the guidance of the chairman of the committee, and when it is all over I would like him to tell me privately what he has gained.

Mr. McCUMBER. I am inclined to think that possibly before we get through there may be a change in these brackets to a straight 33 cents per pound rate.

Mr. SMOOT. I am perfectly willing right now to withdraw the brackets and put it in at 33 cents on the scoured basis.

Mr. POMERENE. Mr. President, I would like to understand the matter, if I may interrupt whichever Senator has the floor. The Senator from North Dakota has just said that they might change a certain section here so as to make the rate 33 cents a pound. What does that mean?

Mr. SMOOT. It means to strike out all the brackets, which are equivalent to 31 per cent, with a 3-cent difference, and simply impose a duty of 33 cents on the scoured content and do away with all the brackets.

Mr. WALSH of Montana. That would make it necessary to revise the language so that it would read:

Wools, not specially provided for, and hair of the Angora goat, alpaca and other like animals, imported in the grease or washed, 33 cents a pound.

Mr. SMOOT. So it would read 33 cents a pound on the clean content.

Mr. WALSH of Montana. That is identically the language of the House text. So in lieu of that why may we not just amend the House provision by substituting 33 for 25?

Mr. SMOOT. There is some difference in the House provision.

Mr. POMERENE. What is expected to be gained by that change?

Mr. WALSH of Massachusetts. After the matter has been before the committee all these months, they do not know what language to use in the paragraph!

Mr. SMOOT. It would be very much easier to administer. The officials of the Tariff Commission claim that it would be very much easier to administer, and I myself think that it would be.

Mr. POMERENE. It would be easier to administer, perhaps, if we would put diamonds and doughnuts under the same rate of duty.

Mr. SMOOT. But that is not what this is. I think we are doing exactly what the Senator from Ohio would like to have done.

Mr. POMERENE. I would like to have it in some form so that I can study it, if possible.

Mr. SMOOT. The Senator has studied the House provision, no doubt?

Mr. POMERENE. I think I understand it fairly well.

Mr. SMOOT. It would be exactly the same as the House provision, although we would make a flat 33 cents a pound on the clean content of the wool.

Mr. POMERENE. Will it be the purpose of the Finance Committee to accept the House provision with that amendment rather than the amendments to paragraph 1102 which are proposed here in the bill?

Mr. SMOOT. That is the object of it, but there will be a little change in the House provision. In other words, if the Senator will follow the language of the House provision, if the change is made, it will read as follows:

Wools, not specifically provided for, and hair of the Angora goat——

Mr. WADSWORTH. Mr. President, I understood that I had the floor.

The PRESIDING OFFICER. The Senator from New York has the floor.

Mr. WADSWORTH. I merely wish an opportunity to offer an amendment. I would not interrupt the Senator at all, but I want to know that my amendment is the pending question. I send the amendment to the desk. In lieu of the matter proposed to be substituted by the committee, I move the following. I withdraw my other amendment which I have previously offered.

The PRESIDING OFFICER. The amendment will be stated.

The ASSISTANT SECRETARY. In lieu of the matter proposed to be inserted by the committee as paragraph 1102, the Senator from New York proposes to insert the following:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, Cashmere goat, alpaca, and other like animals, imported in the grease or washed, 28 cents per pound of clean content; imported in the scoured state, 28 cents per pound of clean content; imported on the skin, 27 cents per pound of clean content.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from New York to the amendment of the committee.

Mr. JONES of New Mexico. Mr. President, may I inquire of the Senator from New York why he does not offer this as an amendment to the committee amendment?

Mr. WADSWORTH. That is just what I have done.

Mr. JONES of New Mexico. I understood that the Senator had changed his first proposal.

Mr. WADSWORTH. The effect of the amendment is to wipe out all of the brackets as provided in the Senate committee amendment, to eliminate, as suggested by the Senator from Montana, the original language providing a maximum ad valorem and substituting 28 cents for 33 cents.

Mr. SMOOT. Will the Senator allow us to perfect the committee amendment now and then offer his amendment reducing the 33 cents to 28 cents?

Mr. WADSWORTH. I will allow the committee to do anything they desire to do so long as I may get a vote on 28 cents in lieu of 33 cents. I am following the advice of the Senator from North Dakota.

Mr. POMERENE. Under this arrangement will there be an opportunity to vote on the 25-cent rate?

Mr. SMOOT. Yes; there will be an opportunity to vote on 25 cents on the amendment that I wish to offer at this time. If Senators will take the bill and look at paragraph 1102 I will read it as it is proposed to have it amended.

Mr. WALSH of Massachusetts. Does the Senator intend to offer that amendment for the committee to-day?

Mr. SMOOT. Yes; I do. As proposed to be amended now the paragraph would read:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, alpaca and other like animals, imported in the grease or washed, 33 cents per pound of clean content; imported in the scoured state, 33 cents per pound; imported on the skin, 32 cents per pound of clean content.

That is the way it would read if amended.

Mr. SIMMONS. Does the Senator offer that as a substitute for the committee amendment?

Mr. SMOOT. I do.

Mr. McCUMBER. Before the Senator offers that amendment I call his attention to the fact that the House text, paragraph 1102, leaves out Cashmere goat, which the Senate committee inserted, and I think that change ought to be made before the Senator offers the other amendment.

Mr. SMOOT. I will say that the reason of that is because of a decision which has been rendered by the Treasury Department as to what Cashmere wool is. With that modification, I will say to the Senator from North Carolina, I now offer the amendment.

Mr. WALSH of Massachusetts. So that the situation is that the committee has withdrawn its amendment and substitutes another amendment, which the Senator from New York proposes to amend by reducing the rate.

Mr. SMOOT. If the Senator from New York would allow me to offer the amendment proposing 33 cents, then the Senator from New York could offer his amendment proposing 28 cents.

Mr. WADSWORTH. Clearly this is the situation: If the amendment now proposed by the Senator from Utah is adopted, I can offer no further amendment to the committee amendment, for it would be an amendment in the third degree.

Mr. SMOOT. But the Senator may, by unanimous consent, offer an amendment after this amendment shall have been adopted, and I do not think there will be any objection to his doing so.

Mr. LENROOT. That may only be done by unanimous consent.

Mr. SMOOT. It may be done by unanimous consent.

Mr. WADSWORTH. But I am not going to take that chance.

Mr. McCUMBER. I desire to raise this point for the consideration of the Chair and of the Senate: The Senate committee under the offer made by the Senator from New York withdraws the previous amendment and substitutes another proposed amendment. The Senator from New York may move to amend the substitute before it is voted upon.

Mr. SMOOT. And the amendment of the Senator from New York would not then be in the third degree.

Mr. McCUMBER. The Senator from New York does not need to wait until the committee amendment is voted on.

Mr. WADSWORTH. Will I have a right to do that in a parliamentary sense?

Mr. SMOOT. Certainly. In offering the new amendment I withdraw the committee amendment in paragraph 1102, beginning in line 16, page 140, down to and including line 11 on page 143.

Mr. SIMMONS. Mr. President, I had generally understood before we took up the pending bill that a committee bringing in an amendment, like an individual Senator bringing in an amendment, could perfect the amendment at any time before it was voted on, but I have understood the Chair has heretofore held that that rule did not obtain with reference to the pending measure, and I do not think we have been proceeding under that rule.

Mr. SMOOT. I will say to the Senator that the method of procedure he has referred to is in accordance with Rule XVIII.

Mr. SIMMONS. That is the rule which has always obtained up to this time, but we have been operating under a different rule, and when the Committee on Finance has desired to change its amendment we have taken a vote upon the question. If it is now proposed to do so, I think we should have to do it by unanimous consent.

Mr. SMOOT. No; for in this case the committee withdraws the first amendment and offers another amendment, and that is an amendment only in the first degree.

Mr. LENROOT. Will the Senator yield to me?

Mr. SMOOT. Yes.

Mr. LENROOT. Merely to get the parliamentary situation in proper state, I desire to ask by what right it is that the chairman of the committee or a Senator who is a member of the committee withdraws or modifies an amendment? Have they been authorized to do so by the committee? I am only speaking from a parliamentary standpoint.

Mr. McCUMBER. It may only be done by unanimous consent, of course.

Mr. SMOOT. That is correct.

Mr. SIMMONS. Under the rule under which we have been operating that is absolutely true.

Mr. BURSUM. I understood the Senator asked unanimous consent.

Mr. McCUMBER. Of course.

Mr. SMOOT. In order that there may be no mistake about the matter, I ask unanimous consent that the amendment to paragraph 1102 as submitted by the committee be withdrawn and that the following amendment be made to paragraph 1102 of the House provision——

Mr. WALSH of Montana. Not "made" but "proposed."

Mr. SMOOT. That the amendment be proposed as a substitute therefor.

Mr. WADSWORTH. Before that question is put, may I again ask the Senator from Utah [Mr. SMOOT] and the Senator from North Dakota [Mr. McCUMBER] what objection there is to giving me permission to perfect the House text?

Mr. SMOOT. The Senator will get a vote upon the 28-cent rate.

Mr. WADSWORTH. But the Senator from North Dakota objects.

Mr. McCUMBER. No; I do not object.

Mr. WADSWORTH. The Senator so stated to me. Of course, I can put it to a vote, I suppose, but I simply want to know the situation. Here comes the committee and completely reverses itself as to the mechanics of the provision assessing this duty, and asks leave by unanimous consent to change the whole mechanism of appraising the wool as it comes in, or very largely so, in its administrative features. Yet when a Senator gets up on the floor and asks leave to change a rate from 25 cents to 28 cents in the House text the chairman of the committee objects. What is the idea?

Mr. LODGE. Mr. President, if I may say a word, I desire to suggest that it is not a matter that requires unanimous consent under our rules.

Mr. WADSWORTH. I have said that it did not.

Mr. LODGE. Under our rules a Senator may modify the original text which it is proposed to strike out——

Mr. WADSWORTH. That is what I wanted to do without forcing the Senate to a roll call.

Mr. LODGE. Or he may move to amend the language which is proposed as a substitute. He may perfect both the part proposed to be stricken out and the part proposed to be inserted.

Mr. WADSWORTH. I offered my amendment to the House text.

Mr. LODGE. The Senator has a perfect right to do that.

Mr. WADSWORTH. But I thought I could avoid a roll call on it. I have been begging for 15 or 20 minutes to do that, but some Senators seem to be sensitive about voting as between a rate of 25 cents and 28 cents.

Mr. SMOOT. Does the Senator from New York object to the committee amendment being offered?

Mr. WADSWORTH. Not at all.

Mr. LODGE. The Senator from Utah has a right to offer the amendment. The Senator from New York could not object to that.

Mr. SMOOT. Then, I now offer the amendment, which is as follows:

Wools, not specially provided for, and hair of the Angora goat, Cashmere goat, alpaca, and other like animals, imported in the grease or washed, 33 cents per pound of clean content; imported in the scoured state, 33 cents per pound; imported on the skin, 32 cents per pound of clean content.

Mr. WILLIS. Does the Senator from Utah propose to strike out all of the brackets?

Mr. SMOOT. Yes; I ask unanimous consent that that may be done.

The PRESIDING OFFICER. Is there objection?

Mr. LENROOT. That is, there is no objection to a modification of the amendment?

Mr. SMOOT. No.

Mr. ASHURST. Of course, I do not object to the request of the Senator from Utah, but I make the point he does not need to ask unanimous consent. It is the procedure, the practice being followed, to which I object.

Mr. SMOOT. I was compelled to ask unanimous consent to withdraw the amendment which has been reported by the committee. That is the only purpose for which I asked unanimous consent, and that was granted. Now I offer the amendment.

Mr. ASHURST. I am not objecting; but this is the same question we had up a month and a half ago, when I tried to point out the error into which we would fall. The Senator from New York does not need unanimous consent to offer his amendment.

Mr. SMOOT. No.

Mr. ASHURST. There is no rule of parliamentary law more clearly fixed than that the matter proposed to be stricken out and the matter proposed to be inserted in lieu thereof may each be perfected. Neither the Senator from New York nor the Senator from Utah needs unanimous consent, and I hope they will withdraw their requests for unanimous consent.

Mr. LODGE. Mr. President, despite what the Senator from Arizona says, there is nothing to prevent them from asking unanimous consent if they want to. A Senator may ask unanimous consent for anything.

Mr. SMOOT. I ask that a vote be taken upon the amendment I have offered.

Mr. WADSWORTH. Mr. President, I think my motion is preferential. I therefore withdraw the last amendment which I sent to the desk, and I renew the motion which I made before—that is, on line 11, page 140, to strike out "25" and insert "28"; on line 12, to strike out "26 cents" and insert "28 cents"; on line 13, to strike out "24 cents" and substitute "27 cents," and, if the Senate does not object—and I am sure it will not—on line 10, after the words "Angora goat," insert "Cashmere goat."

Mr. WALSH of Montana. Mr. President, I notice in the House text there is a difference of 1 cent per pound fixed between the rate on the clean content of wool in the grease or washed and wool in the scoured state, but there is no difference in the rate fixed by the Senator from New York in his amendment. I can not myself understand why there should be a difference in the rate on the clean content and the rate on the scoured content; but, apparently, there must be some reason, because the distinction was made. I wondered what the reason was, and I should like to have the Senator from New York consider whether there should not be the same differential in his amendment. Perhaps the Senator from Utah can explain why, but I notice that the Senator from Utah in his amendment also fixes exactly the same rate.

Mr. WADSWORTH. I followed the example of the committee in that respect.

Mr. WALSH of Montana. I should like to ask the Senator from Utah, then, to explain to us why this differential was put in the House text and he neglected to put it in his amendment?

Mr. SMOOT. The House must have taken into consideration that wool coming in here in the grease or washed had to be scoured, and for that reason they made a cent a pound difference between the content of the grease and the washed wool and the content of the scoured wool. The Finance Committee, however, can not see any reason why that should be done, and I am quite sure that there should not be any difference.

Mr. BURSUM. Mr. President, was not that extra 1 cent a pound put in for the purpose of affording some little benefit to the scouring mills of this country? I think that was the only object of placing a higher duty on the scoured wool than upon the clean content of the other wool.

Mr. SMOOT. I will say to the Senator that, in my opinion, there is no reason for it whatever.

Mr. BURSUM. I think that was the reason it was placed there—simply to afford the scouring mills of this country a 1-cent advantage over the foreign scouring mills.

SEVERAL SENATORS. Vote!

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from New York.

Mr. WALSH of Montana. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. WADSWORTH. My amendment, the Senate will understand, is to perfect the House text.

Mr. WALSH of Massachusetts. Mr. President, if the amendment offered by the Senator from New York prevails, those who want an opportunity to vote for a rate of 25 cents per pound on the clean content of wool will be deprived of that opportunity. If his motion prevails, there will then be merely a choice between the rate of 33 cents and a rate of 28 cents. Therefore a vote against his amendment is a vote to retain the opportunity to vote against the committee amendment and for a 25-cent rate.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield.

Mr. LENROOT. That is hardly correct, I will say, because the Senator would still have the opportunity to amend the committee amendment as it now stands to reduce the rate from 33 cents to 25 cents.

Mr. WALSH of Massachusetts. Yes; that is true.

Mr. WADSWORTH. My amendment is to the House text, and it will not deprive the Senator the opportunity to which he refers.

Mr. LODGE. Mr. President, we have gone at it in rather a complicated way, but the purpose I understand is to substitute 28 cents for 33 cents.

Mr. WADSWORTH. Not on this vote.

Mr. LODGE. Not on this vote, and therefore this vote does not greatly matter. Whatever is done as to the amendment of the Senator from New York, a vote will come later as between the 28-cent rate and the 33-cent rate. The pending amendment merely affects the House text, but the decisive vote will have to come on leaving the House text and defeating the committee amendment.

Mr. LENROOT. I should like to state just what the effect of the amendment is. If this amendment is not adopted and the committee amendment is defeated it will leave the rate at 25 cents. If the committee amendment is defeated and the amendment of the Senator from New York is adopted, it will leave the rate at 28 cents.

Mr. SMOOT. The Senator has stated correctly.

Mr. WARREN. That is, so far as the Senate is concerned, but the House will have to act upon it.

Mr. WALSH of Montana. Mr. President, in order that the test may be altogether fair, I think that the two motions ought to be pending at one and the same time. Of course, if the amendment now offered by the Senator from New York, to reduce the rate from 33 cents to 28 cents, should be defeated, it would be useless for any Senator to propose an amendment to the amendment offered by the Senator from Utah on behalf of the committee to reduce the rate from 33 cents to 25 cents. Therefore the matter will be foreclosed for all practical purposes if the motion of the Senator from New York shall be defeated.

An opportunity ought to be given to perfect both texts; so that the motion, it seems to me, should lie on behalf of anyone who desires to make it—possibly the Senator from Massachusetts [Mr. WALSH]—to amend the amendment offered on behalf of the committee by the Senator from Utah to reduce the rate from 33 to 25 cents. Then there would be the two motions pending, the one applicable to the House text and the other applicable to the Senate text. Then the question would arise as to which should have precedence.

Mr. LODGE. Mr. President, the fact that an amendment is offered to perfect the House text, and is defeated, does not in the least prevent the same amendment being offered to perfect the proposed Senate amendment.

Mr. WALSH of Montana. I will say to the Senator from Massachusetts that I appreciate that perfectly; but the Senator from Massachusetts will appreciate equally as well that if the amendment offered by the Senator from New York is defeated it will signify that the Senate does not desire to reduce the rate to 28 cents, and it would then be useless to offer the other amendment, unless, indeed, some Senators might vote, conceding that it was too high.

Mr. WADSWORTH. Mr. President, will the Senator yield?

Mr. WALSH of Montana. I yield.

Mr. WADSWORTH. In so far as I may authorize it, I have no objection whatsoever to anyone on the other side or anyone in the Senate offering an amendment to the committee amendment before my amendment is voted on.

Mr. WALSH of Montana. Let me make this suggestion to the Senator from New York——

Mr. WADSWORTH. Or I will withhold my amendment until any other amendment is offered.

Mr. WALSH of Montana. That was my suggestion. Possibly the Senator from Massachusetts [Mr. WALSH] will care, then, to make the motion which I suggested.

Mr. WADSWORTH. Then, do I understand that if I withdraw this amendment temporarily another amendment will be offered?

Mr. WALSH of Massachusetts. I will do that; yes, sir.

Mr. WADSWORTH. To the committee amendment?

Mr. WALSH of Massachusetts. Yes, sir.

Mr. WADSWORTH. Very well.

Mr. WALSH of Montana. I am not sure, upon reflection, that that would be pertinent, because that would be merely restoring the House text.

Mr. WALSH of Massachusetts. No; it would not be restoring the House text, because the proviso would be out of the House text.

Mr. LENROOT. But we would have a vote upon the 25 cents.

Mr. WADSWORTH. Does the Senator want to offer it?

Mr. WALSH of Massachusetts. I can not do it.

Mr. LENROOT. Yes; the Senator can offer it to the committee amendment.

Mr. WALSH of Massachusetts. Then I will offer the amendment.

The PRESIDING OFFICER. Does the Senator from New York temporarily withdraw his amendment?

Mr. WADSWORTH. I do.

Mr. WALSH of Massachusetts. Upon reflection, Mr. President, I prefer not to offer the amendment at this time.

Mr. SIMMONS. Let us vote upon the amendment offered by the Senator from New York.

Mr. WADSWORTH. I renew my amendment, Mr. President.

Mr. LODGE. That amendment is to the House text?

Mr. WADSWORTH. To the House text.

The PRESIDING OFFICER. The question is upon the amendment offered by the Senator from New York to the House text. The amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to amend the House text in four particulars, so that if amended it will read:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, Cashmere goat, alpaca, and other like animals, imported in the grease or washed, 28 cents per pound of clean content; imported in the scoured state, 28 cents per pound; imported on the skin, 27 cents per pound of clean content.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from New York, on which the yeas and nays have been demanded and ordered. The Secretary will call the roll.

The Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same transfer as on the previous vote, I vote "nay."

Mr. DIAL (when his name was called). Making the same announcement of my pair and transfer as on the previous vote, I vote "nay."

Mr. GLASS (when his name was called). I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM]. In his absence, and not knowing how he would vote on this question, I withhold my vote. If at liberty to vote, I should vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. LODGE (when his name was called). I have a general pair with the Senator from Alabama [Mr. UNDERWOOD]. I am informed, however, that on this question that Senator would vote as I intend to vote, and I am therefore at liberty to vote. I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. NEW (when his name was called). Again transferring my pair as on the previous ballot, I vote "nay."

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Missouri [Mr. REED], I vote "nay."

Mr. STANLEY (when his name was called). Transferring my pair with my colleague [Mr. ERNST] to the Senator from Rhode Island [Mr. GERRY], I vote "nay."

Mr. WATSON of Indiana (when his name was called). Transferring my general pair with the Senator from Mississippi [Mr. WILLIAMS] to the Senator from Maine [Mr. FERNALD], I vote "nay."

The roll call was concluded.

Mr. CALDER. I am paired with the senior Senator from Georgia [Mr. HARRIS], and therefore withhold my vote.

Mr. JONES of New Mexico. Making the same announcement regarding my pair as on the previous vote, I vote "nay." I also desire to announce that the Senator from Nevada [Mr. PITTMAN], if present and not paired, would vote "nay."

Mr. SMITH (after having voted in the negative). I inquire if the Senator from South Dakota [Mr. STERLING] has voted?

The PRESIDING OFFICER. He has not voted.

Mr. SMITH. I have a pair with that Senator, but I am informed that if present he would vote as I have voted, so I will allow my vote to stand.

Mr. GLASS. I find that I can transfer my general pair with the Senator from Vermont [Mr. DILLINGHAM] to the Senator from Alabama [Mr. UNDERWOOD], which I do, and vote "nay."

Mr. CURTIS. I have been requested to announce the following general pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from Connecticut [Mr. McLEAN] with the Senator from Montana [Mr. MYERS].

The result was announced—yeas 6, nays 54, as follows:

YEAS—6.

Borah	Kellogg	McCormick	Wadsworth
Jones, Wash.	Lenroot		

NAYS—54.

Ashurst	Glass	Nelson	Smith
Ball	Gooding	New	Smoot
Brandegee	Hale	Newberry	Spencer
Broussard	Harreld	Nicholson	Stanfield
Bursum	Heflin	Norbeck	Stanley
Cameron	Hitchcock	Overman	Swanson
Capper	Jones, N. Mex.	Pepper	Trammell
Caraway	Kendrick	Phipps	Walsh, Mass.
Colt	Ladd	Pomerene	Walsh, Mont.
Curtis	Lodge	Ransdell	Warren
Dial	McCumber	Robinson	Watson, Ind.
du Pont	McKinley	Sheppard	Willis
France	McNary	Shortridge	
Frelinghuysen	Moses	Simmons	

NOT VOTING—36.

Calder	Fletcher	McLean	Reed
Crow	Gerry	Myers	Shields
Culberson	Harris	Norris	Sterling
Cummins	Harrison	Oddie	Sutherland
Dillingham	Johnson	Owen	Townsend
Edge	Keyes	Page	Underwood
Elkins	King	Pittman	Watson, Ga.
Ernst	La Follette	Poindexter	Weller
Fernald	McKellar	Rawson	Williams

So Mr. WADSWORTH's amendment was rejected.

The PRESIDING OFFICER. The question now is on the committee amendment, as modified.

Mr. WADSWORTH. Mr. President, I move to amend the Senate committee amendment by striking out "33 cents" and substituting "28 cents" in both places where the figures "33" occur; and where the figures "32" occur, I move to substitute "27."

Mr. McCUMBER. Is not that what we have just voted on?

Mr. LODGE. No; this is a proposal to amend the committee amendment.

Mr. SMITH. Mr. President, may I ask the Senator from New York if this is an amendment to the committee amendment?

Mr. WADSWORTH. It is, and it brings up squarely the question of 33 cents or 28 cents.

Mr. BURSUM. Is not that what we have just voted on?

Mr. WADSWORTH. No; we voted as between 25 cents and 28 cents.

Mr. SIMMONS. In other words, the only alternative is either 33 cents or 28 cents.

Mr. WADSWORTH. In my amendment.

Mr. SIMMONS. There is no other chance to amend.

Several Senators called for the yeas and nays, and they were ordered.

Mr. HITCHCOCK. I ask to have the amendment stated.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to amend the modified committee amendment as follows:

Strike out "33" where it first occurs and insert "28"; where it occurs the second time, strike out "33" and insert "28"; and in the last line, where the numerals "32" occur, insert "27," so that, if amended, it will read:

PAR. 1102. Wools, not specially provided for, and hair of the Angora goat, Cashmere goat, alpaca, and other like animals, imported in the grease or washed, 28 cents per pound of clean content; imported in the scoured state, 28 cents per pound; imported on the skin, 27 cents per pound of clean content.

Mr. LODGE. That is the proposed amendment?

The PRESIDING OFFICER. It is. The yeas and nays having been ordered, the Secretary will call the roll.

The Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same transfer as before, I vote "nay."

Mr. CALDER (when his name was called). I have a pair with the senior Senator from Georgia [Mr. HARRIS], and in his absence I withhold my vote.

Mr. DIAL (when his name was called). Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. GLASS (when his name was called). I have a pair with the senior Senator from Vermont [Mr. DILLINGHAM]. I can

not get a transfer, and therefore I withhold my vote. If permitted to vote, I should vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. LODGE (when his name was called). I transfer my pair with the Senator from Alabama [Mr. UNDERWOOD] to the Senator from Pennsylvania [Mr. CROW] and vote "nay."

Mr. McCUMBER (when his name was called). I transfer my pair as on the previous vote and vote "nay."

Mr. NEW (when his name was called). Transferring my pair as on the previous ballots on this day, I vote "nay."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the last vote, I vote "yea."

Mr. SMITH (when his name was called). I have a general pair with the Senator from South Dakota [Mr. STERLING], and being unable to secure a transfer I withhold my vote. If permitted to vote, I would vote "yea."

Mr. STANLEY (when his name was called). Making the same announcement as to my pair and transfer, I vote "yea."

Mr. WATSON of Indiana (when his name was called). I am informed that if the Senator from Nevada [Mr. PITTMAN] were present, he would vote "nay." Therefore I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the Senator from Nevada [Mr. PITTMAN] and vote "nay."

The roll call was concluded.

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Connecticut [Mr. McLEAN] with the Senator from Montana [Mr. MYERS];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN].

Mr. JONES of New Mexico. I desire to announce that the Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family, and if he were present he would vote "nay."

The result was announced—yeas 19, nays 38, as follows:

YEAS—19.

Borah	Jones, Wash.	Pomerene	Trammell
Caraway	Kellogg	Robinson	Wadsworth
Dial	Lenroot	Simmons	Walsh, Mass.
Heflin	McCormick	Stanley	Walsh, Mont.
Hitchcock	Overman	Swanson	

NAYS—38.

Ashurst	France	McKinley	Sheppard
Ball	Frelinghuysen	McNary	Shortridge
Brandegee	Gooding	Moses	Smoot
Broussard	Hale	New	Spencer
Bursum	Harreld	Newberry	Stanfield
Cameron	Jones, N. Mex.	Nicholson	Warren
Capper	Kendrick	Norbeck	Watson, Ind.
Colt	Ladd	Pepper	Willis
Curtis	Lodge	Phipps	
du Pont	McCumber	Ransdell	

NOT VOTING—39.

Calder	Gerry	Myers	Shields
Crow	Glass	Nelson	Smith
Culberson	Harris	Norris	Sterling
Cummins	Harrison	Oddie	Sutherland
Dillingham	Johnson	Owen	Townsend
Edge	Keyes	Page	Underwood
Elkins	King	Pittman	Watson, Ga.
Ernst	La Follette	Poindexter	Weller
Fernald	McKellar	Rawson	Williams
Fletcher	McLean	Reed	

So Mr. Wadsworth's amendment to the committee amendment as modified was rejected.

The PRESIDING OFFICER. The question is on the committee amendment as modified.

Mr. WALSH of Massachusetts. I ask for the yeas and nays.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same transfer as before, I vote "yea."

Mr. CALDER (when his name was called). I am paired with the senior Senator from Georgia [Mr. HARRIS], and in his absence I withhold my vote.

Mr. DIAL (when his name was called). Making the same announcement as to my pair and its transfer as on the former ballot, I vote "nay."

Mr. GLASS (when his name was called). If permitted to vote, I should vote "nay," but I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM], and in his absence I shall have to withhold my vote.

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. LODGE (when his name was called). Making the same transfer of my pair as before, I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. NEW (when his name was called). Repeating the announcement as to the transfer of my pair, I vote "yea."

Mr. ROBINSON (when his name was called). Announcing the same transfer as on the last vote, I vote "nay."

Mr. SMITH (when his name was called). Making the same statement as to my pair and being unable to get a transfer, I withhold my vote. If permitted to vote I would vote "nay."

Mr. STANLEY (when his name was called). Making the same announcement with reference to my pair and its transfer, I vote "nay."

Mr. SWANSON (when his name was called). On this question I have a pair with the senior Senator from Kansas [Mr. CURTIS], and in his absence I withhold my vote. If he were present and voting he would vote "yea" and I would vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as on the last roll call, I vote "yea."

The roll call was concluded.

Mr. JONES of Washington. I desire to announce that the senior Senator from Kansas [Mr. CURTIS] is necessarily absent on account of illness, and that the Senator from Nevada [Mr. ODDIE] is necessarily absent. If present these Senators would vote "yea."

I also desire to announce the following pairs:

The Senator from Connecticut [Mr. McLEAN] with the Senator from Montana [Mr. MYERS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON].

The result was announced—yeas 38, nays 16, as follows:

YEAS—38.

Ashurst	Frelinghuysen	McCumber	Sheppard
Ball	Gooding	McKinley	Shortridge
Brandegee	Hale	McNary	Smoot
Broussard	Harreld	Moses	Spencer
Bursum	Jones, N. Mex.	New	Stanfield
Cameron	Jones, Wash.	Newberry	Warren
Capper	Kendrick	Nicholson	Watson, Ind.
Colt	Keyes	Pepper	Willis
du Pont	Ladd	Phipps	
France	Lodge	Ransdell	

NAYS—16.

Borah	Hitchcock	Pomerene	Trammell
Caraway	Kellogg	Robinson	Wadsworth
Dial	Lenroot	Simmons	Walsh, Mass.
Heflin	Overman	Stanley	Walsh, Mont.

NOT VOTING—42.

Calder	Gerry	Nelson	Smith
Crow	Glass	Norbeck	Sterling
Culberson	Harris	Norris	Sutherland
Cummins	Harrison	Oddie	Swanson
Curtis	Johnson	Owen	Townsend
Dillingham	King	Page	Underwood
Edge	La Follette	Pittman	Watson, Ga.
Elkins	McCormick	Poindexter	Weller
Ernst	McKellar	Rawson	Williams
Fernald	McLean	Reed	
Fletcher	Myers	Shields	

So the committee amendment as modified was agreed to.

Mr. McCUMBER. I ask unanimous consent that when the Senate closes its session on this calendar day it recess until to-morrow at 11 o'clock.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

EXECUTIVE SESSION.

Mr. LODGE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 6 o'clock and 5 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Thursday, July 27, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate July 26 (legislative day of April 20), 1922.

REGISTERS OF THE LAND OFFICE.

Harry B. Drum, of Montana, to be register of the land office at Billings, Mont.

James Edgar Hays, of Nebraska, to be register of the land office at Lincoln, Nebr.

CONFIRMATIONS.

Executive nominations confirmed by the Senate July 26 (legislative day of April 20), 1922.

RECEIVER OF PUBLIC MONEYS.

Charles Henry Lutz to be receiver of public moneys, Roswell, N. Mex.

POSTMASTERS.

INDIANA.

John E. Ward, Gas City.

MISSOURI.

John T. Garner, Carrollton.
Charles E. Bedell, Hale.
George E. Richars, Lilbourn.

MONTANA.

John J. Pietila, Roberts.

NEW YORK.

Maurice M. Parker, Deferiet.
Harry M. Barrett, Mahopac.

OKLAHOMA.

Joseph C. Eversole, Grandfield.
Warden F. Rollins, Noble.

VIRGINIA.

Lula E. Northington, Lacrosse.

WISCONSIN.

Lyle H. Nolop, Alma Center.
Joseph R. Frost, Avoca.
Grant E. Denison, Carrollville.
Floyd B. Hesler, Glenbeulah.
William H. Ware, Loganville.
Fred J. Marty, New Glarus.

REJECTION.

Executive nomination rejected by the Senate July 26 (legislative day of April 20), 1922.

POSTMASTER.

Washington H. Carlisle to be postmaster at Alexander City, Ala.

SENATE.

THURSDAY, *July 27, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

AMENDMENTS OF THE SILK SCHEDULE.

Mr. McCUMBER. Mr. President, the Committee on Finance have gone over the silk schedule and propose to offer a number of amendments to it. In order that they may be printed and lie on the table so that Senators may have a chance to examine them, I ask that an order to that effect may be made.

The VICE PRESIDENT. Without objection, it is so ordered.

HOSPITALIZATION OF DISABLED EX-SERVICE MEN.

Mr. WALSH of Massachusetts. Mr. President, I ask that there may be printed in the RECORD in 8-point type a letter from Mr. A. A. Sprague, chairman of the American Legion's national rehabilitation committee, addressed to Brig. Gen. Charles E. Sawyer. The letter is a protest on the part of the representatives of the American Legion against the delay in the building of new hospitals under recent appropriations by Congress, and asserts that unnecessary and harmful results will follow. I regret that the tariff bill debate prevents my discussing this situation. Evidently the rehabilitation committee of the Legion is desirous that the construction of these hospitals be proceeded with without further delay and desires the backing of Congress and public opinion in order to get action.

There being no objection, the letter was ordered to be printed in the RECORD in 8-point type, as follows:

"CHICAGO, July 24.—A. A. Sprague, of Chicago, acting officially for the American Legion as its chairman of the Legion's national rehabilitation committee, has written to Brig. Gen. Charles E. Sawyer, President Harding's personal physician, sending a copy to President Harding for his information, requesting General Sawyer to 'stand aside and allow the program of the Veterans' Bureau to go into effect at once.'

"The request is in answer to a recent letter of General Sawyer, who was appointed by Harding from Marion, Ohio. General Sawyer, as chief coordinator of the Federal Board of Hospitalization, is accused of obstructing a prepared program, thereby injuring thousands of mentally sick war veterans maintained in contract hospitals away from their homes and friends against the advice and national program agreed upon by the Director of the Veterans' Bureau of Washington, a board of neuropsychiatrists, and the Legion.

"General Sawyer's recent letter is declared to be 'one of the explanations of a policy of interference, shameful delays, and neglect,' and a statement in the Sawyer letter that 'few are there, indeed, who have particular concern in the disabled war veteran,' is called an indictment of every American citizen. The letter from Sprague to General Sawyer and President Harding follows:

LETTER TO GENERAL SAWYER.

"'Your letter to me of July 12 presents certain statements and conclusions regarding the Government's care of sick and disabled service men, which it is imperative that the American Legion should answer without delay or equivocation.

"'You say: "Up to the present the whole subject of the World War veterans has been one largely of sentiment by many people. A year and a half ago, when I came to my office in Washington, there were not minutes enough in the day to give attention to the people who were here sympathizing with the World War veteran and wanting to do something special for him. To-day the story is very different. Few are there, indeed, who have particular concern."

"'I maintain that the first interest of every citizen of this country, as it is the first purpose of the American Legion, is to secure the fairest and best treatment possible for our men and women who are suffering from services rendered to our country under the colors in war.

INDICTMENT OF EVERY AMERICAN.

"'Your assumption that "few are there, indeed, who have particular concern" with the disabled World War veteran is an indictment of every American citizen, to which each must respond for himself. It ignores the positive, continuous efforts of the American Legion, which have never stopped, no matter how disheartening the results. While your statement is a revelation of your own analysis of the country's attitude, it is also one of the explanations of a policy of interference, shameful delays, and neglect of men and women to whom this country can not give too much, nor deal with too fairly, nor can they afford to have it truthfully said that they have violated their solemnly given promises and pledges.

"'You also say: "I am opposed to the domination of people outside of the Government forces in this matter. I regard and will always regard with the greatest respect the opinions of any who may have opinions to offer and they will all be considered when occasion demands, but if the Government is to be influenced by outside organizations, associations, or specialists' committees, we will continue to be in trouble."

"'Your opposition to the Government being influenced "by outside organizations, associations, or specialists' committees" exists in spite of the fact that every bit of legislation now in effect for the disabled veteran was put through Congress by the American Legion. It was in correction of miserable neglect.

STILL FAILS TO ACHIEVE.

"'It still fails to achieve for the veteran what the country desires he should have. This failure, we are convinced, is not due to the interference of organizations which are seeking honest, constructive cooperation with the Government, but to the constant injection of obstacles to the program as agreed upon, such as your failure to understand and interpret it in a helpful manner. These programs have been arranged at conferences between representatives of the Legion and those who are actually charged with the responsibility of administering this care, and the best group of medical consultants in this country.

"'The policy of the American Legion has always been one of constructive criticism and of close and hearty cooperation with the Government. Our effort has been directed toward a centralized, unified, responsible Government bureau. By legislation such a body has been created in the Veterans' Bureau. We are giving this body our fullest support and with increasing confidence that if not interfered with by the other Government agencies, it will do the work satisfactorily.

"'A national program for the hospital care of service men who are suffering with mental and nervous diseases was agreed upon between the Director of the Veterans' Bureau, the Board of Neuro-Psychiatrists, who are recognized leaders in this country, and the American Legion.

DISTRESSING DELAYS.

"'This program was decided upon after long delays, which have been distressing to the Legion but still more distressing to thousands of men who might have been cured, but who are now doomed to a life of mental darkness.

"'In every district of the United States the largest and most pathetic problem is the care of these men who are mentally sick. They can not speak for themselves. We intend to speak for them until their needs are fairly met.

"'This program is now being curtailed and delayed. The beds for nervous and mental patients have already been reduced 1,270 from the 3,800 beds to be provided by that program. When we remember that these recommendations were based upon money available and not upon needs, and that in several districts the total number of beds would be unquestionably filled by patients now in unsuitable contract institutions, we claim that such a reduction is absolutely inconsistent with an honest attempt to provide permanent cure for this class of patients.

"'You say in your letter to me: "Because the Langley bill has given us these millions of dollars, not mandatory, thank Heaven, to use, let us be careful in the disposition of it so that finally those who are now charged with the responsibility of laying the foundation for this great proposition be given credit, with due sense and careful regard of the interests of the general public for, after all, this same soldiery and their progeny are to be the ones who must pay for what is given now."

MORAL MANDATE IN BILL.

"'If there ever was a bill which carried a moral mandate to the Government it was the second Langley bill. You will remember that the Legion fought to have the money appropriated under this bill awarded to the Veterans' Bureau. We won in this fight. It was a fight against your effort, against your appeal, to have this money awarded to the Federal Board of Hospitalization, of which you are chief coordinator. We were disgusted with the delays in the former appropriation of $18,600,000. We did not want similar delays in the expenditure of this new appropriation. The purpose of the bill and the expenditure to be made were clearly and definitely set forth in the preliminary hearings of the committees and in the report of Congressman MADDEN, for the Committee on Appropriations, to the House. They include 1,060 beds for tuberculosis, 3,800 beds for neuropsychiatrics, and 600 beds for general and medical hospitals.

"'As a business man, and aware of the opinion of business men of this country, as well as that of the Legion, I want to state that there has never been shown any disposition on the part of the American people to economize at the expense of the real heroes of the war. The president of one of the largest business organizations in America wrote me:

PRESENT SYSTEM CRUEL.

"'"I have yet to come in contact with a man or woman who is not in full sympathy with providing the best that the land affords for disabled veterans. Mental disability is the most distressing of all, and to house victims of shell shock with men who are crippled is cruelty, in my opinion. I am strongly inclined to think that there isn't a business man or a business institution in the country, of any size, that would not contribute generously to any plan that would insure the boys who "went over the top" receiving what they have earned—the best possible treatment."

"'I am confident that the future citizen is far more liable to condemn failure to provide the best possible care than he is to complain if better provision than was ever made before is made for these men.

"'Your statement "that the peak of hospitalization has been passed and that there are now 10,000 beds vacant in Government institutions, * * * that we have hospitals enough except in two particular districts," is not only misleading, but will tend to cause the American public to be satisfied with treatment which is unsatisfactory.

PEAK TO BE IN 1926.

"'The experts of the country have repeatedly set up that the peak of hospitalization will not be reached until 1926. You have stated that these hospitals will not be long needed. Sir, they are needed now—the question of the length of time does not enter into the problem any more than it did when we set up hospitals at the front. They were needed. That fact alone was considered. Without a whimper we appropriated $3,000,000,000 at the end of the war to discharge uncompleted contracts, scrapping temporary structures right and left. Is the disabled men's treatment alone to be given a parsimonious supervision?

"'The American Legion for four years has been trying to secure real medical care in Government-owned hospitals for the mental and nervous wreckage of this war. For the first time, several months ago—in the passage of the Langley bill—we felt that the victory had been won and that an adequate hospital program would be put through with speed. To-day over 4,500 mental cases are still in contract institutions, and of the remaining 4,714 only 3,500 are in hospitals entirely devoted to their attention and cure. When you say that there are hospitals enough and beds to spare you unwittingly strike at the most defenseless and yet most important group we have in our hospitals—namely, those who are in contract institutions and who will have to remain there unless proper hospitals are constructed. If this is not done soon, the attempt to cure these men will be futile—many of them are now past help and will be subject to custodial care for the rest of their lives.

PROPER CARE IS URGED.

"'The American Legion is whole-heartedly against the suggestion that any arrangement will do for the mentally and nervously sick. It is true that they have been shoved into overcrowded State institutions where the majority of the patients are dying, demented old people, or in general hospitals where only a partial temporary care can be given them.

"'Is it too much to ask the Government of the United States to put the 10,000 mentally and nervously disabled service men in hospitals owned and operated by the Government? These hospitals are not now in existence. The fact that there are 1,600 beds available for tubercular patients in the southwest of the country has little or nothing to do with the proper hospitalization of these mental and nervous veterans for whom the Legion is now appealing.

"'These men should be hospitalized as near their own homes as possible. I do not agree with your statement made before the congressional committee that "after 25 years' experience I should say that location as regards one's family is of no importance." I do not believe it, because I know the men who have been hospitalized too well, and I know how their families feel about it, and I know that their contentment and the encouragement of their friends is often the chief factor in their return to health and strength.

NO WAR EXPERIENCE.

"'I recognize the fact that before becoming chief coordinator of the Federal Board of Hospitalization you had no contact with the men and women who were serving in the Army and Navy during the war, and no experience either in the field or in Government service that would give you a chance to really know how men feel who lose their nerve, their health, and their minds in their devotion to duty, or how their families look upon these men who went out in the strength of their youth to invest their life in their Nation's service.

"'Those of us who served with them know that these men, many of whom have been hospitalized long periods, need the encouragement of their families and friends, and that encouragement is one of the chief factors in their restoration and cure. This is particularly true of the type for whom we are now asking the Government to provide hospitals.

"'It is almost unbelievable that, having satisfied Congress that these hospitals were needed and that they should be built to capacity, we now have to reply to your statement that they are unnecessary. Sir, ask the boys in the contract asylums and their families, ask the men whose nerves have been shattered by this war, who have suffered for the lack of adequate hospitalization, ask the thousands or tens of thousands of people throughout the United States who no longer come to your office in Washington but who are seeking for hospitals nearer home for those whom they have loved but have given to their country.

BEST CARE DEMANDED.

"'The reply of the American Legion and of every real American is "Give these men the best care that medical science can provide in Government institutions maintained at the highest standard of equipment and administration—and near to their own homes so that if rehabilitated they can be returned to civil life with greater ease, and if doomed to a life of hospitalization they can be near those whom they love best."

"'Four years have already passed and the veteran is not yet provided for. A belated program is now being held up and changed. It is being changed to meet your approval.

"'I appeal to you, sir, to stand aside and allow this program of the Veterans' Bureau to go into effect and at once.'"

Mr. WILLIS subsequently said: Mr. President, this morning the Senator from Massachusetts [Mr. WALSH] has inserted in the RECORD certain criticisms or charges relative to the work

of Gen. C. E. Sawyer, in connection with the hospitalization of veterans of the World War. I think it only fair that the statement which Doctor Sawyer has issued in reply to those criticisms should appear in the RECORD following the statement that was inserted by the Senator from Massachusetts.

I therefore ask unanimous consent that Doctor Sawyer's statement appear in the RECORD in 8-point type just following the insertion that was made at the request of the Senator from Massachusetts. We all desire to get the facts.

Mr. WALSH of Massachusetts. Mr. President, of course, there is no objection. It is perfectly proper that the letter should be inserted in the RECORD. What I had printed in the RECORD was not a statement but was a letter from the chairman of the rehabilitation committee of the American Legion. It is very proper, however, that the reply or communication of General Sawyer should also appear in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

To the public:

Answering A. A. Sprague's charges that Brig. Gen. C. E. Sawyer is delaying and obstructing hospitalization, the following testimony is presented:

NEW YORK, N. Y., *June 21.*

Brig. Gen. CHARLES E. SAWYER,
12 Drake Hotel, Chicago, Ill.:

American Legion officials in statement to N. E. A. Service make charges that you are responsible for delay in hospitalization program for disabled soldiers. They also question your eligibility, because of age limit, for your Army post. N. E. A. Service offers you opportunity to answer charges. Will you wire us 100 or 200 words, press rate, collect?

FRANK RYAN,
Editor, N. E. A. Service,
461 Eighth Avenue, New York.

—

SPRAGUE'S ANSWER.

JUNE 21, 1922.

Mr. FRANK RYAN,
461 Eighth Avenue, New York City, N. Y.:

General Sawyer has shown me your telegram. I have been as closely in touch as any one individual with the hospital program for disabled ex-service men and I know and state here that the charge that the general has delayed the hospital program is false. The latter part of the charge is too trivial and futile to answer. General Sawyer has given much valuable advice and assistance to this work, and I am sure that misinformation and ignorance of facts are responsible for this ridiculous and unfortunate statement.

A. A. SPRAGUE,
Chairman National Rehabilitation
Committee of the American Legion.

(Copy to General Sawyer.)

The American public should know the hospital situation as it really exists at the present time and they will then be able to determine whether or not the United States Government is making effort to take care of its disabled World War veterans, and whether or not the charges by Sprague as set forth in the Associated Press reports are just.

At present under Government control and operation there are in the United States of America 99 Government hospitals with a capacity of 28,412 beds, 10,191 of which are at the present time unoccupied.

The White committee has supplied and turned over to the Veterans' Bureau 2,386 beds and will have provided in its completed program 6,169 beds.

The Veterans' Bureau has under the process of construction at the present time 3,500 additional beds which have already been located and work commenced.

The 99 Government hospitals, with a total bed capacity of 28,412 patients, including the 10,191 unoccupied beds, are distributed throughout the United States and are all now operated upon a standardized plan of service which guarantees the very best of hospital treatment which can be provided.

There is engaged in this hospital service a personnel of about one attendant to each patient. In this personnel are men and women of the highest type of scientific, professional, and medical rehabilitation skill, working daily for the promotion of the interests of those who by the vicissitudes of war become incompetent.

When the hospitalization plan of the Government for the care of the ex-service men shall have been completed as now contemplated—and which is being hurried to early completion—it will represent in all of the departments a total expenditure of approximately $800,000,000.

These facts certainly show that the United States Government is doing every consistent thing possible for the disabled veterans, and for the length of time at its disposal everything has been achieved which human agency could accomplish.

It is the determination of the present administration to give to the disabled World War veterans the very best of hospital service that can possibly be provided, and it shall be my constant effort and my policy to proceed with reason, efficiency, and economy in carrying out such of its affairs as come to the attention of the Federal Board of Hospitalization. From this position I will not be forced, cajoled, or stampeded.

STATISTICS, FIGURES, AND FACTS RELATIVE TO THE CARE AND TREATMENT OF WORLD WAR VETERANS.

(By Brig. Gen. Charles E. Sawyer, Chief Coordinator Federal Board of Hospitalization.)

The following reports from the Veterans' Bureau, the Treasury Department, and the Federal Board of Hospitalization give such detailed account of affairs at present existing relative to the subject of World War veteran hospitalization that I submit them in full for careful consideration.

Data taken from the report of the Veterans' Bureau under date of June 15, 1922, reveal the following facts:

The Government now has under its own control and operation 99 hospitals, providing 28,412 beds, 10,093 of which are unoccupied at the present time. Since February the number of unoccupied beds has been increasing at the rate of 250 per month, indicating beyond doubt that the peak of hospitalization has been reached.

That there may be no errors in figures presented, a complete list of all Government owned and operated hospitals is given herewith. This list shows department to which hospitals belong, number of beds available in each, and the number of beds occupied and unoccupied in each. At the end of the list appears a diagrammatic illustration of the class of patients they serve, which speaks for itself:

Location.	Beds available.		Total.
	Occupied.	Unoccupied.

The following report of the White committee shows in detail just what is being done with the $18,000,000 allotted the Treasury by the first Langley bill.

Through the White committee 6,169 beds are being added to the Government-owned list; 2,096 of these are all occupied or are ready for immediate occupancy; and just as soon as it is humanly possible to complete the balance of them they will be turned over to the Veterans' Bureau.

To Brigadier General Charles E. Sawyer, from consultants on hospitalization.

Bed space ready.

U. S. V. H. No. 63, Lake City, Fla.: Two hospital units completed and opened ..... T. B.. 100

U. S. V. H. No. 50, Whipple Barracks, Ariz.: Project completed ..... T. B.. 422

Prov. Hospital No. 2, Little Rock, Ark. (Fort Logan H. Roots): Project completed and opened ..... N. P.. 257

U. S. V. H. No. 42, Perryville, Md.: Construction practically completed; movable equipment at the site. Doubtless will be ready to open within two weeks. Capacity, 300 beds N. P.

Prov. Hospital No. 2, Fort Walla Walla, Wash.: Project completed and opened ..... T. B.. 165

Bed space ready.

U. S. V. H. No. 27, Alexandria, La.: Work here consisted of constructing kitchen, mess hall, water supply system, refrigerating plant, etc. Completed.

N. H. D. V. S., Milwaukee, Wis.: Report of June 30—57 per cent completed. To be finished in August. Capacity, 612 T. B.

Total		3,500

Sites and locations for the above have been determined upon and some of the work of construction is already on the way.

RELEVANT FACTS AND GENERAL COMMENTS.

When the present administration assumed the reins of government March 4, 1921, all of the Government hospitals caring for the disabled World War veteran were operating under many disadvantages. Particularly was there lacking cooperation and coordination of the various departments of Government which had to do with this matter.

Realizing the importance of the subject of the World War veteran and being desirous of correcting its deficiencies, the present administration began very early to investigate the subject, with a determination to discover discrepancies and provide relief.

As the first step in the general procedure of clearance and establishment of a proper plan for the care of the disabled soldier, a committee known as the Dawes committee was called

to take under advisement and into consideration affairs as they actually presented themselves at that time.

Careful observation disclosed the fact that the subject presented two definite propositions—first, immediate hospitalization needs; second, a future hospitalization program, with some definite policy for execution.

While the Dawes committee were considering the emergency aspect it was discovered that there were at the command of the Government 12,000 vacant beds in the various departments of the Government which were not being used.

Some of these beds, it is true, were in institutions which were not ideal, but they were the best the Government had at command, and they were offered freely and willingly for the service of the World War veteran, and under ordinary circumstances would have been agreeably accepted by them.

But an antigovernment hospital sentiment was created which made the thought of Army and Navy hospitals displeasing to the veterans. This was due to a propaganda of publicity, which should never have been carried on, for, had a proper sentiment of understanding and of reasonable consideration prevailed in the matter of the hospitalization of the World War veteran, there would never have been and would not be now justifiable complaint as to favorable hospitalization of the afflicted veterans.

The objection made to the use of the then available beds in the Government hospitals—Army and Navy—was a dislike for the Army and Navy discipline.

At the meeting of the Dawes committee it was shown that the Army and Navy both had many available beds, and it was the effort of those concerned that they might be made immediately available as an emergency measure for the care of the men, and because of an effort to afford this assistance to the disabled veterans, which was all the Government had at its command, a propaganda of fault-finding was begun against some of those who were most earnestly trying to solve the difficult problem, and, unfortunately for all concerned, that attitude is still being maintained by those who really do know better but still persist in being unfair.

It was understood then, just as it is now, that a building program for the future involved things which would necessarily and naturally take time and careful consideration in the proper carrying out of the various needs presenting.

The Dawes committee sought to bring about an understanding of the entire hospital situation and to provide immediate means for the care of all of the men at that time, never losing sight of the fact that the bigger and broader and more important subject had to do with a building program for the future which must be undertaken with care and deliberation if it was to be competently and effectively carried out.

In order to exercise proper judgment in this great subject it was necessary to study, first, location; second, available property; and, finally, to in some way get something like a clear conception of what the final needs, so far as hospitalization was concerned, were going to demand.

In contemplating the expenditure of $18,000,000, which at the time of the meeting of the Dawes committee was available, the policy adopted was to appoint a committee of specialists. This resulted in the constituting of the White committee. Such was their deliberation, care, and consideration and action that within a reasonable time this $18,000,000 worth of hospitals will have been completed.

If the last of the projects under the White committee are completed within a period of two years from the time the committee began its operations, the Treasury Department will be entitled to much credit.

The program the White committee laid out involved not only a proper expenditure of $18,000,000 but much of consideration as to fitting locations and other conditions which affect very materially the outcome and usefulness of all the hospitals they are constructing.

It has been charged that representatives of this administration have delayed the progress of the work; that the Architect's office of the Treasury has been slow in carrying out their plans; that there were some who were disposed to curtail the development of the hospital project; but all of those charges are absolutely groundless and ultimately will be known to have been made without due consideration of fact.

As chief of the Federal Board of Hospitalization, prompted by a desire to promote the best interests of the World War veterans' hospitalization which will finally return to the soldier something worth the while, I say without fear of contradiction that everything so far that the Government has had to do with the hospitalization of the World War veterans has been done with earnestness, interest, and enthusiasm; furthermore, as expeditiously, economically, and efficiently as the circumstances and conditions would possibly permit.

The unfortunate part of the whole business was and is that there has been a lack of cooperation between those being served and those serving.

To-day in Government-owned hospitals there are 10,000 beds available that could well be used for the various classes of cases which are now applying, and they would be so used but for the fact that some of the men who claim they require hospitalization will not accept the hospital care that is available, because it is not in their own immediate community or because they have some personal feeling as to the influence of location upon their particular disorder.

As illustration of this, we find that some of the T. B. cases belonging in the Middle West and the metropolitan district have gone to the far West or into northern New York and overcrowded the institutions there. This, too, because of their own personal feeling that they would be better off, while in fact they would be just as well off in their homes.

Again, we find that many of the men suffering from so-called neurotic or psychotic disturbances will not go to the institutions provided because of some personal feeling of their own regarding the locality of the hospital presenting.

As an illustration of this there are to-day at the Great Lakes Naval Training Station 750 beds in splendid buildings as perfectly and thoroughly equipped as are any of the hospitals in the country. Here, too, is a wonderful personnel of experienced, expert specialists, who are ready, willing, and qualified to do everything that science and scientific skill can do for cases of this kind, and yet where 1,000 beds could be provided only 361 are used.

What is true of the naval hospital at the Great Lakes is likewise true of many other institutions. In the city of Washington there are to-day at least 1,236 empty hospital beds which might well be utilized for the treatment of the World War veterans and would be but for the fact that the veteran will not accept the change necessary to utilize the beds available.

It is no more possible or convenient for the Government to provide all of the hospitals that would be asked for than it would be possible for the Government to provide universities and colleges in which to educate our young men if they, too, declined to go where the facilities were provided.

What must finally result will be the establishment by the Government of hospitals in fixed localities, so equipped and operated as to give the very best of attention than can be given, and then the sick soldier or sailor who would avail himself of such treatment must go where he is directed. So soon as this policy has been put into effect, both the troubles of the disabled veteran and the National Government will be overcome. This can be and will be very quickly accomplished if only a proper spirit of education and publicity propaganda is carried on by all concerned.

What we need now is getting together in a spirit of quieting the present unrest, of making the best of what we have, and of getting on to something that will ultimately be what we need.

This being true, it is only reasonable that in the contemplation of the needs of the hospitals for the future, we look the whole subject squarely in the face, wring out of it all sentiment, and deal with it as a matter of fact.

If everybody would look into the administration of hospitalization affairs with constructive intention, carrying out the policies now proclaimed, history will record of those administering these affairs as having had both courage of conviction and a constructive vision, and all will be better off.

If we will be firm and determined to look upon this subject from a business man's standpoint, if we adopt and pursue with care, if we hearken to the direction of individuals who have business sense in the conduct of such matters, ultimately the whole country will say that this administration, in which has been laid the foundation for the care of these veterans of the Government for all the years to come, will have served well. On the other hand, if we are sentimental, improvident, and unmindful of the real facts as they exist we will have failed.

So far as my own observations go, I have never met a single individual who was not anxious, ambitious, and more than ready and willing to do the best that possibly could be done for the promotion of the interests of the hospitalization cause.

It is charged that the Federal Board of Hospitalization has become an obstruction between the Director of the Veterans' Bureau and the quick consummation of the Veterans' Bureau plans.

It seems well here that all should know of whom this Board of Hospitalization consists:

"Maj. Gen. Merritte W. Ireland, Surgeon General United States Army, whose experience in this country and abroad in the building of hospitals and caring for the afflicted soldier is unequaled.

"Rear Admiral E. R. Stitt, Surgeon General of the Navy, who has had long years of experience in the hospitalization of sailors, with years of practical application of hospital principles.

"Gen. George H. Wood, president National Home for Disabled Volunteer Soldiers, whose years of experience in caring for the infirm and afflicted of the Civil War makes him competent and capable and brings to the service of the World War veteran the greatest institutions any nation knows, so far as equipment, location, general surroundings, and economy of operation are concerned.

"Dr. William A. White, who has had charge of the largest single Government institution, St. Elizabeths Hospital, for many years, who knows the needs of the neuropsychiatric subject perfectly.

"Mr. Charles H. Burke, Commissioner of Indian Affairs, who has studied the subject of proper legislation, of legal requirements necessary in all of the cases, and because of his years in the United States Congress and his practical experience in 80 hospitals connected with the Indian Service, is specially qualified to render helpful assistance.

"Surg. Gen. H. S. Cumming, of the United States Public Health Service, who has handled the great subject of caring for all of the public health institutions since the great burden of war liabilities has been resting upon the Government.

"Colonel Forbes, the head of the Veterans' Bureau, who fought his way through the trenches from a lieutenancy to a colonelcy during the late war and who to-day is giving everything there is within him to the promotion of the interests and the welfare of the World War veteran and doing everything that lies within his power to help to bring about the best attention and care that can be provided.

"For myself, Dr. C. E. Sawyer, I have had the experience of living on the ground and in hospitals with the sick and afflicted for a third of a century."

These men are varied in their experience, broad in their views, generous in their disposition, practiced in their professions, and as such I would like to submit to a thinking public whether or not they might justifiably be classed as a capable and worthy body of men with whom to counsel in all matters pertaining to disabled soldier hospitalization and domiciliation.

An emergency and lack of attention have passed. We no longer have any possibility of being reasonably and justly charged with not being able to hospitalize such patients as need Government care. That being true, then it is only sensible that we proceed judiciously and with caution; that we do not do things which ultimately will prove to have been unwise and submit ourselves to the same charge of extreme wastefulness that is now being charged to those having the responsibility for the conduct of the affairs of preparation for the World War.

That experience should be an example for us and should stand as a reasonable and sensible warning against inconsiderate action in the expenditure of the money which finally this same soldier will have to reimburse.

After all, it does not matter as much how many hospitals we have or where they are located as it matters the character of the personnel and the manner in which they are conducted.

The Federal Board of Hospitalization has made that subject one of special study and has created a standardized basis of operation, has fixed a personnel and corps of operators that guarantee to the World War veteran the very best attention that can possibly be given.

If all concerned, and that means every American citizen, were to use their influence in behalf of harmony, in encouragement, in helping to carry out the ideas that are promulgated by those who should know, then we could all proceed with a program that would be harmonious and effective.

So long as there is not absolute need for beds, so long as the Government has at its command places where it can hospitalize all who apply, so long as there are over one-third of all the beds in Government institutions unoccupied, there is certainly no occasion for other construction, or such hurry as to bring about waste and would locate our institutions out of sections in which they really belong and build more than is really necessary.

These are some of the obstructions which have been charged in some of the articles that have recently come to my attention by those decrying the progress of the work.

It is easy indeed for those who only wish to complain and find fault to get blatant evidence supporting their position.

It is not in my heart to charge anyone with deliberate desire to misrepresent facts or conditions relative to this vital and important subject.

I would like to call the attention of those who are in charge of these affairs, who speak for the bodies they claim to represent, who are giving out information which must influence the American citizen generally and particularly our defenders, it is only proper that they be as fair as they would have others be in order that together we may proceed in justice to all.

It is only proper that we deal with this subject as though it were a personal affair. Certainly no business man engaged in the hospital business would think of building large additions to his plant without having prospect of patients to fill them.

Reviewing the subject as best we can from every angle, it is my candid opinion that to-day if the unoccupied beds were used discreetly, if they were occupied as they should be by those who could avail themselves of them, there would be no need of more hospital beds to take care of the sick World War veteran, either now or in the future.

Personally I have but one concern in the matter of hospitalization and that is the concern that every doctor of medicine must have for his patient, which is that the end results shall prove that the attention he gave was efficient and helpful in bringing back into health again in the best way possible those who have been submitted to the necessity of hospital attention.

The charge that there are two men dying every week from suicide because of not having hospital care is ridiculous. If the same men who were in the service could be measured as to their deficiencies and disturbances, if they had not been in the service it would be found that a large percentage would be tubercular, an equal portion of them would have been medical and surgical, and about the same percentage neuropsychiatric.

Melancholia and suicidal disposition is a characteristic of our rapid-going race, and if the records of the past for the same number of men were looked into the same rate of self-destruction would be found to exist as is existing now.

This suicide charge is a senseless, sentimental one, made apparently with no other thought than to act upon the emotion of the public generally. Because of such statements, much unrighteous complaint is made and much unjustifiable criticism is developed.

It is my prediction that—

When the history of the hospitalization of the World War veteran is finally written, dictated as it will be by unbiased opinion, the subject will certainly be presented in a much less garbled and dramatic manner than as at present by those who assume to express Legion opinion. When radical sentiment shall have yielded to sober reflection, present complaints will have been exchanged for expressions of gratitude and praise. Ultimately all of the scenes connected with the subject of World War hospitalization will have been shifted and critical business judgment will rise to compliment that which is now being questionably accepted.

Governed by a definite purpose and a burning desire to build well for the real World War veteran, it shall be my continued determination to seek for and help to deliver to the sick soldier the best of treatment, the most helpful surroundings, and the most effective environment with which he can reestablish himself in the normal, active affairs of a great American Republic.

If I can help to bring some afflicted, halt, or faltering veterans to such a degree of recovery as to make them strong, capable, self-confident, and independent, then I will have been more than compensated for the effect put forth and slander endured.

The unvarnished truth about the hospital matter is that it has been a subject of misrepresentation by some ever since the service man became a subject of governmental concern.

If those who jeer and find fault would encourage and aid, the hospital subject would soon be well on its way to final solution; certainly at least to its physical completion.

If all of the forces interested will unite upon a plan and then go courageously forward to its accomplishment, there will be absolutely no cause for reasonable complaint, and the delays now charged to political influence will be dissipated.

So long as articles appearing in the press shall continue to assume an adverse attitude toward those seeking to help, so long will the afflicted service man be disgruntled. If, on the other hand, the veterans' press, legionnaire, or what not, would support with encouragement any plan which they might help to adopt, it would go forward with expedition and with an effectiveness that would be satisfying to all.

THE MERCHANT MARINE.

Mr. RANSDELL. Mr. President, I ask unanimous consent to have printed in the RECORD, in 8-point type, a 1-page leaflet prepared by Mr. C. A. McAllister, vice president of the American Bureau of Shipping, giving 10 good reasons for the ship subsidy. It is brief and full of meat.

There being no objection, the leaflet was ordered to be printed in the RECORD, as follows:

TEN GOOD REASONS FOR THE SHIP SUBSIDY.

1. World conditions now make sale of goods in competitive foreign markets more difficult than ever. The American farmer, miner, merchant, and mechanic can not compete in selling their excess products abroad unless we have our own delivery system, owned and operated by Americans.

2. A merchant marine is as essential for the national defense as the Navy itself. Without this Government help we will have no merchant marine, hence our means for defense would be crippled one-half. The cost of the entire subsidy will be less each year than the cost of building one modern battleship.

3. We have by sale of Liberty bonds during the war raised and invested over $3,000,000,000 in merchant ships. Without this subsidy these vessels can not be operated at a profit to private owners. Hence they can not be sold, and we face the loss of nearly the entire amount invested. By making ship operations profitable in private ownership the ships can be sold for at least $500,000,000, an amount far in excess of the 10 years' total subsidy. The taxpayer will thereby eventually have his taxes reduced instead of increased.

4. The operation of ships under present Government management has vastly increased our foreign trade. It is, however, costing the taxpayer directly over $50,000,000 per year to make up the losses of Government operation. This amount will be saved almost in toto in placing these ships in private hands by means of the subsidy.

5. Heretofore we have been paying an average of $300,000,000 annually for freight and insurance to foreigners for carrying our goods. This vast amount can mostly be kept in our own borders through the means of the subsidy act. In other words, considering shipping alone, an investment of $1 by the Government will keep $10 at home.

6. The creation of a permanent and efficient merchant marine by means of the subsidy act will furnish additional employment to over 100,000 Americans on board ship, in the shipyards, the steel mills, the iron mines, and in the many other industries which are necessary to build and operate ships for the foreign trade. Every man thus employed must be well fed, and the American farmer will be benefited by raising and selling the food to them and their families.

7. The history of the past is the best guide for the future. No nation in the world's history has been truly great without owning and operating its own naval and merchant vessels. We all aim to make the United States the greatest nation upon which the sun has ever shone. This can not be done unless we encourage our merchant marine.

8. We Americans have the money and the desire for foreign travel. Heretofore we have had to be humiliated by traveling everywhere abroad under alien flags, and seldom, if ever, seeing our flag displayed on the ocean. Our national pride need no longer be offended, as the passage of this bill will place and keep Old Glory on the seas. A citizen without national pride is undesirable and unworthy, is a disgrace to himself and to his country.

9. Without this encouragement to our merchant marine we will build no more ships. We have by international agreement already stopped the building of fighting vessels. Hence, without any work to do, shipbuilding will become in America a lost art. Without shipbuilders and shipbuilding facilities this Nation will be helpless both for commerce and for self-defense—an emasculated giant in the family of nations.

10. Our rivals for the world's trade view with great alarm the prospects of the passage of this bill, and their emissaries, masquerading in many instances as patriotic citizens, are spreading insidious propaganda and doing their utmost to defeat the measure. This is the strongest evidence possible why the bill will benefit America and why it should receive the support of patriotic Americans.

CALL OF THE ROLL.

Mr. HEFLIN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Colt	Heflin	Lodge
Ball	Culberson	Hitchcock	McCumber
Borah	Curtis	Jones, N. Mex.	McLean
Brandegee	Dial	Jones, Wash.	McNary
Bursum	du Pont	Kellogg	Moses
Calder	Ernst	Kendrick	Nelson
Cameron	Gooding	Keyes	New
Capper	Hale	Ladd	Newberry
Caraway	Harreld	Lenroot	Nicholson
Norbeck	Sheppard	Swanson	Watson, Ind.
Pepper	Simmons	Trammell	Willis
Phipps	Smith	Walsh, Mass.	
Ransdell	Smoot	Warren	
Robinson	Spencer	Watson, Ga.	

The PRESIDING OFFICER (Mr. SPENCER in the chair). Fifty-three Senators having answered to their names, there is a quorum present.

PETITIONS AND MEMORIALS.

Mr. NELSON presented a resolution adopted by the Bar Association of the first judicial division of the Territory of Alaska protesting against the passage of the bill (H. R. 11905) to provide for the establishment of the Supreme Court for the Territory of Alaska, imposing additional duties on the district judges, which was referred to the Committee on the Judiciary.

Mr. CAPPER presented resolutions adopted by the McPherson (Kans.) Chamber of Commerce, favoring enforcement of the United States Supreme Court decree directing the divorcement of the Central Pacific Railway from the Southern Pacific Co., which were referred to the Committee on Interstate Commerce.

Mr. WILLIS presented the petition of William J. Bauer, president, and sundry other members of the Merchant Tailors' Exchange, of the city of Cincinnati, Ohio, praying for inclusion in the pending tariff bill of a flat duty of 100 per cent ad valorem on manufactured woolen clothing, eliminating specific or weight duties, which was referred to the Committee on Finance.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MCNARY (for Mr. JOHNSON):

A bill (S. 3870) granting a pension to William Roach; and

A bill (S. 3871) granting an increase of pension to William Kenny; to the Committee on Pensions.

By Mr. ASHURST:

A bill (S. 3872) granting an increase of pension to Richmond Bridges; to the Committee on Pensions.

TARIFF BILL AMENDMENT.

Mr. JONES of New Mexico submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

THURSTON W. TRUE.

Mr. SMITH. Mr. President, I ask unanimous consent for the present consideration of the bill (S. 2984) for the relief of Thurston W. True. It is a bill that has been reported favorably, with an amendment, from the Committee on Claims. It is a claim that has been carried over for three or four years, and I would like to get the matter settled now if possible. I wish to make just a brief statement with reference to the purpose of the bill.

The land in question was land the owner of which was notified in 1918 to vacate for the Government, which he did. He vacated and was out of possession of his premises for a year. The time lapsed under the law for him to make his claim to the land. The Secretary of War has stated that it is a worthy claim.

There seems to have been a committee appointed, or the regular local appraising committee, which met with Mr. True, and they agreed, according to his understanding, that they would make a cash settlement of a certain amount. His understanding was that he agreed to the cash settlement. He has put in a claim for eleven hundred and some odd dollars. He agreed with the local appraisers, but they did not pay, and three years have gone by. In view of the fact that prompt cash settlement, as he understood it, has not been made and as the time has passed, nearly four years having gone by since the Government took possession of the property, he now asks that he be allowed the remainder of his claim, some $300. The total amount for which the claimant asked was $1,135. The War Department recommended the payment of $794, but the Secretary of War in his report to the Committee on Claims says:

> While this report of the local examining board was not reviewed by the War Department board of appraisers, there is no reason for assuming that the recommendation was not adequate.

That shows that the reviewing board did not make an examination of the matter. I desire to move to amend the amendment reported to the bill by the committee, if I may have unanimous consent for the consideration of the bill.

The PRESIDING OFFICER. Unanimous consent for the present consideration of Senate bill 2984 is asked by the Senator from South Carolina.

Mr. CURTIS. Let the bill be read in order that we may understand what it is.

The PRESIDING OFFICER. The Secretary will read the bill.

The bill (S. 2984) for the relief of Thurston W. True was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay to Thurston W. True, of Columbia, S. C., the sum of $1,135, out of any money in the Treasury not otherwise appropriated, in full satisfaction of all claims for damages against the United States arising out of the vacating by such Thurston W. True of his premises for several months during the war against Germany, in compliance with an order issued under authority of the War Department that such premises were to be used by the United States Government for a military camp.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. McCUMBER. Before agreeing to unanimous consent, I desire to ascertain what amendment to the bill the Senator from South Carolina proposes. Does the Senator seek to change the amount of compensation which is proposed to be allowed the claimant by the bill as reported by the committee?

Mr. SMITH. The compensation which was asked for when the bill was introduced was $1,135, but along in 1919 a compromise was agreed upon, as I understand, that the claim should be settled by a cash payment to the claimant of $794. The claimant signed for that, but he never has heard anything more in reference to the matter. The War Department has stated that it is a just claim.

Mr. McCUMBER. The committee reports in favor of the payment of $794. That being true, it seems to me if the amount is to be changed, the bill should be recommitted to the Committee on Claims, in order that they may reconsider it. It does not seem as though we should take up the time of the Senate now in considering an amendment which is in opposition to the report of the committee.

Mr. SMITH. I should like to have the member of the committee who reported the bill make a statement with reference to it. The bill was reported by the senior Senator from Arkansas [Mr. ROBINSON].

Mr. ROBINSON. Mr. President, this claim would have been cognizable under the act of March 2, 1919, providing for the payment of damages resulting from notice of intention by the Government to acquire land, but for the fact that it was not presented within the time limitation fixed in the statute. As has been stated by the Senator from South Carolina, an award, however, was made by the board which was appointed by the War Department to investigate the claim. The board found the amount due the claimant to be $794. The claimant had applied for $1,135. The items embraced in his claim were for rent, for damage to land by the removal of timber and other property from it, also the cost of moving some property off the place, and two or three small items which the committee did not think were allowable. Those items, however, I repeat, were only for small sums.

In view of the fact that the board made this award after an investigation, the committee thought it best to report the amount found due by the board. However, I will say that there is some question as to what is the correct amount. I do not think the claim is fully sustained for quite all of the items, though the evidence might sustain an increase above the amount reported by the committee. The committee took the view that the award of the board should be sustained.

Mr. SMITH. I wish to call the Senator's attention to the statement of Secretary Weeks, in which he says:

While this report of the local examining board was not reviewed by the War Department Board of Appraisers there is no reason for assuming that the recommendation was not adequate.

It is evident, and I think the Senator will agree with me, that the understanding was that the $794 which Mr. True said he would accept at the time should be promptly paid, but it has not yet been paid. It was recommended to be paid, but three years have gone by and he has not yet received any compensation. After the award, it seems as though a prompt payment would have been due, but the payment has not been made even of the amount agreed upon.

Mr. ROBINSON. There is no question in my mind but that the Government owes this claimant at least the amount of the award. The War Department held at the time the claim was presented that there was no legal liability for rent of land except that which had actually been possessed and used by the Government; but there was no question as to the right of the claimant to recover the amount of the award.

Mr. McCUMBER. Mr. President, it does seem to me that the committee at least ought to have a chance to reconsider the matter before it is brought into the Senate, if there is a disagreement between the committee and what the Senator desires.

Mr. ROBINSON. I think the bill can be disposed of in a few moments. Here is the statement by one of the members of the board:

Q. How did the local board arrive at $794 in settlement of his claim for $1,135?—A. We allowed $534 on his first two items.

For the first two items the claim was $820.

The second item of rent—that is, the appraised rental valuation for a year—and I can not come across any evidence that he was notified. I am supposed to have notified these people five of us went out, but I don't know who should have seen him. In April I undertook to write a personal letter to each claimant in the area, and I have copies of the letters, but I fail to find this gentleman's name in the files. On his third item we allowed $195 instead of $250. I looked over this place and found about 65 cords removed, and the balance are the same.

That is the testimony of a member of a board who made the investigation upon which the finding of $794 was based.

Mr. SMITH. The officer who testified said that he did not notify the claimant in this case along with other claimants; so it seems as if the dereliction, if there was any, was on the part of the board.

Mr. ROBINSON. He said he could not find where he had notified the claimant.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. McCUMBER. Mr. President, I will not make any objection if the Senator can settle the matter right away.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. ROBINSON. Mr. President, I will make this statement: The claimant agreed to accept $794 in settlement of his claim. Of course, that was with the understanding that it was to be paid promptly. The board, however, afterwards found, for the reasons which I have stated, that it had no power to settle.

The amount in controversy between the committee and the Senator from South Carolina is very small, and the difference grows out of the facts which I have stated. The board made an award and the claimant agreed to accept it, with the understanding that it should be promptly paid. The board afterwards discovered that they had no power to pay it at that time. So the claim came to Congress.

Mr. SMOOT. The bill as reported by the committee carries $794.

Mr. ROBINSON. The committee, under the circumstances, recommended the amount of the award, which amount the claimant agreed to accept, the committee taking the view of the matter, as there was some dispute as to the items which were eliminated by the board and the claimant having agreed to accept that amount, although it was neither his fault nor the board's fault that the award was not promptly paid, the amount of the award should govern. I am inclined to think that the Senator from South Carolina should be satisfied with the sum recommended by the committee.

Mr. SMITH. Mr. President, the only point that I make—and then I will allow the measure to come to a vote and have nothing further to say about it—is that the understanding of the claimant was that there would be a prompt payment. He was a poor man and owned the one hundred and some odd acres of land. The Government notified him to get off and he got off, and he stayed off for a year; he was deprived of the use of the rental and proceeds of his farm, and now for three years no settlement has been made, and no settlement could be made except upon the recommendation of the War Department. The War Department recommends that the claim should be paid, but the claimant says that in view of the circumstances he ought to be allowed the amount which he claimed.

I shall offer an amendment, Mr. President, and let the Senate vote upon it. If the amendment shall not be adopted after my statement, I shall accept the judgment of the Senate. The interest on the amount for three years would really entitle him to an increase over the amount recommended.

Mr. ROBINSON. Mr. President, I suggest to the Senator from South Carolina that I think the evidence would sustain an award of $1,000. I do not know how the chairman of the committee feels, but I am inclined to support an amendment increasing the amount to $1,000, and I think the testimony shows that such an award is justified.

Mr. SMITH. I will accept that. I move to amend the amendment of the committee in line 5 by striking out "$794" and inserting "$1,000."

The PRESIDING OFFICER. The question is upon the amendment of the Senator from South Carolina to the amendment reported by the committee, which will be stated.

The READING CLERK. On line 5, after the words "sum of," it is proposed by the committee to strike out "$1,135," and in

lieu thereof to insert "$794." That amendment the Senator from South Carolina proposes to amend by striking out "$794" and inserting "$1,000."

Mr. CAPPER. Mr. President, I wish to call the attention of the Senator to the statement made by Colonel Bell, a member of the board, which appears on the last page of the report and which gives the reason why the full amount was not allowed. He says:

Items 5, 6, and 7 could only be allowed if it were shown that this damage was done by soldiers or agents of the Government. The evidence does not show this to be a fact, and it is recommended that these items be disallowed.

Mr. ROBINSON. If the Senator will pardon me, those items were $2, $10, and $3, respectively. I referred to that. They would only make a difference of $15 in the amount of the claim.

Mr. SMITH. That is true.

Mr. ROBINSON. Items 2 and 3 were for $200 and $250, respectively, and as stated by the member of the board, item 3, for $250, was reduced by the board to $195. The testimony would support a finding of $1,000, but it would not support a finding of $1,135.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from South Carolina to the amendment reported by the committee.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The bill was reported to the Senate as amended and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

SOUTHERN PACIFIC AND CENTRAL PACIFIC RAILWAYS.

Mr. HITCHCOCK. Mr. President, I ask to have inserted in the RECORD a resolution adopted by the Nebraska State Railway Commission protesting against any action by Congress or any action by the Interstate Commerce Commission which would tend to nullify or modify the recent decision of the Supreme Court of the United States divorcing the Central Pacific Railway from the Southern Pacific Railway, and then I ask that the resolution may be referred to the Committee on Interstate Commerce.

There being no objection, the resolution was ordered to be printed in the RECORD and referred to the Committee on Interstate Commerce, as follows:

Resolution of the Nebraska State Railway Commission of the State of Nebraska.

Whereas the Supreme Court of the United States has recently ordered and decreed that the Southern Pacific Railway Co. divest itself of its interests in and control over the Central Pacific Railway Co., the short-line Pacific coast connection from the great central Mississippi Valley; and

Whereas it is of vast importance to the State of Nebraska that the free flow of commerce from west to east seek its natural route over the great railway routes which connect directly with the eastern terminus of the Central Pacific and cross Nebraska, instead of being forced over the circuitous southern route of the Southern Pacific; and

Whereas the decision of the high court makes possible again renewed traffic between east and west over its short-line route through this State: Therefore

The Nebraska State Railway Commission urges that Congress should give no heed to efforts to secure legislation which would approve previous arrangements in restraint of free flow of traffic that the court has said violates the Sherman Act; we respectfully suggest that when the Interstate Commerce Commission considers the matter of railroad consolidations it give grave attention to the normal transcontinental connections east and west of Ogden already embodied in the tentative plan of consolidation; and we direct that copies of this resolution be sent to the Members of Congress from Nebraska.

[SEAL.] NEBRASKA STATE RAILWAY COMMISSION,
H. G. TAYLOR,
THORNE A. BROWNE,
H. L. COOK,
Commissioners.

Dated at Lincoln, Nebr., this 14th day of July, 1922.

I do hereby certify that the above and foregoing is a true and correct copy of a resolution passed by the Nebraska State Railway Commission of the State of Nebraska at its meeting on the 14th day of July, 1922, the original of which is now on file in this office.

JOHN E. CURTISS, *Secretary.*

Mr. HITCHCOCK. I also ask to have referred to the Committee on Interstate Commerce a resolution of similar tenor adopted by the Valley Commercial Club of Nebraska.

There being no objection, the resolution was referred to the Committee on Interstate Commerce.

INDUSTRIAL CONDITIONS.

Mr. WILLIS. Out of order I ask unanimous consent to present a resolution in the nature of a petition adopted by the Westerville Chamber of Commerce referring to the present industrial situation. I ask that the resolution be printed in the RECORD without reading.

There being no objection, the resolution was ordered printed in the RECORD as follows:

THE WESTERVILLE CHAMBER OF COMMERCE,
Westerville, Ohio, July 24, 1922.

Resolutions adopted by the Westerville Chamber of Commerce.

Whereas one of the first duties of a government is to uphold law and order and protect the life and property of its citizens; and

Whereas, whenever such protection is not rendered, conditions arise similar to those now prevailing in Russia; and

Whereas in various parts of our great country law and order are openly defied and United States citizens vauntingly murdered and property vauntingly destroyed; and

Whereas it is apparent that no earnest attempt has been made by various State and local authorities to bring the murderers and incendiaries to justice: Therefore be it

Resolved, That we, citizens of the State of Ohio and of the United States of America, do hereby appeal to the President of the United States of America that the strong arm of the law be applied as well to those who have openly broken law and order as also to those officers who deliberately shirk their duties which their oaths of office require them to perform;

Whereas, whatever the merits of the disputes between the striking railroad men and their employers may be, the people through their Government have created a Labor Board in which both the contending parties and the public have all three each equal representation to settle such disputes in a fair and lawful manner without recourse to ruinous conflicts like the present: Therefore be it

Resolved, That we herewith petition Congress to provide authority and power to said Government board to enforce its decrees.

Whereas in time of public danger the Executive should be assured of the support of good citizens: Therefore be it

Resolved, That we commend President Harding for his fair and courageous stand in behalf of justice in the face of tremendous difficulties. We appeal to every law-abiding citizen to uphold the hands of the President in his firm determination to preserve law and order and to insure equity between employer and employee and to insure the well-being and happiness of the public.

A true copy.

GUSTAV MEYER,
President of Westerville Chamber of Commerce.
CHAS. R. BENNETT, *Secretary.*

READMISSION OF ALIENS.

Mr. McCORMICK. Out of order, I ask unanimous consent to introduce a joint resolution; and if there be no objection—and I anticipate none—I should like to ask for the immediate consideration of the joint resolution by unanimous consent, as it touches a matter that is somewhat urgent.

Mr. SMOOT. Let it be read.

The joint resolution (S. J. Res. 233) extending the operation of joint resolution of October 19, 1918, and excepting certain aliens from the operation of the quota law, was read the first time by its title, and the second time at length, as follows:

Resolved, etc., That the operation of the joint resolution of October 19, 1918, entitled "Joint resolution authorizing the readmission to the United States of certain aliens who have been conscripted or have volunteered for service with the military forces of the United States or cobelligerent forces" shall not be held to limit the application for readmission to one year after the termination of the war of aliens lawfully resident in the United States who during such residence enlisted or were recruited in America for the Polish Army in France, created by virtue of a decree issued by the French Government and recruited in this country under express permission of the War Department and who by the limitation of application to one year after the termination of the war can not now apply for readmission under the joint resolution of October 19, 1918, and such aliens shall, if otherwise entitled to admission under the said joint resolution, be readmitted to the United States if application for readmission is made and the alien is readmitted within the period of two years from March 3, 1921.

SEC. 2. That all aliens entitled to readmission into the United States under the provisions of this joint resolution, together with their wives and children under the age of 18 admissible under the provisions of the immigration laws, and all aliens who while lawfully resident in the United States were recruited or enlisted for service in the Polish Army in France and who return to the United States on or before March 3, 1923, and are found to be admissible under the immigration laws, together with their wives and children under the age of 18 admissible under the provisions of the immigration laws, shall be exempt from the operation of the act of May 19, 1921, entitled "An act to limit the immigration of aliens into the United States," as amended and extended by the act approved May 11, 1922, and from the operation of the head tax provisions of the immigration act of February 5, 1917, and they shall not be counted in reckoning any of the percentage limits provided by the act of May 19, 1921, as amended and extended by the act of May 11, 1922.

Mr. WALSH of Massachusetts. Mr. President, will the Senator state briefly just what the joint resolution provides for?

Mr. McCORMICK. The joint resolution, in brief, extends the terms of the so-called Sabath resolution to some 1,200 men enlisted in Haller's army in 1918, but who have been held on the Bolshevik front until this time. The Senator will recall that at the beginning of the war between the United States and the central empires some thousands of foreigners resident in this country, many of them Italians and many of them Poles, were enlisted in foreign armies under the terms of agreements between our Government and the allied Governments. Provision was made by the Sabath resolution for the return of the men so enlisted during the period stipulated by that resolution. It fell out that after the invasion of Poland by the red armies, and their repulse, a few of these men were

compelled to continue on the Bolshevik front of Poland. It has only been possible within the last few weeks to secure their discharge and permission for them to return to the United States. They are about to sail from Danzig to the United States.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). The Chair thinks the joint resolution ought to go to the committee and be reported by the committee. Being a joint resolution, it can not pass both Houses until after the 15th of August, and that will give ample time. The Chair may have no objection to it, but thinks it ought to go to the committee, and will therefore object to its present consideration. It will be referred to the Committee on Immigration.

Mr. McCORMICK. Of course, if the Chair insists, it will go there; but I may say that I have submitted the joint resolution to the members of the Committee on Immigration.

The PRESIDING OFFICER. The Chair anticipates that they can report it very promptly.

Mr. WALSH of Massachusetts. Of course, the joint resolution has much merit.

The PRESIDING OFFICER. Yes; the Chair thinks so himself.

Mr. WALSH of Massachusetts. But I think it is a very bad precedent to come in and introduce and ask for the consideration of a bill or a joint resolution without having it take the ordinary course of going through the committee.

Mr. McCORMICK. I ask for its reference, then.

Mr. WALSH of Massachusetts. I believe the joint resolution has very much merit and ought to be passed.

The PRESIDING OFFICER. The joint resolution will be referred to the Committee on Immigration.

DEFLATION POLICY OF THE FEDERAL RESERVE BOARD.

Mr. HEFLIN. Mr. President, I have here two letters from the former Comptroller of the Currency, Hon. John Skelton Williams, addressed to myself, and attached to those letters some comments by Mr. Williams upon certain statements and acts of certain Federal bank officials, and also some correspondence had between the Comptroller of the Currency and the governor of the Federal Reserve Bank of Atlanta. This includes some correspondence between Governor Harding and the governor of the Federal Reserve Bank of Atlanta. I ask unanimous consent to have them printed in the RECORD in 8-point type.

There being no objection, the matter referred to was ordered to the printed in the RECORD in 8-point type, as follows:

PROOF THAT 87½ PER CENT INTEREST RATE WAS CHARGED.

RICHMOND, VA., *July 25, 1922.*

Hon. J. THOMAS HEFLIN, *Washington.*

DEAR SENATOR HEFLIN: It is not surprising that some Members of the Senate should find it hard to believe the grave charges which have been made against the administration of our Federal reserve system. It does seem incredible that the system could in so short a time have been so prostituted and diverted from the high purposes and uses for which it was organized, but unfortunately these serious charges of "favoritism," "extravagance," and "extortion" have been completely proven.

When you stated on the floor of the Senate some time ago that a Federal reserve bank had actually exacted from a small country bank in a time of need interest as high as 87½ per cent per annum, your assertion was questioned by one of the Senators from New York, who seemed to regard it as impossible that a Federal reserve bank should ever have charged an interest rate more than six times as great as was ever charged by any Government bank in any other country on earth, and he asked you what proof you could offer that such an exaction had been made.

I am fortunately in a position to furnish you the proof, and I hand you with this a copy of a letter which I received under date of February 23, 1921, from Governor Harding, of the Federal Reserve Board, addressed to me, in which he incloses a copy of a letter of Governor Wellborn, of the Federal Reserve Bank of Atlanta, dated February 21, 1921, giving details of loans aggregating $112,446, made to a country bank in Alabama between September 16 and September 30, 1920, upon which the average interest rate charged for that period for that accommodation was approximately 45 per cent per annum, and for a portion of this money as high as 87½ per cent per annum was exacted. From the schedule attached to Governor Wellborn's letter you will note this little bank was allowed in that period a "basic line" of only $2,765. That was the total amount they were permitted to borrow at 6 per cent for the period mentioned, except that they were allowed a further exemption from the progressive rates of $35,000 additional, as the reserve bank gave an exemption on farm-production paper to the extent of the bank's capital and surplus, which was $35,000, making the total amount upon which normal rate was charged $37,765, while the loans upon which the progressive rates were exacted amounted to $112,446, and for every $691 which this little bank had to borrow, in addition to the exemption above stated, the reserve bank increased the rate one-half of 1 per cent, so that by the time its loans, in addition to the exemption, had reached $26,000, the reserve bank was charging it as high as 25 per cent per annum; when those loans reached $60,000 the reserve bank was charging it for a portion as high as *50 per cent* per annum; by the time its additional loans reached $94,000, the Atlanta Reserve Bank was exacting 75 per cent per annum on some loans; and when its accommodation, in excess of $37,765, reached $112,446 the reserve bank was actually charging it on a portion of the loan as high as *87½ per cent per annum.*

The reserve bank had a complicated and unfair method of fixing what it called the "basic line" for each two weeks' period, and the reserve bank availed itself of an accidental circumstance to impose these infamous rates upon this little bank, the basic line being based upon "the average reserve balance of the preceding two weeks."

It appears that a note due to the reserve bank of $17,500 fell due on September 14, and instead of renewing it, the reserve bank charged the amount against the reserve balance of the little member bank, so that its account appeared overdrawn for two days, $17,300 one day and $16,300 another day. The omission of the reserve bank to renew or carry this maturing note for a day or two longer was the excuse for reducing the so-called basic line of the small bank to $2,765. It was under these circumstances that the reserve bank proceeded to enforce its theory of progressive rates, and required the little country bank to pay *an average* of about *45 per cent per annum* for the use of *$112,446* in its hour of need in crop-moving times from September 16, 1920, to September 30, 1920.

If the Federal reserve banks should furnish to the Senate a list of all instances where these reserve banks exacted extortionate interest rates, ranging from 10 per cent per annum to 87½ per cent per annum, from their helpless member banks between May, 1920, and May, 1921, the period of acute distress, during which period the reserve banks contracted their loans approximately one thousand million dollars, it would be most illuminating.

The Federal reserve authorities tried to excuse themselves by claiming that, despite the exaction of the progressive rate in many cases, the "average rate" charged for the period was not high, but that is no consolation to the victims of their malpractice.

When I, as a member of the board, discovered that such rates were being exacted by the reserve banks I offered a resolution in the Federal Reserve Board to abolish the progressive rates and limit interest to 6 per cent per annum, but my resolution was promptly voted down. I then offered another resolution, urging that the interest be limited to 10 per cent, but that was not enough to satisfy insatiable greed, and it was also voted down.

I also called upon the board to reimburse to the suffering banks the unconscionable interest exacted from them, but this they also refused to do until the sunlight of publicity had been turned upon these practices, and an aroused public opinion forced the Reserve Board to authorize partial restitution and finally abolish the progressive rates in all districts where they were still in vogue.

I was much struck with an extract from a letter from a prominent banker west of the Mississippi, which you read on the floor of the Senate a few days ago, in which, in a letter to one of your colleagues in the Senate, the bank president said:

"MY DEAR SENATOR: Unless something is done to check the extravagance and grave mismanagement which has been and is still being displayed in the administration of our Federal reserve system, of which I have been an ardent supporter, I fear the system will be doomed.

"*Its gross mismanagement has already occasioned widespread dissatisfaction and discontent. Such reckless extravagance as has been displayed in the erection of banking palaces in New York City and other places must be curbed and cured. There is a real danger that the people will rise in their wrath and not only throw out the men responsible for its mismanagement but may also try to do away with the system itself, unless abuses are corrected.*"

I am, as you are, a profound believer in the tremendous power for good of our great Federal reserve system properly

administered, but it can not survive a continuance of such abuses and mismanagement as those from which it has suffered at times in the past.

I earnestly hope that these wrongs and abuses can be corrected, and that wise, experienced, and courageous men, in the interest of the whole country, may be placed in charge of its administration.

With high regard, believe me,

Sincerely yours,

JOHN SKELTON WILLIAMS.

—

FEDERAL RESERVE BOARD,
OFFICE OF THE GOVERNOR,
Washington, February 23, 1921.

Hon. JOHN SKELTON WILLIAMS,
Comptroller of the Currency.

DEAR MR. COMPTROLLER: Referring to your letter of the 18th instant, relative to the rate of discount charged the ——— National Bank of ——— Alabama under the progressive rate schedule which was in effect in the Atlanta district, I am inclosing for your information copy of communication received to-day from the governor of the Federal Reserve Bank of Atlanta.

It would be interesting to know if the loans of this bank increased during the time it was deficient in its reserves. If so, it would appear it has been guilty of a violation of the provision of section 19 of the Federal reserve act, which prohibits member banks from making new loans while deficient in their reserves.

Very truly yours,

W. P. G. HARDING, *Governor.*

—

FEDERAL RESERVE BANK OF ATLANTA,
February 21, 1921.

Hon. W. P. G. HARDING,
Governor Federal Reserve Board,
Washington, D. C.

DEAR GOVERNOR HARDING: Yours of February 19, relating to the rates charged the ——— National Bank of ——— Alabama under our progressive schedule which was in effect some months ago.

When adopting the progressive rate schedule on May 29, 1920, we established a normal or basic discount line for each bank, which was arrived at in the following manner:

Sixty-five per cent of the average reserve balance maintained during the preceding reserve computation period, plus the bank's investment in our capital stock, multiplied by 2½.

Originally only the direct notes of member banks, secured by Liberty loan bonds or Victory loan notes actually owned by the borrowing banks on April 1, 1920, or secured by Treasury certificates of indebtedness actually owned by the borrowing banks were exempt from the normal line. Three weeks later we added as an exemption from the normal line notes the proceeds of which had been or were to be used for strictly farm production, to an amount not exceeding the paid-in and unimpaired capital and surplus of the member bank.

For the reserve computation period, September 1 to September 15, the required reserve of the bank under consideration, based on its report of net deposits, was $9,433; its actual average reserve balance with us during that period was $86. Sixty-five per cent of this amounted to $55.90. Its investment in our capital stock at that time was $1,050, making a total of $1,105.90, which, multiplied by 2½, established a normal line for the period, September 16 to September 30, of $2,765. Their average rediscounts during the latter period was $150,211.

Amount subject to normal rates (basic line)	$2,765
Farm-production paper exemption (capital and surplus of bank)	35,000
Total exemption	37,765
Leaving as subject to progressive rates	112,446

As you know, our schedule progressed one-half of 1 per cent for each 25 per cent of the basic line, so that this bank was subject to an interest charge of one-half of 1 per cent progressively for each $691 of the remaining $112,446 of rediscounts. A list showing the cost incurred by the bank on each 25 per cent is attached.

Their small average reserve balance during the period September 1 to 15 was brought about by reason of the bank's account being overdrawn on September 14 and 15 approximately $17,300 and $16,300, respectively. This was occasioned by their failure to provide funds or discounts to cover their direct note for $17,500 which matured on September 14.

The period September 16 to 30 was the only one in which the rate against this bank went to such a high figure, viz, 81½ per cent. During the preceding period the highest rate charged was 13½ per cent.

It was with regret that we made the extremely heavy charge, but we did not feel justified in eliminating it, as it would have been discriminatory.

From the comptroller's memorandum it would seem that he is under the impression that all farmers' paper was exempt from the normal line and the progressive rate schedule, which obviously is in error, as exemption on that class was being granted only to the extent of the capital and surplus of the borrowing bank.

I trust the above gives you the desired information, but if any further details are desired will be pleased to furnish same.

Very truly yours,

M. B. WELLBORN, *Governor.*

EX-COMPTROLLER WILLIAMS TURNS LIGHT ON DEFLATION AS CONDUCTED BY FEDERAL RESERVE BANK OF ATLANTA.

RICHMOND, VA., *July 25, 1922.*

HON. J. THOMAS HEFLIN,
United States Senate, Washington.

MY DEAR SENATOR: I received some weeks ago a clipping from the Mobile Register of May 20, containing what purported to be an address made by Governor Wellborn, of the Federal Reserve Bank of Atlanta, before the Alabama Bankers' Association, in defense of the administration of the Federal reserve system, which contained a number of statements so flagrantly incorrect and misleading that I thought it proper to write Governor Wellborn as I did on May 26, asking whether he had been correctly quoted.

I received from him a letter under date of June 1, admitting that his statements to which I directed attention were inaccurate.

I replied to his communication on June 10 in a letter in which I deprecated promulgation by the officials of the reserve system of statements which were obviously incorrect, and remonstrated against policies and practices which were bringing discredit upon the reserve system, and urged the importance of reformation before it might be too late.

Governor Wellborn replied to my letter on July 20, but did not attempt to deny or controvert a single one of the statements and charges which my letter contained.

As my letter discussed matters which I regard as of supreme importance to the whole country, I had it printed, giving on the first page of the printed copy a résumé of the correspondence which had preceded it.

When Governor Wellborn learned that I had made my letter public, he became greatly exercised and wrote a letter complaining bitterly of my doing so, and declared that I should have printed a certain letter of his at the same time. I wrote him in reply that I would be pleased to make public our entire correspondence, including a personal letter which he had written me under date of June 26, in which he assured me of his deep appreciation of my work, both as Comptroller of the Currency and as a member of the Federal Reserve Board, and so forth. He replied July 17, objecting to my making public his letter of June 26, 1922, expressing unqualified commendation of my work as comptroller and member of the Federal Reserve Board, but I wrote him in answer on July 22 that I felt it entirely proper under the circumstances for me to make public our complete correspondence on the subject. I therefore hand you herewith copies of my letters to Governor Wellborn of May 26, June 10, June 24, June 29, July 15, and July 22, and Governor Wellborn's letters to me of June 1, June 20, July 3, and July 17, but I omit at the present time, at Governor Wellborn's earnest request, the publication of his letter to me of June 26, commending my work as a member of the Reserve Board and as Comptroller of the Currency, although, if the occasion in my judgment should at any time call for it, I will make that letter public also.

The correspondence gives a view of some of the inside operations, methods, and practices of the Federal reserve system, especially of one of the Federal reserve banks, which I believe is of real interest to the public, especially in connection with the recent activities of the 12 Federal reserve banks in distributing throughout the country more than 140,000 copies of a Senate speech which contains, as you have openly pointed out on the floor of the Senate, and as the authorities of the several reserve banks are presumed to have known, before disseminating it, so many inaccurate and wholly incorrect statements concerning the operation and policy of these same banks.

With high regard, I am,

Sincerely yours, JOHN SKELTON WILLIAMS.

—

"All progress of the human race and of individuals is based on understanding of our blunders. My hope is to expose and explain blunders that have been made, to try to make them so thoroughly understood that they will not be repeated or continued." (John Skelton Williams, in address at Augusta, Ga., July 14, 1921.)

FAVORITISM, EXTRAVAGANCE, AND EXTORTION IN THE MANAGEMENT OF THE FEDERAL RESERVE SYSTEM—OUR FEDERAL RESERVE SYSTEM A NATIONAL BLESSING; ITS MISMANAGEMENT A PUBLIC CALAMITY—AVERAGE OF 68 PER CENT INTEREST EXACTED ON $50,000 BY RESERVE BANK FROM SMALL COUNTRY BANK WITH $25,000 CAPITAL—ABOUT SAME TIME TWO BIG SPECULATIVE BANKS IN CITY ARE FAVORED WITH $250,000,000, GROSSLY EXCEEDING THEIR NORMAL QUOTA, AT AVERAGE INTEREST CLOSE TO 6 PER CENT—FEDERAL RESERVE OFFICIALS SCATTER BROADCAST, AT PUBLIC EXPENSE, UNTRUE AND MISLEADING STATEMENTS CONCERNING RESERVE BANK OPERATIONS.

The Mobile (Ala.) Register of May 20, 1922, printed what purported to be extracts from an address delivered in Mobile before the Alabama Bankers' Association by Governor Wellborn, of the Federal Reserve Bank of Atlanta, containing several important statements so directly contrary to established facts, and so misleading to the public, that I thought it proper to write Governor Wellborn on May 26, 1922, to ask if he had been correctly quoted. The newspaper had represented Governor Wellborn as saying, inter alia, that the so-called "progressive interest rates" (under which the Atlanta Reserve Bank had charged as high as 87½ per cent to a member bank) had not been applied on any paper issued for "agricultural purposes," and he also declared that from January 1, 1920, to January 1, 1921, the reserve banks "extended their accommodations to member banks around $1,000,000,000." He then added: "I challenge the severest critic of the Federal reserve system to successfully refute the statement."

Governor Wellborn replied to my letter on June 1, 1922, and admitted that both of his statements which I had challenged were inaccurate. (I shall be pleased to send, upon request, to those desiring them, complete copies of my letter to Governor Wellborn of May 26, 1922, and his reply of June 1, 1922.)

In his answer the governor of the Atlanta Reserve Bank asserts that he had "inadvertently" omitted to state that the paper issued for agricultural purposes exempted from the progressive rate was limited to the "capital and surplus" of the borrowing bank, and that in declaring the reserve banks had "extended" their accommodations around $1,000,000,000 he had not referred to the increase in accommodations but to the total accommodations granted, and then explaining that he had made an error of $2,000,000,000, and he should have stated that the total accommodations granted, instead of being "around one billion," had been "around three billion." About three-fourths of his letter, however, was devoted to an effort to show, first, that the Federal Reserve Board, by refusing the Atlanta bank's request for the abolition of the progressive rate on August 31, 1920 (some weeks before the bank had imposed the barbarous rates it subsequently exacted), had "held us" (Atlanta Reserve Bank) "chained to the rocks to be preyed upon later" by critics, claiming that I, as a member of the board, was "bound to assume all mistakes, if any, where you (I) participated in its deliberations," and second, that as I had praised the Federal reserve system and its "functioning" in my annual report as Comptroller of the Currency, dated December 6, 1920, I could not now consistently criticize the mismanagement of that system. Governor Wellborn's claims and criticisms are fully covered in my reply, which follows.

JOHN SKELTON WILLIAMS.

—

(Letter from John Skelton Williams to the governor of the Federal Reserve Bank of Atlanta.)

RICHMOND, VA., *June 10, 1922.*

Mr. M. B. WELLBORN,
Governor Federal Reserve Bank of Atlanta.

DEAR GOVERNOR WELLBORN: Your letter of the 1st instant in response to mine to you of May 26 has been read with interest and concern. It causes me to fear that you have not studied closely the facts and figures of the Federal Reserve Board reports and statements, or have studied them so assiduously that you have become confused regarding their meanings. Knowing your usual care and accuracy in statements on important matters and the clarity of your mind, I am forced to believe that one of the two conditions I have suggested must explain the remarkable position in which you have put yourself by your address at Mobile, as published in the newspaper I saw, and your explanation or elucidation of it in your letter to me.

GOVERNOR WELLBORN MAKES A SLIP OF A BILLION DOLLARS.

If in that address you intended the word "extended," as applied to accommodations by Federal reserve banks to member banks in the year from January 1, 1920, to January 1, 1921, to mean "allowed" or "granted," you understated the amount, as you tell me, and as the undisputed records show, by more than a billion dollars, which is a respectable sum worthy of consideration and recollection. If you intended it, as I understood it, to mean "increased," or "expanded," you overstated the amount by about three-quarters of a billion dollars—also a respectable sum.

Either way, it seems to me, the error is so considerable as to impair very seriously the credibility of any assertions on this subject you may present. My understanding of what you meant, I respectfully submit, is justified by the context of your remarks as published. Accepting myself as a person of average and usual intelligence, I think I might fairly suppose that the impression of your meaning made on my mind was made also on the minds of many of your hearers and the readers of the newspaper reports.

REFRAINS FROM MAKING PUBLIC CORRECTION WHEN ERRORS WERE EXPOSED.

For that reason I asked your attention to the statements published as coming from you. I felt that I might assume your purpose not only to be accurate but to give the public accurate information and, therefore, might reasonably expect that when informed that your statements had been or might be misconstrued you would hasten to make clear what you did mean and what the reserve banks actually did in the year 1920, that you would write me such an elucidation, and that you would straighten, publicly, the misunderstanding the newspapers appear to have had or had given their readers. I regret that no correction has been forthcoming.

My interpretation of your meaning perhaps was based partly on the fact that you appeared to follow so closely the statement of a very able and distinguished, but very sadly misled, United States Senator to whose speech in the Senate in defense of the course of the Federal Reserve Board you have given wide circulation. There can be no possible misunderstanding of this gentleman's meaning. He spoke, referring, apparently, to this same year 1920, to which you refer, of the *expansion in Federal reserve credits aggregating nearly $1,000,000,000 within the 12 months' period of falling prices.*

He named the same amount you named and alluded, it seems, to the same year to which you alluded. I submit it was natural for me to assume that you intended to convey by your word "extended" precisely the same meaning he had conveyed, unmistakably, by the word "expansion." I had showed you when you called at my office with Chairman McCord a month or two ago a chart distinctly disproving the Senator's statement on this very point, which also was overwhelmingly disproved by another Senator on the floor of the Senate. Substantially the only variation you made from the Senator's contradicted and disproved statement was to say that the billion dollars of credit had been "extended" instead of "expanded," and it now appears you should have said the credit "extended" was more than $2,000,000,000.

DISTORTERS OF STATEMENTS COMPARED TO MACBETH'S WITCHES.

Without intending to be discourteous, I can not avoid being reminded that the business interests of the country, suffering so cruelly in that year 1920 for lack of credit which one gentleman says was "expanded" and another says was "extended," might have applied the remark of Macbeth of the witches:

"And be these juggling fiends no more believed
That palter with us in a double sense,
That keep the word of promise to the ear,
But break it to our hope."

In giving widespread circulation, as I am informed you did, to the speech of the Senator above referred to, who had been so gravely misled by some one, you have placed yourself in a serious position. Obviously the Senator who made that speech had been deceived by unworthy informants—had he been better informed he would not have made such statements—but you had not been deceived. You knew officially that vital statements in the speech of the Senator referred to were untrue, and yet you gave widespread currency to them.

FEDERAL RESERVE OFFICIALS DELIBERATELY AND KNOWINGLY GIVE CIRCULATION TO ERRONEOUS AND MISLEADING STATEMENTS.

It is encouraging to note, however, that the United States Senate on June 8, 1922, adopted unanimously a resolution calling upon the Federal Reserve Bank of Atlanta to furnish the Senate a list of the names and addresses of all citizens in Alabama—before whose bankers' association you also made your misleading speech—to whom copies of the Senator's speech, above referred to, were sent by you, and also how much money was expended in thus printing and distributing that incorrect and erroneous document, which you knowingly sent broadcast.

I am sorry that, like various others who have undertaken to defend and uphold the policies and course of the board, you use, in your speeches and elsewhere, so many words and so much space in endeavors to assail my action and, by implication, to impugn my motives. This is unpleasantly like the old trick of attacking the Commonwealth's attorney in default of other defense. Thus far, I may say, incidentally, the most energetic theorizing and ingenuity have failed to develop a motive in me so satisfactory to these assailants as to tempt them even to suggest it definitely. Perhaps their failure is explained by the simple fact that they have assumed that my motives must be evil and can not by any possibility be good. Imagination, apparently, has failed to grasp the possibility that I really may be trying to do a public service by pointing out errors and wrongs that have been committed with the hope that repetition of them may be avoided hereafter.

As a matter of fact, however, my motives and my actions as a member of the Federal Reserve Board are absolutely immaterial and irrelevant in this discussion, except to myself. Let anybody who finds pleasure or relief in the process assume that my motives are the worst and that I connived at, or aided in, all the wrongdoing of the board. That assumption can have no possible bearing on the real question. That question is *whether the policies and methods of the Federal Reserve Board and banks in 1920 were wrong and responsible for so much of the strain to which the commerce of the country was subjected and the many instances of ruin and irreparable loss which attended the process of readjustment of business.*

EFFORTS TO CONFUSE THE CLEAR-CUT ISSUE WILL FAIL.

Yet, to keep the record straight and to prevent assertions regarding myself from winning acceptance as true because allowed to go unchallenged, I am compelled to answer and refute in some detail misleading statements regarding myself in my own behalf, just as I am impelled by sense of duty to answer and refute misleading statements regarding the general administration of the Federal reserve system in behalf of the public and the future. The more important general issues must be taken up first, however.

I understand you to tell me, in your letter to me referred to, that another statement attributed to you in the newspaper reports of your address I saw is a misunderstanding of your meaning or an error. You are reported as having said that in the summer of 1920 you took the precaution to *exempt* from operation of the repressive and oppressive progressive rates charged for accommodations all "borrowings of member banks for agricultural purposes." What you intended to say, you tell me, was that you exempted such borrowings or accommodations "up to capital and surplus." This difference is rather important, inasmuch as exemption limited to capital and surplus would apply to but a minor portion of many banks' legitimate and necessary borrowings, in many instances to one-fifth or one-sixth or even one-seventh of their borrowings.

GOVERNOR WELLBORN TOLD ALABAMA BANKERS' CONVENTION 6 PER CENT HAD BEEN MAXIMUM CHARGED ON DISCOUNTS FOR AGRICULTURAL PURPOSES—OFFICIAL FIGURES INDICATE 87½ PER CENT WAS EXACTED.

It is not hard for the public to see that charging on a loan for agricultural purposes 60 per cent, 70 per cent, and 87½ per cent is very different from limiting your charges on such paper to 6 per cent per annum, as you boldly assured the Alabama bankers in your Mobile address you had done.

Of course, it was impossible for me to know what you intended to say or what the newspapers omitted from what you did say, just as it was impossible for me to know that when you spoke of "extending" a billion dollars of credit in 1920 you meant to refer to and include the two billions allowed before that year. You can see, and I understand you to concede now, that *the statements attributed to you in the newspaper reports of your address, and what you now admit you made, were untrue and misleading on vitally important points of a vitally important question of vast and direct concern to the business interests and the general public.*

I trust you will agree that, seeing such publication and having the real facts in my possession, my duty as a citizen demanded that I file a protest and call for correction. If by any means, or through any misunderstanding or misconception, appearance of public approval of the course of the Federal reserve management is obtained, similar management may continue, with the result of disaster and destruction worse than we already have seen and felt.

This duty of protest and correction is made the more imperative by the determined, systematic effort apparently being made in Congress, through newspapers in all parts of the country, and by addresses from persons supposed to be well informed, and propaganda in other forms to prove that the system has been wisely and faithfully conducted and its machinery and resources have been used in the best possible way.

PROPAGANDA BY FEDERAL RESERVE OFFICIALS MISINFORMING THE PUBLIC AND INJURING THE SYSTEM.

In view of facts painfully evident to all, the inevitable consequence of this propaganda must be to shake public confidence in the entire system, causing the conclusion that if the system was used in the best possible way and failed to avert the dire consequences that came under its operation, it must be a hindrance rather than a help, a curse rather than the blessing it was intended to be and should be and, properly administered, unquestionably would be.

I am doing all I can to strengthen public confidence in the system by proving, as I think I have proved incontestably, that its partial and disastrous failure at the very pinch and the supreme moment of test and emergency was not caused by defect in the system itself, either in its theory or its plan, and was caused by misuse of it and the stubborn blunders of those to whom its management had been intrusted.

Let us consider a little more in detail a claim you make that figures which you have from the Reserve Board "show an expansion of $472,000,000 in discounts for the year 1920," and you add that "This in itself conclusively shows that there was no contraction of loans, but on the contrary a very large increase." I consider that statement very misleading.

DENIALS OF CREDIT CONTRACTION FUTILE—DEFLATION CRUELLY DRASTIC.

While you "parade" the claim that in the year 1920 there was an increase in "discounts" by the reserve system of $472,000,000, *you withhold the fact* that in another class of credits or accommodations by the reserve system, namely, in "purchased paper," there was, in the same year 1920, an actual contraction of $320,000,000.

Furthermore, in order to show an "increase" you combine the first five months of 1920, while prices were still going up or had remained stable, with the last seven months when the great fall in prices was under way. The fact is that the great collapse in prices in this country practically began in May or June, 1920. It received its impetus when the reserve system between May 28, 1920, and June 25, 1920, called in or contracted credits for that one month over $107,000,000, and began exerting pressure all along the line. From May 28, 1920,

to January 28, 1921, the actual contraction in Federal reserve credits, according to the official figures given out by the Federal Reserve Board, was $315,857,000, and from January 28, 1921, to August 31, 1921, while prices were tumbling heavily, there was a further contraction of $1,094,919,000.

The shrinkage in outstanding credits of the Federal reserve system from May 28, 1920, to August 31, 1921, amounted to $1,410,776,000. And from May 28, 1920, to January 25, 1922, the actual shrinkage was $2,005,149,000.

These figures show whether there was "inflation" or "deflation" in credits by the reserve banks in the period of the great fall in prices. You will hardly deny the figures, although they contrast rather vividly with yours.

STATEMENTS OF RESERVE BANK GOVERNOR SPECIOUS BUT DISINGENUOUS.

My letter to you of May 26 showed that the total increase in amount of accommodations granted by the 12 reserve banks between January 2, 1920, and December 30, 1920, was only $169,018,000, not $472,000,000, as a layman, not knowing that the word "discounts" did not include "bought paper," which was really one form of "discounts," would naturally infer from your statement. Moreover, there was an increase in credits granted from January 30, 1920, to May 28, 1920, of over $200,000,000, and in that period the prices of commodities remained stable or advanced.

It was only by eliminating one class of "discounts" or credits in which there was a heavy shrinkage of about $320,000,000 in the period that you were able to figure, as you claim, an expansion of $472,000,000 in "discounts" for the year 1920, omitting items in which there was a heavy shrinkage.

During the summer of 1920 loans were being called in right and left by the reserve system, and although many banks previously accommodated were being made to pay up other banks which had not previously been borrowing were allowed moderate accommodations.

UNFAIR EFFORTS TO SUPPRESS VITAL FACTS AND FIGURES.

The whole atmosphere at that time was so surcharged with the "deflation" propaganda that many leading and experienced men were apprehensive of a panic. On July 28, 1920, I gave to the press a reassuring statement calling attention to the fact that the Federal Reserve Board had an unused lending power at that time of about $750,000,000. The reaction from that statement from all parts of the country was exceedingly salutary and beneficent, and I have been assured that my statement at that time had been most helpful in averting a still more acute situation or panic. However, my colleagues on the Federal Reserve Board, save one, and the chairman of the Federal Reserve Bank of New York became quite incensed over my reassuring and encouraging publication and complained that I *was interfering with their well-laid deflation schemes and plans, which, subsequent events proved, were so ruinous to the country.*

Now, as to your attempts to excuse or palliate the inhuman interest rates charged in certain instances by the Federal Reserve Bank of Atlanta.

GOVERNOR WELLBORN CHARGES THE FEDERAL RESERVE BOARD HELD HIM AND HIS ASSOCIATES "CHAINED TO THE ROCKS TO BE PREYED UPON."

In extenuation of exactions imposed by you under your so-called "progressive-rate system" you claim that that plan was approved by the Federal Reserve Board at a meeting which I attended in May, 1920, and that when a request from the Atlanta reserve bank for permission to abolish the "progressive rate" was presented on August 31, 1920, I was present at *the meeting* and did not vote in favor of its termination, and that *therefore* I held you "chained to the rocks to be preyed upon later" by your critics.

It is not important whether I was or was not present at that meeting, and that point is not essential, for up to that time—August 31, 1921—the barbarous and unconscionable rates subsequently imposed by your bank had not been applied. It was not until the latter part of September, 1920, that you charged a country bank in Alabama 50 per cent, 60 per cent, and 70 per cent, and as high as 87½ per cent for the use of Federal reserve funds.

THE "BIRDS OF PREY."

I am very willing to let the public decide which was the "bird of prey"—the reserve bank which was devouring the entrails of the struggling country bank by exacting from it unconscionable and ruinous interest all the way from 50 per cent to 87½ per cent on "accommodations" amounting to twice the capital of the country bank, or whether the vulture was the little bank which was forced to pay those extortionate rates to the reserve bank, although the little bank was lending money at that very time to its farmer customers at about 8 per cent per annum.

A FEDERAL RESERVE BANK CHARGED INTEREST SIX TIMES AS HIGH AS WAS CHARGED BY ANY GOVERNMENT BANK IN ANY OTHER CIVILIZED COUNTRY ON EARTH.

The official records show that you exacted, sir, in the guise of "interest" from the small country bank referred to, *an average of over 69 per cent per annum on over $50,000, a rate more than six times as great as the maximum charged by the Government banks of any other civilized country on earth*—during that period, or at any time, as far as I have been able to discover, and you now have the effrontery to boast of the "*sympathetic attitude*" of Federal reserve officials toward farmers and other borrowers!

I am sure you will not deny these figures. If you do, I shall have to confront you with your own signed confession that you did exact the inhuman interest rates stated by me. However, as you lay such emphasis on my presence or absence from a certain board meeting, I am glad to take this opportunity to get the true facts on this point in the record.

In the first place, I do not believe that I was present at the August 31, 1920, meeting to which you refer. In the stenographic report of proceedings before the Agricultural Joint Commission Congressman MILLS claimed that the records show that I had been present. I told him that if the record did show me present, I did not care to dispute it, but I informed the commission that I had no recollection of any such occasion and called attention to the fact that frequently matters were taken up by the board after I had been excused from meetings in order to give time to more urgent matters demanding my care in the comptroller's office.

Subsequently Chairman Anderson, of the commission, informed me that the records—the stenographic report of the hearing—showed that I was *not* present at the meeting of August 31, 1920, when the request of the Atlanta bank for permission to abolish the progressive rate was acted upon, and it was Chairman Anderson himself who, when his attention was called to the matter, inserted in the transcript of the proceedings before the commission the note which says, on page 174, that "*the record shows that Mr. Williams was not present at the meeting of August 31, 1920.*"

Subsequently Chairman Anderson wrote me that the minutes of the reserve board, as it was claimed they then stood, indicated that I *was* present, and therefore he directed that the official record of the minutes of the meeting, as quoted by Representative MILLS, which in the stenographic report originally submitted to me read "*Mr. Williams was absent*" should be changed, and that was done.

In a letter to Chairman Anderson, October 14, 1921, I had said:

"Please note that both the stenographer's report and the galley proof which were sent me some time after your letter of August 16, above referred to, report clearly *in regard to the August 31* meeting that '*Mr. Williams was absent.*'

"My letter to you of September 3, 1921, in which I returned the galley proof, which also contained, in the body of the testimony on proof 68 LG, the statement:

"'The record shows that *Mr. Williams was not present at the meeting of* August 31, 1920.'

"I, of course, assumed from your letter of August 16 and the notation above quoted, that the question of my absence at the meeting referred to had been duly checked up and that the stenographic report that I was absent was correct. I do not believe that I was present at that meeting. I was quite surprised to-day to find in part 13 of the hearing, page 173, that since my return to you of the stenographic report and the galley proof that the *text was changed* to read 'Mr. Williams was present,' instead of 'Mr. Williams was absent.'"

And in another letter to Chairman Anderson, October 18, 1921, I had said:

"In view of the conflict in testimony concerning the Federal Reserve Board meeting of August 31, 1920, as to which the extract of the minutes read by Congressman MILLS on August 2, as shown by the stenographic record, reported me 'absent' from that meeting and the subsequent claim of the reserve board that the minutes showed me to be 'present,' I will greatly appreciate it if you could, without embarrassment, procure and send me, as requested in my letter to you of the 14th instant, a certified copy of the entire minutes of that meeting."

Chairman Anderson wrote me under date of October 22, 1921:

"I have asked the Federal Reserve Board to furnish the commission with a certified copy of the record of the proceedings of the board meeting of August 31, 1920."

But from that day to this I have heard nothing further from him on this subject—and I am more fixed than ever in my belief as expressed to the commission that I was not present at the meeting when that subject came up and never at any time voted against the abolition of the progressive rate.

RESERVE BOARD TWICE VOTES DOWN MR. WILLIAMS'S MOTIONS TO LIMIT INTEREST RATES CHARGED MEMBER BANKS TO 10 PER CENT OR LESS.

Will also add that, although my colleagues on the reserve board voted down my resolution offered about the 1st of February, 1921, to prevent the exaction of anything over 6 per cent, and another resolution limiting charges to 10 per cent by any reserve bank in any district, I can hardly conceive that they would have voted at any time to approve such rates as those which were charged and collected by the Atlanta Reserve Bank in certain notorious instances. It was not until January, 1921, that I discovered that your bank had charged, in September, 1920, over 60 per cent, 80 per cent, and 87½ per cent on loans, and by that time the progressive rate had been abolished by the Atlanta Reserve Bank, the progressive rate in that district having been rescinded by the board in November, 1920.

I can not see how you can restrain the blush of shame for collecting such unconscionable rates. When you found that the "progressive" rate plan yielded such results you should have notified the board at once. It seems inconceivable that the board under such conditions would have allowed such rates to be continued. *Yet when I discovered later on that extortionate rates were still being charged and demanded of the board, first in letters and then in public addresses, that they should abolish all progressive rates and reimburse the sufferers, they refused to act for some months, until an aroused public opinion forced them to make restitution.*

In your efforts to establish character for the management of the reserve system and to justify its administration you appeal to the commendation of the system itself contained in my annual report as Comptroller of the Currency for the year 1920, submitted under date of December 6, 1920.

RESERVE OFFICIALS SEEK TO DEFEND THEIR CONDUCT BY APPEALS TO COMPTROLLER'S COMMENDATION IN HIS 1920 REPORT.

I noticed also in some newspaper a few days ago extensive quotations taken from the same report by Governor Harding in his effort to establish character; but your arguments, and his, are fully answered by my statement before the Joint Congressional Commission of Agricultural Inquiry, of which you are doubtless well informed, for you refer in your letter specifically to that testimony. On pages 124–125 of that report appears the following clear and categorical statement which I think dissipates and destroys your claims. I said to the commission:

"I have stated, clearly and repeatedly, that the curbing efforts of the board and of the reserve banks were, for part of the time in the past two years, distinctly helpful and beneficial in restraining inflation and in stabilizing values. But when the upward movement was halted, and the downward rush of prices set in, the Federal Reserve Board, whether from inertia or from an inability to comprehend the meaning of events and the radically changed conditions, distinctly failed in the supreme trial.

"The lack of sympathy displayed by the board, and its apparent impotence to meet courageously and resourcefully a situation demanding instant and sagacious action was in my opinion unpardonable.

"I am convinced that if the Federal Reserve Board had heeded the urgent suggestions, recommendations, and warnings contained in my clear-cut letters and memoranda of August 9, 1920, October 21, 1920, and December 28, 1920, and had revised its policies and methods to meet and respond to the great changes which had already taken place and were going on in the world of business and finance, that it could, as I said in my Washington address on April 15, 1921, 'have saved us from a fall so precipitate and smashing, and from much of the distress and ruin through which we have been dragged. It could have made the shrinkage of values more gradual and uniform instead of violent and sporadic, could have helped strongly to keep the circulating currents of commerce at more even flow, so that the losses of each producer might be offset by reasonable reduction in the cost of what he must consume.'

RESERVE BOARD DEAF TO REMONSTRANCES AGAINST ITS FATAL POLICIES.

"On December 28, 1920, in advocating a liberalization of policies, I had said, inter alia:

"'Events, developments, and conditions warn us to remember that a stoppage too sudden may be disastrous as an explosion, that an unyielding barrier thrust into the path of a runaway machine may only hasten wreckage and assure a smash which skillfully regulated guidance might prevent.

"'Two months of actual experience which have elapsed since my letter to you of October 18, 1920, was written tend to intensify rather than diminish my fears for the immediate future.'

"The Reserve Board, however, refused to act favorably upon the urgent recommendations for more liberal policies made by me as a member, and also by many of the best minds in the financial and business world, and the great decline in values went on. I am happy to note, however, that the board, moved, presumably by the force of an aroused public opinion, has been at last compelled to change and to put into effect lower interest rates and more liberal measures, which, if they had been adopted at the time that I urged them upon my colleagues, would, I believe, have saved the country from a large part of the losses and suffering so needlessly forced upon it."

Extracts from my report as Comptroller of the Currency for 1920 have been assiduously distributed far and wide by Governor Harding and the Federal reserve officials who have been criticized by me, and diligent efforts have been made to secure editorial indorsements from newspapers based upon my statements.

AN EDITOR OF NEW YORK NEWSPAPER, PARTICULARLY ACTIVE IN DEFENDING THE RESERVE BOARD, FOUND ON PAY ROLLS OF THE FEDERAL RESERVE SYSTEM.

A New York paper, one of whose editors I am advised has been for some time past on the pay roll of the reserve system, some weeks after my testimony before the Agricultural Commission, printed an editorial claiming that the excerpts from my annual report furnished "an adequate reply" to Reserve Board critics. Promptly upon reading that editorial I addressed a communication to the editor of the paper, and as they apply equally as well to certain comments in your letter as to the editorial referred to, I take the liberty of quoting here the following extracts from my letter to the editor:

"Governor Harding, speaking at Charlotte, N. C., on September 22, quoted from the last annual report made by me to the Congress—for the fiscal year ending October 31, 1920, dated December 6, 1920, and submitted to Congress early in February, 1921—in which, in reviewing the work of the Federal reserve system in the past, I spoke in warmly earnest terms of the Federal reserve act and the great work which it had done, especially under the wise, conservative, and forward-looking influence during the entire period of the war of Secretary McAdoo, and for more than a year after the armistice with the strong and beneficial authority of Secretary GLASS. Unfortunately, for more than 18 months past the board has been without the salutary dominance and help of either of those leaders and has suffered from their absence.

"You republished these extracts used by Governor Harding in his speech, and you describe them as 'An adequate reply' to all that has been said by myself and others against the administration of the law and the system by the board. I have not changed my opinion of the law or of its earlier administration. * * *

"If an engineer was accused of wrecking a train on September 20 by flagrant disregard of signals, I submit that evidence that he had taken the same train safely through a storm on September 18, two days before, would not be 'An adequate reply.' It seems to me that the fact that the system brought us safely through the war and through the 12 or 18 months following, and then *failed* to bring us through the period of readjustment since the spring of 1920 safely and without the ruin of which we now see so many evidences on all sides is strong if not conclusive proof of mismanagement. *When a machine functions perfectly in its first tests and then, bereft of certain strong and guiding influences, fails, we must suspect faulty operation and management rather than defects in the machine itself.*

"No one can contend that results have been pleasant or satisfactory since inflation was halted. To advert to the simile used by Governor Harding in his letter to me of January 13, 1921, in which he said: 'We hold that the shrinkage which has taken place is somewhat analogous to that which occurs when a balloon is punctured and the gas escapes,' let me emphasize here my reply in which I remonstrated against 'puncturing' the balloon and bringing it to earth to collapse and ruin; urging that we should endeavor to effect a safe landing by the intelligent use of ballast and valve ropes.

"Governor Harding seems to agree with me that the system is as nearly perfect as the human mind can devise. When he concedes that, he forces on us the conclusion that the system has not been properly used.

"The official records show that as far back as January, 1920, I protested earnestly against the manner in which the funds of the system were being used to feed the fires of speculation, and remonstrated against the prodigal way in which the funds of the system were being dispensed to certain favored interests.

"In July and August, 1920, from my post as comptroller and member of the Federal Reserve Board, I saw vividly the dangers of the situation and gave warning to my colleagues. I could quote for you page after page of letters from August 20, increasing in earnestness and vehemence, until my retirement in March, 1921, urging that the situation was critical and dangerous, beseeching that the process of compulsory deflation be slackened and modified to meet changed conditions.

"While I was preparing my report for Congress in the autumn and winter of 1920 I was, at the same time, remon-

strating energetically against the policies by which the board was guiding its actions. I could not know and was unwilling to believe that the board would persist in those policies in the face of cumulating evidence of the destruction and demoralization which they were causing.

"My arguments with the board were against the methods in use, especially in certain sections of the country which were encouraging speculation and usury which should have been restrained or discouraged and were restraining production and actual useful commerce and business which should have been fostered and encouraged.

"It is not my purpose or aim to injure or punish anybody, or to offend or ruffle anybody's sensibilities. My plain purpose is to make clear as possible to the public and to those in authority what I regard as the disastrous mistakes and misuses of the splendid machine and system so that repetition of those mistakes may be avoided. For that reason I ask your indulgence to this contribution to the evidence and arguments in the case.

REPENTANCE AND REFORMATION NEEDED.

"In my view the only 'adequate reply' possible for Governor Harding and the Reserve Board is recognition of the errors of the past and intelligent study of the varying seasonal, territorial, and special needs of the country's commerce and variation and flexibility of policy and method to meet those needs impartially, courageously, and adequately, without fear and without favor.

"Consideration which should be based on plain facts, clear reasoning, and actual needs is clouded, and I think degraded, by attempts to obtrude upon it the familiar dodge of the police-court lawyer, endeavoring to discredit and put on the defensive the accusing witness, and the equally familiar trick of the cheap politician so *juggling and garbling quotations and dates as to make an utterance based upon one condition to apply to an opposite condition.*

"I am not skilled in such controversial arts and have no ambition to acquire them. All I want and ask in this regard is that we have such intelligent and faithful management of the Federal reserve system as will facilitate business and make our country prosperous everywhere, with our financial and commercial establishments safe and hopeful. Results and conditions prove that we have not had such management. I am contributing what I can to make sure that we shall have it soon and always, not only in one locality or section but throughout our whole country."

You appear to claim that in commending in my report as Comptroller of the Currency of December 6, 1920, the "functioning" of the Federal reserve system in a certain period, that I thereby gave a clean bill of health to its management and administration; but I must respectfully differ with you there. It is quite conceivable that the wonderful machinery of the steamship *Olympic* might "function" admirably on a trip across the ocean and yet be wrecked on the rocks by incompetent, drunken, or faithless officers responsible for steering her.

FEDERAL RESERVE OFFICIAL'S CONCEPTION OF A "SYMPATHETIC ATTITUDE."

In answer to your statements as to the "*sympathetic attitude*" of Federal reserve officials I will conclude my letter by quoting the following extract from an address I delivered in April, 1921, before the People's Reconstruction League in Washington:

"Precisely in point with what I have been saying and as illustration as what I may call callous, if not the brutal, attitude of some of our officials, let me read you a paragraph or two from the New York financial article printed in the newspapers the day before yesterday.

"The writer of the article said:

"'From a talk I had to-day with one of the important officials of the Federal reserve bank here it appears that there is a consensus of opinion among the different governors of the Federal reserve banks favoring a continuation of present policies despite the criticism heard from all quarters for lower interest rates and withdrawal of pressure to force payment of outstanding loans. There are three general policies which might be adopted, it was pointed out.

"'One would be to ease up on interest rates, but that policy, with the heavy inflow of gold, it was argued, might result in a renewal of dangerous speculation and inflation.

"'*Another policy might be adopted that would result in putting on still more pressure, thus cleaning up the after-war mess in a hurry and getting it over. But if that course were adopted, it was pointed out, "we would be a long time in picking up the pieces caused by the many forced failures."*

"'By far the best plan, it was argued, was the one now being followed, which permits continuous but moderate liquidation.'

"It must be noted that the only objection mentioned by the 'important official' of the Federal reserve bank quoted to the plan for '*putting on still more pressure*' was not the cruel injustice, the disregard of every principle for which the Federal reserve measure was created which it would involve, but the probability that they 'would be a long time in picking up the pieces'—i. e., the dead bodies—'caused by the many forced failures.'

ONE PLAN FEDERAL RESERVE OFFICIAL SAYS WAS DISCUSSED WAS, IN EFFECT, A PRELIMINARY MASSACRE OF BUSINESS.

"*One* policy 'might' cause renewal of dangerous inflation and speculation. *Another* would mean acute panic forced by unskillful or indifferent management or wanton mismanagement of the machinery ably devised to give relief and prevent panics. It is proposed to check disease and give the doctors and nurses surcease from troubles and responsibility by killing all the patients in the hospitals, a plan actually under discussion being to restore business to general sound condition by a preliminary *massacre* of business.

"The now prevailing method is supposed to be a compromise between these two, and we are told there is a consensus of opinion among the governors of the Federal reserve banks to let it continue. The suggestions offered by the 'important official' of the Federal reserve bank quoted above, are, I assume, a reflection of the attitude of the board, for which I can conceive of no excuse. Apparently it has not occurred to the board that it may be possible, by anxious and alert vigilance and careful responsiveness to daily situations and varying sectional requirements, to avoid either of the alternatives described above—delirium on one side, death on another, or a sleeping sickness, as at present.

"The man who put an automobile on the road with steering gear set and let it run, or the doctor who failed to adapt his treatment to stimulate or retard heart action, as conditions indicated, would be liable to indictment for murder.

"The policy outlined in this newspaper paragraph, as obtained from a Federal reserve bank official, is precisely that against which I war and against which I hope all of us will war. It is the policy of setting the steering gear and letting her go; of applying the same treatment to high fever and paralysis—the 'bureau' method of hard and fixed rules.

"*The Federal reserve system was not intended to be worked that way. It presupposes attention, intelligence, flexibility of thought in those who operate it, the capacity to feel and understand and to value the welfare of the country and of each of the individuals composing it as more important than official dignity, pride in an adopted policy, or blind and slavish allegiance to rules by those who first create them, and then abjectly worship them.*"

"HERO MEDAL" SOUGHT FOR SAVING SOME OF THE PASSENGERS OF VESSEL THEY HAD WANTONLY TORPEDOED.

You have claimed with much fervor that the reserve banks are entitled to great credit for saving the lives of numerous banks and business houses throughout the land during the period of extreme deflation and contraction which they themselves were so instrumental in bringing upon the country. On the other hand, men who are well-informed have likened our great Federal reserve system to a magnificent battleship, designed and built for the protection of the country, its commerce, and all its interests, which, through some colossal blunder, overtakes and torpedoes one of our own merchantmen, with thousands of passengers and a precious cargo, and having sent the merchant ship to the bottom of the sea, then launches lifeboats and picks up *some* of the drowning passengers. The officers of the battleship thereupon solemnly assume the rôle of life-savers and after having wrought such terrific destruction they brazenly ask Congress to bestow upon them the life-saver's medal for having rescued from the waves some of those whom the frightful blunder of those same officers had thrown into the jaws of death.

If you expect from the people of this country, when the facts are fully known, a reward for such a feat, you will find yourself bitterly mistaken. Our people will not scrap that battleship, but they will place it under the command of more worthy officers and they will visit upon those guilty for such a crime the punishment they richly deserve.

This letter I respectfully commend to your thoughtful consideration and study; and let me express the hope that in your future speeches in defending the management of our great Federal reserve system, which is capable of being of such tremendous value to our whole country and in which you hold so important an office, you will be more correct in the presentation of your arguments and claims and not stray so far from truth and fact.

Yours very truly, JOHN SKELTON WILLIAMS.

*"There are many economists who persist in their belief that the ruthless policy of deflation adopted by our financial managers after the war was largely responsible for the great depression that swept like a plague over the land, and from the ravages from which our industries are just beginning to make a progressive recovery; * * * there are many well-equipped business men, among them our exporters almost to a man, who still maintain that less drastic measures could have been adopted, or, at least, applied with less suddenness and severity. * * **

" * * the Federal Reserve Board was pursuing its policy of deflation ruthlessly, and the regional banks, as a result thereof, were piling up enormous profits and building gilded palaces from the sweat of the brow of American business."* (New York World, June 19, 1922, S. S. Fontaine, financial editor.)

It seems incredible, but it is nevertheless true, that four Federal reserve banks—New York, Boston, Cleveland, and Chicago—had, before the scandal was made public, planned, and were, with the sanction of the board, proceeding with the erection of banking palaces the aggregate cost of which was estimated, according to the confession made by the Federal Reserve Board in its report to the Senate, at $49,878,914.

This huge sum of money, nearly fifty million dollars, if it had been applied to the erection of Federal bonded warehouses in the South, together with the warehouses already available, would have provided storage for the entire cotton crop of the South, or, say, 10,000,000 bales; or, if it had been appropriated for the erection of grain elevators and warehouse facilities for agricultural products in the West, would have afforded invaluable aid and given infinite benefit and relief to tens of millions of our people instead of being squandered on costly banking palaces for the sumptuous delectation of four reserve banks. An eminent man of very high standing, writing recently from the North concerning this scandal, said:

"If you think the Tweed ring in their days and ways was any comparison with the Federal Reserve Board transaction you misapprehend the size. I lived in those days and I remember their sensations, which were tame when compared with these. If only the same men who got after Tweed could get after these they would prove an ornament to the generation and have a life estate that would perpetuate the recollections."

In connection with the millions of dollars ruthlessly wasted by the reserve banks, it is interesting to note that the Reserve Board's report to the Senate shows that in the New York Reserve Bank 33, or 80 per cent, of its officers had been given salary increases amounting in the aggregate to 3⅓ per cent, while the aggregate increase granted to 12 of those officers was 5⅓ per cent.

A former member of the Federal Reserve Board, a man of ability and broad progressive ideas, with whom I had the honor of serving on the board, who had seen its operations on the inside and who is also particularly well informed as to the credit situation in the West, to whom I had sent a copy of my address before the People's Reconstruction League, in which I exposed abuses and errors in the administration of the system and called for reform, wrote me, upon its receipt, a letter in which he said frankly:

"We all feel just as you do."

—

Within the past few weeks a bill has passed Congress by a big majority and has been signed by the President which limits the expenditures which may be made for any one Federal reserve bank building without the express authority of Congress to $250,000; which adds an additional member to the board and provides for giving the great agricultural interests of the country representation on that board.

Much has already been accomplished toward correcting the grave abuses in the administration of the Federal reserve system to which attention has been directed, but much still remains to be done. The power of public opinion, however, when once aroused is irresistible.

—

In a letter to Mr. Williams from Washington, under date of March 18, 1922, a distinguished publicist and author, in referring to exposures concerning the mismanagement of the Federal reserve system, which he describes as "startling revelations," said:

"Here is a national scandal. What is the reason the newspapers ignore it? Believe me, they would not have ignored it 25 years ago, nor the magazines 15 years ago. The fact of the suppression is more momentous than the scandal that is suppressed, tremendous as that is. These are disquieting conditions."

"I ask attention to the important fact that not a single one of the many serious criticisms and charges which it has been my unpleasant duty, in behalf of our Federal reserve system and in the public interest, to make against the administration of the reserve system has ever been refuted. They stand today unshaken and unshakable."—(John Skelton Williams in letter printed in CONGRESSIONAL RECORD December 19, 1921.)

—

"Right and wrong are in the nature of things. They are not words and phrases. They are in the nature of things, and if you transgress the laws laid down, imposed by the nature of things, depend upon it, you will pay the penalty."—(Lord Morley.)

(Copies of other published letters and addresses by Mr. Williams in behalf of a better management of the Federal reserve system may be obtained, while the supply lasts, upon application.)

The following extracts from an editorial which appeared in the columns of the Manufacturers' Record, of Baltimore, of August 11, 1921, show the effect which an aroused public opinion and the revelations made by Mr. Williams in his speech at Augusta, Ga., July 15, 1921, and his criticisms and disclosures made in preceding months as to the policies and administration of the Federal Reserve Board had in bringing about a reversal of those policies and a relaxation in money and credit conditions:

FEDERAL RESERVE BOARD FORCED TO REVERSE ITSELF HURRIEDLY AND DRASTICALLY ALL ALONG THE LINE—SIGNIFICANT DEVELOPMENTS.

"It had been arranged that Mr. Williams should testify before the joint committee of the Senate and House of Representatives now investigating agricultural conditions, on Tuesday, July 26, and Mr. Williams was in Washington prepared to go on the stand. He was informed that a postponement until the following Tuesday had been decided on.

"During the intervening week there were some spectacular events filled with meaning. The White House, for instance, gave out a statement intended to show the accomplishments of the administration to date. In that statement emphasis was laid, strongly laid, on the fact that a *change in the policy of the Federal Reserve Board had been brought about;* that the rediscount rate had been *forced down*, and it was intimated that it *would be forced still further down.* * * *

"A week's delay meant that the Federal Reserve Board could come into court, say, with cleaner hands. Likewise it would not be the disposition of the investigating committee, we may assume, to press the board too hard. provided that before the hearing it held, let us say, definite promises from the board that it was already quietly correcting some major abuses and could show, forsooth, that—

"(a) It had ordered a return in the Atlanta district of the usurious graduated charges made last winter.

"(b) That it had abandoned the graduated rates entirely.

"(c) That it was not now coercing State banks.

"(d) That it would no longer compel indiscriminate liquidation, etc.

"(e) That it had given orders for liberality in financing this season's crops.

"Instantly, we may say, following news that there would be a congressional investigation, the board drew over its lion's skin the mantle of a lamb. It would not be able to answer Mr. Williams on the date originally set for the hearing, it averred, but it could a week later.

"This significant fact stands out: *Mr. Williams, reinforced by public opinion from all over the United States, had scored a tremendous victory before he even took the witness stand. His Augusta speech had forced the issue.*

"Rather than meet it, the board hurriedly and drastically reversed itself all along the line. It (a) saw that rediscount rates were cut; (b) abandoned the system of graduated rates; (c) receded from drastic liquidation of farm products, urging the various reserve banks to be liberal hereafter and not to force on the market commodities for which only ruinous prices could be got.

"If it had not done these things the personnel of the board would have dissolved and a new board, responsive to common sense and public opinion, would have sat in its place. * * *

"The comment of one Congressman on the situation is very enlightening. 'If you accuse the board,' he says, 'of having brought about this great debacle, the members deny that they are in any way responsible. But if you congratulate the board on having knocked the bottom out of the markets and on having raised the gold reserve ratio to a point that is in itself a national scandal, they one and all take off their hats, bow solemnly and say, "We thank you; we did it."'"

RICHMOND, VA., *May 26, 1922.*

M. B. WELLBORN, Esq.,
Governor Federal Reserve Bank of Atlanta.

DEAR GOVERNOR WELLBORN: Some one has sent me a clipping from the Mobile Register of the 20th instant containing what purports to be copious extracts from a speech made by you before the Alabama Bankers' Association, devoted in large part to the defense of the management and policies of the Federal reserve system. The newspaper report quotes you as saying:

"I have attended all the conferences of both governors and chairmen with the Federal Reserve Board at Washington," and that, therefore, you feel that you are "pretty thoroughly posted regarding the policies of the Federal reserve system ever since it began operations."

Your alleged address contains a number of sweeping statements which are exceedingly misleading and directly contrary to the record and official figures; but I shall not go into them all in this letter. My purpose at the moment is to deal with a particular statement, as to the accuracy of which you boldly challenged criticism.

As you very well know, I am not and have not been a critic of the Federal reserve system, but I am a critic of the administration of that system, and I have denounced its erroneous policies, its extravagance, and its mismanagement, and I think I have proved all of my charges.

Although your challenge is not, therefore, directed to me, I shall accept it. The particular statement which you challenge critics of the reserve system to refute was this:

"In view of the fact that the reserve banks extended their accommodations to member banks around $1,000,000,000 from January 1, 1920, to January 1, 1921, who has the temerity to say that there was a constriction of currency or restriction of credit? I challenge the severest critic of the Federal reserve system to successfully refute this statement."

I deny your statement that the reserve banks "extended their accommodations to member ranks around $1,000,000,000 from January 1, 1920, to January 1, 1921," and in support of this denial I give you the following figures, taken from the official bulletin published by the Federal Reserve Board:

Total amount of bills discounted and bought paper held by all 12 reserve banks January 2, 1920	$2,805,818,000
Total amount of bills discounted and bought paper held by all 12 reserve banks December 30, 1920	2,974,836,000
The actual increase for the period mentioned by you therefore was	169,018,000

and not "$1,000,000,000," or even approximately, or "around $1,000,000,000." If these official figures, taken from the Federal Reserve Board Bulletin, are correct, your statement is grossly incorrect and misleading, and I respectfully ask that you inform me whether you have been correctly quoted by the newspaper. If you have been correctly quoted I ask that you give me the official figures to corroborate your claim that there was an expansion of "around $1,000,000,000" in the period mentioned, and give me the source of your authority.

The dates which I have given above in the first instance was "January 2, 1920," instead of "January 1, 1920," and in the second instance I give "December 30, 1920," instead of "January 1, 1921," for the reason that the Federal Reserve Bulletin publishes the figures at the close of each week, and I have not the exact figures for the precise dates you mention; but the difference of a day or two will make no material change.

The statements made in your address, as quoted in the newspaper, indicate that your remarks and claims apply to the Federal reserve system, and not only to a Federal reserve bank. How far you intend your sweeping statements to cover other Federal reserve banks I do not know; but a speech made by Representative SWING in the House of Representatives on May 23, 1922, which I have just read in the CONGRESSIONAL RECORD, suggests how matters were handled in the twelfth Federal reserve district. Congressman SWING said:

"I can not understand how men can continue to deny that the deflation policy adopted by the Federal Reserve Board was not deliberately aimed at the farmers of this country. I was present at a meeting of the bankers of southern California, held at El Centro, in my district, in the middle of November, 1920, when W. A. Day, then deputy governor of the Federal Reserve Bank of San Francisco, spoke for the Federal reserve bank and delivered the message which he said he was sent there to deliver. He told the bankers there assembled that they were not to loan to any farmer any money for the purpose of enabling the farmer to hold any of his crops beyond harvest time. If they did he said the Federal reserve bank would refuse to rediscount a single piece of paper taken on such a transaction. He declared that all the farmers should sell all of their crops at harvest time, unless they had money of their own to finance them, as the Federal reserve bank would do nothing toward helping the farmers hold back any part of their crop, no matter what the condition of the market.

"Mr. COOPER of Wisconsin. Did the gentleman from California hear that?

"Mr. SWING. I did. * * *

"The Federal reserve bank deliberately set out to 'bear' the market. They succeeded so well that they broke the market; not only broke the market but broke the farmers as well. We there saw the strange spectacle of the farmer citizens of this country being ruined by being forced to sell their products on a glutted market at less than what it cost to grow them, as a direct result of a policy adopted by their own Government, a Government created to aid them, not to harass them. I say it was criminal, it was damnable for this all-powerful agency of our Government to deliberately crucify the farmers of this country." * * *

It is unnecessary for me to express here an opinion on the question related by Judge SWING, the Congressman from California, or on the policies prevalent in that district. My views on the administration of the Federal reserve system are well known to you.

Before closing this letter, however, there is another statement in your speech, as reported, to which I must take exception. You are quoted as saying:

"So far as the farmers were concerned, we at no time denied them credit. Our officers and directors recognize that agriculture is foremost of all industries in this district, and consequently we have ever been watchful of the needs of the smaller member banks which serve directly the farming interests. In the summer of 1920, when the progressive rates were in effect, we took the precaution to exempt from the operations of the progressive-rate schedule borrowings of member banks on paper the proceeds of which were used for agricultural purposes. This action on our part gave our member banks ample credit to take care of their agricultural customers to the fullest extent. I desire to call your attention to the sympathetic attitude of our board of directors to the farming interests."

Despite this statement, which you are quoted as making at Mobile to the Alabama Bankers' Association, the official records show that in September, 1920, in making advances to a small country bank in Alabama, whose loans were nearly all to farmers and live-stock raisers, you not only did not exempt from the operation of the progressive rate farmers' paper but you charged for the accommodations granted to that bank interest as high as 8½ per cent on a portion of its loans—the average interest charged for the use of about $112,000 for the last two weeks in September being about 40 per cent.

The statement made in your address at Mobile that you "took the precaution to exempt from the operations of the progressive-rate schedule borrowings of member banks on paper the proceeds of which were used for agricultural purposes" impresses me as being inconsistent with a statement which you made to Governor Harding in a letter dated February 21, 1921, in which you said, categorically, that the exemption of farmers' paper from the normal line and the progressive-rate schedule "was being granted only to the extent of the capital and surplus of the borrowing bank."

The capital of that small bank was $25,000, and, according to the official figures, it appears that you were good enough to let them have about $2,765 at the rate of about 6 per cent per annum; but as the bank found it necessary to borrow something over $110,000 to meet the urgent needs of its customers, principally farmers, you exacted for the next $34,000 in excess of $2,765, which the bank had to have, an average of about 21 per cent.

For the next $27,000 which the bank had to borrow the bank was required to pay for some of the money as high as 50 per cent—an average of about 40 per cent per annum.

For the next $34,000 with which the reserve bank accommodated this little country bank it demanded and received an average of over 60 per cent, for a portion of the funds exacted 75 per cent, and for the last $7,000 or $8,000 gotten at that time the bank paid an average of over 80 per cent per annum; for a portion of the money they actually paid 87½ per cent.

Is this, may I ask, an illustration of what the newspaper report states that you described to the bankers at Mobile as "the sympathetic attitude of our board of directors"?

I do not think you will deny these figures.

In letters addressed to the Federal Reserve Board and in public addresses, I demanded early in 1921 that these unconscionable and barbarous rates exacted from farmers and business men by reserve banks be refunded to them, and I understand that pursuant to my demands and warnings the Reserve Board did pass a resolution authorizing certain reserve banks to make restitution of interest exacted in excess of 10 per cent or 12 per cent. The official records show that resolutions offered by me in the Reserve Board in February, 1921, to prevent the exaction of interest in excess of 10 per cent by reserve banks were voted down by my colleagues.

Later on, after public attention had been called to these abuses and exactions, the progressive interest rate was abolished in reserve banks in which it was still in force.

I think it due to you that I should state here that the efforts of the Federal Reserve Bank of Atlanta in the summer of 1920 to adopt a more liberal policy toward its member banks were frustrated and prevented by the refusal of the Federal Reserve Board itself to act favorably upon recommendations looking toward a more liberal policy which were made to the Reserve Board by the officers and directors of the Federal Reserve Bank of Atlanta.

I hope to receive a prompt reply to this letter, in which I have directed your attention to the very misleading and incorrect statements which you, the governor of the Federal Reserve Bank of Atlanta, are reported to have made before the Alabama Bankers' Association at their recent meeting.

If you have been incorrectly quoted, I respectfully submit that you owe it to yourself to make public correction. But if you have made the statements attributed to you by the newspapers to which I have referred, I must denounce the utterances referred to as misleading, incorrect, and contrary to the official records accessible to you, and call upon you as the governor of the Federal Reserve Bank of Atlanta to give your authority for the statements so wholly unjustifiable.

It is a very serious thing for you to inform the public that between two certain dates the Federal reserve banks granted an increase in accommodations of "around $1,000,000,000" if official records available and presumably familiar to you show that the expansion referred to was scarcely one-sixth of the amount stated by you if you do not exempt "bought paper," or even if you exempt "bought paper" for the period indicated the aggregate increase was scarcely one-half of the amount that you represented it to have been. I am wondering what excuse you will offer for such a glaring discrepancy in the presentation of deeply important and significant figures.

Until you shall have had a reasonable opportunity to advise me as to whether the newspaper reports of your speech are correct, I shall prefer to assume that you have been incorrectly quoted and did not make the statements contained in the article.

Awaiting your reply, I remain,

Very truly yours,

JOHN SKELTON WILLIAMS.

—

FEDERAL RESERVE BANK OF ATLANTA,
OFFICE OF GOVERNOR,
June 1, 1922.

JOHN SKELTON WILLIAMS, Esq.,
Care of Richmond Trust Co., Richmond, Va.

DEAR MR. WILLIAMS: Replying to your letter of May 26, I wish to say that I am surprised to note that you criticize the Federal Reserve Bank of Atlanta for the effect of the operation of its progressive rate schedule in the autumn of 1920, for the reason that you, as a member of the Federal Reserve Board, were present at the meeting of the board on May 28, 1920, when these rates were approved by that body; and you did not vote against our bank's putting them into effect. Again, on August 31, 1920, when the Atlanta Reserve Bank sought to abolish the progressive rates, you attended the meeting at which the board declined to permit us to do so; and you did not then vote in favor of allowing us to terminate the operation of this progressive rate schedule. Thus you not only took part in the meeting where the rates were approved which you now so loudly condemn but you also took part in the meeting of the board where that body refused to allow us to get from under those very rates, for which you now so severely criticize us. On the contrary, you held us chained to the rocks, to be preyed upon later by yourself and other critics. I contend that you can not now escape from the responsibilities of your actions while you were a member of the board, but are bound to assume all mistakes—if any—where you participated in its deliberations.

I want to impress the fact upon you that the meeting of the Federal Reserve Board on this question which you attended was held on August 31, 1920, this being several weeks prior to the time the high progressive rate was charged the Alabama bank to which you refer. Had you then, by official action, heeded the request of the Atlanta Reserve Bank to abolish the progressive rates, the incident of the Alabama bank—which you so frequently refer to as the "horrible example"—would never have occurred. Therefore, it seems to me that, in view of your official actions at that time, it is improper for you to now parade this matter and endeavor to make capital out of it in order to work up a plausible case against the Federal Reserve Board and the Atlanta Reserve Bank. The record is so clear as to your participation in this "awful crime" that I think the officers and directors of the Atlanta bank might well exclaim with Cæsar "Et tu, Brute!" and with Brutus, "This was the most unkindest cut of all." Your record in these matters was published in the report of the hearings before the Joint Commission of Agricultural Inquiry in August, 1921.

In referring to my address delivered at Mobile on May 19, 1922, you take exception to the following statement: "In view of the fact that the reserve banks *extended their accommodations* to member banks around $1,000,000,000 from January 1, 1920, to January 1, 1921, who has the temerity to say that there was a contraction of currency or a restriction of credit?" Preceding that statement, I showed that there was an increase of approximately $328,000,000 in Federal reserve notes during the period between January 1, 1920, and January 1, 1921. The only correction I wish to make in any figures which I gave is this: I should have said that the Federal reserve banks extended accommodations to their members around *three* billion dollars instead of *one* billion. Your own figures bear me out in this. I beg that you will note carefully that I used the word "extended" and neither the word "increased" nor the word "expanded," as you seem to have understood from your criticism. These last two words were not used by me at all in the parts of my address you quote.

The figures I have from the Federal Reserve Board show an expansion of $472,000,000 in discounts for the year 1920. This in itself conclusively shows that there was no contraction of loans, but, on the contrary, a very large increase.

Permit me to again refer to your record when, as Comptroller of the Currency, on December 6, 1920, your official report to Congress reads in part as follows: "Largely through the aid and excellent functioning of the Federal reserve system, the business and banking interests of the country have passed successfully through the perils of inflation and the strain and losses of deflation without panic and without the demoralization which has been produced in the past at various times from far less serious and racking causes. Those banking and other interests which, at the outset, so vigorously opposed the Federal reserve system are now among its warmest advocates."

In your letter to me you say that you are not a critic of the Federal reserve system, but that you *are* a critic of the *administration* of that system. Really I am at a loss to understand your attitude, for, as I have shown in the beginning of this letter, you criticize and condemn a Federal reserve bank for the operation of the progressive rate schedule in the case of a small Alabama bank; and yet, as I have pointed out, it appears clearly from your official record that you not only approved those rates when they were adopted but you later refused to vote to allow the Atlanta bank to discontinue them when the hardships which their continued application would entail had become increasingly manifest.

In the above quotation from your report to Congress you speak of "the excellent functioning of the Federal reserve system." If you meant what you then wrote, it seems to me that this statement constitutes a strong indorsement of the *administration* of the system. Permit me to call your attention to the fact that this was written immediately after the crisis of 1920, at a time when all events were fresh in your mind and you were best able to make a calm survey of the situation. What has caused your radical change of view I am unable to comprehend.

I still maintain that our board displayed a sympathetic attitude toward the farming interests, as shown by its action in exempting from the operation of the progressive rate schedule borrowings, up to the capital and surplus, of member banks on paper the proceeds of which were used for agricultural purposes. In my address at Mobile I regret to say that the words "up to the capital and surplus" were inadvertently omitted.

Very truly yours,

M. B. WELLBORN, *Governor.*

FEDERAL RESERVE BANK OF ATLANTA,
June 20, 1922.

Mr. JOHN SKELTON WILLIAMS,
Richmond, Va.

DEAR MR. WILLIAMS: This is to acknowledge receipt of your letter of June 10.

It is my opinion that this communication requires no answer. I simply wish to close the correspondence between us by making the statement that the keynote of my Mobile speech is to be found in the following words: "There was no deflation of Federal reserve bank credits nor any diminution of Federal reserve notes for the period of the tremendous fall of prices in agricultural products which took place in 1920." I do not believe that this statement can be successfully assailed.

In your letter you are at particular pains to lay stress upon the question as to whether or not you were present at the meeting of the Federal Reserve Board on August 31, 1920. I accept your explanation for what you intended it to be, and I am sure that you much regret by now not paying closer attention to your duties as a member of the Federal Reserve Board during the crisis which developed in the autumn of 1920. Surely, by virtue of your official position, you were then much more able to be of assistance to the economically oppressed of the country than you are in your present situation.

I have heard you upon occasion chastise verbally directors of banks when their sole fault was a failure to find out what was going on in the institution with which they were connected. Consistency demands that you now apply just as stringent a rule to your own conduct in the fall of 1920. The Atlanta bank was at that time endeavoring, by every means in its power, to secure the abolishment of the progressive rates. We must surely be given credit for our foresight in sounding the alarm. I believe that we were the only reserve bank which recommended the discontinuance of the progressive rates at that time. Perhaps if you had kept up more closely with the doings of the Federal Reserve Board the famous Alabama case, of which you so persistently complain, would never have occurred. Who, if anyone, is to be blamed for what happened? Surely not the Atlanta bank, and you yourself, being a member of the Federal Reserve Board, can not escape responsibility for its actions.

Very truly yours,

M. B. WELLBORN, *Governor.*

—

RICHMOND, VA., *June 24, 1922.*

Mr. M. B. WELLBORN,
Governor Federal Reserve Bank of Atlanta.

DEAR GOVERNOR WELLBORN: I have your letter of the 20th instant.

You are decidedly mistaken in your assumption when you say:

"I am sure that you [I] must regret by now not paying closer attention to your [my] duties as a member of the reserve board during the crisis which developed in the autumn of 1920. Surely by virtue of your official position you were then much more able to be of assistance to the economically oppressed of the country than you are in your present situation."

I have no apologies or regrets whatsoever to offer in that connection, for no duties were ever shirked by me either as a member of the board or as the Comptroller of the Currency. The record will bear out this plain statement.

Page 172 of the hearings before the Joint Commission of Agricultural Inquiry shows that I was present during the whole or part of 851 of the 1,283 meetings of the reserve board held from August 10, 1914, to March 2, 1921.

In my address at Washington April 15, 1921, before the People's Reconstruction League, in speaking of my occasional absence from meetings of the board when so much time was wasted in trivial discussion while important matters were overlooked or sidetracked, I said:

"I really felt that I could employ my time more usefully than in attending board palavers and in listening to discursive discussions, beginning nowhere and ending in precisely the same place, conducted by eminent gentlemen."

Incidentally I am reminded of a witticism of a distinguished member of the Cabinet, who, when he heard that soon after the organization of the board much valuable time had been dissipated on different occasions by some of the members—informally, of course—in discussing where they should be placed at public receptions and what the position of the board members was compared with other public functionaries in Washington, remarked that in his opinion members of the Federal Reserve Board ought to be allowed to march *immediately after the "fire department."* That, for the time being, had the effect of putting a quietus upon the social soarings of some of my esteemed and ambitious colleagues. Subsequent events, however, suggest that members of the Federal Reserve Board, responsible for certain deadly policies, might, with some propriety, come some distance after any department of the Government whose energies were devoted to the preservation rather than the destruction of property and life.

In a previous letter you referred to my testimony before the Joint Commission on Agricultural Inquiry in August, 1921. Possibly you have not read carefully the whole of my testimony at that time. If you had done so, you would have realized that the record shows that I expostulated and protested repeatedly against the unwise policies of the board and urged change and reformation. If I had been present at the board meeting of August 31, 1920, you allude to, I have not the slightest idea that with the board composed as it was then that my protest against a continuance of the Atlanta bank's progressive rate would have availed. As a matter of fact, at a meeting of the board earlier in the same month I had urged a liberalization of its policies, but my arguments and remonstrances were in vain.

I will remind you of the following statement, made by me before the Joint Commission on Agricultural Inquiry in August last, showing my attitude in the matter of the progressive rates charged by certain reserve banks:

"I did approve of the theory of some increase on excessive loans, but it never entered my mind, in discussing the question of progressive rates, that any such increases as those exacted subsequently would ever be considered for a moment or ever be tolerated, or if the rules ever produced such rates, that they would not be immediately modified. * * *

"I do not recall whether I was present at the particular meeting of the board which took that action, but you may assume that I was. But if I did vote for it, I never contemplated for an instant that it could be so distorted and abused. The main point is, *when I found out how it was being mismanaged, I tried immediately to do away with it.*"

As to your statement that as a member of the board I was then in a position to be of more assistance to the "economically oppressed" than in my "present situation," I think the record will probably show that I have been able to accomplish more in this particular matter by influencing public opinion, as I have tried to do, from outside of the board than I was by direct appeals to my colleagues while a member of the board. On this point I shall take the liberty of quoting the following extract from an editorial which appeared in the Manufacturers' Record of August 11, 1921. It refers to certain things that happened in Washington shortly after my address to the Georgia Press Association, in which I had felt it my duty to expose and criticize what I considered to be errors and abuses in the administration of the reserve system and demanded a change:

"It had been arranged that Mr. Williams should testify before the joint committee of the two Houses, now investigating agricultural conditions, on Tuesday, July 26, and Mr. Williams was in Washington prepared to go on the stand. He was informed that a postponement until the following Tuesday had been decided on.

"During the intervening week there were some spectacular events filled with meaning. The White House, for instance, gave out a statement intended to show the accomplishments of the administration to date. In that statement emphasis was laid, strongly laid, on the fact that a change in the policy of the Federal Reserve Board had been brought about; that the rediscount rate had been forced down, and it was intimated that it would be forced still further down. * * *

"A week's delay meant that the Federal Reserve Board could come into court, say, with cleaner hands. Likewise, it would not be the disposition of the investigating committee, we may assume, to press the board too hard, provided that before the hearing it held, let us say, definite promises from the board that it was already quietly correcting some major abuses and could show, forsooth, that—

"(a) It had ordered a return in the Atlanta district of the usurious graduated charges made last winter;

"(b) That it had abandoned the graduated rates entirely;

"(c) That it was not now coercing State banks;

"(d) That it would no longer compel indiscriminate liquidation, etc.; and

"(e) That it had given orders for liberality in financing this season's crops.

"Instantly, we may say, following news that there would be a congressional investigation, the board drew over its lion's skin the mantle of a lamb. It would not be able to answer

Mr. Williams on the date originally set for the hearing, it averred, but it could a week later.

"*This significant fact stands out: Mr. Williams, reinforced by public opinion from all over the United States, had scored a tremendous victory before he even took the witness stand. His Augusta speech had forced the issue. Rather than meet it, the board hurriedly and drastically reversed itself all along the line. It (a) saw that rediscount rates were cut; (b) abandoned the system of graduated rates; (c) receded from drastic liquidation of farm products, urging the various reserve banks to be liberal hereafter and not to force on the market commodities for which only ruinous prices could be got. If it had not done these things, the personnel of the board would have dissolved and a new board, responsive to common sense and public opinion, would have sat in its place.*"

You say that you have heard me upon occasion criticize "directors of banks when their sole fault was a failure to find out what was going on in the institution with which they were connected," and you remark, "Consistency demands that you now apply just as stringent a rule to your own conduct in the fall of 1920." I am quite willing to apply such a rule. I had obtained information in regard to mistakes of management and abuses which I endeavored earnestly to correct, but yet there *appeared to be, at times, a studied effort to keep from me information upon matters which my colleagues, or some of them, knew or thought I would not approve.* I invite your attention to the following extract from my letter to Senator OVERMAN of December 2, 1921:

"The people of the country have unfortunately been kept in ignorance of scandalous conditions upon which the light of publicity has now been thrown. While Comptroller of the Currency and member ex officio of the reserve board, I tried earnestly and persistently, as the record clearly shows, to correct evils and to effect reforms as I learned of the necessity for them, but I have reason to believe that there was a studied effort at times to keep from me a knowledge of such things. Referring to certain errors, omissions, and operations in connection with which the New York Reserve Bank had been criticized Governor Strong, of that bank, in testifying before the Agricultural Commission in Washington, on August 9, 1921, *with ostrich-like assurance declared, 'Now, the comptroller (Mr. Williams) did not know anything about these things.'*

"'He was not running the Federal Reserve Bank of New York. And I never discovered anything in his attitude that invited very frank discussion of these matters, and did not consider that it was very much of his business.'" (P. 709, Agricultural Inquiry Hearings.)

You refer to the board's balking the efforts of the Atlanta bank for permission to deal more liberally with member banks. You know, for I have had occasion to inform you on more than one occasion, that I endeavored to persuade the board to give the Reserve Bank of Atlanta permission to deal more fairly with its members, especially in the matters of loans on Government bonds, and you yourself have more than once expressed your appreciation of the assistance which I endeavored to render you.

I should, indeed, be filled with regret if I should imagine that an additional remonstrance from me which would have been effective in preventing the imposition of the cruel and unusual rates inflicted by the Atlanta bank under its progressive rate plan was not given.

But there is no reason to believe that such a request from me at the time you speak of would have been any more effective than those which I had already made so earnestly. As to the attitude of the board in those days, let me remind you of the suggestion quoted by an eminent member of the board at that time with seeming approval, and which was referred to in my speech at Augusta in July last, that "it was better to be unanimous than right," surely a sordid parody on the utterance of the great American statesman who declared that he had "rather be right than President."

Let me say in conclusion that if you knew all of the facts of the case you would probably agree that the then Comptroller of the Currency was a truer friend of the Federal Reserve Bank of Atlanta and of that district than any other member of the board. I not only voted in 1914 as a member of the original organization committee (the other two members being the Secretary of the Treasury and the Secretary of Agriculture) to locate the bank in Atlanta, but I interposed earnestly to check or prevent movements which were started several times for the abolition or removal of the Atlanta Reserve Bank, while the governor of the board, the only other southern man on the board, impressed me as being not only unsympathetic with the Atlanta bank but I might say at times hostile to it.

The official records of the board, if they have not been destroyed, will throw an interesting light on the efforts of certain members of the board to abolish three or four of our reserve banks. I have in my possession an important document bearing on that subject which will make interesting reading for a good many people if it should be made public.

Yours very truly,

JOHN SKELTON WILLIAMS.

—

JUNE 29, 1922.

M. B. WELLBORN, ESQ.,
Governor Federal Reserve Bank of Atlanta.

DEAR GOVERNOR WELLBORN: I have your letter of the 26th[1] instant and I am glad to know that you do appreciate my work at Washington.

I thought it a little strange that you should seem to reproach me for neglect of duty, but I did not permit your taunt to disturb my equanimity, for, in the language of the bard whom you quoted in your letter of the 1st instant, I felt that my position was so impregnable that I could afford to let your criticism "pass me by as the idle wind, which I regard not."

If the Comptroller of the Currency had been negligent of his duties we would hardly have had the record which was shown in 1919 of 8,000 national banks under supervision, with 20,000,000 depositors and twenty billions of resources and not one dollar of loss to any depositor by the failure of a national bank in the entire country for that whole year.

With my best wishes for yourself personally and for the Federal Reserve Bank of Atlanta and our great Federal reserve system as well, I remain,

Sincerely yours,

JOHN SKELTON WILLIAMS.

—

FEDERAL RESERVE BANK OF ATLANTA,
OFFICE OF THE GOVERNOR,
July 3, 1922.

HON. JOHN SKELTON WILLIAMS,
Richmond, Va.

DEAR MR. WILLIAMS: I am in receipt of the pamphlet printed by you and containing in full your reply to my letter of June 1, which was itself not accorded the privilege of publication. Without consulting me on the subject at all you have taken it upon yourself to reproduce garbled extracts from my letter, which procedure I regard as being unfair to me and unethical on your part. In fact, no similar example of a correspondent's taking advantage of another in this fashion has ever come to my notice. Evidently you are reluctant to allow my letter to appear side by side with yours, that an impartial reader might judge between us with full knowledge of the facts of the case and with the arguments for both sides presented for his consideration.

The whole business suggests to me nothing so much as a boxing match supposed to be held between two fair and upright opponents, where immediately after the sound of the gong one boxer strikes the other a foul blow beneath the belt. I believe that your action would be so regarded by any fair-minded referee. I marvel how you can reconcile such tactics with the clear conscience you so continually profess.

Very truly yours,

M. B. WELLBORN, *Governor.*

—

RICHMOND, VA., *July 15, 1922.*

Mr. M. B. WELLBORN,
Governor Federal Reserve Bank of Atlanta.

DEAR SIR: Absence from Richmond prevented an earlier acknowledgment of your letter of July 3, in which you complain bitterly that I should have given publicity to my letter to you of June 10, which, I frankly admit, is a severe and, I believe, an unanswerable indictment of yourself and certain others in the management of our Federal reserve system.

My letter referred to was official and not personal. You apparently regarded it as unanswerable, for after contemplating it for more than a week you wrote me on June 20:

"This is to acknowledge receipt of your letter of June 10. It is my opinion that this communication requires no answer." * * *

You did not in your letter attempt to deny or refute a single charge or statement contained in my letter. But after asserting

[1] The letter here referred to was a letter dated June 26, 1822, from Governor Wellborn, marked "Personal," strongly commending Mr. Williams for his work both as Comptroller of the Currency and member of the Federal Reserve Board, which Mr. Wellborn in a subsequent letter besought Mr. Williams not to make public.

in your reply that during a certain portion of the period of falling prices Federal reserve credits and notes did not decline you offered the suggestion that I probably regretted that I did not pay closer attention to matters in the Federal Reserve Board while I was a member of that body, and after commenting that I ought to have been better posted as to what was taking place in the board you again suggested that the reserve board and not the Atlanta Reserve Bank should be blamed for the monstrous interest rates exacted in your district.

I answered your letter of June 20 on June 24, called your attention to the fact that I had been present at the whole or part of 851 of the 1,283 meetings of the board while I was a member of it, informed you that I had no apologies or regrets whatsoever to offer as far as I was concerned, as no duties had ever been shirked by me as a member of the board or as the Comptroller of the Currency. The records of the comptroller's office, which show that for the year 1919, with 8,000 national banks under my supervision and with over twenty billions of resources, there was not one dollar's loss to any one of the 20,000,000 depositors from a failed bank, do not suggest negligence there.

You acknowledged my letter of June 24 on June 26, 16 days after my letter of June 10 had been written, and you still not only did not challenge or deny a single one of the charges contained in my letter of June 10, to which you now suddenly object, because it has been made public, but you very courteously informed me that you "have never let an opportunity pass to speak highly of your [my] work as comptroller and as a member of the board." And you also declared that you "want you [me] to know that I [you] fully appreciate all the good things you [I] did at Washington."

My letter to you of June 10 was written 23 days before your letter of July 3, in which, for the first time, you claim that it does you an injustice, although you do not show how, and you intimate that it deals you a blow "beneath the belt," which is untrue.

On the first page of my published letter of June 10 I summarized correctly the reply which you made under date of June 1 concerning the flagrant errors contained in your Mobile speech, to which I had called your attention in my letter of May 26. *I challenge you now to point out, specifically, any expressions or statements made by me in the letter you criticize which you claim gives an incorrect interpretation of your statements.*

Among the charges contained in my letter to you of June 10, which you did not deny and can not refute, I remind you of the following:

"In giving widespread circulation, as I am informed you did, to the speech of the Senator above referred to, who had been so gravely misled by some one, you have placed yourself in a serious position. Obviously, the Senator who made that speech had been deceived by unworthy informants—had he been better informed he would not have made such statements—but you had not been deceived. *You knew officially that vital statements in the speech of the Senator referred to were untrue, and yet you gave widespread currency to them.*"

In commenting upon your admission that certain statements in your Mobile speech were inaccurate, I said:

"It seems to me the error is so considerable as to impair very seriously the credibility of any assertions on this subject you may present."

Referring to the exorbitant interest rates exacted by the reserve bank of which you are governor, I said:

"The official records show that you exacted, sir, in the guise of 'interest' from the small country bank referred to, *an average of over 69 per cent per annum on over $50,000*, a rate more than *six times as great as the maximum charged by the government banks of any other civilized country on earth*, during that period, or at any time, as far as I have been able to discover, and you now have the effrontery to boast of the 'sympathetic attitude' of Federal reserve officials toward farmers and other borrowers!

"*I am sure you will not deny these figures. If you do, I shall have to confront you with your own signed confession that you did exact the inhuman interest rates stated by me.*"

You now take exception to my publication of my letter to you of June 10, which was wholly official and which I, having a special knowledge of the facts in the case, addressed to you in the public interest; although it was not published until after I had received your letter acknowledging its receipt and saying that in your opinion it "requires no answer."

You suggest in your letter of July 3 that I am "reluctant" to allow your letter to appear side by side with mine. You are again wrong. This is an important subject and one upon which I think the public ought to be fully posted. Therefore I now inform you that if it meets with your approval I shall be pleased to make public, at once, our entire correspondence on this subject beginning with my letter to you of May 26, including your letters to me of June 1, 20, and July 3, and my letters to you of June 10, 24, 29, and July 15, and your brief personal letter of June 26, as you declared to me in that letter that you "have never let an opportunity pass" to commend my work as Comptroller of the Currency and as a member of the Federal Reserve Board during all those years, up to the present time. That generous assurance of what you sincerely thought and publicly expressed was presumably not a confidential communication.

If you really think an omission to make public your letter of June 1 is unfair to you—although I specifically offered on the first page of my letter as printed to send complete copies of it to anyone desiring it—and you desire the correspondence mentioned to be made public, I shall be pleased to have you telegraph me upon receipt of this letter and I will proceed accordingly.

Yours very truly, JOHN SKELTON WILLIAMS.

FEDERAL RESERVE BANK OF ATLANTA,
OFFICE OF GOVERNOR,
July 17, 1922.

Mr. JOHN SKELTON WILLIAMS,
Richmond, Va.

DEAR SIR: I have your letter of July 15, and must say that I admit few of your statements as true.

You evidently intend this last letter for publication, inasmuch as you quote freely therein from a personal letter of mine to you under date of June 26, a thing which you had absolutely no right to do. This letter was, of course, intended to be regarded as confidential, as I endeavored to indicate by marking it "personal," writing it in my own handwriting, and not signing it officially. This letter was not intended to have any direct connection with the subject matter of our previous official correspondence. The commendation of your services as comptroller and as a member of the Federal Reserve Board referred, of course, to the time previous to the autumn of 1920. Your conduct at that time, and subsequently, I had criticized in my official correspondence with you. I found fault with you for failing to do then what you since have so vociferously reproached the board for failing to do at the same time, while you were a member of that body, in connection with the abolishment of the progressive rates.

I feel that I must, therefore, decline to allow you to publish my personal and confidential letter to you of June 26, or any extracts therefrom. This letter, as I have already pointed out, was written after our official correspondence had already been terminated. Since you have taken the unwarrantable liberty of publishing your entire letter in a pamphlet with only garbled excerpts from mine, I feel that I am justified in making the statement that you acted wrongly in lending yourself to such a one-sided publication. As you have shown yourself to be unfair and unreliable in preparing materials for publication, I can not bring myself to give you authorization for any further activities along this line. The publication of the pamphlet you have already brought out is so palpable a breach of the proprieties and such a gross violation of the ethics I have always understood to apply in such cases, that I must herewith decline to have any further correspondence—personal or official—with you.

Very truly yours,

M. B. WELLBORN.

RICHMOND, VA., *July 22, 1922.*

Mr. M. B. WELLBORN,
Governor Federal Reserve Bank, Atlanta, Ga.

DEAR SIR: On or about May 20, 1922, you made an address before a convention of bankers at Mobile in which, in attempting to defend the mismanagement of the Federal reserve system, you made certain statements which were so far from the truth, as I know it to be, that I wrote you on May 26 directing attention to their incorrectness and asking whether the newspaper which printed your speech had quoted you correctly.

You replied June 1 in a brief letter and admitted that both of your statements to which I had referred were inaccurate, but you then sought to draw attention from your own errors by reverting to the charge I had previously made against your bank for the exaction of inhuman interest rates. You charged that it was the Federal Reserve *Board* which had held you (Atlanta Reserve Bank) "*chained to the rocks to be preyed upon*," and that I, as a member of the reserve board, shared its responsibility. Incidentally let me mention here that the

Federal Reserve Board held *three other* Federal reserve banks in the West and South, as you express it concerning the Atlanta bank, "chained to the rock" of "progressive" rates for *many months after* I had offered resolutions in the board to abolish those unconscionable rates and reduce the maximum to 6 per cent, and when the board refused I asked that they limit them to 10 per cent instead of 20, 30 per cent, or higher, but my resolutions were promptly voted down by the reserve board, although at that very time two big banks in New York City were being favored with $250,000,000 of Federal reserve funds at about 6 per cent.

You also in your letter of June 1 charged that as I had at one time praised the workings of the reserve system, I was estopped from criticizing.

In my reply to you on June 10, written in reply to yours of June 1, I went into the facts of the case in some detail, exposed further errors and delinquencies in the management of the reserve banks, established the correctness of my criticisms, and defied you to deny specifically my charges. I offered to prove by your own written confession the exaction by your bank of extortionate interest rates, running up to as high as 87½ per cent per annum. I then waited for your reply, which you sent under date of June 20.

In your answer of June 20 you did not deny a single one of my charges, but being, it seemed to me, cornered as you were, you declared that you did not think my letter required an answer. You added that you presumed I regretted that when I was a member of the reserve board I had not paid closer attention to preventing or relieving the "economically oppressed," and suggested that I should have kept up more closely with "*the doings of the Federal Reserve Board.*"

I replied to you June 24 that I had no regrets on that score. I reminded you that I had responded to 851 of the 1,283 meetings of the Reserve Board, besides attending to my duties as Comptroller of the Currency, and mentioned that, as the record showed that in the 8,000 national banks under my supervision in the year 1919, with twenty billions of resources, not one of their twenty millions of depositors had lost one penny from a bank failure, I hardly thought anyone could suggest "negligence" there.

To that communication you replied June 26, in a letter marked personal, in which you did not take issue with any statement in my letters of June 10 or June 24. On the contrary, in your letter, after declaring that you wanted me to know how *fully* you appreciated all the good things I had done at Washington, you informed me, in so many words, that you had "*never let an opportunity pass to speak highly*" of my work, *both as Comptroller of the Currency and as a member of the Federal Reserve Board.* You closed the letter with further expressions of confidence and commendation.

If your declaration is true, as I, of course, assume it to be, that you have never let an opportunity pass to commend my work at Washington, there can be no possible impropriety in my quoting your apparently unqualified commendation which you tell me you have so often and so publicly proclaimed up to the time of writing your letter of June 26, 1922. I confess it did not occur to me that you intended to censure and criticize me, directly or indirectly, publicly and officially, while holding your reiteration and assurance of your frequent commendations of me under seal of confidence.

Believing that my letter of June 10 contained facts concerning the management of the reserve system which ought to be made public, and as you had not in your reply been able to deny or question a single charge, I had the letter printed, along with a brief résumé of the preceding correspondence, stating on the first page of the printed letter that I would be pleased to send complete copies of the correspondence to those desiring it. I signed and mailed you the first copy of the letter when printed.

The disastrous and humiliating conditions and evidences of mismanagement set forth in my letter of June 10 you were unable to explain away or deny. You must have realized that my charges were all true when you avoided meeting the question of their accuracy by saying they did not "require" an answer.

But when you see the indictment printed and circulated, you protest loudly that you have been given a blow "below the belt," and claim that I ought to have printed your letter of June 1 along with mine, although I had printed a correct summary of your letter on the outside of the pamphlet and had stated there that I would be pleased to send to anyone desiring them a complete copy of your letter.

After receipt of your letter of July 3, I wrote you, on July 15, that I would gladly make public our entire correspondence on this subject, including your personal letter of June 26, if you would telegraph me on receipt of my letter permitting me to do so. You wrote back, on July 17, refusing to allow me to print your personal letter of June 26, although it contains nothing except your declaration that, up to the time of writing that letter, June 26, 1922, you "*have never let an opportunity pass*" without commending my work both as a member of the reserve board and as Comptroller of the Currency, and further assurances and acknowledgements of a complimentary character to myself. But as an afterthought, you now claim that your commendations, expressed unqualifiedly as late as June 26, 1922, referred only to the first *six and one-half years* of my term of office, and not to the last *six months*, when I had occasion to criticize severely the board's deflation policies, its favoritism, etc.

I think it extremely probable that you *have*, as you had asserted so positively before I printed my letter of June 10, on various occasions commended my work at Washington. I know that you have so declared yourself personally a number of times when you called at the Treasury, and as late as *this spring*, a year *after* I had left Washington, you called at my office in Richmond with Chairman McCord, of the Atlanta Reserve Bank, and again complimented my administration as comptroller, and told me that but for my work there would have been many more bank failures than there have been in the crisis.

In my letter of July 15 I challenged you to deny specifically any one of the statements and charges embraced in this correspondence. You limit yourself in reply to the statement, which impresses me as feeble, that you "admit few of my statements as true," but you deny none of them. It is not necessary for you to "admit" them. They are established, and you can not shake them.

The publication I suggested would comply fully with the desire you have indicated to have the record put verbatim before all who may be interested in the subject. It would meet all the suggestions of unfairness on my part that you have recently presented. Yet in your letter to me of July 17, because I proposed that *nothing* be omitted, you undertake to close the correspondence with flat refusal to accept my offer to do precisely what you complained I have failed to do. You say that my publication of abstracts of and extracts from your letters to me—although you do not question the accuracy of abstracts or extracts—is unfair. When I offer to publish your letters to me in full, along with my letters to you, so that the public may have, as you said it ought to have, "full knowledge of the facts of the case," I am met with the reply that you "decline to allow" such publication.

As I have said many times, my hope in all this correspondence is to try to show that the administrators of the Federal reserve system have done precisely what they should not have done and have reversed exactly the beneficent and wise purposes of the Federal reserve act, making it for a considerable period under their misdirection an instrument of calamity instead of the means of protection and safety it was intended to be. I have been at much pains and have invited and incurred some strong antagonisms in efforts to demonstrate the fearful errors of the board and their unhappy consequences, so that neither this board nor any of its successors may repeat those errors and bring on the country like results. It is the cause of keen regret to me that I have been compelled frequently to turn aside from the main and only issue—the wisdom or unwisdom, propriety or impropriety of the reserve board's policies and management—to meet and repel baseless attacks on my motives and official conduct. These attacks really are apart from the merits of the case. I am compelled to think they were merely the familiar device of assailing the prosecuting witness in absence of evidence for successful defense; therefore it has been made necessary to uphold that witness to prevent any possible weakening of the case made by him.

In the circumstances I can not concede or recognize your right to limit publication of the correspondence between you and myself or to close the correspondence at your will, although, frankly, I have no desire to hear further from you.

Please be advised that I intend to use such proper means as I may elect to have the entire record put before the American public that it may be informed of the wrong that has been done, of the grievous mistakes, in my opinion, reaching the gravity of crimes, that have been made, with the hope that public sentiment may be so aroused to knowledge and vigilance that such wrongs and mistakes shall hereafter be impossible.

Yours very truly,

JOHN SKELTON WILLIAMS.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDING OFFICER (Mr. SPENCER in the chair). The Secretary will state the next amendment of the committee.

The next amendment was, on page 143, after line 20, to strike out—

PAR. 1105. Top waste, slubbing waste, roving waste, and ring waste, 25 cents per pound; garnetted waste, 20 cents per pound; noils, carbonized, 20 cents per pound; noils, not carbonized, 16 cents per pound; thread or yarn waste, and all other wool wastes not specially provided for, 14 cents per pound; shoddy and wool extract, 14 cents per pound; mungo, woolen rags, and flocks, 6 cents per pound.

And in lieu thereof to insert—

PAR. 1105. Top waste, slubbing waste, roving waste, and ring waste, 33 cents per pound; garnetted waste, 26 cents per pound; noils, carbonized, 26 cents per pound; noils, not carbonized, 21 cents per pound; thread or yarn waste, and all other wool wastes not specially provided for, 18 cents per pound; shoddy and wool extract, 18 cents per pound; mungo, woolen rags, and flocks, 8 cents per pound. Wastes of the hair of the Angora goat, Cashmere goat, alpaca, and other like animals shall be dutiable at the rates provided for similar types of wool wastes.

Mr. WALSH of Massachusetts. Mr. President, in view of the fact that the rates in this paragraph are based upon the rate of 33 cents upon the clean content of raw wool, I do not feel that I ought to delay the Senate by making any serious objections to these rates. I think they are too high, as I thought the rate of 33 cents was too high; but I understand that the rates on these different wastes have some relationship to their present value in the market and to the duty of 33 cents a pound upon the clean content of wool. Under those circumstances I think it futile for me to take up the time with a long argument upon this paragraph, and I shall be content with simply making the protest and voting against the paragraph.

Mr. WILLIS. Mr. President, I desire to submit an inquiry to the Senator from Utah [Mr. SMOOT]. I have been comparing the rates proposed by the committee with the rates in the act of 1909. Of course, we know that there is a slight increase in the actual rate on the scoured pound of raw wool.

On top waste the duty in the act of 1909 was 30 cents a pound, and here we make it 33. That is all right and is consistent with the slight increase on scoured wool to which I have referred.

Now we come to the next item. In the act of 1909 shoddy is made dutiable at 25 cents a pound. The duty here is proposed to be reduced to 18 cents a pound.

The duty on woolen rags, mungo, and flocks in the act of 1909 is 10 cents a pound, and is here reduced to 8 cents a pound.

We know, of course, that those various commodities—shoddy and mungo and flocks and noils, and carbonized noils, and so forth—are used to some extent to take the place of virgin wool. What is the reason for the action of the committee in reducing the duties on those various wastes?

Mr. SMOOT. I will say to the Senator that the reason of it is because this is a more scientific schedule and the rates are based upon the actual use of the wastes and their value in making the woolen goods in which they are used. It is a very much better provision than that which was contained in the Payne-Aldrich bill.

Mr. WILLIS. The Senator sees the point I am making?

Mr. SMOOT. Yes.

Mr. WILLIS. We are increasing slightly the actual rate on raw wool, and yet we are decreasing—apparently, anyhow, and actually, I presume—the rates on mungo, flocks, wool waste, noils, and these various things that are used by way of adulteration in the manufacture of cloth and to take the place of virgin wool.

Mr. SMOOT. Of course, the duty on mungo and wool rags and flocks at 8 cents a pound is rather a high duty even to-day. For instance, take flocks: Flocks are the shearings that are taken from a piece of cloth. They are not a sixteenth of an inch long, and all they are used for at all in the manufacture of cloth is that where they have a very coarse back goods they take these flocks and put them in the puller and place them between the cloths and pull them into the cloth to make the weight.

Mr. WILLIS. I understand that; they use them for fulling and for finishing.

Mr. SMOOT. Only as fulling, and to increase the weight of the cloth by the flocks going into the woven threads in the cloth.

Mr. WILLIS. That is true of flocks, but that is not true of noils or carbonized noils or mungo or shoddy.

Mr. SMOOT. Oh, no. Of course, I will say to the Senator that top waste, slubbing waste, roving waste, and ring waste at 33 cents a pound are just as good as scoured wool and take the place of scoured wool.

Mr. WILLIS. I understand that.

Mr. SMOOT. If you can get a good ring waste or a good slubbing waste, I prefer it as a manufacturer, as far as I can use it, to a straight clean wool, because everything has been taken out of it and it is the first process of manufacture.

Mr. WILLIS. I think the action of the committee in increasing the rate on top waste and slubbing waste and roving waste to 33 cents a pound is perfectly justifiable for the reason that the Senator has just given, but I am simply inquiring why the rates on these various things to be used as substitutes and adulterants in the manufacture of cloth should be reduced.

In my own view neither the country in general, nor consumers and producers in particular, are benefited by lower rates on mungo, flocks, rags, and carbonized noils, and the possible larger importations of those materials the use of which might lower the quality of cloth manufactured and decrease the percentage of strong, new wool used.

Mr. SIMMONS. Mr. President, I am advised that these rates on wastes, and so forth, have been worked out by the Tariff Commission in conformity with the rates placed upon wool.

Mr. SMOOT. Yes; they have.

Mr. SIMMONS. And they have been found to be on a parity with those rates.

Mr. SMOOT. In the Tariff Summary, on page 960, about the middle of the page, the Tariff Commission gives a description of each of these wastes, and the basis of the rates proposed.

Mr. SIMMONS. Of course, I am opposed to these rates upon the same principle and for the same reasons that I opposed the rates upon wool; but we fought that question out yesterday, and the Senate decided it adversely to our contention, and I see no reason why we should repeat that contest here. We will content ourselves by registering our opposition to these rates, as we had to do in the other case.

Mr. SMOOT. I will assure the Senator that if the rates upon scoured wool were decreased, every one of these rates should be decreased; and they are in proportion to the 33 cents a pound on the scoured wool.

Mr. SIMMONS. That is what I understand.

Mr. WALSH of Massachusetts. Mr. President, the Senator from North Carolina has very correctly stated the attitude of the minority. These rates naturally follow the fixing by the Senate of the duty of 33 cents per pound on the clean content of wool. For comparison's sake, however, I should like to have printed in the RECORD the rates upon these various wastes as fixed in the act of 1913, the act of 1909, the House bill, and the Senate bill. I ask permission to place them in the RECORD; and of course I join with the Senator from North Carolina in protesting against these rates, as I protested against the rate of 33 cents a pound fixed in the bill yesterday.

The PRESIDING OFFICER. Without objection, the matter referred to by the Senator from Massachusetts will be printed in the RECORD.

The matter referred to is as follows:

Wool wastes.

	Act of 1913.	Act of 1909.	House bill.	Senate bill.
		Cts. per lb.	*Cts. per lb.*	*Cts. per lb.*
Top waste, slubbing waste, roving waste..	Free.	30	25	33
Garnetted waste	Free.	30	20	26
Noils, carbonized	Free.	20	20	26
Noils, uncarbonized	Free.	20	16	21
Thread waste and waste n. s. p. f.	Free.	20	14	18
Shoddy—wool extract	Free.	20	14	18
Mungo, woolen rags, and flocks	Free.	10	6	8

The PRESIDING OFFICER. The question is upon agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, on page 144, after line 12, to strike out—

PAR. 1106. Wool which has been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, and not specially provided for, including tops and roving, valued at not more than 40 cents per pound, 16⅔ cents per pound and, in addition thereto, 10 per cent ad valorem; valued at more than 40 cents per pound, 27½ cents per pound and, in addition thereto, 10 per cent ad valorem.

And in lieu thereof to insert—

PAR. 1106. Wool, and hair of the kinds provided for in this schedule, which has been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, including tops, but not further advanced than roving, not specially provided for, 36 cents per pound and 25 per cent ad valorem.

Mr. SMOOT. Mr. President, on behalf of the committee, I desire to substitute 20 per cent instead of 25 per cent, on line 2, page 145.

The PRESIDING OFFICER. The modification will be stated.

The READING CLERK. On page 145, line 2, in lieu of "25" it is proposed to insert "20," so that it will read "20 per cent ad valorem."

Mr. WALSH of Massachusetts. Mr. President, paragraph 1106 covers wool which has advanced beyond the scoured state but not beyond roving. We must now consider, if we are going to fix these rates upon a scientific basis, whether the proposed compensatory rate is just and fair and also whether or not the protective rate is just and fair. The amendment just offered in behalf of the committee is a slight reduction in the rate named by the committee in the printed text.

Mr. SMOOT. Mr. President, will the Senator yield for just a moment?

Mr. WALSH of Massachusetts. In just a minute. Let me say to the Senator of the majority in charge of this schedule that it is not fair to the minority, it is not fair to the country, when a paragraph is reached for consideration to have the representative of the Finance Committee arise and move to change the rate named in the printed bill. The Members of this body upon this side of the aisle have had only the House text and the Senate text to study and consider in the preparation of whatever they desire to say in protest against these rates. These daily changes in your bill are putting you in the position before the people of the country as being unable to determine what is the fair rate to fix in this bill.

Mr. SMOOT. I will say——

Mr. WALSH of Massachusetts. Pardon me; I will yield to the Senator in just a moment. Here we have had before us for months the rates named in the House bill which the Republican majority of the House after long deliberation said were fair, just, and proper.

The Finance Committee had months of discussion and hearings and the majority members of the Finance Committee, after many secret sessions and long deliberations, reported amendments which are printed in the bill before us, and which have remained as the judgment of the committee up to this very hour. To-day, two years after this bill was first introduced and more than three months after the bill was reported by the Finance Committee, another amendment is presented by the committee. We have one rate named by the House; we have another rate named by the Senate Finance Committee when they reported this bill to the Senate; and we have another rate named to-day.

I will say to the Senator from North Carolina [Mr. SIMMONS], in charge of this bill for the minority, that we could do no better service to this country than to keep this bill before the Senate for another year, because every time we fight these rates we frighten the committee into making slight reductions. Frequently when a serious discussion has been entered into upon the rates named in this bill, there has been some slight concessions by the advocates of these high rates. What does it indicate? It means that the committee, if they could get away with it, would make these rates sky-high. It means that the discussion of these questions upon the floor of the Senate and the discussions in the press of the country have compelled the committee which now admits that it has sought to put into this bill exorbitant rates to take a change of position, and submit rates lower than those first presented.

In all my public experience I have never seen a more flagrant confession than we have witnessed in this Chamber during the past few weeks of incompetency, of neglect, of absolute disregard of the caution and care which ought to be taken in the imposition of taxes upon the American people.

Mr. SIMMONS. Mr. President, I suppose the Senator means that the discussions which we have already had upon this bill have brought forth astonishing truths.

Mr. WALSH of Massachusetts. That is the explanation.

Mr. SIMMONS. And if we could have further time for its discussion, and for the enlightenment of the country as to what it signifies, it would bring forth still better fruits.

Mr. WALSH of Massachusetts. There is no doubt about it. The attention which has been called to the high duties levied in the various schedules, and the protests from the American people have at last penetrated—shall I say the hides of the members of the Finance Committee? And they are now being forced by the power of public opinion to say "you are right. The minority is right. The press of the country is right." Protests have been made that these duties are too high, and the majority are beginning to admit it themselves.

How much confidence can the American people repose in a body of their representatives in the United States Senate who repudiate rates fixed by the members of their own party in the other branch of Congress, and after long and extended hearings fix other rates, and then later, not, however, until the whole press of the country and the minority Members of this Chamber spend weeks and months denouncing the high and excessive rates named, they admit that it is all too true, and thereby confessing that they attempted to put through a protective tariff bill with rates they now admit were too high?

I ask the Senator from Utah if his committee has any more amendments to offer to this schedule? If so, that they be submitted now in the interest of expediting the business of the Senate, and in order that we may have the whole record before us, so that when these succeeding paragraphs are reached the Senator in charge on this side will not find himself prepared to discuss one amendment and discover that he is obliged to discuss an entirely different amendment when he gets upon his feet.

Mr. SMOOT. I want to say to the Senator that when the cotton schedule was first taken up the Senator from North Carolina, and I think the Senator from Arkansas, asked me if there were to be any reductions in the wool schedules. I answered at that time that wherever there was a rate of 55 per cent fixed I had no doubt that that would be reduced to 50 per cent. The Senator from North Carolina remarked, "Then it is only a 5 per cent decrease?" I said, "Yes; it is only a 5 per cent decrease, as far as I am aware."

I will say to the Senator from Massachusetts that wherever there is a duty of 55 per cent named in the wool schedule that duty will be reduced to 50 per cent, just as I stated when the cotton schedule was first taken up, and I have stated it once or twice since that time in answering a question put by some one on the other side of the Chamber. I intend to offer all those amendments to-day. Wherever there is a rate of 55 per cent it will be reduced to 50 per cent, so that the highest protective rate in this schedule will be 50 per cent. The compensatory rates are exactly the same, and will be exactly the same throughout the bill, because of the fact that the Senate has already voted 33 cents on scoured wool.

I want to say still further that there is one paragraph, paragraph 1119, providing as follows:

PAR. 1119. Screens, hassocks, and all other articles composed wholly or in part of carpets or rugs, and not specially provided for, 40 per cent ad valorem.

Paragraph 1118 provides:

Ingrain carpets, and ingrain rugs or art squares, of whatever material composed, and carpets and rugs of like character or description, not specially provided for, 30 per cent ad valorem.

In the latter paragraph, covering ingrain carpets, the committee proposes to make the rate 25 per cent instead of 30 per cent, and on screens, hassocks, and so forth, the rate will be reduced from 40 per cent to 30 per cent.

Mr. WALSH of Massachusetts. May I ask the Senator if the reason for the reductions in these rates is because the committee have learned that the danger of foreign competition is not as great as it was a few months ago, when this bill was drafted?

Mr. SMOOT. I was going to answer the statement made by the Senator about the committee when he got through, and perhaps I had better wait until he does get through.

Mr. WALSH of Massachusetts. I think that would be more satisfactory.

Mr. SMOOT. I will make a statement then, for I want the Senator from Massachusetts and other Senators and the country to know why the changes have been made.

Mr. WALSH of Massachusetts. The Senator will agree with me that it is a very unusual procedure for the members of an important committee, such as the Finance Committee, to come upon the floor and, as each paragraph is reached, to say, "We have a modification we wish to make. We want to change that amendment." It is either one of two things—an admission that you were honestly mistaken in the beginning and you want now to correct the mistake or that you were trying to put something over on the American people if it was possible to do so unobserved and undiscovered.

Mr. SMOOT. That is not the case. The committee did not want to put anything over on the country. The committee wanted to fix rates as low as possible under the then existing conditions. I know it is an unusual thing; I admit it. But we are living in an unusual time. Conditions all over the world are unusual, and what Senator more than the senior Senator from New Mexico [Mr. JONES] has called attention to the changed conditions in Germany? It is due to those changed conditions that the changes have been made which have been submitted to this body.

Mr. WALSH of Massachusetts. That is why I think the Senator and the majority members are making a great mistake, in attempting to fix rates in this bill upon conditions which are changing rapidly, which they admit have changed to such extent in the last six months as to already require a readjustment of these rates. If the revision of the tariff were put off for another year, there is no doubt but what the committee would be obliged to make the rates very much lower than they are now; but if the bill goes through with these high rates, and is in operation next year, when the conditions will have changed further, the consumers of America are going to be the sufferers.

Mr. SMOOT. If this bill should pass and if the German mark, from some cause unknown to-day, should advance to 12 cents instead of being worth a quarter of 1 cent, if the moneys of all the countries of the world should be as they were before the war, and if conditions became normal, as they were before the war, I would want some power given to the President to change the rates; and there is a power granted to the President for that purpose, either to increase or decrease the rates. The Senator must have heard me state several times upon the floor that I thought that power would be exercised by the President, if exercised at all, more in the direction of decreasing the rates than in increasing rates. I believe that just as firmly as that I shall live until to-morrow morning.

I will frankly admit to the Senator that if conditions were normal there are rates in the bill which I would not support, which I could not support, because whatever rate I do support I support it because I believe in all my heart that it is right. I have admitted several times upon the floor of the Senate that conditions have changed since the committee reported the bill. Some of the changes in the bill are being made because of that fact coming particularly to the knowledge of the members of the committee.

Mr. WALSH of Massachusetts. Mr. President, I want to assist in the expedition of this bill and this schedule. I want to make an agreement with the Senator that he and I both do everything possible to have this schedule finished by to-morrow night at 6 o'clock.

Mr. SMOOT. I would be glad to have it finished by to-night.

Mr. WALSH of Massachusetts. Also this agreement, that on any of these paragraphs we limit ourselves, except perhaps the paragraphs covering cloth, to half an hour's discussion.

Mr. SMOOT. I am perfectly willing to agree to that.

Mr. WALSH of Massachusetts. Of course, we can not control anyone else; but let us agree that on all paragraphs we limit our discussion to half an hour and on the two cloth paragraphs to a discussion of an hour, and that we will do our utmost to have the wool schedule disposed of by to-morrow night. Is that satisfactory?

Mr. ROBINSON. That would please me immensely; but I suggest to Senators that they might get an agreement for a limitation of debate upon the paragraphs.

Mr. WALSH of Massachusetts. I do not think we could control the time of other Members—the Senator from Wisconsin [Mr. LENROOT] and others.

Mr. SIMMONS. I think that would be inadvisable.

Mr. ROBINSON. I am inclined to think that an agreement could be reached, and I wish Senators would try to get it. I am afraid the suggestion of the Senator from Massachusetts will merely result in the elimination of him and the Senator from Utah from the debate—which I would regard as a calamity from the Democratic standpoint—and the injection into the debate of others who know less about the subject.

Mr. WALSH of Massachusetts. I think in the case of some of these paragraphs very few Senators will speak at length.

Mr. SMOOT. Let us limit the debate just as far as possible.

Mr. WALSH of Massachusetts. Of course, I do not want to have this schedule expedited so fast that the committee will not have a chance to meet and reduce rates in the other schedules. We may get too far ahead of them, and that would be a calamity.

Mr. SMOOT. The committee is ready to go right along with every schedule.

Mr. SIMMONS. I think it is very well that the Senator from Utah and the Senator from Massachusetts, who are managing the schedule, respectively, for the majority and the minority members of the committee, should have this understanding. Both Senators have doubtless very thoroughly studied the schedule and digested in their minds what they intend to say; and they have reached the conclusion that they can say what they desire within the limitation mentioned. I have knowledge of some Senators who desire to discuss certain paragraphs, not many of them, probably a little more extensively than either the Senator from Utah or the Senator from Massachusetts will discuss them. I regard this as one of the most, if not the most, important of the schedules in the bill. I regard the compensatory rates imposed in the schedule as utterly unreasonable. I should not like to have a limitation placed upon the discussion of the more important paragraphs, especially those which relate to yarn and to cloth.

Mr. WALSH of Massachusetts. I had in mind what the Senator said and, therefore, was only limiting the discussion as to the Senator from Utah and myself.

Mr. SMOOT. Mr. President, we need not take any more time in discussing the limitation, but I will say to the Senator that I shall do everything in my power to hasten the consideration of the schedule. I am very glad to have the Senator from Massachusetts say that he will do the same. I have no desire whatever to cut the debate short if anyone desires to ask questions or discuss the matter. I think I can prove beyond question of doubt, even to the Senator from North Carolina, that the compensatory duties here are justified if we have 33 cents per pound on the scoured content of wool.

Mr. SIMMONS. Both are bad, in my judgment. Of course in the judgment of the Senator from Utah they are not bad.

Mr. SMOOT. I am speaking of the compensatory duties if we have 33 cents on scoured wool. Then the compensatory duties are upon the basis that even the Tariff Commission have said they should be.

Mr. SIMMONS. I do not agree with the Senator from Utah about the compensatory rates. I think we shall be able to show that the compensatory rates are altogether out of plumb.

Mr. WALSH of Massachusetts. Mr. President, as I stated a few moments ago, there are two questions to be considered in connection with this paragraph. First, is the compensatory duty a fair duty, and can it be justified in view of the rate of 33 cents a pound upon clean wool? The second question is whether the protective duty is fair.

How are we going to determine whether the proposed duties are fair? There are various ways of doing it. First of all, we can compare the rates named in the bill with the rates named in previous laws—the Underwood law and the Payne-Aldrich law. When we come to consider the question of protective duties we can consider what information is obtainable in reference to the difference in the cost of conversion here and abroad. Mr. President, let us first make a comparison with the House bill.

Mr. President, so far as concerns the compensatory duty on tops, the Senate amendment makes no important change in the House text. To be sure, the 36 cents per pound in the Senate amendment is higher than the 27½ cents per pound in the main bracket of the House text, but this is due to the increase of the duty on raw wool in the Senate bill. In other words, the compensatory duty in the Senate bill bears the same relation to the duty on wool in the Senate bill as the compensatory duty in the House bill bears to the duty on raw wool in the House bill.

The abandonment in the Senate amendment of the valuation bracket for tops valued at not more than 40 cents per pound constitutes no essential change, inasmuch as few, if any, tops would have such a low value.

As regards the protective ad valorem duty, while it is difficult to make a comparison because of American valuation in the House bill and foreign valuation in the Senate bill, it seems highly probable that the duty of 20 per cent foreign valuation in the Senate bill constitutes a substantial increase over the duty of 10 per cent American valuation in the House bill.

Mr. SIMMONS. Mr. President, I wish to suggest this thought to the Senator: The compensatory rates are the same with reference to all classes of wool. On the item under discussion it is 36 cents a pound. On clothing it runs up as high as 49 cents a pound of the wool content. There is a very great difference in the value of wool. The compensatory rate is supposed to be given to measure the value of the raw wool that is used. Some wools sell for as low as 20 cents a pound and some for as much as $1.32 per pound.

Mr. WALSH of Massachusetts. Of course, tops are all wool.

Mr. SIMMONS. Yet the same compensatory rate is given on the wool that sells for 20 cents a pound that is given on a pound of wool that sells for $1.32.

Mr. WALSH of Massachusetts. But we voted yesterday to put the same tariff duty on cheap wool as high-priced wool, 33 cents per pound, so that the high compensatory duty is due to fixing the rate on raw wool at 33 cents.

Mr. SIMMONS. That is what I was saying. I was not saying that this is out of touch with the rates which have been made on wool, but that the fundamental, the primary, the basic

rate on wool is absolutely wrong. The rate given on the wool content is 33 cents per pound. If we carry that forward as a compensatory duty and allow 33 cents to the manufacturer on the wool that is used the paragraph makes no distinction between the characters of wool, and any wool entitles him to the same compensatory duty. If we carry that forward and give the manufacturer the benefit of it, he gets as much benefit by way of protection where the wool has cost him only 20 cents a pound as he gets where the wool has cost him $1.32 a pound. I was speaking about the fundamental basis of the whole proposition.

Mr. WALSH of Massachusetts. There is no difference between the Senator and myself on that matter, and that is the reason why many believe a specific duty on wool is wrong; that it should be ad valorem.

Mr. SIMMONS. I am not comparing the two paragraphs at all. I think the Senator is right about the two paragraphs. Probably if the first paragraph which we adopted, which fixes the rate of duty upon raw wool, is to stand, then the compensatory rate on this particular item might have to follow that rate; but I am talking about when it gets into the yarns and cloths.

Mr. WALSH of Massachusetts. I am very glad the Senator made the explanation, because I thought at first that we were apart upon the matter of compensatory duty. I agree with him that the rate of 33 cents a pound is not justifiable. It is excessive; it is even discriminatory. It applies alike to the cheap wools and to the fine wools. It will result in giving compensatory duties of very high amounts to the various manufacturers of wool, regardless of the quality and value of the wool.

Mr. SIMMONS. It will give 33 cents protection to the manufacturer who uses 28 cents per pound wool. It will give only 33 cents protection to the manufacturer who uses the $1.32 per pound wool.

Mr. WALSH of Massachusetts. In this connection it might be interesting, and I am sure the Senator from North Carolina will be interested in this, to translate the duties proposed in this paragraph into ad valorem terms and compare these ad valorem rates with the ad valorem rates in the Payne-Aldrich law, in the text of the House bill, and as proposed by the committee amendment. What do we find?

Tops which are valued, foreign valuation, at 15 cents, carried, under the Payne-Aldrich law, an ad valorem duty of 188 per cent; under the rates fixed in the House text the ad valorem equivalent would be 138 per cent; and under the proposed rates in the Senate committee amendment 265 per cent. Tops valued on a foreign valuation at 17.5 cents carried an ad valorem rate under the Payne-Aldrich law of 171 per cent; under the House bill they carry a rate of 189 per cent; and under the Senate committee bill of 231 per cent.

Mr. SMOOT. Will the Senator also state that the rates of duty of which he is speaking are based on the prices in 1909 and not on to-day's prices?

Mr. WALSH of Massachusetts. They are based on recent prices, and the percentages cover the specific and ad valorem rates in the Payne-Aldrich law and in the House bill and in the Senate committee bill.

Mr. SMOOT. Does the Senator find that tops are priced to-day at the figures of which he is speaking?

Mr. WALSH of Massachusetts. No, sir.

Mr. SMOOT. That makes a great difference.

Mr. WALSH of Massachusetts. The Senator from Utah has not allowed me to finish. I am proceeding with the cheapest tops at 15 cents and going up to $1. The prices of tops vary from 15 cents to $1.50. The table works out correctly regardless of the date of the prices.

Mr. SMOOT. That makes all the difference in the world.

Mr. WALSH of Massachusetts. In America the prices vary from 25 cents to $1.50. This table begins on tops which are valued at 15 cents and goes to tops which are valued at $1.

Mr. SMOOT. What I wanted to say was this——

Mr. WALSH of Massachusetts. The same relationship exists even if the foreign price is lower or higher than the time these prices were prevailing.

Mr. SMOOT. If the same prices existed to-day as existed in 1910, the Senator's figures would be applicable. That is all I wanted to say.

Mr. WALSH of Massachusetts. Let us, regardless of dates, take tops valued at 80 cents. Under the Payne-Aldrich law the ad valorem rate would be 76 per cent; under the House bill, 51 per cent; and under the Senate committee bill it is 70 per cent. On tops valued at 50 cents the rate would be 103 per cent under the Payne-Aldrich law, 74 per cent under the House bill, and 97 per cent under the Senate committee bill. On tops valued at $1 the ad valorem rate under the Payne-Aldrich law would be 67 per cent, under the House bill 43 per cent, and under the Senate committee bill 61 per cent. I have called attention to these percentages to indicate how close the total protection afforded to the manufacturer of tops by the pending bill is to protection afforded by the high duties of the Payne-Aldrich law, and how much greater duties are granted under the bill as reported by the committee than under the duties levied in the House bill.

Mr. SMOOT. I desire to say to the Senator from Massachusetts that under the Payne-Aldrich law not only did the manufacturers have that 67 per cent duty on the price of the wool, to which the Senator has referred, but they had it on the basis of 33 cents on the scoured content; and as they bought the wool in the grease it did not cost them 22 cents, the average being 18 cents a pound. So they made 67 per cent and the difference between 18 cents on the scoured content and 33 cents. That is what the manufacturers had in 1910.

Mr. WALSH of Massachusetts. The Senator from Utah had better be a little careful about how he denounces the Payne-Aldrich rates, because before we get through with this schedule I expect to show that the rates in this bill parallel them; and, despite the fact that the Payne-Aldrich rates are as bad as the Senator from Utah says they are, he is practically going to adopt those rates in this bill.

Mr. SMOOT. Not in the least.

Mr. WALSH of Massachusetts. To be sure, the manufacturer may not get quite as much protection, because these compensatory rates are fixed upon a duty of 33 cents per pound on raw wool, while the Payne-Aldrich compensatory rates were fixed upon the duty of 11 cents upon wool in the grease; yet the total duties, compensatory and protective, levied in the various paragraphs of this schedule approach the total duties levied in the Payne-Aldrich law.

Mr. SMOOT. But the difference between 18 cents and 33 cents is given to the woolgrower and not to the manufacturer. What the Senator states, however, is true, so far as the rate is concerned.

Mr. WALSH of Massachusetts. It is given to the woolgrower and not to the manufacturer; the Senator from Utah is, in part, right about that, the manufacturer will not get as much; but the Senator must admit that the consumer is going to be taxed just as much.

Mr. SMOOT. Not as much.

Mr. WALSH of Massachusetts. The Senator from Utah has succeeded in his endeavor to shift a little bit of the protection which the manufacturer has been getting to the woolgrower.

Mr. SMOOT. A little!

Mr. WALSH of Massachusetts. Well, considerable, if the Senator insists.

Mr. SMOOT. I should say it was.

Mr. WALSH of Massachusetts. But the result to the consumer is that he is up against the Payne-Aldrich law again, with all its high duties and high rates. I think the Senator from Utah will agree to that.

Mr. SMOOT. Outside of whatever rates have been decreased, of course, I agree to that; there is no doubt about it; but, I will say, compensatory rates in some cases have been decreased, notwithstanding the rate of 33 cents on scoured wool. I want to say further to the Senator that the compensatory duties provided for the manufacturer are absolutely necessary because of the duty of 33 cents a pound on scoured wool; and the Senate has decided that the rate of 33 cents shall be provided by a vote of 38 to 16.

Mr. WALSH of Massachusetts. I agree with the Senator as to that.

Mr. SMOOT. So that there is no need of going back to that at all. Whatever increase there is in the wool rates is given to the farmer; there can be no question as to that. The manufacturer does not get anything at all out of the wool shrinkage under this bill, as I have before stated.

Mr. WALSH of Massachusetts. In other words, it is proposed to reenact the Payne-Aldrich wool schedule with this addition: Instead of so much hidden, concealed, and stolen protection being given to the manufacturers, as was given to them in the Payne-Aldrich law, some of it has been passed over to the sheep raisers.

Mr. SMOOT. All of it has been passed over to the farmer who raises the wool.

Mr. WALSH of Massachusetts. But there is still a heavy duty for the benefit of the manufacturers.

Mr. SMOOT. I thought the Senator was speaking of the compensatory duties.

Mr. WALSH of Massachusetts. I am speaking of both protective and compensatory duties.

Mr. SMOOT. The protective duties are lower in this bill than they were in the Payne-Aldrich law. For instance, on tops the rate in the Payne-Aldrich law was 30 per cent, while in this bill it is 20 per cent. Then, I notified the Senate two weeks ago, and also to-day, that there will not be a protective rate in this bill on cloths above the 50 per cent, while in the Payne-Aldrich law the rates were 55 per cent.

Mr. WALSH of Massachusetts. Fifty per cent is high enough.

Mr. SMOOT. That is what the manufacturers get, and that is all. From now on, I will say to the Senator, about the only question there is to discuss is as to the protective rates in this bill which are given to the manufacturer, and they run, as the Senator will notice, all the way from 20 per cent up to 50 per cent, according to the stage of manufacture.

Mr. WALSH of Massachusetts. What I desire to call attention to from the table from which I have quoted is that the total levy upon the American consumer who buys tops is substantially the same as in the Payne-Aldrich law, in some instances being higher, but higher always in the case of cheap tops that go into the manufacture of cheap clothing, and, in other cases, lower, but always lower in the case of the finer wool tops, and, consequently, that the combined duties, the compensatory and protective duties, on tops in this bill are very much heavier than in the House bill.

I now desire to ask this question: What facts did the Senate Finance Committee possess which the House committee did not possess? The House committee sat in the midst of the industrial depression; they were deliberating during the first six months of 1921 and the latter months of 1920, when there was the most serious financial and industrial condition in this country; they had presented to them the gloomiest and the worst industrial condition this country has probably ever faced; and yet, after all their deliberations, they reported duties upon tops which are very much lower than the rates reported by the Senate committee. Months have now passed and the industrial situation has improved; the threat of cheap foreign competition has subsided, and yet the Senate committee report in favor of protective duties much higher than those provided by the Republican Members of the House who drafted the corresponding paragraph in the House bill. What are the facts? What information came to the Senator from Utah—and he may answer me now or later in his own time——

Mr. SMOOT. I can answer in a very few moments——

Mr. WALSH of Massachusetts. What information came to the committee that made them say, "The House is all wrong; their rates are too low; they have not given sufficient protection to the manufacturers of tops. We propose to give them the higher rates which we have provided in the committee amendment."

Mr. SMOOT. The answer is a very simple one, in my opinion. The House provided a duty on scoured wool of 25 cents, while the Senate committee has reported a duty of 33 cents.

Mr. WALSH of Massachusetts. I am speaking about the combined duties.

Mr. SMOOT. If the Senator will wait I will consider both duties. The Senator himself says that a rate of 36 cents is justified if we have a duty of 33 cents on scoured wool, and he is correct in that.

Mr. WALSH of Massachusetts. Yes, sir.

Mr. SMOOT. There is no doubt about that. So that does away with a great deal of the increase to which the Senator refers. There is another fact which should be taken into consideration. In the House bill the protective duty is 10 per cent on the American valuation. In the case of tops, for instance, the price of 40s to-day in the United States is 55 cents, while in England it is 25 cents. Upon that basis alone the rate of 20 per cent in the Senate bill is more than justified. The prices I have indicated are those of July 15 of this year.

Mr. WALSH of Massachusetts. Right there let me say that I dispute the difference the Senator finds between the price of tops here and abroad. I will proceed, however, and call attention to that later.

Mr. SMOOT. I say that on July 15, 1922, wool tops, 40s, were 55 cents in America, while the English price was 25 cents, and the landing price was 31 cents; that is, allowing 3 cents a pound for landing charges, freight, marine insurance, and so forth, and 10 per cent to cover the expenses and profit of the importer. The price of 31 cents a pound includes all of those items, although the foreign price as quoted on the London market was 25 cents. Therefore, Mr. President, the Senate committee provided a rate on the basis of 36 cents, because on the clean content of the wool we provide a rate of 33 cents. No one can say that is not right. The House provided 10 per cent upon the foreign valuation of the tops, which, as I have said, on July 15, 1922, in the case of 40s, was 25 cents, while the American price was 55 cents.

Mr. WALSH of Massachusetts. It amounts, then, to this: That the price of tops when the House drafted this bill was different from the price at the present time; that the spread between the foreign price and the domestic price was less when the House drafted this bill than it is now. That is the Senator's position, is it not?

Mr. SMOOT. No; that is not what I stated. I said that they did not take the question of what the foreign price was into consideration at all. They simply considered the American valuation of tops and put a duty of 10 per cent upon the American valuation.

Mr. WALSH of Massachusetts. But the ad valorem duty they imposed upon the American valuation was a protective duty?

Mr. SMOOT. It was a protective duty, and the 20 per cent rate upon the foreign valuation as reported by the Senate committee is a protective duty. Twenty per cent upon the foreign valuation of 25 cents would amount to 5 cents, while the 10 per cent rate upon the American valuation of 55 cents would amount to 5½ cents; in other words, there is a reduction under the Senate committee amendment.

Mr. WALSH of Massachusetts. In order to determine what was a fair protective duty on the American valuation you must know the foreign valuation of tops.

Mr. SMOOT. No. They had to give on the American valuation the equivalent production for transforming the wool into tops, and they considered that 10 per cent upon the American valuation of tops was absolutely necessary. We changed the basis to the foreign valuation, and 20 per cent of 25 cents is 5 cents, while 10 per cent upon the 55 cents is 5½ cents. So that 20 per cent is even less than the 10 per cent rate in the House bill.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield to the Senator from Wisconsin.

Mr. LENROOT. I should like to ask on what price of wool the committee figured the London price of scoured wool?

Mr. SMOOT. On 40s.

Mr. LENROOT. No; I said, on what price of scoured wools, at the same time that the committee estimated the foreign price of tops?

Mr. SMOOT. I should think that would be perhaps about 20-cent wool, clean content, because it costs 5 cents to make it into tops, with a loss.

Mr. LENROOT. Scoured wool?

Mr. SMOOT. Oh, no; I am speaking now of 40s, of tops. That is coarse wool. It would be at least 20 cents; or, in other words, quarters and lower are used to make 40 tops, and that was the figure that the Senator had spoken of before I took the floor.

Mr. WALSH of Massachusetts. Mr. President, I am going to proceed to discuss the protective rates in this paragraph. Before doing that, however, I should like to yield to the Senator from Arkansas [Mr. ROBINSON], provided, of course, that I can still retain the floor.

Mr. ROBINSON. Mr. President, yesterday while the present schedule was under consideration the Senator from North Dakota [Mr. MCCUMBER], chairman of the Committee on Finance, made a statement, the accuracy of which was later challenged on the floor of the Senate. The statement by the Senator from North Dakota was substantially as it appears in this morning's RECORD at page 10656. He said:

> I probably could call attention to some other things which defeated Taft, but I will state one thing that the Republicans did in 1909 which was their undoing. They refused to put print paper upon the free list; that was the real crime. Every great newspaper in the United States was in favor of free print paper, and through their organization and the president of the Publishers' Association they put this matter straight up to the committee. It is no secret. They said in substance: "Give us free print paper and we will support the administration; refuse to give it, and we will destroy you, if we can." Well, we took our chances—there were not very many cowards on the Republican side in those days—and we refused to give them free print paper, and suffered defeat more for this cause than for any other. We stood for principle, and to the extent that this refusal assisted in our undoing we died for principle. That is the real thing that was back of the defeat of the Republican Party in 1912. That was the one thing that brought the great press of the country against him.

Mr. President, believing that this declaration, coming from the source that it did, justified serious consideration, I called upon the Senator from North Dakota and other Senators who might possess information respecting the subject to furnish details, and to inform the Senate who constituted the committee representing the Newspaper Publishers' Association, and what individuals were chargeable with responsibility for the threat

and the conduct set forth in the statement made by the Senator from North Dakota. The Senator from Utah [Mr. SMOOT] subsequently said that one John I. Norris, the accredited representative of the Newspaper Publishers' Association, had stated to members of the Finance Committee that there could be no compromise on the question as to whether print paper should be placed upon the free list; that if the Finance Committee refused to put it on the free list the Republican Party would be driven from power.

The Senator from Indiana [Mr. WATSON] took the floor and made a statement attributing to Mr. Herman Ridder a direct threat to the former Speaker of the House of Representatives, Mr. CANNON, that unless print paper were put upon the free list Mr. CANNON would be politically destroyed.

The Senator from Indiana [Mr. WATSON] during the course of his remarks detailed an incident which he said occurred between Mr. Herman Ridder and the former Speaker, Mr. CANNON, in which Mr. Ridder is alleged to have made a corrupt proposal to Mr. CANNON, and to have offered him the support of the newspapers of the United States for President if he would permit a joint resolution placing print paper upon the free list to be called up for consideration in the House of Representatives. The Senator from Indiana declared that the then Speaker, Mr. CANNON, had indignantly refused to grant the request of Mr. Ridder, and had defied Mr. Ridder. He further said that a colored messenger was called and informed that Mr. Ridder was not to be permitted to enter the Speaker's private room again, and that the messenger was instructed to throw him out if he attempted to do so.

Both Mr. Norris, referred to by the Senator from Utah, and Mr. Herman Ridder, mentioned by the Senator from Indiana, are dead. It is a remarkable coincidence that the charge of attempts to corrupt the Finance Committee should be laid against two individuals both of whom are dead.

Mr. CARAWAY. Mr. President, I should not like to interrupt a serious argument, but was either one of these conversations a telephonic conversation?

Mr. ROBINSON. The statement of the Senator from Utah is that Mr. Norris's threat or prediction was made, as I understand, to him and the then Senator from Rhode Island, Mr. Aldrich, they constituting the subcommittee. There was no telephone used in that instance. The statement of the Senator from Indiana respecting the alleged activities of Mr. Herman Ridder was that Mr. Ridder had threatened the Speaker of the House of Representatives in his presence and in the presence of other Representatives if he did not yield to the demand that the joint resolution putting newsprint paper on the free list be considered by the House of Representatives.

Mr. CARAWAY. As I recall, the Senator from Indiana was in favor of surrendering, was he not?

Mr. ROBINSON. Oh, the Senator from Indiana stated that while he thought the Speaker was morally right, he was diplomatically and politically wrong, and that he appealed to the Speaker in every way that he could devise to yield to the demand of Mr. Ridder and permit the joint resolution to be considered by the House of Representatives.

In this morning's New York Times is contained a statement by Mr. Don C. Seitz, business manager of the New York World, who was on the paper committee of the American Newspaper Publishers' Association with Messrs. John I. Norris and Herman Ridder in 1909. In this statement Mr. Seitz uses language which, under the rules of the Senate, can not properly be incorporated in the RECORD. A portion of his statement, however, relates to the accuracy of the memories of the Senator from Utah and the Senator from Indiana. It is as follows:

It is my impression that Mr. Taft was defeated by Theodore Roosevelt and not by the newspapers—

Said Mr. Seitz.

As a matter of fact, most of the newspapers were for Mr. Taft. The newspapers had no grievance, and, far from having been turned down by the Senate, had reached a very satisfactory arrangement.

Nothing of the kind described by Senator MCCUMBER ever happened. The paper tariff discussions began way back in Roosevelt's time, when John Hay was Secretary of State and was trying to get 21 reciprocity treaties with other countries signed by the Senate. He said at the time that it was impossible to get anything with common sense and honesty back of it through the United States Senate. I remember his words very well.

There had been a Canadian joint high commission which dealt with such subjects as we wished to discuss, and we went to Mr. Hay to see if he could not revive the commission. It was then that he told us how his treaties had been killed by logrolling in the Senate.

We never used threats, but we finally made a decent arrangement by which wood pulp was let into the country free if its price did not go higher than 2 cents a pound. Later that figure was revised upward—I have forgotten the exact figures. But it was not necessary to mix in politics to get that done, and the American Newspaper Publishers' Association never did mix in politics.

The article continues:

The remarks of Senator WATSON with regard to Herman Ridder's talk with "Uncle JOE" CANNON were read to Mr. Seitz, who indignantly repudiated them.

"I don't believe Ridder ever said anything of the kind," he exclaimed. "I was with him on both his visits to CANNON, and I did not hear him saying anything like that. The American Newspaper Publishers' Association never did anything of the kind. We didn't have to threaten. We were getting what we wanted by a perfectly decent arrangement, satisfactory to everyone concerned, and there was no need for threats. The entire statement is ridiculous."

Mr. President, in view of the fact that both Mr. Norris and Mr. Ridder are dead, I have felt it not improper to submit the statement of Mr. Seitz to the Senate, inasmuch as he was a member of the committee, and claims to have been present when the conversations between Mr. Ridder and ex-Speaker CANNON occurred. There can be no doubt that the newspapers of the country, as a rule, favored the placing of newsprint paper on the free list then, as they do now. I do not believe the charge made by the Senator from North Dakota, that the accredited representatives of the newspaper publishers of America deliberately and intentionally sought to intimidate the Finance Committee, by threats of destroying the Republican Party, into placing newsprint paper on the free list. I do not believe that the statement made by the Senator from North Dakota that, as a result of the failure of the Finance Committee to yield to the demands for free print paper, the newspapers of the country unitedly and concertedly turned against the Republican administration and wrecked it can be sustained. I do not believe the press of America, the reputable newspaper men of this country, would indulge in practices of that nature.

The reasons for the defeat of Mr. Taft were numerous. They are now generally understood. In the course of his administration he had alienated the political friendship of the one public man, Mr. Roosevelt, who, more than any other, and more than all others, was responsible for the prominence of Mr. Taft in politics.

Mr. CARAWAY. If I may interrupt the Senator, I did not know Mr. Taft was defeated; I thought he went out by unanimous consent.

Mr. ROBINSON. Mr. Taft's defeat for a second election was the most overwhelming and humiliating known to American political history, and it could not have been due to any other cause than the fact that the members of his own party repudiated the course taken by him in public office.

For a long time it has been customary to make politics of the reputations of men in public life. For a long time it has been customary to seek to discredit great agencies which are influential in American public life. This should not be carelessly indulged in, for it endangers our institutions. If the newspapers in this country committed the acts attributed to them by the Senators from North Dakota, Utah, and Indiana, they were hopelessly corrupt and deserved censure. The facts stated by Mr. Seitz show that there was no necessity for making a proposition such as the Senator from North Dakota claims was made by Mr. Norris and others to the Committee on Finance, and I am unwilling to accept the evidence submitted as convincing proof of the very serious charges against the newspaper publishers of America.

If Mr. Norris had taken the course attributed to him, it could not be chargeable to the press of America. Does anyone believe that the newspaper men of this country are so abandoned or were so abandoned as knowingly to permit their representative in Washington to say, "If you will give us free print paper we will support the present administration and we will support Mr. Taft in the coming election, but if you refuse to do that we will wreck the administration without regard to other questions vitally affecting the public interest"?

This is an important issue. The testimony brought to sustain this wholesale charge of corruption on the part of the press of this country is alleged to be based on threats from lips which have long been sealed. The statement of a surviving member of the committee of the Newspaper Publishers' Association is that no such incident occurred. I leave the matter to the judgment of the Senate and the country.

Mr. MCCUMBER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from North Dakota?

Mr. WALSH of Massachusetts. I yield to the Senator.

Mr. MCCUMBER. The Senator from Arkansas says that he does not believe the statements made by the Senator from Utah or the Senator from Indiana or the Senator from North Dakota are sustained. They all agree upon the facts. The Senator can do as he likes about believing. If it is his desire to believe the writer of that article as against the three Senators, of course, he has the privilege of doing so. It does not change the facts one iota.

I mentioned no names. The Senator from Massachusetts, whom I was answering, had stated that the defeat of the Republican Party in 1912 was due to the action of the Congress in passing Schedule K—the wool schedule. I denied that. I still deny it. In the course of that discussion I stated one thing which had a great deal more influence in bringing about an ill feeling against the then Republican administration and the President of the United States, and which was partially, at least, a cause for the resulting division of the Republican Party in 1912.

I have never claimed that the threats made by the papers or their representatives were the sole cause of that defeat. I have stated again and again that the sole cause was that we had two Republican candidates, which divided the vote, and allowed a minority vote to elect a President of the United States. Both of those things had their influence in bringing about that division in the party.

Mr. ROBINSON. Mr. President——

Mr. McCUMBER. Just a moment. Possibly if there had been no assault upon President Taft—and we all know the assault continued viciously for a year—Mr. Roosevelt would not have been a candidate at all, and we would have had but a single candidate. So, whatever may have been the precise language which I used yesterday, my intention was to convey that thought, and we must have the entire statement which I made in order to determine what thought I intended to convey.

Mr. ROBINSON. Will the Senator yield for a brief statement?

Mr. McCUMBER. I yield.

Mr. ROBINSON. In this connection——

Mr. McCUMBER. The Senator read correctly what I stated.

Mr. ROBINSON. The Senator does not dispute making the declaration which I read?

Mr. McCUMBER. No; I do not.

Mr. ROBINSON. It is in the CONGRESSIONAL RECORD as a part of the Senator's remarks.

Mr. McCUMBER. We must take that in connection with other declarations which I made. The Senator did not read the other declarations, and, of course, they must all come in together in conveying the idea.

Mr. President, it was the poison created by the assault upon President Taft which, in my opinion at least, brought about the division in the party. I do not say it was that alone, because I gave other reasons. I stated that President Taft incurred the hostility of a great many Republicans of the North, and possibly I might say the entire agricultural section of the North, because of his espousal of Canadian reciprocity. That, I think, had a more direct bearing upon the feeling engendered against him, which resulted in his defeat. I am candidly of the opinion, however, that if we had had but one Republican candidate, either Taft or Roosevelt, there would have been no Wilson administration. But that is mere conjecture.

The whole question which was raised, and which I sought to answer, was this: A Senator upon the other side attributed the defeat of the Republican Party to the ill feeling engendered throughout the country by the enactment of Schedule K, the wool schedule, in the Payne-Aldrich bill. I took issue with that, and stated that that which had infinitely more influence than the wool schedule was the refusal of the Republican Party to place print paper upon the free list. Those statements have been made and reiterated time and again.

I was a member of the Committee on Finance at that time, as I have stated. I heard all the testimony given in regard to the matter. Mr. Ridder was diplomatic in his presentation of the matter before the committee. He departed very far from diplomacy, however, when he discussed the matter privately with a few Senators, and he used the language which I have stated and which I restated many times after the utterance was made. That statement was made to but a few Senators who happened to be present at a committee meeting in the committee room of the Finance Committee.

I think the Senator from Indiana [Mr. WATSON] can generally be regarded as a truthful man. I do not think he has made up a wild story, with no foundation of truth. The Senator from Arkansas may carry that belief if he sees fit, but anyone who knows the Senator from Indiana will believe him. That remark is true also of the statements made by the Senator from Utah [Mr. SMOOT]. If the Senator from Arkansas wants to investigate the subject, there is one man still living who was a party to the conversation, and the Senator can get his information from Uncle JOE CANNON. After he has gotten it he may come into the Senate and say that JOE CANNON is mistaken; that no such thing ever happened; but I do not think he would.

The PRESIDING OFFICER. The question is upon agreeing to the committee amendment as modified.

Mr. WALSH of Massachusetts. Mr. President, I want to discuss now the protective rates proposed by the Senate committee. I want to call attention to the protective rates in former laws, and I want to call attention to the fact that there have been no importations of tops, even under former laws, in which the protective rate was very much lower than this rate.

COMPARISON OF DUTY ON TOPS IN SENATE BILL WITH THAT IN PRESENT AND PREVIOUS LAWS.

Mr. President, the emergency tariff law imposes a duty of 45 cents per pound upon all manufactures of wool of the kind commonly known as clothing wool in addition to the rates already existing under the Underwood law. This applies not only to semimanufactured products, like tops and yarns, but also to finished products, like cloths and articles made therefrom. This 45 cents duty is intended to compensate for the duty imposed upon raw wool in the emergency law.

The duty now assessed upon tops is therefore 45 cents per pound plus 8 per cent, the latter being the rate previously in existence in the Underwood law. The effect of this duty upon tops has been particularly striking. It has amounted to practically a prohibition of imports. Under normal conditions the importation of tops has never been large, because of the very high rate of duty to which they have been subjected under protective tariff laws. Nor was the importation large under the Underwood law, when the rate was only 8 per cent—at least not until the winter and spring of 1921. At that time, owing to the large stocks of tops on hand in Great Britain and available for liquidation, and in anticipation of the enactment by the United States of a high emergency tariff duty upon raw wool, there was a striking increase in the imports of tops into this country.

Thus in March imports amounted to 4,102,208 pounds; in April, 4,805,558 pounds; and in May, 2,137,131 pounds. From this point they dropped, with the enactment of the emergency law, to 264,635 pounds in June, 271,922 pounds in July, and thereafter to only a few thousand pounds each month. During the calendar year 1921 approximately 15,000,000 pounds of tops were imported, but practically all of these came in before the enactment of the emergency law. The statistics plainly indicate that so far as concerns tops the emergency law has been practically prohibitive. This is logical enough when one stops to consider that the compensatory duty alone upon this product, which is only one step removed from the raw material, is 45 cents per pound.

The Underwood law imposes a duty of 8 per cent upon wool tops and 20 per cent upon tops made from the hair of the Angora goat, alpaca, and other like animals. These latter do not, however, enter largely into commerce, and for purposes of comparison with the present bill we may confine our attention to the duty of 8 per cent upon wool tops.

The Underwood rate of 8 per cent on wool tops can not be said to have led to any formidable invasion of our markets by foreign top makers. It is true that there was some increase in importations immediately after the enactment of the Underwood law. In the first half of the calendar year 1914, for example, they amounted to 3,228,237 pounds, or slightly more than 3 per cent of the quantity consumed in domestic worsted spinning, and in the following year, 1915, they amounted to 3,412,250 pounds, again approximately 3 per cent of the consumption; but this can hardly be regarded as a serious invasion of our markets. Considering that the imports under the Payne-Aldrich law had been practically prohibited, some increase of imports under the 8 per cent duty was inevitable. And so far as regards the importation of almost 15,000,000 pounds of tops in anticipation of the emergency law this is not a fair criterion by which to judge of the Underwood duty. At that particular time there was a heavy surplus of tops on the British market and this surplus was being liquidated with little or no reference to cost. Furthermore, it is a well-known fact in the wool trade that those who were attempting to lay in large stocks of raw material in anticipation of the emergency duty upon raw wool bought heavily of British tops, because these could be had much more promptly than could stocks of wool from more distant sources. In other words, there was a better chance to obtain tops before the enactment of the emergency law than there was to obtain wool.

The truth of the matter is that the duty of 8 per cent upon tops in the Underwood law is in substantial accord with the findings of the Tariff Board of 1912 as to conversion costs here and abroad. Regarding the amount of duty required, more will be said later.

In the Payne-Aldrich law the duty imposed upon tops was as follows: On those valued at not more than 20 cents per pound the duty was 24¾ cents per pound plus 30 per cent; on those valued at more than 20 cents per pound the duty was 36⅔ cents per pound plus 30 per cent.

The duty on tops valued at less than 20 cents per pound was practically inoperative, because very few tops of such low value entered into commerce. For practical purposes the duty upon tops was 36⅔ cents per pound plus 30 per cent. The 36⅔ cents per pound was intended as a compensatory duty, but as is shown in the old Tariff Board report, this was distinctly in excess of the amount required, for it assumed a shrinkage of 70 per cent, whereas the domestic worsted mills actually used mainly the lighter shrinking wools. In other words, it contained a large amount of concealed protection. When to this concealed protection is added the duty of 30 per cent, it is not surprising that imports under the Payne-Aldrich Act were almost negligible. Indeed, as will be shown later, 30 per cent alone is far in excess of the amount required for protection on a product which contains so low a proportion of conversion to total cost as do tops.

In 1910, for example, the importation of tops amounted to only 1,868 pounds, valued at $838. This is not surprising when it is observed that the equivalent ad valorem duty amounted to 111.69 per cent, and that 81.69 per cent represented the compensatory duty alone. In 1911 there was no importation of tops. In fact, as has been stated, under the Payne-Aldrich law imports were practically prohibited.

THE RELATION OF THE SENATE DUTY ON TOPS TO THE DIFFERENCE OF CONVERSION COST HERE AND IN THE UNITED KINGDOM.

The protective rate upon tops in the Senate bill was 25 per cent, but is now 20 per cent. This is distinctly in excess of the amount required. It is nearly 200 per cent higher than the Underwood rate, which, as we have just noted above, is in substantial accord with the findings of the old Tariff Board, and was fixed at 8 per cent. The fact that the House proposed a rate of 10 per cent (American valuation) shows that it was quite aware that any such rate as that proposed in the Senate bills is unnecessary. The extent to which the Senate rate of 25 per cent exceeds the actual requirement is plainly indicated in the following table, which contains a comparison of the cost of conversion of tops here and in the United Kingdom based upon current conditions.

Wool tops—British and domestic conversion costs in relation to the protective duty in the Senate bill.

Grade.	Tearing.[1]	Commission combing rate.			Total conversion costs.[2]			British prices of tops June 15, 1922.[5]		Duty at 25 per cent, Senate bill.		Per cent required to cover difference in conversion costs.
		British.[3]		Domestic.[4]	British.	Domestic.	Excess of domestic over British.	Pence.	Converted.[6]	Equivalent in cents per pound.	Amount above or below difference in conversion costs.	
		Pence.	Converted.[5]									
				Cents.	*Cents.*	*Cents.*	*Cents.*				*Cents.*	
80s	4 and under 5 to 1	6⅔	12.58	17.00	18.87	25.50	+6.63	78	$1.4539	36.35	+29.72	4.56

[1] "Tearing" refers to the percentage of noils removed in combing. "Tearing 5 and 1" means the product consists of 5 parts tops and 1 part noils. The higher the "tear" the higher the combing charges. The ratios shown are the most representative. (See p 622, "Tariff Board Report on Schedule K," 1912.)

[2] This has been calculated by adding 50 per cent to the combing rates. This takes into account such additional charges as storage, scouring, sorting, and losses from off sorts. (See p. 11, "The Tariff Board and Wool Legislation," by W. S. Culbertson, Doc. 50, 1st sess. 63d Cong., 1913; also p. 640, "Report of Tariff Board, 1912.") Losses from off sorts properly constitute an additional charge to raw material rather than to conversion; but since the compensatory rate on tops of 1.1 times the duty on scoured wool, as computed by the Tariff Board, did not allow for losses from off sorts, allowance is made here.

[3] British combing tariff, July 18, 1921.

[4] Combing tariffs of several American establishments, issued on or about July 1 1921.

[5] Wool Record and Textile World, June 15, 1922.

[6] Rate of exchange June 15, 1922 (pound=$4.4751).

[7] Rates are for "preparing" only.

Both the domestic and British combing rates used are the latest available and so far as can be ascertained are still in effect.

The most significant figures in this table are in the last column. These show only one instance where a need of more than 15 per cent to cover the difference in conversion cost is necessary, and in this instance—on 48's—it is evident that the British price is abnormally low in relation to the other grades of tops. In more than half of the cases indicated 10 per cent would be adequate to cover the difference in conversion costs. Under normal conditions 10 per cent would probably be sufficient on all grades for a product containing so low a percentage conversion to total cost. Certainly, 15 per cent would be more than adequate.

Nor are the figures in this table open to the criticism that the British prices are abnormally high in relation to conversion cost and that a duty of 25 per cent, or even 20 per cent, yields relatively much more than it would under normal conditions. The fact is that while the British prices are higher than the pre-war prices, they have undergone a greater post-war liquidation, on account of the great drop in the prices of raw wool, than have the conversion costs here and abroad.

In view of the high duties on tops it is, of course, obvious that there could be no exports of tops. The high duties on raw wool make this impossible.

As the only recent imports were under abnormal conditions described above, just before the enactment of the emergency tariff law, how can a protective duty of 20 per cent be justified when 8 per cent resulted in no substantial increase in importations? And how can it be justified in the light of the comparison of conversion costs here and abroad which has just been presented?

Mr. President, is protection merely a license to extort from the American people? I am going to demand and insist that every single protective duty that goes into this schedule shall be based upon what is actually the difference in the cost of conversion at home and abroad.

I come from a manufacturing State and I would not knowingly protest against a single duty that would deprive the manufacturing interests in my State of sufficient protection to meet the difference in conversion costs. The manufacturer is entitled to protection to meet the difference in conversion costs, but he is entitled to no more; and nothing less than indisputable figures showing the actual difference will guide me in voting for the protective duties. I can not oppose high duties to the agriculturists of this country and vote for excessive duties in favor of the manufacturing interests of this country, and I do not propose to do it.

Mr. President, I ask that a table comparing American prices and British prices of tops be inserted in the RECORD in this connection. This table shows that 10 per cent protective duty would be ample.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Without objection, it is so ordered.

The table is as follows:

Wool tops—American and British prices as of July 15, 1922.

American in United States.	English in England.	English in United States.[1]	Difference.	Emergency duty.	Senate bill.		
				45 cents plus 8 per cent.	35 cents plus 20 per cent.	36 cents plus 10 per cent.
Fine territory, $1.60.	70s average 55d, equals $1.02.	$1.16	$0.44	$0.53	$0.56	$0.46
½ blood, $1.30	60s ordinary 45d, equals 83 cents.	.95	.35	.52	.53	.44

[1] Allowing 3 cents a pound for landing charges (freight, marine insurance, etc.) and 10 per cent to cover expenses and profit of importer.

Wool tops—American and British prices as of July 15, 1922—Continued.

American in United States.	English in England.	English in United States.	Difference.	Emergency duty.	Senate bill.	
				45 cents plus 8 per cent.	36 cents plus 20 per cent.	36 cents plus 10 per cent.
High ⅜ blood, $1.10.	58s comeback 40d, equals 74 cents.	$0.85	$0.25	$0.51	$0.51	$0.43
Low ⅜ blood, 98 cents.	56s average 29d, equals 54 cents.	.63	.35	.49	.47	.41
High ½ blood, 95 cents.	50s average 21d, equals 39 cents.	.46	.49	.48	.44	.40
44s, 64 cents.....	44s average 14d, equals 26 cents.	.32	.32	.47	.41	.39
40s, 55 cents.....	40s average 13½d, equals 25 cents.	.31	.24	.47	.41	.39

Mr. WALSH of Massachusetts. Mr. President, I come now to a very important aspect of this question. I have tried to show that, based upon information available as to prices of British-made tops sold in the American market and as to prices of American-made tops sold in the American market, there is no justification for this protective rate of 20 per cent; that, indeed, a rate of 10 per cent would be ample.

Mr. President, what is the conclusion we arrive at from this study? It has been a somewhat long and tedious study, but an important one. The conclusion is that the 8 per cent protective duty named in the Underwood law was fair and could be justified upon the information available at that time in regard to the difference in the costs of conversion; that the rate named in the bill as it passed the House of 10 per cent—and that rate, of course, was based upon the American valuation—would have been fair and just if that 10 per cent were based upon the foreign valuation instead of the American valuation. The information at hand shows that there is no evidence before the Senate or before the committee, so far as I know, at least of an unprejudiced and disinterested character, justifying this protective duty of 20 per cent.

In the light of the information we have as to the conversion costs here and abroad, in the light of the prices in the American market of British tops and American-made tops, this rate can not be justified. In the light of the fact that the rate fixed upon raw wool—33 cents—is so high, anyway, that we are not likely to have any serious competition, because in every instance the compensatory duty takes care of what the manufacturer must pay for his raw wool, and in this instance the compensatory duty levied is ample and sufficient to take care of the cost to the manufacturer of raw wool, I am going to move that the protective rate be fixed at 15 per cent instead of 20 per cent. I think that is more than the facts justify. I think it is extremely liberal. The woolgrowers might properly accuse me, in proposing this rate, of leaning toward the interests of the manufacturers. By the way, I notice that the woolgrowers' advocates have all abandoned the Senate Chamber. It is all over for them. They got their rate, and they are no longer interested.

Mr. SMOOT. They will not do it if they know where their interest really lies.

Mr. WALSH of Massachusetts. But the Senator from Utah will agree with me that for the last three or four days every Senator who represents a woolgrowing State has been here. Are they here now?

Mr. SMOOT. They may be at luncheon.

Mr. WALSH of Massachusetts. They have not been here this morning, and the Senator knows it. Many distinguished Senators have been more regular in their attendance upon the Senate since the commencement of the discussion upon raw wool than they have been during the whole session, and that might be said of all the Senators who come from the woolgrowing States. I am not complaining, but I am asking them not to abandon us yet, but to stay here and consider these other duties. Having won their fight, they abandon the Chamber, and will only come in when the roll is called, and they will ask those representing the manufacturing interests, "What do you want us to do? We have our rate, and we will now give you what you want."

Mr. SMOOT. The Senator is wrong again, because they are just as vitally interested in tops as they are in wool. If there is not a protective duty upon the tops sufficient to keep them out, the tops will come in instead of wool, and that is exactly why they are as interested in tops as they are in wool itself, if not more so.

Mr. WALSH of Massachusetts. They are not manifesting their interest by their presence. The Senator will agree to that.

Mr. SMOOT. I admit that; but the Senator can see that that is the case, because if you give a dollar a pound on wool and then give only a dollar a pound on tops, tops will come in instead of wool. So every man who is interested in the protection of wool is certainly interested in the protection of the tops, because without that protection the tops would come in instead of the wool, and the top is the first step in the manufacture when the little fine clippings and other things are taken out of the wool.

Mr. WALSH of Massachusetts. They knew that when they won their fight yesterday that the Senate was going to levy every compensatory duty necessary to meet that 33 cents per pound, and they know that the protective duties named by the committee will be adopted. They know that the understanding arrived at or the arrangement which was made, but which was threatened to be broken during the fight upon the paragraph fixing the duty on raw wool, has been restored, so that the program will go through, and the manufacturers will get the rates fixed in this bill, because the woolgrowers yesterday got the rates named upon raw wool.

I have talked a good deal longer than I intended, but this paragraph, which for the first time raises the question of a fair compensatory duty and a fair protective duty, is one I thought required perhaps more discussion than the other paragraphs will require.

Mr. SHEPPARD. Mr. President, may I ask the Senator a question? Does his amendment involve the specific duty as well as an ad valorem duty?

Mr. WALSH of Massachusetts. It involves only the ad valorem duty, a protective ad valorem duty. I propose to change the rate named by the committee of 20 per cent to 15 per cent.

Mr. SHEPPARD. The ad valorem rate named by the committee is in addition to a specific rate.

Mr. WALSH of Massachusetts. The specific rate named by the committee is a compensatory rate, and I do not propose to change that. The specific rate named by the committee is the compensatory protection, and the compensatory protection is based upon the theory that there will be a pound and a tenth of wool used in making a pound of tops, and in view of the information furnished by the Tariff Commission that that is a fair estimate of the amount of raw wool that will be used in making a pound of tops, of course, I can not, in view of the action of the Senate yesterday, make a contest upon the compensatory duty. The objection I make is to the protective duty, which is given to the manufacturer, and ought to be based upon the difference in the costs of conversion here and abroad.

Mr. SHEPPARD. I thank the Senator for his explanation. As I understand it, the difference between him and the committee is that in the amendment he proposes the rate is 5 per cent lower than in the amendment proposed by the committee?

Mr. WALSH of Massachusetts. Exactly. I am going to ask to have put in the RECORD a table which shows the equivalent ad valorem rates of all the duties levied on tops under the Payne-Aldrich law and all the duties proposed in the House and Senate bills. This table shows the duties in the Senate bill in most instances greatly exceed the House rates, as well as the Payne-Aldrich rates.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Comparison of ad valorem equivalents of total duties based on foreign valuation.

TOPS.

Foreign value (cents per pound).	Payne-Aldrich.	Fordney-McCumber.	
		House.	Senate.
	Per cent.	*Per cent.*	*Per cent.*
15	188	138	265
17.5	171	189	231
30	152	116	145
50	103	74	97
80	76	51	70
100	67	43	61

Mr. SMOOT. Mr. President, this paragraph covers tops, the first step taken in the manufacture of wool goods, and I agree that the compensatory duty of 36 cents per pound is necessary, since the Senate has decided upon 33 cents on the scoured content. So I will give no time at all to that question.

The only question is as to the protective duty of 20 per cent ad valorem. I want to say to the Senator from Massachusetts

that, as far as I am concerned, I am a consistent Republican. I do not claim protection for an industry at one place in the United States that I would not willingly give to a like industry anywhere in the United States. I want to call the Senate's attention to the fact that the American people do not buy tops, and this pragraph has to be consistent from the wool to the finest finished piece of cloth, and if there is one place in it where it is not consistent and a protective duty is not given, then the woolgrower will suffer by the product coming in at that stage of the finished product, and every pound of it will displace a pound of wool grown in the United States. What would happen if you have a 5 per cent protective duty on tops with a 36 cents a pound compensatory duty? The scoured wool would not come in and the grease wool would not come in; the top would come in, and when the top comes in the whole structure, from the beginning of the first step in the manufacture to the finished cloth is upset. Such importations would displace American wool.

If they can bring in the tops and they displace $1\frac{1}{10}$ pounds of American wool for every pound imported into this country, there would be no protection that would equal the 33 cents which the Senate has voted upon scoured wool. In other words, if the rate is decreased in the protection of this article, then it means that in order to compete with the imported article in the United States the woolgrower in the United States will find his 33 cents duty is decreased.

Mr. President, I do not think it is necessary at this time to go into detail in answering the Senator from Massachusetts. The Payne-Aldrich law provided 30 per cent protection, the existing Underwood tariff law provides 8 per cent, and the committee amendment provides 20 per cent.

Mr. SHEPPARD. And the Senator from Massachusetts proposes 15 per cent?

Mr. SMOOT. Yes; he proposes now to make it 15 per cent. On the basis of present prices the result of his amendment would be that, instead of having 33 cents on the scoured wool we would have 33 cents less the 5 per cent.

There is another amendment which I desire to offer to the paragraph, which makes no difference in the rate whatever, but the words are unnecessary. On page 145, line 1, when the proper time comes, I shall move to strike out the words "not specially provided for" and the comma. Those words are meaningless because the items in this paragraph are not provided for in the bill in any other place and are not necessary to be provided for other than in this paragraph.

Mr. President, I think there is no necessity for further discussion of the subject unless some Senator desires to ask a question.

Mr. LENROOT. Mr. President, I desire to say only a few words upon the proposed amendment, but I would first like to ask the Senator from Utah [Mr. SMOOT] upon what theory the increase from 8 per cent to 20 per cent in the protective duty is justified in view of the importations under the 8 per cent duty?

Mr. SMOOT. Taking half bloods and above, and I might say, perhaps, taking quarter bloods and above, the differential would hardly be 20 per cent.

Mr. LENROOT. Why did they not come in in great volume when wool was on the free list and there was an 8 per cent duty upon tops, if it requires a 20 per cent duty now? That is my point.

Mr. SMOOT. All I can say is that conditions in the wool market, as it exists to-day, are quite different than they were when this rate of duty was in effect. Of course, it is in effect now, but the Senator knows the emergency tariff law is such that it would virtually prevent them coming in now.

Mr. LENROOT. I do not mean under the emergency tariff law. I mean normally in 1919 and 1920. Of course, in 1921 they came in very heavily just before the emergency tariff law went into effect, so as to get the benefit of the lower rate.

Mr. SMOOT. That was the reason why.

Mr. LENROOT. But normally they did not seem to come in in any volume under the 8 per cent duty.

Mr. SMOOT. If things were normal and the prices of wool were normal—I mean as to all grades—I would say frankly to the Senator that I think 15 per cent would be ample, as the proposed amendment of the Senator from Massachusetts provides. But I think the policy ought to be that if we are going to establish the wool industry in the United States it ought to be established so that wherever they begin the purchase of the wool, and particularly the American wool, it ought to be handled from the raw wool clear through to the finished product.

Mr. LENROOT. I agree with the Senator.

Mr. SMOOT. Therefore, I say that in making a tariff bill the question as to the ultimate consumer should be the protection that is upon the cloth itself.

Mr. LENROOT. That depends, does it not, upon the protection also given upon the tops, the yarns, and so forth?

Mr. SMOOT. Yes, and as one Senator I want them amply protected so that half of the business can not be taken away from the manufacturer in the United States, and leave only the other half perhaps to be done here.

Mr. LENROOT. I am entirely in accord with that proposition, but I can not see, when the imports were almost prohibited normally under an 8 per cent protective duty, why it becomes necessary to jump it to 20 per cent at this time.

Mr. SMOOT. I think to be perfectly safe, with the wool of quarter bloods and more as low as they are in price, that we can not keep them out if we do not have 20 per cent. If they were normal, I would say we would not need that amount. I virtually admit that at this time, but as I have said so many times, the coarse wools are abnormally low and I can not say how long they will continue. That is the only answer I can give the Senator.

Mr. LENROOT. Mr. President, this illustrates what the consumer will have to pay by reason of the action that was taken by the Senate with reference to the coarse wools.

Mr. SMOOT. The Senator has decided that question.

Mr. LENROOT. Yes; I know it. I say it merely illustrates how it is now necessarily carried on into tops, into yarns, into fabrics, into blankets, and every other item. I am not criticizing. I am simply stating the fact.

Because of the action with reference to the rate on tops, for instance, valued at 40 cents a pound, we are now compelled, by reason of the excessive compensatory duty—I say excessive, not by way of relationship, but on the value—to pay an ad valorem duty of 110 per cent. In other words, under the bill as it now stands, tops valued at 40 cents a pound must pay a tariff duty of 44 cents a pound.

Mr. SMOOT. That is absolutely true, because of the fact that the wool itself bears a rate of 36 cents.

Mr. LENROOT. I understand, of course, because if we are going to impose a duty of 36 cents upon the coarse wool we necessarily have to carry that compensatory duty into the tops, into the yarn, and into the cloth. I am not criticizing. I am simply stating now where the consumer must necessarily be affected when it gets into the final product by reason of the compensatory duties made necessary by the action of the Senate already taken.

Mr. SMOOT. That is, so far as the low-priced wools are concerned.

Mr. LENROOT. Exactly. I do not want to go over the matter upon which the Senate has taken action, but the Senator from Idaho [Mr. GOODING] yesterday repeatedly made the statement that the Tariff Commission found that it cost just as much to raise a pound of wool of the quarter-blood class and lower as it does of the fine wool. I do not think the Senator from Utah [Mr. SMOOT] will concur in that statement, because the Tariff Commission have never made any such finding.

They have made a finding that is exactly to the contrary. Yesterday when the statement was made I did not have the information which I thought was contained in the report of the Tariff Board, and therefore I was not in a position to challenge the statement of the Senator from Idaho. The fact is, as the Senator from Utah will admit, that the report of the Tariff Commission, where they found that the cost of raising a pound of wool, including interest, was 45 cents, and without interest from 35 to 37 cents, covered only the territory wools, only the wools in the range States, only the high-shrinkage wools. They made no finding in their recent report upon wools upon the farms east of the range States. Their report covered only the territory wools.

But in 1911 the Tariff Board, in a very comprehensive investigation which it made at that time, went very thoroughly into the question of the cost of raising the wool of the cross-bred sheep and of the fine wool, and I now have that information and I want to put it in the RECORD.

In the Report of the Tariff Board, volume 2, pages 368–369, they found that of the finest class of wools the actual cost—that is, the cost to be charged to that wool—was 40 cents a pound when the selling price was 28 cents a pound, a loss to the woolgrower of 12 cents a pound.

Mr. POMERENE. I do not think the Senator stated to which wool that refers. The Senator from Utah informs me it refers to the finer wools. I merely want the RECORD to show that.

Mr. LENROOT. I am just now referring to the fine wools.

Mr. POMERENE. I was not sure that the Senator so stated. I merely wanted the RECORD to show.

Mr. LENROOT. That refers to the finest wool. On the next grade they found the cost to be charged to wool was 32 cents a pound when the selling price was 27 cents. On the next grade it was 27 cents cost and the selling price 26 cents. On the next grade it was 22 cents cost and the selling price 27 cents. On the next grade it was 12 cents cost and the selling price 24 cents. Then they have a separate table upon the cost of raising wool of the crossbred, which is three-eighths and lower, and instead of there being any charge against the wool of the crossbred, there was a credit in 1911 of 2 cents a pound. In other words, the receipts on the first class——

Mr. SMOOT. Of course, the Senator knows those figures would not apply to-day?

Mr. LENROOT. Oh, no. It is, of course, only a question of relationship. The figures I am giving have no bearing upon present cost whatever, but I think the Senator will admit that they are important as bearing upon the relationship.

Mr. SMOOT. They are relatively so, with this exception: Of course, there is a plan now of disposing of lambs as against disposing of wethers in years past, which has changed the relative cost of the wool. But I say to the Senator frankly that there is something of a difference even to-day in the different classes of wool.

Mr. LENROOT. On the first class upon which the Tariff Commission reports the net charge per head was $2.81, while the receipts per head, wool and mutton, were $2.10. On the next class $2.59 was the charge and the receipts were $2.24. On the next class the net charge per head was $2.50 and the total receipts were $2.49.

Now we come to crossbreds. The charge was $2.78 and the receipts were $4.38 per head. Of course, that tells the story of why the farmers are raising crossbreds at all in the United States. It is because their chief value is for mutton and not for wool. The relationship of that is given by the Tariff Commission. While for the finest wools the percentage of receipts for wool is 78 as against 22 for mutton, when we come to the crossbreds the receipts for wool are only 33 per cent as against 67 per cent for mutton. Will anyone say, then, that it costs as much to raise wool from the crossbreds as it does from the merino? Of course not.

Now, then, to carry the matter one step further and give the conclusions of the Tariff Commission, they say, on page 372:

> In the case of crossbred flocks the receipts from other sources are derived almost entirely from mutton, and since the schedules show but few mature sheep sold except the ewes culled from the flock, such receipts must consist mainly of returns from sales of fat lambs. The wool sold is chiefly from the breeding ewes, as but few or no wethers are kept.

Again, further on they say:

> In the case of the crossbred flocks the average total maintenance costs per head are, as already stated, $2.78, and the average receipts per head from other sources than wool are $2.92. The receipts, therefore, pay the total costs and afford a balance of 16 cents, which, added to the total receipts per head from wool—$1.46—produce a total of $1.62 per head as profit.

In their summary they say:

> In the western region of the United States, with approximately 35,000,000 sheep, the net charge against a pound of wool is about 11 cents.

Under the present figures it would be 37 cents as against 11 cents as reported in 1911. That is correct, is it not?

Mr. SMOOT. That is in the grease, I will say to the Senator.

Mr. LENROOT. I understand it is all in the grease.

> In the other sections, with about 15,000,000 sheep, the net charge against a pound of wool from the merino sheep, which number approximately 5,000,000, is about 19 cents, and the net charge against the wool grown on sheep of the crossbred type is negligible.

Mr. President, basing the proposition upon the report of the Tariff Commission, I think I have demonstrated the accuracy of what I said last night that the tariff rate of 33 cents will afford very much higher protection, based upon the cost of production, to the growers of crossbred sheep than it will to the growers of wool of the high shrinkages. I wanted to get those facts into the RECORD, because I do not want to be understood as standing here upon the floor and advocating a lower rate of protection proportionately for one class of sheep growers than I do for another class of sheep growers.

Mr. President, I am not going to preach any funeral sermon over what has been done, but if we could have made a distinction between the quarter blood and lower we would have given to the growers of the quarter blood the same equal proportionate protection that we do to the growers of the territorial wool, and yet we could have reduced prices to the consumers in this country very materially.

Mr. SMITH. Mr. President, I do not think there is any more appropriate time than the present to call attention to some of the difficulties under which the farmers and truck growers of this country are laboring. An old preceptor of mine once said to me that one illustration was worth an hour's argument. I have listened to this debate from the beginning of the tariff discussion until now, and I have wondered what effect the debate would have upon the American public. The judgment of the American people will be based upon what law you finally pass. I have here a communication from a constituent of mine relative to one of the products of the farm and of our State.

I have formerly taken occasion here to call attention to the fact that it is practically impossible for the farmer to receive certain benefits which you are trying to secure to the American farmer; that it is impossible for the farmer, situated as he is, to receive anything like his share of such benefits under the proposed tariff.

We have on the statute books a law which empowers the Interstate Commerce Commission to fix such rates, fares, and charges on the railroads as shall approximately yield a return of 6 per cent for the capital invested by the railroads for the public use. That commission doubtless has endeavored to do that, and that is illustrated in the letter which I am going to read.

There are organized commission men who have a fixed charge; there are organized fertilizer men who have a fixed charge. Now, I wish the Senate to listen to this letter, which is written to me and which incloses some New York commission house accounts of sale of the article in question, showing what part of the proceeds were received by the farmer who in the heat and cold went out and caused to be produced in his fields edibles for the people in the city to which they were shipped. I am going to read the letter. It indicates that, while we are busy passing laws of which, because of the nature of their organization, the manufacturers and the financiers can avail themselves, we have utterly neglected to provide means by which the agricultural interests of the country can capitalize their work in such manner as to force a just division of the proceeds from the wealth which they produce. The letter is written to me by a man who lives in the heart of the truck-producing section of my State. He says:

> DEAR SIR: I am just wondering if I'm doing the right thing in taking a minute of your valuable time to listen to a complaint that is general in this section this year. The inclosed sales of melons will explain in a glance what I mean. I shipped these melons to New York, and they sold for less than the freight and commission. In other words, the railroad company charged me from $132.50 to $150.34 on the same cars' melons, the commission man got his commission, and, under my guaranty, I will have to send my check for $63.48 to square accounts, having already lost the melons. In other words, I paid $63.48 for the privilege of giving New York three cars of good melons. The railroad got theirs, the commission man his, and me and my hands sweated over these for several months and then was called on to pay $63.48, in addition to losing fertilizer, seed, and all the work done. Can this be remedied? Seems to me that it's so unfair for the farmer to lose all, that the railroad should be made to refund at least $50 a car on this year's shipments, and that rates should be fixed for another season so that the farmer could at least live. I don't know what you can do, perhaps nothing, but if anything can be done I'm sure that you with the help of the others can do it.

Mr. President, I ask to have printed in the RECORD the three accounts of sale which accompany the letter.

The PRESIDING OFFICER. Without objection, it is so ordered.

The accounts of sale are as follows:

(Frank Hewitt & Co., wholesale fruit and produce and commission merchants, 23 and 24 Bronx Produce House, One hundred and thirty-second Street and Willis Avenue. Sales No. 4838. Received 7/12. Via New Haven. Car No. Sea 27691.)

NEW YORK, *July 18, 1922.*

Sold for the account of S. W. Copeland, Ehrhardt, S. C.:

1 car melons	$135.00
Freight	150.34
Commission	13.50
Total	163.84
Sold	135.00
Deficit	28.84

(Frank Hewitt & Co., wholesale fruit and produce and commission merchants, 23 and 24 Bronx Produce House, One hundred and thirty-second Street and Willis Avenue. Sales No. 4839. Received 7/13. Via New Haven. Car No. Sea 27481.)

NEW YORK, *July 18, 1922.*

Sold for the account of S. W. Copeland, Ehrhardt, S. C.:

1 car melons	$125.00
Freight	132.14
Commission	12.50
Total	144.64
Sold	125.00
Deficit	19.64

(Frank Hewitt & Co., wholesale fruit and produce and commission merchants, 23 and 24 Bronx Produce House, One hundred and thirty-second Street and Willis Avenue. Sales No. 4800. Received 7/11. Via New Haven. Car No. ACL 22325.)

NEW YORK, *July 18, 1922.*

Sold for the account of S. W. Copeland, Ehrhardt, S. C.:

1 car melons	$135.00
Freight	136.50
Commission	13.50
Total	150.00
Sold	135.00
Deficit	15.00

Mr. SMITH. As will be noted, the figures indicate a total deficit which had to be met by the grower and shipper of the melons of $63.48 on the three cars of melons.

Mr. President, some of us who patronize restaurants give 20 cents for one-eighth of a watermelon, representing a retail price of $1.60 for the melon. The writer of the letter which I have read gives all his time, his land rent, and the labor of himself and his employees, and then pays $63.48 for the privilege of shipping the melons produced by him to the city. The main point is that the railroads, for melons shipped on an open car, which is very often a cattle car, received $150 for one car from Ehrhardt, S. C., to New York, while the producer of the melons, at the mercy of a combination in the sale of his product, has to pay from $12 to $15 a car for the privilege of sending his melons to New York.

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Georgia?

Mr. SMITH. I yield.

Mr. WATSON of Georgia. I should like to ask the Senator from South Carolina whether or not the outrageous freight charge imposed upon the melon shipper has been legalized by the Interstate Commerce Commission?

Mr. SMITH. As a matter of course, under the present law the Interstate Commerce Commission was converted into a taxing machine for the benefit of the railroads.

Mr. WATSON of Georgia. Then, Mr. President, is not the real crime in the case—the crime of robbery—that of the Interstate Commerce Commission, and can not we handle it?

Mr. SMITH. Yes. The fact of the business is that we, a legislative body, ought not to take into account alone certain public utilities which necessarily belong to our jurisdiction, but, in adjusting the compensation for the work rendered by the carriers and other public utilities, there ought to be taken into consideration the condition under which the carriers are supported. What I mean to say is that if we by legislative enactment—and I do not know but that we should do it—are going to determine rates and take over the regulation of what the railroads shall charge, then we, as legislators, ought to provide a method by which those who produce the freight shall have means at their disposal by which they may graduate their prices in accordance with the overhead which we impose upon them.

What have we done in the way of legislation that would enable these men to form a system of selling by which, when the man knew that the freight would cost him $150 a car, he could regulate the price of his melons to a point where it would absorb the $150 and still leave him a profit? What provision have we made to our agricultural classes in the form of banking legislation or credit legislation that meets their needs as adequately as we have provided for the needs of the ordinary commercial enterprises of this country?

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Georgia?

Mr. SMITH. I yield.

Mr. WATSON of Georgia. On the Interstate Commerce Commission there are two members from the State of New Jersey—a State which is notoriously crisscrossed by railroads and electric lines, and has almost no agricultural interests at all. The great southern coast of this country, from Kentucky on up to north Virginia, including the seaports of Galveston, of Miami, of Fernandina, of Brunswick, of Savannah, of Charleston, of Norfolk, has no representative whatever on that commission. What redress will we ever get so long as we stand here and talk about it, and do not get together and agree to do something?

Mr. SMITH. Mr. President, I think it is unfortunate that the southeastern division of the freight tariff has not a representative on the commission; but, in all justice to the Interstate Commerce Commission, it must be said that they are operating under the laws that Congress passed. We have granted them the power and laid upon them almost a command to fix rates, fares, and charges at a point that will average 6 per cent, not upon the active roads alone but upon the property devoted to the public use. We are busy here with a tariff under the plea that we hope to preserve the American scale of wages and American industries for the American people, providing by this very law a means by which competition is practically stifled, because no man can read this bill and compare it with those that have gone before without agreeing that it approximates an embargo. The truth of the matter is that protection, when it gets away from the idea of aiding in the development of an infant industry, assumes the aspect of an embargo. By no process of reasoning can you arrive at any other conclusion. It is, to all intents and purposes, a legalized form of destroying foreign competition with the domestic manufacturer. Organized means are necessary and essential for any artificial production, such as that of the manufacturer. He can avail himself of this law because he can control his output. He can curtail his production at any hour; but when it comes to the natural producer, he has no control over either the quantity he is to make or the quality of what he is to make; and hence, not being able to take an order for future delivery with the knowledge that he can fill it both as to quantity and as to quality, he must wait until the product is ready, and when millions of his fellows in like condition with himself are ready, you have a 12 months' supply on the market that must be disposed of within 30 to 90 days to meet the obligation incurred in its production. What is the result? The man or the men who are organized and have the means buy the product on the market, discounting the carrying charges for the next 12 months, and then giving the producer what in their judgment it would be safe to give him and allow the buyer to have a safe profit.

I say that we have been derelict in our duty. After 150 years of American history, those who have clothed us and fed us and shod us have to go hungry and barefoot and naked in the midst of plenty, because we have not provided the means by which they can dispose of the wonderful wealth they produce in such a manner and in such quantities as will guarantee them a living profit.

Where is there written upon the statute books a banking system or a credit system by which such absurd things as the return sales that I have read would be possible? Each year, with the fluctuations of governmental control from Republicans to Democrats and back again, we hear the cry of a tariff. It is a paramount issue, and up until the present Congress I thought it was the dividing line between the two parties. I am beginning rather to modify my ideas about that; but, anyhow, we have considered the tariff the dividing line between the two parties, and we were doing what? Every man knows that we were legislating for special interests to get special profits.

Think of the absurdity of a body of men such as the United States Senate is reputed to be legislating as we do and claiming that we are doing it for the benefit of American labor! We put on this tariff under the guise of wanting American labor to have the benefit of protection against the competition of the pauper labor of Europe. Show me one line in this bill or in any tariff bill ever written where we have provided that the rise in price accruing by virtue of the tariff should be paid to the labor employed in producing the articles. There is not a line nor a suggestion of a line which says that whatever additional price accrues shall go to labor, or shall even be divided with labor. You give it to the manufacturer in the sale of his goods and trust his philanthropic impulses as to what he will give labor.

I think that at some time during the discussion of this bill I shall introduce an amendment to the bill to the effect that whatever difference in price accrues to any manufactured article produced in this country under this bill shall be given to the labor employed in its production, or at least a certain percentage of it; and I will make provision in my amendment that the Federal Government shall indicate the proper officer to see that that is done.

If we are doing this for labor, let us write labor in this bill and see that they do get it. Instead of giving it to the manufacturers and saying to them, "We are going to protect you against the competition of the pauper labor of foreign countries in order that you may give a decent American wage to American labor," let us, as honest men, put it in the bill and make provision that it shall be carried out.

Here is a laborer, and he pays $63.48 of actual money out of his pocket for the privilege of giving New York three carloads of watermelons, besides his land rent and his fertilizer and his time and his money that he spent in producing them. We can not sit here and do this thing forever and forever, with a constituency feeling the grind of the unfairness and the in-

consistency of this condition, without danger to us and danger to the Republic. We are not deceiving the American people as well as we think we are. These things can not go on and this country prosper politically, socially, or morally. We are charged with the duty of regulating these things. We are charged with the duty of seeing that our commercial and economic laws are so framed that every man shall have an equal chance to benefit according to his ability. Read this bill and see how much we have equalized or proposed to equalize the burden.

We are going to put a tax on bagging; we have a tax on ties; and the southern farmer puts his free cotton in taxed bagging and ties, and under the 30 per cent tare he has to give away his bagging and ties to the purchaser of the cotton. He not only pays the ordinary price but he pays a duty on them and gives them away.

Mr. DIAL. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to his colleague?

Mr. SMITH. I yield.

Mr. DIAL. They even tax the arsenic with which the grower of watermelons tries to keep the bugs off the watermelons, do they not?

Mr. SMITH. That is a fact. I had not thought of that. It did not occur to me. They come in here with a duty on a by-product called arsenic that the melon grower of the South is depending upon now to keep what is called the cucumber bug from eating up his watermelons. They actually put a duty on the arsenic by which he hopes to poison the insect that possibly would ruin his watermelon crop. He not only has to pay for his arsenic, but now they propose to put a duty on it. He pays all the freight and the overhead charges and gives up his land rent, and then goes into his pocket and takes out $63.48 of money that he earned in some other way and makes that a present to the people who take his watermelons.

Mr. WALSH of Massachusetts. Perhaps it is to prevent the disheartened and discouraged consumers who have to pay the taxes levied in this bill from poisoning themselves.

Mr. SMITH. I do not think they are going to poison themselves; but, God bless your soul, they are going to poison some other people. Now, you can remember that. This poisoned bait, designed to kill off all foreign competitors, is going to kill off some home people. You can not do this thing.

I sat here the other day and listened to the discussion as it wandered off into details and minutiæ, and I thought: "What is the issue?" The issue was, from the Republican standpoint, what was a reasonable rate of duty to measure the difference between the cost at home and abroad? What were you doing? You were discussing how much was imported and how much was exported, and when you got it down to the last analysis the question was, How much did the manufacturer say he wanted? That is the basis upon which this bill is written.

Mr. President, I am not going to bring a railing accusation against the other side. Some one has said that the most dangerous thing in the life of a man or a community is the horrible inertia of habit. We have actually gotten into the habit of thinking in terms of manufacturers and their prosperity, while the consumers and producers of the raw material never seem to cross the legislative brain. Their cry comes up, and it is unheeded. When organizations are formed by people to protect themselves we are disposed to think that they are outside the law. When we thoughtfully, or thoughtlessly, provide the very means by which one class of our citizens may organize for their own benefit and to the hurt of others, we need not be surprised when the helpless ones organize to protect themselves. The logic of modern events is combinations. It is the absolute sequence of modern law and its modern application. We will never be able to destroy the tendency toward combination. Combinations are inherent and natural forces of the creative hand. But we should provide that each and every necessary organization in this country should have the same law, and the same opportunity under the law.

I had not intended to say this much, but I do feel acutely the existence of these conditions right at the time when we are spending weeks and months devising means by which the manufacturers of this country may be protected and their profits guaranteed. I am not inveighing against the stand of the Republican Party, but I do say that, in this bill, we should have a reasonable regard for the men who produce the material out of which the manufacturer must live. I think we ought to amend our transportation act now. I think we ought to incorporate into this bill at least such a modification of the rates proposed here as will give the consumer and the producer an opportunity to live.

Before I take my seat let me call the attention of the Senate to another thing. I took occasion to go down street the other day to purchase a pair of shoes, and so far as the retail price of shoes is concerned, there has been practically no diminution from the war peak. I paid $14.50 for a pair of shoes which readily sold for $5 or $6 before the war. I went to my tailor to have a suit of clothes made, and he charged $107 for a suit that just before the war I could get for from $45 to $50.

With that kind of thing going on, and the purchasing power of the dollar of the ordinary laborer and farmer shrinking to one-quarter its pre-war purchasing power, so far as we can avoid it we should not pass any law by which any discrimination in prices would be possible. I think it would be a wholesome lesson to the shoe dealers of America if we were to take the duty off shoes, as we did in the case of hides; take it all off. I do not know whether that would avail or not, for the reason that we have to wake up to the fact that the facilities for transportation and communication have become so perfect the world over that we have international combinations now where there used to be only national combinations. The markets of the world, as I attempted to show when I had charge of the duties on thread in the cotton schedule, are under the control of these gentlemen, and they fix prices regardless of tariffs and regardless of whatever financial system you may set up. They have the power to crush competition and reimburse themselves at their pleasure. They have a worse power than that. They have a power to invite competitors to join and make it possible for them to join, and when they reach that stage competition dies. Those are the conditions existing now.

Mr. SMOOT. Mr. President, the Senator's watermelon story is not half as bad as one I can tell about a carload of peaches which came all the way from Utah to Chicago. Not only did we not get anything for the peaches—they were dumped into the river—but we had to pay for the peaches and the freight and the boxes the peaches were put in. How is the Senator going to arrange the distribution of these products? For instance, peaches have to go onto the market within 30 days after they are picked; the whole crop has to be marketed within that time. The incident to which I referred happened a few years ago, not in one case but in hundreds of cases. Following that, I know of whole orchards of peach trees, of 10 acres, 20 acres, or 30 acres, which were absolutely dug up, which cost at least a thousand dollars an acre to plant and grow, and which were bearing peaches. How does the Senator intend to regulate the distribution of such perishable goods? I think the watermelons to which the Senator referred went on the New York market, and perhaps the market was overflooded with watermelons and the price went tumbling down.

Mr. SMITH. It always does in such a case.

Mr. SMOOT. I have said many a time on the floor of the Senate that there is something radically wrong with our distribution system. There is something wrong not only with the amount of profits charged the consumer, but the distribution and the handling of them need remedying. That is one of the greatest questions we have in America to solve to-day.

Mr. SMITH. Mr. President, it is a significant fact that for nearly 50 years the Republicans have been in power, and they never even approached a solution of the problem. We did make a start under the Democratic administration through a modification of our banking and currency law.

I will say to the Senator from Utah that perhaps there is a dawn of relief from the splendid object lesson of the California Fruit Growers' Association. They had to combine and sell their products on the ground. They fixed the price and told the purchasers to come and get it. Through our miserable lack of initiative in taking care of those who are helpless under present conditions we are driving them into mutual cooperative organizations. It is going to force them to take the marketing business in hand and dictate their own terms. Labor, in order to protect itself, has organized, and we are beginning to have an object lesson now as to what the organization of labor means.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Kentucky?

Mr. SMITH. I yield.

Mr. STANLEY. The Senator is talking about a subject that is of very great interest to me, and one to which I have for the last 20 years given such poor thought as I could.

I have heard a great deal of talk, a great deal of discussion, of the farmer taking the market into his own hands. The farmers in Kentucky time and again have in a measure dictated the price of their tobacco. I saw them start tobacco at 3 cents a pound and run it up to 12 cents. That is easily understood.

Here is an area you can cross in a few hours by automobile, from north to south, or east to west, cultivated by intelligent men, who can meet for the purpose of cooperation.

The volume of the commodity is such that it can be controlled. They can fix the price for the time being, if not permanently. The fruit growers in California and the truck farmers on the Eastern Shore of Maryland can do the same. The growers of long-staple cotton might do it.

But take wheat, which is grown on every acre of arable land between the Tropic of Capricorn and the Tropic of Cancer and the polar zones. It is grown under all sorts of conditions, by all sorts of people, men speaking all sorts of languages, with all sorts of customs. If you held every bushel of wheat raised in the United States you would not materially affect its price.

Suppose the farmer held his corn; what good would it do him? He would have to control the price of wheat, he would have to control the price of other things which could be substituted for corn.

As a friend of the farmer it is my candid opinion that anything like a control by cooperative action of the staple commodities he sells is utterly impossible, except under the conditions I have named. On the other hand, everything he buys can be controlled by the manufacturer and producer.

In my own State of Kentucky they have lately repealed perhaps the best antitrust law ever put on the statute books.

I can conceive of no worse friend to the farmer than he who comes to him with the story that he will benefit him by repealing antitrust laws, by exempting him from any kind of law preventing combination in restraint of trade, by fattening him with the filthy usufruct of a protective tariff, by endowing him with political rights as a class instead of endowing him with political rights as a citizen. Those who talk that way may think they are the friends of the farmer, but to the judicious they are the most dangerous enemies agriculture has to-day; not that they are not sincere, not that they are not well meaning, not that they are demagogues—although many demagogues play upon that chord—but if they believe it they are mistaken; if they say it without believing it, there is no necessity for any characterization.

Mr. SMITH. Mr. President, the idea the Senator has advanced, the history of the past seems to bear out.

I wish to make one further statement, and then I am not going to discuss the subject further. I said a moment ago that the logic of events, the natural sequence of modern employment of mechanical forces in the production of the world, have made combinations absolutely necessary in order to meet——

Mr. STANLEY. Mr. President, if the Senator will pardon me, I hope I shall not be misunderstood as in any way opposing farmers' organizations for collective bargaining. They are perfectly right and proper. What I mean is that the farmers should form those organizations within the antitrust laws, which is easy enough, and not seek for exemption or repeal of those laws, because they would suffer more than they would gain by it.

Mr. SMITH. The thoughtful, I am sure, will agree with the statement I have made that combinations are the necessary result of the logic of events and the natural sequence of modern employment of mechanical forces in the production of the world, and, therefore, the corollary of that is equally true, that the tremendous, incalculable power that grows out of these combinations will be used for the purpose of enriching the members of the combination, and under another natural law, viz, that everything moves along the line of least resistance; the unorganized, being in position to offer the least resistance, become the necessary victims. Therefore the agriculturists of the country must learn to lose their identity as individuals in the sale of their produce, just like members of a corporation lose their personal identity as stockholders, leaving it to the sales agents to transact the business for them.

I think we are rapidly approaching that condition, but right at the very beginning of this necessary and commendable effort on the part of agriculture to combine for the purpose of distributing the wealth they have produced over the season when the trade will absorb it they find themselves totally without a banking or credit system which will meet that condition. We have provided a system of commercial banking for 30, 60, or 90 day paper that will challenge the world. Every one of the principal civilized Governments of Europe has an agricultural banking system to meet the necessities of the agriculturists of their country; but in the very beginning of the effort on the part of the agriculturists of this country to combine to meet combination they find themselves totally unprovided with any system by which they can meet the peculiar exigencies which necessarily inhere in their business.

Mr. WALSH of Massachusetts. Mr. President, I ask for the yeas and nays upon my amendment.

The yeas and nays were ordered.

Mr. WALSH of Massachusetts. I ask that the Secretary report the amendment which I have proposed to the committee amendment.

The PRESIDING OFFICER (Mr. SPENCER in the chair). The Secretary will report the pending question.

The READING CLERK. On page 145, line 2, the Senator from Massachusetts [Mr. WALSH] moves to strike out "20" in the amendment of the committee as modified and insert "15," so that it will read "15 per cent ad valorem."

The reading clerk proceeded to call the roll.

Mr. GLASS (when his name was called). I transfer my general pair with the senior Senator from Vermont [Mr. DILLINGHAM] to the senior Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the senior Senator from Maine [Mr. FERNALD] to the senior Senator from Nevada [Mr. PITTMAN] and vote "yea."

Mr. McCUMBER (when his name was called). The junior Senator from Nevada [Mr. ODDIE] if present would vote "nay" upon this question. Therefore I transfer my pair with the junior Senator from Utah [Mr. KING] to the junior Senator from Nevada [Mr. ODDIE] and vote "nay."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

The roll call was concluded.

Mr. BALL. I have a general pair with the Senator from Florida [Mr. FLETCHER]. I transfer that pair to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. BURSUM. I have been requested to announce, on behalf of the senior Senator from California [Mr. JOHNSON], that if he were present he would vote "nay" on this question. Had he been present on the previous vote he would have voted in favor of the committee amendment.

Mr. McCUMBER. The junior Senator from Idaho [Mr. GOODING] is necessarily absent from the Chamber. If he were present, he would vote "nay."

Mr. McLEAN. I transfer my pair with the senior Senator from Montana [Mr. MYERS] to the junior Senator from Idaho [Mr. GOODING] and vote "nay."

Mr. DIAL. I am paired with the senior Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the junior Senator from Rhode Island [Mr. GERRY] and vote "yea."

Mr. WALSH of Montana (after having voted in the affirmative). I inquire if the Senator from New Jersey [Mr. FRELINGHUYSEN] has voted?

The PRESIDING OFFICER. That Senator has not voted.

Mr. WALSH of Montana. I have a pair with that Senator, and in his absence, being unable to obtain a transfer, I withdraw my vote.

Mr. SMITH (after having voted in the affirmative). I have a general pair with the Senator from South Dakota [Mr. STERLING], who is absent. Being unable to secure a transfer, I shall have to withdraw my vote. If permitted to vote, I would vote "yea."

Mr. WATSON of Georgia. I have a pair with the senior Senator from California [Mr. JOHNSON]. In his absence, being unable to obtain a transfer, I withhold my vote.

Mr. CURTIS. I wish to announce that the junior Senator from California [Mr. SHORTRIDGE] and the senior Senator from South Dakota [Mr. STERLING] are absent on official business.

I also wish to announce the following general pairs:

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS]; and

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON].

The result was announced—yeas 21, nays 33, as follows:

YEAS—21.

Ashurst	Heflin	Pomerene	Underwood
Borah	Hitchcock	Sheppard	Walsh, Mass.
Caraway	Jones, N. Mex.	Simmons	Watson, Ga.
Dial	Kellogg	Stanley	
Glass	Lenroot	Swanson	
Harris	Overman	Trammell	

NAYS—33.

Ball	Calder	Colt	Hale
Broussard	Cameron	Curtis	Harreld
Bursum	Capper	Ernst	Jones, Wash.

Kendrick	McKinley	Newberry	Spencer
Keyes	McLean	Nicholson	Warren
Ladd	McNary	Pepper	Willis
Lodge	Moses	Phipps	
McCormick	Nelson	Ransdell	
McCumber	New	Smoot	

NOT VOTING—42.

Brandegee	Frelinghuysen	Oddie	Stanfield
Crow	Gerry	Owen	Sterling
Culberson	Gooding	Page	Sutherland
Cummins	Harrison	Pittman	Townsend
Dillingham	Johnson	Poindexter	Wadsworth
du Pont	King	Rawson	Walsh, Mont.
Edge	La Follette	Reed	Watson, Ind.
Elkins	McKellar	Robinson	Weller
Fernald	Myers	Shields	Williams
Fletcher	Norbeck	Shortridge	
France	Norris	Smith	

So the amendment of Mr. WALSH of Massachusetts to the amendment of the committee was rejected.

Mr. SMOOT. On page 145, in line 1, I move to strike out the words "not specifically provided" and the comma.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. In paragraph 1106, page 145, line 1, the Senator from Utah proposes to strike out the words "not specially provided for" and the comma.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee as modified.

The committee amendment as modified was agreed to.

The next amendment of the Committee on Finance was, on page 145, after line 2, to strike out—

PAR. 1107. Yarn, made wholly or in part of wool, valued at not more than 55 cents per pound, 20 cents per pound and, in addition thereto, 15 per cent ad valorem; valued at more than 55 cents but not more than $1.50 per pound, 30 cents per pound and, in addition thereto, 18 per cent ad valorem; valued at more than $1.50 per pound, 30 cents per pound and, in addition thereto, 20 per cent ad valorem.

And in lieu thereof to insert:

PAR. 1107. Yarn, made wholly or in chief value of wool, valued at not more than 30 cents per pound, 26 cents per pound and 30 per cent ad valorem; valued at more than 30 cents but not more than $1 per pound, 39 cents per pound and 35 per cent ad valorem; valued at more than $1 per pound, 39 cents per pound and 40 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, this is an important amendment. I wish to point out, first, that there are three distinct changes proposed in the Senate committee amendment when compared with the House provision. The first change is that the Senate committee amendment proposes to increase the compensatory rate. That probably is justified upon the ground that the rate upon raw wool has been increased. While the compensatory rate may be justified upon that ground, the fact remains that the burden to the consumer is being carried along through all of these various items by reason of the oppressive and very high rate of 33 cents per pound upon the raw wool.

The second change to be noted is that the ad valorem protective duties in the House text have been doubled in the Senate committee amendment. That may be explained in part by reason of the fact that the House ad valorem rates were based upon American valuation, while the Senate rates are based upon foreign valuation; but that does not fully account for the doubling of the ad valorem rates. There has been an added protection given to the makers of yarn by the high rates provided in the Senate committee amendment.

Thirdly, the Senate committee amendment lowers the brackets. The lowest bracket provided by the Senate committee amendment, namely, yarns valued at not more than 30 cents per pound, is useless, because it is inoperative. There is no yarn made with a lower valuation than 30 cents a pound, and the only purpose of including that bracket is for camouflage, to make it appear that a lower rate has been fixed upon yarns of less value than 30 cents per pound than upon yarn of a higher value than 30 cents. So we are concerned about the other two brackets which deal with yarn valued at more than 30 cents and not more than $1, where the specific rate is 39 cents per pound and the ad valorem protective rate is 35 per cent; and yarns valued at more than $1 per pound, where the compensatory duty is 39 cents per pound and the protective duty is 40 per cent ad valorem.

As regards these brackets, we are again confronted with the questions which we considered when we were discussing tops: Are the compensatory duties provided in the Senate committee amendment fair, and can they be justified in the light of the information available as to the shrinkage of clean wool in making yarn? Are the protective duties fair, and are they justified by the difference in conversion costs in America and the United Kingdom?

I do not know that I can put the cases before the Senate in any better way than to call attention to what these rates indicate in ad valorem terms. Yarn valued at 30 cents per pound will bear an ad valorem duty of 116⅔ per cent, which means that a pound of yarn coming into the port of Boston, New York, Savannah, or New Orleans that represents a foreign valuation of 30 cents when bought by the manufacturer to be made into cloth will cost over 65 cents a pound.

Yarn valued at $1, under the rate provided in the committee amendment, will bear an ad valorem duty of 74 per cent, while yarn valued at $2 will bear an ad valorem rate of only 59 per cent. Thus it will be noted that the cheaper yarns instead of bearing a lower duty, as the wording of the bill would on its face indicate, bear a much higher duty. So when we come to vote upon the duties in this paragraph I want it clearly and distinctly understood that a vote for the committee amendment is a vote to double the price of yarn to the manufacturer who wants to buy foreign yarns made from the cheaper grade of wool and to make a lesser increase in the price of yarns made of the high-grade wool.

In order that we may understand more fully the excessive character of this protective duty, I should like to call attention to the duties levied in other laws.

Mr. SIMMONS. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from North Carolina.

Mr. SIMMONS. I merely wish to ask the Senator a question. I understood the Senator to say that the proposed rate upon yarn valued at not more than 30 cents was practically double some other rate, but I did not catch with what the comparison was made. Was the Senator making the comparison with the present law or with the Payne-Aldrich law?

Mr. WALSH of Massachusetts. The rates provided in the Senate bill, translated into ad valorem terms, represent an ad valorem duty of 116⅔ per cent upon yarns valued at 30 cents foreign valuation, and upon yarns valued at $1 the Senate rate translated into the ad valorem equivalent represents a duty of 78.6 per cent.

Mr. SIMMONS. I understand that, but I understood the Senator in speaking about the rate on the low-grade yarns to say that the ad valorem equivalent was double some other rate.

Mr. WALSH of Massachusetts. No. I intended to say, and I think I did say—perhaps the Senator did not understand me—that the ad valorem rate was so high that the price would be doubled, that the foreign price of 30 cents would become to the American manufacturer buying foreign yarns, after the duty was paid, 65 cents.

When we come to consider the question of protection we ought to ask ourselves not only what is the conversion cost in the making of yarn in America compared with the conversion cost abroad, but also is there any danger to this industry from a flood of imports of yarns which will destroy the business of the American spinner?

The facts are that practically the only imports of yarns under any of the laws of the past have been yarns of such a character—fancy-made yarns—as the American manufacturers of certain fabrics require and which are not made in this country. There has been practically no direct competition whatever through the importation of yarns with the yarns made by the American spinners. So it can not be argued that a situation exists in this country which requires protection because the market is being flooded or is likely to be flooded with the cheaply made yarns which would endanger the business of the American spinner.

Before I take up the question of the cost of the foreign yarns of a given grade and the American cost of yarns of a like grade, to determine the difference between the two and to see how it fits into this duty, I wish to discuss corresponding provisions of previous laws.

In the first place, take that much repudiated and condemned act, the Payne-Aldrich law. I do not know whether Senators have observed it or not, but no one has condemned it more vigorously than the Senate Finance Committee and nothing has condemned it as severely as the record which the Senate Finance Committee have produced here.

Mr. POMERENE. And they have condemned it as much as they defended it before.

Mr. WALSH of Massachusetts. As the Senator from Ohio suggests, they have condemned it as vociferously and as earnestly as they praised it when they sought to enact it into law. I challenge any Senator on this floor to state that he has heard a word of favorable comment in this Chamber about the Payne-Aldrich law. Has one voice been raised to pay tribute to that law or to those who voted for that law? Yet, with a rate of

11 cents per pound on grease wool in the Payne-Aldrich law and a rate in this bill of 33 cents a pound on the clean content of wool, the compensatory duty is the same.

That is an admission by this committee that a compensatory duty of 39 cents was all that in fairness and in honesty could be asked when the duty levied upon raw wool was 33 cents; yet the Payne-Aldrich law provided for a compensatory duty of 38 cents on wool bearing a duty of 11 cents per pound, grease content. It is, of course, a confession and an admission that the Payne-Aldrich duty was exorbitant. In fact, the extent to which protection was given in a concealed and veiled way through the compensatory duty levies was astounding.

I do not know whether the Senate understands me or not; but under the Payne-Aldrich law the spinners of yarns and the weavers of cloth all were given a compensatory duty that was more than compensatory, and in addition to that were given a protective duty, so that the protective duty that they had was not the total protection which they received, but they had in the compensatory duty a concealed protection which the public could not discern and could not appreciate; and not until the Taft Tariff Board made its exposé in 1912 did the people of the country become aware of the scandalous, the outrageous, the almost criminal method adopted in levying compensatory duties in the Payne-Aldrich law.

Mr. President, I desire without interruption to discuss the duties levied in previous laws.

COMPARISON OF THE COMPENSATORY DUTY ON YARN IN THE SENATE AMENDMENT WITH PREVIOUS LAWS.

It is difficult to make a comparison because any compensatory duty which is purely compensatory must reflect whatever rate of duty is imposed upon raw wool; that is, it must be worked out in scientific relation to the duty upon raw wool under the tariff act. The raw wool duty has, of course, varied. Under the emergency tariff act the compensatory duty upon yarn—as upon other wool manufactures—is 45 cents per pound. This is 6 cents per pound more than the compensatory duty in the main brackets of the Senate bill. But it must be remembered that in the emergency law, owing to the skirting joker, the duty upon raw wool, assuming an average shrinkage of 50 per cent, would be 60 cents per clean pound; whereas in the Senate bill it is 33 cents per clean pound.

Under the Underwood law there was, of course, no compensatory duty, since wool was admitted free.

Under the Payne-Aldrich law the compensatory duty on yarns in the lowest bracket was 27½ cents per pound. But upon those falling in the remaining brackets—and this comprised the bulk of yarn—the compensatory duty was 38½ cents per pound. Considering that the duty upon raw wool in the Senate bill is 50 per cent higher than the duty in the Payne-Aldrich law, it is obvious that a compensatory duty of 38½ cents per pound bears a peculiar aspect in the light of the compensatory duty of 39 cents per pound in this bill. The explanation is, of course, that the compensatory rates in the Senate bill are based upon the findings of the old Tariff Board, while the compensatory rates in the Payne-Aldrich law were ostensibly compensatory but were in fact loaded with concealed protection. It is a belated acknowledgement of the iniquities of Schedule K.

COMPARISON OF PROTECTIVE RATES ON YARN IN THE SENATE AMENDMENT WITH HOUSE BILL.

The protective rates on yarn in the House text were 15, 18, and 20 per cent, respectively, as the valuation of the yarn increased. But it must be remembered that these rates are based upon American valuation. The protective rates in the Senate amendment, based upon foreign valuation, are 30, 35, and 40 per cent, respectively, for the equivalent brackets. It is difficult to compare the relative height of the House and Senate texts because of the basis of valuation. If we contrast the prices on comparable grades of yarn it is necessary to make allowance for the fact that the domestic price includes the higher cost of raw material owing to the emergency tariff law. It is quite probable, however, that the protective rates contained in the Senate bill constitute an actual increase over the House rates. Certainly the changes of rates made in the Senate amendment will not redound to the disadvantage of the domestic spinner.

COMPARISON OF PROTECTIVE RATES ON YARN IN THE SENATE AMENDMENT WITH EMERGENCY LAW.

Ostensibly the emergency law contains no protective rate other than that of 18 per cent, which already existed in the Underwood law. The fact is, however, that the compensatory duty of 45 cents per pound includes a substantial amount of protection, because the duty upon raw wool in the emergency law has not yet, at least, resulted in such an increase in the domestic prices of raw wool as to require a compensatory duty of 45 cents per pound upon yarn.

IMPORTS UNDER THE EMERGENCY TARIFF LAW.

The emergency law does not appear to have led to any great curtailment in the imports of yarn, though it should be noted that these have not been large either before or since the passage of the law as compared with the production in this country. Even in 1914, when imports amounted to 4,760,610 pounds and were larger than during recent years, they amounted to only 2.7 per cent of the domestic production of worsted yarn. Practically all our imports are worsted yarns. As a matter of fact, both before and after the enactment of the emergency law imports of yarns have ranged on the average around 300,000 pounds monthly, except during the three months preceding the law and while it was being discussed in Congress. At this time importations increased in the same manner and for the same reasons as in the case of tops, which has already been discussed. It being apparent that importers, anticipating the passage of the law, were storing up more than usual, so as to avoid the paying of the high duties threatened by the passage of the emergency law, it is fair to assume that the emergency law has operated to reduce the importations of the coarser and cheaper yarns, and had little effect in keeping out the finer and higher-priced yarns.

COMPARISON OF THE PROTECTIVE DUTY IN THE SENATE AMENDMENT WITH THE UNDERWOOD LAW.

The protective duty levied in the Underwood law was 18 per cent. The Senate amendment, therefore, on the higher priced and finer grade yarns constitutes an increase of over 122 per cent over the Underwood law.

While there was some slight increase of imports during the early years of the Underwood law, these, as noted above, constitute only 1 or 2 per cent of the domestic production. It is to be noted that the bulk of these yarns very likely consist of special yarns, types not directly competing with American yarns.

COMPARISON OF THE PROTECTIVE DUTY IN THE SENATE AMENDMENT WITH THE PAYNE-ALDRICH LAW.

The Payne-Aldrich law imposed a protective duty of 35 per cent and 40 per cent ad valorem. The rate named in the Payne-Aldrich law was condemned and repudiated, as is well known.

It is not necessary to discuss now the finding of the old Tariff Board to the effect that the Payne-Aldrich protective duty was altogether too high and that it led to the complete prohibition of the coarser yarns and almost a complete prohibition on even the finer and higher priced yarns, and thereby gave a protection to the American yarn maker which was unwarranted.

The Underwood law, which followed the Payne-Aldrich law, was in substantial accord with the Tariff Commission's findings in fixing the protective duty at 18 per cent.

RELATION OF THE SENATE PROTECTIVE DUTY TO CONVERSION COSTS.

The normal conversion cost of woolen yarn ranges from 25 to 40 per cent of the total cost. Thus those protective rates in the Senate bill which are most likely to be operative, namely, 35 and 40 per cent, amount all the way from 87½ per cent to 150 per cent of the foreign conversion costs. Yet the old Tariff Board concluded, after an exhaustive study of the conversion costs on yarn here and abroad, that the domestic cost of converting the tops into yarn exceeded the foreign, on the average, by about 100 per cent. Inasmuch as they found that the domestic conversion cost of tops from raw wool exceeded the foreign by only about 80 per cent, on the average, it follows that the total domestic cost of converting clean wool into yarn must have exceeded the foreign cost by a figure somewhere between 80 and 100 per cent—see Tariff Board Report of 1912, page 16. Nor do the subsequent investigations made by the Tariff Commission indicate that this ratio of domestic to foreign conversion costs has been substantially changed in subsequent years. Thus it appears that the protective rates upon yarn in this bill are in direct violation of the findings of the old Tariff Board, and of conditions as they exist to-day in this branch of the industry.

Mr. President, I base my objections to this paragraph on four chief grounds:

First. The rate of 18 per cent was fixed in the Underwood Simmons law after consultation and investigation by the Tariff Board as to the conversion costs of yarns in this country and abroad.

Second. There has been no increase in the spread or in the difference in the conversion costs between 1913 and the present time.

Third. There have been no importations under a rate of 18 per cent.

Fourth. The prices to-day of English yarns and American yarns in New York and Boston do not justify such increased protection as is proposed.

The comparatively slight difference in the prices of British and American yarns, it must be borne in mind, includes the increased cost of the domestic product by the existing duty on raw wool, because the American yarn now is being made under a very high duty upon raw wool, which, of course, is reflected in the price. To make a correct estimate of what would be a fair protective duty we ought to remove entirely from the American yarn the compensatory duty under the emergency law, so as to treat the prices upon the basis of free wool, but I am not doing that. The following prices are of July 15, 1922, and apply to American-made yarns made from wool dutiable at the rates named in the emergency law:

The British price of yarn of a given grade is $1.71. The American price of yarn of the same grade is $2.40—a difference of 69 cents.

In the case of another grade, the price in America of the British yarn is $1.55. The price of a corresponding grade American yarn is $2.

The British yarn in America of another grade is selling at $1.44, and the domestic yarn at $1.85.

The British yarn of the next grade is selling in America at $1.27, and the domestic yarn at $1.65.

The British yarn of the next grade is selling in America at 97 cents, and the American yarn at $1.45.

The British yarn of the next grade is selling in America at 64 cents, and the American yarn at $1.

In the case of the first grade named the difference in price is 69 cents. The amendment proposed by the Senate committee gives to the spinner of yarn 97 cents in that instance. In other words, the Senate amendment licenses the American spinner to charge the American consumer the difference between the American price and the foreign price, and in addition 28 cents, which he can put in his pocket. In this case the duty gives the entire conversion cost, plus 27 cents on every pound of yarn, to the manufacturer. Just figure up, when you come to consider 100,000 pounds or 1,000,000 pounds of yarn, just what an enormous gift that is.

In the case of grade No. 2, the difference in price is 45 cents. This amendment gives a protection of 91 cents, a sum equaling the cost of conversion, plus 46 cents on every pound of yarn for the American spinner.

These duties upon yarn constitute the most outrageous case that has been presented in the whole discussion of this bill. In this case you are giving the manufacturer 100 per cent more than the difference in the conversion costs.

Now, let us take the third case. The difference between the cost of the British yarn and the American yarn is 41 cents. The Senate amendment gives the manufacturer of yarns a protective duty upon that difference of 87 cents—46 cents this time, gratis; 46 cents more than the difference in the cost of converting the wool into yarn in this country and abroad.

The next, 38 cents, the difference in the costs of producing the two yarns, gives the spinner 81 cents. The next, 48 cents, gives the spinner 66 cents. The next, 36 cents, gives the spinner 56 cents.

Are we going to stand for that? Will anybody listen, and, in the light of these figures of July 15, in the light of this information of 10 days ago, vote any such bounty or subsidy to the spinners? I ask that the table from which I read be inserted in the RECORD at the close of my remarks. (See Appendix A.)

Now I intend to translate all the duties levied under the Payne-Aldrich law, and all the duties proposed to be levied under the bill as it passed the House, and all the duties proposed to be levied by the Senate committee amendment into ad valorem rates and find out just how much more we are expecting the American people to pay for the different grades of yarn, based upon ad valorem rates, instead of specific and ad valorem rates, as levied in this amendment.

I shall not take the trouble to read all of the 10 or 12 grades of yarn in the table which I have in front of me. I shall not take the trouble and time of the Senate to point out the difference in the ad valorem duties in the extreme cases. I will pick out just one or two grades of yarn which are most commonly used.

The Payne-Aldrich law levied duties on the 36-ply yarn representing 144 per cent ad valorem.

The bill as it passed the House levied duties of 199 per cent ad valorem and the Senate committee amendment proposes to levy a duty of 143 per cent ad valorem, practically exactly the same as the Payne-Aldrich rates, which have been so very sharply criticized and strongly condemned by the majority party in this Chamber.

You are proceeding to levy upon yarns an ad valorem duty of from 65 per cent, in the case of the cheapest yarns, to nearly 150 per cent, yet the information which all experts upon this subject have given is that the cost of manufacturing yarns out of the raw wool represents only between 25 and 40 per cent of the value of the wool. I want to repeat that, as against a conversion cost, upon the authority of experts, justifying between 25 and 40 per cent of the cost of the article we are providing in this amendment for a conversion cost of from 65 per cent to 150 per cent.

Let the majority go on with this business of bestowing these gifts promiscuously without any impartial data or information to justify them. They spell political disaster for the Republican Party.

My only fear is the effect that the imposition of these duties will have upon American business and foreign commerce, and my only sympathy is with the American consumers who will have to pay the cost. The worst part of an unscientific tariff bill is that when the American people demand, as they will demand, a change in these duties we will find the protected industries so accustomed to these protective duties and to the profits which come from them that we will be unable to strike, without much difficulty and business disturbance, a rate which will be fair to them, fair to the consuming public, and fair to all concerned.

These duties are not fair to the American consumer.. They are not fair to the great competitive business interests of America. Yet this amendment will be adopted by the majority. If I could point out that these duties meant a 500 per cent increase in prices, the amendment would go through just the same under the iron heel of the agricultural bloc and those who represent other favored interests.

I ask that the table showing the ad valorem rates in the Payne-Aldrich law, the bill as it passed the House, and the Senate amendment be printed in the RECORD at the close of my remarks. (See Appendix B.)

Mr. President, I move now that on page 145, line 12, the numeral "30" be stricken out and the numeral "20" inserted; that on line 14 the numeral "35" be stricken out and the numeral "25" inserted; and that on line 15 the numeral "40" be stricken out and the numeral "30" inserted; so that if amended the amendment would read:

Yarn, made wholly or in chief value of wool, valued at not more than 30 cents per pound, 26 cents per pound and 20 per cent ad valorem; valued at more than 30 cents but not more than $1 per pound, 39 cents per pound and 25 per cent ad valorem; valued at more than $1 per pound, 39 cents per pound and 30 per cent ad valorem.

APPENDIX A.

Comparative prices of worsted yarns in England and the United States.

Domestic.		British.		Price of British yarn in United States, excluding duty.[3]	Difference, United States vs. British in United States.	Emergency duty (45 cents plus 18 per cent).	Senate bill (39 cents plus 35 percent, 39 cents plus 40 per cent).

157 (mix)	64	53	65

Mr. LENROOT. Mr. President, it seems very clear to me, from such investigation as I have been able to make, that the protective duties provided in this paragraph are excessive. In reporting this paragraph the committee has assumed that it would require twenty-six thirty-thirds of a pound of scoured wool to make a pound of yarn. At the very lowest rate of the low-blood wool quoted in the London markets last month of 24 cents a pound it would make the very lowest cost of the wool 21 cents a pound, leaving for the first clause 9 cents a pound for the entire conversion cost, whereas the rate of duty at 30 per cent ad valorem would give 9 cents per pound protective duty, 100 per cent, or just double the conversion cost in the case of the very cheapest yarns that could be produced.

The Tariff Board of 1912 went into a very thorough investigation of the difference in the cost of spinning yarn in Great Britain and America, and they found that the cost ranged from 70 per cent to 94 per cent greater in America. But we have in the survey of the British wool-manufacturing industry, made by the Tariff Commission in 1920, a new survey of the situation between England and the United States as to yarn costs. I first want to read the general conclusions of the commission with reference to wages in England and the United States. On page 89 they said:

> With respect to comparative wage scales, it is interesting to note the relative changes in wages in the two countries since the pre-war period, and, in view of the generally appreciated difference in wage levels then obtaining, to judge whether the competitive position of the American industry has or has not improved in the interim. As far as England is concerned, it may be stated that wages have risen on the average 160 to 170 per cent, including the increase due to the shortening of working hours, the cost of living bonus, and the addition to basic wages which is becoming general throughout the industry.

Then they say further:

> For the United States no general authoritative figure of average advances of wages since 1914 exists. The best data available indicate that the increase has been approximately 125 to 135 per cent.

So, according to the report of the Tariff Commission, the spread in cost in Great Britain and in the United States is less to-day, so far as labor cost is concerned, than it was in 1912. But on page 79 of the survey the commission give the comparative cost of yarns, giving the American price and the English price, and then say:

> Here, as in the case of the tops, there is a much closer approximation of the English figures to those in the domestic market than existed before the war. It will be noted that, were the duty on yarns as contained in the present tariff, 18 per cent, to be added to the above prices of the English yarns, it would not be advantageous to import them into this country. Charges for freight, insurance, commissions, and the like would, of course, increase the imported price still further.

So that the commission find that 18 per cent, the rate in the Underwood law, is adequate to-day to cover the difference in price, and yet the committee propose to increase that rate from 18 to 30 per cent in one case and from 18 to 40 per cent in another case.

Mr. McCUMBER. Mr. President, will the Senator yield?

Mr. LENROOT. I yield.

Mr. McCUMBER. Have the commission made any report as to the cost of production in France and in Germany compared with the cost in the United States?

Mr. LENROOT. Not that I know of.

Mr. McCUMBER. France imports quite considerable and Germany not as much, but of course her capacity for doing such is unquestioned if the conditions become favorable for it.

Mr. LENROOT. England imported 4,800,000 pounds in 1921 and France imported 1,000,000 pounds.

Mr. McCUMBER. But that is considerable. It is not, of course, as much as Great Britain imported, but at the same time we have to take the country of lowest production cost as well as the country of the highest production cost in determining what the duty shall be.

Mr. LENROOT. The Senator said the importation of France is considerable. Let us see how considerable it is compared with our own production of yarn.

Mr. WALSH of Massachusetts. Mr. President, may I suggest to the Senator, while he is looking for that information, that while the emergency tariff law was pending it became apparent that increased duties were intended to be levied and there was a considerable increase in the imports of yarn so as to escape the duties about to be levied under the emergency tariff law.

Mr. LENROOT. Oh, yes; the tariff board so stated.

Mr. WALSH of Massachusetts. Of course, those fancy yarns must be imported anyway. They are not made in America.

Mr. LENROOT. I do not have the figures showing our own production in 1921, but the Senator, I think, will admit it was over 500,000,000 pounds. I do not want the question of fact to be in dispute.

Mr. McCUMBER. I do not have them in mind just now, but I understand the Senator has about the right proportion between the British and the German.

Mr. LENROOT. So that with our production of 500,000,000 pounds and over, an importation of 1,000,000 pounds of course is a bagatelle.

Mr. SMOOT. I will say to the Senator, however, that the 1,000,000 pounds are certain kinds of yarns that would come in here as specialties. But if we change the rate here to take care of the low-grade yarns at the price of wool to-day, and if they advance in price, there would be no protection and the door would be wide open.

Mr. LENROOT. I want to understand that. Why does the Senator say that if wools advance in price there would be no protection? I am not speaking of the compensatory duty.

Mr. SMOOT. No; I did not say advance. I say if they decline in price.

Mr. LENROOT. The low wools?

Mr. SMOOT. No; the medium wools. If the medium wools decline in price, then the rate we have provided here would be hardly compensatory because, as the Senator knows, with the 20 per cent decrease there, the line of danger would be immediately marked. It is true that the fine and medium wools are exceptionally high and the low-bred wools are exceptionally low. I can figure out to the Senator on the low rate that the amount provided for in the paragraph necessarily would be 100 per cent, but if the wool advanced from 18 and 20 cents, the price to-day, to the normal price of 40 cents, then it would be cut absolutely in two, and it would be very much less than the emergency tariff rate.

Mr. LENROOT. If the committee are right in the compensatory duty in the first clause, there could not be any imports, because there could not be any yarn valued at less than 30 cents.

Mr. SMOOT. I am aware of that; and I will admit, so far as the brackets are concerned, that that has happened in every one of our tariff laws where the brackets have been used, and necessarily will happen when they are used. The reason for that is because in making the law it is the desire to provide for every emergency that may happen. We thought we had it provided for in the Underwood law to take care of the price of wool, no matter how low it went. If the Payne-Aldrich law was in effect to-day it would not take care of the abnormally low prices of the coarse wools. I know the difficulties there, and I know what the Senator said is absolutely true as to the enormous percentage that falls now through the compensatory duty of 31 cents. There is no doubt about it at all. But if these wools advance 100 per cent—and I believe they will advance 100 per cent—it would be different.

I say now, as I said the other day, that there is no more chance of losing money, if a man wanted to speculate upon coarse wool, than there is that the heavens will fall. Just as surely as he could pack these wools he would make money upon them. Never have they been known to be so low as they are to-day. Those rates, of course, are not going to affect the cloth, because the Senator knows there is not a protective duty here of more than 50 per cent on the cloth anywhere, and those rates are made so they will be step by step in normal times. I could criticize this most mercilessly to-day, so far as rates are concerned, if we had normal conditions and normal priced wool. I could criticize them just as severely as the Senator can criticize them or just as severely as the Senator from Massachusetts has criticized them if conditions were normal and the prices were as they generally are.

Mr. LENROOT. The Senator will admit that if the price goes up the protective-tariff rate translated into terms of ad valorem equivalent also increases.

Mr. SMOOT. Yes; we have to do that on the lower wools.

Mr. LENROOT. I understand that. If the price of wool goes up, the cost of conversion does not go up.

Mr. SMOOT. Not at all.

Mr. LENROOT. By reason of the increased price of wool the cost of conversion does not go up, but the protection does go up when the price of wool goes up.

Mr. SMOOT. That is true; and on the lower bracket, as the Senator will notice, we only have 30 per cent ad valorem, and on the tops 20 per cent. The steps necessary from that are based on the 10 per cent conversion cost.

Mr. LENROOT. That can hardly be, because the bill as originally reported carried 25 per cent on tops, and the next step was 30 per cent upon yarns.

Mr. SMOOT. Now, Mr. President, in order that the Senator may know and in order that the Senate may know, I am perfectly willing to state just why that is. There was a feeling

in the country and there was a feeling in the committee, so far as tops are concerned, that we do not want them to come in and do not want them to displace wool. The 25 per cent rate was put in there as an embargo, pure and simple, and it would be an embargo. I think I told the Senator that in our conversation upon the item. It was put in there for that purpose.

Mr. LENROOT. I think that is true, but, of course, that rather destroys the Senator's argument that the 10 per cent advance was the necessary advance.

Mr. SMOOT. It was not 10 per cent as reported to the Senate. It was only 5 per cent.

Mr. LENROOT. That is what I said.

Mr. SMOOT. But I do say, when it was reduced to 20 per cent, that 10 per cent was the original advance between the tops and the next step. The Senator will notice we only gave 26 cents a pound.

Mr. LENROOT. That would be 26/33 of a pound of wool.

Mr. SMOOT. That is what it means. That is what we put into yarns, and there is no question but what we could make that yarn in normal times at 30 cents, but they would have to have that amount of waste or other material.

Mr. LENROOT. Let me ask the Senator, although I do not care to make any contention about it, will not a yarn that is part cotton come in under this paragraph?

Mr. SMOOT. Yes; if it is mixed with wool and the chief value is wool.

Mr. LENROOT. So that we have, and I am not criticizing the committee for it, given a hidden protective duty in such cases where it is not all wool.

Mr. SMOOT. No; we have taken off the 39 cents and made it only 26 cents. In other words, there would have to be an increase of 50 per cent on the 26 cents to make it 39 cents.

Mr. LENROOT. But it has to be twenty-six thirty-thirds of a pound of wool, according to the committee. That would only leave seven thirty-thirds of a pound of anything else. It might be wool waste.

Mr. SMOOT. More than likely this is what would happen. They would put in perhaps 12½ per cent cotton and the balance of wool waste, and of course the remainder of it would have to be wool. If they should put cotton in it the thread would be so hard that it could not be finished so it would pass in commerce as a wool article.

Mr. LENROOT. I appreciate that there is no way of avoiding an excessive or protective duty in giving a compensatory rate if you are to carry into the compensatory rate the rate on the pure wool. I do not question that. It is simply a fact that necessarily through the whole schedule there are hidden rates, not designedly so, but actually working out that way, and the Senator will admit that, I think.

Mr. SMOOT. I have admitted it, and I admit it again. With the abnormal situation now existing we can not get away from it.

Mr. LENROOT. To get back to the pending proposition, the Senator says if wool rises in price a different situation will prevail; but if the cost of wool rises, the conversion cost does not necessarily change at all.

Mr. SMOOT. No.

Mr. LENROOT. But if wool does rise in price the protective rate rises with it.

Mr. SMOOT. Yes; but the equivalent ad valorem on one kind of wool would then be very much lower than the equivalent ad valorem duty on the other. The fine wools are not going to advance; they are now abnormally high. If there shall be any change whatever I think the price will decrease. On the other hand, if there shall be any change in the case of the low-blood wools the price will increase.

Mr. LENROOT. Then, I think the Senator from Utah will admit that the rate provided in the first bracket is really prohibitive; there can not be any importations under that rate for it is over 100 per cent.

Mr. SMOOT. I do not think that there will be very much wool falling in the 30-cent bracket; in fact, I know of no yarn to-day that could be bought for 30 cents; but if conditions should change, or anything should happen which we do not now foresee, there might be such a thing. However, if the Senator from Wisconsin will look at the importations he will find that there is no such yarn imported. I will further say to the Senator that there is no such yarn of which I know made in the United States to-day.

Mr. LENROOT. I think that is true; I do not think there is any such yarn imported, because the 18 per cent rate is absolutely prohibitive, and I do not think there is any such yarn made in the United States.

Mr. SMOOT. The bill as it came from the House starts out with wool which is valued at not more than 55 cents a pound. There are yarns that are of less value than 55 cents a pound. Then we made a new bracket. Of course, the House rates were based upon American valuation, and we changed those and based them on foreign valuation. Of course, the Senator also knows that these rates are lower than the Payne-Aldrich law rates.

Mr. LENROOT. I think that is true; but, according to the Tariff Commission, the 18 per cent rate is normally prohibitive; and yet it is proposed to increase it to 30 per cent.

I am not going to take further time, Mr. President. I appreciate there is no use in trying to secure a reduction in the rates in this schedule. It simply can not be done; and it can not be done no matter what facts may be shown to the Senate. The votes are here to put the rates through just as the committee proposes them. I appreciate that, and I am not going to take a great deal of time. I am merely going to ask for a test vote on certain of these paragraphs, particularly with reference to clothes. Then I shall be content to let the schedule go through, for I realize the utter futility of arguing the merits of the different rates which are proposed in this schedule.

Mr. McCUMBER. Mr. President, I think the Senator from Wisconsin will admit that the present price of low grades of wool is only about half what it was in 1915, and that, therefore, in all probability it will at least double in price under normal conditions. If such wool should bear the relation that it bore to the higher-priced wools in 1915 it would have to be increased in price about fourfold in order to maintain the difference that prevailed at that time. Let us assume that the price will simply be doubled; then does the Senator think that the rates which we have proposed to impose on the ad valorem basis, outside of the compensatory rate, would be excessive?

Mr. LENROOT. I certainly should, for, if the committee had proposed these rates as allowing fair compensation upon the present prices when the price is doubled, the protection is doubled.

Mr. SMOOT. But there would not be any greater equivalent ad valorem on the wool than if the price were just as low as it is to-day.

Mr. LENROOT. But does not the Senator see that if wool which costs 30 cents a scoured pound is converted into yarn and the conversion cost is 30 per cent, or 9 cents, and if that wool goes up to 60 cents a pound the conversion cost will be 9 cents but that the duty will be 18 cents?

Mr. McCUMBER. But the equivalent ad valorem would be very much lower.

Mr. LENROOT. I know that; but equivalent ad valorems are for the purpose of covering the difference in actual costs, are they not?

Mr. SMOOT. That is true, I will say to the Senator; but, on the other hand, the Senator must admit that that does not apply to wools above three-fourths bloods.

Mr. LENROOT. I will admit that when the wool goes up there can not be the same amount of wool coming in under the lower bracket, of course.

Mr. SMOOT. That is true. The Senator from Wisconsin and I do not disagree as to that.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Massachusetts [Mr. WALSH] to the amendment of the committee.

Mr. UNDERWOOD. Mr. President, I think the Senator from Massachusetts [Mr. WALSH], who is in charge of this schedule but who happens for the moment to be absent from the Chamber, would probably desire a yea-and-nay vote on his amendment.

Mr. SMOOT. I ask for the yeas and nays, Mr. President.

The yeas and nays were ordered.

The Assistant Secretary proceeded to call the roll, and Mr. ASHURST voted in the affirmative when his name was called.

Mr. WALSH of Massachusetts. Mr. President, I ask that the Secretary may state my amendment.

The PRESIDING OFFICER. By unanimous consent, the roll call will be suspended, and the Secretary will again state the amendment offered by the Senator from Massachusetts to the amendment reported by the committee.

The ASSISTANT SECRETARY. In the amendment of the committee, on page 145, being the yarn provision, on line 12, it is proposed to strike out "30" and insert "20"; on line 14 to strike out "35" and insert "25"; and on line 15 to strike out "40" and insert "30."

Mr. LODGE. Mr. President, I make the point of order that there can be no interruption of the roll call.

The PRESIDING OFFICER. The point of order comes too late. The Secretary will proceed with the calling of the roll.

The Assistant Secretary resumed the calling of the roll.

Mr. BALL (when his name was called). Repeating the statement made on the previous roll as to the transfer of my pair, I vote "nay."

Mr. DIAL (when his name was called). Making the same announcement as to my pair and transfer as on former ballots, I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. McLEAN (when his name was called). I transfer my pair with the senior Senator from Montana [Mr. MYERS] to the junior Senator from Colorado [Mr. NICHOLSON], and vote "nay."

Mr. NEW (when his name was called). Repeating the announcement made on previous votes as to the transfer of my pair, I vote "nay."

Mr. WALSH of Montana (when his name was called). I have a general pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] which I transfer to the Senator from Missouri [Mr. REED], and vote "yea."

The roll call was concluded.

Mr. McKINLEY (after having voted in the negative). I note that my permanent pair, the Senator from Arkansas [Mr. CARAWAY], has not voted. I transfer that pair to the junior Senator from North Dakota [Mr. LADD], and let my vote stand.

Mr. HALE. Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. JONES of New Mexico. Making the same announcement as on the previous vote concerning the transfer of my pair, I vote "yea."

Mr. STANLEY (after having voted in the affirmative). I observe that my pair, the junior Senator from Kentucky [Mr. ERNST], has not voted. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and allow my vote to stand.

Mr. CALDER (after having voted in the negative). I transfer my pair with the senior Senator from Georgia [Mr. HARRIS] to the junior Senator from Delaware [Mr. DU PONT] and allow my vote to stand.

Mr. CURTIS. I wish to announce that the Senator from North Dakota [Mr. LADD] is necessarily absent on account of illness in his family.

I also desire to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 19, nays 31, as follows:

YEAS—19.

Ashurst	Jones, Wash.	Sheppard	Trammell
Borah	Kellogg	Simmons	Underwood
Dial	Lenroot	Smith	Walsh, Mass.
Heflin	Overman	Stanley	Walsh, Mont.
Jones, N. Mex.	Pomerene	Swanson	

NAYS—31.

Ball	Gooding	McKinley	Phipps
Broussard	Hale	McLean	Ransdell
Bursum	Harreld	McNary	Smoot
Calder	Kendrick	Moses	Spencer
Cameron	Keyes	Nelson	Sterling
Capper	Lodge	New	Warren
Colt	McCormick	Newberry	Willis
Curtis	McCumber	Pepper	

NOT VOTING—46.

Brandegee	France	Myers	Shields

So the amendment of Mr. WALSH of Massachusetts to the amendment reported by the committee was rejected.

The PRESIDING OFFICER. The question recurs upon the amendment of the committee.

Mr. WALSH of Massachusetts and Mr. SMOOT called for the yeas and nays, and they were ordered.

The PRESIDING OFFICER. The Secretary will call the roll.

The Assistant Secretary proceeded to call the roll.

Mr. BALL (when his name was called). Making the same announcement as on the preceding vote as to the transfer of my pair, I vote "yea."

Mr. DIAL (when his name was called). Making the same announcement of my pair and transfer as on the former ballot, I vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as upon the previous vote, I vote "yea."

Mr. McKINLEY (when his name was called). Making the same announcement as before, I vote "yea."

Mr. McLEAN (when his name was called). Making the same announcement as before, I vote "yea."

Mr. NEW (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. STANLEY (when his name was called). Making the same announcement as before with reference to my pair, I vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair as on the last vote, I vote "nay."

The roll call was concluded.

Mr. COLT (after having voted in the affirmative). I transfer my pair with the junior Senator from Florida [Mr. TRAMMELL] to the senior Senator from Maryland [Mr. FRANCE], and will allow my vote to stand.

Mr. JONES of New Mexico. Making the same announcement as on the previous vote regarding my pair, I vote "nay."

Mr. CALDER. Making the same announcement as on the former vote as to the transfer of my pair, I vote "yea."

Mr. CURTIS. I desire to announce that the Senator from Nevada [Mr. ODDIE] is necessarily absent. If present he would vote "yea" on this question.

I have been requested to announce the following pairs:

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON];

The Senator from West Virginia [Mr. SUTHERLAND] with the Senator from Arkansas [Mr. ROBINSON]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 31, nays 19, as follows:

YEAS—31.

Ball	Gooding	McLean	Shortridge
Broussard	Hale	McNary	Smoot
Bursum	Harreld	Moses	Spencer
Calder	Kendrick	Nelson	Stanfield
Cameron	Keyes	New	Sterling
Capper	Lodge	Newberry	Warren
Colt	McCumber	Pepper	Willis
Curtis	McKinley	Phipps	

NAYS—19.

Ashurst	Jones, N. Mex.	Pomerene	Swanson
Borah	Jones, Wash.	Sheppard	Underwood
Cummins	Kellogg	Simmons	Walsh, Mass.
Dial	Lenroot	Smith	Walsh, Mont.
Heflin	Overman	Stanley	

NOT VOTING—46.

Brandegee	Frelinghuysen	Myers	Robinson
Caraway	Gerry	Nicholson	Shields
Crow	Glass	Norbeck	Sutherland
Culberson	Harris	Norris	Townsend
Dillingham	Harrison	Oddie	Trammell
du Pont	Hitchcock	Owen	Wadsworth
Edge	Johnson	Page	Watson, Ga.
Elkins	King	Pittman	Watson, Ind.
Ernst	Ladd	Poindexter	Weller
Fernald	La Follette	Ransdell	Williams
Fletcher	McCormick	Rawson	
France	McKellar	Reed	

So the amendment of the committee was agreed to.

Mr. JONES of New Mexico. Mr. President, I present an amendment to the pending bill and ask that it be printed and lie upon the table.

I desire to say that I had intended, in connection with the presentation of this amendment, to discuss its provisions; but I have finally concluded that it would be advisable to let the amendment be printed, so that Senators may have copies of it before the discussion begins. I will state generally that it is an amendment to extend the powers of the Tariff Commission, and is offered, in effect, as a substitute for the pending bill.

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. SMOOT. Mr. President, we have now reached the woven-fabrics paragraph of this bill. Paragraph 1108 deals

with the lightweight woven goods, and I desire at this time to modify two of the rates in the paragraph. On page 146, line 7, I ask to substitute "50" for "55," and on line 10 I ask to substitute "50" for "55."

It may be asked, as long as the ad valorem rate is 50 per cent, why there should be two brackets bearing the ad valorem rate of 50 per cent. I will say that of course the compensatory duty is different, and for statistical purposes we desire that they should be separated; and that will appear in one or two other paragraphs. No matter where it appears, if the protective rate is 50 per cent in two of the brackets, we do that, even though the compensatory rate is the same but the value is different, for the purpose of statistics, and so that we may know the quantity of goods of various prices coming into the country.

Mr. WALSH of Massachusetts. Mr. President, paragraph 1108 covers the lighter weight fabrics of wool, mohair, and so forth; that is, women's and children's dress goods, coat linings, bunting, and the like. It contains two sets of duties, those relating to such fabrics when not having a cotton warp and those relating to such fabrics having a cotton warp—the latter being the proviso clause. The provisions covering those not containing a cotton warp fall into two brackets, according to the value of the goods; that is, whether under or over 80 cents per pound. Upon those valued at less than 80 cents per pound the rate is 40 cents per pound plus 50 per cent ad valorem. Upon those valued at more than 80 cents per pound the rate is 49 cents per pound and 50 per cent ad valorem. On the cotton-warp goods—proviso clause—the duty is 39 cents per pound and 50 per cent ad valorem.

The compensatory duty of 49 cents per pound in the second bracket is based upon the Tariff Board's computations relating to compensatory duties upon clothing, which indicate that upon an all-wool cloth the wastage in manufacture is such that, after the value of the waste is credited, there is required about 150 per cent of the clean-content duty to serve as the compensatory on cloth. Thus, with a duty of 33 cents on the clean wool, about 49 cents would be required on the cloth. The assumption here is that any cloth which is valued at more than 80 cents per pound is likely to contain nothing but virgin wool.

In the first bracket the compensatory duty has been fixed at 40 cents rather than at 49 cents per pound, because it has been assumed that fabrics valued at less than 80 cents per pound contain substantial proportion of substitutes for virgin wool. This is presumably an estimated allowance only.

The situation respecting the compensatory duty of 39 cents per pound on cotton-warp dress goods is similar to that in the case of lower valued all-wool fabrics; that is, since the fabric is composed in part of cotton (upon which no compensatory duty is necessary, or if it be of long-staple cotton upon which the compensatory required would be much less than in the case of wool) it is assumed that 39 cents per pound will provide adequate compensation to the manufacturer.

COMPARISON OF THE SENATE PROTECTIVE RATES WITH THE HOUSE RATES.

While no exact comparison can be made because of the difference in the basis of valuation used in the two texts, it is practically certain that the protective rates in the Senate bill constitute a distinct increase over those in the House text. For example, when the $1.25 per pound value used as an upper limit of the first bracket in the House text was converted from the American valuation, upon which it was based, to the foreign valuation basis for the Senate text, it was reduced to 80 cents per pound; that is to say, by 36 per cent. At the same time the protective rate was increased from 22 per cent in the House text to 50 per cent in the Senate text—in other words, by 127 per cent. To have maintained the same relationship between the protective rates in the two texts as was set up for the valuation bracket it would have been necessary to impose a duty of only about 35 per cent on these goods. Likewise upon the higher bracket the rate was raised from 27½ per cent in the American valuation to 50 per cent foreign valuation in the Senate text. On cotton-warp goods the change was from 22 per cent to 27½ per cent—according to value—in the House text to 50 per cent in the new Senate amendment.

It is pertinent to inquire what facts and information the Senate committee had before them that the House committee did not possess which justified them in increasing the protective rate so excessively.

To what extent these high compensatory and protective duties will burden the consumers can be illustrated by the rate fixed upon cloth valued at 80 cents per pound. Adding the 49 cents per pound compensatory duty and the 50 per cent ad valorem protective duty, it is easily seen that the price of the 80-cent wool cloth will be increased to the consumer by about 100 per cent if the duties are effective, of course. In other words, foreign cloth worth 80 cents per pound will, by reason of these duties, be sold to the consumer in America at 80 cents more.

To put it another way, it means the purchasers of ladies' dress goods which cost in the foreign market 80 cents per pound will pay in America $1.60 per pound, which would include the duty imposed on this material. On an average of 4 yards to the pound this would mean that ladies' dress goods bought in America and made abroad would be advanced about 41 cents per yard, in addition to which would have to be added, of course, exchange rates, cartage, insurance, and so forth. On an average of 5 yards to the pound, it would amount to about 35 cents per yard.

On woven cloth valued at $2 per pound in England—16-ounce cloth, 1 yard to the pound, which really falls in paragraph 1109 of this bill—the duty would be 49 cents per pound, equaling 24½ per cent ad valorem and 50 per cent ad valorem protective duty, making a total duty of 74½ per cent ad valorem on foreign valuation, which would mean a tariff tax of about $1.50 on cloth valued at $2.

Mr. POMERENE. Mr. President, the Senator has just said that the reason for this differential lies in the fact that these goods contain a certain percentage of cotton. Is the Senator able to gather information as to what that percentage is, approximately?

Mr. WALSH of Massachusetts. It averages about 25 per cent. So we will bear in mind in the discussion of this paragraph that we are dealing with fabrics which have a cotton warp; that means fabrics which have about 25 per cent of cotton in them, and also fabrics without a cotton warp.

Mr. NELSON. Mr. President, if the Senator from Massachusetts will yield to me——

Mr. WALSH of Massachusetts. Certainly.

Mr. NELSON. I have not said anything before on the tariff bill, but if the Senator from Massachusetts does not mind being interrupted a moment, I shall address my remarke to the Senator from Utah. The pending amendment reads, in part, as follows:

> Woven fabrics, weighing not more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 80 cents per pound, 40 cents per pound and 50 per cent ad valorem.

The duty amounts to 100 per cent on woolen goods. The people in my part of the country, and we live in a cold region, have to buy woolen goods for clothing, and this means that we shall have to pay a duty of 100 per cent on woolen clothing. I think it is an outrageous proposition.

Mr. SMOOT. Of course 40 cents and 50 per cent ad valorem are proposed here, but I doubt if there is any 80 cent goods coming into the country.

Mr. NELSON. It amounts to this, I want to say, that if a yard of cloth comes in here and the export price is $5 a yard it will cost $10 a yard before it gets through the customhouse.

Mr. SMOOT. No; the Senator is wrong there, because if it costs $5——

Mr. NELSON. The duty is then 100 per cent.

Mr. SMOOT. Oh, no; I will say to the Senator.

Mr. NELSON. Yes, let me read it. Here are the figures. It is provided that where the fabric is valued at not more than 80 cents a pound, the duty shall be 40 cents a pound and 50 per cent ad valorem. Fifty per cent of 80 cents is 40 cents, and adding 40 cents to that 40 cents makes 80 cents, exactly what the article costs.

Mr. SMOOT. Let me figure it out to the Senator the way it really is.

Mr. NELSON. If that is the kind of tariff it is proposed to inflict on the American people, we want to know it.

Mr. SMOOT. I will say to the Senator that if that cloth costs $5 a yard the duty would be 40 cents on the $5, which would be just 8 per cent. Eight per cent and 50 per cent are 58 per cent, and not 100 per cent on $5 cloth.

Mr. NELSON. I am referring to the language of the bill. Can the Senator figure out anything else from that language? The language is "40 cents per pound and 50 per cent ad valorem.' If the cloth is not worth more than 80 cents a pound, the duty is 40 cents specific and 50 per cent ad valorem. Those two added together make 80 cents, and is not that 100 per cent of 80 cents?

Mr. SMOOT. Yes; but the Senator——

Mr. NELSON. Can the Senator make anything else out of those figures?

Mr. SMOOT. Yes; I can, and I did from the example the Senator stated, showing it was 58 per cent. That is all it could be. It is true that if the value is not more than 80 cents a pound, it would take exactly 80 cents, as the Senator

has stated. Fifty per cent of the 80 cents would be 40 cents, and that added to the 40 cents would be 80 cents. There is no doubt about it on that particular kind of cloth.

Mr. NELSON. Are not the people entitled to that particular kind of cloth without paying 100 per cent duty on it?

Mr. SMOOT. Yes; if there was such a thing coming into the country. But let me say to the Senator that the 40 cents per pound is a compensatory duty given upon the wool. If we were going to have free wool, then we could cut out the 40 cents a pound.

Mr. NELSON. The 40 cents is not a compensatory duty.

Mr. SMOOT. Certainly it is.

Mr. NELSON. It is more than compensatory.

Mr. SMOOT. No; it is not.

Mr. NELSON. The Senate has fixed a rate of duty of 33 cents a pound on scoured wool.

Mr. SMOOT. Yes; that is right.

Mr. NELSON. There is not a pound of scoured wool in a pound of cloth.

Mr. SMOOT. Then they do not get the 40 cents. It is only 40 cents a pound.

Mr. NELSON. They have to pay 40 cents as provided in the amendment, and in addition to that 50 per cent. I never heard of such an unconscionable duty in my life.

Mr. SMOOT. Let us get at it right. The Senator wants to be fair, I know.

Mr. NELSON. Then the Senator should be fair to the American people——

Mr. SMOOT. That is what I want to be.

Mr. NELSON. And not so exceedingly fair to the woolen manufacturers.

Mr. SMOOT. The woolen manufacturer is getting just 50 per cent duty. That is all he is getting and no more. These are light-weight goods. The Senator said 33 cents on scoured wool is the duty, and that is true, but he can not take a pound of scoured wool and make a pound of cloth from it. It is impossible to do that. There is a waste every time the wool is handled, and in the pending paragraph we have allowed 7 cents for waste. The Tariff Commission says on all woolen goods there is 50 per cent——

Mr. NELSON. But there is a great deal more waste to the poor devil who has to buy the cloth or who has to buy a coat and pay 100 per cent ad valorem duty on it. What about that waste?

Mr. SMOOT. Then the Senator ought to have free wool. If we had free wool, the 40 cents a pound proposed here would come out, but as long as we have 33 cents duty on scoured wool we have to give this compensatory duty. The manufacturer does not make one penny out of it. There is not a penny of protection in that to him. The only protection that he has is the 50 per cent ad valorem. That is his protective tariff. The other 40 cents is for the duty upon the wool, and, as I said, there is not a penny gained in the 40 cents duty.

Mr. NELSON. I am very glad to find out how the Senator from Utah justifies that enormity of a tariff on the woolen cloth that we all have to wear.

Mr. SMOOT. I think the Senator voted for the duty on wool, did he not?

Mr. NELSON. I voted for the amendment of the Senator from Wisconsin [Mr. LENROOT].

Mr. SMOOT. That proposed a duty on wool.

Mr. NELSON. Yes; but that was not such a duty as this.

Mr. SMOOT. The amendment of the Senator from Wisconsin did not affect these very goods at all. These are light-weight goods under 4 ounces per square yard. They are all dress goods. The amendment of the Senator from Wisconsin imposed a duty on coarse wools that never can be made into these goods at all, and they were given 33 cents a pound under the amendment of the Senator from Wisconsin. The Senator from Minnesota certainly does not want to vote 33 cents a pound duty on wool and then say that the manufacturer shall not have a compensatory duty. That is the situation, and I knew if he understood it——

Mr. NELSON. In some way it has been fixed so that on the cloth that we buy, that we can all afford to wear—and when I say "we" I mean the common people of the country—we have to pay a 100 per cent duty, unless the Senator takes the theory that the common people have no business to wear that kind of cloth, and would remit us back to cloth made from carpet wool.

Mr. SMOOT. I have stated what the Senate has done. It has voted a duty of 33 cents a pound on scoured wool. These are lightweight goods, none of them over 4 ounces to the yard. They are dress goods, with the exception of the last provision as to cotton warp, and those are for linings; they are nearly all linings. We have said there should be 33 cents a pound upon scoured wool, and upon this bracket we have given a compensatory duty of 40 cents for that 33 cents on scoured wool, which the Senator from Massachusetts [Mr. WALSH] himself will say is not an exorbitant compensatory rate of duty. I am speaking now of the 33 cents duty on wool. I think no one who knows anything about it will question that.

Mr. NELSON. I want to say in all Christian spirit to the Senator from Utah that I shall be ashamed to go back to the people of Minnesota and tell them that we have enacted a law providing a duty of 100 per cent on the cloth they and I must buy and wear, cloth that we have to wear in the winter. We shall have to pay 100 per cent duty on it under this provision.

Mr. SMOOT. All I can say is to repeat that if we want a duty upon wool of 33 cents a pound, we must give a compensatory duty upon the cloth. The Senator must admit that. We can not get around that. In the bill there is no paragraph relating to fabrics where the manufacturer gets more than a 50 per cent duty. This is the highest protective duty upon woven fabrics that there is in the bill. All the compensatory duties come from the fact that there is a duty of 33 cents a pound on scoured wool. That is all there is to it. Those are the facts in the case.

Mr. POMERENE. Mr. President, will the Senator from Massachusetts yield to me for a moment?

Mr. WALSH of Massachusetts. Certainly.

Mr. POMERENE. The Senator from Minnesota has put a very pertinent question to the Senator from Utah. According to the judgment of the Senator from Minnesota, the duty here is about 100 per cent. I know that the Senator from Massachusetts has had the constant aid of experts from the Tariff Commission on the subject, and in the interest of certainty I would like to ask the Senator from Massachusetts what the duty is going to be. What information has he been able to gather, if any, from the Tariff Commission or other experts on the subject?

Mr. WALSH of Massachusetts. I have several tables which give in different ways the information desired by the Senator from Ohio and which confirm what the Senator from Minnesota has stated.

Mr. SMOOT. The Senator does not understand that I deny that 40 cents a pound on an 80-cent piece of cloth and 50 per cent ad valorem added to that make 100 per cent?

Mr. WALSH of Massachusetts. I did not understand the Senator to deny that.

Mr. SMOOT. What I said is that the 40 cents a pound is a compensatory duty, and the Senator from Massachusetts knows that if we are going to have 33 cents a pound on wool, the manufacturers must have a compensatory duty.

Mr. WALSH of Massachusetts. There is no doubt of the fact that we have to have a compensatory duty. It is because the duty was proposed to be levied on yesterday that the compensatory duty here has to be so high.

Mr. SMOOT. That is what I have said.

Mr. LODGE. Mr. President, if I may make a suggestion, the only proposition here is to give the manufacturer 50 per cent.

Mr. WALSH of Massachusetts. Yes.

Mr. SMOOT. The Senator will admit there is not a piece of that fabric referred to in the bill, in the amendment I have submitted, carrying a protective duty of over 50 per cent.

Mr. WALSH of Massachusetts. That is true.

Mr. SMOOT. That is all there is to it.

Mr. WALSH of Massachusetts. But the Senator from Minnesota was translating these duties into ad valorem duties and basing it upon the fact that both together, the compensatory duty and the protective duty, show that the American people will have to pay 100 per cent higher price for their dress goods than they would if wool was on the free list and there was no protective duty.

Mr. SMOOT. If cloth was free and if wool was free, then there would be a difference of 100 per cent. But 50 per cent of the 100 per cent is for the wool and 50 per cent for protective purposes. The Underwood law, with free wool, imposed a duty upon these cloths of 35 per cent.

Mr. WALSH of Massachusetts. Fifty per cent for the woolgrower and 50 per cent for the manufacturer. The American public must pay $2 instead of $1, or the equivalent of 50 cents to the woolgrower and 50 cents to the manufacturer. That is how the price has increased.

Mr. McCUMBER. The manufacturer gets a duty simply of 15 cents more than he had under the Underwood law.

Mr. SMOOT. Yes; I wanted to say to the Senator from Minnesota that the only difference between the protection in this paragraph and that in the Underwood law, so far as the manufacturer is concerned, is 15 per cent.

Mr. NELSON. I do not care what the difference is. I do not care about this sublime argument about compensatory duty, nor do I care about some other refinements here. I only know that this paragraph fixes a duty of 100 per cent on woolen goods that we all have got to wear. I say that is an outrageous duty.

Mr. SMOOT. I say 50 per cent of that is for protection to the manufacturer who makes the cloth, and the other is for a compensatory duty because of the duty that was placed upon scoured wool.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER (Mr. McNARY in the chair). Does the Senator from Massachusetts yield to the Senator from Kentucky?

Mr. WALSH of Massachusetts. I yield.

Mr. STANLEY. I did not understand the Senator from Massachusetts to state that the compensatory duty of 40 cents, or whatever it is, is the limit of the amount that the purchaser of the cloth will have to pay as a result of the imposition of that duty. As I understand, wherever this duty attaches the man who pays it will pass it on with his added profits so that when the purchaser buys the cloth he will pay the duty upon the raw wool, the duty on the scoured wool, the duty on the tops and noils, the compensatory duty, and a fair profit to every man who advanced the money from the initial stage until the completed fabric is turned over by the retailer to the ultimate consumer. Is that true?

Mr. WALSH of Massachusetts. The Senator states the fact, as I understand it.

Mr. SMOOT. Mr. President, I wish to say to the Senator from Kentucky that in the past, and it is so to-day, to the woolen mills it is not so much a question of what the price of a fabric is per yard but of the number of yards they can produce in a year. If a woolen mill figures on a profit of 10 cents a yard, it does not make any difference whether the cost of the fabric is $2 or $1, it makes 10 cents a yard. It is for that and to that end it is working. It is not a question with the mill as to whether wool is free or dutiable. The looms in the mill can turn out just as many yards with dutiable wool as they can with free wool. The profits of the woolen mill are upon the yardage and not upon the cost per yard of the goods.

Mr. WALSH of Massachusetts. Now, to answer the question of the Senator from Kentucky [Mr. STANLEY], the proposed duties mean just this: When a pound of dress goods arrives at the customhouse and its foreign valuation is under 80 cents a pound the customs officials say, "You must pay 40 cents duty for the wool in that pound of cloth and you must also pay 50 per cent protective duty," which together amount to 100 per cent, so that the price of that 80 cents' worth of English cloth before it may be taken away from the customhouse is fixed at $1.60. Does the Senator from Kentucky now understand the operation of these proposed duties?

Mr. STANLEY. I understand.

Mr. WALSH of Massachusetts. The importer sells to the jobber, the jobber sells to the retailer, and the price, of course, is pyramided.

Mr. STANLEY. I think the Senator from Utah [Mr. SMOOT] misapprehended the purpose of the question which I asked.

Mr. SMOOT. The Senator from Kentucky said a profit was added all the way from the raw wool to the noils, the waste wool, the yarn, and so forth. That was stated in the Goldman letter, which no doubt led the Senator from Kentucky to make the statement he did. The statement of the Senator from Kentucky would be true if the woolen mills sold upon a percentage on the cost of their production in dollars and cents, but the woolen mills charge upon the yardage which they produce. If a woolen mill has 100 looms everybody knows what those looms should produce in yardage in 12 months. The woolen mill manager says, "Upon that yardage I shall ask a profit of so much a yard." That is all there is to it.

Mr. STANLEY. Whether it be a woolen manufacturer or anybody else, I assume that whenever he invests his money, at any point in the integration of the plant, no matter where it starts, from the time the fleece is purchased until the finished fabric is produced—whenever he invests his money in a commodity which brings a certain price as the result, first, of the value of the article, and second, of the accrued duty, he is going to recoup himself for that investment with a margin of profit.

Mr. SMOOT. With a merchant that is always the case, but with a woolen manufacturer, I repeat, it is a question of the yardage which the looms can turn out. The manufacturer knows what his profits have got to be per yard, and those, I will say to the Senator, are always figured by the woolen mill.

Mr. STANLEY. I can readily see that; but that is a mere matter of bookkeeping, is it not?

Mr. SMOOT. No; it is not a matter of bookkeeping.

Mr. STANLEY. Is the mill owner not bound to get back the money that he put into the wool plus the amount that he paid to convert it into a fabric, plus a profit?

Mr. SMOOT. But the profit we are speaking of here is so much per yard for all the fabrics his looms produce. With a merchant it is different. The merchant charges a certain profit upon the goods that he buys, but the woolen manufacturer reckons merely a profit of so much per yard.

For instance, a woolen mill makes a heavyweight tricot and a lightweight tricot. The heavyweight tricot is for the winter season and the light tricot is for the summer season. No woolen mill charges more per yard as a profit on the heavy tricot than it does upon the light tricot, although the heavy tricot costs more to manufacture. The mill takes its orders nearly six or eight months before ever the cloth is made; many times, in fact, practically always, even before all of the wool is bought which is to go into the cloth. The woolen mills figure that if they have 100 looms and their capital is so much, then they have got to make so much profit a yard upon those goods, whether they be heavyweights or whether they be lightweights, in order to pay their dividends as they anticipate. That is all there is to it. In the case of a merchant, I repeat, it is quite different.

Mr. STANLEY. I see that; but suppose we were running a woolen mill and we wanted to make a profit, say, on the yard. Of course, if it costs $1 a yard to produce the cloth, and if there are so many thousand yards produced, we would want to sell that cloth, say, for $1.20 a yard. I can readily see that. However, in estimating that 20 cents, or whatever the profit may be, we would count all the overhead charges in the cost of the cloth; we would count the deterioration of the plant; we would count the interest on the money invested; we would count the amount paid for labor, and so forth, would we not?

Mr. SMOOT. That is, in the cost of the cloth.

Mr. STANLEY. I do not care where it comes in.

Mr. SMOOT. That is the only difference between the woolen mill and the general merchant, so far as that feature of the business is concerned.

Mr. STANLEY. Exactly. I do not care where it comes in; it is a difference, after all, if the Senator will pardon me, in the bookkeeping, because, as the Senator has stated it, the woolen manufacturer is bound, if he is a good business man, to charge in his overhead; he is bound to charge interest on the money which he invests, and necessarily so, whether he invests it in his mill, or whether he invests it in his machinery, or whether he invests it in his material. That is where this pyramiding will infallibly come in, and it does not matter whether he charges so much a yard, or whether he charges so much a pound, or whether his charges are based upon the cost of conversion or the cost of his material; in the end he is not going to invest money without he gets that money back, with a fair return.

Mr. SMOOT. The important consideration to the woolen mills is the number of yards produced. In 1893, when prices were lower than were ever known, a woolen mill did not think of making less per yard than it did when the prices were exceedingly high. It is the yardage that counts, I will say to the Senator. That is the only business of which I know which is conducted in that way.

Mr. POMERENE. Mr. President——

Mr. STANLEY. If the Senator from Ohio will pardon me, my purpose was not to go into a detailed argument as to the method of calculation, but to indicate that the intricacies of this schedule and the accumulating costs are but another evidence of the inherent vice that is found, not only in this schedule but in all the schedules of this bill, in attempting to impose duties from the bottom to the top, and then, by a system of guesses and intricate and double-twisted calculations, to put another duty on this duty and another duty on that duty, and to build it up with a constantly growing weight upon the consumer. I am perfectly willing to admit that when a duty of 30 or 40 cents a pound is imposed on wool, unless that is made good to the woolen manufacturer, his mill would have to be closed. It would be eminently unfair to the American manufacturer, especially to the woolen manufacturer, to ask him to compete on any other basis.

I am of the opinion that if we had free wool in this country and free wool in the world, so that all woolen manufacturers were put on an even basis, yet—and in this respect woolen manufacture is different from any other business—the American woolen manufacturer would be at more or less of a disadvantage as compared to the English manufacturer. The wool puller of England, as I understand, has been at that business for thousands of years, and I doubt if there are in this country, so far as the finer cloths are concerned, as expert manufacturers as there are in Great Britain.

Mr. SMOOT. There is one concern in New Jersey that makes just as fine goods as are made in the world.

Mr. STANLEY. But, as a rule, the foreign fabrics are perhaps better. At any rate, there are more expert weavers in England, for instance, than there are in the United States. Opposed as I am to the principle of protectionism, I would never favor putting a duty on wool and leaving the manufacturer to pay it, because he could not do so; it would close his mill. When a duty of 33 cents a pound is imposed on raw wool in this way—and it is more or less of a guess—it becomes necessary to adopt the whole pernicious system. It is contrary to every principle of sound business; it is contrary to every principle of political economy; it is contrary to every principle of common sense as well as to the principles of democracy to initiate a policy of this kind. The wool schedule simply illustrates the absurdity and the folly of it.

Mr. SMOOT. Mr. President, there is no difference in principle, so far as the duty upon wool is concerned, between this bill and the existing law; not a particle. The existing law starts with a duty of 8 per cent on tops, instead of 20; then, when it comes to yarn, there is a duty of from 20 per cent to 25 per cent; and then, when it comes to cloth, there is a duty of 35 per cent.

The same principle has been applied in every tariff bill that has ever been written. In other words, there is a higher rate of duty imposed upon the finished product than upon the product in any partial stage of manufacture. That can not be avoided. It may be called pyramiding by some, but it is the only way that the tariff can be arranged.

Mr. STANLEY. I admit that the complicated and burdensome system is inevitable whenever the policy is adopted of a duty upon the raw material.

Mr. SMOOT. Or on intermediates of any kind.

Mr. STANLEY. Yes.

Mr. SMOOT. The Senator's policy would be——

Mr. STANLEY. But I want to say that whenever the duty is graduated from the bottom up the worse the situation becomes. When the duty is imposed on the finished product there is an opportunity for the beneficiaries of that duty from the ground up to share it, but when the duty is imposed on the product at the bottom it is going to be pyramided in spite of all that can be done, and by the time it gets to the ultimate consumer we have a monstrosity.

Mr. SMOOT. Mr. President, in every tariff bill which has ever been written, if a duty is levied on the raw product at all, the rate or percentage of duty is lower than is provided when the article advances through the stages of the manufacture. At every stage of advancement the product carries a higher rate of duty. That is true no matter whether it be the tariff law of Canada or England or any other country, and that is the only way in which a tariff law can be framed. It makes no difference whether the measure be a protective tariff or a revenue tariff, progressive rates have got to be applied.

Mr. STANLEY. As I understand that, whenever a duty is imposed anywhere in the process of manufacture it is just like a snowball on the side of a hill. The farther the ball rolls the larger it gets; and if it rolls from the hide of the animal, if it rolls from the fleece on the sheep, if it rolls from the chemical ingredients in a piece of refractory brick, if it rolls from the coke and coal and ore in the case of steel, you are going to have just what you have here. When you get through you are going to have a duty that may well call for the astonishment and the reprobation of the Senator from Minnesota and of everybody else who stops to consider it.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Ohio?

Mr. WALSH of Massachusetts. I yield.

Mr. POMERENE. It would seem from the statement made by the Senator from Minnesota [Mr. NELSON], which, as I understand, is admitted to be correct by the Senator from Massachusetts——

Mr. WALSH of Massachusetts. There is no doubt about it.

Mr. POMERENE. That the duties provided for in this section, all told, add 100 per cent to the cost of the cloth. I want to put that, if I can, in a form that will be intelligible to the men and women of this country who do not have the time to study the intricacies of a tariff bill, and if I am right I should like the Senator from Massachusetts so to say.

Reduced to its final analysis, it has developed here in the course of this debate that if there were no duty on wool and no duty on the finished cloth, and a yard of cloth thus made out of free wool and without any tariff on the finished product were worth $1, then if these duties on the raw wool and those which are provided for in this section are added that yard of cloth would cost $2.

Mr. WALSH of Massachusetts. Absolutely. Nobody can question that.

Mr. POMERENE. In other words, it costs 65 cents per yard more than would the same cloth under the same circumstances under the Underwood bill.

Mr. WALSH of Massachusetts. Yes. The Underwood protective tariff was but 35 cents. There was no compensatory duty. Therefore under the Underwood tariff the duty on cloth valued at $1 would be 35 cents, and under this bill the duty on cloth valued at $1 would be $1.

Mr. POMERENE. So that, assuming that there are 3½ yards of cloth in a suit of clothes, and not taking into account trimmings or anything of that sort, the initial cost of the cloth to the merchant tailor will be three and one-half times 65 cents, or $2.27½ more than it would be under the Underwood law.

Mr. WALSH of Massachusetts. That is correct. The Senator has very plainly and clearly stated the effect upon the price to the consumer through the levying of these duties.

To come back to the table that I was about to discuss, I am going now to take different grades of dress goods that fall within the different brackets in this paragraph, apply the compensatory and the protective duties proposed to be levied under the Senate amendment, and translate them into equivalent ad valorem duties. Let us begin with the lowest bracket.

In the case of cloth valued at 80 cents per pound the Senate bill levies a compensatory duty of 40 cents per pound upon that 80-cent cloth, and a protective duty of 50 per cent ad valorem. That is equivalent to an ad valorem duty of 100 per cent upon the 80-cent cloth.

In the case of cloth valued at 81 cents—just over the 80-cent bracket, in the second bracket—there is a compensatory duty under this amendment of 49 cents and a protective duty of 50 per cent, or an equivalent ad valorem duty of 110½ per cent.

In the case of cloth valued at $1, the compensatory duty is 49 cents and the protective duty 50 per cent, or an equivalent ad valorem duty of 99 per cent.

In the case of cloth valued at $2, the compensatory duty is 49 cents and the protective duty 50 per cent, or an equivalent ad valorem duty of 74½ per cent.

I call attention especially to what has been said before, that these duties upon the cheaper dress goods are very much higher than those upon the more expensive goods.

Translating these duties into equivalent ad valorem rates, the table which I have just read from shows that the cheaper dress goods bear ad valorem duties of 100 and 110½ per cent, while the dress goods valued at $2 bear an equivalent ad valorem duty of 74½ per cent.

Now let us take the cotton-warp dress goods.

In the case of those falling in the first bracket, of the value of 60 cents per pound, the compensatory duty is 39 cents, the protective duty 50 per cent, the equivalent ad valorem duty 115 per cent.

In the case of cloths valued at 80 cents a pound, the compensatory duty is 39 cents, the protective duty 50 per cent, the equivalent ad valorem duty 98¾ per cent.

In the case of cloths valued at $1 per pound, the compensatory duty is 39 cents, the protective duty 50 per cent, the equivalent ad valorem duty 89 per cent.

You see the drop there from 115 per cent ad valorem duty in the case of the cheaper dress goods to 89 per cent in the case of the more expensive dress goods.

As against all of these ad valorem duties, ranging from 74½ per cent to 115 per cent, we have the Underwood law with simply an ad valorem duty of 35 per cent.

Let us work that out. Let us take the case of dress goods valued at $2 per pound.

The duty on a pound of dress goods valued at $2, when the proposed duties become effective, will be 74½ per cent of the $2, so that the price of that $2 piece of cloth will be increased approximately $1.49 per pound by the levying of these duties, so that the $2-a-yard foreign-valuation cloth the moment it leaves the customhouse office in New York or any other port will represent to the American jobber a cost of $3.49.

Now, let us take the Underwood law, and see what that cloth valued at $2 per pound would be taxed. The foreign valuation is $2. There is a protective duty under the Underwood law of 35 per cent, and no compensatory duty. Therefore that cloth would bear a duty of 70 cents, and would represent $2.70 per pound in value to the importer or to the jobber, while under this bill the same piece of cloth will stand the importer or the jobber $3.49 per pound.

In other words, the duties upon all of these cloths under the Underwood law would be about 65 per cent less than it is proposed to levy in this bill; but I want to pass now from the question of costs for the moment. I am going to return to that

question later, because I have the prices of some English dress goods and the prices of American-made dress goods, and I am going to compare those prices, and the price comparisons will show that this protective duty of 60 per cent can not be justified.

Before I come to that, however, I want to make some comparison between the duties proposed to be levied in this amendment and those levied in the emergency law.

The emergency law levied a compensatory duty of 45 cents per pound on all wool manufactures. The framers of that law made no distinction between the compensatory duty upon tops, which is the first step in the manufacturing process of converting wool into cloth, and yarns or cloths; but levied a sweeping compensatory duty of 45 cents.

The protective duty in the Underwood law, which also continues in operation, is 35 per cent. That this compensatory duty of 45 cents per pound, plus the Underwood rate of 35 per cent on the main class of goods, namely, dress goods, constituted a formidable barrier to importations is shown by the fact that importations declined from a monthly average of from 125,000 to 150,000 pounds prior to the enactment of the emergency law to from one-third to one-half of this quantity since the passage of the emergency law.

Mr. STANLEY. Mr. President, it occurs to me to suggest right here that were it not for the 33-cent duty on the raw material, the compensatory duty would in fact be only about half as much. If it were not for this duty on wool, the duty would amount to practically only half as much to the consumer. The compensatory duty is doubled by the imposition of the specific duty. Is not that correct?

Mr. WALSH of Massachusetts. The Senator is correct. Now I am going to give some information about those imports, because I am going to ask the question, How can you justify increasing the protective duties when imports have decreased under lower rates?

The importations declined from a monthly average of 125,150,000 pounds prior to the enactment of the emergency law to from one-half to one-third of that quantity since the passage of that law.

With the decline in the importation of dress goods under a lower rate, how can we justify this increased rate? Indeed, there have never been any considerable amount of importations of dress goods into this country. The protective duties levied in the Payne-Aldrich law and those levied in all other laws, including the Underwood law, have kept out all dress goods, excepting fancy goods, such as the people who want to keep up with the styles in English clothing will import regardless of the duty.

Mr. SIMMONS. Mr. President, the Senator states that there are practically no importations of this cloth. I think an increase in duty under such circumstances is full of suspicious import, to say the least.

Mr. WALSH of Massachusetts. Except cloths of a special character not made in this country. There are no importations of consequence which compete with anybody.

Mr. SIMMONS. It has developed very frequently in these discussions that there were no importations, and it was proposed, even under those conditions, to greatly increase the protective rates. The answer has been made more than once, and it was made before the committee when we were holding general hearings, that under those conditions, if there are no imports, an increase in the duty can do no harm. I want to ask the Senator what he thinks of that proposition?

Mr. WALSH of Massachusetts. I am very well aware of the fact that that claim has been made repeatedly.

Mr. SIMMONS. I did not try to answer the question myself. I wanted to see what the Senator would say.

Mr. WALSH of Massachusetts. Being a pupil in the able Senator's tariff school, I am very happy to answer his question. But I know it will not begin to be as clearly or as ably answered as the Senator from North Carolina would answer it. I am very proud to be a pupil and to sit at the feet of the distinguished Senator from North Carolina to learn the problems growing out of tariff legislation. There is no abler man in this country, in my opinion, no man possessed of more knowledge of tariff questions than the Senator from North Carolina. He can express more clearly, and he has a better conception of the rights of the producer, of the manufacturer, and of the consumer than any man I know of. I do not except the able Senator from Alabama. I have been delighted and proud to be associated with a man who has such sound and just and fair views upon the tariff question as the Senator from North Carolina. He has insisted upon taking a fair, square stand on all of these questions, and has always put his country and the general welfare of all first, rather than selfish interests. The Senator will pardon me for paying this tribute to him in his presence, a tribute which I have often paid him when he was not present.

Mr. SIMMONS. I think an increase in duty under the present circumstances is full of suspicious import, to say the least.

Mr. WALSH of Massachusetts. There is no doubt about it. In an industry like this, which is gradually and steadily becoming trust controlled, that is true. The price is more or less controlled. There is not a woolen manufacturer in this country who announces prices on dress goods or woolen cloths until the great combination, the American Woolen Co., first makes the announcement. That concern leads the way and dictates the price, and that trust is steadily and constantly gathering full control of the large and competitive woolen manufacturers of this country. In the last report of the American Woolen Manufacturing Co. I found that last year three great mills had been added to the combine, and I make the prediction now that before many years have passed the entire manufacture of dress goods and of woolen goods will have passed into the hands of this organization. If you study the history of high protective tariff duties, you will read side by side with that history the story of the birth, the growth, the development, and the control by trusts of the merchandise upon which high protective duties are levied. It is one of the significant things in the economic history of our country, in the history of the last 30 years, that side by side with the bestowal of high protective duties have come combines.

That is easily explained. Those men first meet for propaganda purposes. Every woolen mill in this country is part of an association. They send their representatives here to ask for these high protective tariff duties. They become friendly; they become cooperative; and they can understand and see that by eliminating domestic competition they can make these tariff duties more effective in raising prices, by the larger plant absorbing the smaller plant, and before I get through I expect to tell a story about the combinations which have gone on in the woolen business which will not be creditable to our protective and trust-controlled systems. I expect to show that we are levying protective tariff duties upon industries which are reeking with watered stock, which have made so much money out of protective duties in the past that they have expanded and profiteered without limit.

The American Woolen Co. produces 25 per cent of all the woolen cloth and dress goods produced in this country, and, of course, it is rapidly expanding. So that it has such a volume of production that it is the dictator and the leader in price announcements.

Then consider labor! Senators stand here and justify these rates and tell us that the laboring man's condition is better in this country than anywhere else, and that if we do not put these rates on, labor will have its wages cut. For every $5 that has gone to the manufacturer through protection $4 of it has gone into the pocket of the manufacturer and $1 to labor. The whole thing is a story of legalized robbery of the consumers, the American people, and labor has been asked to keep its mouth shut, even to support the system, because they have been given grudgingly a small share of the plunder, while the big share has been taken by these great manufacturing interests. I say that reluctantly, and I want to make it clear that I do not think all the manufacturing industries of this country are in that line of business, by any means. I know manufacturers who have been conducting an honest and legitimate business, but they eventually, if this keeps up, must become part of the system.

I received a letter from a manufacturer in my State to-day protesting against my vote against some of the high duties in the cotton schedule. That cotton manufacturing company during the war years distributed two stock dividends of 100 per cent each to their stockholders.

Do you wonder that there is unrest in this country? Do you wonder that there are strikes? Do you wonder that there is a tremendous movement against our present economic system, when men who toil and labor read of these excessive and extortionate profits, and realize that the recipients have gotten them largely through licenses granted by the Government to tax the consumers? Do you wonder that there is a movement in this country to check the profits and to limit the amount of money which can be made?

I have thought of drafting an amendment before I get through—and I wish the Senator from North Carolina would help me—providing that the manufacturers shall set aside all of the money which they receive through the operation of these protective duties and file with the Secretary of the Treasury a statement that they have given the great bulk of that to labor.

Mr. SIMMONS. They will have to double their wages in the majority of cases if they do it.

Mr. WALSH of Massachusetts. We ought to draft some such amendment, because their claim is that they need these duties to meet the difference in the costs of labor. So we ought to put a proviso here that this 50 per cent protective duty shall be converted by the manufacturers into the wages of the employees. If that was done they would not ask for 50 per cent. They would not want their labor to get it. These protective duties have been used for the purpose of giving a mite to the working people and putting the rest in the pockets of the corporations.

Mr. SIMMONS. Along the same line on which he is speaking now, has the Senator had his experts make any calculations as to the entire wage costs in the woolen mills with reference to the cost of production?

Mr. WALSH of Massachusetts. I asked one of the experts to prepare for me the exact conversion cost on tops. The task is very difficult, very laborious. That was prepared, and I have put it in the RECORD to-day. It shows the difference in the cost of labor and the production cost between this country and abroad is very small.

Mr. SIMMONS. That is not the idea I had in mind. I think if the Senator would have his expert make a calculation he would find that the entire labor cost in the woolen mills is not much more than half the amount of the duty.

Mr. WALSH of Massachusetts. In the case of yarn the Tariff Commission said the conversion cost is 25 to 40 per cent. The Senator states that in the case of cloth, if we could get the figures, the estimate would be about 50 per cent.

Mr. SIMMONS. I think so. The Senator has given a very lucid and illuminating statement about the tendency of the textile industry toward monopolization, toward single control. I want to ask the Senator if he does not think that the high duties lend themselves to the encouragement of monopolization?

Mr. WALSH of Massachusetts. There is no doubt about it. The wise men in a tariff-protected industry know that monopolistic control of the domestic production makes the protection levied always operative. No trust takes in companies that are failures. The American Woolen Co. is not paying for any mills that are not profitable, but it is because they can see an opportunity for them to buy a mill at one price and increase its capitalization, end competition, and control prices, that makes them form monopolies. It is the incentive to enrich themselves, to get more profits, that has led, in my opinion, to the creation of many of the large organizations.

Mr. SIMMONS. When the industry is monopolized, largely because of these high and unnecessary duties, can not the manufacturer in that condition, whether there are any importations into the country or not, take in the increased price of his product the benefit of the full duty imposed?

Mr. WALSH of Massachusetts. There is no question about that.

Mr. SIMMONS. Then that is the vice and the danger of giving increases in duties upon a product where the present duty is practically prohibitory.

Mr. WALSH of Massachusetts. I agree with the Senator.

Mr. SIMMONS. It enables the monopoly, if there is one, to take advantage, in increases of its prices, of the full amount of the additional duty that may be imposed.

Mr. WALSH of Massachusetts. I want to stop directly, because I know the distinguished Senator from North Dakota desires to move a recess.

Mr. President, these duties promote greed, greed, greed! I would be the last man knowingly to deprive a manufacturer of an honest protective duty that would represent the honest difference in conversion costs. If anyone can show me an honest difference in conversion cost, I will go as far as anybody else to protect the domestic industry, because I do not purpose to stand in the way and see the American laboring man put at a disadvantage with the foreigner. But I will not support protective duties in order to enable producers to pay dividends upon watered stock. That is what this bill will do.

Mr. President, I do not wish to proceed further this evening. I shall conclude to-morrow.

Mr. McCUMBER. Mr. President, before moving to take a recess I desire to take a moment or two to answer the Senator from Minnesota [Mr. NELSON].

Yesterday, by a vote of more than two to one, the Senate of the United States declared it to be their purpose to give the growers of wool a protective duty of 33 cents per pound upon the scoured content. Now, if we give that protective duty of 33 cents per pound upon the scoured content of the wool we must necessarily give a compensatory duty. Even the Senator from Minnesota, I think, would recognize that principle.

The Senator from Wisconsin [Mr. LENROOT] thought that upon the coarser wools that was too high a duty, and he moved an amendment to provide that the duty should not exceed 60 per cent ad valorem upon those kinds of wool. But he left the higher kinds of wool untouched by his amendment. The Senator from Minnesota [Mr. NELSON] voted with him, but the amendment was voted down.

Thereupon the Senator from New York [Mr. WADSWORTH] moved to reduce the rate of 33 cents per pound to 28 cents per pound, a reduction of 5 cents a pound. The Senator from Minnesota [Mr. NELSON] voted against that amendment. Therefore, I assume that he is in favor of 33 cents per pound on the scoured content of the wool. Now, we have to carry that 33 cents per pound upon the scoured content into whatever is made out of it, and in the making of these cloths, considering first the waste in the yarn and second the waste in the manufacture of the cloth, with the experts at our side we arrived at the conclusion that there was a loss of about 7 cents a pound, which would have to be taken into consideration, and therefore we made the duty 40 cents a pound upon the product.

Now, being compelled to give 40 cents per pound upon the cloth from which the wool was made, the next question was, What, if any, duty shall we give as protection? The conclusion of the committee was that the cost of producing on the average, not upon the American value, not upon the retail price, not upon the wholesale price in the United States, but upon the manufacturers' price in a foreign country, required a 50 per cent ad valorem duty to equalize that cost with the cost of producing in the United States. Therefore we gave a rate of 50 per cent ad valorem. Now, if anyone can establish the fact to the satisfaction of either the committee or the Senate that 50 per cent ad valorem is too high, I think we can get a reconsideration and vote for what we may consider necessary for the protection part.

If we put our compensatory duty too low, lower than that which measures the 33 cents a pound upon the scoured content and the waste in making that first into yarn and then into cloth, the cloth and the yarn will come in and the farmer is not getting his protection because the price must necessarily come down. So also if we fail to give a protective duty that will equal the difference in the cost of producing these fine grades of cloth in the foreign country and in this country, then the cloth will come in and the American manufacturer must reduce the price that he pays to the farmer and the farmer will not get his protection.

It seems to me that the position of the Senator from Minnesota is something like that of a man who orders pie from a bill of fare and then does not want to pay for it. If we eat our pie, we have to pay for it. If we give 33 cents a pound upon the scoured content of the wool, of course we have to pay for it. If it should happen upon some class of goods to be 100 per cent, based upon the foreign valuation, if that does measure the difference, then we ought not to complain because we pay that duty. If the Senator from Minnesota is not satisfied, then he should move to reduce the protection which is given to the American producer. If he is not willing to have that reduction, he is compelled by every principle of mathematics to make this allowance and carry it into the finished product.

Now, Mr. President, I move that the Senate take a recess until to-morrow at 11 o'clock a. m.

The motion was agreed to; and (at 6 o'clock and 15 minutes p. m.) the Senate took a recess until to-morrow, Friday, July 28, 1922, at 11 o'clock a. m.

SENATE.

FRIDAY, *July 28, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Ernst	Lenroot	Nicholson
Broussard	Gooding	Lodge	Norbeck
Bursum	Hale	McCormick	Oddie
Cameron	Harreld	McCumber	Overman
Capper	Harris	McKinley	Pepper
Caraway	Heflin	McLean	Phipps
Colt	Jones, Wash.	McNary	Pomerene
Culberson	Kellogg	Moses	Ransdell
Cummins	Kendrick	Nelson	Robinson
Curtis	Keyes	New	Sheppard
Dial	Ladd	Newberry	Shortridge

Simmons	Stanley	Walsh, Mass.	Willis
Smith	Sterling	Walsh, Mont.	
Smoot	Trammell	Warren	
Spencer	Underwood	Watson, Ind.	

Mr. UNDERWOOD. I wish to announce that the senior Senator from Nevada [Mr. PITTMAN] is absent on account of illness in his family. I ask that this announcement may stand for the day.

Mr. TRAMMELL. I wish to announce that my colleague [Mr. FLETCHER] is necessarily absent. I ask that this announcement may stand for the day.

The PRESIDENT pro tempore. Fifty-seven Senators having answered to their names, a quorum is present.

MISSISSIPPI RIVER FLOOD CONTROL.

Mr. RANSDELL. Mr. President, I ask unanimous consent to have printed in the RECORD in 8-point type three very valuable and instructive articles relating to floods in the Mississippi River. One is entitled "The water fighters," from the pen of the well-known author, Harris Dickson, which appeared in the Saturday Evening Post of the 15th instant. Another is by J. Bernard Walker, editor of the Scientific American, and appears in that journal for August under the caption "Curbing the Mississippi," and the third is an interview with myself prepared by Henry L. Sweinhart and produced in the Outlook on the 26th of this month, entitled "Mastering the Mississippi." The three articles would give a great deal of very important information to the country on the subject. Therefore I ask that they be inserted in the RECORD.

The PRESIDENT pro tempore. Without objection, the order will be made as requested.

The articles referred to are as follows:

[From the Saturday Evening Post of July 15, 1922.]

THE WATER FIGHTERS.

(By Harris Dickson.)

In these postwar days of floundering and inefficiency, of clock watchers and grumblers and grafters, it makes the heart beat faster to see a man-sized job bravely tackled and honestly well done. During our high-water fight along the Mississippi River we saw an exhibition of human courage and tenacity that gave a sparkle to the eyes of men. Ten years ago I wrote for the Saturday Evening Post a story of failure, of broken levees, and disaster. Now I joyfully record a success. The world is not lost while men can yet stand resolute. Confronting their ancient enemy, our valley dwellers assembled with such an organization and sturdy work that old Jonah Q. Grouch himself now admits a possibility of hope for the Republic.

The average river dweller is an incurable optimist, undismayed as the peasant who rebuilds his home upon the volcanic slopes of Vesuvius. Like his pioneer father before him, Col. Damascus Swampwood swats mosquitoes, borrows money to ration free negroes, puts all his credit into growing cotton, and starts over again when the Mississippi runs amuck and washes away everything except his mortgage. Being a dead-game sport, the colonel never whines over spilt milk, but plasters his property with a second mortgage to some innocent financier, patches up his levee, corrals more negroes, and plants more cotton, all in the sublime assurance that one good crop will land him on Easy Street. Two bumper crops in succession would make the colonel disgustingly rich, which he doesn't crave. All he wants is plenty for himself and his friends.

Overflows and hope deferred have taught Colonel Swampwood to be a long-shanked wader and a cheerful loser. In lean years he eats corn bread with the same grace that next season he smashes European speed laws. He believes in the valley, and sticks to it. "Consider the postage stamp, my son; its virtue consists in sticking to one thing until it gets there." His country has a glorious future, 40 feet deep in fertility from the erosions of a continent. When the river has become a servant instead of a master, and drainage an established fact, then the two-legged world must wear his cotton breeches and pay tribute to the colonel. Until that sure millennium arrives he swears by his country, and swears at it. In drought years he cusses high whisky, and in wet years he cusses high water.

This has been a wet year. The colonel has cussed and fought, and beat the Mississippi to a fare-you-well. To-day, May 24, the whipped river is running away, and folks who perch upon the mountain tops must pardon us if we strut a bit, and flirt our tail feathers free from mud. I say "we," because everybody did it. We forced our levees to serve our turn long after they were gone; when water towered 2 feet over their tops we halted it, and held a fighting line four times longer than the battle front in France.

For the past five years old Father Mississippi has behaved himself pretty decently, with only local outbreaks. Waterspouts in Wyoming, torrents in the Yellowstone, and chunk floaters in western Pennsylvania all subsided like a village hell-raiser in New York City when they got lost in a vaster channel. Little streams cut up mightily at home, but died before they reached first base. One at a time they have no more effect upon the lower Mississippi than squirting a garden hose into the Atlantic.

This year, however, they all seemed to synchronize their watches and agree upon a zero hour. The Monongahela and the Platte, the Cumberland, Arkansas, Missouri, Ohio, and Tennessee—all went over the top together. Deluges from Denver, Buffalo, and Winnipeg, wave upon wave, crest upon crest, came raging down the valley.

"Told ye so! Told ye so!" Old croakers gleefully shook their heads and based predictions of calamity upon their observation of crawfish prophets.

Colonel Swampwood tightened his belt and realized what a general overflow would mean. Under present business conditions the best he can do is to hang on by his eyelashes, stave off taxes, extend his notes, and draw three cards. With 10 feet of water blanketing his plantations the tenants must swim out and keep swimming, for unless they make a crop this year none of these negroes can get a dollar until Santa Claus comes down his chimney in 1923. If the levee broke, it would depopulate the country. The levees must be held.

A delusion exists in certain unfortunate cities which are so far distant from Vicksburg that they can not be expected to know much—a delusion that our levees are huge dams of stone or concrete, reinforced, buttressed, and impregnable. When Colonel Swampwood takes his rightful seat in heaven he'll plunk his harp in peace behind a levee like that; but in this vale of tears and swears he fights to hold a ridge of dirt so very soft that it melts in his mouth. And his mouth gets hot enough to melt anything.

Our valley is built up of material brought down and deposited by the river, and Father Mississippi had more gumption than to fetch stone or concrete that could be used to bar him from his happy playground. He brought only the mushiest kind of stuff that levees are made of.

Near 2,000 miles of these ridges barricade the river on either bank, and every inch is a danger point; when floods stand for weeks against it not even the strongest levee can be left unguarded.

Our present trouble lies in a lack of uniformity in height and strength, because the system itself is an evolution.

Originally the colonial planter threw up his private embankment to protect his own tater patch; a neighbor joined him, and another, the community, the county, the State—and a system developed. Independent levee boards cherished different ideas as to dimensions or piled up dirt as far as their dough permitted—until the Federal Government became a partner, and the Mississippi River Commission established its standard, designed to keep off any water. Learning the lessons of failures and success, one fact stands forth: A levee constructed according to specifications of the river commission will hold off the highest known water, and everybody is now struggling toward bringing our dikes up to "commission grade and section"—a standard phrase for a standard levee.

This can not be accomplished in a day. The work itself can be pushed only during fair weather and as far as the money will stretch. Frequently we see a huge levee machine standing idle because of rains or failure of appropriations, an abandoned and futile thing gazing upon the tragedy of its unfinished task.

Up to the point where it stopped we walk along a stalwart dike, proof against any flood, and beyond it tremble at the weakness of a temporary sacking. The thick dike gives no anxiety, but thousands must labor upon the thin one.

During overflow after overflow we suffer through this agony, when Federal appropriations are not sufficient and the larger funds raised by local taxation have become exhausted. Much of this money is expended in emergency work, the cost of which sometimes runs as high as $10,000 a mile; all wasted, for it must be torn away when standard levees take its place. The pity of it is that losses from a single crevasse would probably pay for completion of a system that insures immunity, confidence, and increased production.

However devoutly we might wish it otherwise, lower and weaker levees do join the standard levees and are first threatened by the floods.

When the waters rose this year they found a small and experienced force already at the front, and as weak points developed the cry for help went out. With the Anglo-Saxon genius for organization this help assumed the form of a feudal military system. In brave days of old the barons, earls, and dukes marched to war with their king, followed by retainers in

proportion to the lands they held. So did plantations and towns now furnish labor. If a planter objected to diverting labor from his crops he was bluntly reminded that unless the levees were held he'd get 20 feet of water. So the labor came.

An enormous trough, brimful of water, ran down the middle of this continent. On either side lay farms and towns and homes, 10 to 30 feet lower than the rim of the trough. The rim is not made of steel or wood, but of mellow dirt that dissolves like sugar. And if that rim should break more water will pour out than Niagara ever dreamed of.

Such was the menace at Arkansas City. In May the water in front of the town stood 2 feet higher than the crest of their levee, being kept out only by a topping of dirt-filled sacks. The rains fell and the storms raged and the waves dashed against it. It seemed that puny man could never hold the line in defiance of a maddened river. Perhaps not, but they would try. First they towed some heavy barges loaded with logs and moored them alongshore to break the wave wash, while volunteers waded in the river itself, nailing together a plank revetment outside the levee.

Inch by inch, as the bubbling waters climbed, the people stacked up sacks and more sacks, fighting like rats to keep from drowning. But they were loading too much weight on their levee, already weakened by its soaking, with water creeping through every pore and converting it into slush. Engineers realized this, levee officials knew it, and looked for their superstructure to tumble down like a house of cards. It did, or tried to.

On the night of the crisis—such calamities always occur about 2 o'clock a. m.—the levee began to slough—pronounced "sluff." This means that their ridge began to cave on the land side, to slide like mush, and sink. Should that embankment collapse by to-morrow morning there might be a lake 50 feet deep where Arkansas City once stood and no vestige of a town. Scared? Of course they were scared, with a terror that makes men clinch their jaws and die hard.

Yet the girl in the drug store, 30 feet below, never batted an eye as she inquired, "Sassapriller? Choc'late? Strawberry?" The hotel business kept going as usual; most of it was going, for skittish traveling men declined to occupy rooms on the ground floor and departed. Townsfolk set up scaffolding in their homes, hoisted babies to the second story, and wired Little Rock for more convicts. Nobody slept. Folks didn't seem to be tired. Convicts and college professors, lawyers and laborers and ladies—everybody—worked knee deep in mud on the levees.

A sloughing levee is the delirium tremens of the water fighter. While the banquette stands firm as a rock, he can pile sacks on top and keep three seconds ahead of strangulation. But when the water-sogged embankment wabbles like a bowl of gelatin and begins to spread at the base he gets squeamish in the pit of his stomach, for the top is fixing to crumble, and a torrent come rushing through.

THE HERO OF ISSAQUENA.

With a terrific pressure of water against it their slushy levee kept sliding and must be stopped—stopped right now. A water fighter never pesters his head about red tape; he uses the first thing that comes handy, no matter who may own it or who protests. In this case of emergency they grabbed a railroad track which ran along the banquette, just inside the levee and some 20 feet below its top. Somebody had several carloads of coal standing on this track. Long beams of wood were braced against them, and the tottering top of the levee held in place. This makeshift would serve for a while, but might give way at any moment; the entire structure must be made more substantial. A sand-and-gravel company had been dredging up sand from a bar in front of town. There stood the idle dredge and here were empty barges. Tugboats got busy, the dredge began to work, pumping material into the barges—90 per cent solid matter, the water being allowed to run off. At the danger point a force of convicts and citizens filled their sacks with sand, hundreds of thousands of sacks, and piled them at the base of the embankment. This adds weight and steadies the wavering mass.

During that crucial night 1,100 tons of material were sacked by hand and piled in the slush to make it firm. And the levee held. By all fair rules of courtesy it should have held, as a testimonial to the grit and tenacity of those indomitable people. After this flood goes down nobody can look at that rickety ridge without taking off his hat to the men who defended it against every power of the river. At this point the waters rose some 65 feet above their lowest level.

Crevasses, however, are not always caused by water pouring over the levee's top. Their crests can generally be kept above the flood by a topping of sacks; loose earth does no good, but the covering of cloth prevents it from dissolving and washing. These sacks are so carefully laid and trampled down that surprisingly little seepage water comes through. Seepage is always a problem and often a peril. Every schoolboy thrills at the Little Hero of Haarlem who stopped a leaky dike with his finger and got himself immortalized in a poem, but poets are unfair, and fail to record every deed of valor. On our Issaquena Levee a far more gallant exploit has gone unsung for lack of a local poet. It was an anonymous hero who discovered not a trickling leak but a miniature crevasse, 2 feet wide and 3 feet deep, far too big for anybody's finger. The hero of Issaquena had no coal cars, no sacks, no sand-and-gravel company. He had only himself, and used his material by squeezing into the crevasse. He saved his country, yet no songster has garlanded his feat in poesy—which might be difficult. "Hero's finger" rhymes with "lovers linger" and "spring's harbinger"; but the broad hero of Issaquena didn't stop that crevasse with his finger; he sat down in it.

THE CURE FOR SAND BOILS.

If Issaquena's hero hadn't sat down on the psychological spot, in 10 minutes this overtop station would have passed beyond control. Which sometimes happens, but more frequently the pressure of water searches out a stratum of sand far below the levee or a pocket of decayed vegetable matter. The levee itself may have been constructed across the bed of a lake, one of those cast-off coils that was anciently a channel for the capriciously changing river. Through crevices or crawfish holes the water is forced beneath a levee that seems more solid than the Republican majority in Vermont, until it bursts up like a fountain in the rear. This warns the engineer of an underground stream, and he immediately diagnoses a sand boil. A boil hurts, but there's no sense in damming it, although hot-tempered engineers use this treatment while they apply other remedies. Dams only irritate a sand boil, and make it break out somewhere else.

An undiluted gunny sack is to a levee doctor what calomel and quinine are to the country practitioner—first aid in every case. His prescription to cure a sand boil calls for thousands of sacks full of dirt copiously applied in a ring around the boil—like a corn plaster, leaving the center open. The doctor applies these sacks in a circle, erecting a hollow leak-proof tower, and lets the water rise within. This creates a column of water inside the levee to counterbalance the column outside. Theoretically the inside column should rise to a level with the river. But it doesn't. Yet it checks the underground current and minimizes friction until the boil ceases to bring up mud. Then the doctor knows that interior caving has stopped.

Such a sand boil, violent and terrifying, broke loose behind the Vaucleuse Levee at 2 a. m. This boil spouted like a geyser 3 feet across, and tossed a cypress stump 4 feet into the air, just to show how strong it was.

The night patrol instantly detected it, and summoned the fighters with a barge of sacks. It seems queer to meet again upon an Arkansas levee the same little trench sacks that protected our lads in France. Soldiers and water fighters get mighty chummy with their efficient friend who stops a bullet or an overflow.

The malignant boil at Vaucleuse was ripping the very bowels out of their levee. Round and round its festering head the experts placed their sacks, accurately as a skilled mason lays his bricks. But the marsh behind it threatened other boils or an even more disastrous slide. So two small sublevees were hurriedly built, inclosing the entire area. In this precarious situation a levee needs weight, quick weight, substantial weight behind it. The most available commodity is water, siphoned over the main levee from the river and filling the sublevee. Tons upon tons of water were pumped across to offset the pressure outside. Human intelligence and courage had saved the levee at Vaucleuse.

Perhaps our most ticklish fright came at Fulton Lake. Here the levee crosses low ground, an extraordinarily high embankment that lays an enormous load upon its soft foundations. The flood had been standing against it for weeks, and the water-soaked ridge began to slide. An avalanche slipped off from the inside, leaving only a thin barrier of dirt 14 inches thick at the top. A one-legged grasshopper might have kicked this over; yet that flimsy wall alone stood between the country and destruction. Another hour, another minute, top, base, and sides might be washed away together, overflowing 7,000 square miles of cotton and sugar lands—about the area of Connecticut added to Delaware.

But the line did not break, for determined men were guarding it. The top must be held, the base, the sides—everything done

at once—for the entire levee seemed rotten to its core. As a good general holds ready his reserve, an ample force, principally convicts, rushed forward and built a double bulkhead of timbers across the weakest point. This had to be set in the river itself, for the levee's top was practically gone. Between bulkheads they filled in sand from the barges, while other men swarmed like ants below to strengthen the foundation. Sacks, sacks, sacks; more sacks, additional sacks, tier upon tier of sacks were stuffed with sand by the convicts, sent whizzing down the chutes, and laid along the base of the threatened levee. Again the levee held; again the river was beaten.

During a water fight the United States assistant engineer is busier than a one-armed man with the itch that continually breaks out in a new place. His telephone tingles. Another sand boil? The spur at Ashbrook? A hurry call for sacks? No. The sheriff.

"Hello! Hello! Say, I've got to do something about your fellow in jail."

"What fellow?" The engineer had forgot.

"The man you grabbed for pasturing hogs on your levee."

"Oh, that fellow?"

"Sure," the sheriff explained. "I've held him for two weeks without a warrant. He's getting peevish. Send up your witnesses and have a trial."

"Can't spare a man. Hold him. Good-by."

Constitutional rights are apt to get sidetracked when folks are wrestling with an overflow. This backwoodsman had waded out of the swamp with his drove of hogs—an Arkansas razorback being more sacred than cats in Egypt. With his hogs he fetched a steel-blue eye and a wicked-looking rifle. Levees are also sacred. Hogs root them up and cause crevasses. But this drove did not make a crevasse; they made pork chops.

SHIFTING WATERS.

During a previous low water the official inspection steamer had gone chugging up White River, raising waves that jostled the shanty boats. A fisherman's boat is his castle; the rains may beat upon it and the winds may whistle through it, but no stiff-necked brass-buttoned fellow is allowed to jostle it. Fishermen opened fire on the pilot, and the official steamer slowed down.

Which is only their simple-hearted method of asserting a fisherman's low-water rights. High-water rights, however, must be construed more strictly. At the very crest of this flood a bank began caving on the Mississippi side. Men and material hurried there in a barge to find that a shanty-boat man had already preempted the locality. A long-bearded river rat shooed them off with his rifle—for 10 minutes. He is now a jail rat, while the caving bank has been revetted.

This cannibal propensity to eat his own banks is what makes the maintenance of levees a never-ending job. If old Father Mississippi would settle once for all just where he wants to run, and stay there, we could possibly complete our levee system and be done with it. But the river is a restless person, who always craves to ramble somewhere else. This year he meanders along the Mississippi shore, throwing up a big sand bar and letting willows grow on the western side, as if he had no intention of ever consorting again with Louisiana. Next year he takes a notion to hug Louisiana some more, picks up the sand bar and deposits it next to Mississippi a few miles downstream. The willows he uproots and totes away for souvenirs. He swings round in a long bend and hurls his power against Louisiana as if to wipe that State off the map. By constant gnawing he reaches the levee and eats it up, unless the engineers stop him by sinking a mattress or revetting the banks with rocks. Usually these methods will save a levee, but sometimes it must be abandoned for a new line a thousand yards to the rear. This character of repair work will probably continue indefinitely, or until the river gets old enough to lose its pep.

Caving banks frequently cause what is called a cut-off, where the tortuous river carves a brand-new channel for itself through some narrow neck of land and lops off a portion of its own length.

For ages this process has been going on, and many detached fragments of Louisiana now lie east of the river, while sections of Mississippi find themselves divorced on the west.

In 1863, for instance, the Mississippi River at Vicksburg twisted itself into a bend 9 miles long. The Confederates held fortified positions above and below the city, which General Grant found it costly if not impossible to pass with his gunboats. So Grant attempted to dig a canal and make an artificial cut-off. But the Mississippi River, for malicious motives of its own, declined to patronize Grant's canal, and the project failed. Thirteen years later, in 1876, after consulting with nobody, Father Mississippi chose a route that pleased him and made a cut-off to suit himself, which now became his main line of march. This left the horseshoe Lake Centennial of stagnant water, and demoted Vicksburg to the rank of an inland town, for the ends of Lake Centennial filled up.

THE FIGHT FOR ASHBROOK SPUR.

The Yazoo River at that time emptied into the Mississippi, 20 miles above. To provide a water front for Vicksburg, and improve navigation, the Government constructed a canal, built dams, and dredged the channel. This forced Yazoo water down what was formerly the Mississippi and gave Vicksburg the added distinction of being the only great city on earth that has moved from one river to another without budging a foot.

Father Mississippi is now trying his same old tricks of cut-up and cut-off just above Greenville, Miss., which would erase Greenville from the list of water towns and necessitate a rearrangement of levee lines on both sides of the river. To prevent such a cut-off a spur had been constructed at Ashbrook neck, hoping to deflect the current. But when Father goes on a rampage it takes a lot to divert him. He rose in his wrath and attacked the spur, not only by tearing at its end but by a sloughing in its middle. The end crumbled, the center caved, and tidings of disaster went over the land that "Ashbrook is caving! Ashbrook is lost!" For weeks the fight to save Ashbrook spur was one of the dramatic spectacles of our flood. Thousands of sacks filled with gravel were sewed together on wire cables, the cables being securely moored before the sacks were sunk. Engineers dropped line after line of gravel sacks into the torrent, causing the waters to hesitate and become irresolute, which gave them time to protect its end. Ashbrook spur is saved, and the sacks are now held in position by cables as taut as those that support the Brooklyn Bridge.

Every foot of levee is being watched every minute. Keen-eyed men patrol its crest and its banquette and its base. By night hundreds of lanterns swing low against the ground like ignes fatui that hover about the swamps. The slightest weakness is marked, and the inspector sees little stakes flying a white flag; not the flag of surrender but the flag of fight. He examines each tiny rivulet of seepage or soggy spot or depression.

For every trickle there's a man with a spade, testing it out, seeing where it comes from, and leading it away by a trench. Clear leaks do no harm; but when they bring mud, showing an interior erosion, the defenders mobilize.

It is deplorably true that a levee did break on the Louisiana side nearly opposite to Natchez, Miss., and another crevasse occurred below New Orleans, at Poydras. There were also two other breaks on the Atchafalaya. It is true that 5,000 square miles in southeastern Louisiana and western Mississippi are now under water, that enormous property damage has been done, with loss of life, and that 40,000 people are refugees. Yet these distressing facts only emphasize another fact—the levees that gave way were not up to "commission grade and section." Engineers did not expect them to afford protection against such unprecedented water. And they did not. On the contrary, no standard levee has broken, shown weakness, or given serious trouble. Behind those standard levees the plowman now works unafraid. His live stock has not been drowned, his property has not been swept away; no child is homeless and fed by charity. Thousands of square miles are being successfully cultivated that would otherwise be under water, a protection that experienced men insist can be extended to our entire valley.

The partial overflow in the State of Mississippi is not due to levees breaking. Our inundated section lies at the junction of the Yazoo and Mississippi Rivers, at the southernmost angle of our delta. The Yazoo River is not leveed, and backwater stands upon its unprotected lands. No trouble whatever came from the Mississippi River front, where all embankments were held intact.

The Yazoo & Mississippi Valley Railroad traverses this country, where backwater invades its coaches, and the pilots' union kicks like a mule because locomotive engineers are permitted to navigate tributaries of the Mississippi River without a pilot's license.

An adventurous traveler observed a section foreman climb into the train and hitch his skiff behind. The traveler got into the skiff alone and enjoyed the novelty of being towed by a northbound express until they reached a higher stretch of track and his skiff went bumping over crossties.

Throughout this fight our railroads have rendered notable service. For example, the Government had 4,000,000 sacks stored in a warehouse at Schenectady, N. Y., doing nobody a particle of good. So a trainload was shot along its route to Greenville, Miss., 1,450 miles away. Limited specials sulked on the siding, and millionaires waited while the humble sacks

went by, the shipment reaching our levees in 89 hours—a world's record for the movement of freight. Hard-headed jurors who used to soak the soulless corporations are now holding love feasts and passing flowery resolutions, while cynics wonder if their Damon and Pythias performance will last until the next term of court.

In this sweet and gentle springtime old folks discuss the levees and a young man's fancy lightly turns to thoughts of river control. Behind receding waters the usual crop of cross-roads theorists is sure to germinate. Each one presents a sizzling panacea and writes a piece to the editor, writes to every editor. They orate at public meetings, get red in the face, and sweat like a negro under oath seeking to convince a bunch of stupid professionals who persist in doing the wrong thing. These reformers are even more earnest than some of our junior civilian officers during the late war, who invented brand-new plans for revolutionizing strategy, unaware that their patents had been plagiarized and discarded by Alexander the Great. We hear a lot about spillways and the resuscitated error that levees make the bottom of our river fill up. The wiseacre on Pikes Peak is positive. But the trained engineer who has chosen the Mississippi as his life's work, who takes accurate soundings year by year and compares records—this engineer reports that the channel shows no tendency to fill; on the contrary, it is scouring deeper. Innocent bystanders can also remember when boats used to tie up at Natchez in low water because they could go no higher; and pilots were always wondering whether they could cross a certain bar. Boats now proceed to St. Louis, for navigation is far better than it was 50 years ago.

After all, the outstanding feature of this flood is how an undaunted people rallied to the fight. In leisure hours they may squabble, but, like good Romans, they get together when the barbarians hammer their gates. Hillmen helped the valley men; the planter left his plow in the fields; the merchant closed his shop and went to the levee. Everybody worked and everybody won. Now we turn to the future with more than hope that we shall have a standard levee system to the Gulf, strong as that which conducted without a break from St. Louis to Natchez the highest flood in recorded history.

[From the Scientific American of August, 1922.]

CURBING THE MISSISSIPPI—LEVEE CONSTRUCTION THE ONLY PRACTICABLE METHOD FOR RESTRAINING THE FLOODED RIVER.

(By J. Bernard Walker.)

The Mississippi Valley, from Cairo to the Gulf, has recently passed through the most trying and dangerous experience in the history of its long struggle with the flood waters of the great Mississippi River. The distance by the tortuous river is about 1,000 miles, and for long stretches of this distance the inhabitants on either bank have been threatened in the spring of every year with heavy inundation, accompanied with the loss of life, the sweeping away of homes and farm buildings, and of crops and live stock.

It was inevitable that the early settlers in the Mississippi bottom lands would make some effort to protect themselves against this ever recurring peril; but it will be news to many of the readers of the Scientific American to learn that as far back as the year 1717 the early colonists were attempting to control the floods by building levees, or artificial embankments, outside the river banks. Within the next hundred years or so the work was carried on so far as the means of the country permitted, and by 1828 the levees had been extended up the left bank of the river to Baton Rouge, and along the right bank as far as the mouth of the Red River.

Finally the Federal Government came to the assistance of the local communities in this unequal combat with the mighty forces of the river, and in 1850 all the unsold swamp and overflowed lands below the Ohio were granted to the several States along the Mississippi, the object being to raise a fund for reclaiming the lands that were subject to inundation. Under this stimulus the construction of levees was carried forward more rapidly; and by the year 1860 all the basins of the great delta were provided with stretches of levee covering the most exposed positions, and, therefore, possessed a certain degree of flood protection. This levee work, it should be understood, was not comparable to that which exists to-day, the average height being only about 4 feet as compared with the present average height of 18 feet.

However, under the stimulus of the sale of swamp and overflowed lands, the work was carried on with more or less continuity until the year 1879, when the Federal Government, realizing that this big problem could be solved only after a thorough study of the problem by competent engineers and by cooperation with the several States affected, created the Mississippi River Commission. This commission was instructed to make surveys and draw up and put into execution plans for the improvement of the river; they were to "correct, permanently locate, and deepen the channel and protect the banks of the Mississippi River, improve and give safety and ease to the navigation thereof, prevent destructive floods, promote and facilitate commerce, trade, and the Postal Service."

Before passing on to consider the work which has been done and which now is being carried on by the Mississippi River Commission, it would be well to consider the vast extent of the United States that is included within the drainage basin of the Mississippi, which has a total area of 1,240,050 square miles. The eastern boundary line reaches into western New York, south of Buffalo; the extreme western boundary is found in Montana, west of Butte; the northern boundary reaches 70 miles to the north of the boundary line between Canada and the United States, and the southern boundary is formed by the shores of the Gulf of Mexico. The drainage, or run-off, of 30 out of 48 States empties into the Mississippi. The basin measures 1,822 miles east and west, and 1,449 miles north and south. That the Mississippi below Cairo has a tremendous task to perform in conveying the spring freshets to the sea will be understood when we state that over this great area of nearly one and a quarter million square miles the average annual rainfall is about 30 inches. As a matter of fact, when the river has risen to the top of its banks it can carry only about one-half of the maximum flood discharge, which at the upper end of the delta is about 2,000,000 second-feet. The volume of water can be visualized, also, when it is stated that the extreme rise of water, from low to high, reaches 60 feet at Vicksburg and Arkansas City.

Now, when the Federal Government took hold of the problem through the Mississippi River Commission there was a large amount of dissatisfaction with the levee system as such. The local authorities were naturally disheartened by the many and continuous ruptures of the levees, followed by disastrous loss of life and property. During the years 1881, 1882, and 1883, in which there were heavy floods, the levees were broken in no less than 712 places. The opponents of the levee system claimed that as the levees were carried up the deposits of silt caused the bed of the river to rise also. The fallacy of this was proved by extended investigation, which showed that there had been no such progressive elevation of the bed of the river. Indeed, the latest data proves that where the river is reinforced by levees of adequate height there is a tendency for the river to enlarge its cross section and lower its original bed. It should be mentioned here that before any attempt was made to control the Mississippi its floods extended for a width of 60 miles, and the annual floods as they overflowed the river channel deposited most of their silt near the river banks, with the result that there developed a slope of the land away from the river of from 3 to 15 feet per mile. Consequently the drainage would be from the river toward the bordering higher land, where it flowed into various streams which emptied the overflow into the Mississippi when they joined the main river.

From the time when the commission was formed down to the present day there has been a steady rapid fire of criticism directed against levee construction as such. This criticism was most vigorous after the floods of 1881 to 1883, and was due, as we have said, to the large number of breaks which had occurred in that period. On the other hand, all competent engineers have realized that levee failures have been due to the fact that the early structures were more or less of a makeshift character and were not based upon that exhaustive study of the problem which must ever underlie successful engineering works. The engineers of the commission—that is, the Engineer Corps of the United States Army—indorse the levee as being the only practicable solution of Mississippi flood control; but they are careful to point out that levees can be completely successful only when they are of sufficient height to overtop everywhere the maximum flood stage, and only when they are built to a predetermined width and slope and are protected on their river side with some form of antiscour protection.

Several alternative schemes for river control have been suggested. There is the plan for by-passing the flood waters through artificial canals paralleling the river; a scheme which might relieve the stretch of land through which it was cut, but would do so by producing more troublesome floods below the point at which the canal reentered the river.

Then there has been a great deal of unconsidered speech and writing in advocacy of the construction of reservoirs in the upper approaches of the river in which to impound the floods and release them gradually without damage to the country below. Now, in the first place, there are no natural basins, with narrow outlets suitable for dam construction, to be found

in the upper reaches of the Mississippi Basin, and in the lower reaches of the river and its tributaries the construction of such reservoirs would not only be prohibitive but, indirectly, they would flood some fully settled communities and involve the blotting out of large sections of valuable farm land. As a matter of fact, it would be a physical impossibility, and certainly an economic impossibility, to hold back these flood waters by any system of reservoirs. At the Natural Drainage Congress, held in St. Louis in 1913, Col. C. McD. Townsend, United States Army, then president of the Mississippi River Commission, presented a graphic statement showing how the floods on the lower Ohio and Mississippi Rivers are due to rainfall upon their lower tributaries rather than upon the distant headwaters in the mountains, where the advocates of reservoir control proposed to store the water.

He showed that in the great Ohio River flood of 1913 the city of Cairo, at the junction of the Ohio and Mississippi, was so threatened that women and children were sent away and the city was more than half depopulated. The crest of this flood reached a greater height at Cairo than any before recorded. Suppose there had been a huge storage reservoir available, not merely on the headwaters of the Allegheny and Monongahela but at the city of Pittsburgh itself. Suppose there had been another such huge reservoir at St. Paul, Minn., capable of taking all the flow of the upper Mississippi. Suppose another had existed at St. Joseph, Mo., sufficient for the whole flow of the Missouri.

The length of time required for a flood wave to pass downstream from these several points to Cairo is known. Suppose, therefore, said Colonel Townsend, that in order to protect Cairo and the lower Mississippi Valley from the recent flood, the gates of these reservoirs had all been closed, so that not a drop of water would have been allowed to flow past Pittsburgh or St. Paul or St. Joseph until the floods would be too late to meet the flood from the lower Ohio tributary and add to the volume at Cairo. In spite of this restriction the flood flow of 2,000,000 cubic feet per second, which the river at Cairo attained at its record height, would have been diminished by only 35,000 cubic feet per second by such reservoirs. That is to say, it would have been diminished by less than 2 per cent of its total volume.

So much for reservoir protection.

Thanks to the cooperation of the Federal Government with the various States, the Mississippi levees are now completed to standard height and width for about 500 miles. The whole length of the levee line has been built up to a level that will withstand the normal floods. From now on the work to be done consists of completing the levees to standard height, width, and cross section.

Much has been heard naturally of the recent breaks in the levees at certain points, with the usual resulting losses; but it is a matter for congratulation and confidence that no break occurred in those portions of the levee which had been carried up to grade on the standard cross section determined by the Army engineers who have this work in hand. Ask any of the Army Engineer Corps who are concerned in levee construction whether they are satisfied with the way in which the work stood up against the highest flood on record and they will tell you that they are more than satisfied, and that they have the fullest confidence that when the work is completed such a thing as disastrous overflow of the Mississippi River will be extremely unlikely, if not impossible—provided, of course, that every care is taken to maintain the work in first-class condition.

A levee is a simple earth embankment located generally at a considerable distance inshore from the river bank, its exact location being determined by the topography of the ground and by the lay of the river and general flood conditions. Construction is carried on by excavating the material from borrow pits located usually on the land side of the levee, and it is done by the use of the scraper and other customary methods for such work. The cross section of a standard levee is shown in the accompanying illustration. It has a width of crown of 8 feet at a height 3 feet above the highest flood stage. The sides have a slope of 1 to 3, supplemented on the land side by banquettes 20 feet wide for levees from 10 to 13 feet high, 30 feet wide for levees 13 to 16 feet high, and 40 feet wide for levees more than 16 feet high, the tops of the banquettes being from 5 to 8 feet below the top of the levee.

To protect the levees from erosion by rain they are sodded with Bermuda grass. They are protected against the wash of waves by a layer of 4 inches of concrete or by a board protection.

We show illustrations of the methods of revetment which have been developed as a protection against bank erosion. There are three types—the willow mattress, the articulated concrete mat, and the solid concrete mat. In the articulated type each unit is 3 inches thick, 11½ inches wide, and 3 feet 11 inches long, the whole being reinforced with 12-inch wire mesh. Solid concrete mats are 50 feet by 150 feet in area and 3 inches thick. They are launched and sunk in a semiplastic state by pulling the launching barge out from under.

The question of when this great and urgently needed work will be completed is not one of engineering, for the Army engineers have solved the technicalities and demonstrated the complete efficiency of their methods. It is a question of the provision of the necessary funds, and this is for Congress and the several States concerned to decide. The present program is the appropriation of $45,000,000, to be available in annual installments of $10,000,000, these moneys to cover the control of the Mississippi and also of the Sacramento River, Calif.

Such, in broad outline, are the Mississippi flood-control problem and the approved means for its solution. It is not claimed that the latter are absolutely final. Each year's experience suggests new appliances, such as the concrete mats above referred to; and in a later issue we shall return to this subject with the presentation of a new type of brushwood or tree dike, designed to make the river build up again, by silting, stretches of land which have been washed away.

—

[From the Outlook of July 26, 1922.]

MASTERING THE MISSISSIPPI—AN AUTHORIZED INTERVIEW WITH JOSEPH E. RANSDELL, UNITED STATES SENATOR FROM LOUISIANA.

(By Henry L. Sweinhart.)

Man's fight to keep the Mississippi from pouring over its banks into territory marked for human habitation began away back in 1719, when De Bienville laid out the beautiful city of New Orleans. A levee was provided in his plan to confine the father of waters to its channel.

Ever since that early day, more than 200 years ago, this fight to make man the master has been going on. Begun in a small way when the Mississippi Valley was still the home of the Indian, the work proceeded in a slow, sporadic way until the past 40 to 50 years. During this latter period most of the levees that line the Mississippi from Rock Island to the Gulf have been built.

In spite of the enormous amount of work which has been accomplished in making life and property along this giant river safe, much remains to be done before that permanent degree of security which is desirable for—in fact, demanded by—a great modern civilization can be assured. The flood damage of the past few months, which is a heavy loss to the wealth of the entire United States, and the floods of other recent years furnish striking and sufficient evidence of the need of completing the protecting walls along the Mississippi.

Most of this work in the past has been carried on and paid for through State and local initiative, although there has been considerable Federal aid. But the time has come when the assistance of the National Government is needed in a larger way if the levee system of the Mississippi, already so nobly begun, is to be completed in the near future, as it should be. To finish the herculean undertaking, thereby reclaiming millions of acres of valuable overflowed land all the way from Iowa and Illinois to the Gulf, adding many hundreds of millions of dollars to the permanent assets of the Nation, increasing its agricultural output, and preventing the almost annual deprivation and suffering which are caused by floods along the great central drainage artery of the country, it is necessary that a larger appropriation be made from the National Treasury.

The amount needed would be trifling in comparison with the benefit derived, and, moreover, a large part of it would be repaid to the Federal Government, with interest, so that it would be in reality a gilt-edged investment.

Thus was the situation described by United States Senator JOSEPH E. RANSDELL, of Louisiana, who for many years past has taken a deep interest in national river and harbor matters, particularly those affecting the Mississippi River.

"Experts of the Mississippi River Commission estimate that it would require from $30,000,000 to $35,000,000 to complete all the levees on the river from Rock Island to the Gulf to the full section and grade which the commission recommends," said Senator RANSDELL. "This seems a pitifully small sum when one considers the enormous value of the property behind the levees and the large number of human beings and live stock of every kind whose very existence is dependent upon them.

"The national character of the Mississippi as a channel of commerce needs no comment, and protection from its flood ravages is a matter of national importance, calling for national

attention and support. This mighty stream has been well called the Nation's drainage ditch. The waters from 31 States, including western New York, Pennsylvania, Maryland, Virginia, Georgia, and northern Alabama, and as far west as Idaho, pour through the well-named father of waters into the Gulf; and when the torrents of many States converge at the same time the burden becomes a colossal one even for this mighty stream.

"The riparian lands along its banks have borne a large part of the expense of fighting the floods which rush upon them from these 31 other States; and they are still willing to do their full part. They believe, however, that the Nation should handle this question in a big, broad way; that it should appropriate at once all the money necessary to complete the levee system; that it should continue systematically the work of revetment to prevent further caving in of the banks until the permanence of the levee is absolutely assured; and that if any other means of relief can be found to assist in solving the problem for any material portion or portions of the Mississippi River Valley it should be adopted."

The latest plan of Federal aid which seems to have met with widespread approval, declared Senator RANSDELL, is that which has been advanced by Senator MCKINLEY, of Illinois, commonly referred to as the McKinley plan. This provides that the National Government advance the money for completion of the levees in four or five years. This would be repaid into the United States Treasury by the localities protected through the issuance of long-term bonds bearing 4 per cent interest and 1 per cent added for amortization. The people along the river who derive the benefit would be willing and glad to repay this advance if given a sufficient time in which to do so.

Along with the levees, however, and in order to make them permanent, there must ultimately be a total of between four and five hundred miles of revetment work done, which would require from 25 to 40 years to complete, at an annual cost to the Government of about $4,000,000. This work has been recommended by the Mississippi River Commission and should be paid for by the National Government, declared Senator RANSDELL, as it is a permanent river improvement measure.

"For some years past," he continued, "the commission has been revetting the caving banks of the river with willow mattresses weighted with stones, which are placed in the caving bends when the water is at its lower stage. These revetments have proved very effective, and it is entirely feasible to protect all of these eroding places on the river in such manner as to make the banks permanent and prevent any of the levees from being washed away. This work of bank protection is absolutely essential, not only to protect the levees and in many cases large towns and cities from caving into the river, but also to maintain the navigability of the stream; and the Government is fully committed to its prosecution. The levees by keeping the water in the main channel exercise a scouring effect and cause the river to deepen, thereby benefiting navigation, whereas shallow bars form in the stream a few miles below every crevasse."

In speaking of the floods this spring, Senator RANSDELL asserted that there is much misconception as to the amount of damage done. Although accurate statistics are not yet available, he stated that, in his judgment, the levees have protected from 90 to 95 per cent of the cultivated lands which they were expected to protect, which, he thinks, is a very good showing for them.

"In making this computation," he explained, "one must not overlook the fact that there are several gaps in the levee system, notably at the mouths of the St. Francis, the White, and the Arkansas Rivers, in Arkansas; the Yazoo, in Mississippi; and the Red and Atchafalaya Rivers, in Louisiana. The levees in some instances extend down to the mouths of these rivers and in others come to a sudden stop several miles above the mouths, as at the Yazoo and the Red. When the waters rise above the normal banks of the river and are restrained by the levees they flow in large volume through these gaps and gradually cover very considerable areas adjacent to the lower portion of the tributary rivers, flooding in the aggregate between two and three million acres.

"In saying that the levees protected from 90 to 95 per cent of the area behind them I do not include the lands adjacent to the mouths of these tributary streams, which are flooded by the back water from the river rather than by breaks in the levee system.

"Much has been said about the crevasse at Ferriday, in Concordia Parish, La., which caused heavy losses. This levee was much below the standard grade and section recommended by the Mississippi River Commission as necessary for safety. Col. Charles L. Potter, president of the commission, says this levee contained only 48 per cent of the yardage of earth recommended by the commission. If this levee had been enlarged as recommended, I am sure the crevasse would not have occurred. It is certain that at no place where the levees were fully completed was any danger apprehended or experienced, except, as occasionally happens, a gap is made in a standard levee through the rapid caving of the river banks, owing to the erosive effects of its swift currents.

"Such a break occurred recently at Poydras, a few miles below the city of New Orleans. The levee there had been constructed very close to the bank of the river, and the water was quite high against it, several feet above the level of the country. The bank at that point eroded so rapidly when the water was at high stage that the entire levee caved into the river, making a breach through which the flood poured into the adjacent country with very disastrous effect. A similar crevasse was barely averted at Old Town levee, below the city of Helena, Ark., where the people had sufficient warning and were able to construct with rapidity and heavy cost a protection levee back of the old line.

"But the Senators and Representatives who made a recent inspection tour of the Mississippi from Memphis to New Orleans found the residents of the valley unanimous in their expressions that wherever their levees had been built according to the plans and specifications of the Mississippi River Commission they had experienced no trouble whatever and did not feel the least bit uneasy.

"Unfortunately, there are still many miles of levees in a very unsatisfactory condition, much smaller than the commission considers essential to safety."

In addition to completing the levees along the Mississippi proper approximately an equal amount of work should be done on some of the tributaries so far as they affect flood conditions in the larger stream, Senator RANSDELL stated. This would include levee construction along the banks of the streams near the mouths of the St. Francis, White, Arkansas, Yazoo, Atchafalaya, and Red Rivers. This, it is estimated, would cost approximately the same as the completion of the flood protection system along the Mississippi itself—that is, about $30,000,000. A bill is now pending in Congress, legislative in character and not carrying any appropriation, which would enlarge the jurisdiction of the Mississippi River Commission so that it would cover these tributary bodies of water. The section of the bill making this provision has met with the approval of the Senate Commerce Committee, and it is believed that it will pass both the Senate and House.

About 29,000 square miles, or 18,500,000 acres, of overflowed area in Iowa, Illinois, Missouri, Arkansas, Kentucky, Tennessee, Mississippi, and Louisiana, only about one-half of which is now under cultivation, but all of which is very rich agricultural land, would be added to the tillable acreage of these States, said Senator RANSDELL, through the completion of the levee system. Louisiana has 14,000 square miles of land subject to overflow, while Mississippi and Arkansas each have between 6,000 and 7,000 square miles.

Senator RANSDELL emphasized the fact that the increase in height of flood stages in the lower Mississippi has been caused by the clearing and draining of lands farther north, thus bringing the waters down the river during a shorter period of time than in the days when there were more natural reservoirs and forest cover in the northern States to hold the waters of heavy rains in check.

"A common impression prevails," he went on, "that the bed of the river is constantly rising, thereby necessitating higher and higher levees. It is not true that the bed is rising. Accurate statistics of Government officials for the past 60 years and very elaborate study of the subject by the Mississippi River Commission since its creation 43 years ago prove that the bed of the Mississippi River is not rising, but is lowering, if undergoing any change.

"It is true, however, that the surface plane of the river is materially higher than it was 40 years ago. United States Weather Bureau statistics prove this by their flood-stage figures over a number of years. These show, for instance, that the river at Cairo during the flood of 1882 measured 51.9 feet and this year 53.6; while farther south they are even more convincing. At Arkansas City in 1882 the river stood at 47 feet and this year at 58 feet, while at Baton Rouge, where 35 feet is the flood stage, it was 36 in 1882 and 44.6 this year.

"This rise in the surface plane of the river is due to the rapid and very thorough system of drainage in States like Kentucky, Ohio, Indiana, Illinois, Iowa, Missouri, and Arkansas, where most of the rains fall which produce the great floods of the Mississippi. Formerly there were many shallow lakes, ponds, swamps, and forests in these States, which held large quantities of rain water until it evaporated, constituting

in the aggregate vast natural reservoirs. After the drainage of these sections was perfected and the former shallow lakes, swamps, and forests became cultivated fields, the rain waters were carried rapidly through ditches and canals into the nearest rivers, which in turn poured them into the Mississippi, thereby greatly enlarging its normal volume of water. This increased elevation of surface plane has continued to grow higher and higher, as the various sections have completed and perfected their drainage systems; but the Mississippi River Commission believes that the full height of the surface plane has now been reached and that levees constructed according to their specifications will furnish adequate protection against any anticipated floods."

Senator RANSDELL, in passing, paid high tribute to the work of the Mississippi River Commission and to the character of its members, which has included Benjamin Harrison, later President of the United States; James B. Eads, the distinguished engineer; and many other able men. He declared that this board has studied in a most thorough and intelligent manner every problem connected with flood control and navigation of the Mississippi.

There are many persons in Louisiana, he said, who believe that, in addition to levees, below the mouth of Red River there should be one or more controlled spillways to carry off the crest of the flood when it reaches a moderately high stage, thereby taking off some of the strain and preventing an extreme height of flood. This question has been studied for a long time, he added, and many engineers are opposed to the spillway theory. Some engineers, however, and a great many laymen believe very strongly in the efficiency of spillways, and the subject is being studied further with great care.

This vitally interesting question of flood control on the Mississippi and relief for those who live along its banks and who suffer untold hardship and heavy financial loss whenever the high waters of the river break through a levee is one which will be of continuing concern until the National Government, which alone is able financially to handle the problem, comes to the rescue.

PROCLAMATION AND ADDRESS BY GOVERNOR MORRISON.

Mr. OVERMAN. Mr. President, I ask unanimous consent to have printed in the RECORD, in 8-point type, a proclamation and an address to the people of Cabarrus County, N. C., by the governor of that State. It is an able and patriotic address.

There being no objection, the proclamation and address were ordered to be printed in the RECORD in 8-point type, as follows:

A PROCLAMATION AND AN ADDRESS TO THE PEOPLE OF CABARRUS COUNTY.

(By Gov. Cameron Morrison, at Concord, August 19, 1921.)

A PROCLAMATION.

Representations of such character were made to me through sources which I credited that I thought it my duty to send State troops to the city of Concord to aid the local officers in keeping the peace. I hope this condition will quickly disappear, so the troops may be withdrawn. I recognize the industrial condition there creates a delicate situation, and I want to warn the people of the county to be prudent and temperate in conduct, and respect the legal rights of all parties.

People who desire to go in any of the mills and work have a legal right to do so, free from menace, insult, or intimidation of any character. The strikers have the right to present their cause by fair argument and in an orderly manner, through such representatives as do not amount to an overawing crowd, to such of the ingoing laborers as are willing to hear them; but they have no right to menace or threaten the ingoing laborers in their effort to present their cause; they have no right to force any person even to listen to them talk unless he wants to; they have no right to assemble such numbers as by their weight and demonstration to put the ingoing laborer in fear.

ORDINANCE NOT RECOGNIZED.

I will not recognize the validity of the ordinance of the city of Concord which forbids representatives of the strikers by fair argument to endeavor to make laborers who desire to take the place of strikers agree with their cause and refrain from work. I believe in the basic law of the land. The strikers have a right, when they will do so respectfully and in good nature, and without threat or menace, to present their argument to a person about to take their place, and if such a person agrees with them, to induce him to quit work, or not commence, because a person about to go to work, being a freeman and having a right to do so or not do so, as he pleases, it then follows that a person breaks no valid law who undertakes to persuade another to do that which he has a legal right to do.

I will, therefore, request the officer in command of the military forces on duty to permit reasonable-sized committees, as long as they will conduct themselves peacefully and respectfully, to present their cause to anybody they may see fit to present it to, but the officers will be directed to disperse all large assemblies brought together for the purpose of overawing and intimidating, by a display of numbers, those who desire to go to work, and to suppress all effort at intimidation and insult of every character calculated to produce a breach of the peace and riotous conditions. Striking laborers have a right to use argument to such extent as they can do so orderly, but they have no right in any manner whatsoever to put a person about to take their place in fear and by manifestations of physical force or thus, through display of numbers or manifestations of violence of any kind, to drive him from an exercise of his free will to work when and where he pleases.

MUST RESPECT LIBERTY.

The liberty of every person must be respected in this State, and order maintained.

As Governor of North Carolina, I appeal to all law-abiding men and women in the county of Cabarrus to respect the orders and directions of all military and police forces in the county of Cabarrus, and that they make such resistance as they feel should be made to such orders only in court and through due processes of law.

It is the solemn purpose of your governor to cause the military forces of the State to respect the legal right of all persons, and take no part in any peaceful economic battle which the conflicting forces of your county may engage in, but all must realize that our State is one of law and order, and that the full power of the State should be exercised to suppress any effort to substitute force and intimidation for argument in a controversy in this State.

Issued from the city of Asheville, on this the 15th day of August, 1921.

[SEAL.]

CAMERON MORRISON,
Governor of North Carolina.

—

AN ADDRESS TO THE PEOPLE OF CABARRUS COUNTY BY GOV. CAMERON MORRISON, AT CONCORD, AUGUST 19, 1921.

My fellow citizens, my own judgment was against my coming here and speaking on this occasion; but Mr. Barrett, head of the Federation of Labor, and other prominent officials of organized labor, after our conference in Asheville on Wednesday the 17th, gave me most positive assurance that in their opinion my views of the situation and of the difficulties which beset all concerned here would be of great benefit. I frankly confess that I yielded my judgment in the matter to theirs because of my great desire for them to know that I was ready and anxious to do any proper thing to help arrive at a composition of the difficulties so distressing to all good people which surround this community and threaten others in the State.

I have not come here to apologize for sending State troops here at the urgent request of the mayor, the chief of police, and upon the statement of the sheriff that he and the police could no longer control the situation. If I erred, it can not be helped now; but I do want to express in the most emphatic language I can command that these soldiers were sent here simply to uphold the law and preserve peace, and that if they, or any one of them, take sides in any improper manner, I will use my influence as commander in chief of the troops to bring them to military trial for such misconduct.

I want to take them away from here at the very earliest moment that orderly conditions can be established, and that I can get the reasonable assurance of the local officers that they can control the situation, protect liberty, and preserve peace.

As patriotic North Carolinians and loyal citizens of our country, let us calmly and with charity for all, even those who err, consider the principles involved, and see if we can arrive at a basis and agree upon principles which ought to control every good man and woman interested in this situation.

What is the duty of the Government in respect to industrial controversies such as yours? After deep reflection, I declare to you that it is my honest judgment that if this really is a land of orderly liberty, then the Government has nothing whatever to do with it, except to preserve the peace and let the contending parties in an orderly way exercise their liberty and determine for themselves the questions involved.

It is the highest duty of any orderly government to protect the liberty of its citizens and preserve order, so that its citizens can make their contracts and transact their business about labor or any other matter free from intimidation and fear. I do not believe that the executive branch of the Government, or the judicial, has anything whatsoever to do with the settlement of a situation such as yours, except to uphold the

law as it has already been made by the legislative branch of the Government. Let us examine the principles involved fearlessly and honestly seek a sound basis from which to act.

I do not deem it wise or proper for the Governor of North Carolina to interpose and interfere with the making of a contract between citizens of this State.

The freedom of contract involves the very foundation of free government. For the Governor of North Carolina to endeavor to force men to make a contract in this State against their will is, in my judgment, a very improper thing to do.

Labor in North Carolina has a legal right to organize and to collectively bargain when organized, provided, however, that they can get somebody willing to bargain with them. Their right to collectively bargain can not be taken away from them under the constitutional securities of liberty, which are the very life of our Republic. No man has any right to call labor to the bar of public sentiment and lecture it for seeing fit to exercise its undoubted right to organize, and endeavor when organized to bargain for all concerned. I declare to all North Carolinians that it is wrong to undertake to create prejudice against and excite enmity to the labor people in North Carolina because they see fit to exercise their liberty for their interest in their own way. So far as I am informed, organized labor does not contend for any principles or legal right of importance of which I have not been, and am now, as a citizen, a champion. As to how they shall exercise their liberty, and whether they always exercise it wisely or not, is no man's business, and the lecturing and abuse of them which emanates from some quarters should be stopped.

On the other hand, employers with whom they want to contract have the right to contract with them or not contract with them as they see fit and deem it to their interest. This would no longer be a free country if citizens were forced to contract with any individual or group of individuals with whom they did not want to contract. There is no law under which the governor or any other offical can make them contract. None could be enacted under our Constitution. Dearer than our entire industrial fabric and all the wealth we have accumulated is the principle of liberty involved in the right, duly regulated by law, to freely contract and be contracted with about any lawful and moral matter properly the subject of a contract. It is true that we are our "brother's keeper," but I think the time has arrived when we had better recognize more of our brother's liberty, and permit him to attend to his own business. No man owes anybody an apology in this country for entering into or refraining from entering into any business contract, or refusing to enter into a business contract, which he may see fit to refuse to enter into.

There is a wide opinion that public sentiment must jerk up every large employer of labor and by abuse and vilification bring him into contempt when he exercises his undoubted privilege to refuse to enter into a contract which he does not want to enter into with his employees. It is his own business, and no man has any right, even those who want to make the contract which the employer in the exercise of his undoubted liberty will not make, to become angry with him, and abuse him and hate him. We are coming upon serious times in this Republic, and we had better recur to the primary principles of liberty, and reorganize the freedom of contract, and respect it. If the mill employers of this city and country will not enter into contracts with union labor, or with the individual laborers concerned, which labor wants them to enter into, it is absolutely nobody's business but their own.

If the foregoing statement of principles is not correct, then freedom of contract is destroyed in this Republic and we are no longer free, but under an absurd interpretation of the principle that we are our brother's keeper we have reached the place that no man can attend to his own business, but must transact it as liberty-despising public sentiment, fostered by ignorant leaders, requires him to do. Let us, before it is everlastingly too late, recognize the liberty of each citizen or group of citizens, as long as they will act orderly and respect the peace, to transact their business according to their own sweet will.

Without any law to justify me, if I should interpose in a controversy over a contract of employment in this State, the stage would finally be reached when I thought one side or the other willing to do the right thing, and then such influence as my high office has would be thrown against the side I disagreed with. This would result in an effort to do by moral official force that which every intelligent citizen will readily admit can not be done by force of law, and which would result in an end of free government if it could be done by law. I am unwilling to throw the influence of my office against any citizen or group of citizens to force him or them to enter into any contract which they may not desire to enter into, however foolish or unwise his course may be.

I would be most happy to see a freely arrived at adjustment between the conflicting industrial forces of Cabarrus County or elsewhere, but I am satisfied that settlement arrived at through coercion, governmental or otherwise, other than purely economic, would not bring permanent understanding. We must go to basic principles about these controversies and recognize the absolute freedom of individuals or groups of individuals in this State to contract and be contracted with, without coercion by influential public officials or by intimidating coercive assemblies engaging in insult and intimidation.

I believe in recognizing every legal right of organized labor but I also believe in recognizing every legal right of employers of labor and every legal right of unorganized labor.

Furthermore, if I should inject myself into this controversy and endeavor to adjust it, I fear I would no longer have the confidence of the side I had come to a judgment against in my efforts to uphold the law which a continued conflict might necessitate.

In respect to the disorder which had assumed threatening proportions in Cabarrus County, I think it arose largely from the fact that the local police officers did not clearly comprehend their duty more than from any unwillingness to discharge it. There has been much confusion in the public mind as to what would constitute illegal practices in a tense situation produced between striking laborers and those about to take their place. I announced in my letter to Sheriff Cochrane, of Mecklenburg, some time ago—by the way, the widely published statement that Sheriff Cochrane called for troops was untrue: he merely asked me for instructions—that it was the duty of the local police authorities to use all the necessary power to keep order and suppress intimidation and interference of anybody's rights, but that I would unhesitatingly send troops anywhere they were needed, whatever cause produced the trouble.

Of course, I recognize that there will be criticism of my action in sending troops to Cabarrus County, but I thought it to be my duty, and I declare now that during my term of office as governor liberty, law, and order shall not be stifled in any community in this State; no citizen who wants to work shall be intimidated and prevented from doing so through fear of any influence, however powerful.

If all officials, from the highest to the lowest, and the public will recognize that liberty to contract and be contracted with, or not to contract and be contracted with, is more priceless than any other principle of liberty except that of life and personal security, and that this liberty must be orderly enjoyed, and under this principle let conflicting parties to these industrial disputes settle their own difficulties as other people have to do, we will have arrived at a basis which will clear up the whole situation.

If public sentiment, high State officials, and the press were to undertake to dictate to the farmers of North Carolina and those who work for them, the merchants and other business people in the State employing small numbers of laborers, how and when and at what price they should make their contracts, it would become laughable and would not be tolerated by the freemen of this State for one moment. The underlying principles are the same. A controversy between a great manufacturing plant and 1,500 employees is of no more sacred importance, and should be dealt with upon the same principle as a controversy between a merchant and his two clerks or a farmer and his two plow hands.

As governor of North Carolina I have nothing to do with the contracts made between the people of this State about matters subject to contract and which are not illegal or immoral in their nature, other than when conditions arise which threaten the peace and order of the community in which they are being made, and it then becomes my duty to uphold the law.

Hundreds of men and women in Cabarrus County wanted to go to work. I have nothing to do with whether they ought to have gone or not. They had a legal right to work, and a government which would not protect them from jeering, insulting, and intimidating crowds, numbering hundreds, would be unworthy of the loyalty of patriotic men.

Troops under my command will not in this emergency, or any other, violate the liberty of any citizen of this State, or interfere, further than the preservation of peace may require, with the orderly movement of its citizens; but as I understand my duty I propose to see that peace and order prevail in every community of this State. The troops under my command will not overawe and intimidate any human being in North Carolina, save one who stands for the standard of insurrection and enmity to orderly government. To the insurrectionist or champion of mob government the State of North Carolina, so far

as I control its official action, has nothing to offer save its righteous condemnation and the assertion that to the full power intrusted in the commander in chief of the military forces of this State they will be suppressed and made to live in order and respect the liberty of the humblest laborer as well as the largest property owner within the State's borders.

I think I fully understand the legally established rights of laborers on strike and of those who may desire to take their place. I set them forth in the proclamation which I issued a few days ago to the people of Cabarrus County. I do not know who was to blame for the condition of threatened lawlessness here which caused the mayor, the chief of police, and many good citizens to call upon me as governor of the State to send troops here to preserve the peace and protect life. I pass no judgment. The immediate provocations may have come either from the ingoing laborers or from those on strike, or not from either but from meddlesome sympathizers; but, however this may have been, my sole desire was to preserve the peace, protect human life, and allow a peaceful struggle under the law between the conflicting forces here.

No law-abiding citizen should look with awe and dread upon the heroic men who wear our country's uniform. I suspect the lawful intention of any citizen of this land of law and order who hates the sight of the men who wear the uniform of our country's military forces, and who, in the hours of peril to our liberties and all we hold dear, will take the lead in standing forth to preserve for us and our children the principles of liberty upon which the country rests. Some of the men who are trying to bring into derision and contempt the military forces of this State ought to remember that most of them are men who stepped under the country's flag with a courage worthy of the heroes who established this country and met on Europe's bloody battle fields the hosts of the Hun, and through sacrifice and suffering kept every flag symbolizing liberty on earth from being torn down and tramped under foot by the autocrat.

The troops here are under the command of Gen. J. Van B. Metts, who commanded the One hundred and nineteenth Infantry Regiment of the Thirtieth Division in the Hindenburg-line fight, and side by side with the One hundred and twentieth Infantry Regiment, commanded by another North Carolina colonel, carried the standard of law and order and liberty through the Hindenburg line and finished the downfall of the liberty-hating Hohenzollern and Hapsburg dynasties. He loves liberty and peace, and has made proof of it as daring as any patriot who ever faced shot and shell and fire and death for free government. No man except the enemy of order and liberty and peace need fear any body of men under the command of Metts and the heroic captains who command the three companies in this county.

But I want to move them away from here, and I appeal to all men in this county, whether you are standing under the standard of union labor and doing what you can to aid the striking laborers or on the other side. Whoever you are and wherever your sympathies may be, I appeal to you as a citizen of North Carolina to give your influence quickly and without delay to the sheriff and the police officers and establish by common concord of all good men in this county a respect for order, liberty, and peaceful argument which will justify me in moving the troops here from your county. They neither want to stay nor do I want them to stay. They are here at immense sacrifice to themselves, and only for the purpose of enabling each side to this controversy to enjoy all the liberty guaranteed its followers by the law of the land. It is along these lines and upon these principles that we can continue to enjoy liberty in this State and country.

Finally, I want to appeal to all conflicting classes to submerge and forget their class consciousness and class interest in an unselfish devotion to the precious principles of our Government. This country ought not to be governed, and must not be governed, by direct group government, nor by the overpowerful and rich, nor by any class, but it must be governed by men who, above material things and above any class, stand together upon the great basic principles of human freedom.

I beg in conclusion that the Christians and patriots in this community quickly come together as brothers and establish law and order and quiet in your community, and if this industrial conflict can not be settled—which I devoutly hope the parties to it can do—then let it proceed until one side or the other has whipped in a peaceful economic contest.

TRANSPORTATION RATES FOR VETERANS.

Mr. CAPPER presented a resolution unanimously adopted by Garfield Post, No. 25, Grand Army of the Republic, of Wichita, Kans., favoring the passage of the so-called Jones bill (S. 3463) relating to transportation rates for veterans, and for other purposes, which was referred to the Committee on Interstate Commerce.

SUPPRESSION OF MOB VIOLENCE.

Mr. SHORTRIDGE. Mr. President, I ask unanimous consent, by direction and on behalf of the Judiciary Committee, to report with amendments the bill (H. R. 13) to assure to persons within the jurisdiction of every State equal protection of the laws and to punish the crime of lynching, and I submit a report (No. 837) thereon.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the report will be received.

Mr. SHORTRIDGE. I also ask unanimous consent that the report may be printed in the RECORD, and, in addition, I desire to give notice that I shall seek and take advantage of the earliest opportunity to bring the bill before the Senate for its consideration.

The PRESIDENT pro tempore. Without objection the report submitted by the Senator from California will be printed in the RECORD.

The report (No. 837) is as follows:

[Senate Report No. 837, Sixty-seventh Congress, second session.]

ANTILYNCHING BILL.

Mr. SHORTRIDGE, from the Committee on the Judiciary, submitted the following report to accompany H. R. 13:

The Committee on the Judiciary, to which was referred the bill (H. R. 13) to assure to persons within the jurisdiction of every State the equal protection of the laws and to punish the crime of lynching, having considered the same, report the bill favorably to the Senate with the following amendments, and as so amended recommend its passage:

1. On page 3, in line 19, strike out all of section 4 after the word "therein," and insert in lieu thereof the following:

"*Provided*, That it shall be charged in the indictment that by reason of the failure, neglect, or refusal of the officers of the State charged with the duty of prosecuting such offense under the laws of the State to proceed with due diligence to apprehend and prosecute such participants the State has denied to its citizens the equal protection of the laws. It shall not be necessary that the jurisdictional allegations herein required shall be proven beyond a reasonable doubt, and it shall be sufficient if such allegations are sustained by a preponderance of the evidence."

2. On page 4, in line 17, after the word "shall" and before the word "forfeit," insert the following words:

"if it is alleged and proven that the officers of the State charged with the duty of prosecuting criminally such offense under the laws of the State have failed, neglected, or refused to proceed with due diligence to apprehend and prosecute the participants in the mob or riotous assemblage."

3. On page 5, in line 3, strike out the word "should" and insert in place thereof the word "shall."

The bill, with the amendments reported by the committee, will read as follows:

An act to assure to persons within the jurisdiction of every State the equal protection of the laws, and to punish the crime of lynching.

Be it enacted, etc., That the phrase "mob or riotous assemblage," when used in this act, shall mean an assemblage composed of three or more persons acting in concert for the purpose of depriving any person of his life without authority of law as a punishment for or to prevent the commission of some actual or supposed public offense.

SEC. 2. That if any State or governmental subdivision thereof fails, neglects, or refuses to provide and maintain protection to the life of any person within its jurisdiction against a mob or riotous assemblage, such State shall by reason of such failure, neglect, or refusal be deemed to have denied to such person the equal protection of the laws of the State, and to the end that such protection as is guaranteed to the citizens of the United States by its Constitution may be secured it is provided:

SEC. 3. That any State or municipal officer charged with the duty or who possesses the power or authority as such officer to protect the life of any person that may be put to death by any mob or riotous assemblage, or who has any such person in his charge as a prisoner, who fails, neglects, or refuses to make all reasonable efforts to prevent such person from being so put to death, or any State or municipal officer charged with the duty of apprehending or prosecuting any person participating in such mob or riotous assemblage who fails, neglects, or refuses to make all reasonable efforts to perform his duty in apprehending or prosecuting to final judgment under the laws of such State all persons so participating except such, if any, as are or have been held to answer for such participation in any district court of the United States, as herein provided, shall be guilty of a felony, and upon conviction thereof shall be punished by imprisonment not exceeding five years or by a fine of not exceeding $5,000, or by both such fine and imprisonment.

Any State or municipal officer, acting as such officer under authority of State law, having in his custody or control a prisoner, who shall conspire, combine, or confederate with any person to put such prisoner to death without authority of law as a punishment for some alleged public offense, or who shall conspire, combine, or confederate with any person to suffer such prisoner to be taken or obtained from his custody or control for the purpose of being put to death without authority of law as a punishment for an alleged public offense, shall be guilty of a felony, and those who so conspire, combine, or confederate with such officer shall likewise be guilty of a felony. On conviction the parties participating therein shall be punished by imprisonment for life or not less than five years.

SEC. 4. That the district court of the judicial district wherein a person is put to death by a mob or riotous assemblage shall have jurisdiction to try and punish, in accordance with the laws of the State where the homicide is committed, those who participate therein: *Provided*, That it shall be charged in the indictment that by reason of the failure, neglect, or refusal of the officers of the State charged with the duty of prosecuting such offense under the laws of the State to proceed with due diligence to apprehend and prosecute such participants the State has denied to its citizens the equal protection of the laws. It shall not be

necessary that the jurisdictional allegations herein required shall be proven beyond a reasonable doubt, and it shall be sufficient if such allegations are sustained by a preponderance of the evidence.

SEC. 5. That any county in which a person is put to death by a mob or riotous assemblage shall, if it is alleged and proven that the officers of the State charged with the duty of prosecuting criminally such offense under the laws of the State have failed, neglected, or refused to proceed with due diligence to apprehend and prosecute the participants in the mob or riotous assemblage, forfeit $10,000, which sum may be recovered by an action therefor in the name of the United States against such county for the use of the family, if any, of the person so put to death; if he had no family, then to his dependent parents, if any; otherwise for the use of the United States. Such action shall be brought and prosecuted by the district attorney of the United States of the district in which such county is situated in any court of the United States having jurisdiction therein. If such forfeiture is not paid upon recovery of a judgment therefor, such court shall have jurisdiction to enforce payment thereof by levy of execution upon any property of the county, or may compel the levy and collection of a tax therefor, or may otherwise compel payment thereof by mandamus or other appropriate process; and any officer of such county or other person who disobeys or fails to comply with any lawful order of the court in the premises shall be liable to punishment as for contempt and to any other penalty provided by law therefor.

SEC. 6. That in the event that any person so put to death shall have been transported by such mob or riotous assemblage from one county to another county during the time intervening between his capture and putting to death, the county in which he is seized and the county in which he is put to death shall be jointly and severally liable to pay the forfeiture herein provided.

SEC. 7. That any act committed in any State or Territory of the United States in violation of the rights of a citizen or subject of a foreign country secured to such citizen or subject by treaty between the United States and such foreign country, which act constitutes a crime under the laws of such State or Territory, shall constitute a like crime against the peace and dignity of the United States, punishable in like manner as in the courts of said State or Territory, and within the period limited by the laws of such State or Territory, and may be prosecuted in the courts of the United States, and upon conviction the sentence executed in like manner as sentences upon convictions for crimes under the laws of the United States.

SEC. 8. That in construing and applying this act the District of Columbia shall be deemed a county, as shall also each of the parishes of the State of Louisiana.

That if any section or provision of this act shall be held by any court to be invalid, the balance of the act shall not for that reason be held invalid.

An elaborate report was made by Mr. DYER for the Committee on the Judiciary of the House upon the original bill (H. Rept. No. 452), which sets forth so fully the situation which the proposed legislation seeks to remedy, and the grounds upon which the bill is based, that we feel that we can not do better than to incorporate the same as a part of this report.

The substance of the report, omitting only the text of the bill reported by the House, is as follows:

"The prevalence in many States of the spirit which tolerates lynching, accompanied too often with inhuman cruelty and the inability or unwillingness of the public authorities to punish the persons who are guilty of this crime, threaten very seriously the future peace of the Nation. Not only is lynching a denial of the right secured by law to every man of a fair trial before an established court in case he is charged with crime, not only does it brutalize the communities which suffer it by breeding a spirit of lawlessness and cruelty in the young people who see barbarities unpunished and uncondemned, not only does it terrorize important bodies of our citizens, but it inevitably leads the people whose rights are thus trampled upon to leave the regions where their lives, their families, and their property are in danger, and move to others where they can find peace and protection, thus disturbing the labor situation all over the country. It also blots our fair name as a Nation, for we can not claim to be civilized until our laws are respected and enforced and our citizens secured against the hideous cruelties of which we are constantly furnishing fresh examples.

"The people of the United States suffer justly under the grievous charge that they continue to tolerate mob murder. It is well known that the innocent, equally with the guilty, suffer the cruel inflictions of mob violence. Mobs have even invaded court rooms and prisons to seize and murder prisoners whose punishment had already been fixed. Local and State authorities frequently offer only the feeblest objection to the actions of the mob which is permitted to do its will unchecked. Rarely are the members of a mob sought out and prosecuted even when, undisguised and in full daylight, they have participated in murder, and only in a few isolated cases has any lyncher ever been punished. Patriotic citizens throughout the country feel the shame which lynchings cast upon the Nation. The time has come when the United States can no longer permit the setting at naught of its fundamental law. We can no longer permit open contempt of the courts and lawful procedure. We can no longer endure the burning of human beings in public in the presence of women and children; we can no longer tolerate the menace to civilization itself which is contained in the spread of the mob spirit.

"The Republican Party, which received such a large majority at the last general election, adopted as a part of its platform at Chicago the following:

"'We urge Congress to consider the most effective means to end lynching in this country, which continues to be a terrible blot on our American civilization.'

"President Harding, in his first message to the Congress, on April 12, said:

"'Congress ought to wipe the stain of barbaric lynching from the banners of a free and orderly representative democracy.'

"Ex-President Wilson, on July 26, 1918, issued an appeal to the American people to stop lynchings. He said:

"'I therefore very earnestly and solemnly beg that the governors of all the States, the law officers of every community, and above all, the men and women of every community in the United States, all who revere America and wish to keep her name without stain or reproach, will cooperate, not passively merely, but actively and watchfully to make an end of this disgraceful evil. It can not live where the community does not countenance it.'

"Ex-Attorney General Gregory, May 6, 1918, in an address to the American Bar Association, said:

"'We must set our faces against lawlessness within our own borders. Whatever we may say about the causes for our entering this war, we know that one of the principal reasons was the lawlessness of the German nation—what they have done in Belgium and in northern France, and what we have reason to know they would do elsewhere. For us to tolerate lynching is to do the same thing that we are condemning in the Germans.

"'Lynch law is the most cowardly of crimes. Invariably the victim is unarmed, while the men who lynch are armed and large in numbers. It is a deplorable thing under any circumstances, but at this time, above all others, it creates an extremely dangerous condition. I invite your help in meeting it.'

"These and similar appeals have gone for naught. Lynchings continue. This is evidenced by many lynchings that have taken place this year. It is impossible to get data touching all these outrages. Many lynchings take place and the facts never reach the public. I include a memorandum showing some of the very recent lynchings, to wit:

Lynching, 1921.

Name.	Date.	Place.	Manner of lynching.
1. Jim Roland	Jan. 2	Mitchell County, Ga	Shot.
2. Robert Lewis	Jan. 4	Meridian, Miss	
3. Sam Williams	Jan. 6	Talbotton, Ga	Hanged.
4. William Beard (white)	Jan. 13	Jasper, Ala	Shot.
5. Alfred Williams	Jan. 24	Norlina, N. C	Do.
6. Plummer Bullock	...do	.....do	Do.
7. Henry Lowery	Jan. 26	Nodena, Ark	Burned.

50. Jerome Whitfield	Aug. 14	Jones County, N. C	Do.
51. Ed. Kirkland	Oct. 24	Allendale, S. C	Shot (body burned).
52. Sam Gordon	Oct. 25	Winneboro, La	Hanged.

"In the 30 years from 1889 to 1918, 3,224 persons were lynched, of whom 2,522 were negroes, and of these 50 were women. The North had 219; the West, 156; Alaska and unknown localities, 15; and the South, 2,834, with Georgia leading with 386 and Mississippi following with 373. Yet in Georgia negroes paid taxes on 1,664,368 acres and owned property assessed at $47,423,499. Of the colored victims 19 per cent were accused of rape and 9.4 per cent of attacks upon women. In the year 1919, 77 negroes, 4 whites, and 2 Mexicans were lynched. Ten of the negroes were ex-soldiers, one was a woman. During 1920 there were 65 persons lynched; 6 were white and 59 were negroes; 31 were hanged, 15 shot, 8 burned, 2 drowned, 1 flogged to death, and 8 manner unknown; 24 were charged with murder, 2 assault on woman, 15 attack on woman, 3 insulting woman, 1 attempted attack on woman, 1 attack on boy, 1 stabbing man, and 3 assaulting man.

"The Congress must provide the means of ending this cowardly crime. It is in punishing those who take part in it or who permit it. Congress has the power to enact this bill into law.

"The fourteenth amendment to the Constitution provides that no State 'shall deny to any person within its jurisdiction the equal protection of the laws,' and further provides that 'the Congress shall have power to enforce, by appropriate legislation, the provisions of this article.' It is well settled by decisions of the Supreme Court of the United States that the denial forbidden is not alone a denial by positive legislation but that 'no agency of the State or of the officers or agents by whom its powers are exerted shall deny to any persons within its jurisdiction the equal protection of the laws.'

"It is thus made the duty of the Congress under the Constitution to enact such laws as may be needful to assure that no State shall deny to any person within its jurisdiction the equal protection of the laws. Within the limits of the jurisdiction thus conferred the Congress has the right to exercise its discretion as to laws or what means can best accomplish the desired end.

"In nearly all cases of lynching the person put to death is taken by a mob from the sheriff, marshal, or other police officer of the State, whose failure to defend and protect him denies to him the equal protection of the laws.

"In Ex parte Virginia (100 U. S. 339, 346) the Supreme Court in a unanimous opinion by Mr. Justice Strong, speaking of the prohibitions of the fourteenth amendment, says:

"'They have reference to actions of the political body denominated a State, by whatever instruments or in whatever modes that action may be taken. A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision therefore must mean that no agency of the State or of the officers or agents by whom its powers are exerted shall deny to any person within its jurisdiction the equal protection of the laws. Whoever by virtue of public position under a State government deprives another of property, life, or liberty without due process of law, or denies or takes away the equal protection of the laws, violates the constitutional inhibition, and as he acts in the name and for the State, and is clothed with the State's power, his act is that of the State. This must be so or the constitutional prohibition has no meaning. Then the State has clothed one of its agents with power to annul or to evade it.

"'But the constitutional amendment was ordained for a purpose. It was to secure equal rights to all persons, and to insure to all persons the enjoyment of such rights power was given to Congress to enforce its provisions by appropriate legislation. Such legislation must act upon persons, not upon the abstract thing denominated a State, but upon the persons who are the agents of the State in the denial of the rights which were intended to be secured.' (See also the very recent cases of Home Telephone Co. v. Los Angeles, 227 U. S. 278, 290; Buchanan v. Worley, 245 U. S. 60, 77.)

"A distinguished southern judge has given this definition:

"'By "equal protection of the laws" is meant equal security under them to everyone in his life, his liberty, his property, and in the pursuit of happiness. It not only implies the right of each to resort on the same terms with others to the courts of the country for the security of his person and property, the prevention and redress of wrongs, and the enforcement of contracts, but also his exemption from any greater burdens and charges than such as are equally imposed on all others under like circumstances.'

"The Supreme Court of the United States says of this provision:

"'When the facts shown establish an administration directed so exclusively against a particular class of persons as to warrant and require the conclusion that, whatever may have been the intent of the laws as adopted, they are applied by the public authorities charged with their administration, and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of that equal protection of the laws which is secured to the petitioners as to all other persons, by the broad and benign provisions of the fourteenth amendment to the Constitution of the United States, though the law itself be fair on its face and impartial in appearance, yet if it is applied and administered by public authority with an evil eye and an unequal hand, so as practically to make unjust and illegal discriminations between persons in similar circumstances material to their rights, the denial of equal justice is still within the prohibition of the Constitution.'

"In another case the same court said:

"'An actual discrimination against a negro, on account of his race, by officers intrusted with the duty of carrying out the law is as potential in creating a denial of equality of rights as a discrimination made by law.'

"Article I, section 8, of the Constitution gave the Congress the power 'to provide for organizing, arming, and disciplining the militia and for governing such part of them as may be employed in the service of the United States,' as well as 'to provide for calling for the militia to execute the laws of the Union, suppress insurrections, and repel invasions,' but it was not until long after the adoption of the fourteenth amendment that our courts construed 'insurrections' to include mobs and riotous assemblages. Under these two provisions quoted there can be no doubt whatever as to the power of Congress to define and punish the crime of lynching.

"One can not conceive a more humiliating or shameful admission to be made by a Government claiming to be a sovereign State than the confession that it is without the power to make good the guaranty in its Constitution that no person shall be deprived of life, liberty, or property without due process of law. It is nevertheless the fact that in almost numberless instances our State Department has so stated in official communications to civilized nations like France, Spain, China, Italy, and Great Britain.

"The Congress has appropriated and the Government has paid to other Governments no less a sum than $792,499.39 to compensate the murder by lynching of their citizens by American mobs, and there are now with the Department of State unadjusted claims to a large amount for similar murders of Austrians, Greeks, Japanese, and Italians. Every diplomatic letter sent by our foreign office to another nation with regard to these claims has stated that the Federal Government is impotent to protect strangers within our borders and seeks to lay the blame on the State governments under which the lynchings have occurred. Every such letter admits the dereliction of Congress in not enforcing the guaranties of the fourteenth amendment and adds to the appeal to Congress to delay action no longer in enacting the legislation in contemplation when the fourteenth amendment was adopted in 1868.

"This sum of $792,499.39 was paid for less than 100 lives of foreigners taken by mobs. The inquiry is pertinent that if we have paid $800,000 for less than 100 murdered foreigners, how much has the country lost by the murders of 3,307 Americans killed by mobs since 1889?

"The bill reported by this committee seeks (1) to prevent lynchings as far as possible by punishing State and municipal officers who fail to do their duty in protecting the lives of persons from mobs; (2) to punish the crime of lynching; and (3) to compel the county in which the crime is committed to make compensation.

"Section 5 exacts from the county in which a person is lynched a penalty of $10,000, recoverable in an action directed to be brought by the district attorney in the name of the United States for the use of the dependent family, if any, and if there be no dependent family, for the use of the United States.

"Such provisions are common in State legislation and are justified as to citizens lynched by the fact that the penalty makes it to the interest of every taxpayer of the county to prevent the lynching.

"This section does nothing more than adopt the South Carolina and Ohio laws imposing a penalty on the county in which the laws against lynching have failed of enforcement, and such laws have been held constitutional in both States by their respective supreme courts, the law of South Carolina in Brown v. Orangeburg County (55 S. C. 45; 32 S. E. 764), and the Ohio law in Commissioners v. Church (62 Ohio St. 318). The committee can find no stronger argument for this remedy for an admitted evil than in the following words from the opinion of the Supreme Court of South Carolina:

"'It has been held that statutes making a community liable for damages in cases of lynchings and giving a right of recovery to the legal representatives of the person lynched are valid on the ground that the main purpose is to impose a penalty on the community, which is given to the legal representatives not because they have been damaged but because the legislature sees fit thus to dispose of the penalty. Such statutes are salutary, as their effect is to render protection to human life and make communities law-abiding."

Hon. Guy. D. Goff, assistant to the Attorney General of the United States, appeared before the committee on July 20 with reference to this bill. His statement, in part, is as follows:

"This bill seeks to confer upon the Federal courts jurisdiction to enforce the law and maintain the peace of the United States, which is nothing more than the so-called police power of the United States. You are familiar with that 'excursion,' if I may so term it, of the Supreme Court into the field of Federal police power. It was first announced in Gibbons v. Ogden (9 Wheat. 202), and has found definite application in the so-called white-slave cases. I recall those decisions distinctly because at that time I was engaged as an attorney for the United States in the interpretation and enforcement of the white slave law. In Gibbons v. Ogden, supra, Chief Justice Marshall (at p. 202) said: 'It is obvious that the Government of the Union in the exercise of its express powers * * * may use means that may also be employed by a State in the exercise of its acknowledged powers.' In the case which held the white slave law constitutional, Hoke against the United States (227 U. S. pp. 308 and 309), the court said:

"'While our dual form of government has its perplexities, State and Nation having different spheres of jurisdiction, we are one people and the powers reserved to the States and those conferred on the Nation are adapted to be exercised, whether independently or concurrently, to promote the general welfare, material and moral.

"'The white slave traffic act is a legal exercise of the power of Congress under the commerce clause of the Constitution and does not abridge the privileges or immunities of citizens of the States or interfere with the reserved powers of the States, especially those in regard to regulation of immoralities of persons within their several jurisdictions.'

"In Hoke v. United States (227 U. S. 308, 323), speaking expressly of the power of Congress over interstate transportation, it was said 'the power is complete in itself, and that Congress, as an incident to it, may adopt not only means necessary but convenient to its exercise, and the means may have the quality of police regulations.'

"And in Wilson v. United States (232 U. S. 563, 567), speaking of the white slave law, which was held constitutional, the court said:

"'As has already been decided, it has the quality of a police regulation, although enacted in the exercise of the power to regulate interstate commerce.'

"In Seven Cases of Eckman's Alterative v. United States (239 U. S. 510, 515) it was said:

"'Congress is not to be denied the exercise of its constitutional authority over interstate commerce, and its power to adopt not only means necessary but convenient to its exercise, because these means may have the quality of police regulations.'

"And an even more direct statement to this effect is:

"'Congress may establish police regulations as well as the States, confining their operations to the subjects over which it is given control by the Constitution; * * * Gloucester Ferry Co. v. Pennsylvania (114 U. S. 196, 215), citing Cooley's Constitutional Limitations, 732.'

"In other words, when necessary for the proper exertion of its express powers, Congress may use exactly the same means which the State may use for the exertion of its own powers. This is no new doctrine. In Gibbons v. Ogden, supra, it was said:

"'It is obvious that the Government of the Union, in the exercise of its express powers, that, for example, of regulating commerce with foreign nations and among the States, may use means that may also be employed by a State, in the exercise of its acknowledged powers; that, for example, of regulating commerce within the State.'

"And again, in the very recent case, Hamilton v. Kentucky Distilleries Co. (251 U. S. 146, 156) (decided December, 1919), involving the constitutionality of the war time prohibition act, Mr. Justice Brandeis, speaking for the court, stated the principle thus:

"'That the United States lacks the police power, and that this was reserved to the States by the tenth amendment is true. But it is none the less true that when the United States exerts any of the powers conferred upon it by the Constitution, no valid objection can be based upon the fact that such exercise may be attended by the same incidents which attend the exercise by a State of its police power, or that it may tend to accomplish a similar purpose.'

"We had a somewhat hazy comprehension of the police powers of the State and the corresponding rights of the Federal Government. This line of cases holds that there is a Federal police power. Now, if here is a Federal police power, it must be by virtue of some power conferred on the Federal Government by our Constitution. It was conferred in the White Slave cases by the commerce clause. I assume, therefore, in this argument that there is such a Federal police power, a concomitant, as it were, to preserve law and order, and to see that the laws are equally enforced, and to see that no man is denied or deprived of the common right to enjoy life, liberty, and property, and that such rights are conferred upon the Federal Government by the fourteenth amendment to the United States Constitution.

"A case which has caused some discussion is the case of James v. Bowman (90 U. S. 127). I refer to this case, first, because it may be cited in contradiction of the underlying principles of the statement I have made. This case involved the fifteenth amendment to the United States Constitution. It grew out of an indictment in the State of Kentucky, based upon section 5507 of the Revised Statutes of the United States, which sought to punish anyone who attempted to interfere with a person going to or from the polls, or intimidate those who sought to exercise their prerogative to vote as they saw fit. The Supreme Court held that the indictment was improvidently conceived and said that the fifteenth amendment, which reads 'the right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude" was an amendment which prohibited

the State but did not reach the individual. Such was the underlying principle which controlled and which differentiates this case from the other cases. Mr. Justice Brewer wrote the opinion and, in addition to holding that the fifteenth amendment was a curb upon the Federal and State Governments, expressly said that it did not in any sense relate to individuals. He recognized the undoubted existence of the police power of the State and, in the last lines of the decision, remarked that the act was unconstitutional because it was too broad in its terms.

"Congress, he concluded, has no power to punish bribery at all elections. The limits of its power are in respect to elections in which the Nation is directly interested, or in which some mandate of the National Constitution is disobeyed, and courts are not at liberty to take a criminal statute, broad and comprehensive in its terms, and in these terms beyond the power of Congress, and change it to fix some particular transaction for which Congress might have legislated, if it had seen fit.'

"The court recognized the rule, with which we are all familiar, that while a statute may be constitutional in some provisions and unconstitutional in others, the courts will hold it constitutional if they can separate, without destroying the purpose of the statute, the unconstitutional from the constitutional; or, if you prefer, that where a statute can not be separated or resolved into its constituent parts without committing judicial legislation, the courts will not, under such circumstances, attempt to hold the statute constitutional, but will declare it unconstitutional and deny the application of a comity rule of the judiciary, which strives to sustain legislation wherever possible. This case, as I say, recognized that where an inhabitant of a State attempted to interfere with the exercise of a general right which did not relate to a Federal election, that he was not guilty of violating this act. But I must draw this conclusion and emphasize it: I do not think the court attempted to decide that if the same acts so attempted under the broad general terms of the law, which the court felt constrained to hold as beyond the authority of Congress, had been attempted or accomplished in a specific general Federal election, that such acts would not have been a violation of the fifteenth amendment to the United States Constitution, obviously a law meeting the facts of such a situation would be constitutional. In Ex parte Virginia (100 U. S. 339, 346), construing the provisions of the fourteenth amendment, it was said:

"'They have reference to actions of the political body denominated a "State," by whatever instruments or in whatever modes that action may be taken. A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision, therefore, must mean that no agency of the State, or of the officers or agents by whom its powers are exerted, shall deny to any person within its jurisdiction the equal protection of the laws.'

"In view of that interpretation and merely for the purposes of convenience and accuracy, permit me to refer expressly to the amendment:

"'No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law: nor deny to any person within its jurisdiction the equal protection of the laws.'

"Justice Brewer in the Bowman case, referring to the leading case of Ex parte Virginia, supra, gives to the fourteenth amendment, clearly and unequivocally, this interpretation: That no State shall deprive any person—not as a mere abstract entity, but through its legislative, its executive, or its judicial functions—of life, liberty, or property. In other words, the fourteenth amendment to the Constitution of the United States, in so far as it guarantees to the people of this country life, liberty, and property, means that the legislative department of a State shall in no sense encroach upon such common rights; it means that the executive department—that is, any person empowered with the enforcement of legislative acts, be it a governor, sheriff, or police official, acting under the municipal law of a State—shall not deny to any person the rights which the fourteenth amendment pronounces shall be preserved, nor deny to any person the equal protection of the laws of that State.

"The learned justice also quotes from the very important case of United States *v.* Cruikshank (92 U. S. 542, 554). He adopts the statement:

"'The fourteenth amendment prohibits a State from denying to any person within its jurisdiction the equal protection of the laws; but this provision does not, any more than the one which precedes it and which we have just considered, add anything to the rights which one citizen has under the Constitution against another. The equality of the rights of citizens is a principle of republicanism. Every republican government is in duty bound to protect all its citizens in the enjoyment of this principle, if within its power. That duty was originally assumed by the States, and it still remains there. The only obligation resting upon the United States is to see that the States do not deny the right.'

"The State can deny this right through an executive officer as readily as it can through a legislative or a judicial act. If a State, acting through its highest judicial officers, denies this right, there is a direct appeal, if the record has properly raised the point, to the Supreme Court of the United States. If the legislative department denies the right, we know, of course, how the right is preserved and enforced.

"The mere fact that the Congress of the United States has never affirmatively, so far as I have been able to find, invaded the field, and by appropriate legislation under this constitutional provision sought to restrain the executive officers of the States from denying this right is no reason why Congress should not now take such appropriate action as will tend to protect their and similar rights. Therefore, without citing additional authorities, I unhesitatingly make this deduction:

"Wherever the Constitution has delegated to Congress certain rights and duties which Congress is permitted or bound to enforce and to carry out, the extent to which Congress may go in thus enforcing rights or fulfilling duties within the limitations prescribed by the Constitution is sufficiently great to permit of the exercise of a Federal police power, and the exercise of this Federal police power is neither repugnant to nor superior to the police power of the State. Each is concurrent with the other. Thus, if in the proper use of its taxing power, or in the constitutional regulation of commerce, or in the establishment of war-time rules, it becomes necessary to resort to measures which partake of the nature of or are, in fact, equivalent and similar to the police regulations of a State, Congress has the right to adopt such measures and to enforce them. How appropriately might the quotation from Gibbons *v.* Ogden be paraphrased to fit any of the express powers of Congress? Is it not a logical step to adopt this principle of constitutional law to the fourteenth amendment as to any other provision? If it be so applied, and if the aforementioned opinion be so paraphrased, is it not correct to say, with the great Chief Justice—

"'It is obvious that the Government of the Union, in the exercise of its express powers, that, for example, of providing to all citizens equal protection of its laws, may use means that may also be employed by a State in the exercise of its acknowledged powers.'

"In a word, it has been definitely established that there is a Federal police power; that Congress can invoke this power within the limits and according to the provisions of constitutional limitations; and that Congress having so invoked the power can enforce it to the fullest extent. If the State, in the mind of Congress, denies this right because all legislation assumes the existence of an evil to be corrected, then Congress, having legislatively determined that fact (and the courts will not consider whether Congress was or was not justified, but will assume because of Congress having passed appropriate legislation that the States have denied the rights in question), obviously, Congress possesses the authority under the fourteenth amendment and under the interpretation which the courts have given it to go forward and say that since the States of this country have denied to many people within their borders because of race and nationality the right to be protected in their property, in their lives, and their liberty, and have also denied them the equal protection of the laws, a necessity exists that not only justifies but compels adequate and appropriate legislation to the end that the people of our several States may enjoy and be secure in those rights which the organic law guarantees them.

"We have, as you know, a great many instances where a State takes jurisdiction before the Federal Government and where the Federal Government may have and take concurrent jurisdiction. Those are the cases where the same act is a crime against separate sovereignties. If one government proceeds to punishment before the other, the punishment of the first government is generally pleaded as 'an equitable defense' in criminal law to the imposition of a penalty by the other sovereignty, and I think that would be a case presenting possibly the situation you suggest. If Congress saw fit to pass a law which came within the meaning, as the courts have defined that meaning, of the fourteenth amendment, that then the courts could not conduct an inquiry as to whether Congress was justified in deciding what is generally termed a legislative fact. Congress, as we know, can take affirmative action or not upon many questions within its jurisdiction. I recall, as you will, the law relative to bankruptcy. A few years ago we had no national bankruptcy law, merely the State insolvency laws. The mere fact that Congress sees fit to decide that the time has come, within the life of this country as a sovereign Nation, to determine in favor of the affirmative exercise of a power which it has permitted to lie dormant is not to be questioned after Congress has so acted. Neither is the existence of the power to be questioned, merely because of congressional inaction, default, or neglect.

"The Supreme Court, speaking through Mr. Chief Justice Waite, in the case of the United States against Cruikshank (92 U. S. p. 542), said, addressing himself to a very exhaustive consideration of the fourteenth amendment:

"'The fourteenth amendment prohibits a State from depriving any person of life, liberty, or property without due process of law.'

"And from denying to any person within its jurisdiction the whole protection of the laws.

"'But this adds nothing to the rights of one citizen as against another. It simply furnished an additional guaranty against any encroachment by the States upon the fundamental rights which belong to every citizen as a member of society.'

"The duty of protecting all of its citizens in the enjoyment of rights was originally assumed by the States, and it still remains there. Will you please note this:

"'The only obligation resting upon the United States is to see that the States do not deny the right.'

"My conclusion is this: Must the Congress of this country sit supinely by when it knows that a State, either affirmatively or negatively, is denying that right? If the State omits to give or withholds protection through motives of indifference or inability, is the guaranty performed and the duty of the Federal Government discharged? In a word, is the fourteenth amendment meaningless because of State negativity? I hope not, and I think not. The Congress of the United States clearly is charged under the Constitution, as interpreted by the Supreme Court, with the duty of seeing that the States do not neglect this right. Then, if the Congress of the United States decides that the States have, by omission, neglect, in apacity, or local prejudice, if you please, failed to insure and secure to every citizen within those States the full protection of the laws and the right of life, liberty, and property, then does not the obligation arise to protect these rights?

"We are all familiar with that state of affairs where if the Congress of the United States—and it has recently decided it—concludes as a matter of fact that a republican form of government does not exist in a State because the State has not the means or the instrumentalities by which such forms of government are recognized and protected; that it, the Congress of the United States, has the right to go into that State and see that a republican form of government is maintained and preserved. It was done only recently, as you know, in the State of West Virginia, and a committee of the Senate of the United States, merely upon a determination of the legislative fact that a republican form of government did not exist there, invaded the State to see whether the State was properly enforcing its laws under its constitution and the Constitution of the United States.

"If a State omits affirmatively to legislate upon such questions, it has denied this protection by not taking affirmative action; if it takes affirmative action and does not enforce that action, or if it says it will take no action because, within the judgment of the State, no action along those lines should be taken, then I say the Federal Government can say to that particular State, 'You have denied negatively,' 'You have failed to give,' 'You have defaulted,' if I may so phrase it, 'to the citizens of these States the protection that the Constitution of the United States, as interpreted by the Supreme Court, says they are entitled to receive.' Now, I contend that under the general police power, the Federal Government may go in, and, side by side with the States, as it does in bankrupcty, aid the States in securing the protection which for any reason the local governments can not give.

"The Federal Government was given the power to curb the States in these particulars—and the States reserved the correlative right to so 'police' its citizens that in maintaining order it would not deprive any person of life, liberty, or property. And if it fails to preserve these rights—and the Congress concludes that such rights are denied the people and that they are deprived of due process of law, no matter the cause—then are we to be told that these guaranties can not be enforced by appropriate legislation?

"Section 5 of the fourteenth amendment says:

"'The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.'

"This has received special consideration in Logan *v.* United States (144 U. S. 263, 293), where Mr. Justice Gray stated its meaning to be:

"'Every right created by, arising under, or dependent upon the Constitution of the United States may be protected and enforced by Congress by such means and in such manner as Congress, in the exercise of the correlative duty of protection, or of the legislative powers conferred upon it by the Constitution may, in its discretion, deem the most eligible and best adapted to attain its object.'

"There is a limitation, however, in the amendment itself upon the power of Congress. The clause of the amendment under consideration provides that Congress may enforce the provisions of the amendment by 'appropriate legislation,' and the right to judge what is appropriate legislation rests with the lawmaking body of the Government—that is, with Congress.

"Mr. Justice Lamar, in United States *v.* Sanger, said:

"'The provision of the fourteenth amendment authorizing Congress to enforce its guaranties by legislation means such legislation as is necessary to control and counteract State abridgement.'

"The Supreme Court of the United States has held that Congress would have no right to provide for the enforcement of the provisions of this amendment in the following cases:

"'When the State has been guilty of no violation of its provisions; when it has not made or enforced any law abridging the privileges or immunities of citizens of the United States; when no one of its departments has deprived any person of life, liberty, or property without due process of law or denied to any person within its jurisdiction the equal protection of the laws; when, on the contrary, the laws of the State as enacted by its legislative and construed by its judicial and administered by its executive departments recognize and protect the rights of all persons the amendment imposes no duty and confers no power upon Congress.'

"But by implication when a State has been guilty of violating any of the above provisions then Congress may provide for the enforcement of the provisions of the amendment.

"In Ex parte Virginia, supra, Mr. Justice Strong stated the rule to be:

"'Congress is authorized to enforce the prohibitions by appropriate legislation. Some legislation is contemplated to make the amendments fully effective. Whatever legislation is appropriate—that is, adapted to carry out the objects the amendments have in view—whatever tends to enforce submission to the prohibitions they contain, and to secure to all persons the enjoyment of perfect equality of civil rights and equal protection of the laws against State denial or invasion, if not prohibited, is brought within the domain of congressional power.'

"In McCray *v.* United States (195 U. S. 27) the authorities are reviewed and reference is especially made to Ex parte McCardle (7 Wallace, 506), where the court said:

"'We are not at liberty to inquire into the motives of the legislature. We can only examine into its power under the Constitution; and the power to make exceptions to the appellate jurisdiction of this court is given by express words.'

"The courts have no right to question the expediency or the reasonableness of legislation. In Treat *v.* White (181 U. S. 264) the court said:

"'The power of Congress in this direction is unlimited. It does not come within the province of this court to consider why agreements to sell shall be subject to the stamp duty, and agreements to buy not. It is enough that Congress, in this legislation, has imposed a stamp duty upon this one and not upon the other.'

"When Congress determines upon the question what its legislative judgment should be, that Congress takes into consideration not the facts which exist in some one State, to the exclusion of facts existing in another State, but that Congress takes into consideration what is the greatest good for the greatest number.

"Congress must be charged sometimes with altruism when it legislates upon any great question; Congress must not be charged with having taken into consideration conditions in one State to the exclusion of conditions in another, because if it did it would be guilty of penalizing a State where, possibly, the legislation would not affect the individuals of that State for the benefit of the greater number of the people of the United States.

"The words 'necessary and proper' have been held as endowing the Federal Government with every authority the exercise of which may in any way assist the Federal Government in effecting any of the purposes the attainment of which is within its constitutional sphere. In United States *v.* Fisher (2 Cranch, 358), decided in 1804, Chief Justice Marshall declared:

"'It would be incorrect and would produce endless difficulties if the opinion should be maintained that no law was authorized which was not indispensably necessary to give effect to a specified power. Where various systems might be adopted for that purpose it might be said with respect to each that it was not necessary, because the end might be obtained by other means. Congress might possess the choice of means which are in fact conducive to the exercise of a power granted by the Constitution.'

"Take the condition that exists in this country to-day. There is not a State—of course, this is a mere truism—that has not a law against murder. Now, in the act which bears the name of your distinguished chairman there are provisions which confer jurisdiction upon the Federal Government to prosecute assaults upon officers engaged in the enforcement of that act. There is a question in the minds of many people whether or not that act should not have conferred upon the Federal Government the right to prosecute cases of murder. It does concede the right to prosecute assaults. Now, I have in mind a case where men living in a certain State shot down, as they claimed in self-defense, the officers of the law who came to search their premises for intoxicating liquor. These men have been tried twice for murder in the State court and the juries have disagreed. The law has not been popular in that State. Now, suppose the condition which exists in the State to which I refer were found to exist in other States of the Union. It is only an easy step to the psychology of our people. We know that the way the people of one State of this Union view a given state of facts is likely to be the view entertained in other sections of the country, unless you should give the facts a political coloring, which this act does not, because it would be based upon the Constitution, and apply to all—red, white, and black—citizen, alien, resident, and inhabitant. Now, in view of the general knowledge of the so-called unpopularity everywhere of this law, Congress could pass a law conferring upon the Federal courts the right to punish murder wherever officers enforcing that law were assaulted and killed.

"If Congress did that, who could question the judgment of Congress? I do not see who could run 'along the highway' and say Congress was not justified in doing this, because in the New England States or in the Southern States they do not shoot down men so engaged. I do not think we should or that we could make it in any sense a sectional question, because we are all the same people; we all entertain the same views of life in the final, ultimate analysis. Our late World War demonstrated that. We forgot our politics; we were American citizens for the once, and we forgot that we had ever been Democrats and Republicans. We met the same situation in the same way. There may be differences depending upon temperament or environment, because, after all, we are initially the products of the conditions that started us, brought us up, and pushed us forward in this great fight in life, but when all of that is ironed out we are the same. So I say that when you find conditions existing in one State you can conclude legislatively as well as actually that if the same 'cause irritant' makes its appearance in the other State you will find the same conditions in its train.

"The fact that such acts carried a penalty might in their deterrent effect prevent just such crimes. If a mob, in defiance of law, destroys property or commits arson, is the taxpayer without remedy because the authorities were ignorant?

"In Crandall *v.* Nevada (6 Wallace, 35) the court discusses and classifies some of the distinctively Federal rights. It is said to be the right of the citizen, protected by implied guaranties of the Constitution, 'to come to the seat of government to assert any claim he may have upon the Government, to transact any business he may have with it, to seek its protection, to share its offices, to engage in administering its functions. He has the right of free access to its seaports, through which all operations of foreign countries are conducted, to the subtreasuries, land offices, and courts of justice in the several States.'

"And in the Slaughterhouse cases (16 Wallace, 36, 79) it is said:

"'Another privilege of a citizen of the United States is to demand the care and protection of the Federal Government over his life, liberty, and property when on the high seas or within the jurisdiction of a foreign Government. Of this there can be no doubt, nor that the right depends upon his character as a citizen of the United States. The right to peacefully assemble and petition for redress of grievances, the privilege of the writ of habeas corpus, are rights of the citizen guaranteed by the Federal Constitution. The right to use the navigable waters of the United States, however they may penetrate the territory of the several States, all rights secured to our citizens by treaties with foreign nations, are dependent upon citizenship of the United States, and not citizenship of a State. One of these privileges is conferred by the very article under consideration. It is said that a citizen of the United States can of his own volition become a citizen of any State of the Union by a bona fide residence therein, with the same rights as other citizens of that State.'

"In Maxwell *v.* Dow (176 U. S. 581) the court in its majority opinion announced that the mere fact that a certain privilege was granted against Federal infringement did not operate to make such privileges distinctively Federal in character. In that case Justice Harlan delivered one of his famous dissenting opinions based upon the proposition that the privileges and immunities enumerated in the first eight amendments of the Constitution belong to every citizen of the United States. However, in the course of the majority opinion delivered by Mr. Justice Peckham the language of the court In re Kemmler (136 U. S. 436, 448) was repeated and approved. It will be observed that the decision turns upon the question whether the trial of a person accused as a criminal by a jury of only 8 persons instead of 12 was an encroachment by the State upon those fundamental rights inhering in citizenship and which the State governments were created to secure. The court said:

"'The fourteenth amendment did not radically change the whole theory of the relations of the State and Federal Governments to each other, and of both Governments to the people. The same person may be at the same time a citizen of the United States and a citizen of a State. Protection to life, liberty, and property rests primarily with the States, and the amendment furnishes an additional guaranty against any encroachment by the States upon those fundamental rights which belong to citizenship and which the State governments were created to secure. The privileges and immunities of citizens of the United States, as distinguished from the privileges and immunities of citizens of the States, are indeed protected by it; but those are privileges and immunities arising out of the nature and essential character of the National Government and granted or secured by the Constitution of the United States.'

"Obviously, if the State by direct legislation abridged any of these rights, the act would encroach on the privileges protected. The State would then positively violate the Federal provisions. But does the State not violate and render meaningless the provisions of the amendment by neglecting to legislate, refusing to enforce its laws, or by allowing its laws and its officials to drift into a condition of utter helplessness and indifference? Are 'citizens' and 'persons' to be thus deprived of life, liberty, and property when the people of the States have clothed the Federal Government with power to see that they, the States, do not deny such rights, and have expressly empowered the Congress and directed it 'to enforce' such commands by appropriate legislation?"

We quote some additional authorities as to the constitutionality of the antilynching bill submitted by Hon. MERRILL MOORES:

"The case of James *v.* Bowman (190 U. S. 127) is not in point as to the proposed antilynching bill, for the reason, in addition to those stated by Colonel Goff, that it concerns a statute based solely on the fifteenth amendment, while the proposed bill is based on the fourteenth amendment, which is totally different in its provisions.

"The fourteenth amendment guarantees that no State 'shall deny to any person within its jurisdiction the equal protection of the laws,' a guaranty equivalent to one that each State shall secure to every person within its jurisdiction the equal protection of the laws.

"The fifteenth amendment is as follows:

"'The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.' To enforce this provision Congress enacted Revised Statutes 5507, to punish 'every person who prevents, hinders, controls, or intimidates another from exercising or in exercising the right of suffrage, to whom that right is guaranteed by the fifteenth amendment to the Constitution of the United States, by bribery or threats,' etc.

"Certain men were indicted under this statute for bribing colored voters of Kentucky not to vote at a congressional election. The court held that under the amendment providing that the right of citizens to vote shall not be denied or abridged on account of race, color, etc., the Congress could not pass a statute punishing election bribery of negroes. It is hardly worth while discussing the propriety of this decision, in view of the fact that it has no bearing at all on the questions at issue.

"The fourteenth amendment forbids the withholding of the equal protection of the law by any State to any person within its jurisdiction. This bill simply provides that the State governments shall treat all persons within their jurisdiction alike in discharging the highest function of government, the protection of life and liberty of the governed.

"The first principle stated in the Declaration of Independence is as follows:

"'We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed.'

"In framing the Constitution, our fathers, recognizing that governments are instituted among men to secure the rights of life, liberty, and the pursuit of happiness, stated in the preamble its purpose to be to form a perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

"With these principles as their purpose, all the State governments were established and the principles are restated in every State constitution.

"The fourteenth amendment is simply declaratory of the principle that a State in which life, liberty, and property are not protected for every person within its boundary does not perform the first and greatest function of government—the protection of the personal rights of the governed. It is for this purpose that all State officers are chosen and paid. It is for this that taxes are collected and the States policed.

"It goes without saying that in a civilized government like ours if any person is assaulted, beaten, maimed, or lynched by a mob, some officer whose sworn duty it is to enforce the laws has been derelict in his duty and has violated his official oath. The often-quoted words of Mr. Justice Matthews in the Yick Wo case are in point as to the moral liability of the State for the dereliction of its officer:

"'Whatever may have been the intent of the ordinances as adopted, they are applied by the public authorities charged with their administration and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of that equal protection of the laws which is secured to the petitioners, as to all other persons, by the broad and benign provisions of the fourteenth amendment to the Constitution of the United States. Though the law itself be fair on its face and impartial in appearance, yet if it is applied and administered by public authority with an evil eye and an unequal hand so as to make unjust and illegal discriminations between persons in similar circumstances, material to their rights, the denial of equal justice is still within the prohibition of the Constitution.' (Yick Wo *v.* Hopkins, 118 U. S. 356, 373.)

"This language has been quoted with approval by the same court in construing a cigarette law of Tennessee unequally enforced. (Austin *v.* Tennessee, 179 U. S. 343, 350.)

"It has also been followed in its reasoning in the Los Angeles Gas Works case. (Dobbins *v.* Los Angeles, 195 U. S. 223, 240.)

"It was again quoted and followed in the Wisconsin Salvation Army case. (Re Garrabad, 84 Wis. 592–593; 36 Amer. St. 952, 953; 19 L. R. A. 858, 864.)

"It was followed again in the trial of Caleb Powers, where, in a community almost equally divided in politics, Powers being on trial on a charge of the murder of a political opponent, no member of the political party with which Powers was identified was drawn on the jury in three successive trials. (Commonwealth *v.* Powers, 139 Fed. 452, 461. See also In re Orozco, 201 Fed. 106, 117.)

"The Supreme Court of the United States has repeatedly stated that the last clause of the first section of the fourteenth amendment guarantees the equal protection of the laws by the States to all persons within their jurisdiction. The common definition of a guaranty is 'an agreement by one person to answer to another for the debt, default, or miscarriage of another.' Mr. Justice Story thus defined it:

"'A guaranty is the collateral undertaking by one person to be answerable for the payment of some debt or the performance of some duty or contract for another person, who stands first bound to pay or perform.' (2 Story, Contracts, 5th ed. 319.)

"Under the Constitution the States, by ratifying the fourteenth amendment, have bound themselves to perform and discharge the duty of affording to all persons within their respective boundaries the equal protection of the laws, and the Federal Government has guaranteed the performance. The duty to perform is a positive, affirmative duty of equal protection. Wherever this duty is not performed, regardless of the excuse, there is a breach by the State of the contract, and the obligation falls on the guarantor, the Federal Government, to assure performance.

"The Supreme Court has laid down the rule of construction as to guaranties that 'the words of the guaranty are to be taken as strongly against him (the guarantor), as the sense will admit.' (Drummond *v.* Prestman, 12 Wheat. 515, 518.) If this is the rule as to the guarantor, it goes without saying that it is also binding on the principal debtor.

"The general rule as to the liability of private corporations for torts committed by agents within the scope of their authority (briefly and well stated in 10 Cyc. 1205, 1222) certainly furnishes an analogy where a constitutional guaranty had been given by State and Nation for performance by the State. As to cases in point there is a paucity of authority, due to the fact that neither State nor Nation may be sued without its consent. There are, however, cases fully in point.

"The State of New York, having constructed or acquired certain canals, consented to be sued as to claims 'for damages sustained from the canals, from their use and management, or arising from the neglect of an officer in charge, or from any accident or other matter connected therewith,' excluding, however, 'claims arising from damages resulting from the navigation of the canals.' In Rexford *v.* State (105 N. Y. 229), Rexford, while navigating a canal boat on the Erie Canal, left his boat at Syracuse to obtain a clearance, and, returning to his boat, was severely injured by the fact that the agents of the State had negligently permitted a ladder to become unsafe. The court held the State liable for the negligence of the officers charged with the duty of keeping the canal and its appurtenances in order.

"For a stronger case in point, see Gibney *v.* State (137 N. Y. 1; 19 L. R. A. 365). See also as to the liability of a State for the negligence of an officer or agent: Green *v.* State (73 Calif. 29); Chapman *v.* State (104 Calif. 690; 43 Amer. St. 158); note to Houston *v.* State (42 L. R. A. 65–69); 36 Cyc. 882, n. 16.

"These cases are all to the effect that where a State consents to be sued in tort it becomes liable as a private corporation for the negligence of an officer or agent as to acts within the line of his duties.

"As to the right of the United States to sue a State or a county there can be no question. (United States *v.* North Carolina, 136 U. S. 211; United States *v.* Texas, 143 U. S. 621; United States *v.* Michigan, 190 U. S. 379; Lincoln County *v.* Luning, 133 U. S. 529.)

"Originally a State might be sued by a citizen of another State. (Chisholm *v.* Georgia, 2 Dall. 419.)

"This decision led to the adoption of the eleventh amendment, which provides:

"'The judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State, or by citizens or subjects of any foreign State.'

"It will be noted that this amendment takes away the right neither of the United States nor of any other State to sue a State, but simply restricts the right of citizens of other States to bring suits.

"As to the constitutionality of statutes imposing a penalty upon counties or municipalities for lynching or mob violence, the following additional authorities are submitted: Dale County *v.* Gunter (46 Ala. 111); De Kalb *v.* Smith (47 Ala. 407); Cantey *v.* Clarendon County (101 S. C. 141); Atchison *v.* Twine (9 Kans. 350); Cherryvale *v.* Hawman (80 Kans. 170; 23 L. R. A. (N. S.) 645); P., C., C. & St. L. Ry. Co. *v.* Chicago (242 Ill. 178; 44 L. R. A. (N. S.) 358; 11 Cyc. 500, 501).

"To summarize the argument it would appear that the United States, by the joint action of the States, has guaranteed that no State shall deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"It further appears that every State maintains a system of policing the State for the protection of life, liberty, and property, and that in certain of the States the equal protection of the law is, and for years has been, denied. There can be no question that the denial to persons of a class of the equal protection of the laws by officers of or under the State charged with their equal enforcement is the act of the State, and that the failure of the State, through its officers, to give the equal protection of its laws to a class must justify the intervention of the United States under the fourteenth amendment to carry out its guaranty of equal protection.

"In bringing this brief reference to authorities to a conclusion it is proper again to refer to two propositions of law laid down by the Supreme Court as to constitutional questions, the first quoted being in the words of Mr. Justice Bradley and the second in those of Mr. Chief Justice Marshall:

"'We hold it to be an incontrovertible principle that the Government of the United States may by means of physical force exercised through its official agents execute on every foot of American soil the powers and functions that belong to it.' (Ex parte Siebold, 100 U. S. 371, 395.)

"'Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adopted to that end, which are not prohibited but consistent with the letter and spirit of the Constitution, are constitutional.'" (McCullough *v.* Maryland, 4 Wheat. 316, 421.)

DEPARTMENT OF JUSTICE,
OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., August 9, 1921.

Hon. A. J. VOLSTEAD,
Chairman Committee on the Judiciary,
House of Representatives.

MY DEAR MR. VOLSTEAD: I beg to acknowledge receipt of your letter of the 26th ultimo, transmitting a copy of House Resolution 13, to secure to persons within the jurisdiction of every State the equal protection of the laws and to punish the crime of lynching, and inviting suggestions and recommendations with a view to making the bill more effective or to avoid possible constitutional objections.

While under the statutes governing my office I am not authorized to give an official opinion to your committee relative to the bill, my interest in securing to persons within the jurisdiction of every State the equal protection of the laws, especially with reference to lynching, is so great that I feel warranted in submitting to you as my personal and not official opinion certain thoughts which have occurred to me as the result of a somewhat hasty examination of the bill.

As pointed out by Colonel Goff in his statement before your committee, the first seven sections, providing for the removal of cases under certain conditions to the Federal courts, and providing for the punishment of persons obstructing or resisting officers of the United States, are in effect but elaborations of existing law. They appear to be well drafted and within the competency of Congress to enact.

Considerable discussion has taken place as to the constitutionality of the proposed legislation, it being contended that the fourteenth amendment gave Congress power to legislate so as to prevent a denial of the equal protection of the laws by the States and not as to acts of individuals not clothed with State authority. In support of this proposition the following cases have been cited: United States *v.* Cruikshank (92 U. S. 542); Virginia *v.* Rives (100 U. S. 313); Ex parte Virginia (100 U. S. 339); Civil Rights cases (109 U. S. 3); United States *v.* Harris (106 U. S. 629); James *v.* Bowman (190 U. S. 127); Hodges *v.* United States (203 U. S. 1); United States *v.* Wheeler (254 U. S. 281).

Colonel Goff has very thoroughly gone over this question in his statement before your committee, and I heartily concur in the views he there expressed. It will be observed that in the cases above cited the court holds that the State may act through its legislative, its judicial, or its executive authorities, and the act of any one of these is the act of the State. This is concisely set forth in the opinion of the court in Ex parte Virginia (100 U. S. 339, at 346):

"We have said the prohibitions of the fourteenth amendment are addressed to the States. They are, 'No State shall make or enforce a law which shall abridge the privileges or immunities of citizens of the United States, * * * nor deny to any person within its jurisdiction the equal protection of the laws.' They have reference to actions of the political body denominated a State, by whatever instruments or in whatever modes that action may be taken. A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision, therefore, must mean that no agency of the State or of the officers or agents by whom its powers are exerted shall deny to any person within its jurisdiction the equal protection of the laws. Whoever, by virtue of public position under a State government, deprives another of property, life, or liberty without due process of law, or denies or takes away the equal

protection of the laws, violates the constitutional inhibition, and as he acts in the name and for the State and is clothed with the State's power his act is that of the State. This must be so or the constitutional prohibition has no meaning. Then the State has clothed one of its agents with power to annul or to evade it."

Of course, if the act of one of these agencies of the State is a denial of the equal protection of the laws, since the act of such agent is the act of the State itself, such act is within the prohibition of the fourteenth amendment to the Constitution. The authorities above cited hold that a statute that prohibits the act of an individual, irrespective of any action by the State or its officers, is beyond the power of Congress to enact under this fourteenth amendment. To my mind there can be no doubt that negativity on the part of the State may be, as well as any act of a positive nature by such State, a denial of the equal protection of the laws, and thus be within the prohibition of the fourteenth amendment so as to give Congress power to act with reference to it. That such was in the mind of the court when pronouncing the decisions above cited is clearly shown by the following excerpts from the opinion of the court, speaking through Mr. Justice Bradley, in the Civil Rights cases, supra, at pages 13 and 14:

"In fine, the legislation which Congress is authorized to adopt in this behalf is not general legislation upon the rights of the citizen, but corrective legislation; that is, such as may be necessary and proper for counteracting such laws as the States may adopt or enforce, and which, by the amendment, they are prohibited from making or enforcing, or such acts and proceedings as the States may commit or take, and which, by the amendment, they are prohibited from committing or taking. It is not necessary for us to state, if we could, what legislation would be proper for Congress to adopt. It is sufficient for us to examine whether the law in question is of that character.

"An inspection of the law shows that it makes no reference whatever to any supposed or apprehended violation of the fourteenth amendment on the part of the States. It is not predicated on any such view. It proceeds ex directo to declare that certain acts committed by individuals shall be deemed offenses and shall be prosecuted and punished by proceedings in the courts of the United States. It does not profess to be corrective of any constitutional wrong committed by the States; it does not make its operation to depend upon any such wrong committed. It applies equally to cases arising in States which have justest laws respecting the personal rights of citizens, and whose authorities are ever ready to enforce such laws, as to those which arise in States that may have violated the prohibition of the amendment. In other words, it steps into the domain of local jurisprudence and lays down rules for the conduct of individuals in society toward each other, and imposes sanctions for the enforcement of those rules, without referring in any manner to any supposed action of the State or its authorities."

And again, at page 23:

"Many wrongs may be obnoxious to the prohibitions of the fourteenth amendment which are not, in any just sense, incidents or elements of slavery. Such, for example, would be the taking of private property without due process of law; or allowing persons who have committed certain crimes (horse stealing, for example) to be seized and hung by the posse comitatus without regular trial; or denying to any person or class of persons the right to pursue any peaceful avocations allowed to others."

My examination of the proposed legislation causes me to believe that all of its provisions are predicated upon some action—either negative or positive—upon the part of the States and that therefore the same is wholly within the competency of Congress to enact.

Section 10 imposes a penalty upon every county in which an unlawful killing occurs, and section 11 imposes a like penalty on every county through which the victim may be carried before being put to death. While the question whether the United States may penalize an instrumentality of a political subdivision of a State may cause some doubt, it is at least an open one so far as the decisions of the Supreme Court are concerned. There has been conferred on Congress the power by appropriate legislation to enforce the prohibitions of the fourteenth amendment, and the imposition of penalties is a well-established means of enforcing the laws, and is so recognized by numerous decisions of all courts and is no doubt an appropriate method of so enforcing the law. This being true and the States having consented by their adoption of the provisions of the Constitution and its amendments to such enforcement of the law by the Federal Government, it would seem there could be but little question of the power of Congress to provide for such penalties.

Section 12 and section 13 provide for the punishment of State and municipal officers who fail in their duty to prevent lynchings or who suffer persons accused of crime to be taken from their custody for the purpose of lynching. These sections seem to me to strike at the heart of the evil, namely, the failure of State officers to perform their duty in such cases. The fourteenth amendment recognizes as preexisting the right to due process of law and to the equal protection of the law and guaranties against State infringement of those rights. A State officer charged with the protection of those rights who fails or refuses to do all in his power to protect an accused person against mob action denies to such person due process of law and the equal protection of the laws in every sense of the term. The right of Congress to do this is fully sustained by the decision of the court in Ex parte Virginia, supra. (See pp. 346, 347.)

Section 15, providing for the punishment of unlawful acts committed against citizens or a subject of a foreign country, meets a long-standing need which has been expressed by a number of Presidents. In Missouri v. Holland (252 U. S. 416) the court has upheld the power of Congress to enact laws necessary and appropriate to the effectuating of treaties.

I am, in a separate letter, to which is attached a copy of the proposed bill, calling attention to some slight modifications that I am taking the liberty to suggest, most of them being directed to matters of clarity in such proposed legislation.

Yours very truly,

H. M. DAUGHERTY, *Attorney General.*

The committee, in considering the constitutional questions involved, has had the benefit of certain briefs prepared and filed by eminent lawyers.

Mr. Moorfield Storey, of Boston, submitted a brief from which we quote:

THE REMEDIES.

It is clearly idle to hope that the Constitution can be amended so as to increase the powers of Congress in this matter. The States where racial prejudice prevails are too numerous.

The alternative therefore is clear. Either Congress has the power to pass effective legislation against lynching or the United States can not protect its own citizens from murder and their property from destruction at the hands of their fellow citizens who are subject to its jurisdiction. It can impose burdens, but it can not defend rights. It can tax, but it can not save the taxpayer. That lynching is a nation-wide evil, that no action by the States can be expected, and that the evil should be abated for the sake of the Nation quite as much as for the sake of those who suffer by it must be conceded.

To admit that the Nation is powerless to abate such an evil and to protect its own citizens is to admit that our Government is weaker than any other civilized government. This is an admission which we should be ashamed to make.

We should therefore expect to find that the National Legislature has power to end a national abuse in the interest of the Nation. Salus populi suprema est lex is the rule which should control our actions.

There are three sources from which the power to pass this law may be derived.

THE FOURTEENTH AMENDMENT.

The one which is generally considered first in any discussion of the question is the fourteenth amendment of the Constitution, of which the first section reads as follows:

"All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privilege or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

The last section of the amendment expressly gives Congress the "power to enforce by appropriate legislation the provisions of this article." This grant of power can not be ignored.

It is not necessary to point out that this amendment was adopted in order to assure to the freedmen the rights of American citizens. The language of the amendment makes them American citizens first, and apparently as a consequence citizens of the State in which they reside. It forbids the abridgment of the rights belonging to "American citizens," and it is evident that importance was attached to their position as citizens of the United States.

The situation which this amendment was intended to meet was a very practical one, and the amendment should receive a construction equally practical, a construction calculated to accomplish its purpose, not to defeat it. The enfranchised negroes were dwelling in communities where they had been held as slaves, and in those communities had been regarded and treated as chattels, not as men. Their elevation to the rank of citizens was regarded with absolute hostility, and it was clear that their rights would not be protected unless they were maintained by the United States. The amendment was passed to secure these rights and to give Congress the power to maintain them. It never was the intention of the people who adopted the amendment that the States so recently in rebellion should be able to nullify the amendment by simple nonaction, and should be able to plead that the persons who trampled on the new citizens were merely private persons for whose acts the State was not responsible.

The rule laid down by Chief Justice Marshall should be applied. When speaking of the Constitution he said:

"This instrument contains an enumeration of powers expressly granted by the people to their Government. It has been said that these powers ought to be construed strictly, but why ought they to be so construed? Is there one instance in the Constitution which gives countenance to this rule? * * * If from the imperfection of human language there should be serious doubts respecting the extent of any given power, it is a well-settled rule that the objects for which it was given, especially when those objects are expressed in the instrument itself, should have great influence in the construction. * * * We know of no rule for construing the extent of such powers other than is given by the language of the instrument, which confers them taken in connection with the purposes for which they are conferred." (Gibbons v. Ogden, 9 Wheaton 187, 188.)

Speaking of the power to regulate commerce, he says, at page 196:

"This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed by the Constitution. * * * The wisdom and the discretion of Congress, their identity with the people, and the influence which their constituents possess at elections are in this as in many other instances, as that for example of declaring war, the sole restraints on which they have relied to secure them from its abuse. They are the restraints on which the people must often rely solely in all representative governments."

Again, at page 204:

"It is obvious that the Government of the Union, in the exercise of its express powers, * * * may use means that may also be employed by a State in the exercise of its powers."

We must inquire what action by the State was contemplated and forbidden. How could the State deprive a person of life? No one could have supposed that these words were intended to forbid a law decreeing the death of an individual or a group of individuals, nor was a law directly taking liberty or property at all probable.

"The denial of rights given by the fourteenth amendment need not be by legislation." (Saunders v. Shaw, 244 U. S. 317, p. 320.)

The judicial power ex vi termini could not act without process of law.

The action forbidden by these words must be the acts of individuals who, whether officers of the State or private persons, would under the laws of any State be criminals if they took either life, liberty, or property without due process of law. Such acts are murder, assault, and robbery or larceny. No words better describing lynching and mob violence can be framed than "taking life, liberty, or property without due process of law." This difficulty was met very early.

In Ex parte Virginia (100 U. S. 339, 346) the Supreme Court, in a unanimous opinion by Mr. Justice Strong, speaking of the prohibitions of the fourteenth amendment, says:

"They have reference to actions of the political body denominated a State, by whatever instruments or in whatever modes that action may be taken. A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision, therefore, must mean that no agency of the State, or of the officers or agents by whom its powers are exerted, shall deny to any person within its jurisdiction the equal protection of the laws. Whoever, by virtue of public position under a State government, deprives another of property, life, or liberty without due process of law, or denies or takes away the equal protection of the laws, violates the constitutional inhibition; and as he acts in the name and for the State and is clothed with the State's power, his act is that of the State. This must be so, or the constitutional prohibition has no meaning. Then the State has clothed one of its agents with power to annul or to evade it.

"But the constitutional amendment was ordained for a purpose. It was to secure equal rights to all persons; and to insure to all persons the enjoyment of such rights power was given to Congress to enforce its provisions by appropriate legislation. Such legislation must act upon persons, not upon the abstract thing denominated a State, but upon the persons who are the agents of the State in this denial of the rights which were intended to be secured."

If the officers and people of a State sit quietly by, year after year let lynchers murder, rob, and destroy and never take any steps to prevent them; if their governors, as have the Governors of Georgia, Mississippi, and other States, declare that they have no power to prevent them; if they never try to exercise such power, if the lynchers are known and never punished but on the other hand praised, is not the State, the body of citizens who elect the legislature, the judges, and all the officers of the State, are not they privy to and responsible for these crimes? If not, how can the State do what the amendment forbids? Well did President Wilson, in his appeal to the people against lynching, say, "It can not live where the community does not countenance it."

Suppose a State were to pass a law providing that its officers should surrender negroes charged with crimes to mobs bent on lynching them, and that no person taking part in lynching a colored man should be prosecuted for any offense, would not such legislation justify action by Congress? What practical difference is there between such a law passed by the legislature and the practice which prevails by common consent?

How little sympathy the community has with any attempt to protect the rights of these citizens may be gathered from the minority report of the House Judiciary Committee on the Dyer bill, which is signed by five members and is very brief. It contains no recognition of the evil, no expression of regret at the outrages which have continued so long, no suggestion that there is any hope of changing these conditions by the action of the States themselves. It simply denies the power of Congress to pass the law, and with a certain naïveté says that this proposed intervention of the Federal Government "would tend to destroy that sense of local responsibility for the protection of person and property and the administration of justice from which sense of local responsibility alone protection and governmental efficiency can be secured among free peoples."

It is almost humorous to think that these gentlemen dread the destruction of a "sense of local responsibility" which has in many years never punished a lyncher.

Coming next to the clause which forbids the State to deny to any person the equal protection of the laws. Can not that denial be made as well by inaction as by action; by omission to act as well as by deed; by gross negligence as well as by misfeasance?

Does not this amendment impose upon the State a duty to protect? Must it not pass the laws which give protection, and must it not see that those laws are enforced? Every civilized community employs policemen to protect its citizens against criminals. If in any State or city the protection of the police is not given to one class of citizens, if those who attack, kill, or rob them are never arrested or punished, if this goes on for years and the community acquiesces, though having the power by changing its officers to afford that protection, is not the class so treated deprived of the protection to which it is entitled—"the equal protection of the laws"?

The Supreme Court has said that an actual discrimination against a negro on account of his race by officers intrusted with the duty of carrying out the law "is as potential in creating a denial of equality of right as a discrimination made by law." (Tarrana *v.* Florida, 188 U. S. 519, at p. 520.)

The sheriff who does not defend the jail against a mob, the officers who do not resist the persons who take a prisoner from their custody, knowing in both cases that he will be lynched, deny him the protection of the law, and, in the words of Justice Strong, their "act is that of the State."

This proposition is clearly sustained by the unanimous opinion of the court, delivered by Mr. Chief Justice White, in Home Telegraph & Telephone Co. *v.* Los Angeles (227 U. S. p. 278).

The headnote contains this statement:

"Under the fourteenth amendment the Federal judicial power can redress the wrong done by a State officer misusing the authority of the State with which he is clothed. Under such circumstances inquiry whether the State has authorized the wrong is irrelevant."

The court distinctly overrules the contention that "the prohibitions and guaranties of the amendment are addressed to and control the States only in their complete governmental capacity," saying, on the contrary, that "the provisions of the amendment, as conclusively fixed by previous decisions, are generic in their terms, are addressed, of course, to the States, but also to every person, whether natural or juridical, who is the repository of State power. By this construction the reach of the amendment is shown to be coextensive with any exercise by a State of power in whatever form exerted."

It further deals with the proposition that "the terms of the fourteenth amendment reach only acts done by State officers which are within the scope of the power conferred by the State," and overrules it, saying, on the contrary:

"Here again the settled construction of the amendment is that it presupposes the possibility of an abuse by a State officer or representative of the powers possessed and deals with such a contingency. It provides, therefore, for a case where one who is in possession of State power uses that power to the doing of the wrongs which the amendment forbids, even although the consummation of the wrong may not be within the powers possessed if the commission of the wrong itself is rendered possible or is efficiently aided by the State authority lodged in the wrongdoer."

Adding:

"The amendment contemplates the possibility of State officers abusing the powers lawfully conferred upon them by doing wrongs prohibited by the amendment."

Apply this language to the question whether "the equal protection of the laws" is denied to the negroes. If the jailer or officer in charge of the victim surrenders him to the lynching mob, and all the officers of the State from the governor down take no steps to insure him against the mob, or to prosecute the lynchers, do not these officers "use their power" to deny the protection of the law? What protects us all but the laws against crime and their enforcement by the proper officers of the law? Refusal to enforce is denial of protection.

The Chief Justice cites from Virginia *v.* Rives (100 U. S. 318):

"It is doubtless true that a State may act through different agencies, either by its legislative, its executive, or its judicial authorities; and the prohibitions of the amendment extend to all action of the State denying equal protection of the laws, whether it be action by one of these agencies or by another."

Assuming that Congress is satisfied that the occasion exists for the exercise of its power to enforce the provisions of the fourteenth amendment by "appropriate legislation," what form would that legislation naturally and reasonably take? It is not possible by any law to force sheriffs and peace officers to resist a mob, grand juries to indict, prosecuting officers to prosecute witnesses to testify, or governors to call out troops. Congress can not force a State and its officers to do their duty.

It would be almost equally impracticable to enforce a law providing for the punishment of State officials who refuse or neglect to do their duty.

The only remedy is for Congress to provide that the officers and courts of the United States shall step into the gap left by the State and its officers and give that protection to which the citizen is entitled and punish all who take from him life, liberty, or property without due process of law. Congress may also, following the analogy of those laws which impose upon a city liability for losses caused by riots, a punishment almost as old as the common law, make the communities which tolerate lynching responsible in damages, and these are the remedies which Congress has deemed appropriate.

The argument under the fourteenth amendment may be stated briefly.

Congress by the express language of the amendment is given power to enforce it.

Whether at any given time the occasion exists for the exercise of that power is a question of fact, and Congress has the right to decide that question. Who but Congress can decide it? No court can try such an issue and decide whether or not Congress ought to legislate. The passage of a law is a decision by Congress that the occasion for legislation exists.

Congress, which has the power to pass appropriate legislation, has the power to decide what legislation is appropriate.

In Virginia *v.* Rives (100 U. S. at p. 318) the court says:

"Congress, by virtue of the fifth section of the fourteenth amendment, may enforce the prohibitions whenever they are disregarded by either the legislative, the executive, or the judicial department of the State. The mode of enforcement is left to its discretion."

In the Cruikshank case (92 U. S. pp. 552, 553) Chief Justice White says:

"The fourteenth amendment prohibits a State from depriving any person of life, liberty, or property without due process of law; but this adds nothing to the rights of one citizen as against another. It simply furnishes an additional guaranty against any encroachment by the States upon the fundamental rights which belong to every citizen as a member of society."

Mr. Justice Bradley, in First Woods Circuit Court Reports, page 315, in the Cruikshank case said:

"It seems to be firmly established by the unanimous opinion of the judges in the above-quoted case that Congress has power to enforce by appropriate legislation every right and privilege given or guaranteed by the Constitution. The method of enforcement, or the legislation appropriate to that end, will depend upon the character of the right conferred. It may be by the establishment of regulations for attaining the object of the right, the imposition of penalties for its violation, or the institution of judicial procedure for its vindication when assailed or when ignored by the State courts, or it may be by all of these together. One method of enforcement may be applicable to one fundamental right and not applicable to another."

In Logan *v.* United States (144 U. S. 263 at p. 293) Mr. Justice Gray, delivering the opinion of the court, said:

"The whole scope and effect of this series of decisions is that, while certain fundamental rights, recognized and declared but not granted or created, in some of the amendments to the Constitution, are thereby guaranteed only against violation or abridgment by the United States, or by the States, as the case may be, and can not therefore be affirmatively enforced by Congress against unlawful acts of individuals; yet that every right created by, arising under, or dependent upon the Constitution of the United States may be protected and enforced by Congress by such means and in such manner as Congress, in the exercise of the correlative duty of protection, or of the legislative powers conferred upon it by the Constitution, may in its discretion deem most eligible and best adapted to attain the object."

On page 294:

"Any government which has power to indict, try, and punish for crime, and to arrest the accused and hold them in safekeeping until trial, must have the power and the duty to protect against unlawful interference its prisoners so held, as well as its executive and judicial officers charged with keeping and trying them."

THE PEACE OF THE UNITED STATES.

Another source of the power to legislate is found in the doctrine that there is a peace of the United States which Congress has the right to maintain.

The doctrine is well stated by Mr. Justice Bradley in Ex parte Siebold (100 U. S. 371, 394):

"Somewhat akin to the argument which has been considered is the objection that the deputy marshals authorized by the act of Congress to be created and to attend the elections are authorized to keep the peace; and that his is a duty which belongs to the State authorities alone. It is argued that the preservation of peace and good order in society is not within the powers confided to the Government of the United States, but belongs exclusively to the States. Here, again, we are met with the theory that the Government of the United States does not rest upon the soil and territory of the country. We think that this theory is founded on an entire misconception of the nature and powers of that Government. We hold it to be an incontrovertible principle that the Government of the United States may, by means of physical force, exercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the power to command obedience to its laws, and hence the power to keep the peace to that extent. This power to enforce its laws and to execute its functions in all places does not derogate from the power of the State to execute its laws at the same time and in the same places. The one does not exclude the other, except where both can not be executed at the same time. In that case the words of the Constitution itself show which is to yield. 'This Constitution and all laws which shall be made in pursuance thereof * * * shall be the supreme law of the land.' * * *

"The United States must execute them on the land as well as on the sea on things as well as on persons. And, to do this, it must necessarily have power to command obedience, preserve order, and

keep the peace; and no person or power in this land has the right to resist or question its authority, so long as it keeps within the bounds of its jurisdiction."

Again in Tennessee *v.* Davis (100 U. S. 257, p. 262) the court, speaking through Mr. Justice Strong, said:

"The United States is a Government with authority extending over the whole territory of the Union, acting upon the States and the people of the States. While it is limited in the number of its powers, so far as its sovereignty extends it is supreme. No State government can exclude it from the exercise of any authority conferred upon it by the Constitution; obstruct its authorized officers against its will; or withhold from it for a moment the cognizance of any subject which that instrument has committed to it."

The leading case is In re Neagle (135 U. S.) and the opinion of the court by Mr. Justice Miller with the authorities cited is pertinent.

There Neagle in California had killed a man. He claimed that he was acting as the duly appointed guard of Mr. Justice Field then on his way to hold court, that the man whom he killed was threatening Justice Field's life, and he killed him in the discharge of his duty as guardian to defend the judge. The offense was a common-law offense committed in California, and Neagle was indicted in that State, whose courts were competent to try him. He was taken by habeas corpus issued by the Federal court from the custody of the State officers and discharged, and this action was upheld by the Supreme Court.

If there is a peace of the United States, it exists not only for the Federal officer in the discharge of his duty but for the American citizen who is murdered or robbed in violation of the fundamental rights which are secured to every citizen.

Wells *v.* Nickles (104 U. S. 444) is a case very much in point. The facts are thus stated by Mr. Justice Miller in the Neagle case (135 U. S. p. 65–66):

"That was a case in which a class of men appointed by local land officers, under instructions from the Secretary of the Interior, having found a large quantity of this timber cut down from the forests of the United States and lying where it was cut, seized it. The question of the title to this property coming in controversy between Wells and Nickles, it became essential to inquire into the authority of these timber agents of the Government thus to seize the timber cut by trespassers on its lands.

"The court said: 'The effort we have made to ascertain and fix the authority of these timber agents by any positive provision of law has been unsuccessful.' But the court, notwithstanding there was no special statute for it, held that the Department of the Interior, acting under the idea of protecting from depredation timber on the lands of the Government, had gradually come to assert the right to seize what is cut and taken away from them wherever it can be traced, and in aid of this the registers and receivers of the land office had, by instructions from the Secretary of the Interior, been constituted agents of the United States for these purposes, with power to appoint special agents under themselves. And the court upheld the authority of the Secretary of the Interior to make these rules and regulations for the protection of the public lands."

No one can doubt that Congress could exercise the authority which in that case was conceded to a Cabinet officer. It could pass a law to protect the timber which belongs to the United States and to punish the thief who should steal it. It could do this notwithstanding theft was an offense under the laws of the State where the timber was cut, because the United States has the right to protect its property by its own officers and its own courts. It can not be left to depend on State officers and State courts, who may sympathize with their own fellow citizens against the Government. State courts and their juries could not have been relied on to enforce the fugitive slave law.

Has the United States a right to protect a tree and no right to protect a man? Has it no interest in one-fifth of its people, potential soldiers, actual taxpayers, men and women, the best asset that a nation can have? We should be slow to admit that a tree is more valuable to the United States than an American citizen.

Let us suppose that this question had arisen before the Civil War while these colored citizens were slaves and therefore property, that in building a fort or other public work the Government had contracted with a slave owner to furnish slave labor, that some labor organization anxious to discourage their competition had attacked and killed many of the slaves, as Chinese laborers were attacked years ago at Rock Springs, could not Congress have passed laws to protect the slaves and punish those who attacked them in the Federal courts, though all that was done was criminal under the State laws? Were negroes as slaves entitled to protection which is denied to them as freemen, or would such a law have been sustained only because the attack interfered with work prosecuted by the United States?

Must we admit that property is more sacred in our country than human life; that the United States can protect its officers and not its citizens against murder and robbery; that there is a peace of the United States for the judge or the marshal and none for the private citizen? Under imperial Rome the cry "I am a Roman citizen" was a shield against wrong wherever the eagles of Rome were flying. Shall the cry "I am an American citizen" uttered by an American in Mexico bring all the power of the country to his aid, but uttered in Georgia fall on deaf ears? The answer to this question is in the hands of the Senate.

THE FIFTH AMENDMENT.

But there is yet a third source of power.

Suppose that in order to give Congress a power to protect our citizens which no one could question we should decide to amend our Constitution and should adopt the broad form of the thirteenth amendment:

"Neither slavery nor involuntary servitude * * * shall exist within the United States or any place subject to their jurisdiction."

Could we use better language to effect our purpose than this?

"No person shall be deprived of life, liberty, or property without due process of law."

Those words would assure this fundamental right to every person under the protection of the Constitution.

But those words are already in the Constitution, introduced by the fifth amendment.

It is answered that the first 10 amendments were passed to protect the citizen against abuse by the Federal Government and must be construed merely as limitations and not as grants of power.

It is true that this has been held by the Supreme Court in a series of cases, but that court has frequently overruled its own decisions, and no rule not required by the very words of the instrument can prevail against the demand of 10,000,000 citizens for the protection of their dearest rights.

It is doubtless true that the fear of abuse by the General Government led to the adoption of the 10 amendments, but while the first in terms limits the power of Congress, the fifth contains no such language and is rather an assertion of fundamental rights belonging to every citizen of the new Nation. There was no reason why these should be protected against the Federal Government and be left at the mercy of the States. A fear led the people to legislate, but their legislation must be interpreted by its words. The courts have again and again refused to interpret an act by its purpose, as disclosed by words used in debate when it was passed, and have insisted that its meaning is to be found in its language—"within the four corners of the instrument."

If we are going to interpret the language of an instrument by the purposes of those who framed it, let us remember for what the American Revolution was fought and our Government was founded. In England, from which we desired to be separated, it has been well said that King, Lords, Commons, and all the powers of the State existed to get 12 men into the jury box; in other words, to make sure that no man was deprived of life, liberty, or property without due process of law. Our fathers, who resisted what they considered the "tyranny" of England, who in their Declaration of Independence recited the inalienable rights which they fought to secure, and who framed the Constitution in order to establish a government under which those rights would be safe, certainly did not intend that their Constitution should be interpreted so as to take from their Government the power to protect its own citizens in the enjoyment of those rights.

The people who after the Civil War made their colored fellow men their fellow citizens, and passed the thirteenth, fourteenth, and fifteenth amendments to secure their rights as citizens against hostile action by their former masters, never intended that they should be left to depend upon those masters for protection, and therefore gave Congress power to enforce the amendments.

Take the Declaration, the Constitution, and the amendments together, one purpose runs through them all, and if the purpose governs the language must be construed to carry it out. We ask that a rule of interpretation be applied which was announced by Mr. Justice Story in Prigg *v.* Commonwealth of Pennsylvania (16 Peters, 417, at 421):

"How, then, are we to interpret the language of the clause? The true answer is, In such a manner as, consistently with the words, shall fully and completely effectuate the whole objects of it. If by one mode of interpretation the right must become shadowy and unsubstantial and without any remedial power adequate to the end, and by another mode it will attain its just end and secure its manifest purpose, it would seem upon principles of reasoning absolutely irresistible that the latter ought to prevail. No court of justice can be authorized so to construe any clause of the Constitution as to defeat its obvious ends when another construction equally accordant with the words and sense thereof will enforce and protect them."

The sound rule is that the intention must be found in the words of the instrument. The fifth amendment contains not a word which makes its language merely a limitation in the power of the Federal Government. It declares in the broadest terms that under the Constitution "No person shall be deprived of life, liberty, or property without due process of law." It is a statement of fundamental rights belonging to every person under our flag and an assurance to those who would become citizens. Its language is clear and should be given full effect.

If, on the other hand, the purpose of those who framed and adopted the amendment is to prevent, can anyone doubt that the Dyer bill carries out the purpose of the fourteenth amendment?

But it is said that Congress is not given power to enforce the fundamental rights of our citizens. It is well settled that an express grant of power is not needed.

Mr. Justice Bradley, in First Woods Circuit Court Reports, page 314, in dealing with the Cruikshank case, said:

"It is undoubtedly a sound proposition that whenever a right is guaranteed by the Constitution of the United States Congress has the power to provide for its enforcement, either by implication arising from the correlative duty of Government to protect wherever a right to the citizen is conferred or under the general power (contained in Art. I, sec. 8, par. 18) 'to make all laws necessary and proper for carrying into execution the foregoing powers and all other powers vested by this Constitution in the Government of the United States or any department or officer thereof.'"

In Strauder *v.* West Virginia (100 U. S. 310, 311) the language is:

"A right or an immunity, whether created by the Constitution or only guaranteed by it, even without any express delegation of power, may be protected by Congress."

So in United States *v.* Reese (92 U. S. 214) it was said by the Chief Justice:

"Rights and immunities created by or dependent upon the Constitution of the United States can be protected by Congress. The form and manner of the protection may be such as Congress in the legitimate exercise of its legislative discretion shall provide. These may be varied to meet the necessities of the particular right to be protected."

The citizen of the United States is entitled to protection from the Government to which he owes allegiance. The two are inseparable. The essential rights of the citizen, assured by the Constitution, must be supported by the Government which the Constitution created to do the Nation's work and to enforce and insure the rights of its citizens.

THE CASES RELIED ON BY THE OPPONENTS OF THE BILL.

Let us now consider the language of the Supreme Court in the cases which are relied upon to defeat this enactment. They are gathered in the case of James *v.* Bowman (190 U. S., p. 136 et seq.). Ex parte Virginia has been discussed already.

In United States *v.* Cruikshank (92 U. S. 542 at p. 553) the court says:

"The equality of the rights of citizens is a principle of republicanism. Every republican government is in duty bound to protect all its citizens in the enjoyment of this principle, if within its power. That duty was originally assumed by the States, and it still remains there. The only obligation resting upon the United States is to see that the States do not deny the right. This the amendment guarantees, but no more. The power of the National Government is limited to the enforcement of this guaranty."

This recognizes the right of Congress to act when the States "deny the right."

In the Civil Rights cases (109 U. S. 3, at p. 13):

"Until some State law has been passed or some State action through its officers or agents has been taken adverse to the rights of citizens sought to be protected by the fourteenth amendment, no legislation of the United States under said amendment, nor any proceeding under such legislation, can be called into activity, for the prohibitions of the amendment are against State laws and acts done under State authority.

Of course, legislation may and should be provided in advance to meet the exigency when it arises, but it should be adapted to the mischief and wrong which the amendment was intended to provide against, and that is State laws or State action of some kind adverse to the rights of the citizen secured by the amendment. * * * The legislation which Congress is authorized to adopt in this behalf is not general legislation upon the rights of the citizen, but corrective legislation; that is, such as may be necessary and proper for counteracting such laws as the State may adopt or enforce, and which by the amendment they are prohibited from making or enforcing."

Again this recognizes that Congress may act when some State action through its officers or agents has been taken adverse to the rights to the citizen.

Decided by a divided court and dealing with "civil rights," so called, not fundamental right like the right to life and liberty and due process of law, the authority of this case is weakened. The statement that "the prohibitions of the amendment are against State laws and acts done under State authority" is overruled by Home Insurance Co. *v.* Los Angeles (supra).

This is true also of the statement that the legislation which Congress may adopt is only such as may be proper "for counteracting such laws as the States may adopt or enforce."

"The denial of the rights given by the fourteenth amendment need not be by legislation." (Mr. Justice Holmes, in Saunders *v.* Shaw, supra.)

United States *v.* Harris (106 U. S. 629–639):

"When the State has been guilty of no violation of its provisions; when it has not made or enforced any law abridging the privileges or immunities of citizens of the United States; when no one of its departments has deprived any person of life, liberty, or property without due process of law or denied to any person within its jurisdiction the equal protection of the laws; when, on the contrary, the laws of the State, as enacted by its legislative and construed by its judicial and administered by its executive departments, recognize and protect the rights of all persons, the amendment imposes no duty and confers no power upon Congress."

But where these conditions do not exist Congress must act.

Ex parte Virginia recognizes the officers or agents by whom the powers of the State are exercised as the State, and provides that they shall not deny to any person within its jurisdiction the equal protection of the laws.

United States *v.* Cruikshank holds that the obligation which rests on the United States is to see that the States do not deny the right of the citizens to the enjoyment of fundamental rights, that the equality of the rights of citizens is a principle of republicanism, that every part of the Government is bound to protect its citizens in these rights, and that the power of the National Government extends to the enforcement of this guaranty.

In the Civil Rights cases the court recognizes the fact that legislation may and should be provided in advance to meet the exigency when it arises, but it should be adapted to the mischief or wrong which it was intended to provide against; that is, State laws or State action of some kind adverse to the rights of the citizens secured by the amendment.

United States *v.* Harris holds that the Congress can not act when no one of the departments of the State has denied to any person within its jurisdiction the equal protection of the laws, but where such denial has taken place it can act.

All these cases recognize that conditions may arise which will render action by Congress necessary to enforce the guaranty of the fourteenth amendment.

To hold otherwise is to strike out entirely the grant of power in the amendment itself.

We have in hundreds of cases the executive officers of the State, the persons who are in possession of suspected persons and charged with the duty of securing for them due process of law, surrendering to the mob these persons, making no effort to hold the jail against attack or to defend the prisoners from being taken out of their custody, although it must be perfectly apparent to them that the purposes of the mob is to lynch the prisoner without due process of law. These officers are the agents of the State by which its power is exercised, and by their acts toward these accused persons and the mob they deny their prisoners the equal protection of the law, and when their action is ratified by their higher officers and by all the people of the State, it is clear that the State has denied to these citizens the equal protection of the laws.

Unless Congress has power to deal with this situation, if it can not remedy the abuses which have gone unchecked for a generation and more, the manifest intent of the fourteenth amendment is defeated entirely, and by refusing to pass this law either as it stands, or amended if amendment is needed, Congress says to the colored people of this country, "We are powerless to aid you and can hold out no hope that we can ever help you. Alone of all the citizens of the United States, you may be deprived of life, liberty, or property whenever a mob of white men chooses to murder or rob you." Should the Constitution of the United States be so interpreted as to justify this conclusion?

The Supreme Court has never sustained such an interpretation, and in my judgment never will.

It would seem clear in any event that Congress should not refuse to do its duty because of the fear that the Supreme Court might not agree with it as to the necessity and legality of the act which the House of Representatives has passed. The distinction between the cases which have hitherto been presented to the court and this case is very clear, and if Congress errs the Supreme Court will have the power to correct the error, but if Congress refuses to act it is responsible for the continuance of the infamous practice which the bill is framed to stop.

MOORFIELD STOREY.

The following is a brief prepared by Mr. Herbert K. Stockton, of New York, and submitted to Senator BORAH, chairman of the subcommittee having the bill under consideration:

BRIEF OF HERBERT K. STOCKTON ON THE DYER ANTILYNCHING BILL.

NEW YORK, *June 5, 1922.*

Hon. WM. E. BORAH,
United States Senate, Washington, D. C.

MY DEAR SENATOR BORAH: I have studied with the keenest interest the Dyer bill (H. R. 13), the decision to which you directed me in your letter of May 12 and other decisions of the Supreme Court, as well as Mr. Moorfield Storey's brief in support of the bill.

I have come to the conclusion that the Dyer bill is probably constitutional, and I will state briefly why I think so, as my reasons bear a somewhat different emphasis from Mr. Storey's; and I will also state why I think the bill should be reported out (with slightly changed wording) and passed, even though you may feel that its constitutionality is not a matter of certainty.

In view of the many judicial interpretations the Constitution and its amendments have received, it may be well to begin by clearing away certain lines of decisions which might at first sight be thought fatal to the proposed law, but which I think can be shown to be irrelevant. It must first be observed that—

(I) The Dyer bill rests, or should rest, squarely and solely on a single clause of section 1 of the fourteenth amendment of the Constitution, which reads: "Nor shall any State * * * deny to any person within its jurisdiction the equal protection of the laws."

I hope to show later that the proposed law is within the scope of this provision and its supplementary section 5, which empowers the Congress to enforce the provision quoted by appropriate legislation. Meanwhile it helps clear the issue to note that—

(*a*) The Dyer bill does not invoke the rights of the citizens of the United States as distinct from the citizen of the individual State.

Therefore the line of decisions culminating in the Bisbee deportation cases, United States *v.* Wheeler (254 U. S. 281), has no application. It would be futile, it seems to me, to base an antilynching law on the constitutional rights of the citizen of the United States in view of that decision. Though not appearing in the statement of facts, I am told the county authorities were part of the armed mob which seized the United States citizen in question, because they were members of the I. W. W., locked them in box cars, and ran them out of Arizona into New Mexico. Mr. Chief Justice White, after stating that the court below had quashed the indictment on the ground that no power had been delegated by the Constitution to the United States to forbid and punish the wrongful acts complained of, as the right to do so was exclusively within the authority reserved by the instrument to the several States, cited Corfield *v.* Coryell (4 Wash. C. C. 371); Slaughterhouse cases (16 Wall. 36); Paul *v.* Virginia (8 Wall. 168); Ward *v.* Maryland (12 Wall. 418), and on the strength of these cases affirmed the judgment of the court below, observing at page 298:

"* * * No basis is afforded for contending that a wrongful prevention by an individual of the enjoyment by a citizen of one State in another of rights possessed in that State by its own citizens was a violation of a right afforded by the Constitution. This is the necessary result of article 4, section 2, which reserves to the several States authority over the subject, limited by the restriction against State discriminatory action, hence excluding Federal authority except where invoked to enforce the limitation, which is not here the case. * * * A conclusion expressly sustained by the ruling in United States *v.* Harris (106 U. S. 629, 645), to the effect that the second section of article 4, like the fourteenth amendment, is directed alone against State action."

See also United States *v.* Harris (106 U. S. 629); James *v.* Bowman (190 U. S. 127).

It is to be noted from this quotation and from these cases (1) that in United States *v.* Wheeler the Federal authority to enforce the limitation on the States (e. g., against denying equal protection) was not invoked as it is invoked by the Dyer bill, and (2) that the Dyer bill, to be constitutional, must be shown to be "directed alone against State action," as I hope to show that it is directed. By the same course of reasoning we must also put aside such cases as Logan *v.* United States (144 U. S. 263), where lynchers of a United States marshal's prisoners were held to be subject to Federal indictment. That case involved the rights of a citizen of the United States, and this fact gave the Federal Government power to act directly upon individuals as distinguished from the State.

(*b*) The Dyer bill does not invoke the power of the United States to enforce the thirteenth amendment, which prohibits slavery and involuntary servitude.

Accordingly, we can eliminate such cases as Hodges *v.* United States (203 U. S. 1), where it was held that the Federal Government could not by legislation act against persons intimidating negroes from working for wages. This decision was placed on the ground that inability to contract was not an essential element of slavery. Also we can disregard the Slaughterhouse cases and the Civil Rights cases (109 U. S. 3), in so far as they deal with the thirteenth amendment. On the authority of Hodges *v.* United States, the Supreme Court, in United States *v.* Powell, defeated an attempt of Congress to deal with individual lynchers. It is to be noted, however, that the indictment of the lynchers in the Federal court was under sections 5508, 5509, Revised Statutes, prohibiting conspiracy to injure a citizen in his enjoyment of rights secured to him by the Constitution. The court in the Hodges case said, by Mr. Justice Brewer (p. 14):

"That prior to the three post bellum amendments to the Constitution the National Government had no jurisdiction over a wrong like that charged in this indictment is conceded; that the fourteenth and fifteenth amendments do not justify the legislation is also beyond dispute, for they, as repeatedly held, are restrictions upon State action, and no action on the part of the State is complained of."

We are thus brought squarely to the question, Do the provisions of the Dyer bill aim to reach the lynching evil by acting on individuals or on States?

(II) The proposed law constitutes appropriate Federal action under the fourteenth amendment to prevent the individual State from denying to persons within its jurisdiction the equal protection of its laws.

We find the solid ground of fact under our feet at once when we regard the proposed law from this angle, for the States in fact do not give equal protection.

You know and I know, everybody, even the individual members of the Supreme Court know, that the victims of lynching mobs do not get the equal protection of the State's laws, that State and county officials do not try to prevent this crime as they try to prevent other crimes, that they do not try to punish this crime as they try to punish other crimes. This is susceptible of overwhelmingly convincing demonstration. And it is of the greatest importance, in my estimation, that a strong record, showing in graphic detail the unequal protection afforded the victims of lynching mobs, should be made before the committee which has the bill under consideration, or in whatever place and manner is appropriate, so that this record can be brought before the Supreme Court when it passes on the constitutionality of the law.

It is worth noting in passing that it is in accord with the fundamental purpose of this amendment for the Federal Government to take action to insure the negroes particularly equal protection. Their plight was the cause of the amendment being adopted; their plight now is the occasion of this legislation.

But is such inequality as the negroes suffer in connection with lynchings the denial of equal protection by the States which the Constitution prohibits? To anticipate such an objection we should next ob-

serve that inequality in administration is a denial of equal protection of the laws.

It hardly seems possible to make any definition which more exactly fits the existing conditions with respect to lynchings than the constitutional phrase "deny the equal protection of the laws." It is clear that this must not be taken to mean only the passage of discriminating statutes or ordinances. The language of the provision we rely on is sharply distinct from the language of the preceding provision against discriminating legislation, which is that "no State shall make or enforce any law which shall abridge the privileges or immunities," etc.; not to deny that equal protection of laws imports not only an obligation to make no laws which discriminate but equally an obligation to enforce all State laws in existence, so that all persons within the jurisdiction of the State enjoy equal protection from them. But the Supreme Court has said this very exactly:

"The denial of rights given by the fourteenth amendment need not be by legislation." (Saunders *v.* Shaw, 244 U. S. 317, p. 320).

So, in Tarrance *v.* Florida (188 U. S. 519), Mr. Justice Brewer said, page 520 (the italics are mine):

"The contention of plaintiffs in error is that they were denied the equal protection of the laws by reason of an actual discrimination against their race. *The law of the State is not challenged but its administration is complained of.* As said by their counsel:

"'We do not contend that the colored men are discriminated against by any law of the State in the selection of names for jury duty, nor do we contend that a negro being tried for a criminal offense is entitled to a jury composed wholly or in part of members of his race, but we do claim that when a negro is tried for a criminal offense he is entitled to a jury selected without any discrimination against his race on account of race, color, or previous condition of servitude; and when this is not the case he is denied the equal protection of the laws as guaranteed by the fourteenth amendment to the Constitution of the United States.'

"*Such an actual discrimination is as potential in creating a denial of equality of rights as a discrimination made by law.* But such an actual discrimination is not presumed. It must be proved or admitted.

Again, in Yick Wo *v.* Hopkins (118 U. S. 356), which seems to me a decision helpful to the Dyer bill, plaintiff in error (petitioner for writ of habeas corpus below) maintained that the ordinance under which he was imprisoned was unconstitutional. The ordinance made it unlawful to maintain laundries under certain circumstances "without having first obtained the consent of the board of supervisors." The opinion of the court below (quoted in the statement of facts) contains the following significant declaration (at pp. 362 and 363):

"If the facts appearing on the face of the ordinance, on the petition and return, and admitted in the case, and shown by the notorious public and municipal history of the times, indicate a purpose to drive out the Chinese laundrymen and not merely to regulate the business for the public safety, does it not disclose a case of violation of the provisions of the fourteenth amendment to the National Constitution * * *? That it does mean prohibition, as to the Chinese, it seems to us must be apparent to every citizen of San Francisco who has been here long enough to be familiar with the cause of an active and aggressive branch of public opinion and of public notorious events. Can a court be blind to what must necessarily be known to every intelligent person in the State?"

Mr. Justice Matthews, in delivering the opinion of the court, said (pp. 373 and 374) (italics mine):

"* * * The facts shown establish an administration directed so exclusively against a particular class of persons as to warrant and require the conclusion that, whatever may have been the intent of the ordinances as adopted, *they are applied by the public authorities charged with their administration, and thus representing the State itself, with a mind so unequal and oppressive as to amount to a practical denial by the State of that equal protection of the laws which is secured to the petitioners as to all other persons, by the broad and benign provisions of the fourteenth amendment to the Constitution of the United States.* Though the law itself be fair on its face and impartial in appearance, *yet if it is applied and administered by public authority with an evil eye and an unequal hand,* so as practically to make unjust and illegal discriminating between persons in similar circumstances, material to their rights, *the denial of equal rights is still within the prohibition of the Constitution.* This principle of interpretation has been sanctioned by this court in Henderson *v.* Mayor of New York (92 U. S. 259); Chy Ling *v.* Freeman (92 U. S. 275); Ex parte Virginia (100 U. S. 339); Neal *v.* Delaware (103 U. S. 370); and Som Hing *v.* Crowley (113 U. S. 702).

* * * * * * *

"The fact of this discrimination is admitted. No reason for it is shown, and the conclusion can not be resisted that no reason for it exists except hostility to the race and nationality to which the petitioners belong, and which in the eye of the law is not justified. The discrimination is therefore illegal, and the public administration which enforces it is a denial of the equal protection of the laws and a violation of the fourteenth amendment of the Constitution."

I believe that the Supreme Court will come to adopt the reasoning ably expressed by Krekel, D. J., in his charge to the jury in United States *v.* Blackburn (Fed. Cas. No. 14603):

"By the equal protection of the laws spoken of in the indictment is meant that the ordinary means and appliances which the law has provided shall be used and put in operation in all cases of violation of law. Hence if the outrages and crimes shown to have been committed in the case before you were well known to the community at large, and that community and the officers of the law willfully failed to employ the means provided by law to ferret out and bring to trial the offenders because of the victims being colored, it is a depriving them of the equal protection of the law."

Having established that in fact the victims of the lynchings, generally negroes, are being denied the equal protection of the laws by the States, in the sense contemplated by the fourteenth amendment, we next come to the question whether the proposed law is "appropriate legislation" to enforce the prohibition which the Constitution has declared against such denial. We find it settled law that in forcing the State to afford the equal protection of the laws the Federal Government can act directly upon such individuals as are the agents of the State, and whose act or neglect constitutes the denial by the State of the equal protection.

This was strikingly exemplified in Ex parte Virginia (100 U. S. 339), where the petition of J. D. Coles, a county judge of Virginia, for writ of habeas corpus was denied and the act under which he was indicted for excluding negroes from his jury list was found constitutional. The act provided that no citizen otherwise qualified should be disqualified for jury service on account of race, color, or previous condition of servitude, and that any officer or other person charged with any duty in the selection or summoning of jurors who shall exclude or fail to summon any citizen for the cause aforesaid shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not more than $5,000.

Mr. Justice Strong says, on page 345, that in Strauder *v.* West Virginia (100 U. S. 303):

"We held that immunity from any such discrimination is one of the equal rights of all persons, and that any withholding it by a State is a denial of the equal protection of the laws within the meaning of the amendment."

The court says further (p. 345) of the fifth section of the amendment:

"It is not said that the judicial power of the General Government shall extend to enforcing the prohibitions and to protecting the rights and immunities granted. It is not said that branch of the Government shall be authorized to declare void any action of a State in violation of the prohibition. It is the powers of Congress which have been enlarged. Congress is authorized to enforce the prohibition by appropriate legislation. * * * Whatever legislation is appropriate—that is, adapted to carry out the objects the amendments have in view—whatever tends to enforce submission to the prohibitions they contain, and to secure to all persons the enjoyment of perfect equality of civil rights and equal protection of the laws against State denial or invasion, if not prohibited, is brought within the domain of congressional power.

* * * * * * *

"It is said the selection of jurors for her courts and the administration of her laws belong to each State; that they are her rights. * * * But in exercising her rights, a State can not disregard the limitations which the Federal Constitution has applied to her power. * * * Nor can she deny to the General Government the right to exercise all its granted powers though they may interfere with the full enjoyment of rights she would have if those powers had not thus been granted. * * *

"We have said the prohibitions of the fourteenth amendment are addressed to the States. * * * A State acts by its legislative, its executive, or its judicial authorities. It can act in no other way. The constitutional provision, therefore, must mean that no agency of the State, or of the officers or agents by whom its powers are exerted, shall deny to any person within its jurisdiction the equal protection of the laws. * * * Power was given to Congress to enforce its provisions by appropriate legislation. Such legislation must act upon persons, not upon the abstract thing denominated a State, but upon the persons who are the agents of the State in the denial of the rights which were intended to be secured. Such is the act of March 1, 1875, and we think it was fully authorized by the Constitution."

As lately as 1912 in Home Telephone & Telegraph Co. *v.* Los Angeles (227 U. S. 278), Mr. Chief Justice White said, at pages 286 and 287:

"* * * The provisions of the (fourteenth) amendment as conclusively fixed by previous decisions are generic in their terms, are addressed, of course, to the States, but also to every person whether natural or judicial who is the repository of State power.

"* * * The settled construction of the amendment is that it presupposes the possibility of an abuse by a State officer or representative of the powers possessed and deals with such a contingency."

And at page 296:

"The immediate and efficient Federal right to enforce the contract clause of the Constitution as against those who violate or attempt to violate its prohibition, which has always been exerted without question, is but typical of the power which exists to enforce the guaranties of the fourteenth amendment."

The provisions of the Dyer bill are within the scope of these decisions.

The bill is entitled "An act to assure to persons within the jurisdiction of every State the equal protection of the laws."

The definition placed on the lynching mob is an assemblage which is usurping the State's prerogative to prevent and punish crime. I suggest here the alteration of line 5, page 2, "to the citizens of the United States by its Constitution" to read "to persons within the jurisdictions of the several States, or to citizens of the United States, by the Constitution of the United States," this in order to make it clear that the bill is resting on the principle of equal protection and not on the rights of United States citizens.

Section 2 creates a reasonable presumption of denial of equal protection from the State's failure, neglect, or refusal to "provide and maintain protection to the life of any person within its jurisdiction against a mob"; the presumption does not arise merely from failure actually to prevent or punish the taking of life, which might be held unreasonable, but from failure to provide and maintain protection. It is easy to show that the States are providing and maintaining this within reasonable human limits, except as to lynching.

Section 3 acts upon the State or municipal officer in the same way that the statute declared constitutional in Ex parte Virginia acted on the county judge. The officer is held because through him the State fails, neglects, or refuses to make all reasonable efforts to prevent or punish homicide when committed under certain circumstances, thereby denying the equal protection of the laws to the victim slain under those circumstances.

There is perhaps more question as to the provision against "those who so conspire, combine, or confederate with such officer" (lines 10 to 12, p. 3), but they are conspiring with the State itself to deny the equal protection of its laws. It would be highly desirable to have such a provision sustained by the Supreme Court; if it should not be, this, under section 8, would not invalidate any other provision of the law.

Section 4, giving the Federal court jurisdiction to prosecute in case of a refusal, failure, or inability on the part of State agencies to prosecute, constituting a denial of equal protection, should be held constitutional under the opinion of Mr. Justice Strong in Virginia *v.* Rives (100 U. S. 313, at 318) [italics mine]:

"Congress by virtue of the fifth section of the fourteenth amendment may enforce the prohibitions wherever they are disregarded by either the legislative, the executive, or the judicial department of the State. The mode of enforcement is left to its discretion. *It may secure the right—that is, enforce its recognition—by removing the case from a State court in which it is denied into a Federal court where it will be acknowledged.* Of this there can be no reasonable doubt. Removal of cases from State courts into courts of the United States has been an acknowledged mode of protecting rights ever since the foundation of the Government. Its constitutionality has never been seriously doubted."

Section 5 certainly is designed to act upon the State and not upon individuals in the traditional way of imposing a fine on the municipal body. If it be said that the power to tax the State subdivision is the power to destroy, the answer must be that Congress is authorized by the Constitution of the United States to go to such stern measures if they are necessary to prevent the denial to a man of the equal protection of the laws.

I suggest changing "should" to "shall" in line 13, page 4.

Section 6 can not be complained of if the preceding sections are approved.

Section 7 appeals to the Federal authority derived from treaties. Sections 8 and 9 are unexceptionable.

Now, sir, I urge upon you the conclusion that you should not refuse to force this bill out of committee and urge its passage with all the power at your command merely because neither you nor I can guarantee that the Supreme Court is going to take the view of this bill that I have set forth above. The bill is very ably drawn. It is probably the best bill that can be framed under the peculiarly artificial restrictions of our Constitution. It ought to be held constitutional by the Supreme Court. I think it is entirely true to say that the court can hold the bill constitutional on sound reasoning if it wants to. This is a case, therefore, where the problem ought to be put squarely up to the court; it is not a case of passing the responsibility to the court because the legislature does not want to incur the popular odium of refusing the remedial statute.

But look at the matter from a broader point of view. Suppose the constitutionality of the act doubtful. The evil is rampant, it is hellish in particular instances, it is dangerous to the Nation in its increasing threats of race war and mob rule. To cure such a cruel cancer in our body politic every curative force should be set in motion. Even if the court should make vain your efforts, it is tremendously important that the most representative body in the world should go on record as opposing lynching and desiring to stamp it out. At least the lyncher will no longer be able to say that the toleration he and his neighbors feel for his bloody sport exists also in a Congress which raises no protesting voice. We need not deceive ourselves that this law, even if upheld to the last comma and enforced fearlessly, is going of itself to do away with lynching. No law perfectly fulfills its object until the public sentiment behind it renders it practically superfluous. The necessary change of public opinion must perhaps be effected by publicity, education, example; possibly by the removal of such fear as may beset the whites through agencies such as a State constabulary to insure against crimes in sparsely settled districts by blacks against whites as well as by whites against blacks; but those are other questions. The first step, the step which we are looking now to you to take, is to report out the Dyer bill and to get it passed by the Senate.

Very respectfully,

HERBERT K. STOCKTON.

The committee has devoted much time and earnest thought to the consideration of this bill and has reached the conclusion that as amended the bill is constitutional and should pass. That conclusion is reached by different processes of reasoning and by reliance on different provisions of the Constitution; but whatever process of reasoning is adopted or whatever provisions of the Constitution are relied on, we hold that the proposed legislation is "appropriate legislation" to cure or prevent the evil of lynching wherever in the United States and subject to the jurisdiction thereof that evil exists or is committed.

White or black, "all persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States," and no State may by affirmative legislative, judicial, or executive action, or by failure, neglect, or refusal to act, deprive any person of life, liberty, or property without due process of law, or deny to any person within its jurisdiction the equal protection of the laws.

A careful and dispassionate study of the provisions of this bill as amended will, the committee thinks, convince Senators that it is "appropriate legislation," within the competency of Congress to enact, to safeguard and protect those rights to life, liberty, and property which are guaranteed by the Constitution of the United States.

The proposed legislation is not, and should not be considered, in any sense sectional. The evil it is designed to cure is not confined to any particular section or State, north or south, east or west. This monstrous evil, which is a disgrace to the Nation, we should strive to wipe out by a firm and just exercise of every legitimate power conferred upon and residing in the Federal Government.

The proposed legislation is not an invasion or subversion of the rights of the States, nor is it designed to relieve the States from the performance of their duty to secure to all persons within their several jurisdictions equal protection of the laws; on the contrary, the proposed legislation is in aid of the several States and will be impartially administered by the people of the several States.

It is sincerely hoped and confidently believed that the early passage of this bill as amended will have a salutary effect and go far toward insuring that "equal protection of the laws," State and Federal, to which "all persons born or naturalized in the United States and subject to the jurisdiction thereof" are entitled.

American citizenship is indeed a *badge of honor;* it should be, and this bill seeks to make it, a *shield of protection* to every American citizen, man, woman, and child, native and naturalized, who stands on American soil, hedged round and guarded, as they are, by the Constitution of the United States.

D. C. DARROCH.

Mr. CAMERON, from the Committee on Military Affairs, to which was referred the bill (S. 2946) for the relief of D. C. Darroch, reported it without amendment and submitted a report (No. 838) thereon.

OFFICER IN CHARGE OF PUBLIC BUILDINGS AND GROUNDS.

Mr. WADSWORTH introduced a bill (S. 3873) fixing the rank of the officer of the United States Army in charge of public buildings and grounds, which was read twice by its title and referred to the Committee on Military Affairs.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDENT pro tempore. The Secretary will state the pending question.

The READING CLERK. The pending question is on the amendment of the committee as modified, which is to strike out paragraph 1108 and to insert in lieu thereof:

PAR. 1108. Woven fabrics, weighing not more than four ounces per square yard, wholly or in chief value of wool, valued at not more than 80 cents per pound, 40 cents per pound and 50 per cent ad valorem; valued at more than 80 cents per pound, 49 cents per pound and 50 per cent ad valorem: *Provided,* That if the warp of any of the foregoing is wholly of cotton or other vegetable fiber, the duty shall be 39 cents per pound and 50 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, I think I had proceeded on yesterday with my discussion in opposition to the amendment of the committee to the paragraph up to the point where I was about to make a comparison between the rates proposed by the Senate committee and the rates named in the Underwood law.

COMPARISON WITH THE EMERGENCY LAW.

The emergency law provided for a compensatory duty of 45 cents per pound upon all woolen manufactures, including, of course, these dress goods, in addition to the protective duty of 35 per cent on dress goods, linings, and so forth, and 40 per cent on mohair fabrics already imposed in the Underwood law. That this compensatory duty of 45 cents per pound, plus the Underwood rate of 35 per cent on the main class of goods, namely, dress goods, constituted a formidable barrier to importations is shown by the fact that importations declined from a monthly average of from 125,000 to 150,000 pounds prior to the enactment of the emergency law to from one-third to one-half of this quantity since the passage of the emergency law.

COMPARISON WITH THE UNDERWOOD RATE.

The Underwood rate upon dress goods, linings, and so forth, as upon other wool fabrics was 35 per cent, no distinction being drawn between dress goods and cloths. Upon mohair fabrics, which fall largely in paragraph 1108 of the Senate bill, the duty in the Underwood law was 40 per cent, but these are relatively unimportant. So far as the protective rates are concerned, it is apparent that the Senate text raises the duty 40 per cent on the cheaper dress goods and 55 per cent upon those of higher value.

Was the Underwood protective rate sufficient to cover the difference in conversion costs? Attention is called to a table in an article entitled "The Tariff Board and Wool Legislation," by William S. Culbertson, House Document No. 50, Sixty-third Congress, second session. This table derives from the findings of the old Tariff Board computations of the difference between conversion costs here and in the United Kingdom on a large number of samples of wool fabrics. On various samples that would be included under paragraph 1108 the ad valorem duties necessary to cover the difference in conversion costs here and in the United Kingdom were as follows:

Sample No.	Name of cloth.	Ad valorem rate necessary to cover difference in conversion cost.
		Per cent.
4	Women's cotton warp sacking	29.82
2	Fancy cotton worsted	22.18
8	Women's homespun	25.89
12	Women's worsted serge	38.33
15	Women's worsted cheviot	41.01
27	Women's cheviot	38.23
10	Women's all-wool blue serge	38.92
17	Women's all-wool sacking	26.60

Thus, taking these samples as representative, it is apparent that the rate of 35 per cent subsequently enacted into the Underwood law represented a very liberal average of the ad valorem duties necessary to cover the difference between conversion cost here and abroad as indicated in the table above.

It may, of course, be argued that the great changes in prices and labor costs since 1913 have in part invalidated these figures. This argument can not be sustained. The fact of the matter is that while labor costs have greatly increased both here and abroad there is no evidence to be found that the ratio of the domestic to the British conversion cost is any larger than it was before the war. This matter is discussed in great detail in a report issued by the Tariff Commission in 1920, entitled "A Survey of the British Wool-Manufacturing Industry."

For instance, on page 76 of this report, it is interesting to note the following—referring to the comparison of the manufacturing cost, other than combing and spinning, here and in England:

For manufacturing proper and dyeing, the data which have as yet been secured indicate that the difference in both cases, except, perhaps, for fancy cloths, would surely be below the low figure in 1911 (100 per cent) and perhaps as low as from 60 to 80 per cent.

Nor does a comparison of prices seem to reflect any increased advantage to the British manufacturer in the matter of conversion, as is indicated by the following table and comment thereon contained on pages 80 and 81 of the same report:

Comparative prices of certain wool cloths in England and the United States.

Type of fabric.	American wholesale price per yard.	English net mill prices per yard, costing plus profit.
Botany serge	$4.90	$4.14
Botany clay	5.50	5.06
Crossbred serge	3.00	2.29
Botany lightweight serge	1.02	1.13
Cotton warp henrietta	.49	.67
Cotton warp, luster sicilian	.73½	.90
Crossbred unfinished worsted	6.75	4.50
Fancy worsted	11.00	5.58
Fancy woolen	4.25	1.41

While there are important irregularities among these figures, certain conclusions are possibly warranted. The tendency for English and American prices to approximate one another, already noted in the case of tops and yarns, is here also evident. Even making allowances for minor variations between the estimates of English values and those actually prevailing, there are obviously cloths of several types with regard to which no considerable differences of price exist between the English and American markets, while in some instances the domestic manufacturer really has an advantage. It is noteworthy in this connection to recall that in a similar, though more comprehensive, comparison made by the Tariff Board in 1911 there was no fabric of which the English price was higher than the American, nor, indeed, any which came nearer than 20 per cent of the American price.

Again, the difference in comparative advantage among the several types of cloth is fairly clear. Values in the two markets are much closer together in the case of serges and cotton-warp dress goods than in that of fancy fabrics. With regard to the former, no importation is possible, at least over the 35 per cent duty of the present tariff law, but for the latter the present rate is apparently inadequate. Just where the dividing line lies and to what extent the domestic production of cloths is of the more self-sufficient types could be determined only by a wide and thoroughgoing inquiry.

It is apparent from the foregoing quotation that, at the time that this report was written at least, prices did not reflect any advantage in labor cost in the British over the domestic industry comparable to the very high rates of duty provided in paragraph 1108 of this bill.

In view of this information, the latest and most accurate available, how can a protective duty of 50 per cent and 55 per cent on the wool fabrics included in paragraph 1108 be justified?

Finally, a further criterion of whether a rate of 35 per cent is sufficient is provided by the movement of the imports since the enactment of the law.

In the first six months of the calendar year 1914 imports of dress goods, linings, and so forth, amounted to 5,987,628 pounds, and in the fiscal year 1915 they amounted to 7,797,435 pounds.

The census does not segregate the lighter-weight fabrics, such as dress goods, from the heavier-weight fabrics, such as cloths. But, considering that the production of all fabrics in 1914 was 522,919,228 square yards and in 1919 was 491,961,000 square yards—equivalent to 298,190,000 pounds—it is quite apparent that the imports which followed the enactment of the Underwood law could not have been a serious handicap to the domestic industry. Some idea of the size of our production of dress goods is indicated by the 1909 census figures, as shown on page 153 of the old Tariff Board's report. The total production of dress goods, linings, and so forth, is shown as 231,399,981 square yards. On this basis, also, the imports above shown were very small. In fact, the imports which followed the enactment of the Underwood law did not increase in anything like the proportion which might have been anticipated as a result of the material reduction made in the duty. Indeed, considering the fact that there is always a holding back of goods in anticipation of a reduction of duty, the increase in importations was a rather moderate one. In fact, while the quantities of dress goods imported under the Payne-Aldrich Act are stated partly in square yards and partly in pounds, so that they can not be compared with those under the Underwood law, the value of the imports in 1914 and 1915 was even smaller than in 1909 and 1910, and about the same as in 1911.

COMPARISON WITH THE PAYNE-ALDRICH LAW.

The rates on these light-weight fabrics in the Payne-Aldrich law were as follows:

On dress goods, and so forth, containing a cotton warp, the rate ranged from 7 cents per square yard plus 50 per cent on those falling in the lower bracket to 8 cents per square yard plus 55 per cent on those falling in the higher bracket, with an additional proviso that any such goods weighing more than 4 ounces should take the same duty as cloths, less 5 per cent.

On dress goods, and so forth, not containing a cotton warp, the rate ranged from 11 cents per square yard plus 50 per cent to 11 cents per square yard plus 55 per cent.

So far as the protective ad valorem rates are concerned, it is apparent that the rates in the Senate bill are substantially the same as those in the Payne-Aldrich law. Of course, this does not mean, necessarily, that the manufacturer would be afforded the same amount of protection in this bill as in the Payne-Aldrich law, for, as has been previously stated, the old Schedule K was loaded with concealed protection in addition to the very liberal unconcealed protection which it afforded. In fact, the net protection accorded to the manufacturer by the Payne-Aldrich law was so absurdly high that it is a small compliment to the present bill to say that the dress-goods rates probably afford a somewhat lower net protection to the manufacturer than did the Payne-Aldrich rates.

For example, the old Tariff Board report shows that on cotton-warp dress goods the compensatory duties of 7 and 8 cents per square yard—depending upon the value—worked out so that, with a duty of 11 cents per pound on grease wool, the compensatory duty of 7 cents per square yard—or 56 cents per pound, assuming a 2-ounce cloth—was predicated upon a ratio of $5\frac{1}{11}$ pounds of grease wool for each pound of fabric. Even when assuming 3 ounces of wool per square yard, the compensation was 37½ cents per pound—only 6⅜ cents less than 44 cents, the maximum compensation on cloth—and when assuming only 1 ounce of wool the compensation amounted to $1.12 per pound. The situation was similar for the cotton-warp goods (upon which the compensatory duty was 8 cents per square yard) and for dress goods not having a cotton warp. The compensatory rates on these latter were predicated upon the assumption of an average shrinkage from grease wool to goods ranging all the way from 75 per cent on a 4-ounce fabric to 87½ per cent on a 2-ounce fabric; i. e., they assumed a ratio of grease wool to fabric ranging from 4 to 1 and higher. In all of these cases it is apparent that the ratios upon which the compensatory duties were based were absurd, for the Tariff Board clearly showed that even the 4 to 1 ratio was grossly excessive. It is not surprising, therefore, that with the concealed protection as here shown, in addition to the very high ad valorem duties, no invasion of our markets by foreign competitors was possible—not even a faint threat.

However, when we say that the net protection afforded by the Payne-Aldrich law was probably somewhat higher than that in the Senate bill, owing to the concealed protection in the compensatory rates, this does not mean that the total cost to the consumer in the present bill will be less, for in reckoning this latter we must also consider the compensatory duty necessitated by the very high duty upon raw wool. So far as the consumer is concerned, it matters not whether the benefits of the duty—both compensatory and protective—imposed upon the fabrics in the clothing which he wears go to the wool-grower or to the wool manufacturer. The consequences are just the same to him.

RECAPITULATION OF THE DISCUSSION RELATING TO DRESS GOODS.

The foregoing discussion clearly shows—

First. That the protective rates in the Senate bill are substantially the same as in the Payne-Aldrich law.

Second. That the net protection to the manufacturer in the Payne-Aldrich law was probably somewhat higher, owing to the larger amount of concealed protection in the compensation rates.

Third. That the protection in the Senate bill is from 40 to 55 per cent higher than in the Underwood law.

Fourth. That the rate of 35 per cent in the Underwood law is substantially in accord with the average of the rates shown as necessary upon dress goods in a very careful analysis of the Tariff Board figures prepared by one who is now a member of the Tariff Commission.

Fifth. That there has been no change in the ratio of conversion cost here and in the United Kingdom of a character which would tend to invalidate the conclusions drawn from the earlier investigation.

Sixth. That the rates named in the Senate amendment, if effective, will result in higher prices to the consumer than under any previous laws.

The PRESIDENT pro tempore. The question is on agreeing to the amendment of the committee as modified.

Mr. NELSON. I ask for the yeas and nays on that question.

Mr. LENROOT. Mr. President, I should like to ask the Senator from Utah one or two questions for information.

What is the Treasury Department's interpretation of the phrase "wholly or in chief value?"

Mr. SMOOT. The interpretation of the department is that an article coming in will fall under the classification of the material within the article of chief value. That is, it has to be of chief value of wool before it takes the rate provided for in this paragraph.

Mr. LENROOT. Does that mean, for instance, that if there are several materials, and the wool in it is the material of chief value, it takes the wool rate?

Mr. SMOOT. It takes the wool rate.

Mr. LENROOT. Although the aggregate value of the other materials might be more than the value of the wool?

Mr. SMOOT. No; there would have to be 50 per cent or more of wool in the fabric.

Mr. LENROOT. What is the difference between the phrase "wholly or in chief value" and "component material of chief value"?

Mr. SMOOT. The component material of chief value would be the wool itself. I do not think there is any material difference between the two expressions. Sometimes they use one and sometimes the other; but the decision of the Treasury Department is that wherever the words "wholly or in chief value of wool" are used it means that there must be 50 per cent of wool in the article.

Mr. LENROOT. In value?

Mr. SMOOT. No; in quantity. I thought it was the other way; I thought it was the value; but the Tariff Commission man tells me that it must have 50 per cent or more of wool.

Mr. LENROOT. That can hardly be. Does the Senator say it goes by quantity, then?

Mr. SMOOT. That is what I am informed. I always thought it went by value.

Mr. LENROOT. Suppose 40 per cent of it was silk. Would it take the wool duty?

Mr. SMOOT. So I am informed.

Mr. LENROOT. I have not been able to find the Treasury decisions upon that point.

Mr. SMOOT. The Senator will find the definition given in the last paragraph of the bill, on page 207. According to that definition, if two or more rates of duty are applicable to an article, it is dutiable at the highest rate.

Mr. LENROOT. I am just informed by one of the experts that it is hardly as stated by the Senator from Utah; that, in fact, if the total value of the pound is a dollar and 60 cents of that is wool, it will take the wool rate.

Mr. SMOOT. That is as I have understood it.

Mr. LENROOT. But if the chief value was that of the silk——

Mr. SMOOT. And it was 60 per cent——

Mr. LENROOT. It would not take the wool rate, although there might be more wool than silk in it.

Mr. SMOOT. Yes.

Mr. LENROOT. That is contrary to what the Senator has just stated, however.

Mr. SMOOT. I think that is the decision. One of the Tariff Commission men told me just a moment ago, before he went out—I suppose he has gone for the decision—that it was otherwise, but I can not think of it being otherwise than that. That is the material of chief value.

Mr. LENROOT. It ought to be otherwise, because if the fabric comes in worth $1 a pound and the wool in it is worth 60 cents, then, of course, it ought to take the compensatory rate, but if the wool in it is worth 40 cents, it ought not to take this compensatory rate.

Mr. SMOOT. I was going to call the Senator's attention to the definition given on page 207 of the bill.

Mr. LENROOT. That is, of the phrase "component material of chief value"?

Mr. SMOOT. Yes.

Mr. LENROOT. The component material of chief value, as I understand from the Treasury decisions, might be 85 per cent cotton, but if 15 per cent were wool, the wool would then be the component material of chief value, and the article would take the rate. I certainly hope the words "wholly or in chief value" are not synonymous with the words "component material of chief value."

Mr. SMOOT. I think there is only one way to construe the words "wholly or in chief value of wool," and I think they will be construed that way.

Mr. LENROOT. Which way?

Mr. SMOOT. It is my opinion, and I do not see how they could be construed in any other way, that if there were 40 per cent wool and 30 per cent cotton and 30 per cent silk, and the wool was worth more than 50 per cent of the value of the goods, the goods would take the wool rate. I can not see it in any other way.

Mr. LENROOT. That would be proper. There is no objection to that construction. But that would not be the construction of the phrase "component material of chief value."

Mr. SMOOT. But this is "wholly or in chief value."

Mr. LENROOT. I understand, but the Senator said he thought they were synonymous.

Mr. SMOOT. I think they are.

Mr. LENROOT. If they were synonymous, then a single thread of silk would be the component material of chief value, if silk were worth more than wool.

Mr. SMOOT. If worth more than all of the balance of the article.

Mr. LENROOT. It would not come in under this provision at all.

Mr. SMOOT. It would not anyhow, under any circumstances or conditions. "Component material of chief value" means that material has to be 50 per cent of the value of the article.

Mr. LENROOT. Do I understand that if there is one material of greater value than wool, although it may be 5 per cent of the contents of the fabric, then the paragraph would not apply? In other words, under the phrase "component material of chief value," wool must be the material of the highest value, no matter how little wool there may be in it?

Mr. SMOOT. I am told by the Tariff Commission that they are exactly the same, and are so construed to-day. I do not see how it could be otherwise.

Mr. LENROOT. There might be about 5 per cent of wool in a fabric, and the rest of it cotton, and if the Senator's theory be correct, although the cotton actually in the fabric might be worth twice the value of the wool, it would take a compensatory duty of 40 cents a pound.

Mr. SMOOT. No; it would not.

Mr. LENROOT. That is what the Senator just said.

Mr. SMOOT. If I said any such thing, I did not mean it. I think the Senator misunderstood me.

Mr. LENROOT. I do not think so. If the Senator says that the phrase "component material of chief value" and the phrase "wholly or of chief value" are the same, I certainly am right in saying that with the words "component material of chief value" there may be 5 per cent of wool and the rest cotton, and it would take the rate, under the phrase "component material of chief value," as I have been informed by one of the experts that under this phraseology the aggregate value of the fabric will be taken into consideration, and if the wool in it is worth more than 50 per cent it will take the wool rate.

Mr. SMOOT. That is, under the words "wholly or in chief value of wool."

Mr. LENROOT. That is a different thing from "component material of chief value."

Mr. SMOOT. We are not using those words, and there is a dispute, I suppose, between the two officials. We are using the words "wholly or in chief value of wool," and that we agree upon.

Mr. LENROOT. I hope they are not synonymous with "component material of chief value," as I understand the decisions.

Mr. SMOOT. I shall telephone to the commission and find out if they have any decision there, and ask them to send me a copy of it they have one.

Mr. LENROOT. If there were a fabric with 5 per cent wool and all the rest of the fabric cheaper material, the committee did not intend to have that take the wool rate?

Mr. SMOOT. No; and of course it would not, because we use the words "wholly or of chief value."

Mr. NELSON. Mr. President, there can not be any mistake about the meaning of these words. They are based upon value; they are not based on quantity of the material put in, but on the value of the goods.

Mr. LENROOT. I was troubled with the thought whether, if wool were the most valuable material in the article, it would take the wool rate. The other construction would be that if the wool in it were worth more than all the rest of the material, then it would take the wool rate.

Mr. SMOOT. I have sent the expert to telephone to the department to see if they have any written decision upon the question. But the Senator and I agree as to the wording used in this schedule.

Mr. LENROOT. The Senator will agree that if the Treasury decision should not be clear on it, in conference it will be made clear that it is based upon the aggregate quantity, the wool being more valuable than all other materials contained.

Mr. SMOOT. There is no doubt of it.

Mr. SIMMONS. I think the Senator from Utah in his last statement is absolutely correct. I think we have always understood, and the departments have always held, that where the words "chief value" are used, as in this bill, they meant if the wool or other material in the article was of greater value than the other contents——

Mr. SMOOT. All the other contents.

Mr. SIMMONS. Then it took the rate.

Mr. SMOOT. I will say to the Senator that if there is any doubt about it, after receiving word from the commission, I will ask unanimous consent that it be changed; but I am quite sure there will be no question about it.

Mr. SIMMONS. I would like to call the attention of the Senator from Wisconsin, at this point, to another circumstance which I think of very great importance in connection with the "of chief value" provision. It is a common thing for cloths to be made of part wool and part cotton, "fifty-fifty," as we say. Those are sold as woolen goods. They are woolen goods, in the sense that the wool in them is of greater value than the cotton, and under the language of this bill the duty would apply.

Mr. SMOOT. The compensatory duty does not apply, because we only give 40 cents on that instead of 49.

Mr. SIMMONS. The duty does apply, but is adjusted and regulated to some extent, to a very slight extent, however, by the cost of the article.

Mr. LENROOT. If it were half cotton, of course there would be a hidden protection on account of the weight.

Mr. SMOOT. That is impossible. If it were 50–50, as the Senator says, it would fall under the 40-cent rate instead of the 49-cent rate, and that is midway between the 33 and the 49 cent rate.

Mr. LENROOT. If it were half wool, of course; under this rate of 40 cents, it is assumed that $1\frac{7}{13}$ pounds of wool was required. So, whenever the cotton in the article would rise above nine thirty-thirds of the total weight, there would be a hidden protection.

Mr. SMOOT. If it went over 25 per cent, or one-quarter of the 33 cents, which is $8\frac{1}{4}$, that would be true. But there is no such case.

Mr. SIMMONS. I am advised that it is possible to make a cloth with $33\frac{1}{3}$ per cent wool and the balance of other fiber, like cotton, in which wool would be the chief element. Of course, that would be a very fine grade of wool in value.

Mr. SMOOT. If you put $66\frac{2}{3}$ per cent cotton in the cloth, you would not find very much wool in it, and you would never sell it to any people in the world as woolen goods.

Mr. SIMMONS. I do not know whether you would or not. You would probably sell it as part wool and as part cotton. The price would probably be reduced on account of the fact that there was so much cotton in it. But certain grades of wool are mixed with certain grades of cotton in the proportion of 1 to 2, where the wool would be of more value.

Mr. LENROOT. Take a case where wool is worth $1 a pound and cotton is worth 20 cents a pound. Two-thirds of the fabric in weight might be cotton, and yet the article would take the wool compensatory duty.

Mr. SIMMONS. Certainly.

Mr. SMOOT. But no manufacturer is ever going to spoil his goods so that he could not get anything out of the wool at all. If you took a blanket with cotton in it—I do not mean the warp, because that is taken care of, but I mean filling—and tried to wash that blanket, you would see whether there was any wool in it or not.

Mr. LENROOT. I think that is true. Quite often during my life I have found that we buy things as wool, but when we wash them we find they are of something else.

Mr. SIMMONS. You do not find it out until you buy them.

Mr. SMOOT. No manufacturer is going to try to build a reputation in that manner, when he knows that if he does that kind of thing he can not make a second sale.

Mr. SIMMONS. I think you will find that a great many goods on the market which are sold as woolen goods contain less than 50 per cent wool. The other ingredients may not be altogether cotton, but of some other fiber. In that case the cloth would take the compensatory rate of practically all-wool goods, only reduced somewhat by the value of the cloth.

In many instances it is reduced slightly. In the case of these "fifty-fifty" goods the reduction in the cloth is but slight, because it is a very rare thing that you get all wool goods in this country. Where the cost is reduced only slightly the manufacturer would get a compensatory duty upon a pound of wool, whereas there was not a pound of wool in the cloth, but only half a pound, so you certainly would have concealed protection there. Upon a half a pound of wool he would be getting at the rate of 66 cents a pound.

Mr. LENROOT. I have some illustrations of that kind.

Mr. SIMMONS. That is only modified by the price of the cloth, and I say that modification is not sufficient to make up the difference which would grow out of the duty in case only one-half of it is wool.

Mr. SMOOT. If it is all wool it is 49 cents, and we give a compensatory duty of only 40 cents. There is a difference between the 33 cents and the 40 cents of only 7 cents instead of a difference between 33 and 49, which is 16. That is more than 50 per cent of the compensatory duty on the cloth above the scoured wool, upon that priced goods. I arrive at that figure because I know just about what will happen in making that class of goods under normal conditions.

Mr. LENROOT. The Senator does not deny that in this schedule there is concealed protection; I do not mean intentionally so, but inevitably so.

Mr. SMOOT. In practice I do not know where it is.

Mr. LENROOT. I think I shall be able to convince the Senator with reference to that point before I get through.

Mr. SMOOT. I do not know what kind of goods it is in practice.

Mr. SIMMONS. The Senator just stated that if it is all wool it gets 49 cents and if it is not all wool it gets 40 cents.

Mr. SMOOT. That is on goods of a certain price.

Mr. SIMMONS. Suppose it is not all wool, but there is enough wool to get a duty. Suppose it is 50 per cent wool, the compensatory duty is reduced to 40 cents instead of 49 cents, so that by reason of the fact that there is 50 per cent of it cotton we would have to reduce the duty only 9 cents.

Mr. SMOOT. No; it would not be 50 per cent cotton.

Mr. SIMMONS. In other words, if it is all wool it is entitled to 49 cents, but if half of it is wool and half of it is cotton it is entitled to 40 cents. Is it not perfectly clear that it is 40 cents in that case for half a pound of wool?

Mr. LENROOT. I have an illustration right here that comes very near to the illustration stated by the Senator from North Carolina. I hold in my hand a letter from Mr. Dale, editor of Textiles, in which he incloses and permits me to use an editorial appearing in that magazine this month. It is on the question of hidden protection; and when I say "hidden protection" I do not use it in the sense of criticizing the committee, because with the scheme or plan which the committee has adopted in the bill, if it is to give a proper compensatory protection where it is all pure wool, hidden protection on this plan necessarily results where a part of it is wool and would still take the full wool compensatory duty.

Mr. Dale gives this illustration as to suitings, 54 inches, 14 ounces. Those would not come under the pending paragraph, of course; they would come under the next paragraph, but the illustration holds good. Suitings, 54 inches, 14 ounces, value 97 cents per pound; 42 per cent cotton and 58 per cent wool. The duty upon a thousand pounds of this fabric at 49 cents would be $490, or an ad valorem equivalent of 50.5 per cent. The 50 per cent ad valorem, therefore, would amount to $485, making a total duty, compensatory and protective combined, of $975, or 105 per cent. Remember, this was 42 per cent cotton and 58 per cent wool, and the compensatory duty actually required in the fabric, according to Mr. Dale, would mean 870 pounds of scoured wool paying a rate of 33 cents a pound, or a total of $287.10, against an actual compensatory duty covered in the paragraph of $490. Therefore the actual protection upon the piece of woolen suiting would amount to $687.90, or an ad valorem of 70.9 per cent instead of 50 per cent, as is provided in the bill. In other words, there is a hidden protection upon this piece of cloth of 20.9 per cent ad valorem.

Mr. SIMMONS. Mr. President, I want to say to the Senator that I have quite a number of letters working it out in the same way, and there can not be any doubt about it.

Mr. LENROOT. As I said, if the plan is to be adopted, I do not know that that can be avoided; but I want to ask the Senator from Utah this question: Under the phrase "wholly or in chief value of wool," it will be necessary for the appraisers to appraise and ascertain all the elements in the fabric. They

will have to ascertain and appraise the wool; they will have to ascertain and appraise the cotton or the wool extract or the wool waste, or whatever it may be, in order to arrive at a determination of whether or not it is wool of chief value. Is not that correct?

Mr. SMOOT. Not wool waste and not wool content of any kind. That they would not have to ascertain. All they would have to ascertain would be whether any silk or cotton was in it. The wool wastes are counted as wool.

Mr. LENROOT. But they would have to ascertain the value.

Mr. SMOOT. They would have to ascertain the value of the wool.

Mr. LENROOT. They would have to ascertain the value of everything other than wool.

Mr. SMOOT. Yes; and that would only be cotton, unless it would be some few silk threads that may go into a suiting, and they do not amount to anything so far as value is concerned.

Mr. LENROOT. If they have to ascertain the value of the material other than wool, why would it not be equally possible for them to ascertain the wool content of the fabric in weight?

Mr. SMOOT. Certainly they can. If it is cotton or vegetable fiber of any kind, they simply take the small piece of cloth, which they can put into an acid bath which eats out the vegetable fiber, and they then know what percentage of it is vegetable fiber.

Mr. LENROOT. So they can ascertain the proportionate weight of wool in any given fabric?

Mr. SMOOT. Yes; but they can not ascertain whether it is waste or whether it is wool. That it is impossible to ascertain.

Mr. LENROOT. I understand. Then, if that is correct, why have not the committee, in providing for compensatory rates, provided for a compensatory rate upon the wool content instead of the entire weight of the fabric?

Mr. SMOOT. I did not catch what the Senator means.

Mr. LENROOT. The Senator said it was easily possible for the appraiser to ascertain the proportionate quantity of wool in a fabric or an article by weight. I grant that. Now, my question is, that being true, if the appraisers can ascertain whether a given article is 60 per cent or 50 per cent or 75 per cent of wool, why have not the committee provided compensatory duties upon the wool content of an article instead of the entire weight of the article?

Mr. SMOOT. In that way, without putting in the value, they would have to test every single piece that came in.

Mr. LENROOT. It would have to be done anyway.

Mr. SMOOT. Oh, no; not at all. They can very easily test first as to the value, which they must have, and then, if the value is low enough, it takes only 40 cents, and if it is higher it takes 49 cents.

Mr. LENROOT. They will have to test for value.

Mr. SMOOT. Yes; they will have to test for the element of chief value, but not the value of the cloth.

Mr. LENROOT. They will have to do that, and the Senator has said that it is easy also to determine by weight the proportionate content of the wool in the article.

Mr. SMOOT. I would not want to give a rate of 49 cents here if the value of the cloth was low, made so by the putting in of all wool waste and having no cotton waste or cotton in it at all.

Mr. LENROOT. No; of course not; but the committee could adopt here the same rule they have adopted elsewhere, allowing a lower compensatory rate for wool waste.

Mr. SMOOT. But they can not ascertain the percentage of waste in it.

Mr. LENROOT. No; they have to guess at it, just as the committee have done in the bill.

Mr. SMOOT. We have simply arrived at the value of the cloth, knowing that it could not be all wool.

Mr. LENROOT. Exactly so; and in making their estimates on a low value, in assuming that so much of it is pure wool, so much of it wool waste or other waste of wool, the committee could then, according to the Senator's own statement, eliminate all cotton or other material and give a compensatory duty based upon the wool alone.

Mr. SIMMONS. Mr. President, if the Senator will pardon me, that applies to yarns as well as to cloth.

Mr. LENROOT. It certainly does.

Mr. SIMMONS. Will the Senator pardon me a moment further?

Mr. LENROOT. Certainly.

Mr. SIMMONS. I have in my hand a statement sent me by the Carded Wool Manufacturers' Association, 146 Summer Street, Boston, Mass. After discussing an ad valorem rate as the proper one to adjust the difficulty growing out of the methods adopted by the committee, the statement proceeds:

> We have thus far referred only to goods made wholly of wool. The compensatory duty on goods made of mixture of wool and other fabrics represents a special problem that requires solution. The phrase "wholly or in part of wool" in the old Schedule K, which is also in the present House bill, resulted in a scandalous excess of compensatory duties on mixed goods. The phrase "wholly or in chief value of wool," which the Finance Committee has substituted in the present bill, is a very inadequate remedy, leaving, as it does, huge amounts of protection concealed in the compensatory duties. To avoid this defect we recommend that the compensatory part of the ad valorem duty on mixed goods be made proportionate to the percentage of wool in the weight of the goods, a recommendation that we made to the Finance Committee on December 14, 1921, and which has been ignored by both the Finance Committee and the Tariff Commission.

Now, the Senator suggests that way of meeting the difficulty. It is a complete remedy, in my judgment, for the difficulty growing out of the concealed protection in the compensatory duties. If it is necessary to find, as it is necessary to find, the content of chief value in any article where the rate of duty is to be determined by whether a given thing constitutes the element of chief value in the article, that happens in the tariff schedule in a great many instances. In this particular instance it is no more difficult than in others. As the Senator very well said, it is absolutely necessary in the first instance for them to find that the element of chief value is cotton or wool, and when they have found that, then they could apply the ad valorem principle to the wool.

Likewise in the cloth, as the Senator has said, in order to determine the question of whether or not it is entitled to a compensatory duty at all, it is necessary to find that wool is the chief element of value. When that has been found, what is the difficulty in fixing the compensatory rate upon the basis of the percentage of the wool in the article instead of fixing it upon the total contents of the article?

Mr. LENROOT. Mr. President, I am frank to say I had supposed, without having had opportunity to make any careful inquiry into the subject, that there would be a considerable degree of difficulty in ascertaining the wool content; but the Senator from Utah [Mr. SMOOT], a woolen manufacturer and an expert upon this subject, states that there would not be such difficulty. That being so, I can not, for the life of me, see why this compensatory duty is not based upon the wool content so that we may at least prevent this hidden protection where the fabric or the article to from 30 to 50 per cent is made of some other material than wool.

Mr. President, in order to test the sense of the Senate, I move to amend the pending amendment by inserting after the word "pound," in line 6, page 146, the words "upon the wool content thereof."

The PRESIDENT pro tempore. The question is upon the amendment proposed by the Senator from Wisconsin to the committee amendment.

Mr. SIMMONS. Mr. President, I had not intended at this time to enter into a discussion of these compensatory duties, but the Senator from Wisconsin [Mr. LENROOT] has brought the matter up, and I have some very decided views about it which I wish to express. Besides, I have some data in reference to the matter which I wish to lay before the Senate.

All during the discussion of the duties upon yarns and fabrics, whenever it has been brought to the attention of the committee that the rates proposed seemed to be outrageously excessive, the Senator in charge of the bill has replied, "We are compelled to provide these high compensatory rates because of the duty which is placed upon wool." Members of the committee have spoken of that duty rather apologetically as a rate they were forced to impose and as to which they could not help themselves.

Mr. President, who is responsible for the high duties upon the raw material? The Republican Party in this Chamber have themselves placed those duties in the bill. That party alone is responsible for them. Republican Senators, therefore, can not excuse themselves when complaint is made that the compensatory rates are too high by saying "We were forced to make them thus high because of the high rates on wool."

There has never been in the framing of a tariff bill in the United States a case of such gross discrimination as there is in the fixing of the duties upon raw wool in the pending measure. It is entirely proper, Mr. President, to impose a fixed and rigid specific duty upon a product which is of uniform value and of reasonably uniform quality; there is no inequity in that. Every purchaser of the article pays a duty at the same rate and every producer gets the benefit of the same rate; but here we have an article, raw wool, that divides itself into as many parts and grades as do cotton and tobacco. Its value is determined altogether by its quality. We do not overcome that discrimination when we impose the same rate of duty upon the scoured content of wool of one grade as we impose upon the scoured content of wool of another grade. It

is true the duty applies to the same quantity in both cases, measured by weight, but the scoured content of certain wools is worth 20 cents a pound in the foreign market to-day; indeed, certain inferior grades sell for as low as 16 cents a pound in foreign markets to-day, while the scoured content of another kind of wool is worth in the foreign market $1.20 a pound.

The scoured content of certain lower grades of wool in this country to-day is selling in the Boston market at 41 cents a pound; the scoured content of higher grades of wool is selling in the Boston market, I think, for $1.35 a pound. I am not quite sure that my figures are correct as to that, but they are substantially correct. In between these two extremes there is a vast variety of wools in which the scoured content sells for one price and another price and another price according to its grade of coarseness or fineness.

To levy a flat and rigid duty upon that raw material without any reference to its price when the price ranges from 41 cents a pound to $1.35 a pound in the American market and from 16 cents to $1.35 in the foreign market is to inject into this tariff bill with reference to this vital product, which is made the key to the duty upon cloth and the clothes which the people wear, an element of uncertainty and of discrimination without a parallel, I think, in tariff history.

This discrimination, resulting in the rankest injustice to everybody concerned, especially to the consumer who is the purchaser of the cloth, is necessarily carried forward in the duty on the yarn and on the cloth and on the garments and other articles made of woolen goods.

Mr. President, that could have been avoided. It can be no possible excuse for an injustice and a discrimination of this kind to say that it was difficult to arrange it in any other way; that there were administrative difficulties which were almost impossible to overcome. A rate of this sort that works this kind of injustice which is necessarily carried on, getting larger and larger until, in the last analysis, the people are the victims, ought not to be tolerated. To say that there is no other way by which we can tax these raw materials except by imposing a specific duty upon them in bulk, without reference to the grade or quality or value, is to repudiate the whole tariff history of the country and the method of dealing with it that has heretofore been followed. It is also to confess that the present majority party is not able properly to formulate a tariff bill.

At least, Mr. President, if the committee felt that there were administrative difficulties connected with ad valorem rates upon raw wool which could not be overcome without great trouble to the department, they might have divided the wool into classes, the classification to be based upon the value or the quality, and might have imposed one specific rate upon one quality and a different specific rate upon another quality. That has been done heretofore; that would be better than the plan proposed in the pending bill, under which all are bulked together—the Australian wool, the New Zealand wool, the wools of all the countries of the world—without any reference to variety or quality, the same fixed, unyielding rate of duty being imposed upon each. The man who buys wool of a foreign value of 16 cents a pound in order to bring that wool into this country has to pay a duty of 33 cents a pound upon it, and in the last analysis the ultimate consumer of that article has to pay that rate.

Mr. SMOOT. Mr. President, I think the Senator will want to correct that statement.

Mr. SIMMONS. I am talking about a scoured pound.

Mr. SMOOT. The Senator did not say that.

Mr. SIMMONS. Of course, I am talking about a scoured pound, as is plain, or ought to be, to everyone. We are not dealing with wool in the grease in this schedule at all. I am talking about the raw-wool schedule. There is no provision there about taxing wool in the grease. Wool is taxed on the scoured content, and what I am saying is that there are certain classes of wool sold in Great Britain to-day as low as 16 cents a pound and there are other classes sold at $1.20 a pound, and to-day in the Boston market there are scoured wools of the lower grades selling for 41 cents a pound, and there are high-grade wools selling for $1.35 a pound.

What I said was this, and the official records will bear me out: There is some wool sold on the London market for 16 cents a pound. I am referring to scoured content, of course. That wool, when it comes into this market, has to pay a duty of 33 cents a pound. That is practically twice as much as it costs in the foreign market. The man who brings in foreign wool that costs $1.20 a pound in Great Britain or anywhere else in the world pays only the 33 cents a pound. He pays as a duty one-third of the price of the wool he bought. The other man, who buys the 16-cent wool, pays as a duty double the price at which he bought the wool. I say that no such monstrous discrimination and injustice as that has ever before found its way into a tariff bill in this country.

I am not going to argue the question of whether it was entirely feasible to impose an ad valorem duty upon raw wools and carry that forward in the products of raw wools; but in the letter from the Carded Woolen Manufacturers' Association, which I will ask to have published in the RECORD without reading, that question is discussed, and I think the conclusion is reached that it is entirely feasible. I want to say, however, that I can go through this bill, and I can pick out various other provisions of it that assimilate themselves to this situation, in which we have found it feasible to deal with it from the standpoint of ad valorem rates.

It was not, however, that phase of the matter that I rose to discuss. I refer to that simply for the purpose of showing that the fundamental trouble about this whole situation is the erroneous and the misleading and the discriminating method employed by the committee in fixing its duty upon the raw material. That error having been once committed, of course it will pursue us to the end of this schedule. There is no escape from it. Senators do not avoid their responsibility to the public by saying, when we get to the cloths, that they are forced to place upon them these excessive and unheard-of duties, ranging as high as 100 per cent upon the coat that a man wears, because of the high duties upon the raw material for which the manufacturer must be compensated. They can not escape the blame with that sort of an excuse, because they are responsible for these high duties on raw wool and for the outrageously unjust and unequal manner in which they have imposed these rates, working wrong and injustice and discrimination all through the schedule.

Now, Mr. President, I get to the subject that I really rose to discuss, and that is the subject of these compensatory rates. The rates that are imposed on woolens in this bill for the purpose of protection are very excessive, and they are wholly unnecessary and unjustified, as was proven by the Senator from Massachusetts [Mr. WALSH], who in the very able and exhaustive presentation that he made yesterday, showed conclusively that with respect to the most of the products of wool on which these high compensatory rates are imposed the Underwood rates have been so effective that they have reduced importations in many instances to a minimum, and in some instances have practically excluded importations.

His facts and figures have not been disputed or overthrown; and in that situation there would seem to be no excuse or equity in raising these rates higher, especially in view of the fact that the compensatory rates are going to put the price of these cloths up to a point where, in my judgment, very little wool of the lower grade will be imported, and we shall have a flood of domestic goods bearing the name of woolens made of shoddy and noils and the waste products of wool.

The ability of the consumer to buy must sometimes be taken into consideration. Woolen goods are now so high that poor people have to put up with some substitute, or have to buy the very cheapest quality of woolen goods, which they understand to mean goods made out of cotton with a little shoddy or waste wool in it. With these high duties practically doubling the price of many of the products of wool, especially the clothing worn by the common people as well as by the rich—an article that is absolutely necessary in certain sections of the United States in times of winter—they will be so high that it will be difficult for the consumer of moderate means, especially the man who has to earn his living by the sweat of his brow, to buy anything except the very cheapest clothes made of these materials, or into which these materials enter to any extent whatsoever. In that situation, with the distress that exists among a large class of the consumers in America, with 50 per cent of them, the farming classes, unable, generally speaking, to make ends meet in their operations, making nothing upon their capital, and in many instances when fortunate enough to come out even, having no profits whatever, there is certainly no justification for levying these excessive duties on the lower grades of raw wool, two or three times as high as the duties imposed on the finer grades of raw wool. I repeat, there can be no excuse for the majority's proposition of not only levying these high and excessive rates upon the raw material, which are carried forward in the finished product by way of compensation, but actually increasing in these conditions a protective rate that has for 9 or 10 years, when raw wool was free, proved adequate not only to protect the wool manufacturers of the United States but practically to exclude certain outstanding products of the woolen mills, giving our wool manufacturers a virtual monopoly of the market, which they have taken advantage of and greatly raised their prices;

indeed, they are to-day, by reason of protection which is practically an embargo, selling their goods at a rate out of proportion to the standard of wage and the standard of profit under which two-thirds of the people of this country are living.

What do they want higher duties for, when the present duty is highly protective or prohibitive? When I have asked that question heretofore, when a situation exactly like this has developed, the answer I have gotten, and the only answer, is: "Well, if no importations are coming in, increasing the duty will do no harm." Why, then, do they want these duties increased? As the able Senator from Massachusetts [Mr. WALSH] yesterday showed, in this industry—and it is true of practically the whole textile industry; less so, probably, in the cotton industry than others, because in that industry the number of mills is many times larger—but in the textile industry as in the steel industry of this country and in many other industries of this country, unfortunately the process of consolidation and combination and agreement and monopoly has progressed to the point where the industry has been either monopolized altogether or sufficiently controlled by monopoly methods to enable the producer to fix his price arbitrarily, subject only to two conditions: First, the amount that the traffic will bear; second, the danger of foreign competition in case the price is raised above the level of the duty imposed.

In most of these cases where the industry is monopolized or trust controlled as to prices, as in the case of the woolen industry, the price has been raised practically to the level of the present duty. They have not raised it higher because the minute they raise it higher they invite foreign competition. They want to raise prices, and they are raising prices. There is not a day that we do not read in the newspapers of some increase in the price of woolen goods here and there. Since this bill has been under consideration the prices of certain woolen goods have advanced first 10 and then 25 per cent. They can not go any higher without inviting foreign competition. Probably present prices would have invited some but for the demoralized and crippled condition of the industries in the Old World. These protected profiteers want to go higher. They intend, the minute this bill is passed, to go higher.

It is common knowledge that there is going to be a jacking up of prices all along the line as soon as this bill is passed. Some men in the big trust-controlled industries are sufficiently wise and prudent to restrain themselves until the bill is passed, because they are afraid that if they should begin to increase prices before it passes it might have a deleterious effect upon the prospects of the bill. But the woolen industry in many of its branches has not been able to restrain itself. It has been raising prices in anticipation. What do they want with more duties? They want them for the purpose of enabling them to further increase their prices and at the same time, by reason of the increase in the duty upon the product, to continue to be immune from foreign competition.

In these debates I have heard some most amazing statements. The Senator from Indiana [Mr. WATSON], a member of the Finance Committee, a bright particular star in the Republican firmament, in an address which he made in the Senate at the time he staged that vaudeville exhibit which rather sickened the country, and which has become the subject of laughter and of jest from one end of the country to the other, made this broad statement, in effect: "Take care of the producer and the consumer will take care of himself."

Mr. President, with production in these industries in the hands of monopolies, in the hands of price-controlling trusts, how can the consumer take care of himself? If we add additional duties, the consumer, who is now not able to take care of himself, as everybody knows, will be confronted by a still harder proposition in his attempt to take care of himself. Take care of the producer and let the consumer take care of himself! How is he taking care of himself now? He is taking care of himself now by being forced to pay from 50 to 100 per cent more for many of the common things of life than they are intrinsically worth and than is warranted upon any basis of cost of production. He is utterly helpless. Yet this shining light of the Republican Party suggests that our business here in legislating is to provide for the producer and protect him, confer upon him all sorts of favors through the tariff, stop trust prosecutions, and put no impediment in the way of the formation of trusts. That is a magnificent way of taking care of the producer.

The Republican Party has been in power over a year and I have not heard of any prosecutions of trusts, although we all know that during the war the trusts in the United States multiplied and multiplied, and that their power to-day is infinitely greater than it has ever been in the history of this country, and we all know that if this bill passes the hands of the trusts will be further strengthened and the further monopolization of the industries of this country will be invited.

Oh, yes; help the producer. Do not prosecute him if he is in a trust. Do not interfere with his trust organizations. Give him a free hand to monopolize, and then give him enough tariff duty to enable him to raise his present skyward prices until they bump the sky. That was his theory, and the country should know that such is the doctrine of the Republican Party as represented by its leaders in this Chamber.

Mr. NICHOLSON. Will the Senator yield to a question?

The PRESIDING OFFICER (Mr. MOSES in the chair). Does the Senator from North Carolina yield to the Senator from Colorado?

Mr. SIMMONS. No; I do not wish to be interrupted. I am going to make this speech without interruption. I have been drawn off from the things I was talking about on former occasions, and I am not going to be diverted now.

Later we had another most remarkable declaration made here from another very conspicuous and unique figure in connection with this tariff legislation. Of course, I need not name him, because everybody will recognize him at once by the description I have given. I refer to the junior Senator from Idaho [Mr. GOODING], the man who has succeeded in out-Heroding Herod in his demands for protection. He is the leader of the agricultural "tariff" bloc upon the other side of the Chamber. He is the man who dictated these high rates upon wool and all other agricultural products. He made his demand of his Republican colleagues as spokesman of the bloc, and he got what he wanted, every bit of it, and he is demanding of the Senate to-day his pound of flesh. The Finance Committee has shown quite a disposition during the past two or three weeks, while we have been dealing with the cotton schedule and some of the schedules before that, to meet the demands of the country and to recognize the growing opposition of the public and the growing opposition among Senators on the other side of the Chamber. Day after day they have come in and cut their rates, sometimes unexpectedly cutting them almost to the bone, cutting them down almost to the level of the Underwood rates.

That became a common practice. Sometimes their changes covered five or six pages, numbering scores of amendments, expected to be offered that day or subsequently. But it is noticeable that since we reached the wool schedule the committee has come to a sudden halt, and we have no more concessions worth mentioning. Why is that? Why suddenly change this policy of reducing these rates, proven and established and recognized by everybody as being excessive and unjust and unwarranted? Why suddenly stop when we reach wool? I will tell the Senate why. Wool is the very keystone which has bound the other side of the Chamber together in a hard and fast compact, whether implied, expressed, or understood. That has become absolutely necessary to the integrity of the bill and to enable it to be passed through the Senate at all.

The rate on raw wool is the key to the whole situation. If you cut that, look for rebellion on the part of the "agricultural tariff" bloc; look for the slaughter of your high rates upon the manufactured articles.

Mr. President, I think one might safely say that with the increased protective rates in the wool schedule and the increased protection they are going to get in the way of this camouflaged tribute in the compensatory duty, the woolen manufacturers of this country are going to have a protection which will be so satisfying, so complete and all-embracing, that at least for many years to come we will hear no complaint from the woolen people about importations from abroad. But the people will indeed groan under their exactions.

These protective rates, plus the protection in the compensatory clauses of the bill, are going to give the producers not merely control of the American market but are going to give it to them without any interference or the possibility of interference by competition from abroad. The embargo during the war was not more protective and prohibitive than will be these rates.

But, Mr. President, I was speaking of the junior Senator from Idaho [Mr. GOODING]. The Senator from Idaho, I said, is the "master mind" in connection with the wool schedule. He has forced terms upon the Republican Party in the Senate, and he is not going to let them out, and the minute they undertake to interfere with the rates he forced upon the schedule there is going to be trouble about the rates the others on that side want.

But what I desire to call particular attention to in connection with the part of the junior Senator from Idaho in this matter were certain observations which he has made in the

Senate, not once, not twice, but repeatedly, showing that it is a fixed conviction in his mind, to the general effect that he is in favor of a tariff so high that nothing which is produced or can be produced in this country shall be subject to foreign competition. In other words, properly interpreted, the Senator, if not in express terms, though I think it was practically expressed in language that he used, means that he wants to establish a universal embargo, throw all around our borders a high protective wall, and exclude the product of every other country in the world if that product can be or is produced in this country even by the "hothouse method." That means, of course, the establishment in the United States of a policy which was inaugurated in another quarter of the globe centuries ago.

China, the oldest civilization in the world, with a philosophy and a science and a religion that antedates ours, with an industrious population, with exhaustless supplies of all the essential raw materials—I doubt whether there is any country upon the face of the globe so favored with the essential and vital raw materials of manufacture—with a rich and fertile soil, with a reasonably salubrious climate, centuries ago established the policy of seclusion and isolation. Notwithstanding the balance of the world since that time has advanced in economic and financial resources and status beyond the dreams of the philosophers and statesmen of the olden time, or even of the middle of the past century, China to-day stands but little further advanced industrially, economically, or financially than she was when that policy was first inaugurated.

That is the policy which would be inaugurated here by this gentleman representing a great State of the Union, the head of the "agricultural" bloc, whose mandate was honored by the committee and who stands here with a whip in his hand and restrains the Finance Committee from regulating and correcting the evils which are denounced by Senators upon both sides of the Chamber who have studied the question and who understand it, and whose complaints are not even heeded or answered. He has made that declaration. And on the Republican side there comes no repudiation, no rebellion, against the high hand of the modern tariff Herod.

What, I inquire of Senators, will be the effect upon the wheat, cotton, and tobacco farmers of the United States if this suicidal policy is adopted and they should as the result of it, as they would, lose their foreign market for the sale of their great surplus? Will not wholesale bankruptcy and ruin inevitably result?

Now, Mr. President, I come back to the wool schedule. The Senator from Wisconsion [Mr. LENROOT] has rendered a distinct service, although I think it has been entirely futile in its effect upon the Finance Committee and in its effect upon the Senate. Notwithstanding the clear, manifest, undeniable, and practically uncontroverted justice of his position calling for the application of the reductions and the readjustments which the committee have been making now for three or four weeks, the Senator from Wisconsin recognizes, as I think we all recognize, that upon this schedule we are absolutely hopeless and nothing can be accomplished. The cards have been stacked. The deal has been arranged. The rates of this schedule are the basis of the coalition between the Republican factions. It is to that coalition what the blood which palpitates in my heart is to my life. It must not be touched. Touch it and the whole bill is wrecked. The Senator from Wisconsin recognizes that situation as we recognize it, although he may not be quite so open or bold as I am in his expression about it.

There is another feature to which the Senator from Wisconsion called attention this morning that is very interesting. The compensatory duties are levied not exactly as they were in the Payne-Aldrich law. The rule is different. They are not levied as in other Republican tariff laws which have been enacted. The pending bill provides that the application of the duty of 33 cents, when translated into rates that are proposed to be corresponding when the wool is converted into yarn and cloth, whether the rate be on the raw material or in the translated state on the finished or semifinished product, shall be upon the basis of 33 cents a pound. That is the basis of the compensatory rate, different in decimals only because of the waste and loss in conversion. This rate is to apply to all articles, raw wool or finished product, when the wool in the article is the element of chief value—not chief quantity, not chief quality, but when it is the element of chief value.

Mr. President, it may be all right to carry forward that raw-wool duty of 33 cents by way of compensation at the full rate on the raw product, provided the article upon which the tax is to be levied and the duty collected is all wool. If it is not all wool, then if the full rate is levied manifestly the producer will get the benefit of the protection not measured by the wool content, but measured by the content of wool plus the content of cotton or of silk or of any other fiber. Just in proportion as those foreign substances exist as compared with the major substance, namely, wool, just in that proportion will the compensatory rate allowed exceed the proper measure of compensation and be in the nature of additional protection.

I do not think that proposition requires elaboration. The committee have attempted, in some slight measure, to meet this situation by providing a certain rate when the article is worth a certain sum and a certain higher compensatory rate when the article is of a higher value. That does, to some extent, meet the situation, but to a very limited extent. I do not wish to take up too much of the time of the Senate in elaborating that, but I wish to read a letter which I have received from one whom I regard as a very high authority. The letter is from Mr. W. C. Hunneman, of Boston. Mr. Hunneman is a director of the Carded Woolen Manufacturers' Association. He is a man who, as this letter shows, has given very careful study to this aspect of the question. The letter is dated July 24 and is addressed to myself. It reads:

> One feature of the Finance Committee's wool schedule, the concealed protection in the compensatory duty, has not received the attention it deserves.

It has received little attention, Mr. President, although it is one of the most important things in this bill; it is also one of the greatest outrages in the bill. It is a subterfuge and a miserable fraud. It is an attempt to get protection under a false pretense, and it deserves the most unqualified and unmeasured denunciation, in my judgment. Mr. Hunneman continues:

> First let us take goods made of mixtures of wool and cotton. If, as is easily possible, wool is the component material of chief value in a fabric composed of 50 per cent wool and 50 per cent cotton by weight—

Of course the wool is worth twice as much as the cotton, and it is, therefore, necessarily "of chief value"—

> the compensatory duty under the Fordney-McCumber bill, and the compensatory duty actually required—

That is to say, that the manufacturer was actually entitled to by reason of the duty upon the raw material—

> assuming the value to be $1 per pound, would be as follows: Compensatory under Finance Committee bill 49 cents per pound; ad valorem 49 per cent; compensatory required 24.5 cents; ad valorem 24.5 per cent; concealed protection 24.5 cents; ad valorem 24.5 per cent.

In other words, one half of the compensatory duties that the manufacturer gets in that case, according to Mr. Hunneman, he is entitled to because of the wool that is in the fabric, and the other half he is not entitled to because it is not wool but cotton.

Mr. President, how outrageous it is to say that I shall have a duty of 33 cents upon my woolen goods by way of compensation for the 33 cents duty on wool, and then to give me 33 cents a pound upon an article in which there is 50 cents worth of cotton and 50 cents worth of wool, or in which wool constitutes one half and cotton constitutes the other half! Of course, it is concealed protection; it can not be anything else. It is stolen protection; it is sneaked-in protection. Proceeding, Mr. Hunneman says:

> It is impossible to say how small a percentage of wool might be used in a wool and cotton mixed fabric in which wool is the component material of chief value; but let us suppose it could run as low as 30 per cent of wool. Then the concealed protection would be as follows, taking cloth worth $1 per pound for illustration: Compensatory under Finance Committee bill, per pound, 49 cents; ad valorem, 49 per cent; compensatory required, 14.7 cents; ad valorem, 14.7 per cent; concealed protection, 34.3 cents a pound; ad valorem, 34.3 per cent.

I do not know how low the wool element might descend and wool still remain the element of chief value; but I know that woolens and cottons are mixed and I know that wool of the highest qualities is selling for around $1.35 per pound in the United States. That is the quotation furnished me yesterday. I have not the exact figures before me, but, on the average, it is somewhere around there. The lower grade is selling in Boston at 41 cents a pound, and the higher grade, as I have just stated. at $1.35, while cotton is still low, being at this time worth around 21 cents a pound. So it is possible that if one-third of the fabric was wool of a higher grade it might constitute the element of chief value.

This talk about all goods being up to the standard of the complete wool garment is bosh, and everybody knows it. The country is now flooded with mixed goods; I should say, upon a rough guess, that one-half and perhaps two-thirds of all the woolen goods that are upon the market to-day are mixed with cotton or some other fiber. I have no doubt that the cheaper cloths, such as poor people use, are not only made of the cheaper grades of wool but they are greatly mixed with other fibers than wool. Yet, Mr. President, however cheap the

grade may be, however much it may be diluted with cotton and other fibers, under this bill practically the same rate of compensation will be allowed upon those goods, and the coarser the quality of the goods the higher the rate of protection given by way of compensatory duty.

Proceeding, Mr. Hunneman says:

We learn from the press reports—

I will not read that, because it is personal to the Senator from Utah and it is not necessary to read it. After alluding to some statements of the Senator from Utah, calling them in question and criticising them, he says:

Furthermore, the Finance Committee bill, while theoretically making the compensatory duty on all wool goods equal to what is required, does in fact give concealed protection, and for these reasons:

On medium and low-priced wool the scoured-content duty acts as an embargo on imports—

That is exactly what I said a little while ago, that on medium and low-priced wool the scoured-content duty acts as an embargo on imports—

and medium and low-priced all-wool goods will then be manufactured by substituting wool by-products—noils and shoddy—for new wool. The Finance Committee's bill places the full compensatory duty on such goods because they are all wool. Thus the Finance Committee's bill prevents the wool manufacturer from obtaining medium and low priced wools. It also prohibits by high duties the importation of wool by-products, noils, and shoddy. It thus places the wool manufacturers in a position where they can not import any of these raw materials and gives the domestic producers of wool by-products, noils, and shoddy a monopoly of the domestic market, enabling them to force prices of these materials to excessive heights, the ultimate consumers, of course, paying in the end.

The fact is that the Finance Committee has merely camouflaged the old "wholly or in part" provision—

That was the provision in the Payne-Aldrich law—

leaving the compensatory duty on both mixed goods and all-wool goods as objectionable as in the House bill and Schedule K.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Utah?

Mr. SIMMONS. I said awhile ago I was going to make this speech without yielding. The Senator can reply when I conclude.

Mr. SMOOT. I did not intend to refer to anything the Senator himself said, but he has placed in the RECORD statements that some one wrote him, and I wish to say that the statements made in the letter are not true.

Mr. SIMMONS. I have read the statement as being that of Mr. Hunneman, but it is signed by the "Carded Woolen Manufacturers' Association, W. C. Hunneman, director." I am not vouching for the truth of all of his statements, but I do not doubt that they are substantially correct with reference to his comment on this bill.

Mr. SMOOT. That is what I wanted to make clear.

Mr. SIMMONS. The Senator is at perfect liberty to express his opinion of the veracity of Mr. Hunneman after I conclude.

Mr. SMOOT. The Senator from North Carolina knows that the compensatory duty on cloth of which the writer of the letter speaks is 26 cents a pound, and on blankets it is only 20 cents a pound, and not 49 cents. The letter is deceptive from beginning to end.

Mr. SIMMONS. Mr. Hunneman was discussing goods of a value of $1 a pound. That is the basis of his figures.

Mr. SMOOT. Then his conclusions are absolutely wrong.

Mr. SIMMONS. The Senator can point that out and write to Mr. Hunneman about it if he cares to do so.

Mr. SMOOT. I do not care anything about what Mr. Hunneman says.

Mr. SIMMONS. I presume Mr. Hunneman has also written to the Senator from Utah, because I have a copy of a letter here which is addressed to the Senator from Utah, but which has never been read into the RECORD.

Now, Mr. President, I want to put in the RECORD a statement with respect to this matter by the Carded Woolen Manufacturers' Association, whose chief office is at 146 Summer Street, Boston, Mass. I want to read only a very short part of it, but not all of it.

To the Members of the Sixty-seventh Congress:

In the revision of Schedule K the truth about the compensatory duties should be kept in mind, not only because of its importance in the wool tariff but because of the errors regarding it that have been disseminated for 55 years. The facts are as follows:

1. Specific duty on grease wool: It is impossible to adjust the compensatory duties to a grease weight specific duty on wool, any attempt to do so being certain to result in wide variations, the old Schedule K with its concealed protection being an example.

2. Specific duty on scoured content: If wool were a product of uniform value like gold, silver, and copper, with all kinds of wool selling at one price per scoured pound, a scoured content wool duty would give access to all wools on equal terms, and a compensatory duty on goods could be made approximately to balance the scoured content specific duty on wool. Instead, however, of being uniform in price, scoured wool varies widely in value—from 16 cents to $1.20 per pound on wool in large quantities at the present time—as a result of which any specific duty on the scoured content is bound to result in a very low ad valorem equivalent duty on high-priced wool—

The kind that the rich buy; a very low duty on that—

and a very high ad valorem equivalent duty on low-priced wools—

The goods that the poor people of this country buy.

Mr. President, I say that no party can stand before the American people and defend putting an ad valorem equivalent rate of 206 per cent—and that is what Mr. Hunneman says is involved here, as I shall read in a minute—upon the low-priced woolens that are purchased and used by the average man who makes his living by the sweat of his brow, whose occupation in this life is to earn its necessaries, and at the same time putting a duty of only 27 per cent ad valorem equivalent upon the high-priced woolens, which are largely purchased and used by men of means and of wealth. The thing is intolerable. The thing will not be submitted to by the American people. They will repudiate the act and repudiate the agents responsible for the act. They ought to. No more horrible wrong can be done in this world than to discriminate in the cost of the necessaries of life between the poor man and the rich man in favor of the rich. It is cowardly as well as iniquitous.

Proceeding, Mr. Hunneman says:

In the case of the 33-cent duty the variation being from 27 per cent to 206 per cent ad valorem on present values.

Now, an essential factor in the problem is that, regardless of quality or value, every pound of wool, whether new or reworked, and every pound of cotton compete with every other pound of wool, owing to the possibilities of substitution, so that when the ad valorem equivalent of the scoured content duty rises above the purchasing power of the consumer it operates as an embargo, the lower-priced cotton, shoddy, and other fibers being substituted for new wool in order to keep the price of the cloth within the consumer's purchasing power.

That is just what will happen, in my judgment.

Then the theoretically correct compensatory duty ceases to be a compensatory duty, and, combined with the protective rate, operates as an embargo on imports of goods. This fact makes it impossible to adjust a compensatory duty to the increased cost of wool resulting from a scoured content wool duty.

Mr. President, before that article concludes there is a statement that last December this association, through its representatives, appeared before the Finance Committee and suggested an amendment to the wool schedule to cure this difficulty, and in order to accomplish that result they recommended that the compensatory part of the duty on mixed goods be made proportionate to the per cent of wool in the goods. Unless I change my mind, or unless somebody else offers it, I shall offer such an amendment here. I hope somebody else will, because I have discovered the utter futility of amendments coming from this side of the Chamber. To be successful they must come from the other side, in order that the Republican Party may get such credit as there is in the reduction of these rates, or the change and remedy of these unjust arrangements. I hope some one on the other side will offer an amendment by which the compensatory rate shall be imposed upon the wool content of the garment or of the yarn, because I think it will to some extent correct this evil, and it is an evil which ought to be corrected. It is simple justice to the people of this country, and it can be done without injustice to the wool manufacturers.

Mr. LENROOT. Mr. President, will the Senator yield?

Mr. SIMMONS. Yes; I yield.

Mr. LENROOT. I will say that that is the amendment now pending, making the basis of the compensatory duty the wool content of the article.

Mr. SIMMONS. Did the Senator offer it?

Mr. LENROOT. I did and it is now pending.

Mr. SIMMONS. I did not know that. I was not present when it was offered. It had not been called to my attention. It is a very just amendment, and I hope it will prevail. It will help this situation wonderfully. It will eliminate this concealed protection, and if there is one thing we ought to do it is that we permit the people of the country to know exactly what rate of protection we are giving to these interests, and let them know exactly what rate they are going to have to pay upon a certain product, whether that duty is upon the product itself or whether it is smuggled in and camouflaged and screened in the way that these compensatory duties are arranged by the committee.

APPENDIX.

THE TRUTH ABOUT COMPENSATORY WOOL DUTIES.

To the Members of the Sixty-seventh Congress:

In the revision of Schedule K the truth about the compensatory duties should be kept in mind, not only because of its importance in the wool tariff but because of the errors regarding it that have been disseminated for 55 years. The facts are as follows:

1. Specific duty on grease wool: It is impossible to adjust the compensatory duties to a grease-weight specific duty on wool, any attempt to do so being certain to result in wide variations, the old Schedule K with its concealed protection being an example.

2. Specific duty on scoured content: If wool were a product of uniform value like gold, silver, and copper, with all kinds of wool selling at one price per scoured pound, a scoured-content wool duty would give access to all wools on equal terms, and a compensatory duty on goods could be made approximately to balance the scoured-content specific duty on wool. Instead, however, of being uniform in price, scoured wool varies widely in value (from 16 cents to $1.20 per pound on wool in large quantities at the present time), as a result of which any specific duty on the scoured content is bound to result in a very low ad valorem equivalent duty on high-priced wool and a very high ad valorem equivalent duty on low-priced wools; in the case of the 33-cent duty, the variation being from 27 per cent to 206 per cent ad valorem on present values.

Now, an essential factor in the problem is that, regardless of quality or value, every pound of wool, whether new or reworked, and every pound of cotton compete with every other pound of wool, owing to the possibilities of substitution, so that when the ad valorem equivalent of the scoured-content duty rises above the purchasing power of the consumer, it operates as an embargo, the lower priced cotton, shoddy, and other fibers being substituted for new wool in order to keep the price of the cloth within the consumer's purchasing power. Then the theoretically correct compensatory duty ceases to be a compensatory duty, and, combined with the protective rate, operates as an embargo on imports of goods. This fact makes it impossible to adjust a compensatory duty to the increased cost of wool resulting from a scoured-content wool duty.

3. Ad valorem duty on wool: If the percentage of increase in the American cost of converting wool into cloth were equal to the ad valorem rate on wool, both being, say, for illustration, 50 per cent, an ad valorem duty of 50 per cent on goods would provide both compensation for the wool duty and protection to the wool manufacturer without any variable factor whatsoever, regardless of the relative proportions of wool cost and conversion cost that make up the total cost of the goods.

It is generally believed that the American cost of converting wool into wool goods is double that of the foreign cost; that is, 100 per cent higher, while the ad valorem equivalent of the Payne-Aldrich wool duty was about 50 per cent. This difference of 50 per cent between the increase of the conversion cost and a duty of 50 per cent on wool, combined with the variation in the relative proportions of wool cost and conversion cost of goods, introduces the only variable factor in the adjustment of a compensatory duty in an ad valorem wool schedule.

Substantially all variations in the relative proportions of wool cost and conversion cost of goods are included within the extremes of 40 per cent for wool and 60 per cent for conversion, and 60 per cent for wool and 40 per cent for conversion. Let us assume that an ad valorem tariff on wool and wool goods is based on relative costs of 50 per cent for wool and 50 per cent for conversion. Let us also assume that the wool duty is 50 per cent ad valorem and the American conversion cost is 100 per cent higher than the foreign. Then the compensatory rate on goods costing 50 per cent for wool and 50 per cent for conversion would be 25 per cent ad valorem, and the protective rate 50 per cent, making the total duty on goods 75 per cent ad valorem.

Under such a wool schedule the one extreme of 40 per cent for cost of wool and 60 per cent for cost of conversion means that 10 per cent of the total cost which the tariff assumes to be the wool cost, requiring a protection (compensation) of 50 per cent ad valorem, is in fact conversion cost requiring a protection of 100 per cent ad valorem; that is, this 10 per cent of the total cost receives a protection 50 per cent less than is required. Now 50 per cent of 10 per cent is 5 per cent, so that the extreme of 40 per cent for wool cost and 60 per cent for conversion cost would result in the 75 per cent ad valorem being imposed on goods that actually required 80 per cent.

In like manner at the other extreme of 60 per cent for wool cost and 40 per cent for conversion cost, 10 per cent of the total cost on which the tariff places a protection of 100 per cent ad valorem on the assumption that it is conversion cost is in fact wool cost requiring a protection of 50 per cent ad valorem, this resulting in 75 per cent ad valorem being placed on these goods which require only 70 per cent.

Thus under the assumed relations between foreign and American costs, the actual duty collected would not vary more than 5 per cent from what is required, while the great bulk of wool goods would come very close to the assumed proportions of wool and conversion costs, and thus be subject to only negligible variations.

THE TRUTH ABOUT COMPENSATORY DUTIES.

From the above it is plain that a compensatory duty on goods can not be made to balance either a grease weight or scoured weight specific duty on wool, while a compensatory duty can be easily adjusted to balance an ad valorem duty on wool with but negligible variations.

SUPPRESSING THE TRUTH FOR SIXTY YEARS.

Why have the reverse of the facts about compensatory duties on wool goods been paraded before the public since 1867 in order to make the uninformed believe that falsehood is truth, and truth is falsehood? It is because specific duties on wool give unfair profits to favored interests, while ad valorem duties make all equal under the law.

From 1867 to 1913 the worsted spinners spread the error in order to maintain their special privilege under the grease weight specific wool duty, and did this in spite of the astounding degree of concealed protection in the four to one compensatory duty under Schedule K. (See pp. 3624–3626, 1922 hearings before Finance Committee for illustrations of the protection concealed by the compensatory duty in the grease weight specific wool tariff.) The extent of their special privilege under that wool tariff is shown by the fact that from 1870 to 1910 the value of raw materials used in the worsted mills increased 1,352 per cent while the raw materials used by their carded woolen competitors decreased 35 per cent during the same period.

Since the agitation for the specific duty on the scoured content was started in 1909 the same misstatement about the compensatory duty in an ad valorem schedule has been circulated by the woolgrowers in order to promote the 33-cent scoured-content form of special privilege, which places an embargo on a large part of the foreign supply of wool by duties whose ad valorem equivalents run up as high as 200 per cent or more.

Some among each of these two groups of seekers of special privilege have deliberately sought to mislead others on this question. Many have carried on the propaganda in ignorance of the truth. And it goes without saying that the error was readily accepted by the vast majority of legislators and the public, who were neither worsted spinners nor woolgrowers, and who neither had the truth laid before them nor had the time to dig it out for themselves.

A particularly flagrant and wholly inexcusable form of the error is now being circulated by the Tariff Commission (Recent Tendencies with Reference to Wool Tariff Aspects, by L. G. Connor, p. 13), where the variations in relative costs of wool and conversion are exaggerated, without even the pretense of supporting the claim by evidence and without referring either to the facts we have stated above, which were accessible to the commission, or to the impossibility of adjusting the compensatory duty to a specific duty on wool.

COMPENSATORY ON MIXED GOODS.

We have thus far referred only to goods made wholly of wool. The compensatory duty on goods made of mixtures of wool and other fibers presents a special problem that requires solution. The phrase "wholly or in part of wool" in the old Schedule K, which is also in the present House bill, resulted in a scandalous excess of the compensatory duty on mixed goods.

The phrase "wholly or in chief value of wool," which the Finance Committee has substituted in the present bill, is a very inadequate remedy, leaving, as it does, huge amounts of protection concealed in the compensatory duty.

To avoid this defect we recommend that the compensatory part of the ad valorem duty on mixed goods be made proportionate to the percentage of wool in the weight of the goods, a recommendation that we made to the Finance Committee on December 14, 1921, and which has been ignored by both the Finance Committee and the Tariff Commission.

Respectfully,

CARDED WOOLEN MANUFACTURERS' ASSOCIATION,
146 Summer Street, Boston, Mass.

JULY 25, 1922.

BOSTON, MASS., *July 24, 1922.*

Hon. F. M. SIMMONS,
United States Senate, Washington, D. C.

DEAR SIR: One feature of the Finance Committee's wool schedule, the concealed protection in the compensatory duty, has not received the attention it deserves.

First, let us take goods made of mixtures of wool and cotton. If, as is easily possible, wool is the component material of chief value in a fabric composed of 50 per cent wool and 50 per cent cotton, by weight, the compensatory duty under the Fordney-McCumber bill and the compensatory duty actually required, assuming the value to be $1 per pound, would be as follows:

	Compensatory.	
	Cents per pound.	Per cent ad valorem.
Compensatory under Finance Committee bill	49	49
Compensatory required	24.5	24.5
Concealed protection	24.5	24.5

It is impossible to say how small a percentage of wool might be used in a wool and cotton mixed fabric in which wool is the component material of chief value, but let us suppose that it could run as low as 30 per cent of wool. Then the concealed protection would be as follows, taking cloth worth $1 per pound for illustration:

	Compensatory.	
	Cents per pound.	Per cent ad valorem.
Compensatory under Finance Committee bill	49	49
Compensatory required	14.7	14.7
Concealed protection	34.3	34.3

We learn from the press reports that Senator SMOOT claimed, with a great flourish, on Saturday that no provision similar to the "wholly or in part" provision of the old Schedule K and the House bill was in the Finance Committee's wool schedule. The above comparisons show plainly that Senator SMOOT is mistaken.

Senator SMOOT's story about the cotton blankets with a wool selvage being subject to the full compensatory rate represents an extreme case of no real importance in the trade. For all practical purposes the degree of concealed protection in the Finance Committee's compensatory rates is as bad as in the House bill or the Payne-Aldrich Schedule K.

Furthermore, the Finance Committee's bill, while theoretically making the compensatory duty on all wool goods equal to what is required, does in fact give concealed protection, and for these reasons:

On medium and low-priced wool the scoured content duty acts as an embargo on imports, and medium and low-priced all-wool goods will then be manufactured by substituting wool by-products, noils, and shoddy for new wool. The Finance Committee's bill places the full compensatory duty on such goods because they are all wool. Thus the Finance Committee's bill prevents the wool manufacturers from obtaining medium and low priced wools. It also prohibits by high duties the importation of wool by-products, noils, and shoddy. It thus places wool manufacturers in a position where they can not import any of these raw materials and gives the domestic producers of wool by-products, noils, and shoddy a monopoly of the domestic market, enabling them to force prices of these materials to excessive heights, the ultimate consumers, of course, paying in the end.

The fact is that the Finance Committee has merely camouflaged the old "wholly or in part" provision, leaving the compensatory duty on both mixed goods and all-wool goods as objectionable as in the House bill and Schedule K.

In the interest of honest tariff revision, these facts should be made known at once.

Respectfully,

CARDED WOOLEN MANUFACTURERS' ASSOCIATION,
W. C. HUNNEMAN, *Director.*

Mr. LENROOT. I demand the yeas and nays on my amendment, Mr. President.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Wisconsin [Mr. LENROOT] to the committee amendment as modified. On that question the yeas and nays are demanded.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. GLASS (when his name was called). I have a general pair with the senior Senator from Vermont [Mr. DILLINGHAM], which I transfer to the senior Senator from Rhode Island [Mr. GERRY], and vote "yea."

Mr. McCUMBER (when his name was called). I transfer my pair with the junior Senator from Utah [Mr. KING] to the junior Senator from North Dakota [Mr. LADD], and vote "nay."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. McKELLAR] to the junior Senator from Washington [Mr. POINDEXTER], I vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Missouri [Mr. REED], and vote "yea."

Mr. WALSH of Montana. I transfer my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Texas [Mr. CULBERSON] and vote "yea."

Mr. WATSON of Indiana (when his name was called). I transfer my general pair with the senior Senator from Mississippi [Mr. WILLIAMS] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

The roll call was concluded.

Mr. STERLING. I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON].

Mr. McLEAN. I transfer my pair with the senior Senator from Montana [Mr. MYERS] to the senior Senator from Pennsylvania [Mr. CROW] and vote "nay."

Mr. HALE. I transfer my pair with the Senator from Tennessee [Mr. SHIELDS] to the Senator from Delaware [Mr. DU PONT] and vote "nay."

Mr. JONES of Washington. The senior Senator from Virginia [Mr. SWANSON] is necessarily absent. I am paired with him for this afternoon, but I understand that if present he would vote as I shall vote, and therefore I vote. I vote "yea."

Mr. HARRIS. I transfer my pair with the junior Senator from New York [Mr. CALDER] to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

I wish to state that my colleague [Mr. WATSON of Georgia] is absent on account of illness. He is paired with the Senator from California [Mr. JOHNSON]. If my colleague were present he would vote "yea."

Mr. DIAL. I am paired with the senior Senator from Michigan [Mr. TOWNSEND]. I understand that if he were present he would vote as I shall vote, and therefore I feel at liberty to vote. I vote "yea."

Mr. JONES of New Mexico. I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Nevada [Mr. PITTMAN] and vote "yea."

The result was announced—yeas 25, nays 33, as follows:

YEAS—25.

Borah	Heflin	Overman	Underwood
Capper	Jones, N. Mex.	Pomerene	Wadsworth
Caraway	Jones, Wash.	Robinson	Walsh, Mass.
Cummins	Kellogg	Sheppard	Walsh, Mont.
Dial	Lenroot	Simmons	
Glass	McCormick	Stanley	
Harris	Nelson	Trammell	

NAYS—33.

Broussard	Harreld	New	Spencer
Bursum	Kendrick	Newberry	Stanfield
Cameron	Keyes	Nicholson	Sterling
Colt	Lodge	Oddie	Warren
Curtis	McCumber	Pepper	Watson, Ind.
Ernst	McKinley	Phipps	Willis
France	McLean	Ransdell	
Gooding	McNary	Shortridge	
Hale	Moses	Smoot	

NOT VOTING—38.

Ashurst	Fernald	McKellar	Shields
Ball	Fletcher	Myers	Smith
Brandegee	Frelinghuysen	Norbeck	Sutherland
Calder	Gerry	Norris	Swanson
Crow	Harrison	Owen	Townsend
Culberson	Hitchcock	Page	Watson, Ga.
Dillingham	Johnson	Pittman	Weller
du Pont	King	Poindexter	Williams
Edge	Ladd	Rawson	
Elkins	La Follette	Reed	

So Mr. LENROOT's amendment to the amendment of the committee was rejected.

Mr. LENROOT. I now move to amend, on line 7, page 146, by inserting after the words "49 cents per pound" the words "upon the wool content thereof."

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. On page 146, line 7, after the word "pound" where it appears the second time, insert the words "upon the wool content thereof," so that if amended it will read:

Valued at more than 80 cents per pound, 49 cents per pound upon the wool content thereof, and 50 per cent ad valorem.

Mr. LENROOT. I doubt very much whether there were many Senators who voted against the amendment just rejected who knew what they were voting upon, and in offering this amendment I want to ascertain whether the Senate of the United States is going deliberately and willfully to impose a hidden protective duty under the guise of a compensatory duty to the woolgrower. That is the question.

One of the great scandals of the Payne-Aldrich law was that while it purported to give to the woolgrower 11 cents a pound in the grease, as a matter of fact it gave 5, 6, or 7 cents a pound, and yet when they came to the cloth they gave the manufacturer a compensatory duty based upon the assumption that the woolgrower had received 11 cents per pound.

Another of the scandals of that law was just what is involved here, that it assumed to give a full compensatory duty upon an article when only a part of it was made of wool. Under this amendment there can be no excuse, as was urged in regard to the amendment just voted down, that the committee had made allowances for other material, and therefore the rate was fixed at 40 cents compensatory instead of 49 cents. But in this clause the committee assumes that every part of the fabric is composed of pure wool, and therefore it gives 49 cents a pound. All my amendment provides is that if it is pure wool, there shall be 49 cents a pound, there shall be compensation because of the 33 cents a pound given to the woolgrower, but if a part of the fabric is not wool, that we shall not commit a fraud upon the public by giving 49 cents a pound upon something upon which the manufacturer has not paid a cent of duty.

I wonder how the sheep growers on this side of the aisle are going to justify voting against this amendment? How are they going to justify increasing the price of woolen clothing to the farmers of America, when the vote they will cast will merely increase the profit of the manufacturer, and not give one cent additional compensatory duty to them?

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Utah?

Mr. LENROOT. I yield.

Mr. SMOOT. I see no objection whatever to the amendment to this particular paragraph. As the Senator said, there is a difference between this and the other. This takes the full compensatory duty of 49 cents, and is supposed to be all wool. I have no objection, personally, to agreeing to the Senator's amendment in this paragraph of this schedule.

Mr. LENROOT. I propose to follow it up wherever the full 49 cents compensation is provided in the bill.

Mr. SMOOT. The next paragraph provides for 39 cents.

Mr. LENROOT. I say, wherever it is 49 cents, I propose to offer the amendment.

Mr. SMOOT. I do not see a particle of objection to the amendment offered by the Senator in this paragraph.

Mr. LENROOT. I am very glad indeed the Senator from Utah has taken that position.

Mr. SMOOT. I will say to the Senator that the Senator from Utah has tried to write this bill so that the manufacturer would not get one single percentage of hidden protection, and I think the Senator from Wisconsin will agree to that.

Mr. LENROOT. I am not criticizing the Senator.

Mr. SMOOT. Therefore I can not take any other position than that I have taken, and, as I have stated upon the floor, I

do not want any hidden protection. I have no objection to the amendment offered by the Senator from Wisconsin.

Mr. LENROOT. I am glad indeed that we at least have accomplished something, then, by this debate and the procedure this morning. In the illustration I gave, this amendment will mean a saving of 20 per cent ad valorem upon one cloth I cited.

Mr. SMOOT. That, of course, would not fall in this bracket.

Mr. LENROOT. There will be at least less duty upon the articles falling in this paragraph, with the low rate, than in the next one.

Mr. SMOOT. I will say to the Senator that there is one thing in which the manufacturer would be at a disadvantage. We put 10 cents a pound on long-staple cotton, and if the goods were made of long-staple cotton he would be at that disadvantage.

Mr. LENROOT. Not under this amendment. With this amendment in the paragraph the manufacturer would still have the advantage of being able to use wool waste, of being able to use wool extract, and still get the 49 cents a pound compensatory duty.

Mr. SMOOT. The only trouble with that is that they can not use those extracts in making a thread so fine as to go in this bracket. During the operation of the Payne-Aldrich law, in 1910, the cloth averaged 60 cents a pound, and many in the second bracket averaged about 65 cents a pound. But they can not make the thread that would make this class of prime dress goods, because these are the finest there are. But wherever the cotton warp is used they would get that compensatory duty upon the cotton warp. With the Senator's amendment they would not get any compensatory duty upon the cotton warp, although the cotton warp no doubt will be made from long-staple cotton, in order to get the fineness of the thread. But I am perfectly willing to go as far as the Senator has gone in this paragraph, and I see no objection whatever to accepting the amendment.

Mr. LENROOT. While we are on that subject, will the Senator also agree to a like limitation in the next paragraph?

Mr. SMOOT. Yes; I am perfectly willing to do that.

Mr. LENROOT. Then, perhaps, I will modify my statement and say that if we can get that in the illustration I have given we will have saved at least 20 per cent ad valorem on the price of cloth.

Mr. SMOOT. So that there may be no misunderstanding, on the lower grade cloths, in the next paragraph, we give only 26 cents, and not 49 cents.

Mr. LENROOT. I am speaking of the 49-cent rate.

Mr. SMOOT. I will say to the Senator that 90 per cent of the cloths affected by the 49-cent rate will be all wool and will not be affected by the Senator's amendment at all, but if for any reason there should be a cloth where they could not get the thread fine enough and stout enough for warp and they made cotton warp of it, then, of course, they would lose that amount, and I am perfectly willing that they should.

Mr. LENROOT. Very well. I am very glad to have that concession on the part of the Senator from Utah.

Mr. WALSH of Massachusetts. Mr. President, may I ask a question? Do I understand the amendment of the Senator from Wisconsin has been accepted as to the second bracket of paragraph 1108, but has not been accepted as to the first bracket?

Mr. SMOOT. The first bracket provides 40 cents, but the second bracket provides 49 cents.

Mr. WALSH of Massachusetts. Why is it not made to apply to the first bracket as well as to the second bracket?

Mr. SMOOT. Because we only have a compensatory duty of 40 cents in the first bracket instead of 49 cents.

Mr. WALSH of Massachusetts. But the question of how much wool is included in the product is as important in the first bracket as in the second.

Mr. SMOOT. No; in the cloth in the first bracket they use a great deal more woolen waste and different classes of waste than in the cloth covered by the second bracket. The goods in the second bracket are generally the very finest fabrics that are made of wool.

Mr. WALSH of Massachusetts. The only purpose of any compensatory duty is to compensate the manufacturer for the wool he puts in the cloth. What is the objection to applying the amendment of the Senator from Wisconsin to the first bracket as well as to the second bracket?

Mr. SMOOT. Because of the fact that we have not given 49 cents in the first bracket. We have given 40 cents there and not 49 cents.

Mr. WALSH of Massachusetts. I shall not prolong the discussion now. I can not see any difference, however.

Mr. SMOOT. The Senator and I disagree; that is all. If I had the time I would be glad to go into detail and tell the Senator why.

Mr. McCORMICK obtained the floor.

Mr. SMOOT. Will the Senator allow us to have a vote on the pending amendment?

Mr. McCORMICK. I shall be very glad to yield for a vote, but I wish then to speak very briefly.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Wisconsin [Mr. LENROOT] to the amendment of the committee.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question now recurs upon the amendment of the committee as amended.

Mr. WALSH of Massachusetts. There will be some discussion of that.

The PRESIDING OFFICER. The Chair will state to the Senator from Massachusetts that the Senator from Illinois has the floor.

Mr. WALSH of Massachusetts. I am leaving the floor to the Senator from Illinois but explaining why the vote can not be taken now. I am only explaining why I do not want the question put while he has the floor.

SENATOR JAMES A. REED.

Mr. McCORMICK. Mr. President, at the hazard of being criticized for filibustering for a few moments pending the vote, I venture to invite the consideration of those of my colleagues who are on the floor to some aspects of the primary elections which are to be held next Tuesday. Hitherto my very dear friend from Mississippi [Mr. HARRISON], who is absent, has nearly monopolized consideration of primary contests and results.

Without seeking to read into next Tuesday's primaries in advance of the nominations therein to be made a meaning which none of us can forecast, it is interesting to realize that in some of them we shall learn whether the voters—and I speak more particularly of the Democratic voters—may choose for themselves their nominee, or whether the nomination shall be made conformably with the judgment of the one-time arbiter of Democratic destinies. That, I say, notably in Missouri, will be determined next Tuesday.

If I had been here the other day when allusion to the Missouri primary was made, I should not have sought this opportunity to speak. Far be it from me to seek to pass judgment upon the qualifications of a candidate in the Democratic primary in Missouri. I am informed and I am led to believe that Mr. Breckenridge Long is a most estimable gentleman, but the issue appears to be REED. JAMES A. REED has truly great qualities, but it may be that the Democracy of Missouri may decide that the usefulness of JAMES A. REED is past. I do not know. If he be nominated, I shall be joined to those who, upon the domestic issues which to-day divide us, will oppose the reelection of Senator REED. But, Mr. President, at this time, looking back over the months in which I have served in the Senate with JAMES A. REED, I should count myself a poor American if I did not find occasion to say that if his opponents to-day hold that his usefulness as a Senator is gone, there was a time when in his judgment, as in mine, the sovereignty and the liberties of the Republic were imperiled, JAMES A. REED showed himself an indomitable American, a man of incomparable courage.

I trust my colleagues on the other side of the Chamber, some of whom have borne witness to his great qualities and others who will doubtless do so, will not resent what may appear to be an intrusion in a contest in the Democratic Party. I should hold myself ungenerous and unappreciative of his great services if I had not sought and found an opportunity to bear witness to the courage, self-sacrifice, and devotion with which JAMES A. REED served his country in an hour of danger. His name will live when those of most of us are forgotten.

Mr. CARAWAY. Mr. President, I merely wish to say that I presume the Senator from Illinois, by his laborious argument and oratory commending the Senator from Missouri [Mr. REED] for being a true American, referred to the time when the Senator from Missouri so very vigorously opposed the so-called four-power pact. I think the country agreed with him, although the Senator from Illinois voted the other way.

Mr. STANLEY. Mr. President, I am quite sure the Senator from Illinois referred to Senator REED's bitter fight against the four-power pact and his splendid fight for the soldiers' bonus, and his sound Democracy. REED is so superbly equipped for service here that he commands that much deference even from those who disagree with him.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. WALSH of Massachusetts. Mr. President, I move to amend the committee amendment on page 146, paragraph 1108, by striking out, in line 6, the numeral "50" and inserting "35"; in line 7, by striking out the numeral "50" and inserting the numeral "35"; and in line 10, by striking out the numeral "50" and inserting the numeral "35," so as to make the paragraph read:

PAR. 1108. Woven fabrics, weighing not more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 80 cents per pound, 40 cents per pound and 35 per cent ad valorem; valued at more than 80 cents per pound, 49 cents per pound and 35 per cent ad valorem: *Provided*, That if the warp of any of the foregoing is wholly of cotton or other vegetable fiber, the duty shall be 39 cents per pound and 35 per cent ad valorem.

In brief, the amendment proposes to substitute the protective-duty rates now the law for the excessive and high rates named in the bill. Whatever votes have been had heretofore have been with reference to the compensatory rates named in the Senate committee bill. There has been no vote taken to reduce the rates named in the committee amendment. The evidence presented this morning tends to show that there have been no records of imports. The report of the Tariff Commission and the comparison of the prices of foreign and domestic cloths covered by this paragraph do not justify a rate higher than 35 cents.

Upon my amendment to the amendment I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HALE (when his name was called). Making the same announcement as before in reference to my pair and its transfer, I vote "nay."

Mr. HARRIS (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "nay."

Mr. McLEAN (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "nay."

Mr. NEW (when his name was called). Repeating the announcement which I made on previous ballots as to the transfer of my pair, I vote "nay."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the last vote, I vote "yea."

Mr. WALSH of Montana (when his name was called). Transferring my pair as on the last roll call, I vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before in reference to my pair and its transfer, I vote "nay."

The roll call was concluded.

Mr. JONES of New Mexico. Making the same announcement as to my pair and its transfer as on the previous vote, I vote "yea."

Mr. DIAL. I am paired with the Senator from Michigan [Mr. TOWNSEND], but I transfer that pair to the Senator from Arizona [Mr. ASHURST] and vote "yea."

Mr. GLASS. Making the same announcement as to my pair and its transfer as on the preceding vote, I vote "yea."

Mr. WATSON of Georgia. I am paired with the Senator from California [Mr. JOHNSON]. Being unable to obtain a transfer of my pair, I refrain from voting.

Mr. CURTIS. I am requested to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON]; and

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH].

The result was announced—yeas 17, nays 36, as follows:

YEAS—17.

Caraway	Jones, N. Mex.	Simmons	Walsh, Mass.
Dial	Overman	Stanley	Walsh, Mont.
Glass	Pomerene	Swanson	
Harris	Robinson	Trammell	
Heflin	Sheppard	Underwood	

NAYS—36.

Brandegee	Cameron	Cummins	Gooding
Broussard	Capper	Curtis	Hale
Bursum	Colt	Ernst	Harreld
Jones, Wash.	McCumber	Newberry	Spencer
Kellogg	McKinley	Oddie	Stanfield
Kendrick	McLean	Pepper	Wadsworth
Lenroot	McNary	Phipps	Warren
Lodge	Moses	Shortridge	Watson, Ind.
McCormick	New	Smoot	Willis

NOT VOTING—43.

Ashurst	Fletcher	McKellar	Rawson
Ball	France	Myers	Reed
Borah	Frelinghuysen	Nelson	Shields
Calder	Gerry	Nicholson	Smith
Crow	Harrison	Norbeck	Sterling
Culberson	Hitchcock	Norris	Sutherland
Dillingham	Johnson	Owen	Townsend
du Pont	Keyes	Page	Watson, Ga.
Edge	King	Pittman	Weller
Elkins	Ladd	Poindexter	Williams
Fernald	La Follette	Ransdell	

So the amendment of Mr. WALSH of Massachusetts to the committee amendment was rejected.

Mr. WALSH of Massachusetts. Mr. President, I presume it is futile to attempt to lower the protective rates which are carried in the pending bill, but I am still going to persist. I move, on page 146, paragraph 1108, lines 6, 7, and 10, before the words "per cent," to substitute in each instance the numeral "40" for the numeral "50." If that motion prevails, the protective duty levied on the fabrics embraced in this paragraph will be 40 per cent instead of 50 per cent.

Mr. LENROOT. I desire to ask the Senator from Utah has the committee reduced the rate of duty carried in this paragraph from 55 per cent to 50 per cent in each instance?

Mr. SMOOT. Yes; the committee amendment now provides for that reduction.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Massachusetts [Mr. WALSH] to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now is on the committee amendment as amended.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. LENROOT. The vote is now on the committee amendment, as I understand, Mr. President?

The PRESIDING OFFICER. The question is on the committee amendment as amended.

Mr. LENROOT. I wish to say just a word in explanation of the vote that I shall cast.

My opinion is that the committee amendment fixes the rates, both compensatory and protective, too high, but it is also my opinion that the rates proposed by the House provision are too low.

I shall, therefore, vote for the committee amendment as between the two propositions, although I still think the Senate committee amendment imposes excessive rates.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). Making the same announcement as to my pair and its transfer as on former ballots, I vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "yea."

Mr. HARRIS (when his name was called). Making the same announcement as heretofore with regard to my pair and its transfer, I vote "nay."

Mr. McCUMBER (when his name was called). Transferring my pair as on previous votes, I vote "yea."

Mr. McLEAN (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "yea."

Mr. NEW (when his name was called). Repeating the announcement as to the transfer of my pair, I vote "yea."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the last vote, I vote "nay."

Mr. WALSH of Montana (when his name was called). Transferring my pair as heretofore announced, I vote "nay."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before with regard to my pair and its transfer, I vote "yea."

The roll call was concluded.

Mr. JONES of New Mexico. Making the same announcement as to my pair and its transfer as on the last vote, I vote "nay."

Mr. GLASS. Making the same announcement as to my pair and its transfer as on the preceding vote, I vote "nay."

Mr. WATSON of Georgia. I am paired with the Senator from California [Mr. JOHNSON]. Being unable to obtain a transfer, I abstain from voting. If allowed to vote I should vote "nay."

Mr. CURTIS. I have been requested to announce the following general pairs:

The Senator from South Dakota [Mr. STERLING] with the Senator from South Carolina [Mr. SMITH];

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON].

The result was announced—yeas 35, nays 19, as follows:

YEAS—35.

Brandegee	Gooding	McLean	Shortridge
Broussard	Hale	McNary	Smoot
Bursum	Harreld	Moses	Spencer
Cameron	Jones, Wash.	New	Stanfield
Capper	Kendrick	Newberry	Wadsworth
Colt	Lenroot	Oddie	Warren
Cummins	Lodge	Pepper	Watson, Ind.
Curtis	McCumber	Phipps	Willis
Ernst	McKinley	Ransdell	

NAYS—19.

Caraway	Jones, N. Mex.	Robinson	Trammell
Dial	Kellogg	Sheppard	Underwood
Glass	Nelson	Simmons	Walsh, Mass.
Harris	Overman	Stanley	Walsh, Mont.
Heflin	Pomerene	Swanson	

NOT VOTING—42.

Ashurst	Fletcher	McCormick	Reed
Ball	France	McKellar	Shields
Borah	Frelinghuysen	Myers	Smith
Calder	Gerry	Nicholson	Sterling
Crow	Harrison	Norbeck	Sutherland
Culberson	Hitchcock	Norris	Townsend
Dillingham	Johnson	Owen	Watson, Ga.
du Pont	Keyes	Page	Weller
Edge	King	Pittman	Williams
Elkins	Ladd	Poindexter	
Fernald	La Follette	Rawson	

So the amendment of the committee as amended was agreed to.

The PRESIDING OFFICER (Mr. ODDIE in the chair). The next amendment of the committee will be stated.

The next amendment was, on page 146, after line 10, to strike out:

PAR. 1109. Woven fabrics, weighing more than 4 ounces per square yard, wholly or in part of wool, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, 18 per cent ad valorem; valued at more than 75 cents but not more than $1.25 per pound, 25 cents per pound and, in addition thereto, 21 per cent ad valorem; valued at more than $1.25 but not more than $2.50 per pound, 30 cents per pound and, in addition thereto, 24 per cent ad valorem; valued at more than $2.50 per pound, 36 cents per pound and, in addition thereto, 27½ per cent ad valorem.

And in lieu thereof to insert:

PAR. 1109. Woven fabrics, weighing more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 60 cents per pound, 26 cents per pound and 40 per cent ad valorem; valued at more than 60 cents but not more than 80 cents per pound, 40 cents per pound and 50 per cent ad valorem; valued at more than 80 cents but not more than $1.50 per pound, 49 cents per pound and 50 per cent ad valorem; valued at more than $1.50 per pound, 49 cents per pound and 55 per cent ad valorem.

Mr. SMOOT. Mr. President, in the first place I want to modify the committee amendment by striking out "55" and inserting "50" on line 5, page 147. Then I will say to the Senator from Wisconsin [Mr. LENROOT] that when he offers his amendment there will be two places in the paragraph to which it will apply, and there will be no objection to that amendment.

Mr. WALSH of Massachusetts. Why not have that modification made, and have the record complete in that respect?

Mr. SMOOT. The Senator can offer his amendment now.

Mr. LENROOT. I move, in line 4, page 147, after the word "pound," to insert the words "upon the wool content thereof."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. On page 147, line 4, after the word "pound," it is proposed to insert "upon the wool content thereof," so that it will read:

Forty-nine cents per pound upon the wool content thereof, and 50 per cent ad valorem.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Wisconsin to the amendment of the committee as modified.

The amendment to the amendment was agreed to.

Mr. LENROOT. Now, in line 5, after the word "pound," I offer the same amendment.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The READING CLERK. On page 147, line 5, after the word "pound," where it appears the second time, it is proposed to insert the words "upon the wool content thereof."

The PRESIDING OFFICER. The question is upon agreeing to the amendment offered by the Senator from Wisconsin to the amendment of the committee.

The amendment to the amendment was agreed to.

Mr. SMOOT. Mr. President, this paragraph provides duties upon all woven fabrics weighing more than 4 ounces per square yard. The paragraph that we have just adopted covers the lightweight dress goods. It is true that some flannels fall within paragraph 1108, but the great bulk of flannels made not only in this country but in foreign lands fall under this paragraph. Ninety-five per cent of the goods falling under this paragraph, however, are what are known as cloths for the making of clothing.

The Senate will notice that the compensatory duty begins with 26 cents per pound on the first bracket; on the second it is 40 cents per pound; and on the other two brackets it is 49 cents per pound, modified by the amendment of the Senator from Wisconsin [Mr. LENROOT].

Mr. President, I sent to five of the principal woolen mills in the United States and asked them to give me samples of cloth that they made at the opening in April, 1920, at the opening in July, 1921, and at the opening in February, 1922. When I say "opening" I speak of the opening of the samples for sale. I have those samples here from five different mills, ranging from the finest of cloth to the heaviest 27-ounce overcoating; and while it will take too long a time to call attention to each of the samples submitted I am going to take one or two samples of cloth from each of the mills and call attention to the prices of these cloths on the dates of opening that I have already named.

The first are the samples from the mill of the G. C. Hetzel Co. They are located in Pennsylvania. This is a cloth weighing 15 to 15½ ounces per yard. This sample is made of all pure wool, with the exception of the silk thread that is found in the stripe in order to give a striped effect to the cloth. The price of this cloth in April, 1920, was $5.85 per yard.

In July, 1921, the price of that same identical cloth, made of the same kind of wool, decorated with silk in the same fashion, and weighing the same number of ounces per yard, was $2.72 per yard instead of $5.85 in 1920. In the opening in February, 1922, that same piece of cloth was put upon the market for $2.50.

Mr. President, I have here the increased prices of woolen goods since the opening in February, 1922, up to July 18, 1922.

Mr. WALSH of Massachusetts. Mr. President, will the Senator permit an interruption right there? Was the great drop in prices in one year on the fabrics referred to by the Senator due to importations from abroad?

Mr. SMOOT. No. I may come to the importations later.

Mr. WALSH of Massachusetts. So that the drop in prices of 50 per cent is not due and can not be attributed to the importations of comparable wool fabrics?

Mr. SMOOT. No; I think it is because the competition is so keen that it has brought about that result.

Mr. WALSH of Massachusetts. I wish I could think so. The drop has been due to the fact that the prices of all products have dropped from 25 to 50 per cent in the last year.

Mr. SMOOT. Oh, the Senator knows, of course, that there is to-day the keenest kind of competition in woolen goods.

Mr. WALSH of Montana. Mr. President, that leads me to inquire if it is the opinion of the Senator that the price in 1920 was a profiteering price?

Mr. SMOOT. I think they were exceedingly high prices—unjustifiable.

Mr. WALSH of Montana. And that the manufacturers are satisfied with less profits now?

Mr. SMOOT. I judge so.

Mr. WALSH of Montana. Is not this element likewise involved—that in 1920 the manufacturer was producing his product from wool that sold for 60 cents in the grease and now he is manufacturing a wool that cost last year 20 cents per pound? Is not that the explanation of the difference?

Mr. SMOOT. He is not buying to-day upon the basis of 20 cents a pound.

Mr. WALSH of Montana. No; but he did a year ago. The goods on the market now, of course, were produced not from wool that was bought this year but from wool that was bought a year ago.

Mr. SMOOT. Of course, the wool that will go into these cloths this year more than likely is not bought yet.

Mr. WALSH of Montana. Quite likely.

Mr. SMOOT. There is not any doubt about it. No manufacturer is going to pile up a lot of goods unless he has sold them. These goods are for next spring. They are not goods for this fall. I have said many times on the floor of the Senate

that in the case of woolen goods they open in February for the cloths that will be made up into suits in the fall and sold for the next spring.

Mr. WALSH of Montana. The point I am making is that the goods that are now on the market were not made from wool bought or sold this year. They were made from wool that was sold last year.

Mr. SMOOT. They will have to buy the wool this year, because they have not the wool on hand to make the cloths I have shown. There is not any doubt but that the increase of prices that has taken place since the opening in February has been brought about because of the increased price of wool.

Mr. WALSH of Montana. But I am not talking about the cloth that will be made. The cloth that is now made, that is ready for sale at this price, was made from wool that was bought last year at 20 cents a pound. The cloth that was made the year before was made from wool that was shorn in 1919 and 1920 and sold at sixty-odd cents a pound in the grease.

Mr. SMOOT. Mr. President, I simply want to say to the Senator that these cloths are being sold to-day at a less price than they were in July, 1921.

Mr. WALSH of Massachusetts. Mr. President, what is the Senator's explanation of that? Does the Senator claim that because these cloths are selling to-day for less than they did a year ago a high protective tariff duty should be levied in this bill?

Mr. SMOOT. I am not saying that at all.

Mr. WALSH of Massachusetts. What connection has it with a tariff bill?

Mr. SMOOT. It has a great deal to do with a tariff bill when you have an ad valorem duty, as the Senator must know. An ad valorem duty on $5.85 is quite a different thing from an ad valorem duty on $2.10.

Mr. WALSH of Massachusetts. But the ad valorem duty is not based upon the American valuation. The Senator knows that. It is based upon the foreign valuation of these fabrics and not the American price. That is a misleading statement.

Mr. SMOOT. The Senator knows that they are both based on the same identical valuation.

Mr. WALSH of Massachusetts. The Senator has given the American prices of those fabrics. The tariff duty levied here is based upon the foreign prices of comparable fabrics, not the American prices.

Mr. SMOOT. Then, if it will suit the Senator better, I will say that the ad valorem duty on $1 is quite different from the ad valorem duty on 40 cents.

Mr. WALSH of Massachusetts. The ad valorem duty upon a piece of goods made in Europe that cost $2 is quite different from the ad valorem duty upon goods made in America that cost $5.

Mr. SMOOT. Nobody has ever denied that.

Mr. WALSH of Massachusetts. The ad valorem duties in this bill are based solely and alone upon the foreign prices of fabrics and not upon the American prices of fabrics.

Mr. SMOOT. It does not make a particle of difference. There was comparatively the same spread in foreign values there was in values in this country, and if there was an ad valorem duty upon $2 of foreign valuation in April, 1920, and to-day's price on the basis of foreign valuation is $1, the protection is quite different in the two cases. That is what I am contending, and I know that there is no Senator who will deny it.

Mr. WALSH of Massachusetts. Pardon me; I do not want to interrupt the Senator's argument; but how can the Senator justify levying any duty upon any price that he has named, when he admitted just a moment ago that he has made no inquiry into the financial standing of these concerns to find out whether or not they are making a profit at the lower price and what profit they were making at the higher price?

Mr. SMOOT. Mr. President, perhaps some mills could make a profit at this price and some could not. There may be a mill in the United States that could not make these goods at all at any price without losing money, while other mills may make them and make money. Are you going to provide a rate of duty to take care of both classes, or which class are you going to take care of?

Mr. President, here is another lot of samples. The price in April, 1920, was $5.10 a yard. In July, 1921, it was $2.75. In February, 1922, it was $2.25. The mills are in Pittsfield, Mass.

Mr. WALSH of Massachusetts. Mr. President, will the Senator be kind enough to state the 1914 prices of those fabrics?

Mr. SMOOT. I have not the 1914 prices here.

Mr. WALSH of Massachusetts. Does not the Senator think that we ought to compare present prices with those of 1914, rather than with the peak prices of the war?

Mr. SMOOT. We are comparing the prices of last year and this year with the prices of the early part of 1920.

Mr. WALSH of Massachusetts. The Senator is comparing the peak prices following the war with the present prices, at a time of great depression; and he has made no comparison between present prices and the prices in 1914, before the war.

Mr. SMOOT. Mr. President, that all depends upon the price of wool; and what is the difference whether the wool is low and the price is low or the wool is high and the price is high? The conversion cost means whether the labor is high or whether it is low, whether the material that goes into the product is high or whether it is low.

To save time, I want to say that the same comparative decline in prices upon every kind of goods, from the light weights to the overcoatings, took place.

Mr. WATSON of Indiana. Where were those goods made?

Mr. SMOOT. These overcoatings were made at Pittsfield, Mass. Here is a very fine class of goods. [Exhibiting.] These goods are made by Frederick Clark, at Talbot, Mass., and the prices of those are about in the same ratio. There is no need of my taking more time of the Senate or filling the RECORD with these things.

Mr. WALSH of Massachusetts. I do not think there is a man on this floor who doubts for one moment that there have been substantial increases in the prices of everything in the last two years.

Mr. SMOOT. I would not say everything. There have been reductions since the war—since the peak prices of 1919 and 1920—but I do not think the Senator can find where the raw material entering into an article is higher than it was; that is, in the case of the fine goods and the finished product lower in price. The prices have dropped in comparison with the drop in prices of woolen goods.

Mr. WALSH of Massachusetts. But I claim that the Senator can not justify the levying of any protective tariff duty—not a compensatory duty, but a protective tariff duty—upon these fabrics, simply because there has been a drop in prices. He must first demonstrate that these companies are losing money at the prices at which they are selling these fabrics, and he is not able to do it.

Mr. SMOOT. I think I could go out and find a number of companies which are losing money, and other companies that are making money. In fact, I know that is true. You can not base a tariff bill upon any such proposition. We hear in this Chamber so often some particular case pointed to and held up as being typical of the conditions in this country. Yesterday we were told of the experience of the shipper of a carload of watermelons; and is the whole law to be changed because of the fact that there was a glut of watermelons in New York, and when that glut took place they did not get enough out of the car of watermelons to pay the freight and expenses? When there is a glut of any article, particularly a perishable article which must seek the great centers of population to be sold, and that article arrives at a time when there is no sale for it at all, they are not going to get a good price for it. I called attention to the fact that one year carload after carload of peaches were shipped from my section which did not bring enough to pay for the boxes the fruit was put in, and in many cases they did not bring anything whatever, the shippers claiming that they had to be dumped into the Chicago River. I do not think all the laws of the United States ought to be changed to meet a condition of that kind, nor do I think so in relation to the watermelons.

I have before me, in the German language, an original copy of a contract which has been made between the textile manufacturers of Germany and the employees of the Rhineland district of Germany. I have had that contract translated into English, and it shows what the wages in Germany in May of this year are, not only in the textile industry but a few other industries of that country. I have also had figured the equivalents in United States money, granting that the mark was worth one-third of a cent. The mark is not worth one-third of a cent, but I want to be perfectly fair in the figures presented here, because the mark may go higher than it is to-day. It is only worth one-fourth of a cent now, but it may reach a third of a cent. All indications point to the fact that it is going lower. I hope it will not, for the great German people's sake and for the German Government's sake. I do not want to see

the German Government disrupted. I do not want to see civil war in Germany and that great people and that great nation destroyed. Let us see what those wages are. This is a textile worker's contract, for males and females. I will first give the wages of the males and then the wages of the females.

Mr. WATSON of Indiana. For May?

Mr. SMOOT. It begins with the month of May. This is the last contract that has been made.

Mr. WILLIS. What year?

Mr. SMOOT. In 1922. For a male, 14 years old, the base wage is 4.2 marks per week. The bounty given to cover the cost of living for April is half a mark. These are the increases they received up to that time in this contract. The increase was half a mark a week—not a day. These are weekly wages—not daily wages. The total applicable to May in marks was an increase of 1 mark, together with the cost of living allowance. The per-hour total wage for May was 5.2 marks.

Change that into equivalent United States money, on the basis of a mark being worth one-third of a cent, and the male, 14 years old, working in the textile industry in Germany, receives 74.8 cents a week—not a day, but a week. The 15-year-old receives 84.9 cents. The 16-year-old receives $1.12 a week. The 17-year-old receives $1.26 a week. The 18-year-old receives $1.65 a week. The 19-year-old receives $1.84 a week. Those 20 years and over receive $2.80 per week.

Let us see what the pay of female workers in this industry is.

Mr. WALSH of Montana. Up to the present time I have understood that our real competitor in the manufacture of woolens was Great Britain and not Germany.

Mr. SMOOT. I will come to that later. I will say to the Senator that as to special cloths, in cases where our nobby Americans will not wear other than the English goods, they do come from England.

Mr. WALSH of Montana. I received the other day from the Department of Agriculture a bulletin, which gives a gratifying piece of news. It says:

> German imports of merino and crossbred wool in the grease and washed during the last six months of 1921 were over three times those for the corresponding period of 1920, and about one-fifth greater than those of July–December, 1913.

That is to say, the German mills are beginning to absorb the wool which ordinarily is marketed from Antwerp, and that fact accounts to a very large extent, I am sure, for the improved foreign market for wool as reflected in an improved price in this country.

But I rose because I thought this was an opportune time to call attention to the fact that the conditions in Germany to which the Senator now alludes is not, as we understand it, at all favorable to the export trade.

Mr. SMOOT. If the Senator will let me make my speech, I may be able to explain.

Mr. WALSH of Montana. I just want to put this information in in connection with what the Senator was saying. I clipped from the paper of two mornings ago, under the heading "Wall Street Gossip"——

Mr. SMOOT. What paper?

Mr. WALSH of Montana. The Washington Post, which, as the Senator is aware, is not unfavorable to his side of the contention.

Mr. SMOOT. I do not know. I have not seen that the Washington Post has said anything very favorable of the pending bill.

Mr. WALSH of Montana. I do not care to controvert that. It submits a consideration important in this connection. The clipping reads as follows:

> Although it seems a far cry from the foreign exchange markets to the domestic steel situation, the virtual collapse of German exchange constitutes one of the strongest factors in the prosperity of the Crucible Steel Co. The products of this company have little competition from domestic producers, but in normal times German mills are well able to handle the same sort of business. The unsettled financial situation in Germany is practicaly eliminating mills of that country from foreign markets, and it is partly for this reason that Crucible has been doing so well.

So the facts to which the Senator invites attention, far from indicating that competition with American wool manufacturers is going to be keener, would clearly indicate that the difficulties surrounding manufacturers over there, by reason of the collapse of the mark, are so great that Germany is practically retiring from the world market.

Mr. WALSH of Massachusetts. Will the Senator from Montana permit me to suggest that of the imports into this country last year—that is, in 1921—of woven fabrics, only 1.3 per cent came from Germany, and the importations were very small anyway. One and three-tenths per cent of the importations, which were negligible, came from Germany.

Mr. SMOOT. Mr. President, we are not making this tariff bill for to-day. I know that it is difficult for Germany to buy, under her depreciated currency, the high-priced wool of the world to-day. She does not raise one pound of it in her borders, and every pound she buys she has to pay for in gold or in goods. We know that. But how long is that going to last? If we were making this bill for the conditions of to-day, it would be made quite differently, and if we could change the tariff rates every month, the rates would not change, perhaps, that often, but there would be a great many changes made.

Mr. WATSON of Indiana. Aside from the question of the basic raw material, there is still the question of wages.

Mr. SMOOT. Certainly; and another thing, I want to say frankly to the Senator that I suppose Germany finds for her excess woolen goods perhaps a better market.

Mr. WALSH of Massachusetts. Does the Senator claim that Germany makes enough woolen goods for home consumption? Does the Senator make that claim here, with his knowledge of the woolen industry?

Mr. SMOOT. Why, of course no country makes all of the woolen goods that it uses. Germany does not make the same classes of goods that she imports. I have never made any such statement as that, but I do claim that Germany makes goods in competition with the goods that are made here and found in the paragraph we are discussing. Those are the goods she makes.

Now, what are the females paid in German mills? Females 14 years old are paid 63 cents a week; 15 years old, 73 cents a week; 16 years old, 91 cents a week; 17 years old, $1.02 a week; 18 years old, $1.29 a week; 19 years old, $1.44 a week; 20 years old and over, $2.18 a week.

What are we paying in our mills in this country? Is it 100 per cent more? Is it 200 per cent more? Is it 300 per cent more? Is it 400 or 500 per cent more? Is it 600 or 700 or 800 or 900 per cent more? Yes; it is 1,000 per cent more. I would not want to live to see the day when the working people in the textile industry in this country would be compelled to work for the pittance that is paid in Germany to-day.

Mr. President, outside of the compensatory duty provided for in this paragraph there is no rate of protection to the American manufacturer of more than 50 per cent. The cotton manufacturer was given 45 per cent. The woolen manufacturer given 50 per cent. I have been asked how I could justify that 5 per cent differential. I have tried many times to run a loom at a higher speed than 83 picks to the inch of cloth a minute.

Mr. WALSH of Massachusetts. Does the Senator compare the manufacturer's method of running looms with the method in vogue when he ran them?

Mr. SMOOT. Certainly.

Mr. WALSH of Massachusetts. Has there been no improvement?

Mr. SMOOT. As relating to many of these goods, there has not been.

Mr. WALSH of Massachusetts. So there has been no development or improvement in the weaving of woolens in the last 30 years?

Mr. SMOOT. In the last 20 years. The Crompton loom is as good as any made in all the world, and they do not run any faster. If they undertook to run faster it would never pay them because the breaks would be too frequent.

Mr. WALSH of Massachusetts. Does the Senator contend that a weaver does not run more woolen looms to-day than he did 30 or 40 years ago?

Mr. SMOOT. Certainly, on the same kind of goods. We have no automatic woolen looms. This is not a case where you can put up 20 looms along an aisle and have one woman running up and down the aisle, and whenever an automatic stop is made fix the thread and set it going, while the other 19 looms are running all the time. I want to say there is no one who can take a piece of fancy woolen goods and run more than one six-quarter loom. I do not care whether he lives in England or America, and England claims to have the best weavers in the world.

Mr. WALSH of Massachusetts. Of course, the Senator does not mean to claim that all weavers run only one loom?

Mr. SMOOT. I say on fancy cashmeres.

Mr. WALSH of Massachusetts. On extremely heavy fabrics they run one loom, but on the lighter weaves they run two and three looms, and the Senator knows it.

Mr. SMOOT. On plain fabrics they may have run two looms, but when it comes to fancy cloths, I do not care whether it is 16 or 24 ounces, they run only one loom, and it takes a pretty

good weaver to-day to do it if the pattern is complicated, particularly where there is a check in it. On the other hand, in a cotton mill, as I said, on plain goods they may run as high as 15 and 16 automatic looms, automatic not only as to the stopping of them when the filling breaks or runs out, but with every thread that breaks in the warp. They have no woolen loom that can do it. Somebody has to watch the warp all the time, and if a thread breaks in the warp in a fancy pattern and the loom runs very long, there will be not only one thread broken, but from 10 up to perhaps 100 of them. Then when the threads are drawn in, if they are drawn in properly and drawn in straight and the pattern in the cloth maintained, I want to say right now that it takes a good weaver to do it.

In the cotton looms they run 140 picks to the minute, and the highest I have ever run on the Crompton loom was 83 picks. So, Mr. President, every minute a cotton loom with the same number of picks produces three-fourths more in the length of cloth then it would in wool if the pick is of the same size thread. Therefore the difference between the 45 per cent and the 50 per cent.

The highest rate of protection in the Payne-Aldrich law was 55 per cent, where we have 50 per cent in the pending bill, but in the Payne-Aldrich law was an unhidden protection that came to them because of the fact that they had 11 cents upon wool in the grease and 33 cents on the scoured wool. The average of all the wools in the grease which they imported cost but 18 cents clean content. So between 18 cents and 33 cents was the hidden protection under that law. I do not say that applied to all woolens. It was not so on western wools, because those wools average 60 per cent shrinkage, but under the law of 1919 the importer was allowed to import wools with a shrinkage of from 20 per cent to 40 per cent, and the difference of shrinkage was the unhidden protection of the manufacturer.

I do not know that I have anything further to say on the matter. The Senate has decided that there should be 33 cents on the scoured content of the wool. The compensatory duties in the paragraph are simply the amounts of the compensatory duties necessary to take care of the 33 cents on the scoured content. The protective duty, as I said, is in this case 50 per cent.

I ask unanimous consent to have inserted in the RECORD, following my remarks, a copy of the wage agreement to which I have referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

WAGE AGREEMENT.

DISTRICT GROUP OF RHINELAND NATIONAL WORKERS' ASSOCIATION FOR THE TEXTILE INDUSTRY FROM MAY 5, 1922.

1. May wages according to the base tariff of the textile workers' tariff for males and females.

The new operative wages from May 1, 1922, for such male and female workers who receive only the rates of the base tariffs are as follows:

	Base wage.	Cost of living for April.	Increase for May.	Total applicable to May.	Per hour new total wage for May.	Per week equivalent in United States dollars, at 1 mark equals .003 cent.[1]
(a) Males:						
Day workers who are paid the fixed rates—	*Marks.*	*Marks.*	*Marks.*	*Marks.*	*Marks.*	
14 years	4.20	0.50	0.50	1.00	5.20	$0.7488
15 years	4.50	.70	.70	1.40	5.90	.8496
16 years	5.80	1.00	1.00	2.00	7.80	1.1232
17 years	6.20	1.30	1.30	2.60	8.80	1.2672
18 years	8.35	1.65	1.50	3.15	11.50	1.6560
19 years	8.90	2.10	1.80	3.90	12.80	1.8432
20 years and over	13.50	3.40	2.60	6.00	19.50	2.8080
Pieceworkers, 20 years and over	13.00	3.40	2.60	6.00	19.00	2.7360
(b) Females:						
Day workers who are paid the fixed rates—						
14 years	3.60	.40	.40	.80	4.40	.6336
15 years	3.90	.60	.60	1.20	5.10	.7344
16 years	4.65	.85	.85	1.70	6.35	.9144
17 years	4.95	1.10	1.10	2.20	7.15	1.0296
18 years	6.40	1.40	1.20	2.60	9.00	1.2960
19 years	6.70	1.70	1.60	3.30	10.00	1.4400
20 years and over	10.40	2.70	2.10	4.80	15.20	2.1888
Pieceworkers, 20 years and over	10.00	2.70	2.10	4.80	14.80	2.1312

[1] The United States equivalents are not in the original agreement, but have been added for convenient comparison.

2. For those who are engaged in branches of the industry having distinctive branch tariffs, all day and piece workers are allowed the same cost of living additions for May as are given in column 4 above.

3. The foregoing wage agreement is effective until May 31, 1922, and continues itself automatically for one month unless one week's notice is given before the expiration of the month by either party.

4. The family allowance remains as heretofore.

Tariff agreement for clerical and technical forces of the following industries for the month of April, 1922.

	Salaries per month.	Salaries per month equivalent in United States dollars, at 1 mark equals 0.003 cents.[1]
Metal and wood industry:	*Marks.*	
1. Art draftsman, class A (30 years old)	4,000	$12.000
2. Works assistants (22 to 24 years)	3,925	11.775
Works assistants (over 24 years)	4,525	13.575
3. Independent construction men	5,400	16.200
3a. Independent construction men	6,000	18.000
Overseers	6,000	18.000

Second hand	3,575	10.725	3,875	11.625

[1] The United States equivalents are not in the original agreement, but have been added for convenient comparison.

To these salaries are to be added after Feb. 1, 200 marks per month for husband or wife who is not employed, and for each child 100 marks per month.

The foregoing general tariff and salary agreement will discontinue March 31, 1922, without notice.

Mr. SMOOT. Mr. President, I ask unanimous consent that when the Senate closes its session to-day it take a recess until to-morrow morning at 11 o'clock.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WATSON of Indiana. Mr. President, I have no desire to make any extended remarks on the subject. Had it not been that the Senator from Utah [Mr. SMOOT] has presented the facts for the consideration of the Senate and for publication in the RECORD, I perhaps should not have claimed the attention of those present long enough even to have asked the privilege of inserting similar and supplementary figures for publication.

It has been asserted repeatedly on the floor that wages in Germany are increasing, and that they have increased constantly almost from the time of the close of the war, and occasionally clippings have been read from newspapers to show that wages have increased in that country. Of course, in order to prove that, the wages are stated in marks. Stated in marks an increase is shown but stated in American money it is not an increase, as the Senator from Utah has already so well shown.

The figures which I have were compiled by the Tariff Commission from German sources after a thorough study and full survey of the whole situation. They refer not only to the textile industry, male and female, but also to a great many other industries—metal, chemical, building, bricklayers, stonemasons, carpenters, and miners of different kinds, iron ores, and so forth. The Senator from Utah has stated the wages received in the textile industry in Germany. He did not give the cities.

Mr. SMOOT. It was in the Rhineland district.

Mr. WATSON of Indiana. I have the report for as many as 15 different cities in the textile industry for September, 1921; December, 1921; March, 1922; and April, 1922, supplementing what the Senator from Utah has already given for May, 1922. These figures show that in Germany in September, 1921, the average wages paid females in the textile industries in all those cities, stated in marks per hour, was 5.65; in December, 1921, 7.93; in March, 1922, 9.75; in April, 1922, 12.02. This would show a steady increase stated in marks, but when stated in American money it shows there has not been an increase, as the Senator has already said. In September, 1921, in terms of American money it would be the equivalent of 5.07 cents per hour; in December, 4.26 cents per hour; in March, 1922, 3.21 cents per hour; and in April, 1922, 4.95 cents per hour, showing, instead of an increase, a decrease when measured in American money. I ask permission to insert in the RECORD the statement to which I have just referred.

The PRESIDING OFFICER (Mr. MOSES in the chair). Without objection, it is so ordered.

The table is as follows:

Wages in German textile industry (union workers, female, full time).

Mr. WATSON of Indiana. In addition to that I desire to submit a table comparing German wages in gold and in terms of wholesale prices and cost of living, covering various industries and a very great number of employees, something over a million, possibly a million and a quarter. The table gives the wages in dollars per hour, the equivalent wholesale purchasing power, and the equivalent in cost of living; that is to say, the average for all the workers reported for September, 1921, was 6.19 cents per hour, but the equivalent wholesale purchasing power of the mark thus paid at that time was 11.21 cents per hour, while the equivalent in the cost of living was 21.36 cents per hour. That explains why it is that, although the German workers are receiving such low wages measured in American money, yet, trading among themselves, their money is of sufficient value to enable them to live as they do live in Germany. These figures are quite instructive, if anyone cares to study them, and they explain very fully the situation. It is a fact that the factories in Germany are all open and they are all at work and running full time, and they show as large a percentage of employment as ever before in the history of Germany. I have those facts here, which I do not care to insert in the RECORD. I desire, however, to place in the RECORD the table to which I have referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

The table is as follows:

Comparison of German wages in gold and in terms of wholesale prices and cost of living.

Industry.	Number of workers reported.	September, 1921.			December, 1921.			March, 1922.			April, 1922.		
		Wages, dollars per hour (mark at $0.008967).	Equivalent wholesale purchasing power (mark at $0.0167).	Equivalent in cost of living (mark at $0.0318).	Wages, dollars per hour (mark at $0.00538).	Equivalent wholesale purchasing power (mark at $0.0096).	Equivalent in cost of living (mark at $0.0503).	Wages, dollars per hour (mark at $0.003294).	Equivalent wholesale purchasing power (mark at $0.0058).	Equivalent in cost of living (mark at $0.0104).	Wages, dollars per hour (mark at $0.03606). Mr. WATSON of Indiana. Mr. President, in addition to that I wish to have printed in the RECORD some tables which have just been compiled by the Bureau of Labor and which I received on yesterday. The first table shows the number of employees and their earnings per hour in cotton manufacturing in Massachusetts and in five Southern States in 1920 and 1921 by occupations. The other tables show the number of employees and earnings per hour in the metal trades in specified cities in the same year; the number of employees and earnings per hour in the building trades in specified cities in 1920 and in 1921; the number of employees and earnings per hour in the bituminous coal mining in the United States in 1919 and 1921 and also in anthracite coal mining.

The PRESIDING OFFICER. Without objection, it is so ordered.

The tables are as follows:

Number of employees and earnings per hour in cotton manufacturing in Massachusetts and in five Southern States, in 1920 and 1922, by occupations.

Occupation.	Males.				Females.			
	1920		1922		1920		1922

Mr. WATSON of Indiana. Mr. President, all these facts and figures become of value in any consideration of the tariff, which is largely a question of wages. It is quite true that when Germany goes out in the open market of the world to buy wool she must pay the same prices that any other nation pays, plus the cost of transportation; but, nevertheless, as compared with ourselves, there is a vast contrast in the wages paid. We protect our laboring people as against those wages, not as against the raw material. This whole question always resolves itself into a question of wages.

When the Payne-Aldrich tariff bill was framed the rates provided therein were no higher on the whole than are the rates in this bill; indeed, the honorable chairman of the Committee on Finance a few days ago placed a statement in the RECORD showing that on the whole the rates in the pending bill are lower than those in the Payne-Aldrich law, and yet at that time the currency of Germany was normal; at that time the manufacturing industries of Germany were running along full blast, as, indeed, they are now; at that time her laboring people were paid in money at par. Now there is a vast contrast, there is a tremendous difference between wages there and here; and yet we are making the tariff rates no higher now than we made them then. I think the rates are entirely justifiable if we are to take into consideration at all the question of the difference in the conversion costs as between this and competing countries. But these considerations seem to be lost sight of. Some Senators on the other side of the Chamber and some on this side are always discussing the question as to whether or not the pending rate is as high or is higher than the corresponding rate in the Payne-Aldrich tariff law. To me that does not amount to anything. The question is, Are the rates proposed essential to protect the American laboring man in the particular industry in which he is engaged? And that has reference wholly to conversion costs in this and competing countries. Whether the rates were too high in the Payne-Aldrich law or too low in the Wilson law or the Underwood law has not anything to do with the question. Does the rate measure the difference? That is the only question that ought to be asked.

We are all the time making comparisons with previous tariff laws for the purpose of showing that the rates in the pending bill are higher or that they are lower than the rates in some other bill. The question is, Are wages lower over there now? Nobody denies that they are. Are they higher here now? Nobody disputes that. So we must fix such a rate as will save the American laboring man from that withering and blasting competition that comes from vast imports from abroad. That is the sole question which is involved, especially in the wool schedule, where the raw material costs as much to all countries which engage in the business as it costs us.

Mr. LODGE. Mr. President, in connection with what has been said by the Senator from Utah [Mr. SMOOT] and the Senator from Indiana [Mr. WATSON], I desire to read into the RECORD a short quotation from one of the leading news papers of Germany. I think it will interest my friend from Indiana, if he will listen to it.

Mr. WATSON of Indiana. I shall be very glad to hear it.

Mr. LODGE. It is from Vorwärts, controlled by Maximilian Harden, one of the most important newspapers in Germany. The extract which I am about to quote is taken from the Living Age, a magazine published in Boston, of the issue of Saturday, July 22, 1922, on page 188:

> Vorwärts ascribed this covert opposition to the desire of Stinnes and his associates to prevent a rise in the value of the mark, lest it deprive them of the huge profits they are making by selling abroad, at gold prices, goods produced by underpaid German workers whose wages are in depreciated currency. "Foreign trade is becoming the most profitable field of German industry. Our home markets have sunk to comparative unimportance, although manufacturers can extort any price they wish from domestic consumers without fear of foreign competition." However, the flooding of foreign markets has been overdone. German firms now have on hand vast stocks of raw materials and half-manufactured goods, sometimes exceeding many times over the value of their capital stock and reserves; and they welcome a still further depreciation of the mark to enable them to dispose of these stocks in manufactured forms abroad at additional profits.

There is a confession of the whole thing by a leading German newspaper. It shows that the contention as to the volume of German export trade is not an invention of this side of the Chamber.

Mr. GOODING. Mr. President, at this point it might be well to mention also that Germany controls all imports through a license system and that no license may be granted for any particular imports with any assurance that the license will hold good for any length of time. All goods of a character such as the Germans manufacture themselves are entirely excluded from Germany under her license system, which, therefore, amounts to an embargo; so that, so far as our manufactures are concerned, the doors of Germany are closed.

The PRESIDING OFFICER. The question is on the adoption of the committee amendment as amended.

Mr. NELSON. Mr. President, I do not think that there is much value in the statistics which have been cited. Conditions in Germany are in a state of flux. Conditions there affecting wages, as well as the currency, are chaotic. Therefore I apprehend that the figures presented will not be of great value as a permanent guide.

I am unable to bring before the Senate and to translate any statement emanating from Germany; but paragraph 1109 of the bill which we are now considering is written in plain English, and I can state what its provisions imply to me. I may be very obtuse, but, taking the second bracket of the paragraph, the duty provided on cloths valued at not more than 80 cents per pound is 100 per cent. Allowing 33 per cent for the scoured wool, there is left for a margin 67 per cent.

In the next bracket, covering cloth valued at more than 80 cents but not more than $1.50 per pound, on a fabric valued at $1.50 a pound the protective duty is 124 per cent. Deducting the 33 per cent for the scoured wool, leaves 91 per cent protection.

When we come to the last bracket, covering goods valued at more than $1.50 per pound, taking a fabric valued at $1.55 a pound, or $1.51 a pound, for if the value exceeds $1.50 it falls within this bracket, the duty on that is 131 per cent. Deducting 33 per cent for the scoured wool, leaves a margin of 98 per cent.

Mr. President, I have voted for a good many paragraphs in the pending tariff bill. I have been anxious to have considered by the Senate a tariff bill which I could support. I have always been in favor of a moderate protective tariff. At the Chicago convention I was on the committee on resolutions, and was instrumental—in fact, I think I there proposed the language which was written into the platform—in securing the declaration that the measure of protection should be the difference in the cost of production here and abroad. In many paragraphs of this bill the rates exceed that degree of protection, and to my mind profits have been included.

Taking this bill as it has been arranged by the Finance Committee of the Senate in its entirety, it increases the rates of the House bill, and the bill in its entirety is a more radical and more extreme measure, so far as protection is concerned, than even the Payne-Aldrich law.

While I am anxious to support proper tariff legislation, yet it is very hard for me to vote for these excessive rates. It seems that the woolmen in four or five Western States, where the sheep are kept on the ranges, which to a considerable extent are Government land, control the subject of the tariff on wool.

Mr. President, I desire to remind the Senate of the fact that, while States such as New Mexico, Arizona, Wyoming, and Idaho, which are sheep-producing States, are very strong in the Senate, the State of Minnesota, while it has only two Senators here, yet in the Electoral College has more votes than all of the wool States I have mentioned combined.

I had hoped, Mr. President, that protection would not run mad, as it has done. I have sat here quietly. I have voted for many schedules here that I felt were entirely unjustified, hoping against hope that there would be a modification, but every once in a while it seems that the Finance Committee meet, and they come in here with their program for an increase or a change. They get new light as a result of new hearings. I never in all my life saw such a swarm of men as were around the Finance Committee while they had this bill before them. Day after day they came there with their handbags. They swarmed in the corridors, and the bill indicates that most of them got their work in well.

I am very sorry that the committee have gone to such extremes as they have. Take this woolen schedule. It is perhaps in one respect more important to the American consumer than any other schedule in the bill. In the northern half of the country, during a large part of the year, we have cold weather, and we are compelled to wear woolen goods, and the men who use these woolen goods are a great army of people compared with the men who raise the wool, and they all have to suffer more or less because of this excessive duty on wool. It seems to me that there should be a more moderate duty on wool in the grease, for instance. Instead of 11, 12, or 13 cents a pound, as the case may be, it seems to me there should perhaps be a duty of from 5 to 6 cents a pound.

As an illustration of the excessive duties in this bill, I come from an agricultural State, one of the biggest dairy States in the Union, and I have thought that the duties on some of the agricultural products in this bill were too high. I think the duty on wheat in the Payne-Aldrich bill was 20 cents a bushel. It seemed to me that that was ample protection, and yet in this bill they put a duty of 30 cents a bushel on wheat; and on the other cereals—flax, oats, and barley—they have gone to extreme lengths, unnecessarily so. I suppose it is to make a big showing for the farmer and make him believe that he will get all that excessive duty in one form or another, and to make it easier for him to swallow the high duties on manufactured goods and on wool.

It is evident, it seems to me, that the Senator from North Dakota [Mr. MCCUMBER], in his zeal to put such an immense tariff on these agricultural products—higher than we have ever had before, higher than there was any necessity for—has done so simply to oil the protection machine for the woolen schedule and some other schedules in the bill. I do not want to do the Senator from North Dakota any injustice. This is simply a notion of mine. I do not make the charge against him, of course. I would not think of doing that. It is only a notion and a suspicion of mine.

I had hoped that we would have a tariff bill not based on the chaotic and fluctuating conditions which prevail at this time in Europe, but having a tangible and reasonable basis that would make it a permanent measure.

There is nothing more disturbing to business than to have tariff legislation very frequently. This bill is evidently based on the chaotic financial conditions that prevail in Europe to-day, on the low rate of the mark, the franc, the lira, the pound, the crown, and the kroner. We are all hoping and expecting, however, that those financial conditions may change and gradually improve. We know that they have improved in some countries, notably the pound sterling in England, notably the crown in Sweden and Denmark, and I think to some extent the franc has been lower than it is to-day.

It seems to me we ought to base our tariff legislation on a moderate and reasonable amount of protection. This parading of wages in Europe is an old story. Whenever a tariff bill has been up I have always heard the same thing, the same horrible story about the low wages in Europe. To be sure, they are lower than in this country. They are lowest, perhaps, in Germany at this time, owing to their inflated currency and owing to the World War, as a result of which they have great trouble in paying the compensation that is expected by France and the other allied countries.

Some of those who support these rates will go back to the farmers and say, "We have given you 30 cents a bushel on wheat, 40 cents a bushel on flaxseed, so much protection on butter, so much on cattle, and therefore you ought to tolerate these high duties on cotton and woolen goods." I am not as great an expert as the Senator from Utah [Mr. SMOOT] is; I can not go into such minutiæ or particulars; but, on the whole, it strikes me that the wool schedule, from first to last, is the most vicious schedule in this entire bill.

Minnesota is not a wool State in the same sense that the range States are. Our farmers have a few sheep. There are probably between four and five hundred thousand sheep in the entire State. The farmers raise these sheep mainly for the mutton that is in them. Lands are high and sheep are not very much favored, because they are hard on the pasture lands. Years ago I tried to raise sheep on my place, but I was very unfortunate. I did not have much of a flock. I think I had 50 or 75 sheep, but I did not have enough so that I could afford to hire a herder to stay with them or to pen them up at night, and every family in town had a dog and every dog called on my sheep.

Mr. SMOOT. We have coyotes now, and they run wild.

Mr. NELSON. I felt at that time as though I wanted something in the shape of a Payne-Aldrich bill to protect me against the inroads of those dogs.

If we look at this matter of the sheep, the Tariff Commission have some wonderful statistics about the cost of raising sheep. I do not know how they get them. The sheep in the range States are pastured to a large extent on public lands, and except in forest reserves they get pasture free, and where it is not public land it is a species of land that is good for nothing in the world except as a sheep range; and I never could see the validity of the figures that they give us about the cost of raising sheep in those range countries. Where they have free ranges or practically free ranges, where, as in New Mexico, they have such mild winters that they need not feed or stable their stock, and the only cost of taking care of the sheep is a few herders, their food and equipment, and the losses incident to managing the herds, I can not see how in the State of New Mexico, for instance, or in other States where similar conditions prevail, it can cost the amount that the Tariff Commission have figured out. Even in Minnesota, where land is high and where we are engaged in general farming, I do not believe that the cost of raising wool is what they have estimated.

But, Mr. President, this is all "love's labor lost." We are in the hands of the wool Philistines. They have us by the throat, and perhaps it would be wiser for us to take the medicine in silence and turn our heads toward Providence and hope to get relief from that source.

Mr. WALSH of Massachusetts. Mr. President, I have listened with attention to the arguments of the Senators on the other side to hear some justification expressed for the high protective rates named in this schedule and to hear some answer to the objections made by the minority. Stripped of all verbiage, just what did the Senator from Utah and the Senator from Indiana say in justification of these rates? First, the Senator from Utah took in his hand a piece of woven wool fabric and said it cost about $5 in 1920, and that the price now is about $2.50. He drew no conclusion; he made no further reference to the fact but that there had been a depreciation in the price of woven wool fabrics in the American market.

Secondly, he said that the wages paid in Germany are ridiculously low, that they are very, very much beneath the standard of wages paid in this country, and therefore we should levy the protective tariff duties named in this schedule. If it is true that Germany is competing with the American woolen manufacturers, then his 50 per cent ad valorem duty is not worth anything, because it ought to be 1,000 per cent on his own statement. Think of a Senator in charge of this bill presenting such an argument to justify these high rates; first, that cloth has declined in price since the war peak; secondly, that the wages paid in the woolen mills of Germany are scandalously low.

I might just as well come in here and say that the wages paid in India are scandalously low; that the wages paid in China are scandalously low. No woolen cloth comes to America from China, none comes from India, and none of any consequence comes from Germany. Of the few imports into this country last year—1921—as the Senator well knows, only 1 per cent of all the imports of woven woolen fabrics were made in Germany, and all imports comprised only 2 per cent or less of our production.

Mr. STANLEY. Mr. President, has the Senator any data on the capacity of German woolen mills? Before they can overrun this country with German fabrics they must have the looms, and then Germany must collect her raw materials from all over the world. If Germany could supply one-tenth of the things it is feared she will supply, she would be the richest country on earth in natural resources and in industrial equipment.

Mr. WALSH of Massachusetts. Germany has to import practically all her wool. Her consumption of wool before the war was 464,000,000 pounds. She produced only 25,000,000 pounds. She had to import 439,000,000 pounds. The Senator from Utah and the Senator from Indiana did call attention to the fact that, as the mark went down, the wages paid to the laborers of Germany went down, but they refrained from stating that as the mark went down the cost of the imported wool to the woolen manufacturers of Germany went up. They did not tell you that. The Senator from Utah did not tell you what the cost of production was. He drew a red herring across the trail, as the Senator from Minnesota has well pointed out, by shouting about low wages in Germany.

I ask any Senator to state a single argument that has been made in favor of these high protective duties other than the argument that domestic made woolen cloth has depreciated in price and that the wages paid in Germany are exceedingly low. Not one word has been said about competition with or difference in cost of conversion between the only slight competitor we have—Great Britain.

Let us come to the facts. Let me present a table as to costs of cloth. Let me read this table of prices of wool cloths and then ask Senators how, by reading this table, I can justify either an argument for these duties or an argument against these duties.

I have in my hand a table showing the cost of Washington standard clay worsteds, quality No. 200, weighing 68 ounces per yard. I have the price of that cloth as announced by the woolen manufacturers every year from 1911 to 1923. Let me read them to you, the prices of one standard piece of woolen cloth:

Fall of 1911	$1.42½
Fall of 1912	1.47½
Fall of 1913	1.62½
These are under the Payne-Aldrich law.	
Spring of 1914	$1.42½
Fall of 1914	1.37½
Under Underwood law.	
Fall of 1915	$1.55½
Under Underwood law.	
Fall of 1916	$1.82½
Under Underwood law.	
Fall of 1917 (war prices)	$2.37½
Fall of 1918 (war prices)	4.15
Fall of 1919 (war prices)	3.50
Fall of 1920 (after-war prices)	6.02½

That is the year the Senator from Utah quoted, the peak year.

Fall of 1921	$3.80
Spring of 1922	3.10
Fall of 1922	3.05
Spring of 1923	3.32½

Tell me how those figures would justify me in making an argument for or against these protective duties. What is there about those figures that would justify me in saying that these rates are too high, or what is there about those figures to justify me in saying that this is the reason why we have named these high duties in this amendment? Of course, there is no reason.

But they do show something else. They show that if these manufacturers were able to make these standard woolen cloths in 1911, 1912, 1913, 1914, and 1915 for from $1.42 to $1.55, unless there has been a tremendous increase in the cost of production, they were not justified in charging $6.02 in 1920 or charging $3.35 in the present year.

Mr. SMOOT. The wool alone would cost them more than that. It did in 1910. It would cost that if they did not put a single cent of labor on it.

Mr. WALSH of Massachusetts. The Senator means, of course, because of the emergency tariff law it has cost them more in 1922.

Mr. SMOOT. No; I mean to say that wool to-day, quoted on the market in London, not here, is about $1.20 a pound.

Mr. WALSH of Massachusetts. The Senator does not mean to tell me that he claims that wool would cost manufacturers more when we had free wool, except for the war, than when we did not have free wool?

Mr. SMOOT. I did not say that. I do not claim anything of the kind.

Mr. WALSH of Massachusetts. I am claiming that these high prices are attributable to war conditions, and chiefly to excessive profiteering indulged in during the war by woolen manufacturers and other manufacturers, and in part to the increased cost of production during that period of time.

Mr. SMOOT. The Senator referred to the price of those goods in 1911, saying it could not be justified in any other way than as he stated. The Senator must know that you could not buy the wool for that amount, taking into consideration the loss in the wool itself.

Mr. WALSH of Massachusetts. Then, of course, the Senator will admit that the costs he produced here to show that there had been a depreciation in price also proved that there had been a depreciation in cost of production. He produced a piece of cloth and said the price in 1920 was approximately $5, and that the price now is $2.50, and he drew no argument from that fact at all. He did not say that proved we ought to levy these protective duties, or should not levy these duties; why the Senator produced those cloths and why he called attention to them is beyond my comprehension. I might just as well produce here a web of cotton cloth and say that the price in 1921 was $5 per yard and the price this year was $2.50 per yard, and ask for these high duties upon woolen cloths because of the great decrease in the cotton-cloth prices.

Mr. SMOOT. I was interrupted.

Mr. WALSH of Massachusetts. I ask the Senator now what argument he intended to make to support these duties by bringing here a piece of woolen fabric and saying that there had been a decrease in price, any more than I could argue from this price table that there has been a constant fluctuation and change of prices and that the duties ought to be lowered rather than increased.

Mr. SMOOT. When I come to think about it, I was interrupted so many times that I did not conclude what I had to say in relation to that matter. I could hardly make a statement consecutively because of the interruptions, and I think myself that the Senator is justified in asking that question now

The object I had was that it has been stated from one end of this country to the other that if these rates on wool are imposed there will be an increase of $4.75 in the price of a suit of clothes and $7 in the price of an overcoat. When we had free wool in 1920 the price of cloth was a great deal higher than in 1921, when there was no peak price. The prices are lower than they were then, with the 45 per cent rate imposed on the wool under the emergency tariff law.

Mr. WALSH of Massachusetts. Does the Senator say that free wool was the reason for high prices in America in 1920?

Mr. SMOOT. I did not say so.

Mr. WALSH of Massachusetts. Does not the Senator admit that the peak of high prices and wages and the high cost of production was reached in 1920, and that there has been a steady decline since that time?

Mr. SMOOT. I did not say any such thing. There was no emergency tariff law in 1920.

Mr. WALSH of Massachusetts. The Senator called attention to the fact that there was free wool.

Mr. SMOOT. There was free wool in 1920 and up until May, 1921.

Mr. WALSH of Massachusetts. Did not the Senator call attention to the fact that there was free wool, and mean that somebody should infer that free wool was responsible, in part, for the high prices of 1921? Otherwise it could have had no association with the price.

Mr. SMOOT. Not at all. I called attention to the fact that when the emergency tariff bill was passed there was a duty of 45 cents a pound on wool, figuring on the scoured basis, and with that 45 cents a pound on the scoured basis for 1921 the price was higher than it is this year.

Mr. WALSH of Massachusetts. Will the Senator agree with me that when you levy high protective tariff duties on some article that has been on the free list one of two things is going to happen, either there is going to be an increase in the price of the article or there is going to be a check on the decrease in price by the levying of the duty? Will the Senator agree to that proposition?

Mr. SMOOT. I will agree that it is true in many cases. For instance, where there is no competition in the United States a duty will increase the price, I have no doubt, unless the market is absolutely controlled by some foreign country charging us just exactly what they want to charge. But I can not say that it will increase the price in all cases. It does not.

Mr. WALSH of Massachusetts. Of course, it does not as to some agricultural products.

Mr. SMOOT. Competition is what has brought the prices down to where they are to-day. The Senator knows that the prices of these wools are higher than they have been for years and years, with the exception of the period when the Government was purchasing the wool for war purposes.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER (Mr. STANFIELD in the chair). Does the Senator from Massachusetts yield to the Senator from Kentucky?

Mr. WALSH of Massachusetts. I yield.

Mr. STANLEY. I understood the Senator from Utah to state that we produce half of the wool consumed here and buy the other half. Is not that the fact, that we buy about half of it?

Mr. SMOOT. No; we buy about 40 per cent of it.

Mr. STANLEY. Well, that is nearly half. If we buy 40 per cent of our wool and pay a duty of 35 cents per pound on it, does not the Senator believe the 35 cents is added to the price of wool in the country?

Mr. SMOOT. If there is a demand for that particular kind of wool, I do not think it would be added. I want to give an example to the Senator. For instance, to-day scoured wools are selling at 41 cents on the Boston market, and yet there is a duty of 45 cents on those wools. That is the example I had in mind, I will say to the Senator, when I said "if there is a demand for the wool."

Mr. STANLEY. Under ordinary circumstances?

Mr. SMOOT. When the market has to buy it.

Mr. STANLEY. Under normal conditions?

Mr. SMOOT. When the market can not get it from this country, or when there is an active market in the foreign lands all fighting for the wool, then they will get the duty.

Mr. STANLEY. If it did not result in an increase in price, there would be no reason to produce it.

Mr. SMOOT. Yes; in a case like that.

Mr. STANLEY. I understood the Senator to say that the woolen mills make a profit upon the yards produced. It does not matter whether they are weaving wool that costs $1 a yard or wool that costs 10 cents a yard, they charge so much for converting the wool into cloth.

Mr. SMOOT. Those are extremes that never occur.

Mr. STANLEY. But that is the system?

Mr. SMOOT. The system is to charge so much per yard.

Mr. STANLEY. So much per yard for reducing the wool to the cloth condition? They charge for the process?

Mr. SMOOT. Yes; and the price regulates that in the end.

Mr. STANLEY. Then, if it cost 30 cents or 40 cents or $1 a yard to change the wool into cloth, the cloth would cost just $1 a yard more, or 50 cents a yard more, if there was 50 cents worth more of wool in the cloth. Is not that true?

Mr. SMOOT. Yes.

Mr. STANLEY. If there is a charge of $1 for converting the wool into a yard of cloth——

Mr. SMOOT. That is, provided the full duty amounted to that and they had to pay the full duty.

Mr. STANLEY. If the wool in the cloth costs $1 more, we would have to pay $1 more per yard; if it costs $1 less, we have $1 less to pay.

Mr. SMOOT. Provided they have to pay the full duty.

Mr. STANLEY. Then, under normal conditions the 35 cents about which the Senator is talking will necessarily be reflected in the cost of the cloth when it passes from the woolen mill.

Mr. SMOOT. Certainly.

Mr. STANLEY. And the whole compensatory duty is based upon that assumption.

Mr. SMOOT. Why, certainly. If we give a compensatory duty on long-staple cotton, it is upon the same principle.

Mr. STANLEY. And that is just as bad as this.

Mr. SMOOT. I would say it is worse than this, because it is a fact that in that case, of course, we do not produce any such cotton in this country at all, and they have the market at their command, anyhow. I said we produce no such cotton in this country at all; I mean outside of a little that is raised in Arizona.

Mr. STANLEY. I agree with the Senator that the duty on long-staple cotton is worse, if anything, than the duty on short-staple wool, and that both are an abomination in the sight of the Lord.

Mr. CARAWAY. Both are as bad as they could possibly be, and therefore they could not be any worse.

Mr. STANLEY. I believe long-staple cotton is really the worst, because it is reflected in a greater charge.

Not to interrupt the Senator from Massachusetts unduly, I wish to suggest this proposition, and then I shall cease to divert him. I want to ask the Senator from Massachusetts if the Tariff Commission have made any figures upon the cost of producing the cloth in Germany and in England? If it be true, as the Senator said, that no cloth is imported from Germany to amount to anything and that the Germans have no mill capacity, this is purely a bogey man. The Germans could not build cotton mills to enter into the export business.

Mr. SMOOT. I did not understand the Senator from Massachusetts to say that they had no mill capacity in Germany.

Mr. STANLEY. None for export purposes.

Mr. SMOOT. They imported over 400,000,000 pounds of wool. Our consumption, all that we have used in the United States, including all that we have produced and all that we have purchased, was about 575,000,000 pounds in the grease.

Mr. STANLEY. In addition to what we raise here?

Mr. SMOOT. No; that is all of it. We only raised about 230,000,000 pounds, and with importations and all, the highest year ever known was 575,000,000 pounds. So Germany certainly has some capacity for manufacturing woolen goods.

Mr. WALSH of Massachusetts. I want to call the attention of the Senator from Kentucky to the imports of woven fabrics and wool. No one until this day has ever considered that we competed with any country except the United Kingdom in the matter of wool fabrics. The Tariff Commission, of course, has made no investigation about cost in Germany, because there are no importations from Germany. This is done to camouflage the real facts with the public. It is all done to make it appear to the working people of the country that if we did not levy these high duties, which will mean an increase in the cost of their clothing, they would be obliged to accept reductions in wages. The record of the imports tell the story better than anything I can say.

Mr. SMOOT. Mr. President, I simply want to say in that connection, if the Senator will yield to me——

Mr. WALSH of Massachusetts. I yield.

Mr. SMOOT. The Senator must remember that I stated that under conditions existing to-day even in Germany, with the way she is situated to-day, we are not making a tariff for that condition. It is for the future that we are making the tariff.

Mr. WALSH of Massachusetts. The Senator's argument and the argument of his colleagues is that this tariff bill is made upon fear and not facts; that this tariff bill is made, as he just said now, for fear of the future and not upon facts. He does not attempt to give facts. He can not give us facts to justify these rates. There are no facts to justify these high rates. They present a fear of competition with low wages in Germany, not that they have any sympathy for the workingmen, not that they care for the working people, but, as a matter of fact, it is done as a cloak to help them levy duties which they have agreed to levy in the interest of those producers who would benefit by high protective duties.

Now, let us return to the question of imports, because I want that cleared up on the record. I want to show that there are substantially no imports coming into the country from Germany. I am going to give the figures for the years 1913 and 1921.

The total amount of woolen dress goods, women's and children's, imported into this country in 1913 was $3,321,626. Paragraph 1108 deals with dress goods and the pending paragraph deals with cloth. The total amount of cloths imported in 1913 was $4,488,477, a total importation of $8,210,073 worth of wool fabrics. From Germany there came $521,141 worth of dress goods and $940,906 worth of cloth, making a total importation from Germany of $1,462,047 worth of dress goods and woolen cloth. That was 17 per cent of the total importations of that year under the Payne-Aldrich law and before the Underwood law became operative.

In 1921 the total importations of dress goods were $3,189,458, the total importations of woolen cloths were $11,353,352, making a total importation in 1921 of $14,542,810 worth of woolen fabrics. From Germany there came $182,772 worth, which represents 1.3 per cent of all the imports. In 1913 there were 17 per cent of the imports came from Germany and in 1921 there were 1.3 per cent of the imports came from Germany. The total imports for the year 1921 were negligible compared to the total production. I think they were something less than 2 per cent. When I return to the line of argument which I want to pursue after I finish answering what has been said by those on the other side of the aisle, I shall give that exact figure. But here we have only 1 per cent of our imports coming from Germany and all our imports absolutely of no consequence and no factor in influencing or controlling the price in the domestic market.

Mr. POMERENE. Mr. President, will the Senator refresh my mind a moment? In 1913 was not the duty on this class of goods 50 per cent?

Mr. WALSH of Massachusetts. It was 55 per cent.

Mr. POMERENE. And in 1921 it was 35 per cent?

Mr. WALSH of Massachusetts. In 1921 the protective duty was 35 per cent. My notes to which I referred just a moment ago remind me of the fact that there were less importations in 1921 of woolen cloth than there were during the time when the Payne-Aldrich law was in effect.

Mr. SIMMONS. Mr. President, I would like to ask the Senator if, during the whole year of 1921, when we had the pending bill before the committee, the demand for the increased duties was not based upon the alleged claim that Germany and other European countries, especially Germany, were flooding this market with German goods?

Mr. WALSH of Massachusetts. The claim was made repeatedly and repeatedly, in the face of the record showing a great decrease in our imports, that the market was being flooded with manufactured articles of various kinds and therefore the prices at home were likely to be driven down by reason of foreign competition.

Mr. STANLEY. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Kentucky.

Mr. STANLEY. In that same connection there has been talk here about Germany utilizing her war stocks to flood this country. It is a notorious fact that during the war Germany developed the use of paper to the highest degree ever known in the world. She made twines and clothes out of paper. She buried the dead in paper clothing. Her wool was so entirely exhausted that at the close of the war Germany was literally clothed in paper. The idea of people clothed in paper sending their woolens to this country is absurd.

Mr. SIMMONS. At an earlier stage of the remarks of the Senator from Massachusetts he gave the Senate the prices, I think, of certain fabrics.

Mr. WALSH of Massachusetts. A certain fabric. I gave the price every year for the last 10 years.

Mr. SIMMONS. Under the Payne-Aldrich law the price he gave for that cloth was $1.40, I think, and the present price or the price in 1921 was what?

Mr. WALSH of Massachusetts. Between $3 and $3.50.

Mr. SIMMONS. That is, more than twice what that fabric was selling for under the Payne-Aldrich law before the war?

Mr. WALSH of Massachusetts. Yes.

Mr. SIMMONS. Now, can the Senator give us any reason or can the Senator conceive of any reason, when that fabric is selling to-day in the American market at more than twice what it sold for before the war under the Payne-Aldrich law, why we should increase the protection upon it under those conditions?

Mr. WALSH of Massachusetts. Of course, there is no reason at all, and these increased prices merely indicate excessive

profiteering, with some increase, of course, in the cost of production.

Mr. SIMMONS. Certainly we ought not to be levying duties for the purpose of enabling the manufacturers of that particular product to sustain a price which is more than 100 per cent over the price at which the article sold anterior to the war.

Mr. WALSH of Massachusetts. Of course the Senator from North Carolina is absolutely correct in his statement.

Mr. President, I desire to discuss in detail this paragraph, which includes the heavier fabrics, or what are technically known in the trade as cloths; also the bulk of the flannels—i. e., those weighing over 4 ounces per square yard.

The rates of duty imposed are graduated upward by steps as the value of the goods per pound increases.

The first bracket covers goods valued at not more than 60 cents per pound, and levies a compensatory duty of 26 cents per pound and a protective duty of 40 per cent.

The second bracket covers goods ranging from 61 cents to 80 cents per pound in value, and imposes a compensatory duty of 40 cents per pound and a protective duty of 50 per cent.

The third bracket covers goods valued at from 81 cents to $1.50, and imposes a compensatory duty of 49 cents per pound and a protective duty of 50 per cent.

The fourth bracket covers goods valued at more than $1.50 per pound, and imposes a compensatory duty of 49 cents per pound and a protective duty of 50 per cent.

It will be noted that both the compensatory and protective rates are graduated upward with the successive increases in the value of the cloths. The proper compensatory duty, according to the findings of the old Tariff Board, assuming a 33-cent duty on clean wool, would be 49 cents per pound on cloths composed wholly of virgin wool. On cloths valued at not more than 80 cents per pound, however, the assumption in this paragraph is that the content will not be wholly of new wool. Consequently the compensatory duties given are slightly more than half the compensatory which is given on goods valued at over 60 cents and about four-fifths of the full compensatory duty in the case of goods valued between 61 and 80 cents per pound. These allowances are, of course, estimated only and not based upon scientific accuracy.

Goods valued at more than 80 cents are assumed to consist wholly of virgin wool, and therefore carry a full compensatory duty of 49 cents per pound.

COMPARISON OF PROTECTIVE DUTIES IN SENATE AND HOUSE BILLS.

As in the case of paragraph 1108, it will be noted that the valuation brackets in paragraph 1109 have been cut down from those in the House text in order to make allowance for the change in basis from American to foreign valuation. The increases of protective rates in the Senate text over those in the House text distinctly exceed the ratio by which the valuations in the Senate bill were reduced below those in the House bill. In other words, even making allowance for the change from American to foreign valuation, it seems quite apparent that the protective rates in the Senate bill are distinctly higher than were those in the House bill. If the same ratio had been used in translating the protective rates as in changing the valuation brackets, the rates in the Senate bill would have been as follows:

First bracket would have been 21.6 per cent instead of 40 per cent.
Second bracket would have been 28.56 per cent instead of 50 per cent.
Third bracket would have been 33.6 per cent instead of 50 per cent.
Fourth bracket would have been 38.5 per cent instead of 50 per cent.

The very fact that the protective rates in the Senate bill are double, or more than double, those in the House text indicates very strongly without any further analysis that the rates in the Senate bill are substantially higher.

COMPARISON WITH THE EMERGENCY ACT.

The emergency tariff law imposed a compensatory duty of 45 cents per pound upon all wool manufactures—including the cloths, and so forth, covered in this paragraph—in addition to the protective rate of 35 per cent which already existed in the Underwood law. Considering that the emergency duty on raw wool became effective only by slow degrees as the stocks of wool in the country were gradually exhausted, and that the skirting joker has not even yet become effective, it is quite apparent that this compensatory duty of 45 cents per pound has thus far, at least, contained a considerable amount of protection. Yet it does not appear that imports of woolen and worsted cloths have been seriously affected. The monthly importations since the emergency law was passed have been substantially the same as those before it was passed, except for the two or three months which immediately preceded the enactment of the emergency law. (See the report of the Tariff Commission upon the operation of the emergency tariff law.)

The fact that this duty of 45 cents per pound, which, under the conditions here described, was largely a protective duty, at least during the earlier months of the emergency law, did not curtail imports would appear to indicate that the imports of cloths are largely supplementary and that they do not compete directly with goods made in this country. Indeed, it is a well-known fact that imports of wool fabrics have generally consisted of goods made from fine yarns or fancy woven and special cloths largely used by custom tailors, such as Scotch and Irish tweeds, superior face goods, such as English broadcloths, and other special fabrics of a type not duplicated in this country. Most of these fabrics sell at a higher price than domestic goods. They are sold on the basis of superiority and established reputation and amount to a very minor factor of domestic consumption, and they compete only with the highest classes of goods which we make, or not at all.

COMPARISON WITH THE UNDERWOOD ACT.

The Underwood law imposed a straight ad valorem duty of 35 per cent upon cloths, as upon other wool fabrics, with no compensatory, since wool was admitted free. Upon the lowest classes of cloths covered in paragraph 1109 of the Senate bill there is a differential of 5 per cent between the Senate rate and the Underwood rate, the Senate rate being about 14 per cent higher. In the next two brackets, however, the differential between the Underwood law and the Senate bill is 15 per cent and on the highest bracket 20 per cent, the rates in these three brackets being 40 to 57 per cent higher than the rates in the Underwood bill, just as in the case of dress goods.

Yet, even under the duty of 35 per cent imposed by the Underwood law, it can hardly be contended that imports have seriously interfered with the prosperity of the domestic industry at any time. It is true that immediately after the enactment of this law there was a substantial increase in the imports. From an annual average during the period from 1910 to 1913 of 4,742,081 pounds imports increased to 16,439,655 pounds during the calendar year 1914.

Considering that imports prior to the enactment of the law had been exceedingly small in relation to our consumption and that the imports during the first half of the year included a large amount of goods that had been held back in anticipation of a lower duty, this 16,439,655 pounds is not a formidable figure.

(It should be noted that the rates in the wool schedule did not go into effect until January 1, 1914.)

Indeed, after the calendar year 1914 imports fell off sharply, nor has the postwar importation reacted to a point much beyond the importations under the Payne-Aldrich law. In 1921, for example, the imports were only about 6,300,000 pounds. These figures do not bulk large in contrast with a combined production of cloths and dress goods amounting to almost 300,000,000 pounds in 1919 and over 500,000,000 square yards in 1914.

DIFFERENCE IN COST OF CONVERSION HERE AND ABROAD.

Now, Mr. President, I want to turn to the arguments advanced by the proponents of this amendment, if I may properly call them such. There has been nothing whatever said in justification of this rate except the presentation of a table showing the wage scale in some woolen mills in Germany. The Senator from Utah [Mr. SMOOT] made a very remarkable admission in reply to a question by me. He said he had paid no attention to the effect of war conditions upon this industry; that he has not investigated to ascertain the financial status of those engaged in the domestic industry. The Senator from Utah may justify the levying of high protective duties simply upon the request of manufacturers, but the American people, who must pay the tax, want to know upon what basis, by what reasoning, have these rates been determined; and where is the evidence to show the need for such protection to this industry.

I now make the assertion—and I challenge contradiction—first, that the difference in conversion cost between woolen cloth woven in America and that woven in the United Kingdom does not justify this protective rate of 50 per cent, and I call as authority to confirm my statement the information furnished by the Tariff Commission itself, which I gave in detail when I was discussing the previous paragraph on dress goods.

I also contend that the prices of foreign fabrics comparable with the American fabrics do not justify the protective duty that it is proposed to levy in this instance.

I have in my hand the table prepared by Mr. Culbertson when he was engaged as a tariff expert. He is now a Republican member of the Tariff Commission. The table, however, was prepared when he was a tariff expert in 1913, when at the request of the Tariff Commission he investigated the prices of fabrics falling within this paragraph which are produced in

America and similar fabrics produced in the United Kingdom, comparing the price of the foreign fabrics with the price of the American fabrics in order to determine what ad valorem protective duty was justified. The table, which is printed in House Document No. 50, first session Sixty-third Congress, discloses the following information:

Sample number.	Name of cloth.	Ad valorem rate necessary to cover difference in conversion cost.
		Per cent.
13	Men's fancy wool suiting	33.16
42	Fancy woolen overcoating	32.72
21	....do	32.45
28	Men's fancy woolen suiting	41.00
9	Woolen tweed	26.79
22	Men's blue serge	34.12
23	Men's worsted serge	37.79
37	Black clay worsted	27.44
44	Wool overcoating	24.02
46	Uniform cloth	21.94
36	Men's blue serge	22.50
42	Men's light weight blue serge	34.00
45	Men's fancy half worsted suiting	28.05
48	Men's unfinished worsted	35.62
49	Men's serge	37.10
53	Men's unfinished worsted	42.39

The samples here chosen from the table to which reference is given are fairly representative of the entire group of 53, some of which have been included in the discussion above relating to dress goods (paragraph 1108). Out of the entire list of 53 samples, the highest ad valorem duty necessary to cover the difference in conversion cost is 46.07 per cent in the case of sample No. 34, a fancy worsted suiting, while the minimum is 21.15 per cent in the case of sample No. 24, a fancy cotton warp worsted.

The Tariff Commission made a survey of the British woolen industry in 1920, and they find in their report—I quoted it this morning—that there has been a decrease in the conversion cost since 1911.

Even at a glance it is apparent that upon cloths, just as upon dress goods, the 35 per cent in the Underwood bill constitutes a high average for the cloths listed in this table. That the changes which have occurred in prices and in labor costs since these figures were computed do not invalidate them for our present purpose has already been explained in connection with the dress goods paragraph (1108).

Mr. WALSH of Montana. Mr. President, before the Senator proceeds I should like to remind him that the distinguished Senator from Indiana [Mr. WATSON] stated a few moments ago that there was no purpose on earth in imposing these duties except to take care of the poor laboring man. The Senator from Indiana unfortunately is not now in the Chamber. I should like to hear what he has to say about the figures now presented for the second time by the Senator from Massachusetts, showing that the total difference in the conversion cost is not to exceed 33⅓ per cent.

Mr. WALSH of Massachusetts. Mr. President, no Senator has taken the floor here to dispute the claim that the conversion cost does not justify this duty; no Senator has taken the floor to dispute the fact that there are no imports coming into this country of such volume as to threaten the domestic industry; no Senator has taken the floor to dispute the fact that the difference in the price of the foreign product and the American product does not justify this high protective tariff duty; and no Senator will take the floor to make any such contention. It was almost pathetic to listen to the attempt to urge justification for this rate which we witnessed here a short time ago, when a piece of cloth was lifted before the eyes of the Senate, and it was said that the piece of cloth cost so much in 1920, and it cost so much now; ergo, there should be a protective duty. How much? Fifty per cent. How was the conclusion reached that 50 per cent should be the rate? There has been no attempt whatever to determine the rates here upon any basis of honest calculation and of disinterested information.

Mr. WALSH of Montana. Mr. President——

Mr. WALSH of Massachusetts. I yield to the Senator from Montana.

Mr. WALSH of Montana. I merely wish to add the remark that there is only one of two conclusions which may be drawn from the remarks of the Senator from Indiana, namely, either that he does not know the facts as disclosed by the Senator from Massachusetts, or else there must be some other reason besides concern for the welfare of the workingman prompting the imposition of these high duties.

Mr. WALSH of Massachusetts. I desire now, Mr. President, to proceed with another branch of the subject.

COMPARISON WITH THE PAYNE-ALDRICH ACT.

The Payne-Aldrich law imposed duties of 33 cents per pound, plus 50 per cent; 44 cents per pound, plus 50 per cent; and 44 cents per pound, plus 55 per cent, respectively, upon cloths according as the valuation increased. It is thus apparent that in the Senate bill, except for the lowest bracket—in which the protective rate is 40 per cent—the protective rates are practically identical with those in the Payne-Aldrich Act, while the compensatory rates are even higher by virtue of the increase in the duty upon raw wool.

It is not fair, however, to say that the net protection to the manufacturer afforded by the Senate bill will be as high as in the Payne-Aldrich law, for here again, as in the case of dress goods and in general of the entire wool schedule, the compensatory duties in the Payne-Aldrich law included a large amount of concealed protection, so much, in fact, that a decrease in the net protection to the manufacturer much greater than has been made in the Senate bill would need to occur to bring the rates within the realm of moderation and reason.

Nowhere in the old Schedule K did this concealed protection operate to greater advantage to the manufacturers than in the case of wool cloths. Upon the absurd assumption that, on the average, it took 4 pounds of grease wool to make 1 pound of cloth, the compensatory duty, when added to the high ad valorem protective rates, amounted to almost complete prohibition. On wool cloths, where there was a very liberal use of substitutes and adulterants like shoddy, noils, and cotton, the reduction of the ratio from 4 to 1 to 3 to 1 did not by any means remove the protection contained in the compensatory duty. In fact, the Tariff Board found that this concealed protection served to keep the lowest valued cloths out of the country. In other words, it discriminated against those of modest means who were compelled to purchase the cheaper goods. For example, the board found that the compensatory duty alone on cloths valued at 44 cents or less per pound was 99.59 per cent of their value in 1911, that on cloths valued at from 41 to 70 cents per pound the compensatory duty was 73.71 per cent of their value, and that on cloth valued at over 70 cents the compensatory duty was only 39.17 per cent of their value; yet the compensatory rates for the lowest valued cloths were 3 to 1 as against 4 to 1 for those of higher valuation.

Under the circumstances here described it is not surprising, therefore, that imports under the Payne-Aldrich law were very small compared with our domestic production. As already stated in the discussion of the Underwood law, imports during the period 1910 to 1913 averaged 4,742,081 pounds annually; in other words, about 4 per cent of the total production of cloths and dress goods combined in 1914. The census of 1914 does not segregate cloths from dress goods, but the total production of cloths in 1909, it will be noted, was 242,665,949 square yards. (See report of Tariff Board on Schedule K, pp. 127–129.)

RECAPITULATION.

Mr. President, I am now going to summarize for the RECORD, as I did this morning, the objections to the rates proposed, and then I am going to proceed to discuss a very important aspect of this question; I am going to say something about the financial standing of some of the beneficiaries of this protective tariff duty.

From the discussion in which I have indulged the following conclusions may be drawn:

1. That the protective rates in the Senate amendments are a substantial increase over those levied in the House bill.

Would you not think, Mr. President, at least that the committee would give us the information which they had and which the House did not have? The House is Republican; the Members of the House are responsible to their constituents; the Members of the House may have their votes challenged and be asked to explain why they fixed the rates proposed by them. Would it not be reasonable to expect, at least, some information or the indication of some reason why the Senate Finance Committee increased the House rates?

2. That the emergency duty of 45 cents per pound, which was intended as a compensatory duty but which contained a large amount of protection, did not seriously affect the small importations of wool cloths which were already coming in under the 35 per cent imposed by the Underwood law, a fact which can be readily understood when it is realized that a very substantial proportion of the imports, always negligible, are supplemental and not competitive in character.

Even the levying of a 45 per cent compensatory duty, plus a 35 per cent protective duty, did not stop these importations because they are not competitive at all; they are made up of special cloths. Now, let me follow that. The record shows that even when an increased duty of 45 cents a pound was put

upon these woolen cloths, the importations came in just the same; they had to come in, for that character of cloth did not compete with the American trade at all.

3. That the protective rates to the manufacturer in the Senate bill are an increase over the Underwood rate of from 40 to 55 per cent, although it was shown in House Document No. 50, first session Sixty-third Congress, above referred to, that the average protective rate required on these cloths in 1913, at the time when the old Tariff Board made its report, was even less than the 35 per cent rate fixed in the Underwood law, and that there has been no substantial change of conditions which would materially increase the amount of the rate required.

There has been no attempt made to dispute that. They will not even say that it is not so. They will not even deny these facts. There is not a denial, but only an exhibition of a piece of cloth. Think of answering a challenge such as I am making here by saying, "Here is a piece of cloth that cost so much two years ago, and costs so much now," and "Here is the scale of wages over in Germany." That is the answer that is made to your argument.

I want this in the RECORD, so that the country will know just what is happening here. for, after all, our plea must be made to the country. So far as changing votes here is concerned, we are wasting our time and our energy; but we have an obligation to our fellow citizens to stop what will overthrow this Government if it keeps on—the levying of unwarranted and unjustifiably heavy tax burdens upon the American people. If I should be asked what, in my opinion, would lead to dangerous attacks upon our free institutions—and God forbid that such attacks may ever come—I should say that in my opinion it would be the imposition of taxes upon the people which resulted in favors and privileges and gifts to the few at the expense of the many, and to the neglect of our Government to limit the watering of stocks and the creation of monopolies and trusts so that a combination of a few would be able to control prices and profiteer mercilessly at the expense of the American people.

Mr. STANLEY. Mr. President, at that point I wish to suggest to the Senator, because he is touching a very interesting phase of this situation, that perhaps the socialist has a better argument and a better cause than the protectionist, and the socialist is doing but common justice in going from rank protectionism to sane socialism; and I am not a socialist.

If an industry is to be maintained by taxation and not by reason of the fact that it is indigenous to the soil and is producing well, if the source of its wealth is taxation, is it not better that that industry should be operated for the benefit of the people who are taxed than for the benefit of the few men who eat those taxes and enjoy them? Has not the socialist the better of the argument? And have we any answer to the socialist who charges us with having maintained a wealthy and privileged class not by virtue of their own industry but by the absolute, indefensible, and partial operation of the law?

This is socialistic—worse than socialistic. It has all the evils of socialism and none even of its apocryphal virtues.

Mr. WALSH of Massachusetts. Mr. President, to be unable to justify the levying of a tax upon the people of the country is bound to lead to unrest and discontent and dissatisfaction; and every time we invoke the taxing power to bestow favors upon groups of our citizens at the expense of the many we are doing a very dangerous thing to free institutions.

I do not want, however, to depart from my speech, interesting as that phase of this question is.

4. That the total compound rates in this cloth paragraph are never less than double the total rate in the Underwood bill, and on the lower-priced goods are more than three times the Underwood rate. That, of course, means that the Underwood rates are only protective, while the rates in this bill are both compensatory and protective.

5. That while the protective rates in the Senate bill are substantially the same as in the old Schedule K of the Payne-Aldrich law, the net protection accorded to the manufacturer is probably less, owing to the large amount of concealed protection in the compensatory rates of the Payne-Aldrich law.

6. That the cost to the consumer has been increased to a higher point than ever before, for, as has been stated elsewhere, the compensatory duty is as much of a burden as is the protective duty, and the sum of the two is greater in the Senate bill than in the old Schedule K.

7. That there is no danger of foreign competition to the domestic manufacturer, by reason of the fact that there are no importations of consequence..

Now, I am going to ask this question: Does the conduct of this business by some engaged in it in recent years entitle them to this gift or subsidy from the American people? Does it become us, with the information available as to the extent to which profiteering was carried on in this country during the war, to turn about now and say: "For your success in profiteering we are about to bestow upon you, in order that you may continue your profiteering, an increased measure of protection to your industries"?

I pointed out yesterday that 25 per cent of the domestic production of dress goods and woolen cloths was in the hands of the American Woolen Co. I pointed out the fact that in the last 25 years they have purchased and consolidated over 50 independent woolen manufacturing units. I called attention to the fact that they are still consolidating; that last year they consolidated three more big woolen mills, and that they must have now at least 60, and I do not know how many more. I called attention to the fact that levying an unwarranted and an unjustifiable and an excessive protective tariff duty is an invitation to monopoly. Why?

If a high protective tariff duty is levied, it shuts out imports and competition from abroad, and the only thing necessary in order to control absolutely the home market is to stifle competition at home. The next step is to corral all the domestic manufacturers into one powerful organization to stifle domestic competition, control the home market, and dictate prices to be imposed upon the American people.

This bill is helping to bring about that condition. Previous protective tariff bills have helped to bring it about. It will not be long before the woolen industry will be one big monopoly. They already can destroy any small unit, any little woolen mill.

I do not know whether or not the Senator from Kentucky was here a few days ago when I called attention to the fact that the census showed that 40 years ago we had 4,000 little woolen mills in this country, all over this country, good American citizens carrying on an honest-to-God mill business in these little woolen mills, employing men in the same neighborhood where they lived, paying decent wages, and conducting a profitable business. With the coming of these high protective tariff laws during the last 40 years that number has been reduced to 900; yet the capitalization and the amount of money invested in the woolen manufacturing industry has increased tremendously, but the little unit is gradually being destroyed. Why? The big units are in a position in one way or another to stamp out competition. As the Tariff Commission report shows in discussing the industry, the American Woolen Co. now names the prices of dress goods and woolen cloths, and all the others follow. No independent company names its prices each season until the American Woolen Co. speaks.

I must hasten on. I am going just to develop two thoughts and close the debate upon this paragraph, and I am going to have very little to say about the rest of this schedule; but it is a good opportunity to call attention to the absence of any investigation by anybody to find out whether these industries or these producers—it makes no difference—were in such a financial condition that they needed protection. I tell you the American people will not permit themselves to be taxed in the manner that it is proposed to tax them here without some information that the distressed condition of the industry requires and necessitates protection.

Mr. SIMMONS. Mr. President, has the Senator any data showing the profits that these mills were making?

Mr. WALSH of Massachusetts. Yes. In 1920 I prepared a speech which I delivered in this Chamber on May 18, 1920.

Before making that speech I made some investigation in reference to the extent to which profiteering had been carried on in this country during the war and up to May, 1920, and collected some very valuable information. I made an analysis of the extent of profiteering in the fuel, food, clothing, and iron and steel industries, and I discovered that it was very difficult to get very much definite information, because the profiteering corporations had resorted to many successful devices to conceal from the public the true relation between their net incomes and the actual investments on which the percentage of profit should justly be computed. I found that one of the ways resorted to for the purpose of hiding their profits was to pay large salaries. One corporation paid to its president, two vice presidents, the chairman of its board of directors, and two office managers, six executives altogether, an average of $200,000 apiece, aggregating $1,189,000. I cite that only as an illustration, to show the extent to which some of these beneficiaries have gone to hide their profits.

An article published by a former member of the Federal Trade Commission on war profits of the "patrioteers" shows many secret methods resorted to to hide profits, and he makes this comment:

So far as the income and excess-profits taxes are concerned, the Treasury Department is an impenetrable veil, through which no citizen is permitted to see.

Calling attention to the fact that the disclosures made to our Government are secret and if they were made public there would be much very valuable information available. But the Finance Committee could have seen those returns. There is provision in the law permitting the Finance Committee to ask the President to have furnished to that committee the returns of those corporations. The committee could have summoned their officers before them. The witnesses who appeared, saying "Our industries need this rate of protection," could have been asked by the committee, "What are your earnings? What are your profits? What dividends have you been paying?"

Mr. POMERENE. Did they do it?

Mr. WALSH of Massachusetts. In not one instance was it done. There was no attempt made to do so. The committee did not want it. That is why I asked the Senator from Utah the question to-day, and that is why the Senator from Montana was also prompted to ask it, because the same thought was going through his mind—if these increased prices of woolen cloths show, in part, the extent to which profiteering was indulged in during the years of the war, and during the years the high prices were maintained.

Mr. SMOOT. Does the Senator say that I admitted that the committee has made no endeavor at all to find out any reasons why these rates were imposed?

Mr. WALSH of Massachusetts. No. I said the Senator had made no effort to find out the profits of these corporations; had made no effort to find out what dividends they paid; had made no effort to find out what salaries their officers received; had made no effort whatever to determine whether they are in financial distress or not. Am I correct in that?

Mr. SMOOT. The Senator, of course, is correct in his statement that the committee did not go into the question of the profits the companies have made in the past. I suppose the Senator would mean by that to infer that we could take the American Woolen Co., and one or two other of the large woolen mills and compare the profits of all the other mills in the United States with the profits they made during the war. That would be unfair. I want to say to the Senator that, as far as the rates in the bill are concerned, they are not nearly what the Reynolds report would justify, and the Senator knows that that report was made at the instigation of the Congress. I have sample after sample which the Reynolds committee submitted to the Committee on Finance with the results and the tabulations, and according to their figures the duty of 50 per cent would not be sufficient to afford protection.

Mr. WALSH of Massachusetts. What the Senator is saying is that the committee were furnished by the Reynolds committee with information as to what the prices of various products made in this country were abroad and in this country, as of August, 1921.

Mr. SMOOT. Yes; and I say that is what we had when we had the bill under consideration. As I have said before, the rates which were named and the changes which have been made have been due to changes in conditions which have taken place. The Senator also will admit that the compensatory duties have been based upon the reports of the Tariff Commission absolutely.

Mr. WALSH of Massachusetts. I asked the Senator if he made any investigation of the profits and earnings of these companies, and he has admitted he did not.

Mr. SMOOT. The committee did not make that investigation, and I do not see that the committee could have gotten any information which would have assisted them at all in making the rates, either in the case of the woolen business or any other business in the United States.

Mr. WALSH of Massachusetts. I am going to proceed now to show what the chief beneficiary of this protective duty has made, and show that the woolen industry, honestly managed, never needed such high protective duties, and does not need any such high rate as is now proposed.

Mr. SMOOT. Does the Senator mean that the tariff bill ought to be passed with only the American Woolen Co. in view?

Mr. WALSH of Massachusetts. Evidently the Senator anticipates what I am going to say. He evidently is not going to be surprised at the figures which I will give, showing the extent to which stock watering has been carried on and stock dividends and excessive dividends paid. He is not surprised at all. If the American Woolen Co. can pay, upon the stock which they have expanded and expended upon earnings, the present dividends they are paying, I contend that an honestly managed small industry can make money without these high protective duties.

Mr. SMOOT. The Senator has a perfect right to make that statement, and I have no doubt he believes it.

Mr. STANLEY. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Kentucky?

Mr. WALSH of Massachusetts. I yield.

Mr. STANLEY. Mr. President, I want to call the Senator's attention to one fact at this point, and I think the Senator from Utah will agree with me. The Senator intimates that a great industry like the American Woolen Co. can make cloth much cheaper than a small mill can. It is true that a great steel plant which is integrated—that is, where they own their transportation facilities, and where they have no loss in reheating metals—can produce steel fabrics cheaper than a smaller mill can. But that is not true of woolen mills or cotton mills. They are built up like a Wernicke bookcase. You have the same loom here you have there, and when you add to your mills you simply add to the number of looms. There is no integration. A little woolen mill or a little cotton mill differs in size only from a large one, as a little Wernicke bookcase differs from a big one, and the economies are on the side of the smaller mill.

Mr. SMOOT. A little mill may have only one set of cards, and of course everything in the mill is based upon the set, whether it is 1 set, or 2, or 10, or 20, or 30. The overhead expenses of a large concern are not as much as those in a smaller mill by any manner of means.

Mr. STANLEY. If you take a mill with 100 looms or 200 looms——

Mr. SMOOT. Say, a 10-set mill.

Mr. STANLEY. After you get a mill with the requisite number of cards, and so on, necessary to carry on the different processes, from the wool through the yarns, the tops, and so forth, you can multiply that by the hundred if you want to, but you will not have materially cheapened the cost of production.

Mr. SMOOT. The same room for a salesroom would be just as much for one as the other.

Mr. STANLEY. That is not a material economy.

Mr. SMOOT. That is overhead expense, and the overhead expenses are extremely heavy. For instance, in one plant of the American Woolen Co. they may have 20 sets of cards, and in another one only 5, but you have to have foremen in each place.

Mr. STANLEY. As I understand, the American Woolen Co. is not one single factory?

Mr. SMOOT. Oh, no.

Mr. STANLEY. They have mills scattered all over the country?

Mr. SMOOT. Certainly.

Mr. STANLEY. One corporation owning 20 mills is not going to operate any one of those 20 mills much more cheaply than a single owner, and the economies secured by joint ownership are more than offset by the lack of attention to particular business. The only economy is in combination.

Mr. WALSH of Massachusetts. The facts I am going to disclose were submitted to the Federal Trade Commission in 1920 for verification and approval, and I do not think they can be seriously disputed. They were prepared with great care and simply for the purpose of getting accurate information. There is no reason why I should try to exaggerate or in any way seek to put the American Woolen Co. in an unfavorable light. I am citing this case to show why our present economic system is being attacked by labor and by the consumer.

At its organization it was capitalized at $70,000,000, of which the thirty millions of common was unquestionably water and the forty millions of 7 per cent preferred was represented by mill properties whose combined market value at the time probably did not exceed four or five millions. The company, while every year paying this nominally 7 per cent, but more probably 50 per cent, on the actual investment, remodeled its old mills and built new mills of much greater capacity entirely from the proceeds of short-time notes which were redeemed out of surplus earnings. A few years later ten millions of the common stock was "retired" at 31; in other words, $3,100,000 of surplus earnings were diverted into the pockets of certain shareholders whose identity was carefully concealed, leaving, however, little doubt that by this one transaction all the money actually ventured by those in control of the combine was replaced in full. This pre-war record of profiteering was in the war period entirely cast in the shade. Its profits, as disclosed by the company's annual report for 1919, rose from $2,788,602 in 1914 to $15,513,414 in 1919, this after all taxes had been paid. Meanwhile the working capital of the company has been raised through its earnings from $21,843,636 in 1914

to $64,086,943 in 1919, and its "surplus reserves" from $8,024,435 to $39,004,426, while $13,193,549 has been written off for depreciation of plant and machinery which cost the company nothing, though its book value was originally $63,642,911.

Mr. POMERENE. Within what period did the increases in earnings and increase in capital stock out of the earnings occur?

Mr. WALSH of Massachusetts. Between 1914 and 1919. The working capital was raised from those earnings from $21,000,000 to $64,000,000.

Mr. POMERENE. Over 300 per cent.

Mr. WALSH of Massachusetts. Yes. Its surplus reserve during that period was raised from $8,000,000 to $39,000,000, nearly 500 per cent.

The actual earnings for the common stock, as computed from the company's report by the Christian Science Monitor, were $41.87 a share in 1917, $93.86 in 1918, and $76.14 in 1919, or a total in three years of $211.87 per share of common stock, every dollar of which is undeniably water. Think of it.

Let me digress a moment to read a newspaper clipping which came to my office a few days ago:

PRIEST CHAMPIONS CAUSE OF LABOR.

LAWRENCE, MASS., July 20.—Foremost among the champions of the striking operatives of the textile mills in this city who are refusing to accept a 20 per cent wage cut ordered by the mill owners is Rev. James T. O'Reilly, pastor of St. Mary's Church and chairman of a citizens' strike committee named to effect some possible settlement of the difficulties. The mill men, however, have flatly refused to arbitrate. They say the wage reduction is forced by economic conditions.

"It is to the discredit of those who are paying 12 per cent dividends to say that they can not afford to pay their workers a living wage," said Father O'Reilly last Sunday, as he announced from the pulpit that a special collection would be taken up for use of the Society of St. Vincent de Paul in its work among the poverty-stricken mill workers. This great Catholic charitable organization has been doing wonderful work throughout the city.

"The strikers will remain out until they get the living wage that they want," said Father O'Reilly. He said that there were many cases of actual want in Lawrence, and that within 400 yards of his church there were families of from 7 to 12 persons who did not know whence their next meal was to come.

"Though there are not yet any cases of actual starvation," said he, "this is due entirely to the efficient work of the relief organization, and conditions are rapidly approaching those of the terrible days of 1912, when the sufferings of the Lawrence mill workers were known throughout America."

Mr. STANLEY. Mr. President, right at that point, if the Senator will pardon another interruption, let me say that I happened to be a member of the congressional committee which investigated the conditions of the Lawrence strike to which the article refers. It appeared in that hearing that the original mill workers, American citizens and citizens of Irish and German descent, went on a strike.

Mr. WALSH of Massachusetts. There are many foreigners there. They speak 20 or 25 different languages. At the time to which he refers, however, I think the Senator is correct.

Mr. STANLEY. That was in 1911. Their places were filled by employees gathered from southern Europe, from the Balkan States. Great posters were placed, according to the testimony of those people, in the little Balkan countries like Czechoslovakia and Bulgaria, and in every pest-haunted hole in the Orient and in southern Europe, containing pictures of long streams of beautifully dressed people passing from magnificent vans to lovely villas, which were described as the residences of the mill workers. They were brought over here without any knowledge of our institutions, without any knowledge of the actual conditions which were to confront them; brought over in the holds of cattle ships, unloaded in violation of our immigration laws into the city of Lawrence, and there they worked for a song. They did not speak our language and were utterly helpless when they got here.

These people afterwards went on a strike. They were I. W. W.'s. They did not speak our language. They were perfectly desperate as to conditions, and in a way they wrecked the mills so far as they could. They picked up wooden billets and smashed the windows. They ran the employers out. The police were called out and the strikers marched in the streets with the women and children in front of them to protect them. There was a horrible state of affairs all around. This undesirable population worked at a starvation wage to take the places of American citizens, all of which was the result of the desperate efforts of the Lawrence Mill Co. to employ laborers who were willing to work in America under conditions similar to those from which they were taken in Europe.

Mr. WALSH of Massachusetts. I thank the Senator for his observations.

But let me proceed. I showed what the earnings were for three years, being $211 on each $100 share of stock. The common stock, according to this report, has now behind each share a value of $320 in quick assets alone, or not less than $520 per share when we estimate the company's plants at a fair replacement value. The financial editor of the Christian Science Monitor is clearly well within the mark in characterizing this 1919 report as "the most brilliant in the series of extraordinary statements issued by the company since 1916."

But the American Woolen Co., if the chief, is not the only clothing profiteer. It would be a long story to discuss the information that is available to anybody who will look into it as to the extent to which profiteering has been indulged in by the very persons who are to be the beneficiaries of the high protective duties proposed in the pending bill. I shall not take the time to go into that at this time.

If there is any question about what I have been saying, let me put this proposition to the Senate. The common stock of the American Woolen Co. was quoted in 1915 at $16. What do Senators suppose it was quoted for in 1920? One hundred and sixty-nine dollars.

Mr. STANLEY. That is only 1,000 per cent increase.

Mr. WALSH of Massachusetts. That is all, and that was during the war, from clothing that our soldiers had to wear—I do not know how many war contracts they had—and that our people had to wear during those years.

But let me turn to the RECORD, because what I have read was from a speech which I prepared on May 18, 1920. I read now from another newspaper clipping from the New York Daily News-Record:

American Woolen Co. reports profits of $9,192,621 net. Shows gain from operations over previous year amounting to $2,337,362.

Even in the year 1921, these were the gains over 1920:

Earned, 8.02 per cent on common—

The common stock, as I stated, was water.

Preferred shares earned slightly over 15 per cent, compared with 11.56 per cent in 1920. Surplus gains, $406,648. Company in splendid position after difficult year, says William M. Wood.

I am not going to read the report in detail, but because it has some relation to the tariff discussion, I am going to call attention to one paragraph in it. Commenting upon export business of the company, this news article states:

Mr. Wood explains that the reason for liquidating the American Woolen Products Co. was because foreign buyers of goods are able to purchase requirements at prices lower in England and on the Continent than the American Woolen Products Co. could offer. This, coupled with the gradual recuperation of the manufacturing centers of Europe and the increasing costs of wool in this country, due to the high tariff existing, made it impossible successfully to export the company's products, Mr. Wood states.

That is Mr. Wood's statement, referring, of course, to the emergency tariff law of 1921.

Mr. President, why have I called attention to this? Because I could not vote against excessively high duties on agricultural products and then when it came to this industry turn about and vote for high protective duties to it. I felt that I owed it to my colleagues to show why great care and caution should be exercised in the levying of protective tariff duties upon these beneficiaries of protection, and to point out to the country that no Senator can justify levying taxation upon their neighbors and their neighbors' neighbors for the benefit of industries unsoundly organized.

It may be said that this is only one of the woolen industries, but it is the controlling industry. I omitted to read from my clipping the reference made to the number of mills the American Woolen Co. brought into the combine during the year 1921 and to give their names for the RECORD, showing that they are still enlarging and combining. That, however, is only typical of the indefensible way in which the American people are being fleeced for the benefit of monopolies. It shows that to levy protective tariff duties for the benefit of any industry without an examination into the financial condition of the industry works an injustice to the American people. It shows that we are levying upon the American people a toll in order to pay dividends, in many instances, upon watered stock.

This might have been done in the past and no special comment have been made about it, but our people are enlightened. There is unrest in the country. The American people are studying our economic system; our working people are asking why, why, why? It is the age of whys. Men are no longer taking anything for granted. It is asked, "Why do you want me to vote the Democratic ticket?" "Why do you want me to belong to your church?" "Why did you levy that duty?" "Why did you impose that tax?" The American people are going to ask, "Why did you make this duty 50 per cent?" "Why did you levy this protective duty?" Of course, there is no answer.

They must be told that it is a guess; a mere guess at what duty could be levied that would not provoke a storm of disapproval. There have been no figures, no calculations, no estimate at all.

I am going to say but little more on this schedule; I am not going to discuss at length the other paragraphs of this schedule, for it would be useless to do so. We must take this case to the country, not for the sake of political success, but to destroy the growing want of confidence in our own institutions. When we proceed to give protection in order to pay the dividends on watered stocks, what can be expected but protest and disrespect for such laws?

Mr. President, on no ground whatever can this high duty be justified. The Senator from Minnesota [Mr. NELSON] is absolutely right. This is one of the most flagrant paragraphs of the whole bill. These duties can not be defended and they are bound to create very serious opposition throughout the country and will bring very serious results to the political party that stands sponsor for them.

Mr. President, I yield the floor.

Mr. POMERENE. Mr. President, I am going to speak for only a very few minutes. I had hoped when the pending tariff measure was first presented that I should be able to vote for substantial changes in the wool schedule as it is now framed in the Underwood law. I had made up my mind to do that, in view of present world-wide conditions. I have been hoping that the more moderate views of the distinguished Senator from Wisconsin [Mr. LENROOT] and those of the venerable Senator from Minnesota [Mr. NELSON] might prevail, but that seems impossible. Now to vote for the duties as they are presented by the Finance Committee would be to do violence to my own judgment and my own conscience. I do not want to vote for or to speak in behalf of any rate of duty here which is going to do any injury to any established industry, but, on the other hand, I can not vote for duties which, in my judgment, are going to impoverish the consumers of the country; and I wish to submit a few figures to indicate how the proposed rates will affect the State of Ohio, which I have the honor in part to represent.

Ohio is one of the States that has a very substantial sheep industry. There are, generally speaking, two classes of sheep raised in Ohio, one the merino, which is raised more particularly for its wool and of which mutton is a by-product. This class of sheep is more largely produced in the southeastern section of the State. There is another class of sheep raised in the western and northern sections which is produced rather for its mutton, as sheep men tell me, with wool as a by-product.

In 1900 the population of Ohio, according to the Federal census, was 4,157,545. At that time there were 2,648,000 sheep of shearing age which were raised on 73,636 farms, the average flock numbering 36 sheep.

In 1910 the population of Ohio was 4,767,121; the sheep of shearing age numbered 2,890,000; the number of farms reporting was 70,458, and the average flock was 41.

In 1920 the population was 5,759,394; the number of sheep of shearing age was 2,152,550; the number of farms reporting sheep 55,246, and the average flock 38.

The average weight of grease wool per fleece in Ohio, according to the report of the United States Tariff Commission known as "The Wool Growing Industry," is about 8.7 pounds, with a shrinkage of 60 per cent. The merino wool shrinks somewhat more than that, and the wool of mutton sheep in Ohio somewhat less, the average being, as I have stated, about 60 per cent. This would give 3½ pounds of clean or scoured wool per fleece.

In 1922 the number of sheep in Ohio was 1,957,000. Multiplying this by 3½ pounds gives a total of 6,849,000 pounds. Supposing the duty of 33 cents per clean pound to be fully effective, the tariff would result in increasing the value of the wool crop of the State over its value under the free wool by $2,260,335. This sum, divided by the 55,246 raisers of sheep, gives an increased value to each flock owner of $40.91 per annum; that is all. If, of course, the duty of 33 cents per pound on the scoured content should only be one-half effective, then it would cut the total gross profit to the farmer down to $20.455 on the average flock in Ohio.

I am advised that the consumption of clean wool in the United States averages around 3 pounds per capita. It must be borne in mind that the rate of per capita consumption in States such as Ohio and other States in the northern section of the country is considerably larger than in the Southern States. Many of the people in the South use little wool, so that the per capita consumption of wool in the North would be considerably more than the average of 3 pounds. Let us estimate this at 5 pounds per capita.

A duty of 33 cents a pound on the clean wool means, with the unavoidable pyramiding, a tax of about 93 cents a pound by the time the wool reaches the consumer in the form of clothing. The cost to the people of Ohio, therefore, assuming that the per capita consumption is 5 pounds, could be figured as 5 pounds multiplied by 93 cents, or $4.65 per capita; and this, multiplied by the total population of the State, of 5,789,394, would mean a total increased cost to the people of Ohio for their woolens of $26,781,182 per annum. Of course, the figures assume that the duty on the fabric complete is wholly effective. If it were only 50 per cent effective, then the increased cost to the people of Ohio would be $13,340,000 plus. Assuming, for the sake of the argument, that the consumption is 4 pounds per capita and that the tariff is pyramided as above stated to 93 cents, it would equal $3.72 in increased cost, or the total would be $21,436,545.66. These figures, again, assume that this duty is wholly effective. If it were only 50 per cent effective, then the increased cost would be $10,718,000 plus.

I understand, of course, that there are many varying circumstances which affect this situation; but it is just as likely that the tariff tax on the raw wool will be wholly effective as it is that the tariff tax on the finished product will be wholly effective. It was demonstrated here yesterday in the course of the debate that the increase in the cost of the fabric under these tariff rates was 100 per cent over and above what it would be if there were no tariff rate either on the raw material or on the finished product; and I want to commend to the attention of the Senate and to the attention of the country the statement made by the venerable Senator from Minnesota [Mr. NELSON] when he said:

> In some way it has been fixed so that on the cloth that we buy, that we can all afford to wear—and when I say "we" I mean the common people of the country—we have to pay a 100 per cent duty, unless the Senator takes the theory that the common people have no business to wear that kind of cloth, and would remit us back to cloth made from carpet wool.

Again, I want to commend his words when he said:

> I want to say in all Christian spirit to the Senator from Utah that I shall be ashamed to go back to the people of Minnesota and tell them that we have enacted a law providing a duty of 100 per cent on the cloth they and I must buy and wear, cloth that we have to wear in the winter. We shall have to pay 100 per cent duty on it under this provision.

Later, again, he said:

> I do not care what the difference is. I do not care about this sublime argument about compensatory duty, nor do I care about some other refinements here. I only know that this paragraph fixes a duty of 100 per cent on woolen goods that we all have got to wear. I say that is an outrageous duty.

Senators, an analysis of these figures shows that in order to get the benefit of a tariff duty of 33 cents per scoured pound, if the duty is wholly effective, in order to give to the flockmasters $2,260,335, we must impose upon the people of the State of Ohio, if the total consumption is figured at 5 pounds per capita, a burden of $26,781,182 per annum. If it is figured at 4 pounds per capita, then the total burden to the people of the State of Ohio would be $21,436,545.66.

Mr. President, I want to do the fair thing, and I know that I am going to be criticized by some of the people of my own State for taking this position, but I can not help it. I can not impose a burden of $26,000,000 and over, as it would appear if the consumption is 5 pounds per capita, or $21,000,000 and over, if the per capita consumption is 4 pounds to the person, in order to give a benefit of $2,260,335 to the woolgrowers of the State, assuming, of course, that they would get the benefit of it.

For these reasons I shall vote for the lower duty.

Mr. McCUMBER. Mr. President, the Senator from Ohio has made a wonderful speech as a free-trade speech—wonderful in its logic, wonderful in its mathematics—and it is absolutely correct.

The Senator says, and we must all admit, that where there is one producer of anything that is used in the United States there are from a thousand to five thousand consumers; and therefore, in order to give a protection to that one producer, we necessarily have to make a charge on from 1,000 to 5,000 consumers. So the Senator argues that out very nicely with reference to the population of the State of Ohio; and in that respect the Democratic side have the easy philosophy and the easy side in the discussion of a protective tariff bill. They can go to Mr. A and say, "They are giving you a duty of 40 per cent ad valorem so as to allow you to earn 40 cents more a day, but when they are doing this they are also giving a duty of 40 per cent ad valorem on a thousand things that you buy. There-

fore, while you make 40 cents saving because of a duty on you, you pay $400 for the things that you buy."

It is a very fine argument, Mr. President. It lacks only one thing, and that is the Senator fails to tell Mr. A what he would have to buy with if he produced nothing and none of the rest of the country produced anything, but the foreign country produced it all. That he has not yet shown us.

The Senator from Minnesota [Mr. NELSON] with all his complaint yesterday voted against a reduction of the rate of 33 cents a pound on wool. I assume, therefore, that he was in favor of a duty of 33 cents a pound on wool. There is not one man in five hundred in my State who has a sheep on his farm, and probably, other things being equal, if he had protection on everything that he produced, he would be better off if there were no protection upon wool; but having given the farmer of the other States, like Arizona and New Mexico and Idaho, an equivalent of 33 cents a pound upon the scoured content of his product, we have to carry that into the yarn and into the cloth. We have had the careful estimate of the Tariff Commission expert and of others to determine just to what extent that increases the cost of a pound of noils, a pound of yarn, and a pound of cloth, and in every instance we have given a less duty than that shown to be absolutely required. We have to give that compensatory duty. Then we took up the matter of protection. We had not any very late statistics on that point that were extremely reliable, I admit, but we had the statistics under normal conditions, say in 1912; and taking all of the importations at that time we arrived at the fact, and it was so reported by the Tariff Commission, that the differential which would require protection to put the two upon an equal footing was from 60 to 70 per cent, and we gave 50 per cent.

In every instance we gave very much lower than that which was shown to be required to actually balance the accounts.

Mr. LENROOT. Mr. President, the pending question is the committee amendment.

The PRESIDING OFFICER. The committee amendment as amended.

Mr. LENROOT. I move to amend, on line 25, page 146, by striking out "40" and inserting "35"; on line 2, page 147, by striking out "50" and inserting "40"; on line 4, by striking out "50" and inserting "40"; on line 5, by striking out "55" and inserting "45," so as to read:

Woven fabrics, weighing more than 4 ounces per square yard, wholly or in chief value of wool, valued at not more than 60 cents per pound, 26 cents per pound and 35 per cent ad valorem; valued at more than 60 cents but not more than 80 cents per pound, 40 cents per pound and 40 per cent ad valorem; valued at more than 80 cents but not more than $1.50 per pound, 49 cents per pound and 40 per cent ad valorem; valued at more than $1.50 per pound, 49 cents per pound and 45 per cent ad valorem.

Mr. WALSH of Massachusetts. That is an amendment which I had intended to offer, and I am very glad the Senator has proposed it. I prefer to have it come from the other side than from this side, and I shall be glad to support the amendment. I think it provides very fair protective rates.

Mr. LENROOT. Mr. President, the hour is late, and I shall occupy the time of the Senate but a few moments.

I offer this amendment because from such study as I have been able to give to this paragraph I find that the present rate of 35 per cent is practically prohibitive; that the imports which do come in are almost exclusively of specialties, which would come in under almost any rate. I find, further, that the average value of the imports which have come in run about $1, or on the average $1.80 a pound, while the average value of our production of like goods in 1919, according to the latest figures we have before us, was only a little over $2 a pound. When we come to the various kinds of goods I find that of fancy woven fabrics the imports for 1921 were valued at $2.96 a pound, upon the average; of the plain woven fabrics, $2.66 of one class, and $3.58 of another, under the emergency tariff act, being the latest importations, $2.27 a pound; under another classification, fancy woven woolens, $1.63 a pound; under the emergency tariff, $1.85 a pound. Plain, $1.82 a pound.

When we come to the figures of our own production of the various classes of goods I find in the Summary of Tariff Information that the very highest rate on any class was $2.50 a pound, and it runs $2, $1.50, $2, $2, and so on, showing conclusively, because the prices of 1919 were certainly higher than the prices of to-day, that there is not and there can not be any such difference as 40 per cent between the prices of the foreign goods and the present prices of our domestic goods.

That being true, how can an increase to 40 and 50 per cent be justified? If it be said that importations are increasing, I refer to the Monthly Summary of Commerce and Finance and I find that of woolen cloths—worsted and woolen—while the importations in May, 1921, were 674,000 pounds, the importations of this last May were only 598,000 pounds. The importations of May of this year were less than the importations of May of last year.

As you go through the statistics it is conclusively shown, it seems to me, that, except for these specialties, the 35 per cent rate applicable prior to the passage of the emergency tariff law—and that had nothing to do with it, because that adds only the compensatory duty—was practically prohibitive. Therefore, Mr. President, in my judgment the committee has not made any defense of this increased rate. They read again from the Reynolds report the duty which would be required under the Reynolds report, and under that report the duties proposed by the committee are too low.

All I have to say with reference to the Reynolds report is what I have heretofore stated. The test is whether imports come in, and if the Reynolds report is correct, why do not imports come in in greater volume? The answer is conclusive—there is something the matter with the Reynolds report. It is not my business to inquire what it is, but it is very evident that it does not give the correct picture of competitive conditions between Europe and the United States to-day in the matter of woven cloths.

I have been very moderate in this amendment I have proposed. The amendment I have proposed upon the lowest class of goods will leave the rate the same as in the Underwood law, which is now prohibitive. Upon the higher-valued goods it is an increase of 5 per cent in one case and 10 per cent in another case over the present Underwood rates.

I know this amendment is going to be defeated. I know it is going to be voted down. I know it does not make any difference what facts are presented with reference to these duties, a majority of the Senate has determined to vote this wool schedule through, and will do so without the slightest change, except in the one particular, where an amendment of mine was accepted this morning, where it was very clear that without that amendment hidden protection would be given to the manufacturer. I know this amendment will be voted down; yet I want to make this record, and I want a yea-and-nay vote upon this proposition, because I want to know, and to let the record show, whether the Senate is standing for prohibitive duties or not.

I want to say, Mr. President, that I shall not carry this effort on through this schedule. I think this is as good a test as we can have, and if the amendment is voted down I think I shall be content to let the other paragraphs take their course. I ask for the yeas and nays upon it.

Mr. WALSH of Massachusetts. Mr. President, before the vote is taken, I ask to have inserted in the RECORD a table showing a comparison of ad valorem equivalents of total duties, based on foreign valuation of various grades of dress goods, cotton-warp dress goods, and heavy cloths.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Statement showing a comparison of ad valorem equivalents of total duties.

DRESS GOODS.

Value (cents).	Payne-Aldrich law.	House bill.	Senate committee.
	Per cent.	*Per cent.*	*Per cent.*
50	138	112	130

80	110	87	100
100	99	77	99
120	92	70	91
150	84	78	88
200	77	70	79

Mr. McCUMBER. Mr. President, I ask unanimous consent to insert in the RECORD a table prepared by an actuary of the Treasury Department showing the ad valorem rates of duties

under all the paragraphs of the Payne-Aldrich law in 1910 and the duties estimated under the proposed law.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Article.	Payne-Aldrich law, imports 1910.			Estimated imports first 12 months under proposed bill.		
	Value.	Duty.	Equivalent ad valorem.	Value.	Duty.	Equivalent ad valorem.
			Per ct.			*Per ct.*
Raw wool	$47,687,293	$21,128,729	44.31	$19,909,500	$12,172,500	61
Wastes	203,509	79,293	38.96	1,500,250	731,980	49
Wools, etc., advanced, including tops, etc	1,130	1,188	105	171,000	98,550	58
Yarns	326,886	269,296	82.38	295,000	226,000	77
Woven fabrics	15,445,409	15,546,605	100.66	5,955,600	4,509,370	76
Pile fabrics	16,726	17,118	102.34	150,000	114,000	76
Blankets	45,995	33,768	73.42	59,400	38,578	65
Felts, not woven	107,018	103,821	97.01	112,000	66,000	52

Knit articles	389,308	372,329	95.63	1,635,500	985,132	60
Wearing apparel (not knit)	1,388,928	1,071,977	77.29	3,000,000	1,766,000	59
Carpets and rugs	4,619,170	2,802,212	60.66	4,550,000	2,410,000	53
Manufactures, n. s. p. f	393,407	371,763	94.5	800,000	440,000	55
Total, wools and manufactures	70,736,937	41,900,694	59.23	38,162,650	23,576,410	62

Mr. LENROOT. I ask that the three amendments to the amendment of the committee may be considered together.

The PRESIDING OFFICER. They will be so voted upon as one amendment, and upon agreeing to the amendment to the amendment the Senator from Wisconsin demands the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). I have a pair with the Senator from Michigan [Mr. TOWNSEND], which I transfer to the Senator from Arizona [Mr. ASHURST], and vote "yea."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "nay."

Mr. HARRIS (when his name was called). Making the same announcement as on the previous vote, I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement as to my pair and its transfer as on the previous vote, I vote "yea."

Mr. LODGE (when his name was called). I transfer my pair with the Senator from Alabama [Mr. UNDERWOOD] to the Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. McCUMBER. Transferring my general pair as on the previous vote, I vote "nay."

Mr. McLEAN (when his name was called). Making the same announcement as before with reference to my pair and its transfer, I vote "nay."

Mr. McNARY (when his name was called). Upon this amendment to the committee amendment I am paired with the junior Senator from Minnesota [Mr. KELLOGG]. If he were present, he would vote "yea," and if I were permitted to vote I would vote "nay."

Mr. NEW (when his name was called). Making the same announcement with reference to the transfer of my pair as upon the previous ballot, I vote "nay."

Mr. ROBINSON (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Missouri [Mr. REED] and vote "yea."

Mr. DIAL (when Mr. SMITH's name was called). My colleague [Mr. SMITH] is detained on official business. He is paired with the Senator from South Dakota [Mr. STERLING]. I ask that this announcement may continue for the balance of the day.

Mr. STERLING (when his name was called). I have a general pair with the Senator from South Carolina [Mr. SMITH]. I understand that that Senator, if present, would vote as I intend to vote. I therefore am at liberty to vote. I vote "yea."

Mr. WALSH of Montana (when his name was called). Transferring my pair as announced on the previous vote, I vote "yea."

The roll call was concluded.

Mr. McNARY. I transfer my pair with the junior Senator from Minnesota [Mr. KELLOGG] to the junior Senator from Vermont [Mr. PAGE] and vote "nay."

Mr. CARAWAY (after having voted in the affirmative). I have a pair with the junior Senator from Illinois [Mr. McKINLEY]. I transfer that pair to the senior Senator from South Carolina [Mr. SMITH] and allow my vote to stand.

Mr. GLASS. Making the same announcement as to my pair and transfer as on the preceding vote, I vote "yea."

Mr. CURTIS. I wish to announce the following general pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 24, nays 27, as follows:

YEAS—24.

Borah	Heflin	Overman	Sterling
Capper	Jones, N. Mex.	Pomerene	Swanson
Caraway	Jones, Wash.	Robinson	Trammell
Dial	Lenroot	Sheppard	Wadsworth
Glass	Nelson	Simmons	Walsh, Mass.
Harris	Norbeck	Stanley	Walsh, Mont.

NAYS—27.

Brandegee	Gooding	Moses	Ransdell
Broussard	Hale	New	Smoot
Bursum	Kendrick	Newberry	Spencer
Cameron	Lodge	Nicholson	Stanfield
Colt	McCumber	Oddie	Warren
Curtis	McLean	Pepper	Willis
Ernst	McNary	Phipps	

NOT VOTING—45.

Ashurst	France	McCormick	Shortridge
Ball	Frelinghuysen	McKellar	Smith
Calder	Gerry	McKinley	Sutherland
Crow	Harreld	Myers	Townsend
Culberson	Harrison	Norris	Underwood
Cummins	Hitchcock	Owen	Watson, Ga.
Dillingham	Johnson	Page	Watson, Ind.
du Pont	Kellogg	Pittman	Weller
Edge	Keyes	Poindexter	Williams
Elkins	King	Rawson	
Fernald	Ladd	Reed	
Fletcher	La Follette	Shields	

So Mr. LENROOT's amendment to the amendment of the committee was rejected.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee as amended.

Mr. WALSH of Massachusetts. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. CARAWAY (when his name was called). I have a pair with the junior Senator from Illinois [Mr. McKINLEY]. I can obtain no transfer of that pair, and therefore withhold my vote.

Mr. DIAL (when his name was called). Making the same announcement as to my pair and transfer as on the previous ballot, I vote "nay."

Mr. GLASS (when his name was called). Making the same announcement as to my pair and transfer as on the previous vote, I vote "nay."

Mr. HALE (when his name was called). Making the same announcement as before, I vote "yea."

Mr. HARRIS (when his name was called). Making the same announcement as before, I vote "yea."

Mr. JONES of New Mexico (when his name was called). Making the same announcement regarding my pair and transfer as on the previous vote, I vote "nay."

Mr. LODGE (when his name was called). Making the same announcement as before as to the transfer of my pair, I vote "yea."

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. McNARY (when his name was called). Making the same announcement as to my pair and transfer, I vote "yea."

Mr. NEW (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. ROBINSON (when his name was called). Announcing the same pair and transfer as on the last vote, I vote "nay."

Mr. STERLING (when his name was called). On this vote I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from New Hampshire [Mr. KEYES] and vote "yea."

Mr. WALSH of Montana (when his name was called). Transferring my pair as heretofore, I vote "nay."

The roll call was concluded.

Mr. JONES of Washington (after having voted in the negative). I understand the Senator from Virginia [Mr. SWANSON] did not vote. I promised to pair with him for the afternoon, but I understand on this amendment he would vote as I have voted. Therefore I allow my vote to stand.

Mr. CARAWAY. I transfer my pair with the junior Senator from Illinois [Mr. MCKINLEY] to the senior Senator from Virginia [Mr. SWANSON] and vote "nay."

The roll call resulted—yeas 27, nays 21, as follows:

YEAS—27.

Broussard	Hale	Newberry	Smoot
Bursum	Kendrick	Nicholson	Spencer
Cameron	Lodge	Norbeck	Stanfield
Colt	McCumber	Oddie	Sterling
Curtis	McNary	Pepper	Warren
Ernst	Moses	Phipps	Willis
Gooding	New	Ransdell	

NAYS—21.

Borah	Heflin	Pomerene	Wadsworth
Capper	Jones, N. Mex.	Robinson	Walsh, Mass.
Caraway	Jones, Wash.	Sheppard	Walsh, Mont.
Dial	Lenroot	Simmons	
Glass	Nelson	Stanley	
Harris	Overman	Trammell	

NOT VOTING—48.

Ashurst	Fletcher	La Follette	Reed
Ball	France	McCormick	Shields
Brandegee	Frelinghuysen	McKellar	Shortridge
Calder	Gerry	McKinley	Smith
Crow	Harreld	McLean	Sutherland
Culberson	Harrison	Myers	Swanson
Cummins	Hitchcock	Norris	Townsend
Dillingham	Johnson	Owen	Underwood
du Pont	Kellogg	Page	Watson, Ga.
Edge	Keyes	Pittman	Watson, Ind.
Elkins	King	Poindexter	Weller
Fernald	Ladd	Rawson	Williams

The PRESIDING OFFICER. On the amendment of the committee as amended, the yeas are 27 and the nays are 21, no quorum having voted.

RECESS.

Mr. MCCUMBER. In accordance with the unanimous-consent agreement heretofore entered into, I move that the Senate now take a recess, the recess being until to-morrow morning at 11 o'clock.

Mr. WALSH of Massachusetts. I suggest that the Senator from North Dakota give notice that we shall have a vote the very first thing after convening.

Mr. MCCUMBER. We shall have to vote immediately on convening.

Mr. LODGE. We could not do anything else.

The PRESIDING OFFICER. The question is on the motion of the Senator from North Dakota [Mr. MCCUMBER].

The motion was agreed to; and (at 6 o'clock and 20 minutes p. m.) the Senate, under the order previously made, took a recess until to-morrow, Saturday, July 29, 1922, at 11 o'clock a. m.

SENATE.

SATURDAY, *July 29, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The VICE PRESIDENT. The Secretary will call the roll, to ascertain the presence of a quorum.

The reading clerk called the roll, and the following Senators answered to their names:

Ashurst	Jones, N. Mex.	New	Stanfield
Borah	Jones, Wash.	Newberry	Stanley
Brandegee	Kellogg	Nicholson	Sterling
Bursum	Kendrick	Norbeck	Swanson
Capper	Keyes	Oddie	Trammell
Caraway	Lenroot	Overman	Underwood
Cummins	Lodge	Phipps	Wadsworth
Curtis	McCumber	Ransdell	Walsh, Mass.
Dial	McKinley	Robinson	Walsh, Mont.
Ernst	McLean	Sheppard	Warren
Gooding	McNary	Simmons	Willis
Harris	Moses	Smoot	
Heflin	Nelson	Spencer	

Mr. HARRIS. My colleague [Mr. WATSON of Georgia] is absent on account of illness. I ask that this announcement may stand for the day.

Mr. DIAL. I desire to announce that my colleague [Mr. SMITH] is detained on official business. I ask that this notice may continue through the day.

The VICE PRESIDENT. Fifty Senators have answered to their names. A quorum is present. The question is on the committee amendment inserting paragraph 1109 as amended, on which the yeas and nays have been ordered. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. HARRIS (when his name was called). I transfer my pair with the junior Senator from New York [Mr. CALDER] to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the senior Senator from Maine [Mr. FERNALD] to the senior Senator from Nevada [Mr. PITTMAN]. I ask that this announcement may stand for the day. I vote "nay."

Mr. JONES of Washington (when his name was called). On this vote I am paired with the junior Senator from Arizona [Mr. CAMERON]. If he were present, he would vote "yea." If at liberty to vote, I would vote "nay."

Mr. MCCUMBER (when his name was called). Transferring my pair with the junior Senator from Utah [Mr. KING] to the junior Senator from North Dakota [Mr. LADD], I vote "yea."

Mr. NEW (when his name was called). Transferring my pair with the junior Senator from Tennessee [Mr. MCKELLAR] to the junior Senator from Vermont [Mr. PAIGE], I vote "yea." I will let this announcement of my pair and transfer stand for the day.

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the senior Senator from Missouri [Mr. REED], I vote "nay."

Mr. STERLING (when his name was called). Transferring my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Pennsylvania [Mr. PEPPER], I vote "yea."

Mr. WALSH of Montana (when his name was called). I transfer my pair with the Senator from New Jersey [Mr. FRELINGHUYSEN] to the Senator from Rhode Island [Mr. GERRY] and vote "nay."

The roll call was concluded.

Mr. DIAL. I am paired with the Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the Senator from Texas [Mr. CULBERSON] and vote "nay." If my colleague [Mr. SMITH] were present and not paired, he would vote "nay" on this question.

Mr. WILLIS. I am paired with my colleague [Mr POMERENE] and therefore withhold my vote. If at liberty to vote, I would vote "yea."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Maryland [Mr. WELLER] with the Senator from Illinois [Mr. MCCORMICK];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS]; and

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS].

The result was announced—yeas 26, nays 24, as follows:

YEAS—26.

Brandegee	Keyes	New	Smoot
Broussard	Lodge	Newberry	Spencer
Bursum	McCumber	Nicholson	Stanfield
Curtis	McKinley	Norbeck	Sterling
Ernst	McLean	Oddie	Warren
Gooding	McNary	Phipps	
Kendrick	Moses	Ransdell	

NAYS—24.

Ashurst	Harris	Nelson	Swanson
Borah	Heflin	Overman	Trammell
Capper	Jones, N. Mex.	Robinson	Underwood
Caraway	Kellogg	Sheppard	Wadsworth
Cummins	Lenroot	Simmons	Walsh, Mass.
Dial	Myers	Stanley	Walsh, Mont.

NOT VOTING—46.

Ball	Edge	Hale	La Follette
Calder	Elkins	Harreld	McCormick
Cameron	Fernald	Harrison	McKellar
Colt	Fletcher	Hitchcock	Norris
Crow	France	Johnson	Owen
Culberson	Frelinghuysen	Jones, Wash.	Page
Dillingham	Gerry	King	Pepper
du Pont	Glass	Ladd	Pittman

Poindexter	Shields	Townsend	Williams
Pomerene	Shortridge	Watson, Ga.	Willis
Rawson	Smith	Watson, Ind.	
Reed	Sutherland	Weller	

So the amendment of the committee as amended was agreed to.

PETITIONS.

Mr. ROBINSON presented resolutions of the Arkansas Association of Pharmacists, favoring inclusion in the pending tariff bill of a prohibition against importation of merchandise bearing any trade-mark, label, print, or other mark registered in the United States Patent Office and owned by any person domiciled in the United States, unless imported by such owner, provided the owner shall file with the Secretary of the Treasury a certified copy of the registration of the mark, which were referred to the Committee on Finance.

REPORTS OF COMMITTEES.

Mr. SPENCER, from the Committee on Claims, to which was referred the bill (S. 1715) for the relief of the heirs of Almon R. Proctor, reported it without amendment and submitted a report (No. 839) thereon.

Mr. WADSWORTH, from the Committee on Military Affairs, to which was referred the bill (S. 2750) to provide for the advancement on the retired list of the Regular Army of Second Lieut. Ambrose I. Moriarity, reported it with amendments and submitted a report (No. 840) thereon.

BRANCH OF FEDERAL RESERVE BANK AT DETROIT, MICH.

Mr. McLEAN. From the Committee on Banking and Currency I report back favorably without amendment the joint resolution (S. J. Res. 229) authorizing the Federal Reserve Bank of Chicago to enter into contracts for the erection of a building for its branch office in Detroit, Mich. I do not suppose there will be any objection to the joint resolution, and I ask for its present consideration.

Mr. SMOOT. I should like to ask the Senator if the joint resolution takes care of the other two branch offices?

Mr. McLEAN. No; there are two others. They are all approved by the Federal Reserve Board.

Mr. SMOOT. I know they are.

Mr. HEFLIN. Let the joint resolution go over. I should like to look into it.

The PRESIDING OFFICER (Mr. SPENCER in the chair). Objection is made, and the joint resolution will be placed on the calendar.

RIO GRANDE RIVER BRIDGE.

Mr. SHEPPARD introduced a bill (S. 3874) granting the consent of Congress for a temporary toll bridge and a permanent bridge across the Rio Grande River, which was read twice by its title and referred to the Committee on Commerce.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. Mr. President, I send to the desk and desire to have printed an amendment which is designed as a substitute for paragraph 1215 of the silk schedule.

I also desire now to ask unanimous consent that when the Senate closes its session on this legislative day it recess until Monday next at 11 o'clock a. m.

The VICE PRESIDENT. The amendment submitted by the Senator from North Dakota will be printed, and, without objection, the unanimous consent for which he asks, that when the Senate closes its session on this legislative day it take a recess until Monday next at 11 o'clock a. m., is granted.

Mr. SMOOT. Mr. President, on behalf of the Committee on Finance I ask that paragraph 1110, beginning in line 11, on page 147, down to and including line 11, be stricken from the bill.

This paragraph provides for the 2 per cent ad valorem duty additional where the cloth is cut in suit lengths or where the cloth has been shrunk or dampened or sponged before being shipped from the foreign country into the United States. The House of Representatives no doubt inserted this provision in the bill because of the fact that when cloth is sponged or dampened, as it has to be before it can be made into a suit, it shrinks and loses in length about 2 per cent.

It is, however, a small matter, and, so far as the cloth being cut into suit lengths is concerned—and a great many of the importations reach the customhouse in that form—there is always a 15 per cent increase in price on cloth so cut and shrunk. So the 15 per cent addition in the price, while it will not entirely take care of the shrinkage, will take care of a part of it, and the committee thinks, that being so, it is not necessary further to take the matter into consideration at all.

Mr. ROBINSON. Will the Senator from Utah yield to me?

Mr. SMOOT. I yield.

Mr. ROBINSON. The effect of the Senator's proposal to strike out the paragraph to which he refers, if agreed to, would be to diminish the rate that would otherwise be imposed on that class of goods?

Mr. SMOOT. Yes; that is the object of the amendment.

Mr. SIMMONS. Mr. President, I think the Senate is to be congratulated upon the fact that there is something connected with the manufacture of textiles which is not to be subjected to a duty. Every possible waste in the process of manufacture seems to have been provided for in the bill as presented; but now we are. I am glad to say, advised that the committee has finally, after mature deliberation, decided to strike out this paragraph imposing a duty to compensate for every little item of shrinkage in the process of manufacturing woolen goods.

Mr. CARAWAY. Mr. President, after consulting with a number of my colleagues on this side of the Chamber and some on the other side, in view of certain editorials which have been appearing in the leading metropolitan newspapers, principally Republican newspapers, I shall ask leave at the conclusion of the few remarks I am about to make to introduce and have immediately considered a resolution.

In the New York Herald of the 26th of July appeared an editorial of which I shall read only a portion, omitting the names of those who are mentioned. It says:

> The shocking thing about the tariff duties on wool now being jammed through the United States Senate is not merely that they are extravagantly, inordinately, incomparably excessive. Other tariff duties framed by the Finance Committee and adopted by the general membership of the Senate are, from the point of view of economic sense and of consideration for the consuming public, so high as to be outrageous. The wool schedule, therefore, has plenty of bad company. But that is not all there is to say against the wool tariff.
>
> The worst indictment of the wool schedule and of the men responsible for it, bad as is the wool tax itself, is that the wool duties were made and are being driven through the Senate under whip and spur by United States Senators who are financially interested, directly and heavily, in the growing of sheep and the production of wool. The circumstances are flagrant.

I am omitting the names of those mentioned—

* * * * * * *

> Their performance is the last word in personally interested, private-pocket statesmanship.

I am skipping again—

* * * * * * *

> Yet Members of the United States Senate, up to their necks in the business of growing sheep and producing wool, have not hesitated to make the highest wool duties in the history of the country—have not hesitated in a matter deeply touching their own private pockets, to put an extra wool tax on the American people estimated at not less than $200,000,000 a year.

A newspaper published here in the city of Washington yesterday contained an editorial in which a Senator is named, saying that he has been absent until the duty on wool was to be fixed; that he came then and was exceedingly interested in putting through that schedule; and it quoted from his biography as it appears in the Congressional Directory—and I shall omit his name—which says:

> Engaged in the live-stock industry, being America's largest producer of wool and mutton.

Other papers are carrying similar charges. It has been asserted that certain Senators were even interested in purchasing the products that are to be affected by either this or the emergency tariff and in forming pools and selling on a higher market.

I, of course, make no comment as to whether the charges are true or false. I shall leave each Senator, of course, as I will be compelled to do, to determine for himself how far he may consistently with his own honor and the public good vote for a measure that directly enriches him.

But, Mr. President, I sat in the gallery here a few years ago, before I was a Member of either body and when I expected never to be a Member of either, and saw a judge impeached while standing at the corner of the Vice President's rostrum. It was charged that as a judge he influenced the sale of a coal dump. I doubt if any Senator thought that he directly profited by his conduct. It was thought, however, by the Senate—and many of the Senators voting in that case then are here now—that he was so intimately related to the transaction that his usefulness as a public servant, as a judge of a court, had been destroyed, and that he should be impeached, and he was impeached. He was driven out of public office in disgrace, and his family were disgraced, because it was suspected that he had abused his office to try to influence the price of a coal dump in which he might have some interest.

I deny, Mr. President, that the honor of the bench is any more sacred than the honor of the Senate of the United States. This judge was the chief justice of a court which Congress had created, and therefore he was a creature of this legislative body; he had been confirmed by a vote of the Senate; but he was driven out of public office because it was thought that he had not been circumspect in the use of his official position and that possibly he tried to profit by some judicial act of his.

The constitution of my State, and I presume of every State, and of the United States forbids a judge to sit in judgment upon a cause in which he is interested. It not only forbids him to sit in a case in which he is interested but in which a kinsman down to the third degree is interested, so jealous are we of the honor and integrity of the courts and so considerate of the rights of the individual.

The laws everywhere forbid a juror to be accepted to sit in a cause in which he is financially interested or in which a near relative of his might be so interested. Can we say that we are more concerned for the honor and integrity of the courts than we are for the legislative honor?

A judge may be dishonest, and his decision may affect only a few people, the litigants before him. It can not be said that this body can be influenced by a personal consideration and affect the welfare of but a few people, because we legislate for all the people; and the honor and the dignity and the respect and the confidence of this country must be reposed in the integrity and honor of the Senate as one of the bodies of the legislative branch of the Government or else the Government ends.

If a decision had been handed down by the Supreme Court of the United States, we will say, in Smith against Jones, and it should be charged in reputable papers that five members of that court were interested in the decision, and that their wealth was increased by it, that $200,000,000 worth of property was affected by their decision, and that they profited by this decision, unless they could show that that was not true this body would impeach them. It would sit in judgment on them when the charge has been made in the other body, and we would drive them out of office. Here are reputable papers, Republican papers, saying that this legislation was framed and is being jammed through this body by men who are legislating to put money in their own pockets. The Senators whose names were mentioned in the editorial to which I have referred have not seen fit to demand an investigation. I am unwilling that the incident shall be closed without our knowing whether it is true or not.

Yesterday one of the most respected Members of this body, a man who possesses the confidence of every man who knows him, Democrat and Republican alike, said this:

> It is evident, it seems to me, that the Senator from North Dakota [Mr. MCCUMBER], in his zeal to put such an immense tariff on these agricultural products—higher than we have ever had before, higher than there was any necessity for—has done so simply to oil the protection machine for the woolen schedule and some other schedules in the bill. I do not want to do the Senator from North Dakota any injustice. This is simply a notion of mine. I do not make the charge against him, of course. I would not think of doing that. It is only a notion and a suspicion of mine.

Mr. BURSUM. Mr. President——

The PRESIDING OFFICER (Mr. SPENCER in the chair). Does the Senator from Arkansas yield to the Senator from New Mexico?

Mr. CARAWAY. I yield.

Mr. BURSUM. Under what authority would the Senator suggest that the Senate should investigate this matter?

Mr. CARAWAY. I am proposing in a resolution to let the Committee on the Judiciary, either by the full committee or by a special committee, for which there is precedent, investigate it.

Mr. BURSUM. Does not the Senator believe that the charge to which he is referring might with equal justice be made against any Member of this body who might have voted on any schedule which has been passed upon by the Senate? Might not the owner of a farm, who may produce a few turnips, who may raise a few bushels of oats or a few bushels of wheat, also be charged with having a personal interest, and might not anyone who represented some other interest be charged with the same thing? Would it not be impossible to have a body representative of the people of this country and limit its membership to those who had no interest of any kind or character in legislation and who would not be affected by it?

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Idaho?

Mr. CARAWAY. I will yield. I wanted to answer the question of the Senator from New Mexico, but I will hear the Senator from Idaho first.

Mr. GOODING. While the Senator is drafting his resolution will he not be kind enough to incorporate in it a direction to investigate as to why the junior Senator from Arkansas voted for a high protective tariff on rice?

Mr. CARAWAY. I will say to the Senator from Idaho that I am not interested, directly or indirectly, and that no kinspeople of mine are interested, in a grain of rice.

Mr. GOODING. How is the Senate to know whether the Senator is or not?

Mr. CARAWAY. I know it; and I will say to the Senator that if anybody said I was I would say that he was an unqualified liar. That is what I would say, because I do not legislate for myself.

Mr. GOODING. We will investigate and see why the Senator voted for it, and why he has condemned every other schedule.

Mr. CARAWAY. Investigate.

Mr. GOODING. That is the most extraordinary exception.

Mr. CARAWAY. Investigate; investigate. The resolution is going to require me to disclose it, as it will require the Senator from Idaho to disclose his interest. I am willing to do it. I would spurn the idea of trying to take money from somebody else to put into my pocket by legislation, and I am willing that every other Senator shall have a chance to show how he stands on that matter.

Mr. SMOOT. Mr. President——

Mr. GOODING. Mr. President, will the Senator yield again?

Mr. CARAWAY. I yield to the Senator from Utah now.

Mr. SMOOT. Mr. President, from what the Senator has said, if a statement was made in the paper that was not true he would not approve of any such statement, would he?

Mr. CARAWAY. No, sir.

Mr. SMOOT. Then I want to say to the Senator that the article in the New York Herald of July 26, which the Senator has just read, charges me with being a Member of the Senate who is interested in the tariff upon wool.

Mr. CARAWAY. I know it, sir; but I did not put it in the RECORD.

Mr. SMOOT. I want to say to the Senator, as I have said before, that I have not owned a sheep or a lamb since I sold all that I had immediately after Grover Cleveland was elected.

Mr. CARAWAY. I heard the Senator say that the other day.

Mr. SMOOT. I do not own a single head of sheep, and I do not know of a relative of mine who owns a single head of sheep.

Mr. CARAWAY. I do not doubt that, and I thought, in view of what I had heard the Senator say, that this article did him a grave injustice; but we will give each Senator a chance.

Mr. ODDIE. Mr. President——

Mr. CARAWAY. If it is right to do these things, no Senator can complain of having it made public that he does them. That is evident. If it is right, he will not complain. If it is right, he has no objection to having it known. If it is wrong, he has no right to ask that it be concealed.

Mr. ODDIE and Mr. BURSUM addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Nevada?

Mr. CARAWAY. I started in with the Senator from New Mexico. I will yield to the Senator from Nevada just as soon as I am through with him.

Mr. BURSUM. Just by way of calling attention to the unreliability and the recklessness and the malice, for no other purpose, apparently, except to capitalize prejudice, of the statement which the Senator from Arkansas referred to in a paper called the Daily News, I believe, there is one statement with reference to myself as to which I wish to say that I should be very glad if it were true, namely, that I am one of the millionaires of this body. I should be perfectly willing to give my note for half the amount stated in that article and turn it over to anyone who would agree to have it discounted at the bank, and I will divide with the fellow who obtains that discount. There is nothing further from the fact; and if the rest of the article is no more accurate than that——

Mr. CARAWAY. That is the very reason, then, why there ought to be an investigation. If Senators have been slandered, they ought to have a chance to appear in a forum where they can vindicate themselves.

Mr. BURSUM. I have no objection to an investigation or to the world knowing everything about this matter. I may question the propriety of a representative body like the Senate of the United States taking notice of every little slur that may be published by some half-brained fellow who may be in the employ of some political party or of some particular interest for the purpose of disseminating propaganda. If we are to

spend our time attending to those things, we will not do anything else.

Mr. CARAWAY. If the Senator thinks it is merely a little slur to have it charged in the newspapers all over this country that he was voting to put money in his pocket, which meant that he was voting to take money out of somebody else's pocket, he does not look at what is a little slur as I do. I am going to afford the Senator, if he does not object to the consideration of the resolution, an opportunity to vindicate himself.

Mr. BURSUM. I have nothing to vindicate. I want to ask the Senator this question: If there is a Member of this body who happens to be interested in a patch of potatoes, and who voted for a tariff on potatoes, would the Senator charge him with acting improperly?

Mr. CARAWAY. I might want to know what the size of the potato patch was, and how much his direct interest was. I am going to say in good faith to the Senator that I realize that it may become difficult to draw the exact line.

Mr. BURSUM. So far as being interested in the industry is concerned, I have said on the floor of the Senate that I was interested in it. There is no secret about that.

Mr. CARAWAY. All right; then the Senator will have no objection to the resolution?

Mr. STANFIELD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Oregon?

Mr. CARAWAY. I promised to yield first to the Senator from Nevada.

Mr. ODDIE. Mr. President, I could not hear what the article was that the Senator from Arkansas put into the RECORD. Was it an editorial from the New York Herald?

Mr. CARAWAY. Yes, sir. I left out the names of everybody who was mentioned, and read just the charging part.

Mr. ODDIE. That editorial mentioned my name, did it not, as being interested in sheep?

Mr. CARAWAY. I have not the editorial before me. I do not know, but I think it did.

Mr. ODDIE. I saw the editorial yesterday, and I wish to state to the Senator that I do not own one sheep, and am not interested in any manner whatever in sheep, except that I am interested in the welfare of the West and the upbuilding of the West and consequently the welfare of our whole country.

Mr. CARAWAY. The Senator has a right to be.

Mr. ODDIE. Just as the Senator says he is interested in Arkansas rice, I am interested in sheep.

Mr. BURSUM and Mr. GOODING addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Arkansas yield; and if so, to whom?

Mr. CARAWAY. I am going to let the Senator from New Mexico get through with his questions first.

Mr. BURSUM. I simply desire to ask the Senator from Nevada if he pleads guilty to being a millionaire.

Mr. CARAWAY. He is not charged with that.

Mr. BURSUM. Yes; it is said that he is one of them.

Mr. CARAWAY. Is he charged with being a millionaire?

Mr. BURSUM. Yes; he is charged with being a millionaire.

Mr. CARAWAY. Well, possibly.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. CARAWAY. Yes; I yield.

Mr. STANFIELD. I simply want to ask the Senator from Arkansas a question. In his opinion is a member of a legislative body disqualified from voting on a legislative measure because it affects in some way an industry in which he may be interested?

Mr. CARAWAY. I should not say "in some way." If he is directly financially interested in the result, I should like to answer the Senator in the language of Jefferson's Manual, which we have always thought to be a rule of the Senate. It reads in this way—I am reading from section 17, on page 249:

> Where the private interests of a member are concerned in a bill or question he is to withdraw. And where such an interest has appeared his voice has been disallowed, even after a division. In a case so contrary, not only to the laws of decency but to the fundamental principle of the social compact, which denies to any man to be a judge in his own cause, it is for the honor of the House that this rule of immemorial observance should be strictly adhered to.

I am going to say to the Senator that I do not know where the line lies. If the interest of a representative is merely that of the American people, if he has no special interest, it is presumed that legislation will be helpful to us all, and where his interest is general I think there is no question about his right to participate in the legislation; but where he is to be directly financially benefited by his vote it seems to me that he ought not to cast a vote.

Mr. STANFIELD. Does not the Senator think, rather, that instead of applying the rule in that way, if the Senator is not so big that he will not be influenced, and is not going to vote according to a principle, he should withdraw from the industry in which he is engaged, rather than not do his legislative duty here? The Senator surely realizes that if we are to enact a tariff bill—in which the Senator does not believe; it is well known that the Senator from Arkansas is opposed to a protective tariff, except in a very few instances he is in favor of a free-trade proposition——

Mr. CARAWAY. The Senator would do well to state his own position, and not mine.

Mr. STANFIELD. There are a number here who are interested in this woolen schedule. Some may be the owners of ranches. It is laudable for a man to be the owner of ranch property. It is laudable for a man to be a flockmaster, the owner of a flock. If he is, should he then stand aside and permit an injustice to be done to the great industry in which he is interested?

I want to say to the Senator now that if any Senator here believes in a protective tariff, he can defend this woolen schedule fairly and truly, under the principle of a protective tariff, which is that an industry is entitled to protection equal to the difference in the costs of production in this country and the foreign countries in competition in the home market. I want to say to the Senator from Arkansas that, so far as the duty on wool is concerned, this tariff does not represent the difference between the cost of production in this country and in foreign countries with which this country comes in competition. Further, I hope the Senator is not impugning the character or the standing of any Senator here, in voting for this woolen schedule, because he happens to be interested in wool. I am interested in wool, and I believe my interest in it only fits me to vote intelligently here, more intelligently, perhaps, than many others who have not given it a thought, but simply stand here on this floor and oppose the principle of a protective tariff.

Mr. CARAWAY. Let me ask the Senator a question. Suppose that a judge has a lawsuit in which he is interested. He doubtless knows more about it than any juror who could be selected. Yet would we expect him to try the case?

Mr. STANFIELD. But this is a legislative body, not a judicial body, and there is no one here who knows better than the Senator from Arkansas that there is a difference. We know that a legislative body should not function as a judicial body. We pass judicial questions on to the judiciary. We are not standing here passing judgment; we are here enacting a law, according to a principle, that is to save a great industry in our country.

Mr. CARAWAY. The judge might say it was to save a right he had, and therefore he wanted to sit in the trial, so that no mistake would be made. He would know how to render a judgment to protect his interests. I am not here charging anybody with anything. I say that certain charges have been made in the newspapers to the effect that Senators are influenced by their financial interests. I do not know whether it is true or not, and I am not going to pass judgment on it.

Mr. BURSUM. Mr. President, does the Senator from Arkansas believe all he sees in the newspapers?

Mr. CARAWAY. I am going to be very largely compelled to believe or disbelieve by the attitude which the Congress itself may take with reference to whether it wants the facts known; and the country is of the same opinion. Let me say this to the Senator from Oregon—I am not pointing the accusing finger at anyone: Charges have been made. They have been made by members of his own party, by men who believe in the same theory he professes to believe in, in protection. They have said that the rates are unconscionable; that they are indefensible; that they are outrageous; and that they are the result of pocketbook legislation. Those are charges made by people on your side. I do not know whether they are true or false. Every Senator can answer under his own conscience. But I do want to say this, and the Senator must know it to be true, that if the people out in the States are to believe these charges, that legislation is the result of corrupt bargaining, that men who have private interests get together and fix a tax on them that is going to cost the people hundreds of millions of dollars, that that is the way their laws are made, they are not going to respect law, and I do not blame them. If I believed that laws were bought and sold, I would owe no obedience to the law made or the government in which that thing could happen. It would become the duty of every self-respecting citizen to rise up not only in protest but if necessary in rebellion against a government where the laws were bought and sold.

This is a charge made by a reputable Republican paper. It has been reiterated here on the floor of the Senate. It was charged yesterday afternoon by a Member on your side whose

honor, and whose acute sense of honor, nobody questions, that it was an outrage, and, using his own language, to which I will go back, he said:

But, Mr. President, this is all "love's labor lost." We are in the hands of the wool Philistines. They have us by the throat, and perhaps it would be wiser for us to take the medicine in silence and turn our heads toward Providence and hope to get relief from that source.

Is it wise to let the impression go abroad that legislation is being framed by selfish interests, by men directly profiting by the legislation?

Mr. STANFIELD. Mr. President, the Senator knows that the great American people are not accepting a report written in some paper by some individual.

Mr. CARAWAY. I am not reading a paper; I am reading the language of Senator KNUTE NELSON, a man whose honor no man ever impugned.

Mr. STANFIELD. I have the highest respect for the Senator from Minnesota.

Mr. CARAWAY. And he uttered that sentiment here on the floor of the Senate.

Mr. STANFIELD. I do not believe the Senator from Minnesota intended, and I do not believe the Senator from Arkansas thinks, that it was the intention of the Senator from Minnesota to impugn the motives of any Member of the Senate, and I do not believe that the great American people are going to accept any such opinion as that. I can understand that the Senator from Arkansas is attempting to write into the RECORD something to promote that feeling among the great American people, but the great American people indicated by their ballots not long ago that they believe in a protective tariff, and that they believe in the cardinal principles of a protective tariff.

Mr. CARAWAY. When was it they did that?

Mr. STANFIELD. In the last election, when, by the large majority of 7,000,000 votes, they put the Republican Party into power, and that party was pledged to a protective-tariff policy.

Mr. CARAWAY. I have heard so many alibis for what the people mistakenly did in 1920 that I am at a loss to know which of them to accept. The Senator from Illinois [Mr. MCCORMICK] assures us always that it was a repudiation of Wilson's League of Nations. Other Senators have ascribed it to the extravagance of the last administration. Now the Senator says it is because they want an embargo on wool.

Mr. STANFIELD. No; not on wool. I said they believed in the principle of a protective tariff. Do not put words in my mouth I did not use.

Mr. CARAWAY. Wool is what we happen to be discussing.

Mr. TRAMMELL. Mr. President, I would like to have the Senator inform me, if he knows, whether or not the rates in the wool schedule were increased in the Senate over the rates of the House, which, of course, is overwhelmingly Republican.

Mr. CARAWAY. They are.

Mr. TRAMMELL. They were increased in the Senate over the rates fixed by the House, although the House has a very large Republican majority, entertaining the same ideas of protection, as far as the general public is concerned, as are entertained in the Senate.

Mr. CARAWAY. They are closer to an election. If I may, I want to read an extract from the CONGRESSIONAL RECORD of May 7, 1909, page 1837. This is the utterance of a Republican Senator when a tariff bill was before the Senate:

* * * Mr. President, I am myself placed in a position where I shall withhold my vote upon this amendment, and for this reason: Some years ago, when I was not in official life, I acquired an interest in land in Wisconsin which was believed to be, and which has proven to be, in part lead-bearing property. Some development has taken place upon it, and one portion of it is at this time producing lead ore in small quantities, and zinc ore as well. I make this statement now as covering both those products.

If maintaining duties or increasing duties affects the price of those products, I can not consistently and conscientiously vote upon this question as a Member of this body, and therefore upon this roll call, for the reason stated, withhold my vote.

Mr. BURSUM. Mr. President, if that lead stock referred to is worth as much as some lead stock I know of, it would not bring the price of print paper. The Senator was not hazarding very much.

Mr. CARAWAY. The Senator must set up his own standard. I am reading from the CONGRESSIONAL RECORD a speech made by a man who was a Member of the Senate then and who is a Member of the Senate now, and merely in order not to drag him into the RECORD, I shall withhold his name. Two such occasions arose. On June 16, 1909, pages 3363 and 3364 of the CONGRESSIONAL RECORD of that date, he said:

* * * Mr. President, as I am confident that the amendment offered by the committee will be adopted, I shall take the time of the Senate to submit a brief statement. * * * Mr. President, for reasons which I stated when the paragraph on lead ore was under consideration, I am compelled to withhold my vote on all questions or amendments offered as to paragraph 190.

I am interested in property which I believe will be increased in value if zinc ore is made dutiable as provided in the amendment proposed by the Finance Committee. For that reason I will ask to be excused from voting.

I am going to leave every man to be his own judge, whether he stands in a better light who declines to vote at all where his vote might increase his own wealth than the Senators who come together and frame a schedule which will put into their pockets money, a large amount of money, and for which they have been pilloried in the public press as having made this schedule because they were financially interested in it. I do not say it is true, but I say that every man who feels very acutely what public opinion might be, should want an opportunity to have all the facts known.

I know there is not a Senator on this floor who would not vote to impeach a judge if he were guilty of having done that thing. I know that under a law which Congress passed a Senator from this Chamber was taken to a court and convicted and imprisoned for violating a provision of that law, which declared that no Congressman should for hire, or as an attorney, appear before one of the departments, for fear he might unduly influence that department. You were so jealous of other people's honor that you made it a crime for a man who held a seat in either House of Congress to appear before one of the bureaus or one of the departments of the Government and try to influence that department, as an attorney, to render a decision, even in a matter which might not have involved five dollars worth of property.

I know of another Senator, I believe from the Senator's own State, who was indicted and carried west to his own State to be tried for having used influence in a matter affecting public land. He died before the trial, and what the result would have been I do not know.

Mr. GOODING. Mr. President——

The PRESIDING OFFICER. Does the Senator from Arkansas yield to the Senator from Idaho?

Mr. CARAWAY. I yield.

Mr. GOODING. I wanted to ask the Senator if he was the holder of property in his State of any kind.

Mr. CARAWAY. Oh, yes, sir.

Mr. GOODING. The Senator owns property down there?

Mr. CARAWAY. Yes, sir; and I would be glad to disclose what it is.

Mr. GOODING. Why did the Senator vote for a protective duty on rice?

Mr. CARAWAY. I have explained to the Senator over and over again——

Mr. GOODING. Was that not for the purpose of increasing the prosperity of the rice grower, enhancing the value of the Senator's own property?

Mr. CARAWAY. No.

Mr. GOODING. If the rice growers were prosperous——

Mr. CARAWAY. If I had had a dollar invested in rice I should not have voted, and I do not think I ought to have voted.

Mr. GOODING. Mr. President, if every Senator followed that out, there would not be a quorum to vote on the tariff question.

Mr. CARAWAY. If every Senator had a special interest, and came to write a law to make himself rich, it would be infinitely better if there never was a quorum in the Senate.

Mr. STANLEY. Mr. President, I would suggest to the Senator that there is a way to settle this question without any investigation, a very proper way——

Mr. GOODING. Mr. President, there is going to be an investigation; let Senators make no mistake about that.

Mr. CARAWAY. I have the floor.

Mr. STANLEY. I am not opposing an investigation, but I simply suggest, to save time, that we could easily enough determine this question by simply proposing an amendment, like that of the Senator from Wisconsin [Mr. LENROOT], providing for a sane reduction in the duty on raw wool, and I can not conceive it possible that Senators with a direct interest in a schedule in this bill have or will vote on it. If there are such, let them abstain from just one vote, and the question will be settled to the satisfaction of the country.

Just take one vote and let the men with a "take out in this pot" take no hand in the game, and the country and the press will be content.

Mr. GOODING. If the Senator would not restrict that to wool, if he would put that embargo on all agricultural products and manufactured products, and all others, of course——

Mr. STANLEY. Certainly.

Mr. GOODING. And rice.

Mr. STANLEY. Yes, sir; and rice.

Mr. GOODING. Certainly.

Mr. STANLEY. Rice and hemp and horses and mules, everything that is raised in Kentucky, from a quart of whisky to a row.

Mr. GOODING. The Senator should add jackasses.

Mr. CARAWAY. That would exclude the Senator from Idaho.

Mr. STANLEY. If ever we get to jackasses, I advise the Senator from Idaho to wait on the Lord in prayer, for He is the only one who can save him. But there is no use in talking about an animal after having heard it bray.

Mr. President, I am perfectly willing to have the Senator catechise me as to the property I hold and the cash I have and the votes I have cast until he is black in the face. I have no treasures except treasures in heaven, and nothing to fight except the iniquities of the Republican Party and such scandalous situations as this.

Mr. BURSUM. Mr. President, I suggest to the Senator from Kentucky that if his treasures are all in heaven his income tax will not be a burden upon him.

Mr. STANLEY. Absolutely not. But I would not trade my peace of mind for all the sheep the Senator owns.

Mr. BURSUM. The Senator would not have much if he had them all.

Mr. CARAWAY. Anyway, we would find out just how many sheep the Senator does own if he would let us pass the resolution. I want to say to the Senator from Idaho that the resolution contemplates every article that appears in the tariff bill. Whether it is sheep, rice, cotton, sugar, or whatever the article is, it covers the whole field. I believe that when it is done and the American people see by what interests certain schedules were adopted the proponents of the bill themselves would move a reconsideration of it, because there is a power in public opinion—the Senator from Idaho and the Senator from New Mexico and the Senator from Oregon seem to doubt it—but there is such a power in public opinion that it compels people to right wrongs, and I say it is wrong to legislate to put money in the pocket of one individual when it is taken out of somebody else's pocket. Tariffs do not create wealth; they transfer it. If $40,000,000—because that is about the duty the woolgrowers will get—has been put in their pockets at a cost of $200,000,000, according to most conservative estimates, that $200,000,000 has to come out of somebody else's pocket. Tariff does not create it. It does not coin it. It transfers it, and public opinion will not stand for it.

Mr. STANFIELD. Mr. President, will the Senator yield?

Mr. CARAWAY. I yield.

Mr. STANFIELD. Is it not true that that applies to all tariffs, in the estimation of the Senator? The Senator would have all free trade, except as to a duty on rice.

Mr. CARAWAY. Let the Senator state his own position.

Mr. STANFIELD. The point I am seeking to bring out is the fact that the Senator is entirely opposed to any protective duty.

Mr. CARAWAY. Let me tell the Senator what I am opposed to. I am not entirely opposed to a duty on a revenue basis, though some of my votes I might not be able to defend on that basis. I am perfectly willing for the Senator, after he knows what my views are and what my motives are, to call the attention of the world to them, but I am unalterably opposed and would be opposed to what is being done here. I would rather surrender my seat in this body and go back to the people who sent me here than by a vote of mine to take one dollar out of their pockets and put it in my own. I would not do it. I did not inherit wealth and I shall take none with me. I did inherit a good name, and, so help me Almighty God, I shall attempt to keep it. I do not believe any man has a right to take advantage of an official position to enrich himself at the expense of his Nation.

Mr. STANFIELD. Neither do I believe he should, I will say to the Senator.

Mr. CARAWAY. Then we should pass the resolution and find out.

Mr. STANFIELD. For that purpose, and neither am I going to object to the Senator's resolution; but here is the question I want to ask the Senator from Arkansas: If he did believe in a protective tariff, would he not believe that an industry is entitled to protection to the extent of the difference in the cost of production in a foreign country that comes in competition with the American production, and the cost of production in our own country?

Mr. CARAWAY. Yes; I would believe that.

Mr. STANFIELD. If the Senator believed in it, would he not apply that principle?

Mr. CARAWAY. Oh, yes.

Mr. STANFIELD. I will say to the Senator that the woolen schedule does not afford that protection. It does not even afford the difference in the cost of labor. I want to say, just to show my position, that I do not believe, whether a Senator happened to be interested in sheep or owns sheep, that that has been the motive which is impelling him to vote for the woolen schedule. He has voted for the woolen schedule, because he realizes the industry in America can not exist with a lesser protection. I want to say to the Senator that the duty imposed has left a large margin to be absorbed by the efficiency of the American producer over the foreign producer.

I want to say, further, in explanation, because I do not believe the Senator has given it thought, that if he will give to the American wool producer the same conditions, so far as labor is concerned, that exist in the rest of the world, the American can produce wool without a protective tariff. Let him go out into the world and hire the same labor that they hire in Patagonia and Australia and New Zealand, and he can produce wool here without protection. But I say that whenever that is done the Senator is going to lower the American standard of living; he is going to take away from the great American laborer the right to live as he does live, and he will have to live as people live in those foreign countries. So it is not the producer selfishly contending for himself, but he is contending to see that protection is given to the American laborer to enable him to live upon the American standard of living.

Mr. CARAWAY. Of course, I might go into an argument of whether he is doing that or whether he is protecting selfish interests, which would lead nowhere. The Senator from Oregon wholly misses the point. I presume he believes that wool got no more than it was entitled to receive. The question is, Shall a man sit in judgment upon his own case? Shall he determine whether he is being fairly treated and vote to treat himself fairly according to his own ideas, although it costs millions of dollars to other people who differ with him in opinion?

If the Senator could affect only himself by his vote and put money in his pocket without taking it from somebody else, I presume there would not be anybody complaining, but when he takes money from the other 110,000,000 American people or makes them freeze in winter in order to enrich the man who has sheep, then the man who owns the sheep ought not to decide the question in controversy.

Mr. STANFIELD. Mr. President——

The PRESIDING OFFICER (Mr. SPENCER in the chair). Does the Senator from Arkansas yield to the Senator from Oregon?

Mr. CARAWAY. I yield.

Mr. STANFIELD. The point that I was attempting to bring to the Senator's mind a moment ago was that the one interested in an industry is not concerned about himself nor his interest in the industry; he is concerned about the industry for the benefit of the whole American people.

Mr. CARAWAY. I can not concede that, of course.

Mr. STANFIELD. I had hoped the Senator would be fair and concede that.

Mr. CARAWAY. Let us say that a judge who was interested in a case before him would be absolutely honest. Lord Bacon's defense for accepting bribes was that they never changed his verdict; that he accepted bribes, but was not influenced thereby. But posterity has not accepted his excuse for being a bribe taker. A judge who sat in judgment on his own case might say, "So help me God, I rendered a verdict according to the law and the evidence," but the Senate would impeach him for having done it.

I say that we ought not to be more jealous of the honor of other people than we are of our own. The Secretary of the Treasury has to divest himself, before he can become the Secretary of the Treasury, of all banking and commercial interests. Many Cabinet officers have to do the same thing, because Congress has said that they must—not that we presume a man would be interested and therefore be biased, but for public decency we said, "You shall not be a Cabinet officer, you shall not be Secretary of the Treasury and be interested in banks which are controlled and affected by the Treasury." We create commissions here and make their members swear that they are not interested in matters which they are going to consider as members of the commission. No Senator would vote to confirm a man as interstate commerce commissioner who owned stock in a railroad. He might be able truthfully to swear that his ownership of the stock would not bias him at all, and yet we would say it was abhorrent to public policy to let him sit in judgment and raise or lower rates on property in which he himself was financially interested.

If it is wise and if it is right that we should guard other people, if we shall say they shall not be suspected of being influenced by their selfish interests and therefore we make them disclaim, before they enter upon their duties, that they have any interests of that kind, shall we, then, who create those conditions for other men, say that we rise above them, that we will disregard public opinion, that we will disregard what we think to be wise for other people and say we will vote money into our own pockets, and nobody shall have the right to complain? It is abhorrent, and we can not afford to do it.

Mr. President, I send to the desk and ask unanimous consent to introduce a resolution, and I ask for its immediate consideration.

Mr. WADSWORTH. I ask that the resolution be reported.

Mr. CARAWAY. I want it reported.

The PRESIDING OFFICER. The Secretary will read the resolution.

Mr. BURSUM. Mr. President——

Mr. CARAWAY. Just a moment, and then I shall yield the floor. I want the resolution read, and then the Senator may have the floor.

Mr. BURSUM. I shall only occupy the floor a moment.

Mr. CARAWAY. I want the Senator to have a chance to say whatever he pleases, but I want to have the resolution read first.

The PRESIDING OFFICER. The Secretary will read the resolution as requested.

The Assistant Secretary read as follows:

Whereas it has been charged both on the floor of the Senate and in the public press that Senators whose names have been mentioned are financially interested in the rates of duty proposed in certain schedules of the pending tariff bill; and

Whereas it is also charged that Senators are, or were, financially interested in the passage or extension of the so-called emergency tariff act; and

Whereas these charges are hurtful to the honor of those Senators and to that of the Senate itself: Therefore

Resolved, That the Committee on the Judiciary of the Senate or a subcommittee appointed by the committee be, and is hereby, authorized and instructed to investigate said charges and to report its findings to the Senate within 10 days. Said committee is hereby instructed to ascertain:

First, whether any Senator is or has been financially or professionally interested in the production, manufacture, or sale of any article or articles mentioned in either of said tariff bills, and if so, to what extent.

Second, whether any Senator represents or is connected professionally or otherwise, directly or indirectly, with any person, firm, association, or organization engaged in the manufacture, production, or sale of any of said articles, or has been so interested during the pendency of this bill or the emergency tariff bill.

The committee is authorized to administer oaths, subpœna witnesses, send for persons or papers in the prosecution of said investigations, and to employ stenographers and to pay for the services therefor not to exceed $1.25 per printed page of said testimony, all expenses of said investigation to be paid out of the contingent fund of the Senate.

Mr. WADSWORTH. Mr. President, I object.

The PRESIDING OFFICER. Is there objection to the introduction of the resolution?

Mr. WADSWORTH. I object to its introduction and to its consideration.

The PRESIDING OFFICER. Objection is made.

Mr. BURSUM. Mr. President, this whole proceeding seems to me to be ridiculous——

Mr. GOODING. Mr. President, I would say, if I may——

The PRESIDING OFFICER. The Senator from New Mexico [Mr. BURSUM] has the floor.

Mr. BURSUM. And is giving undue recognition to matters which are of daily occurrence and which are indulged in by the opposition press every day in the year. It seems to me that it is tainted with an attempt to capitalize partisanship and to inject politics.

Mr. CARAWAY. Will the Senator yield to me?

Mr. BURSUM. I yield.

Mr. CARAWAY. The Senator from Iowa, the present President pro tempore of the Senate, in 1913 introduced a resolution from which the resolution which I have introduced was copied. That resolution was passed by the Senate when it was Democratic. The investigation was had. If to introduce this resolution now is partisan, was it not partisan when the Senator from Iowa introduced such a resolution?

Mr. BURSUM. Very likely it was. The Senator from Arkansas is not the only gentleman who has the privilege, and who enjoys it and takes advantage of it, of indulging in partisanship and in capitalizing such things. He is very smart and very adroit in such procedure.

Mr. CUMMINS. Will the Senator from Arkansas [Mr. CARAWAY] repeat what he said? I did not quite catch it.

Mr. CARAWAY. I said that the senior Senator from Iowa introduced a resolution in 1913 of which the resolution which I have introduced is a copy. The resolution then introduced by the Senator from Iowa was passed by the Senate and an investigation was had.

Mr. CUMMINS. Oh, surely. Mr. President, the committee appointed by the Chair, as I remember it, entered into an investigation upon that subject, and the committee compelled every Senator to inventory all his possessions, in order to ascertain whether or not he had any property that was likely to be affected by any kind of legislation.

Mr. BURSUM. And there was not a mother's son of you disfranchised from that day to this; so I suppose that you were all paupers and did not have anything.

Mr. CUMMINS. I was a member of the committee that conducted the investigation.

Mr. CARAWAY. The Senator from Iowa introduced the resolution.

Mr. OVERMAN. The Senator from Iowa introduced the resolution asking for an investigation of the so-called lobby. President Wilson had charged that there was a lobby here, and the Senator from Iowa introduced a resolution to investigate whether that charge was true or false. The senior Senator from Missouri [Mr. REED] then proposed an amendment to the resolution which had been introduced by the Senator from Iowa to inquire into the fact as to whether or not any Senator was interested in the tariff bill then pending.

Mr. CARAWAY. The original resolution was amended, and of that amended resolution the one I have introduced is a copy.

Mr. CUMMINS. At any rate, we conducted an investigation I think requiring months—I do not remember just how long——

Mr. OVERMAN. I think it was about three months.

Mr. CUMMINS. And when it is understood that we were inquiring into all the property that every Senator owned, it may be appreciated that it would take quite a while.

Mr. CARAWAY. It would not take long if they have not got more than I have.

Mr. ROBINSON. Mr. President——

Mr. BURSUM. I yield to the Senator from Arkansas.

Mr. WARREN. Mr. President, I inquire who has the floor. I should like to have just a moment in order to make an observation.

The PRESIDING OFFICER. The Senator from New Mexico has the floor, and he has yielded to the senior Senator from Arkansas.

Mr. ROBINSON. I desire to point out to the Senator from Iowa that the Senator from New Mexico has just stated that both the resolution of the Senator from Arkansas and the resolution of the Senator from Iowa were presented for partisan purposes. The Senator from New Mexico made that declaration, but I do not think the Senator from Iowa heard it.

Mr. WARREN. Mr. President, I wish to say that I was here when the investigation referred to was conducted——

Mr. CUMMINS. Mr. President, the resolution which I presented was not for partisan purposes. Whatever may have been the character or tinge of any other resolution that has ever been offered in the Senate, the resolution I offered was not for partisan purposes.

Mr. ROBINSON. I thought the Senator from Iowa ought to be advised as to what the Senator from New Mexico had stated.

Mr. CARAWAY. Mr. President, I hope the Senator from New Mexico will accept that explanation.

Mr. WARREN. Mr. President——

Mr. BURSUM. I yield to the Senator from Wyoming.

Mr. WARREN. Mr. President, as I was about to say a moment ago, I was present and testified before the committee created by the resolution of the Senator from Iowa; but what did the investigation amount to? It amounted, as all similar investigations do, to a heavy draft on the Treasury of the United States; and that is all the resolution now proposed will amount to if it should be adopted. It will simply fill up pages of the record of the committee, and result in a little notoriety, perhaps, for some "holier than thou" man, and probably enable it to be proved to the Senate that the only men who are eligible to the Senate are the hoboes who ride on the brake beams of freight trains and who, when the train runs through some village, go to some near-by farm to get a free meal.

How many Senators are there here who are not interested in some property somewhere? Shall they be debarred from voting upon this measure? If the farmers of this country are interested in this legislation, are they to be debarred from representation here?

I have no objection whatever to the resolution which has been offered, or any other similar resolution, except I am tired of having to accept demands from the disbursing officer for

hundreds of thousands of dollars for these damn-fool, nonsensical investigations called for from time to time.

Mr. CARAWAY. Mr. President, will the Senator from New Mexico yield to me for a moment?

Mr. BURSUM. I yield.

Mr. CARAWAY. Of course, the Senator no doubt thinks it is a damn-fool resolution. It is much more to his way of thinking that you may conceal your interest and profit by it. I should not have said an unkind thing if he had not seen fit to start it. He says that if certain sentiments were to prevail nobody but hoboes would sit in the Senate. I sometimes doubt if the country would be much worse off if the membership of the Senate were composed of hoboes than when it is composed of millionaires. People have a right to sit in the Senate whether they are rich or poor, although rich people do not sometimes think so, and it thoroughly angers the Senator from Wyoming that anybody who is not among the rich questions what the rich do.

That may be good politics; I do not know and I do not care; it may be altogether according to the standards that the Senator from Wyoming sets up for human conduct; I do not care as to that, and neither do I care whether or not the Senator thinks the resolution I have introduced is a damn-fool resolution. I shall entertain the same opinion about it that I had before, although I shall not entertain quite the same opinion about the Senator from Wyoming that I had before he used the expression. I do not care who profits by it; I know that it is morally indefensible for a man to get the confidence of his people and to be elected to office and then use that office to enrich himself, and I do not care whether he is from Wyoming or any other State.

Mr. STANFIELD. Mr. President, will the Senator from Arkansas yield to me for a moment?

Mr. CARAWAY. The Senator from New Mexico has the floor.

The PRESIDING OFFICER. The Senator from New Mexico has the floor. Does he yield to the Senator from Oregon?

Mr. BURSUM. I yield.

Mr. STANFIELD. Mr. President, I should like to say to the Senator from Arkansas that I dare say, so far as the subject that has been discussed is concerned, probably, if the Senator from Wyoming and other Senators who are here went before their constituencies and made it an issue in their reelection, that their constituencies would stand by them and show their confidence in them.

Mr. CARAWAY. Suppose the constituency of the Senator from Wyoming did say, "You can go back there and enrich yourself at the expense of everybody else," does that make it right?

Mr. STANFIELD. That, however, is not the point I am making.

Mr. CARAWAY. That is the question we were discussing—whether it is right to enrich yourself through the medium of legislation.

Mr. STANFIELD. That is not the question.

Mr. CARAWAY. That is the point I was discussing with the Senator from Wyoming.

Mr. BURSUM. Mr. President, it does not seem to me that we are getting very far in this discussion.

Mr. CARAWAY. Oh, no; the resolution has been objected to.

Mr. BURSUM. As I said a few moments ago, the whole proceeding seems to me an undue capitalization of a matter which is unimportant, for the reason that it is of daily occurrence and is indulged in by the opposition press every day in the year. Without reflecting on anyone, it reminds me——

Mr. CARAWAY. Mr. President, will the Senator yield?

Mr. BURSUM. I will yield in just a moment.

Mr. McCUMBER. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator from New Mexico has the floor. Does he yield; and, if so, to whom?

Mr. McCUMBER. I do not ask the Senator to yield. I rise to a point of order. I ask the Chair to enforce the rule that no Senator shall speak oftener than twice on the same subject in one day.

The PRESIDING OFFICER. The point of order is well taken.

Mr. BURSUM. Mr. President, I have the floor. This proceeding reminds me very much of a Chinese poem which, when translated, reads as follows:

> In speech he is a wonder,
> How small are his games;
> How loud is his thunder,
> How little it rains!

Mr. CARAWAY. May I just say that so long as an objection can save its raining it will not rain.

Mr. JONES of New Mexico and Mr. GOODING addressed the Chair.

The PRESIDING OFFICER. The Senator from New Mexico.

Mr. JONES of New Mexico. Mr. President, I would not rise solely for the purpose of referring to the matter which has been under discussion, but it leads me to some thoughts regarding the general subject. I was interested some years ago in the production of wool; but in 1904 I disposed of all the interest which I had, and have not had any interest in wool production since. I may state further that when I disposed of my interest I just about got a return of the capital invested in the enterprise. I did acquire, however, some personal knowledge of the industry. During those years I became acquainted with the adverse condition under which wool is produced in this country; I realized the effect of drought, the effect of severe winters, and of the extremely unstable markets. I can state that even with the protection accorded by the pending bill the business of the woolgrower will still be speculative; there is no assurance that even with such duties upon imports the wool-producing industry of the country is going to be prosperous, although, in my judgment, the duties will add to the chances of his prosperity.

I was very glad to support the emergency tariff law. I had something to do with the framing of that law. I was also very glad, when the time came to continue the emergency tariff law in operation, to suggest that it be continued not for an unlimited time but until otherwise supplanted or modified by law, and with that modification that law is permanent to-day. I had this thought especially in mind when that proposal was made that it would put the woolgrowers of this country in position to inveigh against exorbitant taxation and tariffs upon manufactured products.

The emergency tariff law reasonably took care, so far as legislation can do it, of the agricultural interests of this country. It is true there was not a tariff upon hides. The Senate put such a tariff duty in the bill upon my motion; but in conference the distinguished Senator from Massachusetts [Mr. LODGE] succeeded in having the tariff upon hides removed. After the war agricultural conditions in this country were alarmingly depressed, and those conditions largely prevail to-day. While the prices of manufactured products have gone down somewhat, they have not gone down to anything like the same extent as the prices of agricultural products. The prices of manufactured products to-day, as compared with the pre-war prices, are 72 per cent above the prices of 1913 and 1914, while the prices of agricultural products, and particularly the meat products of the country, are to-day only a little—about 10 or 12 per cent—above the prices of 1913 and 1914.

It is true that the price of wool has rallied; the price of wool has increased beyond the 1913 price, and, in my judgment, it should be largely attributed to the emergency tariff law; but still the prices of wool are not above the pre-war price to the same extent as the prices of hundreds and thousands of manufactured commodities.

There are some farm products which can not be benefited by a tariff. In my judgment, a tariff has little influence upon any farm product with the exception of wool; but after the war the farming industries of this country were laboring under such depression that I felt that I was willing to prescribe any remedy which the farmer might think would benefit him.

Mr. BURSUM. Mr. President——

Mr. JONES of New Mexico. I yield to my colleague.

Mr. BURSUM. The newspaper referred to by the Senator from Arkansas [Mr. CARAWAY], the News, refers to my colleague as being one of the millionaires created out of the raising of sheep and wool.

Mr. JONES of New Mexico. I have stated, Mr. President, that if I made anything out of wool it was a very small amount, and that was more than 18 years ago.

After the war a campaign was started over this country in favor of a high protective tariff. There existed almost universally throughout this country what I believe to be a mere superstition that the tariff will benefit any product on which it is placed. It is not so; it can not be so; but if by the passage of an emergency tariff law we could improve even the psychological situation of the country, I was in favor of it. I wanted to relieve the minds of the farmers and producers of this country. If there is any benefit to be derived from a protective tariff or any tariff, why should not the farmers of the country get it?

If we look over the history of this country of ours, we see wealth concentrated in a few centers and sections of the coun-

try. It has been brought about largely through the favoritism of protective tariffs.

I think the tariff bill has advanced the price of wool. As to the revenue, why should we not be willing to raise revenue by a tax upon imported wool at least as high as upon many other commodities? There are manufactured products in this bill, hundreds and thousands of them, where the revenue derived from the tariff amounts only to a nominal sum. We import at least one-half the wool consumed in this country, and the Treasury of the United States is largely benefited by a tariff upon wool. Such can not be said of hundreds and thousands of manufactured articles. The tariff is put there for the express purpose of creating a monopoly in this country, to prevent any imports; and time and again in the discussion of this bill, when Senators have been called upon to tell why we ought to have a tariff on some manufactured article, they have referred to the fact that some infinitesimal amount of the commodity was being imported. When this thing is going on, when this orgy of tariff raising is rampant, why should not the farmers of this country get some benefit from it, if there is any benefit to be had? The same thing may be said of the mining interests of the country.

I think the time has come when we ought to take into consideration the welfare of the whole country. I think my good friend from Idaho [Mr. GOODING] has gone too far. By giving up the emergency tariff law and voting for these high protective duties upon manufactured products he has been voting so as to injure the farming interests of this country. Why not keep the present emergency law, rather than pass this infamous bill, which is increasing by enormous amounts the duty upon manufactured products where no further protection is needed, where it will have the effect of increasing the prices of these commodities to the consumer, where it will have the effect of making the farmers of this country surrender to the manufacturers of the country what little benefit they received through the emergency tariff law?

There is no better index to what this bill proposes than what was stated by the Senator from Connecticut [Mr. MCLEAN] in the discussion of the bill. When I was discussing putting sheep shears upon the free list he said that the woolgrowers had a tariff upon wool, and he thought they ought to give some of their gains to the manufacturer of shears whether the industry needed it or not. He did not, of course, use the latter part of my expression, but that is what his expression meant, and that runs all through this bill—that while a few agricultural producers may get some benefit from the emergency tariff there is a combined and concerted effort here to take that benefit away from them and give it to the manufacturing interests of this country, simply because they have put a tariff upon some of these agricultural products.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. WALSH of Massachusetts. As I understand the Senator's argument, it is that those who are really interested in the welfare of the farmers should vote to substitute the emergency law for this bill.

Mr. JONES of New Mexico. Mr. President, the emergency law will remain the law of the land if this bill is not passed.

Mr. WALSH of Massachusetts. They should vote against this bill and therefore permit the emergency law to remain in force?

Mr. JONES of New Mexico. If they consider the interests of the agricultural producers of the country, in my judgment they should.

Mr. WALSH of Massachusetts. I thought the emergency law provided that it should no longer be operative after the passage of this bill.

Mr. JONES of New Mexico. That is quite true.

Mr. WALSH of Massachusetts. So that if this bill is not passed, the Senator claims that it will continue in operation?

Mr. JONES of New Mexico. If this bill is not passed, the emergency tariff law will continue in effect.

Mr. WALSH of Massachusetts. And of course the tariff on wool would then be about 60 cents a pound.

Mr. JONES of New Mexico. There would then be a tariff of 15 cents a pound upon wool in the grease and of 45 cents a pound upon scoured wool.

Mr. WALSH of Massachusetts. And, of course, having in mind the "joker" clause, the rate would be very much higher on the clean content.

Mr. JONES of New Mexico. No; there is no "joker" clause in the emergency tariff bill that I know of. The old skirting clause of the Payne-Aldrich law was removed specifically by the terms of the emergency tariff law.

Mr. WALSH of Massachusetts. Does the Senator claim that under the emergency law the duty on wool is higher or lower than under this bill?

Mr. JONES of New Mexico. As to perhaps 80 or 90 per cent of the wool grown in this country, the duty under this bill is less than it is under the emergency tariff law.

Mr. WALSH of Massachusetts. So the real friends of the woolgrowing industry would serve them best by voting to retain the emergency law?

Mr. JONES of New Mexico. Mr. President, it is hard to make an unqualified answer, because the different classes of wool receive different rates of duty under the respective laws, and it is really difficult to answer that; but so far as the fine wools of the country are concerned there is more protection under the emergency law than under this law.

Mr. WALSH of Massachusetts. The Senator will please pardon me for interrupting him. I simply wanted to bring out the fact that he thinks the emergency law is a better tariff law for the farmers than the pending bill.

Mr. JONES of New Mexico. It is for all those who raise fine wool, in my judgment, and that is quite evident from the remark which has been made here by different Senators. The Senator from Utah [Mr. SMOOT], the Senator from Massachusetts [Mr. LODGE], and others have referred to the fact that there are 107,000,000 pounds of wool in bond in the warehouses of Boston to-day awaiting the passage of this bill so as to come in at the lower rate of duty under this bill than that of the emergency tariff law.

Mr. President, so far as the farmers of this country are concerned, this bill simply means an increase in the cost of what the farmer has to buy. Take the present tariff upon meats, the emergency tariff upon meats. It has operated to the interest of the meat producers of this country in a way, but only in a very limited extent. There is no meat now coming into the United States which would make necessary an increase in the duty on meats. This bill proposes to do it, and I have voted for it, because if we are going to raise these tariffs higher and higher upon the manufactured products of the country, why not do so in the case of the agricultural products?

So far as wheat is concerned, the tariff has very little influence upon it. The hard spring wheat of the Northwest may be to some extent advantaged by the tariff upon wheat; but this bill reduces the duty upon that wheat, so how can any wheat grower of the country claim any advantage under this bill? As to the wheat grower, this bill simply means increased costs of everything he has to buy, and why should the wheat grower favor this bill rather than the present law?

The same thing may be said of the bean growers. The duty under this law is precisely the same as in the emergency tariff law, so as to the bean grower the only effect is to increase the price of the things which he has to buy.

The tariff can not affect the price of corn in this country to any substantial extent, but if it does the tariff upon corn in the pending bill is no greater than that in the present law. So why should the corn producer favor this bill? Its only effect as to him would be to increase the price of everything he must buy.

So with the other commodities. There have been a few changes here and there, but in my honest judgment there is no reason on earth why anyone who has the real agricultural interests of this country at heart should vote for this bill in preference to the existing law, including the emergency tariff law.

I hope the Senators on the other side who say they are speaking in the interest of agriculture will bear these things in mind. I come from an agricultural section of the country. I voted for the emergency tariff law; I helped frame it, and I helped continue it until it should be supplanted by some other law; but in my humble judgment, by repealing that law, as this bill does, by substituting these enormous duties upon manufactured products, as this bill does, for the rates in that bill, anyone who votes for the pending bill will be voting against the interest of the agricultural producers of the country.

Mr. SMOOT. "Consistency, thou art a jewel." I want simply to call attention to the fact that there are 17 Democratic Senators who have voted for these so-called "indefensible" rates wherever the products on which those rates were placed were produced in the States which they represent. I am not that kind of a protectionist. I believe in the policy of protection. I believe that this country can not live without it. I believe in it so strongly, Mr. President, that it makes no difference to me where an industry is located, or whether it be agriculture, whether it be the manufacture of any article whatever; whether it be located in the North, in the South, in the East, or in the West. As far as I am concerned, I believe those industries ought to be protected, so that if there are other places in the world which can produce the goods at costs

low enough to result in the destruction of those industries in the United States, I want them to be protected to that limit, and no more.

I do not believe in embargoes. I voted against the embargo presented in this bill on dyestuffs. I was opposed to it, and will be to the end. I do not believe in a rate of duty which would act indirectly as an embargo, but I can not understand a Senator who will vote for a duty upon a product of the farm, or a product which may be produced in his State, the product requiring further manufacturing processes in the different stages before it can be disposed of, refusing to give a compensatory duty for the duty imposed upon the raw material, so called. There is no consistency in that at all, and I can not justify any such vote.

I did not expect to say even this much, but I looked over the list of those Senators voting as stated and saw the articles on which rates have been imposed and voted for by Members on the other side, which Democratic Members have vociferously denounced as indefensible rates of duty, and then, in the very next paragraph, on an article not produced in their State, in which their people are not interested, they vote against even a compensatory duty for the duty they have placed upon the raw product. I say that such action is inconsistent.

Mr. GOODING. Mr. President, first let me say that I want to congratulate Senators on the other side of the Chamber who have courage enough to vote for the industries of their States, and I care not whether it be rice, peanuts, wool, long-staple cotton, graphite, or anything else. It shows to me that, after all, when it comes to the interest of their own people they know and understand that protection is a blessing to their States. I understand, of course, that under the party lash, working under a Democratic platform which declared that protection is unconstitutional, as it has done for a hundred years, all of them can not see their way clear to go the full length of the matter. But I say in all sincerity, and I say it to the junior Senator from Alabama [Mr. HEFLIN], who saw a little village spring up in his State where there was a graphite mine, who saw a schoolhouse there, with happy children, who saw a people prosperous, an industry which had been developed by the war, because that gave it protection on account of lack of transportation to bring graphite from the mines of foreign countries. As soon as the war was over, and ocean transportation became normal, he saw that little mining camp go down, the schoolhouse was closed, every home was deserted, and if there was any wild game in that neighborhood it stalked through that deserted village.

I have seen just such things as that happen in the mining camps of the West when there has been a lack of proper protection. It never entered my mind that the Senator from Alabama had an interest in that graphite mine. I believed his heart was touched with sympathy, and I knew it was, for people who had once been happily engaged in that industry and were thrown out of an occupation, and are no doubt struggling now to keep the wolf from the door. I never had such a feeling in regard to any other Senator who had the courage to vote for protection for an industry of his State. Never once did it come to my mind that he was doing it for any selfish purpose.

Of course, I know that if something unpleasant had to happen on the other side for the political advantage of the Democratic Party the junior Senator from Arkansas would be the first to take up the matter.

I plead guilty to owning a few sheep. We would call them a few out West; they would not be called a few down here. Sheep raising has been my life's work, almost from boyhood. The people of Idaho knew I owned sheep when they elected me, and, as I remember it, I lead the ticket in majorities. There is no question of doubt about my people understanding that I was a woolgrower, and that I would fight for that industry to the last ditch, because without it my State can not exist. Without the live-stock industry—I will include sheep and cattle—the great West can not go on, and so I am going to fight, and I am going to insist that this resolution be passed, and that this investigation which the other side is so keen to have, for political purposes, proceed in an orderly and proper manner.

For weeks I have known that the importers were spreading propaganda all over this country, just as the resolution offered by the junior Senator from Arkansas intends to do, and I am ready for that investigation. If I have violated any law in voting for the industries of my State, I am ready to resign, and, by the eternal gods, I will resign. I have held public office before, and have always been able to lie down with my conscience clear, and go to sleep, and I know that when I get through with this job in the United States Senate I shall be able to sleep with a clear conscience.

Of course, if there was any reflection to be made on an honest man for political purposes, if there was one man in the Senate who would be more ready to do it than any other, it would be the junior Senator from Arkansas.

There are 700,000 woolgrowers in America, and I believe it is safe to say that 95 per cent of the Senators on this floor own property of some kind or other that is affected by this bill. I think it is safe to say that 80 per cent of them own land upon which farm products are grown. God forbid that the day shall come when the Senate and the House will be filled with men who do not own property in their own rights.

Maybe the Senate is not functioning in the interest of the people as fully and forcibly as it ought to be, but when the time comes—and I do not mean this as any reflection upon the great profession of the law—when all the Members of this body are lawyers, and not a business man is to be found here, God pity the American people. There is no question about their honesty, but their whole life's work has led them along such lines that not all of them have had an opportunity to know, after all, what is for the best interest of humanity in this country. They think they know.

Nobody has any greater regard for them and respect for them than I, but if it must come to a time when a man must not have property in this body and only lawyers serve here, or men who have not had energy enough in this life to accumulate property, ah, this great American Republic will go down to decay.

I am not going to take up a great deal of the time of the Senate, but I say again that I am going to insist that the resolution offered by the junior Senator from Arkansas be passed, because for weeks it has been whispered around the Capitol Building that I was interested in the wool pool and that for that reason I was pushing a tariff on wool. Is there a Senator here who will say I have not fought just as hard for peanuts and for rice and for soya beans and for vegetable oils and for the manufacturers as I have for wool?

No Senator must say that I have not, for it would not be true. In my efforts to secure proper protection I have not known any North or South, East or West. I have stood for every industry because I believed in the great American principle of protection. There never has come to my mind at any time any thought of dishonesty on the part of any Senator voting for any schedule upon this floor. But I want the investigation to be made, because if I have violated my oath of office in trying to protect the industries of my State there will be a vacancy in this Chamber, so far as I am concerned.

I want the American people to know the truth, the whole truth, and nothing but the truth. At some future time I shall pay my respects to the importers and some of the great newspapers for their outrageous attack upon my integrity because I have had the courage to do my duty as I saw it toward the great agricultural industry of this country.

Mr. HEFLIN. Mr. President, the Senator from Idaho made reference to the vote I cast on the graphite item of the bill. I have explained to the Senate——

Mr. GOODING. Mr. President, if the Senator will yield to me a moment, he need not explain further.

Mr. HEFLIN. I understand.

Mr. GOODING. The Senator raised himself in my estimation by that vote. When he voted for graphite I felt that he had a heart.

Mr. HEFLIN. I was not quarreling with the Senator from Idaho about his reference to me.

Mr. President, I stated at the time that I believed in a tariff for revenue. I am not a free trader. I stated at that time that graphite had no tariff upon it whatever; that the graphite produced in foreign countries had come in without paying any revenue and had taken possession of the home market and literally closed the graphite mines in the United States. The mines in my State were closed and the people who were working in those mines lost their employment. I wanted our Government to derive some revenue from graphite coming in from foreign countries, and if that tariff incidentally helped the graphite industry in my State and in other parts of the country, all well and good.

Mr. President, the Senator from Idaho [Mr. GOODING], commenting upon the resolution offered by the Senator from Arkansas [Mr. CARAWAY], intimated that the Senator from Arkansas did not want anybody in this Chamber unless he was a pauper. That is not the position of the Senator from Arkansas.

The Senator from Arkansas does not care how much property a man in this body has if he came by it honestly and is faithful to his oath of office, is one who safeguards the interest of the

people of the United States, and is one who does not use his position and power to feather his own nest or put money in his own pocket. I think that is the position of the Senator from Arkansas. It is well and good to have Senators in this body representing the various stratas of society, but, Mr. President, it is not well for the country to fill this body up with millionaires, and I do not care whether they are wool kings, flockmasters, trust magnates, or tariff barons. It is not well to fill this body with men of great wealth. No man should be elected to membership here who is lacking in human sympathy and a knowledge of the science of government.

Mr. GOODING.. Mr. President——

Mr. HEFLIN. I yield to the Senator from Idaho.

Mr. GOODING. I want to say to the Senator that the newspapers do me entirely too much honor when they mention me as being a millionaire. I would not object to being a millionaire, but, unfortunately, through conditions which have existed, I have a pretty hard fight myself, not to keep the wolf from the door but to pay my debts, and unless conditions improve in the West I shall be fortunate if I am able to liquidate.

Mr. HEFLIN. The Senator is not by himself. There are millions in his class under this Republican administration. [Laughter.]

Mr. GOODING. I want to say to the Senator that this happened to me under a Democratic administration and free wool.

Mr. HEFLIN. I have told the Senator from Idaho and others on the other side of the Chamber frequently that in spite of free wool, when the Democrats were in power every industry in the country prospered, and we never had any fall down in the business of wool until deflation was started by the Federal Reserve Board under a resolution that was passed by a Republican Senate. Now they are undertaking to tax the whole American people for the benefit of the wool kings of the country. I want to say to the Senator from Idaho that the Tariff Commission right here in Washington in its report said that the wool industry was injuriously affected by the Federal Reserve Board's policy when it determined to contract the currency and deflate credits.

Mr. President, I have not heard the Senator from Idaho lift his voice against the reappointment of the present governor of the Federal Reserve Board, and I want to comment just briefly upon that. Of course, I expect him to vote against his confirmation, if his name should by any hook or crook be sent to the Senate.

Mr. BURSUM. Mr. President, I rise to a point of order. I request that order be maintained on the Democratic side of the Chamber.

Mr. HEFLIN. I thank my friend from New Mexico. He is one of the wool kings to whom I have reference. I appreciate his kindly interest in this side of the Chamber. This side of the Chamber is in perfect order, and it wants an investigation of wool kings, including the Senator from New Mexico.

Mr. BURSUM. Mr. President——

Mr. HEFLIN. I yield to the Senator from New Mexico.

Mr. BURSUM. I hope the Senator appreciates the fact that kings have been very unpopular in the last few years and some of them have been beheaded. I hope the Senator does not intend to behead us because we happen to be shepherds.

Mr. HEFLIN. I am not in favor of beheading them literally, but I am in favor of beheading them politically. I think it would be a good thing for the country to have them beheaded politically.

Mr. BURSUM. We will get to that next November. But what about my colleague from New Mexico [Mr. JONES]? Would the Senator from Alabama like to have him beheaded politically?

Mr. HEFLIN. The other Senator from New Mexico made the statement that he did not belong in that class and had not made anything out of wool in about 18 years, or words to that effect. Now I should like to hear the real wool kings here testify who are voting money into their own pockets when they place a high tariff tax on wool.

Mr. President, I desire to speak for a little while about another matter. I am going to read an interesting document about the governor of the Federal Reserve Board, about a newspaper man being on the Federal reserve pay roll, naming one and asking about others. I have been suggesting for some time to the Senate that I would read this statement.

I have a letter here from a prominent banker which says that on page 3049 of Who's Who in America, edition of 1920–21, there is a biographical sketch of H. Parker Willis, economist, born at Weymouth, Mass., August 14, 1874, from which the following is quoted:

Associate editor New York Journal of Commerce, 1912–1914, and editor same 1919.

That means that he was an associate editor of the Journal of Commerce from 1912 to 1914, when he ceased the duties as associate editor, and after an interval of five years he went back to the newspaper as editor and was still editor when the 1920–21 edition of Who's Who was printed. The same sketch then proceeds:

Secretary Federal Reserve Board, Washington, 1914–1918, and director of research same 1918.

That means, the letter continues, that Doctor Willis was secretary of the Federal Reserve Board from 1914 to 1918, and that when he ceased to be secretary he took the job of director of research in 1918 and was still holding the job when the 1920–21 edition of Who's Who was printed.

On page 257 of the annual report of the Federal Reserve Board for the year 1920 we find the name of H. Parker Willis listed as director of analysis and research and drawing a salary of $6,000 a year. Is he drawing that salary now? Has it been increased or reduced? If he is the editor of the Journal of Commerce, as is asserted in his biographical sketch in Who's Who, and is also on the pay roll of the Federal reserve system at a salary of $6,000 a year, as the Reserve Board said that he was in 1920, we can very well understand why the editorial columns of the Journal of Commerce are so earnest in their defense of the Federal Reserve Board.

Mr. President, I had passed through this body a resolution calling upon the Federal Reserve Board to state whether they had a publicity fund. The governor of that board came back and positively stated that he had no such fund. I said there was some way by which they were getting publicity, there was some way by which they were getting into the newspaper columns, and I said that it must be that they are putting men on the pay roll to do a little research work of this kind and that in order to cover up what they are really paying them for. Are they paying certain newspaper men to get publicity for their views and for refusing to give publicity to those who criticize their official conduct?

Certain banking and speculative interests are making a hard fight just now to have Governor Harding reappointed. All news detrimental to their scheme must be kept in the background. It must not get in the papers. Look at the press gallery now, if you please. Watch those who represent some of the great dailies of the country. Whenever a Senator criticizes the deflation and the Federal Reserve Board on this floor now they leave the gallery instanter. They fly away out of sight and hearing like a covey of birds flushed upon the field. Why is it that these grave matters touching the public interest are ignored or suppressed? Who is it that does not want them to reach the people of the country? I am making a charge here to-day that there is an editor of a great daily paper on the pay roll of the Federal reserve system enthusiastically defending the Federal Reserve Board and denying publicity to those who attack it. Look in certain big dailies to-morrow and see if you find an accurate report regarding this matter.

I have a note, written by a gentleman who has been for some time a visitor in the Senate gallery, calling my attention to a certain fact and asking me, "Have you noticed that certain newspaper men get up and leave the gallery whenever a discussion of deflation and the Federal Reserve Board is commenced in the Senate? If you have not noticed it, watch the next time and see what happens." So when I got up this morning and mentioned deflation and said I was going to read something important in reference to it, I looked at the press gallery and saw several very clever gentlemen quietly walking out. I asked my correspondent why that was; why they did that? I was told, "They do it in order that they may say if questioned about it, 'Why, I was not in the gallery when that was said; I did not hear it, and that is why I did not write a story about it.'"

Mr. President, I am fighting a battle here for the good of my country, and the people are entitled to know what we, their public servants, are doing to safeguard their interests. It is wrong to support that portion of the press that will not give to the people both sides of the great questions discussed here.

I wish to refer to another interesting matter in this connection. Some time ago I made the mistake of referring to the Wall Street Journal when I should have said the New York Journal of Commerce. The Journal of Commerce stated editorially that it had declined to print certain material sent to it by the president of the great American Cotton Association, Hon. J. S. Wannamaker. I read excerpts from that editorial on the floor and I confused the Journal of Commerce with the Wall Street Journal. I have apologized to the Wall Street Journal for having done so. It was the Journal of Commerce which refused to take material sent by the head of the great American Cotton Association, which shut out that material and threw it into the wastebasket.

I have found the reason for that. H. Parker Willis, who is or was and may be both, on the Federal reserve pay roll at $6,000 a year, is one of the editors of the New York Journal of Commerce. Mr. Wannamaker, who is the president of the American Cotton Association, wrote many articles in which he pointed out wherein the deflation policy had been ruinous to the cotton producer. He was giving his side of it; he was asking this great newspaper in New York to carry his views; but all of a sudden that paper stopped printing anything that he wrote and boasted of it in an editorial; it threw his matter into the wastebasket. I wondered why. Now, we find that Mr. Wannamaker was attacking the Federal Reserve Board; and I find that the man who sits in the "holy of holies" in the office of the Journal of Commerce is on the Federal reserve pay roll at a salary of $6,000 a year. And yet the Federal Reserve Board, without explaining how it is they get publicity, deny that they have a publicity fund.

Mr. President, a few days ago I called the attention of the Senate and the country to the fact that Mr. Curtiss, appointed by Governor Harding as the chairman of the Federal Reserve Bank of Boston, was connected with Harvard University, and that he had probably been influential in securing the degree of LL. D. for W. P. G. Harding. I did not know that any other institution had given him such a degree. But I have secured some more thrilling information. The gentleman who writes me says:

I am advised that Governor Harding has recently obtained a degree of LL. D. from Columbia University, New York.

I thought it was high time that New York was doing something to show its appreciation for what Governor Harding did for the New Yorkers through his deadly deflation policy. I now ascertain that they have annointed him with the degree of LL. D.—this same W. P. G. I find that Dr. H. Parker Willis, who is drawing a salary of $6,000 a year from the Federal reserve system of which "Doctor" Harding is governor, was lecturer at Columbia University in 1913–14, and that since 1917 and up to the time of the publication of the 1920–21 edition of "Who's Who" he was professor of banking at Columbia University.

"Lord God of Hosts, be with us yet!" Professor of banking at Columbia University and on the pay roll of the Federal reserve system, aye, and four years secretary to Governor Harding's board, this same H. Parker Willis, who is also now the editor of the New York Journal of Commerce, which is now shutting out material presenting the cotton producers' side of deflation as sent in by the president of the great American Cotton Association, and just now on the home stretch, when they are trying to get W. P. G. Harding reappointed governor of the Federal Reserve Board, they come forth and give him another degree of LL. D.—the aforesaid and same W. P. G.

Senators, what are we coming to in this country? I saw a picture of him participating in the parade which was held as an incident to the ceremony of conferring the LL. D. degree at Columbia University. The head of our great Federal reserve system was walking along, all capped and gowned, with a Chinaman, also capped and gowned, near by in the same parade. A deflation policy so deadly that it destroyed property values by the billions was conducted by the head of the board. It took men's homes away from them; it made them tenants; it took farms away from farmers and turned men out of employment by the millions.

It destroyed property values in America to the extent of more than $10,000,000,000. New York profited by it. New York made her hundreds of millions and her billions of dollars by that deadly deflation process. Now they are reaching out for every influence at their command in order to boost this man. So they have made him a "doctor of laws." Who was standing by his side, fanning him, and praising him and deflation when he got his degree and his cap and gown on that hot day at Harvard? Mr. Curtiss, intimately connected with Harvard and chairman of the Federal Reserve Bank of Boston, drawing $18,000 a year through an appointment given him by this same Governor Harding. Who was with him at Columbia, and said softly, "Lean on me"? Prof. H. Parker Willis, who is on the Federal reserve pay roll at $6,000 a year, who is editor of the New York Journal of Commerce. He shuts out from the columns of that journal criticisms of the Federal Reserve Board, and boldly takes his stand by his chief while, strange to say, the faculty or board at Columbia consents that the degree of LL. D. shall pass to W. P. G.

Oh, Mr. President, I am sure such performances are not going to deceive President Harding. The wholesale farce in LL. D. degrees has become so ridiculous that some of the poets of America are writing about them and making fun of them. Time was when the man who was given the degree of LL. D. at one of our great universities had to be a profound scholar, a man of great learning and of superb intellectual powers, and because of these great qualities or achievements the universities would honor him and feel themselves honored by giving him the degree of LL. D.; but it has gotten so now that one can almost get such degrees by subscribing to newspapers and periodicals in a club—of two dailies, one weekly, and an LL. D. degree for $4 cash. [Laughter.]

Mr. President, I want to read to the Senate how such proceedings strike the intelligent mind of the average man and the average woman in the country. S. E. Kiser expressed their views of some of these ridiculous LL. D. performances in the following poem. Listen, Senators. I would that the sheep kings were here:

THE DOUBLE ELL DEES.

Buck Bunkerson now is a doctor of laws;
His manner is proud since he got his degree;
Lift your hat, if you please, when you meet him, because
It's a fine thing to bow to a double ell dee!
Buck Bunkerson's wife has a right to be glad;
Her hard-fisted husband now ranks with the great.
Who cares if the English he uses is bad?
He's the richest egg dealer we have in this State.

[Laughter.]

Oh, Mr. President, these degrees of LL. D. are going easy now.

There Bullwinkle, too, stands among the select;
If ever you've doubted his wisdom or worth,
Begin to address him with proper respect;
His honor is greater than breeding or birth!
Remember the double ell dee he has won,
And cease to be jarred by his vulgar displays;
His beginning was humble; see what he has done:
His horses run fast and his trolley road pays.

[Laughter.]

LL. D's in this morning of the twentieth century are exceedingly easy to get, Mr. President.

Begosh was another who loomed in the line,
Looking great in his gown where degrees were conferred;
His children have something your children and mine
Will lack all their lives—it is pride, in a word.
Don't sneer and don't scoff; keep your jealousy down;
Each garden possesses a prominent toad;
Begosh is the richest coal man in this town;
His honor, of course, has been justly bestowed.

[Laughter.]

How thrilling it is, when the college year ends,
To read how our leaders received their degrees!
Skaggs gets a degree that surprises his friends,
For making six millions in doughnuts and cheese;
Tubbs, Tinker, Gilfeather, De Gass, and Macneil
Are "doctored" for winning in timber or tea;
Bohunkus goes through as the king of corn meal—
Oh, it's great to be tagged with a double ell dee!

[Laughter.]

Mr. President, I do not intend that these disgusting tricks shall be turned without the Congress of the United States, the President, and the country knowing just how they are being done. Senators, the deadly influence of the insidious and dangerous money power is worming itself into everything. Beware! It is time to cry out against it; it is time to stop it. One can not get these attacks on the Federal Reserve Board published in the New York Journal of Commerce. Into the wastebasket they go. One of its editors is on the pay roll of the Federal Reserve Board at $6,000 a year, we are told; professor of banking at the Columbia University for four years, secretary to Governor Harding, of the board, and is now drawing this salary out of the purse of the American people. LL. D. degrees are showered down upon W. P. G. Harding on every hand just as he is on the home stretch, and the appointment of governor of the Federal Reserve Board is soon to be made.

How alert and enterprising are they who have profited through deflation at the hands of the Federal Reserve Board governor!

Mr. President, this man took the greatest banking system ever devised when it was in the pink of condition and operating to the satisfaction of business of every kind in every section of the country and changed it from a helpful and serviceable agency into an implement of torture and destruction; but those who sat back and clipped their coupons and made their millions pat him on the back and say, "Leave that to us; we will fix all that; we will root out all these impressions in the public mind; we will do such things for you that we will make them think you are really great, anyway. We will have institutions of learning which are mighty in the land give you the degree of LL. D. After all these attacks have been made, after all this ruin has been wrought, and all this history has been written, we will lift you up above all this ruin that you have helped to bring about and crown you with dozens of

LL. D. degrees and clothe you in the splendor and glory that predatory interests alone can bestow. Leave it to us."

But, Mr. President, I have assurances that they will not succeed. I owe it to the Senate, in view of his deflation record since, as this man hails from my State, to fight his reappointment to the uttermost. I am proud of my State; proud of her splendid history and look with perfect faith to a glorious future for her. When a man holding a great position misuses and abuses his power, and by so doing injures not only the people of his own State to the extent of millions of dollars but the people of other sections of the country while sinister interests grow richer and richer upon the distress and misfortune thus produced, I owe it to the whole people to repudiate him.

Mr. President, it is no small offense to take a man—I do not care whether he is a man in small business or in big business—and simply destroy him, take his substance away from him, turn him adrift without a dollar, and shatter his hopes for the future. There are millions, not merely hundreds of thousands, of people who were robbed outright by the deflation policy conducted by the Federal Reserve Board. I would be a hypocrite and a coward and unfaithful to my oath when I said I would defend my country against all enemies, both foreign and domestic, if I should sit silent and permit this thing to pass without characterizing it as it should be characterized, without doing everything in my power to make it so hated and odious that it never will be undertaken again.

Mr. President, I said the other day, and I am going to repeat in conclusion, that 25 years from now, 50 years from now, parties will be referring to the deflation crime of 1920; and the Wall Street buccaneers, the wolves who profited from the distress and misfortune of millions of people of the South and West, are not going to escape the condemnation which is the just and righteous judgment of the people.

What ought posterity to think of me, and especially the people in my State, who honored me, if I should sit silent here because I was afraid of that part of our press known as a subsidized press that would attack me, as it has, and would misrepresent me, as it has? What ought it to think of me if I should fold my arms and say: "I am not going to assail this thing. I know it was a crooked deal; I know it was a crime; I know that it destroyed this man's business; I know that it shut the schoolhouse door to thousands of children out yonder; I know that it made tenants out of home owners, and put adrift farmers who owned their land, and turned people out of employment—all this in order that the wild speculators might, like those at Belshazzar's feast, revel at their own deflation carnival, buying up Liberty bonds and other Government securities for practically nothing, and sitting back enjoying their billions.

New York City, I repeat, never made as much money in the same length of time in all its history as when this dragnet of deflation was working through the South and through the West, to the ruin of my people and your people of the West; and yet every kind of pressure has been brought to bear to silence me because I dared to point out the doings of big crooks in high places. I am indorsed by nearly every honest man and woman in the country. I ought to be cor mended for my efforts by every newspaper in the United States. Some of them—a good many of them—are commending my course and are doing good service in this important battle.

Mr. President, I am either right or wrong in the fight I am making. If I am right, I am entitled to the support of every honest man and woman in the country. If I am wrong, I ought to be opposed by all of them. I have stated facts from time to time as to what this deflation policy has done, and Senators on the other side, a few of them—my friend from Oregon [Mr. MCNARY] in the number—and Senators on this side, a majority of them, including my friends from Georgia, Senators WATSON and HARRIS, tell me: "You are exactly right. They did that same thing to my people. Go on with your fight"; but some of the newspapers have published editorials attacking me. They do not represent the people.

Mr. President, I said once before, and I am going to repeat, that when I am attacked by some of them I regard it as a compliment, because when I am assailed by some of them that I know are the mouthpieces of these corrupt interests I know that I am on the right road.

If they feel that they are to be the tools of these interests, and they want to carry on that sort of work, I suppose they are at liberty to do that; but, Mr. President, there is a wonderful stir going on in this country about a free press just now as surely as you and I live. I have in my possession now some awful editorials, written by strong men, about how susceptible certain papers are to the coin of the realm—how money controls certain newspapers' policies. Time was when you could get news in the columns of certain newspapers and the editor reserved the right to take issue with your position, to criticize what you had written, or criticize what you had said in a speech that was printed in his paper. A gentleman wrote me not long ago and said, "You can not only get the news columns now in some of these papers, but you can literally buy the editorials as well." He is a very responsible man; he has had a good deal of experience and has been around the world a great deal, and that is his deliberate opinion.

Mr. President, we have two classes in the newspaper business—one of them is honest and the other is dishonest; one of them is subsidized or corruptly controlled and the other is not. That is the situation we have in this country, and we might just as well talk plainly about it.

I am not afraid of the press. I am the firm friend of the honest press. God knows I would not hamper the press in the discharge of its duty, or take away from it any of its rights and privileges to give the news to the people, and print the views of those who own the papers; but I am against the scheme that some of them have of suppressing the news of events of importance that take place right here in this Chamber, around this Capitol, that the people of the country are entitled to know about. Why is it that you never see a line about a lot of important matters discussed in this Chamber?

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Alabama yield to the Senator from Georgia?

Mr. HEFLIN. I am glad to yield to my friend from Georgia.

Mr. WATSON of Georgia. The time is coming when the press will have to be free if it wants to exist. This country can not live and tolerate a press which it knows is a hireling press. It will not pay for such papers. It will not advertise in such papers. People will not buy from those who advertise in such papers, and the worst of the fight is past.

When the espionage law was passed and so many hundreds of newspapers were crushed by arbitrary orders of the Post Office Department freedom of press was more in danger than it ever had been since our Government was established or since Charles Fox, Lord Grey, and John Wilkes had made their noble fight in England for the freedom of the press, and Thomas Erskine had made his glorious fight for trial by jury instead of arbitrary directions of verdicts by judges. That time, if the Senator will allow me, is coming again. The forces of conflict are arraying themselves against each other again. That battle is irresistible. Nothing on earth can stop it and nothing on earth can silence the people. They are going to be heard, or we will have a revolution in this country.

I will say to the Senator from Alabama, for his encouragement, that there was one little press, one little weekly paper, that rode out the storm during the war times. That paper is being sustained without subsidy and without private capital of any sort. The money that sustains it comes from the pockets of the people who pay for it as subscribers. It has almost no advertising. It asks for none on those terms alone upon which advertising could be obtained for such a paper; and I tell the Senator now that there is more demand for such speeches as his than there ever has been before. There is more demand for such attacks as I have made on the Federal Reserve Board, upon the same lines as those which he has used, than ever before. They can not cry us down. They can not answer us. They dare not try to answer us. They need not try to ignore us.

My belief is that in the next congressional election in the South, at least—I can not speak for other sections—the man who dares to stand for the contraction policy of the Federal Reserve Board will take his death warrant in his hands, already signed by himself, and I myself will do all in my power to put that death warrant into effect. No such man has a right to a place in this body, because his heart is not with the people. The very fight which the Senator from Alabama has made here against the Federal Reserve Board Andrew Jackson made against James Biddle, and if he will read those thrilling chapters, written by Van Buren in his old age, he will find that every argument he has made here was made then. If he will read the speeches which Thomas H. Benton made here in the Senate he will find that he has made no speech differing from those made by Benton in the great fight of himself and of Jackson against the old Federal bank.

Mr. HEFLIN. Mr. President, I thank my good friend from Georgia for his very valuable suggestions. I rejoice to see him back in his seat again. I am glad that he has gained strength enough from his recent illness to come back to his post of duty, where he can fight the battles of his people.

Mr. President, as the Senator from Georgia proceeded I was reminded by what he said about the fight that was made back

yonder by Jackson to keep the banking system out of politics, and there came to my mind the little poem—

Freedom's battle, once begun,
Bequeathed from bleeding sire to son,
Though baffled oft, is ever won.

And that is literally true.

The people in that time won their battle against the banking system that was undertaking not only to control everything in the business world but sought to dominate the political affairs of the Nation. They were stopped. Jackson drove them back out of politics. Am I to be criticized; are both of my friends, the Senators from Georgia, and others to be criticized for fighting this battle to punish those who committed that crime? What do we do to a burglar who breaks into a dwelling house, steals property, and appropriates it to his own use? We stand him up in the court, and the judge scolds and reprimands him as a culprit and punishment is imposed upon him.

What do you do to the man who breaks into a bank and takes the money out of the vault and appropriates it to his own use? You arraign him before 12 jurors, and they punish him for his crime.

What did deflation do? It did more harm to Alabama and the South and West than an invading army could have done. A million burglars turned loose could not have done the harm that the Federal Reserve Board's deflation policy did under the guise of civic authority.

What was ordered to be done? The widow in my State and yours with $1,500 of Liberty bonds, which she had bought by stinting herself. When deflation came, what happened? Her little farm was swept away. She went to the bank and tried to borrow money on her bonds, and could not get it. The bankers said, "We would like to accommodate you, but we have been instructed not to loan on bonds." What then? She was told that the sharks of Wall Street would buy her bonds. She asked what they would give, and she was told $80 or $85 on the hundred.

They got her bonds through deflation. What caused her to have to sell the bonds? Her debt-paying power was destroyed by deflation. What was that? It was a crime against honest business and a crime against this good woman. What did that necessitate her doing? She had to go to the bank with the Liberty bonds. Could she borrow money on them? No; she had to sacrifice them, interest-bearing bonds of the Government, for which she had paid $100 on the hundred, and was told that they would always be as good as gold. They were sacrificed upon the altar of the greed of Wall Street. Wall Street got them. Then what happened? This woman's business was ruined and she is without a home to-day, and Wall Street has her bonds. They are above par, drawing 4 and 4½ per cent interest.

What is that offense? It is a crime. What is my duty? My duty is to condemn it as a crime. If some man had gone there and stolen $15 on the hundred out of $1,500 worth of bonds you would have sent him to the penitentiary; but the bond sharks of Wall Street, through a deflation policy, will steal $15 on the hundred, and then you want to honor and glorify the man who conducted the deflation thievery that took her money. Then they assail me with a miserable, subsidized press, because I dared to defend right dealing and dared to condemn crooked conduct in a thing like this. I just want to serve notice of them now what will happen. I am not making any criticism on any paper that is not subsidized, and I do not want these clever boys who represent papers at this Capitol—and many of them are exceedingly clever gentlemen—to take any offense at what I say, unless they represent a subsidized paper, for what I say is not intended for them. I am talking about the enemies of my country, papers who are hired character assassins, hired to try to destroy men who stand in this body and fight the crooked conduct of big crooks and the interests they represent. I want to serve notice on them now that they are wasting space in their paper, they are wasting ink, and wasting time, by their attacks upon me. I am going to fight them to the end.

Mr. President, I have spoken longer than I had intended, but this is the most serious question which confronts the American people by far. It affects very vitally the business life of the Nation. I have heretofore used this illustration, but it comes to my mind, and I am so anxious that all Senators should get it that I will repeat it. I said I would not like to turn the control of the circulation of the blood through my body over to anybody. He might go to sleep or, if these subsidized newspaper fellows had control over it now, they would stop it altogether, and put me out of commission.

It is a serious thing to permit a few men to control the money supply of the country, which is the lifeblood of the business of the country, and let them control the circulation as they see fit. I quote the Manufacturers' Record when I say that Governor Harding hoarded the lifeblood of the Nation, and would not let it circulate. What a crime! That was said by Richard H. Edmonds, one of the bravest and best of all the brave editors in the country or that the country has ever produced. He indicts this governor of the system for hoarding the Nation's lifeblood and not letting it circulate.

That is the fellow I am condemning, and that is the crime I am condemning. Here is H. Parker Willis on the pay roll of the system, drawing $6,000 a year, the editor of a great paper that is attacking me because I fight this board's conduct and its deadly deflation policy.

Mr. President, I suppose they would like to have every Senator where they could say to him what was said to the new preacher who came into the community. He said, "I hope you will all be out Sunday night when I preach my first sermon." They said, "We want to start you off right. What line of talk are you going to give us?"

He said, "I am going to preach against sin, as the Bible tells me to do. I am going to preach against sin as my conscience as a Christian man dictates that I should. I am going to condemn sin in the big sinner and the little sinner alike."

They said, "Let us tell you something. You had better give us a little outline of your sermon and let us see whether it is going to suit this settlement or not."

He said, "Gambling at cards leads to other vices. It is a dangerous thing. I knew a young man who started out that way, and he went to ruin."

They said, "Whoa, whoa, you want to cut that all out. The best paying member of this church plays cards, and he plays for big money, and you don't want to offend him. Cut that out."

He said, "I don't like to cut out anything. I don't like to have anybody dictate to me what I shall preach about."

They said, "You cut that out"; and they made him cut it out, and several other things.

So finally they told him of so many things that he should cut out that he said, "Now, you have just about cut everything out of my sermon. What am I to preach about?" One old fellow over in the corner stroked his beard and said, "There is an infernal old infidel here in town, you can turn loose on him. He hasn't got a friend in town."

So, Mr. President, these highbrows, who represent these big interests in Wall Street, and the subsidized press like to take a Senator and start him off right. They pat him on the back and tell him, "You want to lay off of this. It is dangerous, and you will hurt the feelings of men of big wealth, don't you see?" And they try to scare you by telling you that certain men have gone down politically for attacking these big interests. You do not want to say anything about those things, they remind you. Fold your arms and drift. Move against the lines of least resistance. Put your courage aside. Swallow your convictions. Draw your pay. Be a rubber stamp. Do the bidding of the interests. Lead an easy life, and you will have no opposition in the future. We will take care of that. Do you understand? "We will have," they will tell you, "the newspaper publishers tell how smart you are if you will serve us and what a big and wonderful man you are, if you do our bidding." Do you get that? But do not oppose us. If you do, we will fight you. "For what care we for wrongs and crimes, its dimes and dollars and dollars and dimes."

It is high time that some of us were accepting the challenge. Conscious of the righteousness of my position and knowing the people that I represent, I do not fear those interests. I accept the challenge. I would rather go out fighting for what I believed was honest, fair, just, and right and leave to my son and the people who have honored and trusted me a stainless record, one of devotion to duty and fearlessness in its discharge, than to stay here a quarter of a century and be the subservient tool of those whose unbridled corruption, greed, and avarice mean ruin to my country.

That is my position upon this question, and I shall continue the fight.

The PRESIDING OFFICER. The question is on the amendment of the Senator from Utah [Mr. SMOOT] to strike out paragraph 1110.

The amendment was agreed to.

Mr. SMOOT. Now, I move, on line 17, page 147, in paragraph 1111, to substitute "50" for "55," so as to read "50 per cent ad valorem."

The PRESIDING OFFICER. The Secretary will state the amendment.

The READING CLERK. On page 147, lines 16 and 17, the committee report, to strike out "36 cents per pound, and, in addi-

tion thereto, 27½," and to insert "45 cents per pound and 50," so as to make the paragraph read:

PAR. 1111. Pile fabrics, cut or uncut, whether or not the pile covers the whole surface, made of wool or of which wool is a component material, whether or not constituting chief value, and manufactures, in any form, made or cut from such pile fabrics, 45 cents per pound and 50 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, we have come now to the paragraphs which cover, respectively, pile fabrics, blankets, automobile rugs, steamer rugs, felts, knit goods, and so forth. All of these paragraphs involve exactly the same principles we have been discussing. It would be futile for me to reiterate the arguments I have made during the last few days, especially when we were discussing the paragraph dealing with dress goods and wool cloths. It would be irksome and tiresome to the Senate, and all I could do would be to repeat what I have said about the preceding paragraphs, namely, that the duties are excessively high, that the information before us as to the difference in conversion costs does not justify these high duties, and that the importations have not been of a character to threaten the domestic industry. In fact, the importations under the rates named in the Underwood law have been negligible. So far as I am concerned, I am going to hasten action on these paragraphs, have a record vote taken, and have the balance of the wool schedule disposed of this afternoon, if it is possible.

Mr. McCUMBER. I want to ask the Senator a question for information. I think the Senator agrees that the compensatory duties are accurately levied upon these goods, but the Senator says that the conversion duty is too high. I have tried to get some evidence upon that. I have no information relating to it later than 1912. I do not think that is very accurate, but it was the best we could get hold of. That would show a difference in the conversion costs at home and abroad reaching all the way from 60 to 80 per cent, but I am well aware that the labor costs in Great Britain and the United States are closer together to-day than they were at that time.

I ask the Senator what he thinks is the difference in the cost of conversion and what evidence he has which directly bears upon the subject. We put the rate at 50 per cent. If the Senator has anything direct to the point showing that that is erroneous, I would like to get it.

Mr. WALSH of Massachusetts. Mr. President, I find that I shall have to take some time in discussing this paragraph. The Senator did not pay me much of a compliment by his inquiry. I spent hours in discussing that subject, producing tables and figures to show what were the prices of domestic cloths and the comparable foreign cloths, compared the difference in the prices, and proved, as far as I could prove, that a protective duty of 35 cents was ample. I produced information in regard to tops, worked out by experts, showing exactly to the cent what the conversion cost was and showing that the rate named in the bill was too high. I produced similar evidence from the Tariff Commission, to the effect that the conversion costs of yarns and cloths were not as high now as formerly and that the duties proposed in the bill were too high.

Now I am going to call attention to what the Senator from North Dakota said yesterday, and I am going to ask the Senator, as this is a good opportunity to do it, either to bring me the proof or retract what he said yesterday about information from the Tariff Commission. I want to find out if I have been deceived in this matter by the experts who have been sent to me and have informed me that the Tariff Commission have never made any estimate as to just what protective duty was necessary to protect the American industries making woolen manufactures. The information I have is that the Tariff Commission will prepare tables, give data of imports and exports, prices, and other facts, but that they have never advised the committee as to what rates to levy, and there has been no rate in the bill levied upon the advice of the Tariff Commission.

I am going to read what the Senator said yesterday and what was printed in the press to-day about the rates on cloths. I was not in the Chamber at the time or else I should have called attention to it at once. I refer to what was printed of the Senator's remarks on page 10776 of the RECORD:

We—

Referring to the committee—

had not any very late statistics on that point that were extremely reliable—

Meaning, of course, the conversion costs—

I admit, but we had the statistics under normal conditions, say, in 1912; and taking all the importations at that time we arrived at the fact, and it was so reported by the Tariff Commission, that the differential which would require protection to put the two upon an equal footing was from 60 to 70 per cent, and we gave 50 per cent.

The Senator from North Dakota allowed the impression to go out, and the papers of the country printed it, that the Tariff Commission recommended 60 or 70 per cent and the committee gave only 50 per cent. If the Tariff Commission recommended 60 or 70 per cent, I say to the Senator that he ought to have given 60 or 70 per cent to the woolen manufacturers as well as to give to the woolgrowers the duty which they asked.

Mr. McCUMBER. Does the Senator want a reply at this time?

Mr. WALSH of Massachusetts. In just a moment. I am going to read what the Tariff Commission said, not in 1912 but in 1920, absolutely refuting the statement made by the Senator yesterday.

Mr. President, I read from a report issued by the Tariff Commission in 1920 entitled "A survey of the British wool manufacturing industry." On page 76 of this report is a table showing the American wholesale price of cloth, such as we were discussing yesterday, under paragraphs 1108 and 1109, and showing the English and American prices per yard. Following that table the Tariff Commission makes the following comment—and remember, this was in 1920, the last word upon the matter—on page 80:

While there are important irregularities among these figures—

Referring to the prices quoted—

certain conclusions are possibly warranted. The tendency for English and American prices to approximate one another, already noted in the case of tops and yarns, is here also evident.

The tendency of American and English prices of woolen cloth to approach each other was in 1920 evident, and yet the Senator from North Dakota had the hardihood to say here yesterday that the Tariff Commission recommended a 60 or 70 per cent protective duty. Let me continue:

Even making allowances for minor variations between the estimates of English values and those actually prevailing, there are obviously cloths of several types with regard to which there is no considerable difference of price existing between the English and American markets, while in some instances the domestic manufacturer really has the advantage.

I am reading from the Tariff Commission, which made a survey of the British wool-manufacturing industry in 1920. These are not my findings of fact:

It is noteworthy in this connection to recall that in a similar, though more comprehensive, comparison made by the Tariff Board in 1911 there was no fabric of which the English price was higher than the American, nor, indeed, any which came nearer than 20 per cent of the American price.

In view of that statement, how can it be said on the floor of the Senate that the Tariff Commission recommended a protection of 60 or 70 per cent and the committee only gave them 50 per cent?

Again, the difference in comparative advantage among the several types of cloth is fairly clear. Values in the two markets are much closer together in the case of serges and cotton-warp dress goods than in that of fancy fabrics. With regard to the former, no importation is possible, at least over the 35 per cent duty of the present tariff law—

With regard to certain classes, no importation is possible with a 35 per cent protective duty—

but for the latter the present rate is entirely inadequate.

That shows that there are some woolen cloths on which the commission thinks the rate of 35 per cent is inadequate, and those, of course, are the fancy cloths.

Just where the dividing line lies and to what extent the domestic production of cloths is of the more self-sufficient types could be determined only by a wide and thoroughgoing inquiry.

That is in the RECORD. I put this evidence in the RECORD when I discussed the paragraph on cloths. Other tables and other information were put in the RECORD. I ask the Senator, in the face of that statement from the Tariff Commission in 1920, where is the evidence before the Finance Committee since 1920 which is to the effect that the Tariff Commission believe that a protective duty of 60 or 70 per cent ought to be levied?

If the explanation of the Senator is that he drew those deductions from the Reynolds report on prices, and when he referred to the Tariff Commission he meant the Reynolds report showing the difference in cost, then it may be possible that he could claim that the value of some cloth in some other part of the world other than England would show a wider difference in prices.

But I want to know, for I do not propose that any Senator shall vote upon the strength of my argument and upon the information furnished to me by the experts of the Tariff Commission until I am answered. I do not propose that the Senator from North Dakota can make the statement he did, that the committee only gave 50 per cent when the Tariff Commission recommended 60 or 70 per cent, without refutation. I wait for the Senator's answer.

Mr. McCUMBER. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from Massachusetts yield to the Senator from North Dakota?

Mr. WALSH of Massachusetts. I yield. I am waiting for the Senator's reply.

Mr. McCUMBER. I can answer now or wait until the Senator gets through.

Mr. WALSH of Massachusetts. I am confining myself to the allegation made by the Senator yesterday, and I am asking the Senator to give me the information which he has, which I have not been able to get, which is to the effect that the Tariff Commission made any such recommendation.

Mr. McCUMBER. I do not know, Mr. President, just how accurately I expressed myself yesterday, as I did not have time to look over my remarks, but what I attempted to say and what I reiterate to-day is that the conversion costs in the woolen schedule would range from 60 to, I think, almost 100 per cent more in the United States than in Great Britain. In France, I think, the spread would be still greater. I do not mean to say that that means we would have from 60 to 80 per cent upon the cost of the goods which are manufactured to meet that. That would depend entirely upon the price of the goods, and it might average 50 per cent.

This is what the Tariff Commission said, and I am reading from page 75 of the Survey of the British wool-manufacturing industry, which was furnished to the Committee on Ways and Means of the House in 1920. This is what the Tariff Commission say:

> In the comparison of commission rates in England and in the United States for the several sections of the wool manufacture, information is too inadequate to permit the formulation of accurate conclusions as to the primary consideration relative to costs of production in the two countries. Such data as have been presented, together with such fragmentary figures on weaving as the commission has been able to secure, suggest that, at least at present, the differences in cost are not as great as they were found to be in 1911 by the Tariff Board. In its report the board stated that the cost of converting wool to tops was approximately 80 per cent higher in this country than in England; that of converting tops to yarns, about 100 per cent higher; and of turning yarns into cloth "for a great variety of fabrics," 100 to 150 per cent greater. The present commission rates for combing in this country have been shown to be not over 40 per cent greater than the current rates in England; those for spinning around 80 per cent; while, for manufacturing proper and dyeing, the data which have as yet been secured indicate that the difference in both cases, except, perhaps, for fancy cloths, would surely be below the low figure in 1911 (100 per cent)—

That is, 100 per cent was given in 1911, and it would be below that—

> and perhaps as low as from 60 to 80 per cent.

Then, Mr. President, on page 691 of the document entitled "Wool and Manufactures of Wool," published in 1912, there is a table showing the comparative conversion cost from yarn to finished cloth of 53 samples of American cloth and similar English cloth. In the case of sample No. 1 the American cost is 8 cents and the English cost 4 cents; in the second the American cost is 8.3 cents and the English 4.1 cents; in the third the American cost is 8.9 cents and the English cost 4.8 cents, and in the other cases about the same difference is shown to exist.

If anyone understood me as intending to convey the idea that the difference in the cost of conversion, ranging all the way from 60 to 100 per cent, necessarily would require a duty of from 60 to 100 per cent on the value of the foreign product, he certainly misunderstood me or I did not accurately express myself.

Mr. WALSH of Massachusetts. If the Senator will pardon me, the Washington Post carries a story this morning evidently sent out by the Associated Press, and this is the headline:

> McCUMBER defends rates. Lower than Tariff Commission had calculated as needed, he says.

That shows that even the press gallery construed the Senator's statement to mean that the committee had reported a rate lower than the Tariff Commission had recommended.

Mr. McCUMBER. I think if the Senator will ascertain to what that relates, he will find that it undoubtedly relates to the table that I put in the RECORD on yesterday following the table which was offered by the Senator from Massachusetts himself, a table made by the Actuary of the Treasury Department, in which he takes the average rate upon each paragraph of Schedule K in 1910, and then makes an estimate of what it would be under the pending bill for the year 1922, and shows a greatly decreased ad valorem rate of duty. That, of course, is absolutely true.

Mr. WALSH of Massachusetts. As I now understand the Senator from North Dakota, he did not intend to state, and does not intend that his remarks of yesterday shall be construed to indicate, that the Tariff Commission made any recommendation about the tariff duty which would be required; that whatever duty was levied by the committee was levied after the committee had studied the question, with the aid of such tables and information as were available to them, and after the hearing of all the evidence?

Mr. McCUMBER. Certainly. The Tariff Commission is very careful always to make no recommendations in reference to any duty. It is so careful for fear it may be regarded as making a recommendation that, in many instances, it does not express itself as clearly as it might otherwise do.

Mr. WALSH of Massachusetts. That was the information that I had; and that is the reason I was surprised at the Senator's statement, and surprised at the construction put upon the statement, that in this case the committee had repudicated the recommendation of a higher rate claimed to have been made by the Tariff Commission.

Mr. McCUMBER. Oh, Mr. President, I think the newspaper evidently must have gotten matters somewhat mixed. In the table which I introduced I simply sought to show that of the goods that would come in under the pending bill, when it passes, the ad valorem rate will be, I think, about 30 per cent less than the ad valorem rate upon similar goods which came in 1910 under the Payne-Aldrich law; and I think I am absolutely correct in that.

Mr. LENROOT. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Wisconsin?

Mr. WALSH of Massachusetts. I yield.

Mr. LENROOT. I am quite sure, in view of the Senator's statement, that he would desire the RECORD to show that he wishes to correct the statement which he made on yesterday, wherein he said:

> And taking all of the importations at that time we arrived at the fact, and it was so reported by the Tariff Commission, that the differential which would require protection to put the two upon an equal footing was from 60 to 70 per cent, and we gave 50 per cent.

Mr. McCUMBER. Possibly I should have stated from all of the testimony that we concluded that it would require about 50 per cent. I did not intend to convey the idea that that was based entirely upon the Tariff Commission's report nor based entirely upon the difference in cost of conversion as shown in the tables.

Mr. LENROOT. Nor did he intend to say the Tariff Commission had reported that 60 to 70 per cent ad valorem protection would be required.

Mr. McCUMBER. No; the Tariff Commission did not so report, but the committee, if it had followed the recommendation of the Reynolds report and some of the other evidence and held to that alone, would have had to so conclude.

Mr. WALSH of Massachusetts. That is a different story. The statement I wanted to challenge was that the Tariff Commission had recommended a higher rate. This all amounts, as I understand, to this, that the cost of converting the wool into cloth represents about 50 per cent; and the Tariff Commission reported the difference between the conversion in America and England was 60 to 80 per cent, which would make the conversion duty practically between 60 and 80 per cent of the 50 per cent cost of conversion, or between 30 and 40 per cent, which I stated yesterday.

Mr. McCUMBER. The difference in the cost of conversion might be even more than that, but, as I have stated before, that would not necessarily mean 40 or 50 or 60 per cent; it would depend, of course, upon the cost of the goods.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. The Chair understands the Senator from Massachusetts yields the floor?

Mr. WALSH of Massachusetts. I yield the floor.

Mr. SMOOT. The junior Senator from Wisconsin [Mr. LENROOT] has called my attention to the wording of the compensatory duty in this paragraph, and suggested that it ought to conform with the wording in other paragraphs, and I myself think it should. Therefore, I should like to modify the amendment of the committee, on line 13, after the word "made," by inserting the words "wholly or in chief value"; then, after the word "wool," in line 13, strike out "or of which wool is a component material, whether or not constituting chief value," so that the paragraph as modified would read:

> PAR. 1111. Pile fabrics, cut or uncut, whether or not the pile covers the whole surface, made wholly or in chief value of wool, and manufactures, in any form, made or cut from such pile fabrics, 45 cents per pound and 50 per cent ad valorem.

The PRESIDING OFFICER. The Secretary will state the amendment as proposed to be modified by the Senator from Utah.

Mr. WALSH of Massachusetts. I have no objection to the modification suggested, but I shall want a record vote on the paragraph.

Mr. SMOOT. I am perfectly willing that the yeas and nays should be called on the paragraph.

Mr. WALSH of Massachusetts. The amendment offered by the Senator from Utah, which is merely to correct the text, may be adopted first.

Mr. SMOOT. It may all be treated as one amendment, if that is desired, or the Senator can have a separate vote if he wishes.

Mr. LENROOT. I suggest that the amendment proposed by the Senator from Utah to the amendment may be adopted by unanimous consent.

Mr. SMOOT. We can adopt now the amendment which I have just suggested.

The PRESIDING OFFICER. The Secretary will state the amendment as modified in behalf of the committee by the Senator from Utah.

The READING CLERK. It is proposed to modify the committee amendment to paragraph 1111 so as to read:

PAR. 1111. Pile fabrics, cut or uncut, whether or not the pile covers the whole surface, made wholly or in chief value of wool, and manufactures, in any form, made or cut from such pile fabrics, 45 cents per pound and 50 per cent ad valorem.

Mr. SMOOT. That is correct.

The PRESIDING OFFICER. Is there objection to the modification? The Chair hears none. The question now is on the amendment of the committee to paragraph 1111 as modified.

Mr. LENROOT. Mr. President, I desire to give notice that I shall reserve for a separate vote in the Senate the committee amendment to paragraph 1109.

Mr. WALSH of Massachusetts. Mr. President, I omitted to state when I was on my feet that the duties in paragraph 1111, as originally reported by the committee, were even higher than those of the Payne-Aldrich law, and I think they are as high now, even as the amendment has been modified by the Senator from Utah. I ask for the yeas and nays on the adoption of the committee amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee as modified, on which the Senator from Massachusetts asks for the yeas and nays.

The yeas and nays were ordered.

Mr. SIMMONS. I ask that the amendment be stated.

Th PRESIDING OFFICER. The Secretary will again state the paragraph as proposed to be amended.

The reading clerk again stated the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee as modified. The Secretary will call the roll.

The reading clerk proceeded to call the roll.

Mr. McCUMBER (when his name was called). Transferring my pair as on the previous vote, I vote "yea."

Mr. ROBINSON (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. SUTHERLAND] to the Senator from Missouri [Mr. REED], I vote "nay."

Mr. STERLING (when his name was called). I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from Pennsylvania [Mr. PEPPER] and will vote. I vote "yea."

Mr. WATSON of Georgia (when his name was called). I have a general pair with the Senator from California [Mr. JOHNSON] and therefore withhold my vote. If the Senator from California were present, he would vote "yea" on this question, and I would vote "nay."

Mr. WILLIS (when his name was called). I am paired for the day with my colleague, the senior Senator from Ohio [Mr. POMERENE], who is absent. I transfer that pair to the junior Senator from Washington [Mr. POINDEXTER] and will vote. I vote "yea."

The roll call was concluded.

Mr. DIAL. I have a pair with the Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the Senator from Rhode Island [Mr. GERRY] and will vote. I vote "nay."

Mr. HARRIS. Making the same announcement as before as to my pair, I vote "nay."

Mr. WALSH of Massachusetts. The Senator from Ohio [Mr. POMERENE] is absent from the Senate to-day. If present, he would vote "nay."

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Vermont [Mr. DILLINGHAM] with the Senator from Virginia [Mr. GLASS];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN];

The Senator from West Virginia [Mr. ELKINS] with the Senator from Mississippi [Mr. HARRISON];

The Senator from Maine [Mr. HALE] with the Senator from Tennessee [Mr. SHIELDS];

The Senator from California [Mr. JOHNSON] with the Senator from Georgia [Mr. WATSON];

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS]; and

The Senator from New Jersey [Mr. FRELINGHUYSEN] with the Senator from Montana [Mr. WALSH].

The result was announced—yeas 33, nays 16, as follows:

YEAS—33.

Borah	Kellogg	Moses	Spencer
Brandegee	Kendrick	Nelson	Stanfield
Broussard	Keyes	Newberry	Sterling
Bursum	Lenroot	Nicholson	Wadsworth
Capper	Lodge	Norbeck	Warren
Cummins	McCumber	Oddie	Willis
Curtis	McKinley	Phipps	
Gooding	McLean	Ransdell	
Jones, Wash.	McNary	Smoot	

NAYS—16.

Ashurst	Harris	Robinson	Swanson
Caraway	Heflin	Sheppard	Trammell
Culberson	Myers	Simmons	Underwood
Dial	Overman	Stanley	Walsh, Mass.

NOT VOTING—47.

Ball	France	La Follette	Reed
Calder	Frelinghuysen	McCormick	Shields
Cameron	Gerry	McKellar	Shortridge
Colt	Glass	New	Smith
Crow	Hale	Norris	Sutherland
Dillingham	Harreld	Owen	Townsend
du Pont	Harrison	Page	Walsh, Mont.
Edge	Hitchcock	Pepper	Watson, Ga.
Elkins	Johnson	Pittman	Watson, Ind.
Ernst	Jones, N. Mex.	Poindexter	Weller
Fernald	King	Pomerene	Williams
Fletcher	Ladd	Rawson	

So the amendment of the committee as modified was agreed to.

The PRESIDING OFFICER (Mr. SPENCER in the chair). The next amendment of the committee will be stated.

The next amendment was, on page 147, after line 18, to strike out:

PAR. 1112. Blankets, wholly or in part of wool, not exceeding 3 yards in length, plain woven, with not more than one color in warp or filling, and not advanced beyond weaving by any process of finishing, valued at not more than 75 cents per pound, 20 cents per pound and, in addition thereto, 20 per cent ad valorem; valued at more than 75 cents but not more than $1.50 per pound, 25 cents per pound and, in addition thereto, 20 per cent ad valorem; valued at more than $1.50 per pound, 30 cents per pound and, in addition thereto, 20 per cent ad valorem.

And in lieu thereof to insert:

PAR. 1112. Blankets and similar articles, including carriage and automobile robes and steamer rugs, made of blanketing, wholly or in chief value of wool, not exceeding 3 yards in length, valued at not more than 50 cents per pound, 20 cents per pound and 30 per cent ad valorem; valued at more than 50 cents but not more than $1 per pound, 30 cents per pound and 32½ per cent ad valorem; valued at more than $1 but not more than $1.50 per pound, 33 cents per pound and 35 per cent ad valorem; valued at more than $1.50 per pound, 40 cents per pound and 40 per cent ad valorem.

Mr. WALSH of Massachusetts. Mr. President, in the case of blankets the protective rates are practically the same as those in the Payne-Aldrich law, but on account of the change in the raw-wool rate the compensatory rates are higher. This, of course, means that the total duty levied upon blankets is higher than ever before. It also means that the consumers will have to pay more for blankets than ever before.

As I said in the case of the last paragraph, I am not going to take the time of the Senate to discuss the principles that I attempted to outline yesterday in the debate on woolen manufactures. I simply want to call attention to the fact that in the case of blankets, unlike most of these woolen manufactures, we export more than we import. We have a fair export business in blankets and the imports are negligible. If the domestic industry was not troubled by competition from imports under total duties of 35 per cent, why is there need of these high duties of 40 cents per pound of wool plus 40 per cent ad valorem? I can only reiterate what I have said before, that I am unable to find any information which justifies the levying of these duties and the consequent result that will follow, that the price of blankets will be higher than ever before to the American consumer.

Mr. SMOOT. Mr. President, I simply want to say that the equivalent ad valorem in this bill is very much less than it was in the Payne-Aldrich law, but the Senator's statement as to the compensatory duty is about correct, although in the first bracket in this bill the rate is 20 cents and 30 per cent, and in the Payne-Aldrich law it was 22 and 30.

Mr. WALSH of Massachusetts. What does the Senator say the protective duty was in the Payne-Aldrich law?

Mr. SMOOT. The first bracket in the Payne-Aldrich Act was 22 cents a pound and 30 per cent ad valorem.

Mr. WALSH of Massachusetts. That is the same as it is here.

Mr. SMOOT. No; it is 20 cents a pound here.

Mr. WALSH of Massachusetts. And 30 per cent protective duty.

Mr. SMOOT. Yes.

Mr. WALSH of Massachusetts. I said that the protective duty was the same and the compensatory duty was higher, by reason of the higher duty upon raw wool.

Mr. SMOOT. That is as I understood the Senator; but I call attention to the fact that even with higher wool in the present bill the compensatory duty on the first bracket of blankets is 20 cents, and in the Payne-Aldrich bill it was 22 cents; so it is lower there.

Mr. WALSH of Massachusetts. Slightly lower; very slightly.

Mr. SMOOT. The next bracket is 30 cents, and under the Payne-Aldrich law was 33 cents.

Mr. WALSH of Massachusetts. What was the protective duty in the second bracket of the Payne-Aldrich law?

Mr. SMOOT. Forty per cent.

Mr. WALSH of Massachusetts. In the second?

Mr. SMOOT. In the second bracket, and in this bracket it is 32½ per cent.

Mr. WALSH of Massachusetts. My statement has been challenged, and I am going to state what I find it to be.

Mr. SMOOT. I do not do it in a spirit of criticism at all.

Mr. WALSH of Massachusetts. Oh, no; I understand; but the Senator says that the rates named here are less than those in the Payne-Aldrich law.

Mr. SMOOT. The equivalent ad valorems.

Mr. WALSH of Massachusetts. The highest bracket in the Payne-Aldrich law has a compensatory duty of 33 cents and a protective duty of 40 per cent. The highest bracket in this amendment has a compensatory duty of 40 cents, as against 33 cents in the Payne-Aldrich law, and a protective duty of 40 per cent, as against the 40 per cent in the Payne-Aldrich law. Of course, the highest bracket is the most important bracket, because it refers to the blankets that have the most wool in them.

Mr. SMOOT. I intended to go through each bracket and show just what the changes were. I began with the first two brackets, and, of course, they happen to be lower.

Mr. WALSH of Massachusetts. I think the Senator, in fairness, ought to state that the rates are very, very close to, if not identical with, the rates in the Payne-Aldrich law.

Mr. SMOOT. With the exception of the equivalent ad valorem of both of them, and in that case it is because of the lower price of blankets at the time they were made. I want to say to the Senator that I have not made any statement on the floor that I do not believe is fair. I do not try to dodge a question in any way, shape, or form. I admit that the compensatory duty in the last bracket is 35 cents instead of 33, but the Senator knows the reason for that, and he has stated frankly the reason why that was. We have not given the amount in the lower brackets because I know that at those prices it would be largely wool waste, and therefore I am only taking wool waste into consideration here in giving compensatory duties, and the Payne-Aldrich act does not take that into consideration as far as we did.

Mr. WALSH of Massachusetts. Of course, we are agreed that there was no compensatory duty under the Underwood law, and merely a protective duty of 25 per cent. It is now proposed that there should be a compensatory duty of 40 cents per pound and a protective duty of 40 per cent in the highest bracket, against the Underwood duty of only 25 per cent.

Mr. SMOOT. But the Senator will remember that in the Payne-Aldrich law carriage and automobile robes carried a duty of 35 per cent, and we have put them all together here, and they are all carrying the same rate of duty, namely, 40 per cent. So, as far as the carriage and automobile robes are concerned, there is only 5 per cent difference between the existing law and this, and there is the other difference of 10 per cent more on the blankets—the protective rate on the blankets.

Mr. WALSH of Massachusetts. On this amendment I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. LENROOT. Mr. President, I think this is probably the only remaining paragraph I wish to comment upon, but I do want to say a word about this paragraph.

I would like to ask the Senator from Utah what reasons actuated the committee in increasing the present rate, so far as the protection is concerned. I say nothing about the compensatory rate.

Mr. SMOOT. We had the Tariff Commission make a thorough investigation in June of 1922, and they took samples at that time from the Sanford Mills, of Sanford, Me.; W. F. Libbey Co., of Lewiston, Me.; Stroock Plush Co., of Newburgh, N. Y.; Orr Felt & Blanket Co., of Piqua, Ohio. I do not want to identify the costs of each one of these, but I am giving the names of the mills, and I want the Senator to understand, if I give any comparison, that I am not going to say which mill the figures refer to, because that would be unfair to the mills. I am going to give the names of the mills to show simply how thorough this investigation was in June of this year.

There is also Shuler & Benninghofen, of Hamilton, Ohio; Beckman Co., of Cleveland, Ohio; Colonial Woolen Mills, Cleveland, Ohio; Portland Woolen Mills, Portland, Oreg.; Columbia Mills, Lewiston, Me. That is a fair selection of all of the blanket mills in the United States and in all sections of the country.

The articles which were taken were bed blankets, steamer rugs, and auto robes. In their report to the committee the commission gave a description of every one of these samples. For instance, we will take camel's-hair noils. They gave the percentage of the noils used in the blankets and the percentage of the wool, then the weight of the cotton warp, if it were a cotton warp, and if it were a wool warp they gave the amount of wool, and also the noils used in that wool. Then they took three types of blankets, called the highest and the lowest, and what they termed the bulk sale of the blankets; that is, the lowest cost, the highest cost, and the cost of the bulk of the blankets which went into the trade. Then they gave the selling price per pound, and each one of these is then converted into the equivalent ad valorem which would be necessary in order to protect the blankets.

Mr. LENROOT. Did the Senator say they gave the cost?

Mr. SMOOT. They gave the percentage of conversion cost in each case.

Mr. LENROOT. What was that percentage?

Mr. SMOOT. In stating this I am not going to give the name of the mill.

Mr. LENROOT. I do not want the Senator to name the mills.

Mr. SMOOT. I am not going to read the percentages in the same way I read the names of the mills, but in this first one to which I shall refer on the bulk of the goods sold it was 39.8 per cent. That is the only one we had of that kind. Then I will take another one. It showed 49.4 per cent on the high and 35.4 per cent on the low.

Mr. LENROOT. Will the Senator give me those figures again?

Mr. SMOOT. Forty-nine and four-tenths per cent on the high and 35.4 on the low, and on the bulk of the goods it was 42.8 per cent.

On the next one it was 71 per cent on the high, 62 per cent on the low, and 63½ on the bulk. Then I take another one. On the high it was 73 per cent, on the low 67 per cent, and they do not give the conversion cost on the bulk. Another one shows 82 per cent on the high, 60 per cent on the low, and 67 per cent on the bulk.

Mr. LENROOT. Where the conversion cost is 82 per cent, what kind of material was used?

Mr. SMOOT. That was an auto robe, and it would be a pretty good auto robe. I will say to the Senator that in that particular case the cost price was running about a dollar a pound.

Mr. LENROOT. Is that on the material or the finished product?

Mr. SMOOT. That is the finished product. I will run through this quickly. They run 72, 73, 63, 51, 64, 82, 80, 81, 44, 50, and 54. There is no need of giving any others, because that is a fair sample of what the report shows.

Mr. LENROOT. Take the case of the auto robe. Does the Senator mean to say that the material in that represented but 18 per cent?

Mr. SMOOT. The conversion cost was 82 per cent and——

Mr. LENROOT. The material would represent only 18 per cent, then.

Mr. SMOOT. We know the conversion cost in the case of that particular article; we know that the cost of that was $1 and the great bulk of it must have been cotton. They used a cotton warp and most cotton in the filling, or approximately that. That could not be done in the case of cloth, but in a blanket it could be. In fact, they made cotton blankets which were gigged so that a few feet off you could hardly tell them from wool.

Mr. LENROOT. Did the Tariff Commission give the exports of the mills or say what they did with the products?

Mr. SMOOT. They have not made that report.

Mr. LENROOT. Upon the matter of blankets the information which the Senator has given us would be valuable provided we had comparable conversion costs of foreign manufacturers, and provided we had the figures of imports which had a bearing upon the question. Very hastily figuring this, with an average of 42 per cent conversion cost, it seems to me these rates will cover, not the difference in conversion cost but will equal the entire American conversion cost in a great many cases. It is bound to be so, from the figures the Senator has given.

What are the facts with reference to what the Tariff Commission reports as to these blankets, as to imports, exports, and production? The imports are absolutely negligible. The imports of blankets in 1920 were valued at only $40,000; in 1921, for nine months, they were valued at $48,000. The exports of blankets in 1920 amounted to $1,257,000, as against imports of $40,000.

Mr. SMOOT. There is an explanation for that.

Mr. LENROOT. I would like to have it.

Mr. SMOOT. I want to give it to the Senator and to the Senate. A considerable part of the blankets exported in 1920 went to Russia. Senators know that in that year everybody was fighting for goods. That was the year of peak prices. It was a question of securing goods, not what the price was. That is the reason that shows the exportations of that year so high.

Mr. LENROOT. The Tariff Commission states that in 1918 about 80 per cent of the exports went to Italy. I can well understand that. That was immediately following the war. In 1919 about one-half went to France and Austria. In 1920 about one-half went to Russia and Asia, a considerable part to Mexico, Turkey, and Poland.

Mr. SMOOT. I do not care to go into details of the Poland purchases of that year.

Mr. WATSON of Georgia. Mr. President, will the Senator from Wisconsin state the date of the shipment to Poland?

Mr. LENROOT. The Tariff Commission does not report it, except as 1920.

Mr. SMOOT. That was the year they were looking for goods all over the world, and they could not get them in sufficient quantities anywhere.

Mr. LENROOT. But the important point after all, Mr. President, is not the amount of our exports, although that has a bearing. The important factor is, are we importing in great quantities under the present tariff rate of 25 per cent ad valorem? We are not. We have not been at any time. The Tariff Commission reports that despite a distinct lowering of duty in 1913 the imports immediately thereafter increased only slightly.

Now, Mr. President, I submit that there has not been any showing made for the increase that is proposed by the committee upon this article of universal use. The Senator from Utah has given the conversion cost of the American mill. That has no bearing on it unless we have other costs with which to make comparisons, and also unless we have imports coming in to bear out the difference in conversion cost, if there be such difference. The House rate, I am frank to say, I think is too low.

I am going to propose an amendment. I move to amend in line 8 by striking out the numeral "30" and inserting the numeral "25," in line 10 by striking out the numeral "32½" and inserting "30," and in line 13 by striking out the numeral "40" and inserting the numeral "35." I present it as one amendment, so that there may be one vote on all three.

The PRESIDING OFFICER. It will be so ordered. The Secretary will state the amendment to the amendment.

The ASSISTANT SECRETARY. On page 148, in line 8, strike out "30" and insert "25"; in line 10 strike out "32½" and insert "30"; and in line 13 strike out the numeral "40" where it occurs the second time and insert "35," so as to make the paragraph read:

PAR. 1112. Blankets and similar articles, including carriage and automobile robes and steamer rugs, made of blanketing, wholly or in chief value of wool, not exceeding 3 yards in length, valued at not more than 50 cents per pound, 20 cents per pound and 25 per cent ad valorem; valued at more than 50 cents but not more than $1 per pound, 30 cents per pound and 30 per cent ad valorem; valued at more than $1 but not more than $1.50 per pound, 33 cents per pound and 35 per cent ad valorem; valued at more than $1.50 per pound, 40 cents per pound and 35 per cent ad valorem.

Mr. LENROOT. I ask for the yeas and nays on agreeing to my amendment to the amendment of the committee.

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. McCUMBER (when his name was called). Transferring my pair as on the last vote, I vote "nay."

Mr. STERLING (when his name was called). On this vote I understand that my pair, the Senator from South Carolina [Mr. SMITH], if present, would vote as I intend to vote. I therefore vote. I vote "yea."

Mr. TRAMMELL (when his name was called). I transfer my pair with the senior Senator from Rhode Island [Mr. COLT] to the senior Senator from Texas [Mr. CULBERSON], and vote "yea."

Mr. WILLIS (when his name was called). I transfer my pair with my colleague, the senior Senator from Ohio [Mr. POMERENE], to the junior Senator from Washington [Mr. POINDEXTER], and vote "nay."

The roll call having been concluded,

Mr. DIAL. Making the same announcement as to my pair and transfer as on the previous ballot, I vote "yea."

Mr. HARRIS. Making the same announcement as to my pair and its transfer, I vote "yea."

Mr. NEW. Making the same announcement as on the previous vote with reference to my pair and its transfer, I vote "yea."

The roll call resulted—yeas 22, nays 23, as follows:

YEAS—22.

Ashurst	Heflin	Overman	Trammell
Capper	Jones, Wash.	Sheppard	Underwood
Caraway	Kellogg	Simmons	Wadsworth
Cummins	Lenroot	Stanley	Walsh, Mass.
Dial	Myers	Sterling	
Harris	Norbeck	Swanson	

NAYS—23.

Brandegee	Kendrick	McNary	Smoot
Broussard	Keyes	Moses	Spencer
Bursum	Lodge	New	Stanfield
Curtis	McCumber	Newberry	Warren
Ernst	McKinley	Oddie	Willis
Gooding	McLean	Phipps	

NOT VOTING—51.

Ball	France	McCormick	Reed
Borah	Frelinghuysen	McKellar	Robinson
Calder	Gerry	Nelson	Shields
Cameron	Glass	Nicholson	Shortridge
Colt	Hale	Norris	Smith
Crow	Harreld	Owen	Sutherland
Culberson	Harrison	Page	Townsend
Dillingham	Hitchcock	Pepper	Walsh, Mont.
du Pont	Johnson	Pittman	Watson, Ga.
Edge	Jones, N. Mex.	Poindexter	Watson, Ind.
Elkins	King	Pomerene	Weller
Fernald	Ladd	Ransdell	Williams
Fletcher	La Follette	Rawson	

The PRESIDING OFFICER. A quorum of the Senate not having voted, the Secretary will call the roll.

Mr. McCUMBER. I know that is the usual program in such cases, but I think it would be almost useless to spend hours here in attempting to secure and to maintain a quorum this afternoon. That being the case, I move that the Senate now take a recess, the recess being in accordance with the unanimous-consent agreement entered into earlier to-day, until Monday next at 11 o'clock a. m.

The motion was agreed to; and (at 3 o'clock and 15 minutes p. m.) the Senate, under the order previously made, took a recess until Monday, July 31, 1922, at 11 o'clock a. m.
